Countess d'Istria, Frederica Bremer, Ida Pfeiffer, Lady Hester Stanhope, Lady Morgan, Mary Somerville, Lady Brassey, Lady Florence Dixie, Isabella Bird, Miss Gordon Cumming, Lady Duffus Hardy, &c.

CHILD'S PIANOFORTE BOOK (The), for the Home, the Kindergarten, and the School. By H. KEATLEY MOORE, B.Mus. B.Sc. 4to. With Songs, Music, and many Pictures, 3s. 6d.

"An excellent present for a child beginning to learn the piano; song, picture, and instruction being combined for one end....A compendious, yet copious, introduction to the study of the rudiments of music and the art of pianoforte playing....Many graphic woodcuts add to the attractiveness of the volume."—*Daily News.*

GUSTAVUS VASA and his STIRRING TIMES. By ALBERT ALBERG. Fully Illustrated, 3s. 6d.

SEVEN HEROINES of CHRISTENDOM (The). By Professor CHARLES DUKE YONGE. With Plates, 3s. 6d.

"MINIATURE" CATALOGUE of PRESENTS and PRIZES published by W. SWAN SONNENSCHEIN & Co., with Miniature Reduced Illustrations (comprising nearly 100 Books), may be had at all Booksellers' or of the Publishers.

"A little gem of typography, worthy of permanent preservation."

Paternoster-row.

NOW READY,

In One Volume, crown 4to., cloth extra, 550 pp., gilt edges, 31s. 6d.; or, in parchment binding, top gilt, uncut edges, 35s.

AN

ÉDITION DE LUXE

OF

Mr. R. D. BLACKMORE'S

CELEBRATED NOVEL,

LORNA DOONE:

A ROMANCE OF EXMOOR.

In reply to many inquiries for an Illustrated Edition, the Publishers have much pleasure in announcing that they have prepared a superb ÉDITION DE LUXE, which represents the Twentieth Edition of the above well-known work. It contains numerous Full-Page and other Illustrations, engraved by Mr. J. D. Cooper, in the very best style of Wood Engraving, after Water-Colour Drawings by Mr. F. Armstrong, specially made and presented to the Author, who has kindly lent them for this purpose. These Illustrations represent the scenery of 'Lorna Doone,' from studies made in the localities of the chief incidents of the story, and have been drawn on wood by Mr. Percival Skelton.

The Work is further enriched by several Full-Page Illustrations, drawn by the well-known Artist, Mr. W. Small, representing studies of some of the Leading Events, Battles, Scenes, Characters, and Incidents. Many of the chapter headings also contain Illustrated Initials of Devon or Somerset views by Mr. W. H. J. Boot. It is printed by William Clowes & Sons in their best style, and bound in handsome cloth by Messrs. Burn. The type is new, and specially chosen, and the paper of the finest and best material. In no respect has expense been spared by the Publishers to make this Edition in every way as perfect as possible.

This Work is already so well known that it is quite unnecessary to describe either its character or its merits. The best test of these is its great popularity, Nineteen Editions in the popular six-shilling form having already been issued, with an increasing sale every year.

Author's Preface to the Twentieth Edition.

What a lucky maid you are, my Lorna! When first you came from the Western Moors nobody cared to look at you, the "leaders of the public taste" led none of it to make test of you. Having struggled to the light of day, through obstruction and repulses, for a year and a half you shivered in the cold corner without a sunray. Your native land disdained your voice, and America answered "No child of mine"; knowing how small your value was, you were glad to get your fare paid to any distant colony.

Still a certain* brave man felt convinced that there was good in you, and standing by his convictions—as the English manner used to be—"She shall have another chance," he said; "we have lost a lot of money by her; I don't care if we lose some more."

Accordingly forth you came, poor Lorna, in a simple pretty dress, small in compass, small in figure, smaller still in hope of life.

But—oh but—let none of the many fairer than yourself who fail despond—a certain auspicious event occurred just then, and gave you golden wings. The literary public found your name akin to one which filled the air, and, as graciously as royalty itself, endowed you with imaginary virtues. So grand is the luck of time and name, failing which more solid beings melt into oblivion's depth.

This you too must do, ere long; meanwhile, be proud of success beyond merit, and rejoice yet more that fortune showers fresh delights upon you. To shine with adornment, as a female should, to find your words made pictures of bright genius—from pure love of you†—and thus to venture forth to those who will receive you kindly, through the force of habit and of nature.—*October*, 1882.

* The late Mr. Sampson Low the younger.

† This unwise lover is Mr. F. Armstrong, of Bristol.

WARD, LOCK & CO.'S *ANNOUNCEMENTS.*

SCIENCE MADE EASY.

A MOST INTERESTING BOOK FOR WINTER EVENINGS.

Royal 8vo. 800 pages, cloth gilt, price 7s. 6d.

POPULAR SCIENTIFIC RECREATIONS

IN

NATURAL PHILOSOPHY, ASTRONOMY, GEOLOGY, CHEMISTRY, &c.

With about Nine Hundred Illustrations.

The subjects treated of in this most entertaining work include (amongst hundreds of others of equal value and interest):—

Acoustics.	Eclipses.	Natural History.
Astronomy.	Electricity.	Optics.
Atmosphere.	Fungi.	Optical Illusions.
Ballooning.	Gases.	Planets.
Botany.	Gravity.	Rocks.
Chemistry.	Geology.	Sea (The).
Clocks (Mysterious).	Heat.	Sky (The).
Crystals.	Insects.	Sound.
Distillation.	Light.	Stars.
Earth (The).	Magnetism.	Water.
&c.	&c.	

"There is endless amusement, and, let us say, useful knowledge, comprehended in this work, and the profusion of illustrations is a feature of considerable importance."—*Exeter Flying Post.*

Volume I. now ready. One of the most useful books ever published.

Crown 4to. cloth gilt, 500 pages, 7s. 6d.

AMATEUR WORK, ILLUSTRATED.

A PRACTICAL WORK ON CONSTRUCTIVE AND DECORATIVE ART, AND ALL KINDS OF MANUAL LABOUR.

With ELEVEN FOLDING SUPPLEMENTS and FIVE HUNDRED WOOD ENGRAVINGS.

The Work contains Articles, practically written and thoroughly well illustrated, upon

Lathe-Making.	Home-made Furniture.
Working Drawings.	Filter Construction.
Electro-Plating.	China Painting.
Modelling in Clay.	Photographic Apparatus.
Organ Building.	Restoration of Furniture.
Household Clocks.	Stencilled Decoration.
Boot and Shoe Making.	Electric Bells.
Amateur Photography.	Violin Making.
Amateur Bookbinding.	Domestic Electric Light.
French Polishing, &c.	Practical Gasfitting.
Gymnastic Apparatus.	Boatbuilding.

And very many other useful subjects.

"One of the most useful works any 'handy man' can possess. It will in many cases render such a man quite independent of various classes of so-called skilled workmen."—*Derby Mercury.*

A New Volume commences with Part 12. Price 6d.

Prospectus post free.

ONE OF THE MOST BEAUTIFUL AND INSTRUCTIVE GIFT-BOOKS EVER PUBLISHED.

Royal 8vo. 800 pages, cloth gilt, price 7s. 6d.

LAND, SEA, AND SKY;

Or, WONDERS OF LIFE AND NATURE.

A Description of the Physical Geography and Organic Life of the Earth.

Translated from the German of

Dr. KERMAN, J. KLEIN, and Dr. THOME, by J. MINSHULL.

Beautifully illustrated with 300 Original Engravings.

'LAND, SEA, and SKY' is offered to the Student of Nature as a guide to the understanding of phenomena; to the lover of the picturesque it appeals by the beauty and number of its illustrations; to the adventurous, as revealing wonders previously but dimly recognized, in many cases unknown; and to all as a carefully-prepared work of the greatest interest.

NEW SERIAL PUBLICATIONS.

GIBBON'S DECLINE and FALL of the ROMAN EMPIRE. With Dean MILMAN'S copious and valuable Notes, and numerous Engravings. In Sixpenny Monthly Parts. Parts I. and II. now ready.

The CHILD'S INSTRUCTOR; or, Learning Made Easy by Toys, Pictures, and Stories. A Comprehensive Work, partially planned on the now celebrated Kindergarten System of Toy Teaching and Play Learning. Profusely and beautifully illustrated. In Sixpenny Monthly Parts. Part I. now ready.

*** With Part I. is PRESENTED GRATIS a VALUABLE SUPPLEMENT, containing the necessary materials for the TOY TEACHING of the ALPHABET adopted under the Kindergarten System.

The ILLUSTRATED BIBLE for the YOUNG. With Questions and Explanations, 16 beautiful Coloured Plates, and 80 separate Pages of Engravings. In Sevenpenny Monthly Parts. Part I. now ready.

*** With Part I. is PRESENTED GRATIS a magnificent Steel Engraving (29 by 27), entitled "Behold, and see if there be any sorrow like unto My sorrow."

A COMPLETE CATALOGUE of WARD, LOCK & CO.'S Publications, comprising about 2,000 Volumes in all departments of Literature, together with Prospectuses of their Serial Publications, will be sent post free on application. Any quantities may be had of the latter for distribution.

London: Ward, Lock & Co. Warwick House, Salisbury-square, E.C.

SATURDAY, NOVEMBER 4, 1882.

LITERATURE

Conversations and Journals in Egypt and Malta. By the late Nassau W. Senior. Edited by his Daughter, M. C. M. Simpson. 2 vols. (Sampson Low & Co.)

Mr. Nassau Senior's Egyptian conversations will not interest the general public as his Paris volumes did, but for a certain class of readers they will possess a peculiar charm. To people who do not know a good deal about the dynasty of Mehemet Ali and the wheels within wheels upon which that dynasty rolled along and still rolls, much of Mr. Senior's volumes will be Greek; the characters who converse will be uninteresting, because unknown, and the subjects of debate will be dull, because their bearing upon history and present politics is not understood. But those who are tolerably familiar with the course of Egyptian history for the last fifty or sixty years and know something of the motives and ambitions of the various leaders who have guided Egyptian policy will find Mr. Senior's records of their conversations and of the common talk about them interesting and instructive; they will acquire an insight hitherto unattainable into the aims and dispositions of the rulers of Egypt, and into the real issues of many of the vital questions raised by the internal government and foreign relations of the several viceroys.

How far such records should be encouraged is another matter. At first it does certainly seem a doubtful proceeding to listen to a man's conversation and then quietly note it down for eventual publication. We wonder how many people were bastinadoed or "sacked" into the Bosporus for Mr. Senior's Turkish journals, and even in the present instance it may be questioned whether some of the remarks of living persons might not have been omitted with advantage. It is true there is very little to compromise anybody in the new volumes, and M. de Lesseps, the principal speaker who is still living, has compromised himself sufficiently without Mr. Senior's help; but still one may hope that the distinguished people whose conversations are fully reported were previously warned, like prisoners, that anything they might say would be used against them. That they were so warned in most instances appears probable from their style, which reminds one a little too much of Lord Lyons's friendly and quite impromptu chats with M. de Freycinet in a recent Blue-book. Indeed, Sa'îd Pasha avowedly set himself to furnish *une belle page* for Mr. Senior's journal, and there is more than one hint that other people may have also talked for effect. If this was so the injury is more to the public than to the speakers; for their conversations, instead of being the easy, frank revelations of soul to soul that they profess to be, assume something of the aspect of a letter to a friend which he is "at liberty to publish."

The period at which the journals were written was peculiarly interesting. Mr. Senior went out to Egypt in 1855 as a friend of M. de Lesseps, and as an amateur associate in the tour of exploration made in that winter by the commission for inquiring into the feasibility of the Suez Canal. He went to Cairo, struck across to Suez, came back to spend three months in the capital, left Egypt in the middle of March, and, stopping three weeks at Malta, returned to England in April, 1856. He was thus in Egypt just when French influence was becoming paramount. Abbâs Pasha, the brutal *protégé* of England according to M. de Lesseps, was dead, and the new viceroy, Sa'îd, was devoted to France. Thenceforward France ruled the policy of Egypt; from this date begin the immense public works, the railways, docks, telegraphs, the Suez Canal, and the debt. When Mr. Senior was in Cairo the railway was just completed, the projected canal was being surveyed, the Barrage du Nil was in progress, and the treasury had not begun to depend upon foreign loans. The greater part of these volumes is filled with debates upon the changes going on, and nothing more confusing than the diversity of opinion expressed by Mr. Senior's friends can be imagined. The French engineers, Mougil and Linant Beys, agree with M. de Lesseps in lauding Mehemet Ali, abusing Abbâs, and admiring Sa'îd; Consul-General Bruce abuses Mehemet Ali, but is not very clear about the conflicting claims of Abbâs and Sa'îd; Consul Walne praises Abbâs and vilifies Sa'îd, and the American consul Cahil Bey follows suit; while Hekekyan Bey, an Armenian (an excellent man, but a notorious chatterbox) who was dismissed from office by Abbâs and not restored by Sa'îd, abuses everybody, except himself, indiscriminately.

For example, here is M. de Lesseps's panegyric on Mehemet Ali, delivered, it must be allowed, in presence of the subject's grandson:—

"Napoleon always boasted that he went with his age. Mehemet Ali went far and far beyond it.....When, in opposition to England, Mehemet Ali became Pasha, the canals on which the existence of Egypt depends were going fast to ruin. The country was unsafe, the population was diminishing; all was misery and ignorance. He restored the canals, he fertilized the country, he increased its population and its wealth, he made it safe, he made it powerful; and if England, partly deceived by Russia, and partly in pursuance of her old jealousy of France, had not interfered, he would have made it still more powerful. He raised it from being one of the lowest to be one of the first Mussulman countries in the world, the only one in which wealth, knowledge, and education are advancing."

A little further on Mr. Bruce remarks:—

"The improvement of this country was begun at the wrong end. Mehemet Ali tried to make his subjects soldiers and sailors and cotton spinners and sugar-makers, instead of improving them morally and intellectually. He tried to spread a varnish of civilization over their barbarism."

There is truth in both views, but it needs some acquaintance with Egypt and Egyptian affairs to reconcile them; and the drawback to Mr. Senior's book is that he never attempts to reconcile them. There is hardly a single opinion in the two volumes which is not contradicted in some other page. Sometimes three or four different versions are given of matters of fact, like Sa'îd's youthful assassination of a beggar, a ferryman, or a claimant, according to different but quite positive statements; or Abbâs's murder by two or five men, or his death by apoplexy, according to equally well-informed sources! Mr. Senior puts them all down, and never gives an opinion or tries to verify or confute them. The result is a remarkable impression of truthfulness, but also a sense of doubt and uncertainty. In Egyptian figures and diplomacy uncertainty is unavoidable; but in facts and characters it ought to be possible to get at the truth.

But Mr. Senior never attempted to get at the truth or to see all round a question. His informants are one-sided. French consuls and English consuls have their prejudices; Armenians and other Eastern Christians are often liars; and Mr. Senior never conversed with a Mohammedan, if we except a couple of European renegades who enjoyed a queer reputation among their fellow countrymen. The most ignorant assertions about Islam and its disciples are commonly recorded throughout these volumes, without any counterbalancing statements from the Moslem side; and the word of an Armenian or a Frenchman is taken for the characteristic vices and virtues of Mohammedan races! Mougil Bey's advice about the treatment of a donkey-boy is typical of the whole book: "Until you thrash him you have not answered him in the only language which he understands. If you had used the stick at the beginning, you would have saved yourself and him much trouble." This is just the point of view from which the friends of Mr. Senior regarded the Egyptians; and the results of a long course of the stick, here recommended, have recently been brought forcibly before the eyes of the British public. Mr. Senior's friends are excellent examples of the European colony in Egypt; but their opinions are, for that very reason, to be taken with reserve. They represent one point of view, or two; but they do not show the entire scene.

But if the conversations are one-sided they are the opinions of a considerable and influential class, and of men whom we knew before. It is interesting to trace the various actors in previous books in this later part of their career. We remember Linant Bey as Lane's friend and companion in a Nile voyage in 1826, we hear of him again in Mrs. Poole's 'Englishwoman in Egypt,' and now we meet with him in Mr. Senior's circle of talkers. Then, again, it is pleasant to learn more of the figures in the viceregal family than earlier accounts could tell. Sa'îd's

wife is as charming to Mrs. Senior as she seemed to Mrs. Poole; but Nezlé Hanum, the daughter of Mehemet Ali, whom the "Englishwoman" found so gracious a hostess, has shown her teeth and made herself an evil reputation even among the unenviable characters of her relations. She is sadly changed, but still a striking personage:—

"She is now sixty-five: what remains of her are magnificent large black eyes, with long eyelashes, a yellow face, and the short thick figure which belongs to her family. She is said to be thoroughly tired of life, but to be in great fear of death; is never left alone, and never without a light."

There are many such interesting sequels to what we have all heard and read, but we have no space to quote more. The accounts of Sa'id in vol. i. p. 181, and vol. ii. p. 8, should be noticed; and the criticisms of English policy in vol. i. pp. 37, 207, and 252, are particularly worthy of study.

The book is mainly personal in its interest. Apart from *people*, it really tells us almost nothing. The trip up the Nile might just as well have never been made so far as any addition to our knowledge of the archæology or the scenery is concerned. Mr. Senior "did" Cairo, but has nothing noteworthy to say about it. At first he admires the totally inharmonious mosque of Mehemet Ali, but afterwards admits that its details are vulgar compared with true Arab architecture. He calls the mosque of Barkook (who, by-the-by, was not an "Ayoubite") a fine building, compares the court of Ibn-Tooloon with the "Tom quad" at Christchurch, and, generally speaking, treats Cairo as a Philistine should. His account of the Barrage is certainly amusing, and contains the novel information that the Great Pyramid was within an ace of being pulled down to build the locks! Mr. Maclean, however, one of the party, professed himself quite ready to "turn out a much better article" in a year if they would give him enough men to build it. But it is chiefly as a reporter that Mr. Senior will be valued. The conversations are admirable; the journal is neither new nor interesting. English readers have heard so much about the creaking of the *sâkiyehs* (not "sakeeyehs"), and the early marriages, and the infanticides and murders and oppression that everybody is weary of them. Moreover, Mr. Senior is evidently unsympathetic; he does not care for Egypt, and the consequence is that his readers will not care for what he says about it. "The more I see of Cairo," he writes, for once in his own person,

"the more I am inclined to hate all its living inhabitants except my own friends and acquaintances. I hate the shopkeepers, with whom every transaction is a negotiation in which you lose your time or your money; I hate the half-naked, one-eyed men, and the black or white veiled female spectres that jostle and dirty you in the muddy passages called streets; I hate the children covered with flies, the ungainly, complaining camels, the stumbling donkeys, the teasing donkey-boys, the unfortunate beggars, the dogs, the flies, the mosquitos, and the fleas. In short, I hate everything in or about Cairo, except the climate, the Nile, the desert, the scenery, the Citadel, and the Pyramids."

And the reader will hate everything in Mr. Senior's book except the conversations; he will not always like them. There is nothing else to like. There is no power of description, no skill in painting portraits, little humour, little knowledge of the kind that was wanted. There is just a remarkable power of recalling people's conversations, and nothing beyond. The people and the subjects are interesting, and precisely so far is the book interesting, and no further.

Mrs. Simpson appears to have edited her father's journals with skill and discretion. She could not be expected to know that "Salam aleykum" does not mean "Peace be between us," or that Hekekyan's using the salutation to a Moslem was an egregious breach of etiquette. But we really cannot see the point of the editorial quotation from the Psalms of "Though ye have lien among the pots," &c., *à propos* of pigeon towers. And it is impossible to help thinking that a great deal of the superannuated information about the chances of a Suez Canal and about the monuments of Thebes and Edfu, and the like, might have been advantageously curtailed. We should like to know who the English correspondent was who received 1,000*l.* a year from the Egyptian Government.

Recollections of Dante Gabriel Rossetti. By T. Hall Caine. (Stock.)

Mr. Caine's recollections of Rossetti are likely to stimulate rather than satisfy public curiosity concerning one of the most interesting and remarkable figures belonging to the present generation. That an ampler and a more elaborate biography is required Mr. Caine admits. The aim of his work scarcely extends beyond supplying the particulars of those closing years over which his acquaintance with the painter-poet extended. Such brief information as is furnished concerning Rossetti's earlier life has, of course, been obtained at second hand. This portion of the work is, however, trustworthy and moderately comprehensive. Light is now cast upon many events in Rossetti's life over which for the more discreet of his friends there hung a veil of mystery, and the conditions which made a recluse of one of the gentlest and most sociable of men are indicated.

Fairly accurate and lifelike is the picture of Rossetti in his declining years which Mr. Caine supplies. During two years Mr. Caine, who had never spoken to Rossetti, maintained with him a close correspondence upon literary and personal topics. After the pair once met acquaintance ripened into intimacy, until, at the close of eighteen months of affectionate intercourse, Rossetti died, supported on one side by his closest friend, Mr. Theodore Watts, on the other by his present biographer. To Mr. Watts the world looks for the life of Rossetti. Mr. Caine's recollections mean time supply the best portrait at present to be obtained.

So strong an influence was exercised by Rossetti over those who were at any time thrown into close intimacy with him, that it is difficult for them even now, while the sense of loss is yet fresh, to form a strictly judicial estimate of his character. One point stands, however, boldly out. Never before was there a man capable of producing highest work whose interest in the work of others, and especially of beginners, was so keen and sustained. For the Philistine Rossetti had complete and sublime indifference. So soon, however, as an effort was made to accomplish work in literature or in art, or at least in certain paths of literature and art, the aspirant might, if he chose, obtain the close sympathy, the affectionate interest, and the best and most deeply pondered counsel of one of the most clear-sighted of judges. In the large dimly-lighted studio in Cheyne Walk, at the late hours of the night or the early hours of the morning, many a would-be poet has been encouraged to read his productions to Rossetti, has been heard with flattering attention, and has found his work the subject of the sustained consideration of men to whom he had learned to look with reverence. By the next day, probably, would come a letter in a bold, clear, artistic calligraphy, suggesting alterations or emendations, with the framing of which Rossetti had occupied himself during his long hours of insomnia. Interest would not stop here. Not easy, indeed, is it to say where it would stop.

These particulars, better suited it might appear to an essay upon Rossetti than a review of recollections concerning him, serve, at least, to explain the kind of intimacy to which Mr. Caine's volume is due. A lecture upon Rossetti delivered by Mr. Caine in Liverpool was forwarded by him to the poet. It drew forth a warm and friendly response, accompanied by an invitation to call when next in London. The visit to London was long postponed, and an exchange of letters, which then commenced, served to convert into friends two men who had never met. Intimacies of this kind are, of course, far from unknown in literature. With Rossetti, indeed, who was always on the quest for unrecognized merit, and who was generous as Goethe in the bestowal of counsel, they must have been common. To the correspondence we owe the possession of some literary verdicts of Rossetti upon writers chiefly of the present century, from Keats and Shelley to Oliver Madox Brown. That the excerpts are not more numerous is, assumably, attributable to a feeling of modesty on the part of Mr. Caine. It is characteristic of all correspondence of Rossetti that allusions to his own work are few, those to the work of the man he addresses are continuous. Desire to avoid the appearance of self-advertisement may well have led to the omission of passages in which Rossetti thus effaces himself. Sooner or later, however, the world will demand intact so much of his correspondence as is preserved. About the early years of Rossetti's life, about the establishment of the so-called Pre-Raphaelite Brotherhood, the appearance of the *Germ*, and so forth, the full truth has yet to be told. It is to be hoped, moreover, that the facts concerning Rossetti's early career will be published while those are still alive who can supply truth instead of fable. More particulars of value as illustrating character than were to be expected are supplied by Mr. Caine. When, however, the first ten pages of the volume bring Rossetti under the potent influence of Mr. Ford Madox Brown and into association with Mr. Morris, Mr. Burne Jones, and Mr. Swinburne, it is obvious that the scale of the narrative is not adequate to

the final requirements of the public. Of the burial of the fair copy of Rossetti's poems in the grave of his wife and of its subsequent exhumation the account is meagre. It is scarcely probable that further details will be supplied. The most interesting portion of the volume is that in which Mr. Caine describes his first interview with Rossetti and narrates so much as he can recall of the conversation that then passed. Rossetti's thoughts are in this easily recognizable; the language is, however (unavoidably, it may be supposed), Mr. Caine's:—

"I asked if his work usually took much out of him in physical energy. 'Not my painting, certainly,' he replied, 'though in early years it tormented me more than enough. Now I paint by a set of unwritten but clearly-defined rules, which I could teach to any man as systematically as you could teach arithmetic; indeed, quite recently I sat all day for that very purpose with Shields, who is not so great a colourist as he is a draughtsman: he is a great draughtsman—none better now living, unless it is Leighton or Sir Noel Paton.' 'Still,' I said, 'there's usually a good deal in a picture of yours beside what you can do by rule.' 'Fundamental conception, no doubt, but beyond that not much. In painting, after all, there is in the less important details something of the craft of a superior carpenter, and the part of a picture that is not mechanical is often trivial enough. I don't wonder, now,' he added, with a suspicion of a twinkle in the eye, 'if you imagine that one comes down here in a fine frenzy every morning to daub canvas?' 'I certainly imagine,' I replied, 'that a superior carpenter would find it hard to paint another "Dante's Dream," which some people consider the best example yet seen of the English school.' 'That is friendly nonsense,' rejoined my frank host, 'there is now no English school whatever.' 'Well,' I said, 'if you deny the name to others who lay more claim to it, will you not at least allow it to the three or four painters who started with you in life?' 'Not at all, unless it is to Brown, and he's more French than English; Hunt and Jones have no more claim to the name than I have. As for all the prattle about pre-Raphaelitism, I confess to you I am weary of it, and long have been. Why should we go on talking about the visionary vanities of half a dozen boys? We've all grown out of them, I hope, by now.' I remarked that the pre-Raphaelite movement was no doubt a serious one at the beginning. 'What you call the movement was serious enough, but the banding together under that title was all a joke. We had at that time a phenomenal antipathy to the Academy, and in sheer love of being outlawed signed our pictures with the well-known initials.' I have preserved the substance of what Rossetti said on this point, and, as far as possible, the actual words have been given. On many subsequent occasions he expressed himself in the same way: assuredly with as much seeming depreciation of the painter's 'craft,' although certain examples of modern art called forth his warmest eulogies. In serious moods he would speak of pictures by Millais, Watts, Leighton, Burne Jones, and others, as works of the highest genius."

That Rossetti's life might have been spared for a dozen or even a score years but for his use of chloral hydrate few who knew the man doubt. His frame was robust, he had superb vitality, and lungs such as few mortals are fortunate enough to possess. According to Mr. Caine's account, Rossetti was in the habit of taking sixty-grain doses at intervals of four hours.

That a considerable portion of the volume should be about sonnets was to be expected. Rossetti had a marked preference for that form of composition, and to the influence he exercised the popularity the sonnet has acquired in recent years is in part attributable. Of the literary squabble which arose out of the article in the *Contemporary Review* signed "Thomas Maitland," Mr. Caine treats lightly. To him the explanation or retractation subsequently made seems adequate. He chronicles that Rossetti was touched by the dedication to himself in language of apology by Mr. Buchanan of the romance of 'God and the Man.' This, though true, is scarcely characteristic. Slow to form dislikes, Rossetti was still slower to be moved from them. Like many eminently peaceable men, he had a strong aversion from those who committed acts of violence. Never writing himself an ill-natured word concerning any one, and seeking rather to be helpful to every worker, the nature that could go out of its way to wound was to him detestable. In some cases in which he had been wantonly assailed he regarded as further offence an attempt to obtrude on him with an apology. "What have I to do with his apologies?" he said in one instance. "I never heard of the man before, and only ask to be left in ignorance of his continued existence." This was the nearest approach to sternness that his nature seemed capable of showing.

Mr. Caine has furnished a pleasant book, and a book that, thanks to its subject, must survive. It is to be regretted that he has written in so great a hurry that his style is often slipslop. He talks perpetually about "gifted" men. Once, indeed, he quotes the objectionable word from Rossetti, who can only have used it in banter. Such words or phrases as "The bye-ways of English poetry," "By-the-bye," and the like are not pleasant. A man who desires his books to be read by the highest class of readers should avoid such slovenliness of speech.

Der Buddhismus und seine Geschichte in Indien. Von Heinrich Kern. Autorisirte Uebersetzung von Hermann Jacobi. (Leipzig, Schulze.)

If a scholar of such eminence as Prof. Kern undertakes to write a history of Buddhism, it is a foregone conclusion that, however much we may demur to some—nay, to all—of the results at which he has arrived, we may still learn a great deal. Prof. Kern tells that in a "weak moment" he engaged to write a history of Buddhism, and this promise he was not disposed to break. He goes on to remark that it is not because he had to set forth new views he has written the book. We most willingly acquit Prof. Kern of any such motive, and the only question before us is if he has availed himself of all means to write a history of Buddhism. We may answer the question, so far as the printed literature is concerned, in the affirmative. But it is well known that the printed literature forms only a very small part of that actually existing. We also know that the older books especially, such as Spence Hardy's 'Manual of Buddhism,' were not compiled from original sources, but were mostly based on personal observations.

It seems to us that in writing a history of Buddhism the author should search for the chronological order of the writings. It is well known that two great recensions of the sacred books exist, the one written in a peculiar Sanskrit dialect, the so-called North Buddhist recension, the other in Pāli, the South Buddhist. Prof. Kern does not even attempt to examine which is the earlier; it seems as if he believes the recensions to be contemporaneous, though it is only from his silence on these matters that we can draw this conclusion. He further quotes from a work, the 'Milinda Paṅha,' belonging to the second century after Christ, as if it gave a clue to the earliest teachings of Buddhism; and in the reconstruction of the life of Gotama we find him quoting the introduction to the 'Jātaka' book, written about the sixth century of our era in Ceylon. The descriptions of Chinese pilgrims and Tibetan biographies of the Buddha are all adduced in support of a theory of which we shall have to speak presently. However, our author never consults the unpublished literature which is still lying in manuscript. If he had done so it would have led him to some very different conclusions.

Prof. Kern arrives at some strange results. The life and teaching of the Buddha are only the outcome of a popular sun-myth, Buddha is the sun-hero, his disciples are planets and other heavenly bodies, his temptations are so many phases of the fight of light with darkness, the places in which the Buddha lived are as many stations as the sun makes on his journey, and we are treated accordingly to some etymologies. The teaching of the "Awakened" is also brought into connexion with the sun-hero. His community is not the actual Buddhist community, but it is identified with the inhabitants of the kingdom of Yama, the god of death, "who is only another form of the god of life." We are willing to admit that Prof. Kern could not have arrived at any other conclusions from his ill-chosen materials. Our author himself regrets that he has treated the other great religious movement which took rise in India about the same time in a manner which throws little light on the relations of Buddhism and Jainism.

Prof. Jacobi, the translator, shows several times in the foot-notes, which he has been allowed to add, that a mythological explanation of some facts is not necessary through simply reverting to Jainism. The translator gives in his preface as his reason for rendering the book, that he thought the tribal language in which the book was written would impede to a certain extent its becoming widely known. We can sincerely sympathize with Prof. Jacobi, who was the first to draw attention to the importance of Jainism, having to translate a book the contents of which are so diametrically opposed to his own view.

It is difficult to obtain through the perusal of the book any clear notion of what Prof. Kern's ideas are with regard to the historical growth of Buddhism. This growth, we are sure, he would not deny. We can easily understand that the founder of a religious movement has been afterwards endowed with divine attributes. It would be, however, contrary to experience that an original sun-hero should be made the founder of a religious or a philosophical sect. From the

XUM

fact that he has been invested with divine attributes we have no right to draw conclusions as to his original personality. Into this mistake, however, Prof. Kern has fallen, and this mistake he has kept up throughout the book.

The English Scholar's Library.—Richard Barnfield's Poems. Edited by Edward Arber. (Birmingham, published by the Editor.)

THE neglect into which Barnfield's poems have fallen is in great measure due to himself. A poet who begins his career by taking Virgil's Second Eclogue as his model cannot be congratulated on his choice of subjects, yet for refinement of diction and delicacy of treatment Barnfield has few equals among the minor Elizabethans. When we remember that 'The Affectionate Shepheard' was written at the age of twenty, it seems extraordinary that the writer should have done so little afterwards; but perhaps there is small cause for regret. In his early manhood George Wither sang blithely, but, though he continued writing to the end, he was seldom "able to recapture the first fine careless rapture" of Philarete's praises. William Browne gave us 'Britannia's Pastorals' and the 'Shepheard's Pipe' before the age of thirty, and then we hear no more of him; there is no evidence to show whether he died young or lived to a hundred. Of Barnfield's biography the facts are meagre enough, but even less information has been vouchsafed us in regard to far more illustrious names. He was baptized in June, 1574, as appears from the parish register of Norbury, near Newport, Shropshire; and when his mother died in March, 1581, he was tenderly nurtured by his aunt, Elizabeth Skrimsher. At the age of fifteen he matriculated at Brasenose College, where in 1592 he took his B.A. degree. It has been supposed that he entered Gray's Inn on coming to town, but proof of this is wanting. In November, 1594, 'The Affectionate Shepheard' was published; and his second poem, 'Cynthia,' appeared two months later. The 'Encomion of Lady Pecunia' was issued in 1598, and another edition, containing some additional stanzas, was brought out in 1605. From this time forward he ceased to write, or at least to publish, and, retiring into Staffordshire, lived the life of a country gentleman until the end came in 1627.

It is mainly owing to the association of his name with Shakspeare's that Barnfield has been kept in remembrance. The sonnet "If Musique and sweet Poetrie agree" and the ode "As it fell upon a day" were published by W. Jaggard in the 'Passionate Pilgrim,' 1599, as Shakspeare's. That they undoubtedly belong to Barnfield has been shown over and over again, and the arguments (which we need not recapitulate here) are fully given by Mr. Arber. It is curious that when the authorship of the ode was discovered so little should have been done to atone for the neglect into which Barnfield's name had fallen. The extraordinary rarity of his poems doubtless accounts to some extent for his obscurity. Of 'The Affectionate Shepheard' only two copies are known to exist; 'Cynthia' and the first edition of the 'Encomion of Lady Pecunia' are, so far as has been discovered, unique; and there are but three copies, one of which is imperfect, of the second edition of the 'Encomion.' In 1876 Dr. Grosart issued a complete and very handsome edition of Barnfield's poems, the number of copies being limited to about forty. There had been previous reprints of separate pieces, but these had become very scarce. Mr. Arber therefore deserves thanks for making these poems accessible.

It is an ideal pastoral world of which Barnfield sings. As we read his pages we can hear the tinkling of sheep-bells and sniff the fragrance of new-mown hay. We may be sure that the poet had a genuine taste for clouted cream and perry and syllabub. Born in easy circumstances and not obliged to write for a livelihood, he moves gaily and jauntily among the throng of Elizabethan workers. Like his friend Michael Drayton, he is quick to recognize the merits of his contemporaries, and he is never happier than when he is paying compliments. He has not the exquisite fantastic grace that we find in the 'Nymphidia' and portions of the 'Muses' Elysium'; but ordinarily his touch is lighter than Drayton's, and we meet with none of those harshnesses of construction that mar so much of his friend's best work. The same fault that we have to find with Drayton's eclogues may be charged against 'The Affectionate Shepheard'; the luxuriance should have been pruned, we are cloyed with too much sweetness. But the delightful quaintness of the verses leaves no time for fault-finding; every one feels a kind of child's pleasure in reading such lines as the following:—

And when th' art wearie of thy keeping Sheepe,
Upon a lovely Downe (to please thy minde)
Ile give thee fine ruffe-footed Doves to keepe,
And pretie Pidgeons of another kinde:
A Robbin-red-brest shall thy Minstrell bee,
Chirping thee sweet and pleasant Melodie.

Or if thou wilt goe shoote at little Birds
With bow and boult (the Thrustle-cock and Sparrow)
Such as our Countrey hedges can afford 's,
I have a fine bowe and an yvorie arrow:
And if thou misse, yet meate thou shalt [not] lacke;
Ile hang a bag and bottle at thy backe.

Wilt thou set springes on a frostie Night
To catch the long-bild Woodcocke and the Snype?
(By the bright glimmering of the Starrie light)
The Partridge, Phaesant or the greedie Grype?
Ile lend thee lyme-twigs and fine sparrow calls
Wherewith the Fowler silly Birds inthralls.

Or in a mystie morning if thou wilt
Make pitfalls for the Larke and Pheldifare,
Thy prop and sweake shall be both over-guilt;
With *Cyparissus* selfe thou shalt compare
For gins and wyles the Oozels to beguile,
Whilst thou under a bush shalt sit and smile.

The 'Encomion of Lady Pecunia,' while it testifies to the writer's sprightly and genial temperament, is remarkable for felicity of language and rhythmical fluency. Though Barnfield's collected poems make but a very thin volume, they will yet hold a place of their own so long as Elizabethan literature continues to be seriously studied.

The Works of Henry Fielding, Esq. With a Biographical Essay by Leslie Stephen. 10 vols. (Smith, Elder & Co.)

HERE, in ten portly and imposing volumes, are the entire works—plays, novels, poems, essays, legal papers—of Byron's "prose Homer of human nature." No expense has been spared to make the edition worthy of its matter and its subject. The type is clear and comely; the paper is thick and brilliant; the covers, of brown buckram relieved by a parchment label, are workmanlike and neat; Mr. Small has illustrated the novels with some forty designs, elaborately cut and reproduced as India proofs; Mr. Leslie Stephen has contributed an admirable introductory essay; and the English edition is limited to a thousand copies. The change from Roscoe's penurious issue and from the vulgar poverty of a cheap reprint is striking. Fielding took rank among immortals even while he lived and wrought; and time, in spite of Richardson's illiberal charity and Johnson's honest disregard, has but strengthened his claims and improved his position. The issue of the present edition—an *édition de luxe* in every sense of the term—is a kind of official recognition of the admiration which has been his portion all along. Thanks to its publishers, he has become one of the saints of the library as well as one of the world's novelists. His canonization is complete; the last honours have been bestowed, and his reception into the hierarchy is an accomplished fact. He need no longer be read in the blunt type and blurred pages of Murphy and Chalmers, nor in the pale ink and yellow paper of original editions, nor in the dog's-ears and meagre margins and dreadful double columns of popular reissues. The greatness now thrust upon him is at once impressive and engaging. In his new guise he appears as one of the handsomest and noblest classics in the language.

With so much to praise—and justly praise—it seems ungraceful to condemn. The edition has been projected on so opulent a scale, and is in certain ways so complete and honourable a success, that to find fault with it at all is to run the risk of appearing hypercritical, and even unjust. On reflection, however, it is impossible to reject the conclusion that the enterprise is remarkable rather for liberality and enthusiasm than for taste and judgment. To begin with, the size of the volumes raises objections, and objections that are neither to be gainsaid nor despised. Fielding is, before all things else, a writer to be studied. He wrote for the world at large, and he wrote to the end that he might be read, and read continually. His matter, his manner, the terms of his philosophy, the quality of his ideals, the nature of his achievement, proclaim him popular. Like Scott, like Cervantes, like Shakspeare, he claims not merely our acquaintance, but an intimate and abiding familiarity. He has no special public, and to be only on nodding terms with him is to be practically dead to his attraction and unworthy of his society. He worked, not for the boys and girls of an age, but for men and women of all time; and both as an artist and as a thinker he commands unending attention and lifelong friendship. He is a great inventor, an unrivalled craftsman, a perfect master of his material. His work is the record of a lifetime of varied experience, of keen observation, of unwearying intellectual endeavour. The types he created are vigorous and sound, with an intellectual flavour peculiarly their own. His novels teem with ripe wisdom, and generous conclusions, and improving examples. He has, as Mr. Stephen remarks,

"the undeniable merit of representing certain aspects of contemporary society with a force and accuracy not even rivalled by any other writer." Not to have studied him "is to be without a knowledge of the most important documents of contemporary history." It is evident that such a writer is not one to be skimmed and laid aside, and that it is doing his admirers doubtful service to present him in any but the handiest of forms. Now this is exactly what has come to pass in the present edition. It is sumptuous, but it is unwieldy. It is inaccessible without a reading-desk and a library chair. To peruse it is to engage in the performance of a literary solemnity. We consider it with a respectful admiration; and we think, with a mixture of envy and regret, of the editions of Alphonse Lemerre and the delightful *bouquins* produced by Jouaust at the Librairie des Bibliophiles. What was wanted was a Fielding that could be comfortably held and easily perused, and that, while an ornament to the shelf, would not on occasion have proved impossible to the pocket—a Fielding with whom the reader might converse at odd hours of the day or night with the affectionate freedom that is his due. What has been achieved is a Fielding to be superbly bound and gilded, honoured with a prominent place in the library, and venerated for his appearance—a Fielding to be revered at a respectful distance, like a colossal Pharaoh or Mr. Addison's celebrated tragedy of 'Cato.'

Another point on which we regret to find ourselves at variance with the publishers of the new Fielding is the illustrations. It is at all times difficult to understand why the library edition of a great writer should be held incomplete without pictures; and the difficulty is increased tenfold when the great writer enjoys such a position as is Henry Fielding's. In the first place it is not doubtful that if Fielding wrote for any class of readers in particular, it was for readers who were interested in his work not as a vehicle for illustrations, but, primarily and essentially, as literature, and that, could we suppose him to have been consulted in the matter, he would be mortified to find that after over a hundred years of popularity his novels are held to stand in need of adventitious assistance. Again, 'Tom Jones,' and 'Jonathan Wild,' and 'Amelia' have been classics for many years; we know them intimately, and we have formed as definite a conception of the appearance of their heroes and heroines as we have of the men and women of Shakspeare and Cervantes themselves; and it is certain that the artist who essays to improve upon our imaginings for us, or to thrust them out to make room for imaginings of his own, is doomed in advance to failure. Moreover—and this is perhaps the strongest argument of all—there is a gap between the present and that part of the past which it was Fielding's lot to represent for us, between the convention of to-day and the convention of a century and a half ago, between the age of Gladstone and the age of Walpole, that is, for all practical purposes, as impassable as Styx itself. The present is an epoch of sentiment; its ideals and ambitions are mainly emotional; what it chiefly loves is romance or the affectation of romance, passion, self-conscious solemnity, and a certain striving after the picturesque. In Fielding's time there was doubtless a good deal of sentimentality, for his generation delighted not only in Western and Trunnion and Mrs. Slipslop, but in Pamela and Clarissa and the pathetic Le Fevre. But for all that it was—at all events in so far as it was interesting to Fielding and in so far as Fielding has pictured it—a generation that knew nothing of romance, and was keenly interested in common sense, and took a vast deal of honest pleasure in wit and humour and a rather truculent type of satire. It is evident that such possibilities of sympathy and understanding as exist between a past of this sort and such a present as our own must of necessity be few and small. Their importance, too, is greatly diminished when we reflect on the nature and tendency of certain among the essential elements of Fielding's art and mind. The most vigorous and the most individual of these is, perhaps, his irony; the next is that abundant vein of pure intellectual comedy by the presence of which his work is exalted to a place not much inferior to that of such work as the 'Tartuffe' and the 'École des Femmes.' These rare and splendid qualities are distinguishing features in the best and soundest part of Fielding's work. Of irony he is probably the greatest English master; of pure comedy—the intellectual manipulation and transmutation of what is spiritually ridiculous in manners and society—he is, both in narrative and in dialogue, the greatest between Shakspeare and Mr. George Meredith. And with both our sympathy is, to say the least of it, imperfect in no small degree. We have learned to be sentimental and self-sufficient with Rousseau, to be romantic and chivalrous with Scott, to be emotional with Dickens, to take ourselves seriously with Balzac and George Eliot; there are touches of feeling in our laughter, even though the feeling be but spite; we have acquired a habit of politeness—a tradition of universal consideration and respect; and our theory of satire is rounded by the harmless generalities of Mr. Du Maurier on the one hand and the malevolent respectability of Mr. W. S. Gilbert on the other. A consequence of all this is that, in attempting the illustration of 'Tom Jones' and 'Jonathan Wild,' the modern artist enters on a task for which he is indifferently prepared, and in which he can at best achieve but an imperfect success. This is what has happened to Mr. Small. He is probably as good a draughtsman for wood as the publishers could have selected; in picturing the aspects and emotions of his contemporaries he is usually successful; he has the true sentiment of black and white; his invention is varied, his design expressive and sound. Yet of the forty pictures he has contributed to the new Fielding there is hardly one that does not seem inappropriate to his matter, and that does not act as a barrier between his author and his author's readers. It is not that the illustrations are bad in themselves. On the contrary, many of them are excellent. But they have little or none of Fielding's spirit, and they are in no sense in harmony with Fielding's work. In Thackeray or in Messrs. Besant and Rice, in 'Denis Duval' or 'The Chaplain of the Fleet,' they would be well enough; in 'Amelia' and 'Joseph Andrews' they appear misplaced, and their effect is discomforting. They have faults of their own, as, for instance, a certain indecision in invention, which has resulted in the production of two or three Westerns, half a dozen Joneses, several Jonathan Wilds, and a strange variety of Amelias and Sophias. But their chief fault is that they do not illustrate Fielding. Mr. Small has left his comedy to shift for itself, and has endowed him with picturesque and romantic qualities altogether foreign to his art and to the epoch in which it was produced. He ignores Lady Bellaston and Miss Matthews and Mrs. Ellison; he only shows us Col. Bath as a defeated duellist, and Sergeant Atkinson in the act of saving his master's life; to him Capt. Blifil is but a body to be carried upstairs, and Jones a slim young gentleman to be presented under the influence of violent emotion; he has made nothing of Partridge, nothing of the Ordinary, and next to nothing of Mr. Abraham Adams; and for one picture of Lady Booby conceived in something of the right spirit he has given us half a dozen of Sophia which are merely pretty and clever and accomplished. And just as he has suppressed the element of comedy so has he exaggerated the element of incident. His picture of Joseph Andrews, stripped and abandoned, has the gloom and the terror of a design for 'Eugene Aram'; he has drawn us three or four duels, as many bouts at fisticuffs, and a couple of highway robberies; his sketch of Jonathan Wild picking the count's pocket might illustrate a melodrama in a Strand theatre; his presentment of Booth in prison is like a page from a modern novel in the manner of 'Oliver Twist.' His designs, in one word, are suggestive now of a Fielding who wrote for the Adelphi, and now of a Fielding who lived at Bedford Park. The impression, as may be imagined, is peculiar. To this may be added that, though fairly well engraved, they are, on the whole, ill printed. For the reproduction of such trenchant contrasts as those in which Mr. Small indulges such a medium as India paper seems improper. It is soft and spongy, and it absorbs and spreads the ink, so that an impression is often produced of vagueness and indecision. It is probable that a better effect might be obtained with ordinary plate-paper, which is hard and glossy, and permits of a great deal of clearness of outline and transparency of darks and shadows. For the selection of wood engraving in preference to etching as a means of illustration the projectors of the edition deserve a great deal of praise; and we cannot but regret that their venture should be unfortunate—as in certain ways it undoubtedly is.

In addition to all this it must be admitted that the editing of the new Fielding is by no means so scholarly as was to be desired. The arrangement is entirely arbitrary; the text, save that in 'Amelia' a few suppressed passages have been reprinted, appears to be mainly that of Arthur Murphy; of annotations and explanations, which are absolutely indispensable to a correct and complete understanding of Fielding, and which, judiciously supplied, would have gone far to make the edition final, there is not one in all the ten volumes. That these are defects, and grave

ones, will readily be granted. They are blemishes, too, that were hardly to be looked for in such an elaborate publication as the present. To the absence of critical and historical annotations we have just referred; and we shall add no more than that, in our opinion, it does away with any pretensions to finality the edition might have been supposed to possess. Scarce less noticeable are the vices of arrangement. 'Tom Jones' (1749), the author's second novel, is printed first; it is followed immediately by 'Amelia' (1751), which was his last; and this in its turn is succeeded by 'Joseph Andrews' (1742), which was his first. In the same volume with 'Joseph Andrews' appears the 'Journey from this World to the Next,' which first appeared in the second volume of the 'Miscellanies,' published in 1743; while the fifth volume is composed of 'Jonathan Wild,' originally printed as the third volume of the 'Miscellanies,' and of Fielding's contributions to the *Champion*, which appeared in 1739–1740, two or three years before. The sixth volume contains, in the order specified, thirty-seven articles from the *Covent Garden Journal* (1752), against the twenty-six reprinted by Murphy; the ten numbers of the *True Patriot* (1745) included in Murphy's edition; the two numbers of the *Jacobite's Journal* (1748) republished by Murphy; the 'Philosophical Transactions' (1743); the essay 'Of the Remedy of Afflictions'; the 'Dialogue between Alexander the Great and Diogenes the Cynic,' the 'Interlude,' and the essays on 'Conversation,' 'Character,' and 'Nothing' (1743); and the 'Clear State of the Case of Elizabeth Canning' and the 'Case of Bosavern Penlez,' which appeared full ten years later. The seventh volume opens with the 'Voyage to Lisbon,' which is a posthumous publication; passes on to the 'Charge to the Middlesex Grand Jury' and the 'Inquiry into the Causes of the late Increase of Robbery,' which date from 1751 and 1753 respectively; and after presenting us with the early prefaces to 'David Simple' and the 'Familiar Letters,' continues with the 'Translation of the Second Olynthiac' and the 'Poems,' included in the 'Miscellanies' in 1743, and concludes with the translation of Juvenal's Sixth Satire, which is one of Fielding's first performances. The last three volumes are devoted to the plays, and include — very properly — the two pieces first printed among the 'Miscellanies.' It is to be noted that the dates of production are not always given, and that the editor has very wisely prefaced each play with a statement of the cast. Where much is wanting one is apt, in the nature of things, to feel grateful for little.

Of Mr. Stephen's introductory essay we can speak in terms of almost unqualified approval. It is not so hearty and cheerful as the excellent note on Fielding contributed to one of the series of 'Hours in a Library'; it repeats unquestioningly the old, old story of the Fielding portrait; it comments upon Lady Mary's estimate of Fielding and Horace Walpole's malevolent *historiette* as though the lady's literary weaknesses and Walpole's fondness for decorating his gossip had no existence, and were not to be taken into the writer's calculation; and it errs a little in electing to consider its hero according to the canons of modern morality, in showing a trifle more interest in the religious influences that made him what he was than perhaps they deserve, and in declining to give a detailed opinion about Fielding's relations with his contemporaries, and particularly with his innumerable posterity. But, when all is said, it remains a piece of singularly good and able work, and one of which even its author may well be proud. It bears in every sentence the stamp of acute intelligence and great literary tact; it is full of wit and humour, of excellent criticism, and of kindly and generous feeling; it abounds in happy phrases, and in just and pointed remarks on life and literature and morals. It may, without exaggeration, be described as the best and soundest estimate of Fielding that has yet appeared, in English or in any language whatsoever.

NOVELS OF THE WEEK.

The Lady Maud, Schooner Yacht. By W. Clark Russell. 3 vols. (Sampson Low & Co.)

Mrs. Raven's Temptation. By the Author of 'Dr. Hardy's Marriage.' 3 vols. (Bentley & Son.)

My Beautiful Daughter. By Percy B. St. John. (Maxwell.)

Weighed and Wanting. By George Mac Donald. 3 vols. (Sampson Low & Co.)

In 'The Lady Maud' Mr. Clark Russell comes nearer to a successful solution of the problem how to turn a ship's log into a novel than in any of his previous books. The incidents are more significantly connected, and the human and nautical interests of the story are this time perfectly blended. And though every reader must be disappointed by the choice the heroine makes between her two admirers, the author deserves much praise for the quiet skill with which he keeps the issue dark till quite the end of the book. The Lady Maud is a schooner yacht belonging to Sir Mordaunt Brookes, and her voyage to the West Indies is undertaken for the benefit of Lady Brookes's health. The narrator is a guest on board, and so is the heroine, Ada Tuke. These four, with the surgeon, a lady's maid, and an attractive Irishwoman who is saved from a wreck at the beginning of the second volume, make up what may be called the domestic group of passengers. They are all well drawn, with individuality as well as consistency. But here and there the portraiture suffers from too much insistence upon flat and uninteresting details. A truer proportion is observed in the treatment of the sailors' characters. Purchase, the drunken captain of the yacht, is a particularly good sketch, while nothing could be better than the progressive indications of Sir Mordaunt's reluctant passage from blind confidence in this man to remorse when his mistake has involved the whole party in tragic disaster. These things invite especial notice because they mark a very real improvement in those parts of Mr. Russell's work which have hitherto been most open to criticism. It remains to be said that he has lost nothing on the side on which he has always succeeded. His descriptions of the terrors and the glories of the sea have all their accustomed vigour and charm, and he is not less liberal than heretofore of exciting adventures and almost miraculous marvels. The episode of the rescue of three men and a woman from a wreck in mid-ocean is not only excellently managed in itself, but is most artistically introduced by means of a mirage that reveals the position of the distressed ship to the yacht's crew. The picture of this mirage is as fine as anything that Mr. Russell has ever written. He has thrown into it his best powers, both of imaginative and realistic description, and the result is a scene in which natural effects and supernatural suggestions are admirably combined. Another point in which this book shows improvement upon former works is the greater finish of the style. There is a gain in reserve and in simplicity. There are no parenthetic girdings at abuses and persons not in favour with the author, and there are fewer digressions of all sorts. The sentences are terser and suppler, and many of the periods are really graceful. Among many passages that are tempting to cite in illustration of this improvement in literary form there is none which shows it better within convenient limits than this quiet picture of the yacht clearing the Solent:—

> "She made no noise; the merest seething of foam came from the direction of the cutwater; the pale blue surface alongside was only just blurred by the motion of the yacht; but astern her passage was denoted by a long line of eddies and revolving bubbles, which broadened out like a fan, until the extremity resembled a faint puff of steam, amid which the heads of the little windy ripples flashed like dew upon grass over which a shred of mist is crawling."

Of the three volumes the least good is the last. The particulars of the sufferings of the shipwrecked party are too often prosaic, and some painful pages are devoted to the analysis of morbid emotions connected with the bodies of the dead.

Whosoever wrote 'Dr. Hardy's Marriage' has also written 'Mrs. Raven's Temptation.' She has written it in the vein and under the auspices of Mrs. Henry Wood; and perhaps it may not be impertinent to add that internal evidences seem to stand in the way of her identification with Mrs. Wood. In any case she has produced a readable story, a story full of mystery and crime, of ghosts and changelings, of fortune-tellers and private detectives, of clairvoyants and conspirators. The stage business of the changelings is so artfully developed and modified—both at the same time—that it acquires something of the freshness of a new device; for there is a triangular duel of interchanged infants, and one case of deception is aided by the fact that the children belong to different branches of the same family, so that a natural resemblance of features assists the villainy of the plotter. The complications are elaborately made and unmade; but, to tell the truth, the whole story is very trivial, not to say ridiculous. The hardened novel-reader will not think these epithets inconsistent with the foregoing admission that 'Mrs. Raven's Temptation' is decidedly readable. However thin the plot of the book, it is written in flowing and vivacious English; and if the majority of the patrons of fiction refused to peruse everything of a trivial character, there would be much less work for novelists to do.

It was probably worth the publishers' while to reprint the novels of Mr. Percy St.

John, for it is conceivable that a numerous class of readers will be found for slapdash and slipshod romances like 'My Beautiful Daughter' and 'The Arctic Crusoe.' The present generation has too many writers of the same school, from the most sensational of the novelists who reach their audience through the circulating libraries down to the authors of melodramatic adventure-stories and tales of hairbreadth escapes by land and sea. But it may be questioned whether any of them excel in interest the originators of this peculiar style. Dozens may surpass them in literary form and in the natural construction of their plots; but these qualities, it is needless to say, are not precisely the qualities which make novels engrossing fer the lovers of thrilling sensation. Mr. St. John stands, at any rate, in the second rank of the originals. He is thoroughgoing, he is ghastly, his villains are unsophisticated, and his heroines are prodigies of rigid virtue and defiance. From this point of view he may be worth reprinting; but it must be confessed that his mannerisms are unpleasant and his improbabilities are mountainous.

As a story Dr. Mac Donald's last book is ill-balanced, the *dénoûment* being rather hurried, as if the author had grown tired of his characters. Yet perhaps the reconciliation of the austere Mr. Raymount with his ill-conditioned son could only have been effected by some such shock of remorse and self-contempt as is experienced by a proud man who has made a mistake. Of Cornelius a lifelike picture is drawn. Though he is common and shallow enough, his type is interesting to those whose hopes reach as far as the redemption of the common. As to this commonness hear our author: "It is my conviction that such an act of open disgrace as he had been guilty of" (he had forged his father's name) "may be the outcome of evil more easy to cast off than that indicated by home-habits embodying a selfishness regarded as a mere matter of course." To the self-righteous father and the self-indulgent son the mother and the sister are good contrasts. Hester, with a large measure of nobleness, comes short of the Christianity she is endeavouring to attain. She is right enough in discarding her lover Vavasor, but her interview with Vavasor's aunt speaks ill for her charity, not to say the courtesy of a young woman to an old one. The acrobat and his family must have been suggested by experience, and the death of poor Moxy in the cellar is powerfully told. Yet on the whole, the author's reputation as a novelist will not be increased by this work. Those who are familiar with his previous writings will expect a large humanity in his teaching. The flaw seems a certain undervaluing of the more conventional expression by which others have sought to inculcate the same moral. The very application of that idea of Michael Angelo which he cites should have led him to look below the surface of imperfect formulas.

CHRISTMAS BOOKS.

Belt and Spur: Stories of the Knights of the Middle Ages from the Old Chronicles. (Seeley, Jackson & Halliday.)

Sunday: Reading for the Young. (Wells Gardner, Darton & Co.)

The Children's Pastime. By Lisbeth G. Séguin. (Same publishers.)

The Fairy Tales of Every Day. By Harriet L. Childe Pemberton. (Society for Promoting Christian Knowledge.)

The Professor's Daughter. By A. Eubule Evans. (Same publishers.)

Una Crichton. By the Author of 'The Fortunes of Hassan.' (Same publishers.)

Alone in Crowds; or, Kindlup Tower. By Annette Lyster. (Same publishers.)

Out of the Shadows. By Crona Temple. (Same publishers.)

Miss Jean; or, Lives that Tell. By Margaret E. Hayes. (Same publishers.)

Ella's Mistake. By Laura M. Lane. (Same publishers.)

Jenny's Offering: a Tale. By M. C. E. (Same publishers.)

Grumble; or, How She wanted to Grow Up. By Mrs. Thomas Erskine. (Same publishers.)

Sally Tramp: the Story of a Mother's Prayer. (Same publishers.)

Golden Flowers; or, Simple Sunday Stories. By F. B. Harrison. (Same publishers.)

Ralph's Year in Russia. By Robert Richardson. (Nelson & Sons.)

'Belt and Spur' is a charming story-book for children, or perhaps we ought to say for young people between childhood and manhood, for it requires some feeling for historical perspective to enter into it. The stories are all of them except one—'Fulk Fitzwarine'—true in the main; they are, indeed, freely translated, with omissions, from contemporary annalists. The author says that as far as possible he has endeavoured to preserve "the spirit and style of the original." In this he has fairly well succeeded. There are no startlingly modern words, and the bad deeds of his heroes, though not brought out in very strong relief, are by no means hidden. War was the pastime of the Middle Ages, and was often followed quite as much for the delight it gave as for the substantial benefits which it was hoped victory would bring. A book like this, which is all about fighting, is well calculated to impress this fact on the understanding. There are seventeen short tales in the volume. They naturally vary much in merit. 'Prince Edward at the Last Crusade' and 'King Henry V. in France' are by far the best. The slaughter of the prisoners after Agincourt is, we may remark, not omitted. There is hardly anything that calls for unfavourable remark in the translation. We are told in one place that King William the Lion "called together his Parliament." We do not know what the Latin word may be that has been so rendered; "Parliament" is, however, in any case misleading, while "Council" could not have been misunderstood. There are several coloured illustrations in the volume, made after the manner of old illuminations. They are clearly not exact copies of anything mediæval, but as imitations they are worthy of praise. Reasonable attention has been paid to the costume of the ladies and the armour of the knights.

'Sunday' is a volume of pleasant reading for children; good type and fairly attractive pictures make it alluring to the eye. The child readers will doubtless not abstain from its perusal on weekdays.

'The Children's Pastime' appears to deserve the name: stories, hymns, songs, and accompanying music follow each other in pleasant mixture.

'The Fairy Tales of Every Day' have the great disadvantage, as the author points out, of following Miss Thackeray's 'Five Old Friends and a Young Prince.' Nevertheless youthful readers will follow with interest the adventures of the new Cinderella, Red Riding-hood, and the hero of the beanstalk.

'The Professor's Daughter' shows great improvement on the author's former work. There is much sprightliness in the sketch of the foibles of the rich old aunt and the feats of the little German professor. The shade of George Eliot falls upon the pages; the earnest young doctor is surely a descendant of Lydgate.

'Una Crichton' is a book to please girls, especially such as have not read Miss Fothergill's 'First Violin'; to them, perhaps, the doings of the artists in Dresden and the performance of Herr Luthardt's cantata may fall a little flat.

'Alone in Crowds' is the story of Amyas Lynwood, who was born at sea and reared on a desert island, then suddenly rescued and thrust into the world, where he finds his way to success and happiness. The effect produced by civilization on the mind of such a man is an interesting subject and well developed.

'Out of the Shadows' is what may be called a religious story. The scene opens on church decorations, and the rector and his sermons pervade the pages; but the rector is a dear old man, and his sermons are well worth listening to.

Miss Jean's story is told by her old nurse, with a tender lingering on details and a certain prolixity which are rather tiresome.

'Ella's Mistake' is a story with a moral: it is pointed against undue religious excitement, and its moral is not misapplied.

'Jenny's Offering' is the story of a child struggling between honesty and dishonesty, truth and falsehood. The somewhat exceptional little penitent makes a confidant of the clergyman, and by his help and advice she gets herself reclaimed.

'Grumble' is a fanciful tale of a child who, longing to do something to raise her father's fallen fortunes, goes out to look for the fairies, when a dream teaches her content.

'Sally Tramp' is a somewhat improbable tale of a long-lost child.

'Golden Flowers' is the fantastic title of a collection of stories the *motif* of each of which is a flower. The idea is fanciful, and not too happily developed.

'Ralph's Year in Russia' is a book intended to give young people some idea of the Russian Empire and its inhabitants. It is written in the form of a story narrating the experiences of an English physician who, having impoverished himself by speculating in Welsh mines, accepts a post in Russia. There he spends a year, accompanied by his wife, daughter, and son, and by an erudite governess and a faithful retainer. The adventures with which the family meet at St. Petersburg, Moscow, Novgorod, and in the country, and the stories which its members tell or are told, serve to make the volume sufficiently attractive to the youthful mind and to render palatable a considerable amount of useful information. What is said about Russia is correct enough, but the Russians who are introduced into the story are decidedly favourable specimens of their kind, and they talk English, even in outlying districts, with a fluency which is surprising. The tone of the book is thoroughly good, and it may be safely recommended for family reading.

OUR LIBRARY TABLE.

Brushland, by Mr. John Darby (Lippincott & Co.), is one of those little gossipy medleys, containing some study of nature, some humour, and some moralizing, in which Americans seem to delight, and of which from Thoreau onwards they have had a speciality. Mr. Warner's 'Summer in a Garden' is, perhaps, the best known and most popular book of this class. In that the humorous element predominates, and it is of a quality to which Dr. Garretson (for "John Darby" appears to be but a transparent concealment) cannot lay claim. Still there is a good deal of pleasant reading in 'Brushland.' It relates the doctor's experiences—whether genuine or invented there is nothing to show—during the reclamation of a tract of land in what appears to be the most unsatisfactory region, from an

XUM

agricultural point of view, in the whole of the Eastern States, the "Barrens" of New Jersey. He takes this up "as a speculation, and as a vantage-ground from which undisturbed we can look out on the question, What for?" The plural pronoun indicates the double personality which the doctor acquires by taking up the business of a swamp-farmer; and the two persons who are combined in him are thenceforth denoted as "Broadcloth" and "Corduroy." Perhaps when they get into a discussion both are apt to be a trifle priggish. However, "Corduroy" is the hero of the little narrative; and he tells it with so much spirit, of a queer New England kind, that the reader is almost inclined to go for a location in the Jersey Barrens himself, and "commence swamp-clearing just back of the barn." The following extract will give him an idea of the kind of work that he may expect:—"Work on sassafras-runners with a grubbing-hoe is a trying occasion. We had a full share of these roots. They are about as tough as a new-made hemp-rope, and not less full of turns and twists. The emphasis with which the tenant would bring a blow at a curl exceptionally bad had something of the smack of a wordless oath. My own whangs were not always without a spice of temper; while the frequently-repeated 'gosh darns' of the son were not at all times sufficiently removed from swearing to deceive a minister." However, the result was health, a good appetite, and "a crop of corn not surpassed for measure or quality, taking acre for acre, by any other in the state." So this doctor at least seems to have prescribed satisfactorily for himself.

M. Jules de Glouvet is an extremely clever and powerful writer, but it is not quite clear that he has been well advised in adopting, at least for a whole volume, the style of his *Histoires du Vieux Temps* (Paris, Calmann Lévy). They are supposed to be related by a certain Loys de Cussière, a survivor of the last days of the Hundred Years' War. The *pastiche* of language is clever, but it will hardly, we think, stand a very minute critical examination by that unsympathetic person the philologist or philologer, as he indifferently delights to call himself, and the ordinary reader may possibly find in it more difficulty than piquancy. On these matters, however, it is never safe to pronounce very decidedly, because individual taste enters too largely into them to make any general laying down of laws possible. The singular descriptive faculty which M. de Glouvet has displayed in his previous books reappears here to great advantage. The account, for instance, of the feast given to René of Anjou in the "Devis Premier" is excellently done, and may compare, in a very different order of things, with the vivid pictures of the great forests of France which made M. de Glouvet's reputation in his first book. Of higher merit is the power of maintaining and emphasizing an interest in the grotesque and horrible which appears in the "Devis Quatrième," which is entitled 'Le Chevalier Estrange.' Some short tales which compose the "Devis Cinquième" are also very good. Indeed, if it be necessary for the critic's satisfaction to draw a general literary moral from everything, it may be said that this book confirms the idea that experiments in *patois*, old language, &c., should always be short. In a work of "long breath"—and two of these *devis* occupy nearly three hundred pages between them—the constraints which the author imposes on himself and his reader have more leisure to make themselves felt.

Messrs. Cassell's new serial, *Greater London*, promises well. The letterpress is written by Mr. E. Walford. The first instalment contains a great deal of interesting information (why on p. 31 does Mr. Walford twice call Julius Cæsar "the emperor"?), and the illustrations are well chosen. A capital map by Mr. Stanford adds much to the value of the work.

Messrs. Macmillan send us the *Calendar of Queen's College* (Harley Street), which shows what excellent work that institution is doing.

We have on our table *First Twenty Years of Australia*, by J. Bonwick (Low),—*An Englishman's Views on Questions of the Day in Victoria*, by C. J. Rowe (Trübner),—*The Army Examination Series*, 2 vols., edited by C. H. O. Curtis (Fisher Unwin),—*Preparatory Book of German Prose*, by H. B. Boisen (Boston, U.S., Ginn & Heath),—*Latin Course, for First Year* (Chambers),—*Elements of Algebra*, by G. A. Wentworth (Boston, U.S., Ginn & Heath),—*The Wonders of Nature*, by Prof. Rudolph (Paisley, Gardner),—*The Scientific Evidences of Organic Evolution*, by G. J. Romanes (Macmillan),—*A School Course of Heat*, by W. Larden (Low),—*The Remote Antiquity of Man not Proven*, by B. C. Y. (Stock),—*The Psychology of the Salem Witchcraft Excitement of* 1692, by G. M. Beard (New York, Putnam),—*The Æsthetic Movement in England*, by W. Hamilton (Reeves & Turner),—*The Harveian Oration*, 1880, by J. W. Ogle (The Author),—*Uncle Pat's Cabin*, by W. C. Upton (Dublin, Gill),—*Clever Things said by Children*, edited by H. Paul (Bogue),—*Tributes to Longfellow and Emerson*, by the Massachusetts Historical Society (Trübner),—*Sea Pictures*, by J. Macaulay (R.T.S.),—*The Great Cranberry Quarrel* (S.P.C.K.),—*Beechwood*, by M. Davison (S.P.C.K.),—*Be Kind to your Old Age* (S.P.C.K.),—*Early Poems*, by J. S. Fletcher (Poole),—*Peace Triumphant, Poems*, by T. N. Millar (Glasgow, Dunn & Wright),—*Smithy Rhymes and Smithy Chimes*, by J. Senior (Sheffield, Leader & Sons),—*Storm-Drift*, by H. E. Clarke (Bogue),—*Shakespeare's Ricardo III.*, translated by De G. Macpherson (Madrid, De Fortanet),—*Träumereien*, by U. Rous (Thimm),—*Verlobung und Hochzeit*, by K. Lehmann (Munich, Kaiser),—and *Antiquæ Britonum Scotorumque Ecclesiæ*, by F. Loofs (Nutt). Among New Editions we have *The Elements of Jurisprudence*, by T. E. Holland (Frowde),—*Principles of the English Law of Contract*, by Sir W. R. Anson, Bart. (Frowde),—*Handbook to the Mastery Series*, by T. Prendergast (Longmans),—*Spasmodic Asthma*, by W. E. Steavenson (Bell),—*T Leaves*, by E. F. Turner (Smith & Elder),—and *Uncle Remus*, by J. C. Harris (Routledge). Also the following Pamphlets: *The Yâtrâs*, by N. Chattopâdhyâya (Trübner),—*Hothouse Education*, by J. A. Digby (Stanford),—*Organisation without Opinions*, by A. Herbert (Cassell),—*The Economics of Fair Trade*, by W. R. Herkless (Glasgow, Wilson & McCormick),—*My Lords Unmasked*, by Athos (National Press Agency),—*Evidence given before the Select Committee of the House of Lords on the Land Law (Ireland) Act*, 1881, by G. Fottrell, jun. (Dublin, Gill),—and *Science in Popular Education*, by T. Twining (Twickenham, Franklin).

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Fragments from the History of the Christian Church, from Clement of Rome to Clement of Alexandria, cr. 8vo. 3/6
Jenkins's (Rev. R. C.) Romanism, a Doctrinal and Historical Examination of Creed of Pope Pius IV., cr. 8vo. 5/ cl.
McArthur's (C.) The Evidences of Natural Religion and the Truths Established Thereby, 8vo. 3/6 cl.
Religion in the Light of Philosophy, cr. 8vo. 2/6 cl.
Shunamite (The), by C. G. S., cr. 8vo. 3/6 cl.
Teacher's Prayer Book, being the Book of Common Prayer, with Introduction, &c., by A. Barry, 18mo. 2/6 cl.

Fine Art.

Linton's (W. J.) The History of Wood Engraving in America, 4to. 31/6 cl.
Paton's (Sir J. N.) Compositions from Shakspeare's 'Tempest' and Shelley's 'Prometheus Unbound,' cr. 4to. 3/6 cl.
Scottish Loch Scenery, illustrated in Coloured Plates from Drawings by A. F. Lydon, imp. 8vo. 12/ cl.

Poetry.

Coster's (G. T.) Poems and Hymns, 12mo. 5/ cl.

Philosophy.

Spinoza, Four Essays, edited by Prof. Knight, 8vo. 5/ cl.

History and Biography.

Adams's (W. H. D.) Learned in the Law, or Examples and Encouragements from the Lives of Eminent Lawyers, 5/
Bramston (A. R.) and Leroy's (A. C.) Historic Winchester, England's First Capital, cr. 8vo. 6/ cl.
Buckland's (A. J.) Life of Hannah More, 3/ cl.
Correspondence of Sir Patrick Waus, of Barnbarrock, Knt., 1540–1597, ed. by R. V. Agnew, 8vo 21/ cl.
Cupples's (Mrs. G.) Memoir of Mrs. V. Jeypore, with a Sketch of her Father, Judge Fraser, of Lucknow, cr. 8vo. 3/6 cl.
Fitzgerald's (P.) The Royal Dukes and Princesses of the Family of George III., 2 vols. 8vo. 25/ cl.
Fuller (A.), by his Son, A. G. Fuller, cr. 8vo. 2/6 cl. (Men Worth Remembering.)
Haco's Expedition against Scotland in 1263, cr. 8vo. 6/ swd.
Hogg's (J.) Domestic Manners and Private Life of Sir Walter Scott, cr. 8vo. 6/ cl.
Hunter's (W. W.) Brief History of the Indian People, 3/6 cl.
Jahn's (O.) Life of Mozart, translated from the German by P. D. Townsend, 3 vols. 8vo. 31/6 cl.
Stoughton's (J.) William Penn, the Founder of Pennsylvania, 8vo. 7/6 cl.

Geography and Travel.

Allpress's (R. H.) Geography Questions, cr. 8vo. 2/6 cl.
Caledonia described by Scott, Burns, and Ramsay, with illustrations by J. Macwhirter, cr. 4to. 10/6 cl.
Kermode's (W.) Natal, its Early History, Rise, &c., as a Field for Emigration, cr. 8vo. 3/6 cl.
O'Donovan's (E.) The Merv Oasis, Travels and Adventures east of the Caspian, 1879–80–81, 2 vols. 8vo. 36/ cl.
Wilson's (Rev. J.) The Gazetteer of Scotland, 8vo. 7/6 cl.

Philology.

Crump's (H.) Colloquial Exercises in French Grammar, 2/6 cl.
Plato (The Republic of), Book 1, ed. by E. Hardy, cr. 8vo. 3/
Savage's (F. W.) French Examination Reader, cr. 8vo. 2/ cl.
Tacitus (Annals of), ed. by G. O. Holbrooke, 8vo. 16/ cl.
Thompson's (A. R.) Dialogues, Russian and English, 12mo. 5/
White's (F. A.) English Grammar, 12mo. 2/
Wrightson's (Rev. W. G.) An Examination of the Functional Elements of an English Sentence, cr. 8vo. 5/ cl.

Science.

Anderson's (J. W.) Lectures on Medical Nursing, 12mo. 3/6 cl.
Day's (R. E.) Electric Light Arithmetic, 18mo. 2/ cl.
Marshall's (A. M.) Owens College Course of Elementary Biology: Part 1, The Frog, cr. 8vo. 2/6 cl.
Politzer's Text-Book of the Diseases of the Ear and adjacent Organs, translated by J. P. Cassell, illustrated, 8vo. 21/ cl.

General Literature.

Alcott's (L. M.) An Old-fashioned Thanksgiving, 18mo. 3/6 cl.
Alcott's (L. M.) Proverb Stories, 18mo. 3/6 cl.
Alice through the Looking-Glass, and other Fairy Plays for Children, by K. Freiligrath-Kroeker, cr. 8vo. 3/6 cl.
Arnold's (Rev. J. E.) The Interpreter's House, and What I Learnt There, cr. 8vo. 2/ cl.
Blackmore's (R. D.) Lorna Doone, illustrated, *Edition de Luxe*, 4to. 31/6 cl.
Brabourne's (Lord) Ferdinand's Adventure, illus. cr. 8vo. 5/
Clay's (Lady) A Stranger in a Strange Land, 3 vols. 31/6 cl.
Coxhead's (E.) Birds and Babies, illustrated, 12mo. 2/6 cl.
Dimelow's (J.) Practical Bookkeeping, cr. 8vo. 3/6 cl.
Donaldson's (Mrs.) Home Duties for Wives and Mothers illustrated by Women of Scripture, 12mo. 2/ cl.

ENGLISH AUTHORS AND AMERICAN PUBLISHERS.

Crown Buildings, 188, Fleet Street, Oct. 31, 1882.

As Mr. Clark Russell's letter in the last number of the *Athenæum* does injustice to the firm of Harper & Brothers, of New York, by conveying the impression that it has printed unauthorized editions of his stories and without pecuniary acknowledgment, I beg leave to state:—

1. That the stories referred to were published by Messrs. Harper & Brothers from early sheets and by arrangement with Mr. Russell's London publishers, who had purchased all rights from the author.

2. That no story by this popular author has been published by Messrs. Harper & Brothers without payment therefor of an honorarium. It is the invariable custom of Messrs. Harper & Brothers to pay for early sheets of English works published by them.

3. That Messrs. Harper & Brothers have paid for Mr. Russell's stories thus far secured from his London publishers between two and three hundred pounds, a fact of which Mr. Russell had probably not informed himself when he wrote to the *Athenæum*.

4. Mr. Russell is perhaps unaware that the editions to which he refers were of the cheapest character, viz., 7½*d.*, and were sold in competition with unauthorized editions.

SAMPSON LOW.

30, St. James's Road, Brixton, Oct. 31, 1882.

MR. W. CLARK RUSSELL'S recital of his treatment at the hands of American publishers is so completely at variance with my own experience that possibly you will allow me a few words on the question at issue.

Is it probable that my brother author disposed of his copyrights, *i.e.*, of all rights, British and foreign, to his English publishers to begin with? This would explain why no money has reached him from America, where I am sure his clever stories would always command a high price for "advance sheets." If this be not the case, I am at a loss to understand the position, or to reconcile it with the liberal treatment, and in some instances the almost princely rate of pay, which Messrs. Harper, of New York, have awarded to English authors, as a rule for very slight advantages.

You, I am sure, will allow me at least to assert in my own case that Messrs. Harper have for many years published simultaneously in America all that I have written in the way of fiction here, and have paid handsomely for every line of it; in one or two instances—and English publishers will bear this in mind for all our sakes, I am sure—exceeding even the "scale of wage" agreed upon. F. W. ROBINSON.

*** A lady novelist also writes to us and confirms Mr. Robinson's account of the liberal treatment accorded by Messrs. Harper to English writers.

FIELDING'S PORTRAIT.

Oct. 30, 1882.

KNOWING nothing of painting and sculpture, I approach anything so accomplished a writer as Mr. Austin Dobson has to say upon those subjects with genuine diffidence. All I desired to ask was whether, even granting that Hogarth's portrait of Fielding was life itself, a sculptor could reproduce the whole face of a dead man from a profile likeness of him. Nothing is fuller of the unexpected than the human countenance, and I have seen a nose that looked in profile to be as long as a young carrot dwindle into a mere pimple in a full-face photograph. Were Fielding's eyes alike? Might not the right eye have had a droop, a leer, one knows not what, absent from the other? Were both eyebrows identical? Are all the suggestions a full view of the mouth would yield preserved in the extraordinary lips found in Hogarth's likeness? In truth, I cannot help thinking there is something of caricature in the portrait from which the bust has been or is to be modelled. Did any one ever see such a nostril in the human nose? Why, it looks to be a horizontal puncture, as though the owner had it done for a ring. Hogarth was very fond of noses of that kind. There is one in plate iv. of 'Marriage à la Mode'—see the little bow-legged old man polishing a pair of eye-glasses. But it is a sculptor's question; and if the thing *can* be done, then all that remains for me to do is to apologize for doubting its practicability.

W. CLARK RUSSELL.

THE HISTORY OF THE MATICE CZESKA'.

I.

THE history of a society is proverbially uninteresting; but in the case of the Matice Czeská the untoward political circumstances against which it had to contend, the extraordinary jealousy of a "paternal" government, and the fact that the Bohemian or Czeskish language had been proscribed for a couple of centuries, invest the history of the society with a peculiar interest. Indeed, its ups and downs exhibit a remarkable similarity to the gallant struggles of one of those exceptional individuals who are held up to admiration as prominent instances of "self-help."

The word "Matice" is one of the many Slavonic forms of the word signifying "mother," but it has also the special signification of "fund." The words Matice Czeská thus signify Bohemian Fund. Its object was and is the republication of old and the publication of new works of historical, scientific, practical, or literary value in the Bohemian language.

The unfortunate result of the battle of the White Hill in 1620, which drove Frederic, the "Winter King," the son-in-law of James I. of England, from his temporary throne, caused the suppression, not only of the liberties, but also of the language of Bohemia; nor was it till 1816 that the authorities allowed any notice to be taken of the native tongue in upper schools and universities. Sentiments at Vienna, however, were so hostile to any recognition of Bohemian nationality, that another decree in 1821 reduced that of 1816 to next to a nullity. Endeavours made by Jungmann and others to establish a "Bohemian Society" consequently came to nothing. But through the exertions of Francis Palacký, and the help of Counts Caspar and Francis Sternberg, the National Museum of Bohemia, which had been founded in 1818, commenced in 1827 to issue two magazines, a quarterly in Bohemian and a monthly in German, under the editorship of Palacký, who in April, 1829, was appointed "Historiographer to the Estates of Bohemia." Contrary to expectation, that in German languished, while that in Bohemian prospered. A project was also formed to publish an encyclopædia in the Bohemian language by means of a society, which was provisionally allowed by Count Chotek, the Grand Burggrave. But when Palacký and Jungmann in December, 1829, made their views known to the chief of the police, Chevalier Hoch, they were received with great kindness, but withal informed that unfavourable representations as to their sentiments were certain to be made at Vienna, and that the Emperor Francis, though ready to protect all existing institutions, yet entertained an innate distrust of new ones. Hoch therefore advised Palacký to attach the society for the publication of the encyclopædia either to one of the existing scientific or learned societies, or to the National Museum. This advice was followed, and in 1830 the Committee of the Museum resolved to form a special branch for the promotion of the Bohemian language and literature, naming as its council the three proposed editors of the projected encyclopædia, Jungmann, Presl, and Palacký. Prince Rudolf Kinský was appointed "curator" of the fund to be raised for these purposes, and Count Chotek authorized the issue of an appeal to the public for subscriptions. On January 1st, 1831, the Matice Czeská came into legal existence as a branch of the National Museum. Membership of the society was obtained by an annual subscription of a guinea in English money during five years or a single payment of five guineas. The first English member was Connop Thirlwall, the late Bishop of St. Davids.

The German monthly of the Museum having fallen through, the Council of the Matice took up the Bohemian quarterly in 1832. In 1832 also the fortieth anniversary of the accession of Francis I. was celebrated, and the Matice published a volume of poems in the Bohemian language entitled 'Voices (Hlasy) of Patriots with regard to March 1st, 1832,' as a proof of the loyal sentiments of the Bohemians. Copies of this were graciously received and acknowledged by the emperor and other members of the imperial family. This recognition of their work caused hopes of better things for their nation and language to arise in the hearts of Bohemian patriots; but a memorial setting forth the claims of the Bohemian language, which was presented on April 10th, 1832, only resulted in the prohibition of the use of the appellation "Matice," and in an underhand attempt to destroy the entire institution, which was happily frustrated by the prudent and conciliatory policy of Palacký. For a considerable time the Matice was termed the "Special Fund (*pokladnice*) of the Bohemian Museum for the publication of Bohemian Books."

In 1833 the Council of the Matice managed by the aid of wealthy and noble friends anonymously to ensure the celebrated Szafarzik the modest income of 48*l.* a year, which enabled him to move from an inferior and uncomfortable position in Hungary to Prague, where he proceeded to write his 'Slovanské Starozitnosti' ('Antiquities of the Slavonians'), a work which is one of the glories of the Matice.

In 1836 the Matice lost its curator, Prince Kinský, by death, but a worthy successor was found in Count Kolowrat Krakowský. About this time public interest in the Matice appeared to languish; very few new members joined it, and its financial condition was the reverse of prosperous. Still it managed to publish the great Bohemian dictionary of Jungmann in five huge and closely printed quarto volumes. This was the result of thirty years' labour—labour rendered greater by the fact that so large a portion of the authorities quoted was in MS. and not in print (1834–1839). About the same time (1834–1837) Szafarzik's 'Antiquities' was also published, but the Council of the Matice was compelled to ask permission of the Committee of the Museum to violate its statutes by expending a portion of its capital on the completion of these two great works. The required permission was granted on condition that the capital thus expended should be replaced without delay, a necessity which greatly fettered the further activity of the Matice.

The 'Antiquities' drew attention from every quarter. In 1838 a Russian and in 1842 a

Polish translation appeared, which were followed by a German translation in two parts in 1843 and 1844. Prague now became a kind of focus of literary reciprocity among the Slavonians. But at home things ran counter to the Matice, and the petition presented in favour of the Bohemian language in 1832, as above mentioned, received a decided rebuff in October, 1835. However, the Council did not lose heart, but elaborated arrangements for the future, projecting four series of works to be published by the Matice:—(1) The Old Bohemian Library, comprising MSS. and printed works from the rise of the national literature to its fall and proscription in the seventeenth century; (2) the New Bohemian Library, containing original works of a literary or scientific character; (3) the Classical Library, containing translations from ancient and modern classical works in various languages; and (4) the Home Library, consisting of simple works for domestic use. A. H. Wratislaw.

MR. G. A. CARTHEW.

The Norfolk and Norwich Archæological Society has sustained a severe loss by the death of Mr. G. A. Carthew, on the 21st ult., in his seventy-sixth year. He is the last of that remarkable band of local antiquaries of which Mr. Dawson Turner, Mr. Daniel Gurney, Sir John Boileau, the Rev. Charles Boutell, and Mr. Harrod were prominent members, and who did much towards reviving the taste for archæology and local history which is now widely spread in East Anglia. He was the son of Mr. George Carthew, solicitor, of Harleston in Norfolk, by Elizabeth, daughter of Peter Isaac, gentleman, of Wighton, and was born on the 20th of June, 1807. His father was a younger son of the Rev. Thomas Carthew, of Woodbridge Abbey in Suffolk, who, though a gentleman of large income and good position, seems to have made very small provision for the children of his second wife, of whom the Harleston solicitor was one. The result was that young Carthew's education was somewhat defective, and that he had to make up by painful study for the lack of early training. He used to say that he only acquired a little Latin at a private school at Wells in Norfolk, and that he had to learn good manners elsewhere. He was articled to his father when very young, and from him he acquired his love for genealogical and historical research. While still in his articles he fell in with a collection of charters once belonging to Mendham Priory in Suffolk, and though there were in those days few of the helps which are now readily accessible to the beginner, he resolutely set himself to master the contents of the precious parcel, and he actually spent years in deciphering, copying, and analyzing the large mass of ancient documents which fell into his hands. He was rewarded by finding himself perfectly familiar with the writing of the thirteenth and fourteenth centuries, and it was not long before he had gained for himself a reputation as an expert "black-letter lawyer." Unfortunately, clients did not come so often as other seekers for information. Both father and son were unworldly men, and the younger Carthew was glad to accept a partnership at East Dereham in 1839 and to start on a new venture. He had hardly settled at Dereham when he conceived the design of collecting materials for a 'History of the Hundred of Launditch,' at which he laboured for nearly forty years, and which will long remain a conspicuous monument of his indomitable perseverance and industry. When the Norfolk and Norwich Archæological Society was started under the presidency of Bishop Stanley in 1845, Mr. Carthew's name appeared as one of the local secretaries; and at what was in effect the first general meeting of the society in 1846 he read a paper on the architectural peculiarities of the church of Great Dereham. From that time till his death rarely did a volume of the *Norfolk Archæology* appear without some contribution from his pen, the most valuable being, perhaps, the 'Notice on North Creak Abbey' in the seventh volume, and that 'On the Right of Wardship and the Ceremony of Homage in Feudal Times' in the fourth volume.

In 1872 Mr. Carthew was temporarily disabled by a stroke of paralysis, which, though alarming at the time, exercised no effect upon his intellectual powers. Indeed, his enforced repose only seemed to act as a stimulant to his mental energy, and while still almost confined to his room he issued the prospectus for his 'History of Launditch,' and actually began to send the MS. to the printers. So little notion had he of the immense mass of materials which he had gathered that he contemplated only a single volume, the subscription price of which was to be one guinea and the number of copies limited to one hundred. Before the work was finished it had extended to three volumes quarto, illustrated by lithographs, plans, and facsimiles without stint, the printed matter filling just 1,500 pages. The cost of the work after all subscriptions were paid entailed an outlay upon its author of nearly 500*l.*, yet he never grudged it; money was to him only valuable in proportion to its power of rescuing from oblivion what was noble and beautiful in the past.

When the 'History of Launditch' was finished Mr. Carthew began to find life purposeless. He lost his wife and then a sister who kept house for him. He would probably have died three or four years earlier if a friend had not suggested that he should undertake a new work, for which he had already made large collections. This was the history of the adjoining parishes of East and West Bradenham, Necton, and Holm Hale. The publication was undertaken by Messrs. Goose & Co., of Norwich, on the understanding that Dr. Jessopp should see through the press any portion of it that Mr. Carthew might not live to correct. About two-thirds of this volume are already struck off, and its author was at work upon the index a few hours before his death. He was found dead in his chair on the morning of the 21st ult., and was laid in the family vault at Harleston on the following Wednesday.

Mr. Carthew had been a Fellow of the Society of Antiquaries for many years; he was a frequent contributor to *Notes and Queries* and to all the leading antiquarian and genealogical publications. He has left an immense mass of papers behind him, which, together with his books, will be sold without delay. A man of gentle manners and singular simplicity of character, he was too easily assailable on the softer side of his nature; but his shrewd dryness served him in good stead on many occasions when a pretender tried to impose upon his credulity. His astonishing memory never failed him to the last day of his life, and they who were happy in enjoying his friendship best know that the loss of this veteran East Anglian antiquary is irreparable.

THE PUBLISHING SEASON.

Mr. F. Unwin will publish in a few days a Christmas story-book entitled 'The Prince of the Hundred Soups: a Puppet-Show in Narrative,' edited by Vernon Lee. The editor, whose studies and essays on art in Italy are well known, contributes an introductory preface showing that the story is written in the manner of the mask-comedies popular in France and Italy during the seventeenth and eighteenth centuries, which suggested to Watteau the designs for his celebrated album.

Messrs. Griffith & Farran will shortly publish a translation of Henrik Ibsen's 'Doll's House,' under the title of 'Nora: a Norwegian Drama of Social Life.' Miss F. Lord has made the translation, which will be prefaced by a sketch of the life and works of Ibsen.

Messrs. Wyman & Sons have in the press a system of shorthand by Mr. E. Guest which is based upon a new theory. The most frequently recurring letters in English having been ascertained by the counting of thousands of words, and the most rapidly drawn stenographic lines having been ascertained by a series of experiments, Mr. Guest in forming his alphabet has allotted to the frequent consonants the most facile lines and the less facile lines to the infrequent ones. The book is to be entitled 'Compendious Shorthand; or, Stenographic Visible Speech.'

Messrs. Hildesheimer & Faulkner will issue this month an illustrated gift-book of poems for children by F. E. Weatherly, with coloured illustrations by Jane N. Dealy, entitled 'Sixes and Sevens.'

Messrs. Bagster & Sons have in the press a new work upon the spurious text of the three that bear witness in heaven, by the Rev. H. T. Armfield, rector of Colne Engaine, Essex.

A HEBREW DEED DATED COLCHESTER, 1253.

On the fly-leaf of Sebastian Münster's 'Dictionarium Chaldaicum,' &c., Basilæ, 1527, with MS. notes by William Bedwell, 1586, preserved in the Bodleian Library (Laud. 172), is the following deed, transliterated from the Hebrew by Bedwell. The original is most probably lost if it is not amongst the deeds called *shetars* in the Record Office. I think it would be of some interest for the history of the Jews in England, inasmuch as it contains the first mention of Jews having resided at Colchester.

A. Neubauer.

Translation.

"We the undersigned, Monday, the twenty-seventh day of the month of Adar (April), in the year 5018 A.M. (1258 A.D.), according to the date we use here at Colchester, [testify] that R. Isaac, R. Joseph, and Benjamin, sons of R.

* The text transcribed in Hebrew characters will appear in the *Revue des Etudes Juives*, No. 10.

† *Ch* is in Bedwell's MS. expressed by *w*.

‡ This word to be omitted.

Jehiel, came before us, saying, Be ye witnesses for us, and write and seal in the language of the law of acquisition that we have agreed to make over our part of the house in Stockwell Street,* left to us as an inheritance by our grandfather, to R. Samuel, all the house with all its appurtenances,† so that he may occupy it and use it. No one shall dispute this right to him from the day of the *neomenia* of Nisan (April) 5018, until eighteen years after this time, this Nisan which is called the Pasques, in the forty-second year of the reign of our lord the King Henry (the third), son of the King John. And this is the agreement made between the said R. Samuel and his brothers. R. Samuel shall dwell in the said house fifteen years, where he will have to take care of it, so that it shall not be damaged either by winds or by rain, so that the house shall remain in its present state when he leaves it. And he shall not remove anything which he has added to the upper rooms and lower rooms. After fifteen years the brothers reserve their right to give him notice to leave the said house, which he will do without any dispute, and R. Samuel will only claim the part of inheritance which is due to him. These men have taken the oath before us on the Law and according to the rite that they will keep the above-mentioned condition without any subterfuge. What we have seen and what they asked us we have signed with our seal, so that the document should be in the hand of each as a proof, and as righteous witnesses we have written and taken possession, according to the regulations of our rabbis, for their brother R. Samuel according as it is explained above, by laying hand upon a piece of money (manâ), fitted by regulation for a confirmation of deeds.

"Judah, son of R. Isaac.
"Joseph, son of R. Joshua."

CAPT. GILL, R.E.

Unfortunately the reports which have been current for some weeks of the death of Capt. Gill have now been confirmed, and, though all hope of Prof. Palmer's safety is not yet abandoned, there can be no doubt that both Capt. Gill and Mr. Charrington have perished. For some years Capt. Gill has held a foremost place among geographers. Endowed by nature with an ardent taste for exploration, and by training with the power of making the fullest and best uses of his discoveries, he was eminently qualified for the self-imposed task of unravelling geographical puzzles and of filling up the blank spaces on our maps.

In his first journey of exploration he travelled through parts of Persia in company with Col. Valentine Baker. The two officers left England in the beginning of 1873, having for their main object the exploration of the Atrek valley. In this they were partially disappointed, though they succeeded in laying down the upper course of the river. They visited, however, Tiflis, Baku, Astrabad, and Teheran, and brought back with them route surveys through the intervening districts which have added considerably to our knowledge of the geography of the country. Shortly after their return to England, Col. Baker published an account of their travels in his work entitled 'Clouds in the East.'

But Capt. Gill's travels in China were beyond comparison his most memorable achievement, both as regards the results obtained and the magnitude of the undertaking. In September, 1876, he landed in China, and after making some excursions in the country to the north-east of Peking he returned to Shanghai to make preparations for an adventurous journey through more than the breadth of the empire into Burmah. After having sailed up the Yang-tsze-kiang to Chung-ching, a distance of upwards of 1,500 miles, he struck northwards by land to Cheng-tu, and on to the "Northern Alps," which form the watershed of the Min and other rivers. Returning to Cheng-tu, he started westward, in the vain hope of being able to reach Kashgaria through Tibet. But the Tibetan Lamas were as inhospitable to him as to others, and he determined therefore to strike southward from Batang to Talifu and so on into Burmah. The geographical, ethnological, and linguistic results of this journey are of the first importance, and are fortunately preserved for us in the extremely interesting account of his travels which he published in his 'River of Golden Sand.'

After his return from China Capt. Gill was sent on a special mission to Constantinople. Subsequently, having obtained six months' leave of absence, he hurried out to Afghanistan, and arrived in time to join General Macgregor's campaign in the Marri country, but too late to follow the march from Cabul to Candahar. On the outbreak of hostilities in Northern Africa he went to Tripoli, but was there also met with the same kind of insuperable opposition which prevented his penetrating into Tibet. The particulars of his service in Egypt and of his last fatal journey are too fresh in the memories of all to need recapitulation.

Capt. Gill twice stood in the Conservative interest, once for the borough of Hackney and once for Nottingham, but in each case he was unsuccessful. To his many friends his death is an irreparable loss, and it has left a conspicuous blank in the world of science. His personal qualities were such as to draw many to him, while his quiet determination and cool intrepidity in moments of danger fitted him admirably for the work of exploring the dark places of the earth.

Literary Gossip.

It is unfortunately true that the Hamilton collection of manuscripts has left this country. But the German papers are wrong in two particulars. The collection has been sold in its entirety to the Prussian Government by Messrs. Sotheby, Wilkinson & Hodge, and the price paid is not that mentioned in the Berlin journals.

Mr. William Allingham is preparing a volume of poems for publication.

The title of Mr. Walter Besant's story for the Christmas number of *All the Year Round* is 'Let Nothing you Dismay.'

Messrs. Chatto & Windus will publish at the end of this month 'Gideon Fleyce,' a novel by Mr. H. W. Lucy. The book has been described in some quarters as a political novel, a designation which we understand the author himself does not adopt. Mr. Lucy has taken advantage of exceptional opportunities to describe some political episodes and to sketch some types of political character; but the novel depends for its main interest upon a wider range of incident and characterization.

Mr. Allardyce's 'Life of Lord Keith' is to be followed immediately by another naval biography. Messrs. W. H. Allen & Co. hope to issue before Christmas a 'Life of Admiral Lord Hawke,' by Prof. Montagu Burrows, of Oxford. The family papers have been placed at his disposal, and there will be as frontispiece an engraving from a picture of the admiral in the possession of the family. He has included in the book two independent treatises: (1) upon the origin of the English wars in the reign of George II.; and (2) upon the state of the royal navy in that reign. The courts-martial upon Admiral Mathews and his officers, on General Sir John Mordaunt, and upon Admirals Byng and Keppel will receive some illustrations from original sources in the body of the work, which will also give an account of the career of the leading naval officers of Lord Hawke's time.

The Index Society is crying out for more subscribers to enable it to print off the materials it has on hand. Mr. Harrison's index of the topographical literature of England and Wales, arranged alphabetically under the names of places only, is ready for the press. An index of kindred character applied to the whole of Europe is in contemplation. The titles of the best descriptions of countries and cities will be placed under the name of the place described, and the place-names will be arranged in an alphabet. An index is likewise projected of all the memoirs known in English literature from Grammont to Charles Greville. This work must of necessity be divided, but whether into reigns of the kings and queens or into more regular periods of years it is not yet determined. Fellow helpers in the work are wanted almost as much as additional subscribers.

Mr. Ebsworth is working hard at the 'Roxburghe Ballads.' Part xi. will be issued before the end of the year, and parts xii. and xiii. (the "Monmouth Group") are promised for the spring or early summer. Such editors as Mr. Ebsworth are rare, and we heartily wish him health and strength to successfully carry out his important undertaking.

The first volume of Mr. Cornelius Walford's work, 'Fairs, Past and Present,' is just on the point of completion, and will form part of Mr. Elliot Stock's "Antiquarian Library."

The Clarendon Press will publish shortly 'The Gospel of St. Mark in Gothic, according to the Translation made by Wulfila in the Fourth Century,' edited by Prof. Skeat. This work is intended to serve as a Gothic primer, and to introduce the beginner to larger works on the subject. The introduction gives all necessary elementary information concerning the MS., the author, and the sources of the alphabet, with some account of the pronunciation, phonology, and grammar. The glossary not only explains all the words occurring in St. Mark's Gospel, but is extended so as to explain all the more important words of the language, especially such as are most required by the student of English etymology, for whom some knowledge of Gothic is absolutely indispensable.

There will be published next week by Messrs. Simpkin, Marshall & Co. a little gift-book entitled 'The Book-Lover's Enchiridion.' It will consist of a selection of thoughts on the "solace and companionship of books," gathered from the writings of between one and two hundred authors, ranging from Solomon and Cicero to Carlyle and Ruskin. The object of the compiler has been to present the wisest and most pithy thoughts of the best authors on the subject of books, and what they do for us as companions, friends, and counsellors. Besides the selections from British writers of the seventeenth, eighteenth, and nineteenth centuries, the best thoughts of some of the most distinguished American authors

* The streets formerly called Stockwell (East and West) contain now the greatest part of St. Martin's Lane and Angel Lane (see Philip Morant's 'History and Antiquities of the County of Essex,' London, 1768, vol. i. p. 114).

† This word is left in the Hebrew document in English.

XUM

are also given. The size and form of the volume will resemble the Elzevir classics of the seventeenth century. It will be handy for the pocket, and transmissible by post for twopence. The compiler has gone to the original sources for his matter.

THE Rev. W. Walker, author of biographies of Dr. Jolly, Bishop of Moray, and Dr. Gleig, Bishop of Brechin, is preparing an extended memoir of the Rev. John Skinner, Dean of Aberdeen and father of the bishop of that name who wrote the 'Annals of Scottish Episcopacy.' The elder of the two divines is still remembered for his 'Tullochgorum,' 'The Monymusk Christmas Ba'ing,' 'The Ewie wi' the Crookit Horn,' and other humorous poems in the Scottish dialect. He was a correspondent of Robert Burns. The memoir of this persecuted pastor, who died in Aberdeen after a ministry of sixty-four years at the obscure village of Longside, in Aberdeenshire, and who passed his days in a cottage of two rooms, besides containing fresh biographical matter, will furnish an analysis of his theological and other writings, an account of the religious controversies and persecution of the time, and a collection of his early poems hitherto supposed to be lost. The work will be published by subscription.

THOSE who are interested in Prof. Blackie's efforts to establish a chair for Celtic Languages and Literature in Edinburgh will be glad to see the following note, read before the University Council last week:—"I crave the liberty to state, for the information of all concerned, that the Celtic chair is now in the hands of the University; and that I understand a meeting of the curators will forthwith take place for proceeding to elect a professor, with the customary intimations."

WE learn through a private source that the Russian bibliography, the publication of which was suspended last March, will reappear in 1883.

A BIOGRAPHY of John G. Whittier, with a full bibliography of his works, has been prepared by Mr. W. Sloane Kennedy, and will soon be published by Mr. S. E. Cassino, of Boston, U.S.

THE *Library Journal* asserts that it is well known in Washington that the author of 'Democracy' is Mr. Clarence King. But we have reason to doubt this.

'LEGION; OR, THE MODERN DEMONIAC,' is the title of a new work by Mr. William Gilbert, which will be published this month by Messrs. Tinsley Brothers. The same publishers have in the press a new novel by the author of 'Cynthia,' entitled 'Lemuel; or, the Romance of Politics.'

Two new serial novels will be commenced in *Tinsleys' Magazine* for January: 'Under a Ban,' by the author of 'Lady Ottoline,' and 'The Waters of Marah,' by the author of 'Wild Rose.'

WE greatly regret to announce the death of a well-known journalist, Mr. William Sawyer, F.S.A., from typhoid fever, in the fifty-fifth year of his age. He was editor of the *South London Press* and *Funny Folks*, and he was the author of 'Thought and Reverie,' 'Ten Miles from Town,' 'The Legend of Phyllis,' and 'A Year of Song.' His amiable character made him exceedingly popular, and his loss will be much felt by a large circle of friends. He died on Wednesday night.

THE Rev. M. H. Lee, of Hanmer, Salop, has nearly ready for publication by Messrs. Kegan Paul & Co. a volume containing a considerable number of the diaries and letters of Philip Henry (father of Matthew Henry, the commentator), which have hitherto remained unprinted.

THE son of Dr. Orestes A. Brownson will edit a complete edition of his father's writings, extending to seventeen octavo volumes of more than five hundred pages each. Dr. Brownson was in early manhood a Unitarian minister and a leader in the transcendental and socialistic movements of New England, but in 1844, at the age of forty, he became a Roman Catholic, and his *Quarterly Review* was the chief organ of that church in America. He is best known in England by a work he tried to suppress in America, 'Charles Elwood; or, the Infidel Converted.'

A CORRESPONDENT writes with reference to our remark regarding a German translation of Mr. Hatch's Bampton Lectures:—

"It may interest your readers to know that the Boyle Lectures of Canon Barry have also 'been considered worth reproducing in Germany for the benefit of German theological students.' English works of fiction are frequently enough translated into German, but it certainly may be considered a distinction if English theological lectures are issued in a German version."

A NEW Greek magazine called *Kosmos* has appeared at Constantinople.

MESSRS. WEIR & KNIGHT will shortly publish a new tale by Miss Rosa Mackenzie Kettle. The scene is laid among the Shropshire highlands.

THE King's College lectures for ladies are prospering. The entries this winter are considerably larger than they were in October, 1881, although the last session showed a considerable advance on the year preceding. The building fund is steadily increasing, about 7,000*l.* having been promised.

SCIENCE

SCHOOL-BOOKS.

Elementary Chemical Arithmetic, with 1,100 Problems. By Sydney Lupton, M.A. (Macmillan & Co.)—There is reasonable ground for the opinion, largely prevalent, that natural science studies do not adequately replace the older methods of mental training in a school course. Chemistry and what used to be called natural philosophy are the subjects generally taken up on the modern side of a school, and even these, notwithstanding their acknowledged usefulness and obvious interest, often fail to develope the accuracy and definiteness of thought that result from classics and mathematics. The haziness—we had almost said superficiality—which seems compatible with attentive assiduity in the science class or lecture-room is best dispelled by a course of chemical arithmetic such as Mr. Lupton has just given to the school world. It is pleasant to find the attention of schoolmasters directed to this side of science teaching, and they will not easily find a more serviceable *vade mecum* than that now before us. The earlier pages of the introduction deal with and explain purely arithmetical processes. "The following sections are devoted to the cases in which chemistry calls in the aid of arithmetic," and "common mathematical formulæ are simply given as facts to be remembered." This introduction is not designed to supersede either oral teaching or reference to more comprehensive works. In it certain chemical and physical laws are stated, and the methods of calculation depending upon them are explained with laconic brevity. A certain amount of amplification would have been advantageous; for Mr. Lupton, in his anxiety to save words, has at times rendered his meaning hard to understand. The main utility of the book consists in the numerous well-selected problems, to which happily, after "some doubt and deliberation," the answers are given. These problems cover so much ground and are of so many kinds and degrees of difficulty that a student who successfully works any considerable number of them may be quite sure that his scientific knowledge, so far as it goes, is sound and available. A boy's interest in the subject-matter of a lecture sometimes disguises his insufficient grasp of it, but an arithmetical problem furnishes a test not to be eluded. Mr. Lupton gives in the tables at the end of the volume many facts and figures frequently wanted in calculations, but not too readily accessible in larger treatises.

Outlines of Zoology for Junior Classes. By William F. Collier, LL.D. (Dublin, Sullivan Brothers.)—The aim of this book, the author says, is to give to "*beginners* in zoology—say pupils about ten years old—an outline of the subject in a pleasant and interesting form, divested of all scientific terminology, except what is absolutely needful." Dr. Collier has no doubt written many passages which will please and interest his readers; but unfortunately he seems to us to have succeeded in imparting in the ninety pages of his little manual the smallest possible amount of real scientific teaching. Even an outline—other than a mere table of classification—of vertebrate and invertebrate zoology is not to be compressed into a small volume of this size. Either great division of zoology, if so treated as to be attractive and instructive to readers of ten years old, would occupy a volume of at least the size of the one before us; and the compilation of such a small treatise would be a task requiring great zoological attainments and singular literary skill. The earlier part of the book, that treating of invertebrate animals, is the less satisfactory. The classification adopted is hardly the best, and the descriptions are so insufficient and indefinite that the "junior classes" for whom they are intended will gain more bewilderment than information from them; while the general reader, for whom Dr. Collier considers he gives "a sufficiently easy view of the classes and orders of the animal world," will certainly not get beyond the first few paragraphs, unless, indeed, the plentiful illustrations, many of which are good, tempt him idly to turn over the remaining pages. A graver defect even than the meagreness of the scientific instruction to be gleaned from these 'Outlines' is Dr. Collier's frequent inability to express his meaning in English, for to this only, we imagine, can be due such a statement as that the shields of tortoises and turtles are joined at the edges, "but at each end a hole is left for the head and the tail." We never saw a chelonian or other vertebrate animal with two heads and two tails, as is thus implied; and it is clearly inexpedient to make the too credulous "pupils about ten years old" believe in the existence of so weird a creature.

Animal Physiology for Elementary Schools. By Mrs. F. Fenwick Miller. 3 vols. (Collins, Sons & Co.)—These little school-books treat of the three stages of animal physiology presented in Schedule IV. of the New Code of 1882. Mrs. Fenwick Miller's treatment of her subject is extremely felicitous; she gives such sound teaching in physiology as is adapted to the requirements and capabilities of young scholars, and escapes the two faults which beset compilers of manuals for use in public elementary schools—she neither soars away far above the heads of her readers

nor tries to satisfy them with childish superficialities. The elements of physiology are put clearly and concisely—in fact, they are arranged by a person who knows how and what to teach, and who fully realizes the difficulties of teaching elementary science to very young people. The only defect in the purely physiological part of these books is one for which Mrs. Fenwick Miller is not responsible, as it is obvious in the schedule of the Code. The scholars are taught to refer to diagrams in illustration and explanation of the text, not to the organs, &c., themselves. There is, of necessity, unreality in any natural science teaching which is not based on observation of the things studied, and it is much to be regretted that this principle was not recognized by the framers of the schedule of specific subjects in the Code. Mrs. Fenwick Miller is laudably accurate in the use of physiological terms, and sternly reproves the loose way in which they are used in ordinary parlance; but she herself is inaccurate in the terminology and definitions of allied sciences. We refer to these blemishes not by way of empty verbal criticism, but because the elementary notions which a child acquires in his education should be rigidly accurate if the further stages of instruction are to afford him a maximum—and anything less is unsatisfactory—of information and mental discipline. In discussing walking and standing Mrs. Miller has much to say about the centre of gravity, and gives, by way of illustration, drolly ingenious diagrams; but no scholar will gather from either figure or explanatory text what is meant by the "centre of gravity." Again, in giving certain necessary chemical information, Mrs. Miller tells us that "nobody will have seen either oxygen, hydrogen, or nitrogen by itself"; she ignores, apparently, the results of well-known recent experiments in the condensation of so-called permanent gases. We are further told that gases are vapour-like—*i. e.*, like steam or smoke (*sic*); this statement is grossly inexact. The difference between mixture and combination is one of the facts first insisted on in chemistry; Mrs. Miller, however, lays great stress on the misstatement that "if oxygen and hydrogen are mixed together water is formed." Many similar instances of inaccuracy might be adduced. The scholars who take up physiology may be working at mechanics or chemistry or physics, and their progress, and consequently the progress of their classes, will be impeded if facts in one branch of study are associated with fallacies in another.

GEOGRAPHICAL NOTES.

Mr. Stanley has just left London for Brussels. His survey work for some five hundred miles of the Lower Congo, accomplished during the last weeks of his late mission, is very complete and full of geographical interest.

Mr. Joseph Thomson will leave England for Zanzibar at the end of the present month, to organize the expedition which the Royal Geographical Society are about to send, under his command, through the hitherto unexplored Masai country to the eastern shores of Victoria Nyanza. The expedition will not start from the coast for some months; mean time Mr. Thomson will make a preliminary journey inland to inquire as to the best and most practicable route. Of the two mountains in this region which rise above the limits of perpetual snow he will direct his attention preferably to Mount Kenia, as the less known. There appears to be a much larger area above the snow-line on this than on Kilimanjaro, and a possibility of glaciers on its western side.

A letter from M. J. M. Schuver, dated Famaka, July 12th, 1882, has reached the editor of Petermann's *Mittheilungen*. The Dutch traveller left Fadasi towards the end of March, and as soon as his health permitted started from Famaka on an exploring trip into the region between the Blue Nile, the Abyssinian frontier, and the Upper Dinder. This journey occupied no less than fifty days. In the course of it M. Schuver penetrated eastward as far as Mount Kienien, traced the Kisin or Bolasa down to its confluence with the Blue Nile, and reached the headstreams of the Dinder. On a lofty mountain, three days' journey to the east of Famaka, he discovered the Sienetjo, a "yellow" tribe, differing in language from all the neighbouring negro tribes. Incidentally M. Schuver states that Gessi and Matteucci never passed beyond Fadasi, as alleged by them. A letter of older date, together with a map, has apparently fallen into the hands of the insurgents, who, according to our latest information, are closely pressing the governor-general of the Sudan at Khartum. This insurrection makes us look anxiously for news from other Europeans now on the Upper Nile. Nothing has been heard of Dr. Emin Bey since he left Khartum in March last, and the latest letters from Dr. Junker and Capt. Casati were written on the Welle in December last.

In connexion with the centenary commemoration of the annexation of the Crimea to Russia and the foundation of Sevastopol, which is to be celebrated next year, it is purposed to establish a local committee to investigate the peninsula, which not only abounds in the remains of antiquity, but is rich in botanical and mineralogical interest.

The Geological Map of the Balkan Peninsula, by Dr. Franz Toula, published in Petermann's *Mittheilungen*, summarizes in a very acceptable manner the researches carried on by numerous geologists since Ami Bouë, some forty years ago, published his 'Esquisse Géologique de la Turquie d'Europe.' The same number of the *Mittheilungen* contains a copy of the valuable map of the Russo-Persian frontier first published in the *Isvestiya* of the Caucasian Geographical Society; a paper on the geographical distribution of the aurora borealis in the United States, by H. Fritz; and a translation of the Rev. W. S. Green's account of New Zealand explorations, from the *Alpine Journal*.

We are in receipt of School Maps of Europe and of England and Wales, both by Mr. T. Ruddiman Johnston, of Edinburgh. These wall-maps belong to the "Universal Series"; they are clearly printed in colours as to political divisions, but fail almost completely in the hill features, which are so faintly indicated as hardly to be visible from a distance.

ASTRONOMICAL NOTES.

The great comet (*b*, 1882) will be visible for some time longer, but during the remainder of its appearance it will be best seen in the southern hemisphere. Prof. E. Weiss communicates a paper to *Astronomische Nachrichten*, No. 2465, in which he points out the importance of following it as long as possible, as it is not likely that another comet will appear for some centuries which will approach the sun so closely, and thereby enable astronomers to trace by its motions the effects of the resisting medium in the sun's neighbourhood. Much interest is of course still felt in the question of the possible identity of this comet with those of 1668, 1843, or 1880. We mentioned last week how uncertain was our knowledge of the orbit of the comet of 1668, in consequence of the roughness of the few observations made of it; and Prof. Weiss's later investigations have not tended to increase the probability of its identity with the present comet. And he now considers that we must give up the idea that this is a return of the comet of 1843, which is probably identical with that of 1880 (*a*). The following positions, given in *Nature* for October 26th from Dr. Hind's elements, will indicate the comet's course during the next fortnight, after which the whole care of it must rest with the astronomers in the southern hemisphere. These places are for six o'clock on each morning, mean time at Greenwich:—

Date.	R.A. h. m.	N.P.D. °
Nov. 7	9 45·8	111 47
,, 11	9 38·3	113 9
,, 15	9 30·1	114 27
,, 19	9 21·1	115 40
,, 23	9 11·3	116 47

The distances of the comet from the earth and from the sun are now very nearly the same, about 140,000,000 miles, both increasing.

We have already mentioned that, so far as is known, this comet was first seen by Mr. Finlay at the Royal Observatory, Cape of Good Hope, on the 8th of September. On the day of perihelion passage, on which it was detected close to the sun by Mr. Common at Ealing (Sunday, September 17th), Mr. Gill states that it "was followed by two observers with separate instruments right up to the sun's limb, where it suddenly disappeared at $4^h\ 50^m\ 58^s$ Cape mean time." Allusion has also been made (*Athenæum*, October 21st) to Dr. Julius Schmidt's discovery at Athens of a cometary body a short distance from the great comet, moving with the same velocity, and suggesting the idea of its being a companion comet, as in the case of Biela's. He obtained two measures of the position of this body on the mornings of the 10th and 12th of October, and found its apparent motion to be slightly more rapid than that of the great comet, its distances from the nucleus of the latter being on those two mornings 3° 24′ and 5° 21′ respectively; on the following morning (October 13th) the "companion" was scarcely to be discerned with certainty.

Since the above was written, the number of the *Observatory* for November has been published. It contains a letter from Mr. Ellery, by which it appears that the great comet was seen at Melbourne on the 7th of September, one day therefore *before* Mr. Finlay noticed it at the Cape. No positions, however, of it could be obtained at Melbourne until the 10th, at 5.20 A.M. The comet was well seen in the telescope until within one minute of sunrise; its intrinsic light was considered to be equal to that of Jupiter.

Dr. Hind has also computed elements of Barnard's comet (*c*, 1882). He finds that the perihelion passage will take place on the 13th inst., at the distance from the sun of 0·95 in terms of the earth's mean distance. It will continue to be observable for some weeks in the southern hemisphere, the calculated intensity of light even on January 9th being half as great as it was on September 14th, when it was discovered at Nashville about three o'clock in the morning. On the day of perihelion passage (November 13th) its southern declination will be $66\frac{1}{2}°$, and the right ascension being about $13^h\ 17^m$, it will be near the star η in the constellation Musca.

The principal astronomical event of next year is a total eclipse of the sun, which takes place on the 6th of May. At some points on the central line the totality will last nearly six minutes; but so forgetful is the eclipse of the convenience of astronomers that this line, the whole of which is included in the South Pacific Ocean, only touches land on a small island situated north of the Society and west of the Marquesas group. This is a low coral formation less than ten miles in circumference, and is called Caroline Island. Its exact position is south latitude 9° 57′, west longitude 150° 25′.

The *Sidereal Messenger* for last month gives a summary of a paper by Mr. C. H. Rockwell, of New York, which was read before the American Association for the Advancement of Science, calling special attention to this matter, and to the desirability of sending an expedition to Caroline Island for the purpose of observing the eclipse. The paper erroneously attributes the discovery of the island in question to Capt. Nares in 1874. The real discoverer was that famous navigator William Robert Broughton, who, after taking part with Vancouver in his voyage of discovery in 1790–1, commanded a similar expedition sent to the Pacific in 1795, in the course of which he discovered this island

and named it after the eldest daughter of Lord Spencer, then First Lord of the Admiralty.

SOCIETIES.

ARISTOTELIAN.—*Oct.* 23.—Mr. S. H. Hodgson, President, in the chair.—Mr. W. R. Dunstan read a paper 'On Spinoza,' which was followed by a discussion.

MEETINGS FOR THE ENSUING WEEK.

MON. Royal Institution, 5.—General Monthly.
— Musical Association, 5.—'Fallacy of the Repetition of Parts in the Classical Form,' by Mr. F. Praeger.
— Aristotelian, 7½.—'Leibnitz and Wolf to Kant,' Miss M. S. Handley.
— Royal Academy, 8.—'Anatomy,' Mr. J. Marshall.
— Institute of British Architects, 8.
TUES. Society of Biblical Archæology, 8.—'Demotic Papyrus containing the Malediction of an Egyptian Mother on her Son embracing Christianity,' 'Two Demotic Documents of the Reign of Darius referring to a Marriage Contract,' M. E. Révillout; 'Some recent Discoveries bearing on the Ancient History and Chronology of Babylonia,' Mr. T. G. Pinches.
WED. Microscopical, 8.—'Observations on *Stephanoceros*,' Mr. T. B. Rossiter; 'Organisms found in the Excrement of the Domestic Goat and the Goose,' Dr. R. S. Maddox.
THURS. Mathematical, 8.—President's Address; 'In- and Circum-scribed Polyhedra,' Prof. Forsyth; 'Explicit Integration of certain Differential Resolvents,' Sir J. Cockle; 'Compound Determinants,' Mr. R. F. Scott; 'Quartic Curves in Space,' Dr. Spottiswoode; 'Derivation of Elliptic Functions Formulæ from Confocal Conics,' Mr. J. Griffiths.
— Telegraph Engineers, 8.—'Munich Electrical Exhibition, 1882,' Mr. W. H. Preece.
FRI. Royal Academy, 8.—'Demonstrations,' Mr J. Marshall.
SAT. Physical, 3.—'Three Historical Notes on Physics,' Prof. S. P. Thompson; 'Conservation of Energy and the Theory of Central Forces,' Mr. W. R. Browne.

Science Gossip.

THE following is the list of changes proposed to be made in the Council of the London Mathematical Society for the ensuing session: Prof. Henrici to be President in the place of Mr. S. Roberts, who, with Sir J. Cockle as his colleague, is recommended for a vice-presidentship; Mr. E. B. Elliott and Dr. J. Hopkinson have been selected to fill the places of the retiring members, Prof. Rowe and Mr. Lloyd Tanner. Mr. Roberts's address will be upon mathematical terminology and the philosophical bearing of recent mathematical speculations concerning the realities of space. His principal thesis is that mathematics are essential in philosophy. He will also announce to the Society the establishment of the De Morgan memorial medal and the conditions of its award.

A MEETING of the junior members of the University of Cambridge was held last Monday in the debating hall of the Union Society to express their sense of the loss sustained by the University in the death of Prof. Balfour. It was resolved that a subscription list in support of the memorial to the late professor should be opened at the Union. The hall was well filled with undergraduates, and the speeches were received with much enthusiasm.

PROF. NEWTON informs us that he "has not relinquished his intention of continuing his edition of Yarrell's 'British Birds.' But for the accident which befell Prof. Newton in June last, a portion would have now been on the point of appearing; and he hopes before long to bring out an account of the British pigeons and game-birds, which will complete the second volume according to his original plan."

THE first meeting of the one hundred and twenty-ninth session of the Society of Arts will be held on Wednesday, the 15th inst., when the opening address will be delivered by Dr. C. W. Siemens, F.R.S., Chairman of the Council.

DR. H. C. SORBY delivered at the Firth College, Sheffield, on Saturday the 21st of October, a lecture on 'The Microscopic Structure of Steel.' The lecture was illustrated by a large number of specimens of steel prepared under different conditions, the microscopic structures of which were curiously unlike each other. We are unable to give the space required for any description of the variations in the molecular arrangement; we therefore must refer our readers to the lecture itself, which we are told will be published. Alloys of iron and nickel were prepared by Dr. Sorby, and examined with the microscope in connexion with meteoric iron. The inference drawn from these examinations is that meteoric iron crystallized very slowly, at a temperature below fusion.

PROF. T. C. ARCHER having offered a place in the Edinburgh Museum of Science and Art to the famous old locomotive "Wylam Dilly," the Messrs. Hedley have agreed to send the engine direct from Tynemouth to Edinburgh.

HERR FRISCHEN, chief engineer of the firm of Siemens & Halske, described at a recent meeting of the Polytechnic Society in Berlin the first attempt to employ the electric railway for industrial purposes in a mine near Dresden. The line is 260 mètres underground, and laden coal waggons travel on it.

WE have received the Indian Meteorological Tables for the months of October and November, 1881. Perhaps we may be permitted to suggest the advantage of printing upon the first page, which contains the month and year only, a title by which this vast work of the Indian meteorological staff might be recognized.

MAJOR-GENERAL W. B. HAZEN, chief signal officer of the U.S. Army, sends No. VII. of the *Professional Papers* of the Signal Service, which is a report on the character of six hundred tornadoes by Sergeant J. P. Finley. The deductions from these tables are of considerable interest, and they must lead, especially if attention is given to the rules by which these investigations should be regulated, to most important results.

FOREIGN journals announce the death of the celebrated physicist Prof. Palmieri, who made the observatory on Vesuvius famous throughout the civilized world. This distinguished man had quite recently observed that oils conduct electricity at rates considerably different from each other, and he had constructed a diagometer for the purpose of investigating this property and applying it in the examination of oils in commerce.

M. DAUBRÉE, in presenting to the Academy of Sciences, on the 2nd of October, the 'Catalogue de la Collection des Météorites du Muséum d'Histoire Naturelle au 1er Juillet, 1882,' which is edited by M. G. Masson, observed that catalogues of the collection have been successively published in 1863, 1864, 1868, and 1878, and now in 1882, and that the number of specimens described amount to 306.

MR. JOHN COLLETT, State Geologist, has just published his Geological Report on Indiana for the year 1881, which includes a memoir by Prof. James Hall 'On the Fauna of the Niagara Group of Central Indiana'; and Dr. White gives several descriptions of the Illinois fossils, four of which are new species.

FINE ARTS

The EIGHTEENTH ANNUAL EXHIBITION of WATER-COLOUR DRAWINGS by ARTISTS of the BRITISH and FOREIGN SCHOOLS is NOW OPEN at Thomas McLean's Gallery, 7, Haymarket.—Admission, including Catalogue, 1s.

SHEPHERD'S WINTER EXHIBITION of PICTURES by BRITISH ARTISTS is NOW OPEN.—Choice Works by Vicat Cole, R.A., B. W. Leader, J. S. Noble, E. Verboeckhoven, W. Shayer, H. Dawson, George Cole, E. J. Niemann, John Syer, &c.—Shepherd Brothers, 27, King Street, St. James's.

PHOTOGRAPHIC SOCIETY'S EXHIBITION, at the GALLERY, 5 Pall Mall East, NOW OPEN DAILY, from Ten till Dusk, 1s. Monday Wednesday, and Saturday Evenings, Seven to Ten, 6d.

DORÉ'S GREAT WORKS, 'CHRIST LEAVING the PRÆTORIUM,' 'CHRIST ENTERING JERUSALEM,' and 'MOSES before PHARAOH,' each 33 by 22 feet, with 'Ecce Homo,' 'The Ascension,' 'Dream of Pilate's Wife,' 'Soldiers of the Cross,' 'A Day Dream,' &c., at the DORÉ GALLERY, 35, New Bond Street. Daily, Ten to Six.—1s.

THE DUDLEY GALLERY.

THIS exhibition, notwithstanding all that has been said to the contrary, has, in a double sense, taken a new lease of life. It was, indeed, desirable that this gathering should not come to an end in its fifteenth year. There must be a demand for the small and agreeable paintings which form the bulk of these exhibitions.

The influence of Paris, either direct or indirect, is even more obvious than before. We shall notice, in the order of the Catalogue, the noteworthy examples out of some 450, and believe that no valuable one has escaped attention. M. de Bréanski's *A Pier-head* (No. 5) represents with spirit a storm on the west pier-head at Whitby. The breaking sea is good; the drenched pavements sparkle.—Mr. T. Graham's *Over the Downs* (38) is a figure of a girl with a milk bucket, clad in warm white, and would be more agreeable if the face were not lifeless. Warm colour and good harmonies of tone compensate in some measure for flimsy workmanship. —An illustration of 'The Raven' (48), by Mr. E. G. H. Lucas, is a good piece of still life, but shows little sympathy with Poe's poetry.—In spite of its hackneyed subject, Mr. W. M. Loudan's landscape *Evening* (59) evinces sympathy with nature and considerable knowledge of pictures of the modern French school.—A broad, meritorious, Rembrandtish study from the life, by Mr. P. J. Jansen, is called *A Cornish Lad* (79).—If F. Walker had never painted naked boys in sunlight and bathing in blue water with richly toned mists suffusing the air, Mr. H. Macallum's *A Summer Half-holiday* (80) would have been more striking than it is. We do not, however, think that Walker, if alive, would care to claim copyright in Mr. Macallum's achievement.

But for its empty forms and flatness, Mr. D. W. Wynfield's *An Expected Visitor* (106) would be able to boast of greater merits than a dashing design and broad and effective tones impart to it. It is very clever, but very slovenly.—Mr. F. D. Thomas's *Mapledurham Mill* (130), though a little hard, is full of light, clearly and neatly touched. —One of the very few well-considered designs and fairly painted pictures here is Mr. T. Davidson's *Words to express his Thoughts* (131), a gentleman seated at an escritoire, reading the draft of a letter. This picture, conceived in the mood of Mieris, contains a broad effect of interior light and some dexterous and clever painting of furniture. The figure is good and expressive.—The *Roses* (151) of M. Fantin, though dirty in the shadows, glows with rich colour. It is mannered. The same artist's *Autumn Flowers* (181) is varied in tone and good in all respects but the shadows. —A figure leaning on a staff, called *A Peasant Girl* (166), by M. G. Claussen, shows courage in reproducing the manner and some of the lesser merits of M. J. Breton's treatment and conception of similar subjects, but it has none of M. Breton's pathos.—Mr. E. J. Lambert's *On the Brent* (227) displays care, but lacks refinement and brilliancy.—Though the distant sky of Mr. H. Moore's *Scarborough Fishing Boats running in a Breeze* (244) has dignity, softness combined with splendour, and that beauty which belongs to sumptuous light striking on cloudland, the rest of the work contains little that is new, and is somewhat painty.—The *Chrysanthemums* (246) of Miss J. Hayllar, a modern house corridor with flowers, is bright, firm, pure, and full of light.—*A Wood Gatherer* (254), by Mr. Val. Prinsep, is very prettily conceived and solid, if somewhat opaque in the carnations and deficient in richness of tones. Though burdened heavily with sticks, this is a young lady.

In publishing these notes we do so rather in obedience to custom than on account of the attractions of the exhibition. Its fatal defect is lack of earnestness in studies, of devotion to art, and of thoroughgoing loyalty to the beauty of that nature for which it is obvious many of the contributors really care, though they pay her no more than perfunctory homage.

THE FRENCH GALLERY.

THE miscellaneous gathering of pictures which on Monday last was opened to the public in Mr. Gambart's old gallery in Pall Mall comprises 175 works. The most important is Madame Henriette Browne's *Alsace*, 1870 (No. 153), the not very happy title of a life-size and intensely pathetic figure of a sad and stately Alsacienne in her national costume, with a charger placed

on a table before her to receive gifts for the benefit of sufferers in the devastation of 1870. She stands, as many nobly born French ladies stood at that time, in the entrance of the *Salon*, the white stone walls of the Palais des Champs Élysées serving as a background to her dark attire. Clad in mourning, she turns to us with a profoundly expressive yet mute appeal. As we noticed this painting when reviewing the *Salon* of 1872, of which it was perhaps the greatest ornament, we need not now say more than suffices to affirm that it is a modern *chef-d'œuvre*.

Un Bon Vivant (2) is a lively little picture by M. V. Chevilliard, whose laughing curés have made half the world laugh. It is rather more metallic and black in the half-tints than usual.—*The Smiling Spring* (7), by Herr Heffner, represents his art and his mannerisms with fairness, but it is a comparatively unimportant and uninteresting example.—*Dolly's Dressmaker* (11), by M. Duverger, is, except technically, sufficiently well described by the title. It is a very pretty, warm, and pleasing work by the excellent artist who produced *A Partial Critic* (18), the companion to the last, in which a child looks at a picture through a magnifying glass. For breadth, neatness, and pleasantness it is precious.—M. J. Dupré's *In the Fields* (15), a man and a woman carrying hay, is painty, but full of action.—Still better is the richly coloured and toned *Heartsease* (31), a young matron, by M. Scanes, who works with taste and genuine pathos, but with a rough touch which is not agreeable.—*Rent Day in Germany* (42), by Herr Oehmichen, must not be compared with Wilkie's representation of a similar event in Scotland. The conception of the subject is dull and without pathos or humour. Some character is delineated, but the forms are empty and the touch is heavy.—Herr Seiler's *A Freischütz Bargain* (56) shows cleverly painted figures of foresters in an old chamber. The design and actions are spirited.—*The Guardian of the Sacred Well* (60) has no discoverable *raison d'être* or animating motive. It is one of those purely artificial and professorial paintings for which the learned world is indebted to Prof. L. C. Müller.—There is some vitality in M. E. de Blaas's *From the Sunny South* (72), a study of a luscious girl's head of rich carnations, black hair, and ruddy lips. It is admirably modelled and dexterously drawn.—*A Flemish Bird-stuffer* (76) is M. Lagye's tribute to the merits of the art of his master, Baron Leys.—The *Hermione* (146) of Mr. T. F. Dicksee is a smooth, modern, somewhat doll-like figure, and even its sentimentality is weak. Its very prettiness is feeble.

The following names are in the Catalogue, but the pictures assigned to them do not call for notice: T. Weber, C. Sell, E. Duez, W. Wyld, E. Crofts, Mrs. Anderson, H. Goodwin, E. Ellis, and A. de Bréanski.

MINOR EXHIBITIONS.

In Mr. McLean's Gallery in the Haymarket are 180 drawings. Among them are *A Waif* (No. 4), by Mr. Herkomer, a comparatively trivial work; the pretty *Provence Roses* (12) of Mrs. Cecil Lawson, which is rich, warm, and flushed with rosy light; a finely drawn, animated group of *Stag-Hounds* (22), by that admirable and masculine draughtsman M. Melin; the showy and meretricious *Gold Bracelet* (8), by Mr. Lundgren; and Mr. B. Foster's characteristic *Spring Time* (45), a ford and rustic bridge, with figures, the whole executed in what may be called the vermiculated touch of this agreeable painter, which presents a mosaic-like result. With these may be seen the sunny and broad *Southwold Beach* (66), with boats and bright herbage, by Mr. Aumonier.—Heer J. Israëls's *Waiting and Watching* (69), a Dutch fisherman's family looking, full of anxiety for their father, from a cottage window, is familiar to us: a good but mannered instance of art in a rudimentary stage.—Mr. L. E. Lambert's *Happy Family* (96) is a most charming, soft, humorous, and natural group of a cat and kittens.—Mr. A. W. Hunt's *Land of Antique Slate* (105), a fine Welsh study, is pathetic, dignified, and beautifully drawn and painted with exquisite skill.—There is lack of pathos and even the beauty of homeliness in the dull face of Mr. Dobson's *Farmer's Daughter* (112), whose features are lachrymose and peevish, their execution dull, heavy, and reddish.—J. F. Lewis's splendid single male figure, in a brilliant red jacket and white robes, standing at a wooden doorway, is called *An Egyptian Pipe-bearer* (154), and is made precious by the famous artist's crisp, masterful touch, scintillating illumination, and exquisitely clear modelling of draperies. We notice in the catalogue of this collection the following names of artists: Messrs. H. Heilbuth, John Varley, J. L. Browne, F. Tayler, J. Orrock, J. Hardy, J. F. Skill, G. Bach, E. K. Johnson, E. M. Wimperis, L. Harpignies, C. Jacque, L. Leloire, G. Jacquet, A. Gow, Mesdag, S. Whiteford, E. Frère, and G. G. Kilburne. Besides these are to be found the under-mentioned names of ladies: Lady Coutts Lindsay, Mrs. Angell, Mdlle. R. Bonheur, and Mrs. Allingham.

In Mr. A. Tooth's Gallery in the Haymarket are some works by MM. Sadée, A. Gow, De Nittis (a capital picture called *Connoisseurs*, 22), L. J. Pott, F. Holl, A. Hughes (the *Eve of Palm Sunday*, 56), Heywood Hardy, José Frappa (*Les Indiscrets*, 66; which we noticed at the last *Salon*), De Bréanski, and S. E. Waller (the cleverly sketched and designed *Flown*, 76). With these is the animated *Playing Bowls* (91), by M. Sorbi; F. Roybet's energetically conceived and vigorously painted figure of *The Burgomaster* (93); M. Lambinet's clear, sunny, and silvery *Fishing on the Loire* (105); M. G. Jacquet's *Spring* (124); and Heer Jan van Beers's *Near St. Germains* (128). The only remarkable picture is M. J. Bastien Lepage's *Le Père Jacques* (60), to which we have already several times referred.

ART NOTES FROM ITALY.

A Correspondent writes from Florence:—

The Gallery of the Uffizi has just had the good fortune of making one valuable and one very valuable purchase. The first consists of a couple of niches, formerly existing in the Palazzo Leperello, and at present deposited in the lumber-room of the Bargello. They are attributed to Benedetto da Rovezzano (1480–1550), an artist, by the way, who ought to have left some work in England, since Vasari tells us that, after the siege of Florence in 1530, he was called by Henry VIII. to London, where he lost his sight in consequence of the fogs. The niches in question, doubtless intended for figures of saints in a chapel, are of very simple design, but most charming and delicate ornament, especially in the network of foliage which covers the lower half of the pillars, and strongly recalls some of the finer work of Sansovino at Venice, and of Marrina and others at Siena.

The second purchase consists of a small square picture, or portion of a picture, bought at Padua, and most probably formerly belonging to the Cittadella family. A certain resemblance in one of the figures to a man-at-arms in one of the St. Christopher frescoes at the Eremitani of Padua is the only conceivable reason for the statement by the former owner that this beautiful piece of work is by Mantegna. Of Mantegna it has, however, neither the very characteristic and exaggeratedly bossy modelling nor the equally characteristic reminiscence of sculpture in the seemingly damp, clinging draperies and the fleece-like clotted hair; nor does the colouring of Mantegna, even in his great altar-piece at Verona, approach to the splendid glow of this picture. The attitudes and faces of the three or four men-at arms or pages, in magnificent dresses and elaborate fuzzy wigs of the late fifteenth century, immediately recall the ambassadors in Carpaccio's St. Ursula series; and the whole scale of colour, particularly the kind of atmosphere of pale gold which permeates the whole picture, so that hair, flesh, and linen seem steeped in it, seems to make it highly probable that it really is by Carpaccio. It is, if so, doubly valuable in Florence, as no other specimen of the master exists here. The fact that the group of which the picture consists is absolutely inactive and (with respect to story, always so important in Carpaccio's work) meaningless, and also that one of the figures is cut in two by the frame, makes it evident that this can be but a portion of a picture—unless, indeed, we suppose, as is possible, that it formed part of a kind of panel decoration running all round a room, in which the paintings would be interrupted by carved wooden pilasters. The subject also is doubtful. Commendatore Donati, director of the Florentine galleries, seems to incline to the belief that the group is one connected with the history of the discovery by St. Helena of the True Cross; but as the beam in the foreground is very cavalierly bestridden by a page, it can scarcely be a holy relic, but a mere meaningless accessory; and the group of youths is extremely suggestive of the attendants of one of the three kings, or of the listless crowd about the crucified Saviour. This beautiful work, at present under lock and key in the director's room, will soon be hung in the Venetian Room of the Uffizi Gallery, where various changes of plan are intended.

A vague rumour is about of another fresco by Botticelli, discovered during the summer in the Villa Incontri, near Florence, and already sold and dispatched to America. As the Villa Incontri is near the Villa Lemmi, the removal of whose frescoes to the Louvre caused some sensation last winter, and both of these country houses are near the Medician villa of Careggi, the suggestion arises that Botticelli may have painted in other houses of that neighbourhood, and that some more works, as unknown to Vasari as both the Lemmi and the Incontri frescoes, may still be awaiting us.

ANTIQUITIES AT NABLUS.

Jerusalem, Oct. 15, 1882.

At Nablûs some excavations have recently been made, which if they could be followed up might lead to important discoveries. Outside the walls of the city, near the south-east corner of it, and close under Gerezim, a native commenced to build a house, and at a depth of eighteen feet came upon a large slab of stone, which was ten feet long, about seven feet wide, and more than two feet thick. One edge was finely carved, and dentils and egg-shaped ornaments existed in abundance, and some of the fragments have acanthus leaves. The block may have formed a part of some rich cornice. The workmen had no means of raising the slab to the surface excepting by breaking it in pieces, which was accordingly done, and the fragments were brought up and placed by themselves, where they now lie. Finely faced walls, carved work, capitals and columns in large numbers, mosaics of different patterns, large blocks of stone, and flights of steps are among the things reported as having been found at various points at the depth before indicated. Among the objects discovered were a bullock's head, which has since been stolen, and a statue of a man, which has been preserved. This is of choice marble, and is covered with drapery which left the right shoulder and breast bare. The right arm is broken between the shoulder and the elbow, and the left arm, which was entirely covered by drapery, is broken at the wrist. It is headless, and the head has not been found. From the base of the neck to the bottom of the feet the figure measures fifty-six inches. The pedestal, or a pedestal, was found which stood on four feet: one of the feet has been preserved. The platform of the pedestal, which is thirty inches square, is seven inches thick, and the

XUM

feet were fourteen or fifteen inches long. The sides of the pedestal were richly ornamented, and its top was about twenty-two inches above the ground. The feet of the statue were attached to a block (as a background) which was thirty inches wide. Above this block the statue proper had a width of eighteen inches.

Hearing of these discoveries I rode up to Nablûs last Wednesday and returned to Jerusalem on Friday. I learned other particulars which I cannot state in this note. They convince me, however, that very important remains exist beneath the surface at or near the place where this statue was dug up. The remains may be those of a theatre or of a beautiful temple. Every reader will see at a glance why it is important that excavations should be made here at once. SELAH MERRILL.

Fine-Art Gossip.

THE Dudley Gallery has, so far as its constituency is concerned, vanished, and the Dudley Gallery Art Society has taken its place, and under these new auspices the current exhibition has been opened. The lease of the premises to the former society having terminated, the tenancy has been renewed to the new one, which consists, or is to consist, of a hundred oil-colour painters and a hundred water-colour draughtsmen, each paying four guineas a year, who are severally invited to contribute works to two exhibitions annually, appointed for the same dates as before. It is stated that since 1865, when the Dudley Gallery started into existence, nearly 100,000*l.* has been obtained for pictures there exhibited. We wish the new society good luck, and trust the managers may be able to carry into effect the proposed improvement in lighting the gallery. It is indispensable that the depressing, if not ignominious, entrance to this exhibition should be entirely altered.

MR. A. W. BLOMFIELD has been appointed architect to the cathedral of Salisbury, a post which G. E. Street held for some years.

IT is proposed to buy by public subscription the whole of the remaining drawings of John Leech and present them, in sections, to Liverpool, Leeds, Sheffield, Nottingham, and other large towns, Manchester having the first group. To secure such works by this means and thus distribute them is surely more laudable than to forestall the small grant from the Treasury to the Print Room, as was lately done with regard to the purchase of the whole of J. Doyle's original drawings for the "H. B. Sketches," to obtain which the department has been crippled. Ten of the Doyles would have been quite enough to show their quality; 50*l.* might have procured these, leaving 950*l.* for the acquisition of desirable works of art.

DECIMUS BURTON'S ill-starred arch is now in course of removal from its original excellent site to a lower spot on Constitution Hill, where it cannot possibly be so well seen nor so conveniently placed. Still, relieved of the burden of the duke's statue, and completed by the addition of the bronze chariot group on the summit, and the attendant standing figures intended by the architect to enrich his work, the arch may be, comparatively speaking, happy yet. Wellington and his horse are to be, we trust, re-erected on an appropriate pedestal where they can be seen. Meanwhile, we should like to see in the Academy Winter Exhibition the original models for this arch and its enrichments and other designs by Decimus Burton which remain in possession of his family. We do not see why the delightful and instructive exhibitions for which we owe the R.A.s so considerable a debt should not include with works of painters and engravers those of architects and sculptors.

A BUST of Robert Burns, the cost of which has been defrayed by small subscriptions, will, it is said, shortly be placed in Poets' Corner, in Westminster Abbey, near the memorials of his fellow poets and countrymen, Campbell and Thomson.

MANY readers who study the history of English art will like to know that Messrs. S. Low & Co. intend to publish in *The Year's Art for* 1883 a complete list of the Members and Associates of the Royal Academy from the foundation to the present time, giving the dates of the births, elections, and, as to deceased artists, the deaths of each man and woman. With this will be given a summary of the contents of the principal art-museums in the country, a report of the Hamilton Palace sale, and, in addition to a directory of artists' names and addresses, those of exhibitors in various provincial galleries. We have found former issues of this book simply invaluable.

CORPUS CHRISTI COLLEGE, Oxford, has paid Mr. A. W. Hunt, the well-known landscape painter, the compliment of electing him to an honorary fellowship. Mr. Hunt was formerly a Fellow of Corpus, being one of the very few artists of our day who combine literary culture with artistic accomplishment. The other Honorary Fellows of Corpus are Mr. Ruskin, Sir H. S. Maine, Archdeacon Palmer, and Mr. Shadworth Hodgson.

MR. W. B. RICHMOND has resigned the Oxford Slade Professorship of the Fine Arts.

THE Institute of Water-Colour Painters is preparing to remove from Pall Mall to Piccadilly, and has consequently decided not to open the usual winter exhibition. A "scratch" collection of works in oil and water by past and present members of the Society and others, including some of John Martin's pictures, will be opened on Monday next in Pall Mall.

THE French journals record the death of M. Charles Bonnegrâce, historical and portrait painter, who was born at Toulon in August, 1812, and entered the École des Beaux-Arts, and afterwards became a pupil of Gros. His first appearance was in the *Salon* of 1834. From this date he exhibited many pictures, most of which represented religious subjects. He produced a great number of portraits, including several likenesses of literary and other celebrities. He was employed to decorate the Chapelle St.-Denis and other churches. He obtained a third-class medal in 1839, a second-class medal in 1842, and the Legion of Honour in 1867.

HERR EDUARD MANDEL, the famous engraver of Berlin, died lately in that city, where he was born in 1810. A pupil of Buchhorn, he was a great master with the burin. His most renowned works are the portrait of Bindo Altoviti and the 'Vierge à la Chaire' ("Colonna Raphael"), both by Raphael; the portraits of Charles I. and Van Dyck, by Van Dyck; the 'Mater Dolorosa,' by Carlo Dolci; Titian's portrait of himself; and 'Christ weeping over Jerusalem,' by A. Scheffer. He was appointed Professor of Engraving in Berlin in 1842, and was a very frequent contributor to the *Salon* and elsewhere, on which account he obtained numerous French distinctions, including a medal of the third class in 1840; medals of the second class in 1844 and (at the Exposition Universelle) 1855; *rappels* in 1857 and 1861; and a medal of the first class and the cross of the Legion of Honour at the Exposition Universelle of 1867.

THE next *Salon* is not, it is said, likely to be made attractive by pictures by MM. E. Detaille and De Neuville, who are both occupied in painting a panorama for Vienna representing the great fight in the neighbourhood of Metz, at Rezonville.

M. E. CHESNEAU has nearly finished a 'Histoire de la Peinture Anglaise,' which is to be published by M. Quantin in his "Bibliothèque de l'Enseignement des Beaux-Arts."

WITHIN the past few weeks considerable alterations have been made in the arrangement of the pictures at the Museo at Madrid. The director, Señor Madrazo, commenced by lowering the line in the whole of the long gallery; this necessitated rehanging the pictures, and the opportunity was taken to arrange them in more systematic order. Special prominence has been given to some of the more celebrated masterpieces by isolating them. These are Raphael's 'Pasmo de Sicilia,' and Velazquez's 'La Familia' and his 'Surrender of Breda,' or 'Las Lanzas.' Many works that previously could scarcely be seen are now brought to the level of the eye. The improved arrangement will be appreciated by all, but will especially receive the commendation of students of arts.

MUSIC

THE WEEK.

CRYSTAL PALACE.—Saturday Concert.
ALBERT HALL.—Gounod's 'Redemption.'

THE concert given last Saturday at the Crystal Palace possessed more than one feature of special interest. It opened with Beethoven's Overture to 'Leonora' known as No. 1—a work less grand than the "No. 3," which has eclipsed it, but hardly less interesting or characteristic of its composer. It was played at the German opera performances at Drury Lane last summer, on the nights when 'Fidelio' was given; but it had not been heard at the Saturday Concerts since 1877. It was followed by Schumann's Symphony in D minor (No. 4), a work for their acquaintance with which amateurs may thank Mr. Manns, seeing that it is scarcely ever to be heard elsewhere than at Sydenham. In spite of the irregularity of its form and the occasional thickness of its instrumentation, the work is one which, when adequately performed, never fails to produce a deep impression, from its masculine energy and its interesting workmanship. It is probable that no composer except Schumann would have selected for treatment a subject apparently so unpromising as that which opens the first *allegro;* yet from themes which in themselves may almost be called trivial the composer has constructed a movement which never allows the hearer's attention to flag for a moment. The Romance is a perfect gem; Schumann has written nothing more tender and poetical; while in the *scherzo* and *finale* the vigorous character of the opening movement is resumed. The performance of this great work on Saturday was one of the finest conceivable—indeed we may say the finest within our recollection. Nobody conducts Schumann's music with truer appreciation of its spirit than Mr. Manns; and on this occasion he won a genuine triumph both for himself and for his orchestra. Mr. Carrodus had been announced to play Mendelssohn's Violin Concerto; but a telegram was received at the last moment to the effect that he was too ill to come. At a very short notice Weber's Concerto in F minor for clarinet was substituted, the solo part being played by Mr. G. A. Clinton, the first clarinettist of the Crystal Palace band. The concerto in question is one of a series of works which Weber wrote for his friend Heinrich Baermann, a distinguished *virtuoso* on the clarinet. The instrument was always a special favourite with the composer, and no other of the great masters has so fully availed himself of its resources. The *adagio* of the Concerto in F minor is especially

noticeable for the tone of dreamy romanticism so characteristic of Weber, while the opening *allegro* and the *rondo* offer to the soloist splendid opportunity for legitimate display. Mr. Clinton's performance of this very difficult work was remarkable not only for finished execution, but for artistic phrasing. He has always been a master of his instrument from a technical point of view; but it is no more than just to him to say that his experience at the Crystal Palace has developed higher qualities in his playing, and that his rendering of the concerto was not less satisfactory æsthetically than mechanically.

The Prelude to 'Parsifal,' which followed the concerto, and which was heard for the first time in England, was naturally one of the great attractions of this concert. Wagner's orchestral introductions to his music-dramas are always so closely connected with the works to which they serve as preface that they must necessarily lose much of their effect when heard apart from their context. In the case of the 'Parsifal' prelude, however, thanks partly to the impressive character of its themes, partly also to the excellent analysis of the music written by Mr. C. A. Barry for the book of the words, much less is lost than we had anticipated. Of course the effect produced on those who had heard the work at Bayreuth was greater than on those to whom the music was unfamiliar; but even on a first hearing it cannot fail to move all who are susceptible to musical impressions. The performance, with the preparation of which Mr. Manns had taken enormous trouble, was excellent. It was impossible to reproduce the mystic effect of the concealed orchestra at Bayreuth; but the various points of the music were so clearly brought out that but little of the effect was lost. The ballet airs from Goldmark's 'Königin von Saba,' which concluded the concert, are extremely pleasing, full of originality, and charmingly scored for the orchestra. Mdlle. Carlotta Badia was the vocalist of the afternoon.

The first performance in London of a work of such significance as Gounod's oratorio 'The Redemption' must be regarded as an event of importance, although the discussion on its merits has been already carried almost as far as it can well be carried. Public interest in the work appears to be every whit as great in the metropolis as in the provinces, even the vast capacity of the Albert Hall proving too small for the accommodation of all who desired to be present on Wednesday evening. Some disappointment may have been felt that the composer was unable to fulfil his engagement to conduct his cherished *opus;* but this feeling had no influence over the general curiosity to hear it. In the absence of M. Gounod the direction could not have been in better hands than in those of Mr. Joseph Barnby, who, there is reason to believe, must be in sympathy with the music. This is a point of considerable importance, as it would be fruitless to anticipate a perfect representation of a great musical composition under a conductor to whom its style and manner were distasteful. Expectations of a meritorious rendering of 'The Redemption' were not, on the whole, disappointed, though there were some points to which exception had to be taken. With regard to the principal singers there is little to observe—Madame Albani, Mr. Edward Lloyd, and Mr. Santley repeated their Birmingham and Bristol successes; and Madame Fassett, Miss Santley, and Mr. Pyatt lent efficient aid in the smaller parts. It should be mentioned that Mr. Santley sang the music of the bass narrator as well as that of Christ—a procedure to be explained on the ground of economy, but certainly inartistic and unjustifiable under the circumstances. The efforts of the chorus deserve the heartiest praise that can be given. They had evidently been trained with the utmost care, and their singing was noteworthy for precision, delicacy, and intelligence. The orchestra was satisfactory so far as it went, but it was too small in comparison with the chorus. The magnificent sweep of the strings, which proved so effective at Birmingham, was missed, and frequently the body of tone was thin and ill balanced. This was inevitable, for whereas the proportion of band to chorus at Birmingham was about 1 to 2·5, here it was not more than 1 to 7. A greater display of liberality in the instrumental department may be recommended on subsequent occasions. Mr. Barnby conducted with much skill, and, except for a slip made by one of the harps, the general performance was irreproachable; but he has not entirely conquered his old failing of hurrying the *tempo*. Nearly every movement in the first part was taken quicker than under M. Gounod, the whole occupying sixty-three instead of sixty-nine minutes. The composer must, of course, be the best judge as to the pace at which his music should be played, and doubtless Mr. Barnby's alterations were unintentional, resulting possibly from nervousness—a fruitful source of errors of this description alike in conductors and executants.

Musical Gossip.

In the programme of last Monday's Popular Concert were some minor pianoforte pieces introduced for the first time by Mdlle. Janotha. The first of the group was Beethoven's set of Variations in C on 'God save the Queen'; the next a well-written and pleasing Nocturne in G, in the style of Chopin, by Herr Henschel; and the third a Valse Brillante in E, of no great value, by Herr Jules Janotha. These were all given with perfect technique and much charm of style by the Polish pianist. The other works performed were Mendelssohn's Quintet in B flat, Schumann's Pianoforte Trio in D minor, and Max Bruch's Hebrew melody 'Kol Nidrei,' for violoncello. Miss Marian McKenzie sang very acceptably an air from Handel's opera 'Faramondo,' and a song "Farewell," by Edward Bache. To-day an otherwise familiar programme includes a new song by Signor Piatti, "Hymn to God the Father," to be sung by Mr. Santley.

The annual performance of the 'Messiah' for the benefit of the funds of the Royal Society of Musicians of Great Britain will take place at St. James's Hall on Friday evening, the 24th inst., under the direction of Mr. Joseph Barnby. The solos will be sung by Miss Mary Davies, Miss Jessie Jones, Madame Isabel Fassett, Miss Hilda Wilson; and Messrs. Edward Lloyd, W. H. Cummings, Frederic King, and Hilton. Mr. J. T. Carrodus will lead the band, Mr. T. Harper will be solo trumpet, and Dr. E. J. Hopkins will preside at the organ.

Four performances are to be given of the 'Ajax' of Sophocles in the original Greek at St. Andrew's Hall, Cambridge, on the evenings of November 29th, 30th, and December 1st, and the afternoon of December 2nd. The choruses and incidental music have been written by Prof. Macfarren, and will be performed by an orchestra and a chorus of undergraduates. On the evening of December 2nd, after the last performance of 'Ajax,' a concert will be given by the University Musical Society, under the direction of Mr. Villiers Stanford, the programme of which will include Bach's cantata, 'Halt in Gedächtniss Jesum Christ' (for the first time in England), a part of Palestrina's 'Missa Papæ Marcelli,' a symphony by Emanuel Bach, and Mr. Stanford's hymn, "Awake, my heart."

Mr. Kuhe's twelfth annual musical festival will be given at the Dome, Brighton, during the coming week. The vocalists announced are Madame Albani, Miss Ella Lemmens, Miss Santley, Miss Robertson, Madame Antoinette Stirling, Miss Emily Dones, and Madame Trebelli; Messrs. E. Lloyd, J. Robertson, F. King, Albert McGuckin, Lucas Williams, and Santley. As usual, Mr. Kuhe gives English music a fair share of attention. The festival commences on Tuesday evening with Sullivan's 'Martyr of Antioch,' followed by Cowen's 'Scandinavian' Symphony, both works being conducted by their respective composers. On Wednesday morning a classical concert will be given, conducted by Mr. Manns; 'Elijah' will occupy Thursday evening; a popular concert (Mr. Kuhe's benefit) will be given on Friday evening; and the festival will conclude on Saturday morning with a performance of Gounod's 'Redemption,' conducted by Mr. Randegger.

It is said that Richard Wagner is engaged upon a new and important literary work, of which the subject is not yet announced.

Mr. Charles Halle commenced his twenty-fifth series of concerts at the Free Trade Hall, Manchester, on the 26th ult., when the principal items of the programme were Haydn's Symphony in D, No. 2, Beethoven's Concerto in E flat, and the Overtures to the 'Midsummer Night's Dream' and 'Guillaume Tell.' Madame Marie Roze was the vocalist.

A new school of music has been opened at Bedford Park in connexion with the Chiswick School of Art. Mr. Charles J. Hargitt has been appointed director, with Mr. Wilbye Cooper as principal of the vocal department.

Mr. Walter Bache will give a pianoforte recital at St. James's Hall on Monday afternoon, when his programme will be entirely selected from the compositions of Franz Liszt.

We have received the prospectus of the ninth season of the Glasgow Choral Union concerts to be given under the direction of Mr. Manns. Those who are familiar with the difficulties attendant on the establishment of any high class musical enterprise will readily comprehend the temptations to abandon an effort of this kind in Glasgow which followed upon the inauguration of the scheme. However, after the severest vicissitudes the turning point has been reached, and the success of the past two seasons has induced the promoters to enlarge the field of operations. During the coming season, which will extend from December 12th to February 14th, four choral and eight orchestral concerts will be given. The works selected for the former are Gounod's 'Redemption,' Berlioz's 'Faust,' and Handel's 'Samson' and 'Messiah.' The orchestral programmes will include a goodly list of symphonies, concertos, and other works, with a fair proportion of English compositions by Messrs. Cowen, Mackenzie, Stanford, and Wingham. The orchestra will be increased to seventy performers, and the list of vocal and instrumental soloists includes many eminent names, with Madame Albani and Herr Joachim at the head of each department.

Rather more than a year ago we noticed in these columns the appearance of the first volume of Madame Ramann's work on 'Franz Liszt.'

We have now received from Messrs. W. H. Allen & Co. an English translation of the same, in two volumes, by Miss E. Cowdery. It is with much regret that we find it quite impossible to speak of the translation in any terms but those of condemnation. Miss Cowdery's knowledge of the German language appears to be limited, while with music she has evidently no acquaintance at all. A few examples will prove the truth of both these statements. In vol. i. p. 68, we read of "Caroline Unger, for whom Beethoven at that time *was writing* his 'Melusine.'" As every musician is perfectly aware, Beethoven never wrote a 'Melusine' at all. We therefore turned with some curiosity to the German original, and there found (p. 42), "für welche Beethoven in jener Zeit die 'Melusine' *schreiben wollte.*" Such carelessness is altogether unpardonable. Again, on p. 296 of vol. i. the name of the final movement of Berlioz's 'Symphonie Fantastique,' which is really the "Witches' Orgy," is translated "Midsummer Night's Dream"! As to technical mistakes, the volumes fairly swarm with them. We read of such musical impossibilities as "a concert [*concerto* is obviously meant] in E *sharp* by Ferdinand Ries" (i. 39); "Hummel's Rondo in A *sharp*" (i. 134); a sonata in "F *flat*" (i. 135); and so on, all through both volumes; while misprints of proper names, &c., are so frequent that it is impossible to keep account of them all. Madame Ramann's book is so full of interest, that we strongly advise the publishers to cancel the present edition, and to reprint the translation after having had it carefully revised by somebody who has a knowledge of music. In its present form it is simply worthless.

DRAMA

THE WEEK.

TOOLE'S THEATRE.—'Girls and Boys,' a Comedy in Three Acts. By A. W. Pinero.

To Mr. Pinero playgoers have commenced to look as the coming dramatist. So great knowledge of stage requirements is in his work combined with so much freshness of style, that the hope that he would take the place vacated by Robertson seemed reasonable. That Mr. Pinero will not yet occupy the position indicated may not be said. His last step is, however, backward. What is of still more evil augury is that the faults traceable in his earlier work are accentuated in the later. 'Girls and Boys' is the least reasonable, least comprehensible, and least sympathetic piece that has been put upon the stage during recent years. Claiming to be comedy, it has scarcely cohesion enough for farce; and approaching in the character of its incidents to domestic drama, it is false to all traditions of the stage in its substitution of cynicism for sentiment. Mr. Pinero seems, indeed, to forget that in order to impress an audience it is desirable to appeal to the emotions rather than the intellect, the heart rather than the brain. In most of his pieces some trace of cynicism has been apparent. More than one of the characters in 'Girls and Boys' is so heartless as to be positively repellent. Take a single instance. Mark Avory is the adopted son of Josiah Papworth. No acknowledged tie of kinship exists, yet the old man has fed, clothed, and educated the younger, assigned him a liberal allowance, and made him his heir. The one care of Papworth, who is acquainted with the true character of his adopted son, is to keep him out of the way of women. Master Mark sees a girl who has been a circus rider, and at the end of a week elects to marry her. This scheme is with some passion opposed by Mr. Papworth. With a noble "indignation" the youth throws off his trammels and goes abroad to win a fortune by his labour. This conduct may be defensible enough; yet the objection to sanction a match with a circus rider is sufficient to obliterate all memory of past kindnesses, and the news that the old man has all but died of grief does not move Mark in the least. With one exception the characters use the strongest language they can find, and in the contest of invective it is difficult to know where to award the palm. Add to these things that eating seems the great aim with every one, and some idea of the mistake Mr. Pinero has made is afforded. A feeling that ridicule is aimed at ourselves is experienced when we find a lady, who has the moment before been exchanging kisses and assumably vows with a young lover, acknowledge her readiness to marry any man who can secure her hot meals. One of the earliest questions put to the prodigal son upon his return is whether he has had hot meals; and the woman he loves, when on the point of marrying another man, seeks to console him by the cates put on one side for the marriage feast.

Had Mr. Toole been one whit less popular than he is, or had the character of Solomon Protheroe taken by him been less cleverly played, the piece would scarcely have survived the first representation. Mr. Toole, however, who was admirably made up, acted with a mixture of drollery and pathos that carried all before it. It may be doubted whether any piece in which Mr. Toole has been seen gives a higher idea of the range of his talent. On the strength of his impersonation, of a comic performance by Mr. Garden, and of a piece of very sympathetic acting by Miss Ely Kempster, the whole obtained a favourable reception. Mr. Pinero's future career seems to depend on his capacity to put heart into his pieces.

Dramatic Gossip.

A NEW drama by Mr. W. G. Wills, similar in character to 'Olivia,' has been accepted by Mrs. Bernard Beere, and is to be produced at the Globe Theatre after the withdrawal of 'The Promise of May.'

'BETSY,' Mr. Burnand's adaptation of 'Bébé,' first produced at the Criterion in August, 1879, has been revived at the Criterion. Such alterations as have been made in the cast are not improvements, and the whole performance is more obstreperous than before. The power of the piece to amuse is not lost, however, and the whole goes with much spirit. Mr. Matthison's two-act play 'Brave Hearts' has also been revived, with Mr. Beerbohm Tree in his original character of the Marquis.

'MORE THAN EVER,' described as a "concentrated tragedy in one horror," by Arthur Matthison, produced at the Gaiety Theatre on Wednesday afternoon, is a genuine burlesque. The characters and incidents of melodrama—the wicked baronet, the nephew deprived of his rights, the forged will, and so forth—are whimsically parodied. An enthusiastically favourable reception was accorded the novelty, which will probably find its way into the regular bill at the Gaiety.

SAMPSON LOW, MARSTON & CO.'S
NEW LIST.

TWO ON A TOWER
IS THE TITLE OF
MR. THOMAS HARDY'S
NEW THREE-VOLUME NOVEL,
NOW READY AT ALL THE LIBRARIES.

THE NEW NOVEL TO READ IS
THE "LADY MAUD": SCHOONER YACHT.
A NARRATIVE OF HER LOSS ON ONE OF THE BAHAMA CAYS,
From the Account of a Guest on Board.
By W. CLARK RUSSELL,
Author of 'A Sailor's Sweetheart,' 'The Wreck of the Grosvenor,' &c.
In 3 vols. at all Libraries.

AT ALL LIBRARIES.
A CHELSEA HOUSEHOLDER.
By the Hon. EMILY LAWLESS.
3 vols.
"Both the subject and its treatment are fresh.....'A Chelsea Householder' is very pleasant reading."—*Athenæum.*

A STRANGER IN A STRANGE LAND.
By LADY CLAY.
3 vols.

THE NEW NOVEL BY DR. GEORGE MAC DONALD,
WEIGHED AND WANTING.
3 vols.

UNDER THE DOWNS.
By E. GILLIAT,
Author of 'Asylum Christi.'
3 vols.

Now ready, in 1 vol. crown 4to. cloth extra, gilt edges, 31s. 6d.; or in parchment binding, top gilt, uncut edges, 35s.
An ÉDITION DE LUXE of 'LORNA DOONE,' Mr. R. D. Blackmore's celebrated Novel. Superbly illustrated with the finest Wood Engravings of Exmoor and the Neighbouring Scenery, after Designs by Mr. F. Armstrong; also with Full-Page Engravings of Incidents and Characters in the Story by Mr. W. Small, and other Illustrations.

Now ready, large imperial 4to. in tasteful extra binding, gilt edges, 3*l.* 3*s.*
FLORENCE: its History. The Medici—The Humanists—Letters—Arts. By CHARLES YRIARTE. Translated by C. B. PITMAN. Illustrated with 500 very fine Engravings.

Now ready, 2 vols. demy 8vo. cloth extra, 24*s.*
CONVERSATIONS and JOURNALS in EGYPT and MALTA. By the late NASSAU W. SENIOR. Edited by his Daughter, M. C. M. SIMPSON.

Now ready, small post 8vo. cloth extra, 3*s.* 6*d.*
PROVERBS. By Louisa M. Alcott,
Author of 'An Old-Fashioned Girl,' 'Little Women,' &c.
Also, now ready,
An OLD-FASHIONED THANKSGIVING DAY. By LOUISA M. ALCOTT. Small post 8vo. cloth extra, 3*s.* 6*d.*

LITERATURE

Memoir of Augustus De Morgan. By his Wife, Sophia Elizabeth De Morgan. With Selections from his Letters. (Longmans & Co.)

Mrs. De Morgan states in her preface that she has not attempted to write a "scientific memoir" of her husband. Such a memoir, if it be ever written, will require a biographer who is at once a mathematician, a logician, a bibliophile, an astronomer, and an antiquary, for in all these departments of knowledge De Morgan has left his mark. He was certainly the most learned authority of his time upon the history of astronomy and mathematics, and also as a bibliophile he was *facile princeps*. But there is no need in this journal to dwell upon these facts; his critical wit, his good sense and wide erudition, were sufficiently shown in the 'Budget of Paradoxes,' published in these columns, and since reprinted as a separate volume.

Mrs. De Morgan depicts the domestic life of her husband; he figures in her memoir as a friend and an agreeable letter-writer, who occasionally investigates spiritual phenomena and dearly loves a laugh, but is withal most serious and earnest whenever he feels that a principle is at stake. One closes the volume with a feeling of increased respect for the uncompromising philosopher who knew how to live his own life, a thoroughly unworldly man.

De Morgan was born in India in 1806; his father was a colonel in the East India service, and his grandfather and great-grandfather had both fought under Warren Hastings. But probably it was from the maternal side that he inherited his mathematical powers. His mother was a granddaughter of James Dodson, author of the 'Anti-logarithmic Canon,' a pupil and friend of De Moivre's. Dodson was mathematical master at Christ's Hospital, and De Morgan records that

"when quite a boy he asked one of his aunts who James Dodson was, and received for answer, 'We never cry stinking fish'; so he was afraid to ask any more questions, but settled that somehow or other James Dodson was the 'stinking fish' of his family; and he had to wait a few years to find out that his great-grandfather was the only one of his ancestors whose name would be held deserving of record."

De Morgan was a fine healthy boy, but he suffered from a grievous infirmity, the loss of one of his eyes, and this provoked all kinds of practical jokes among his schoolfellows. One lad was in the habit of coming up stealthily to De Morgan's blind side, and, while holding a sharp-pointed penknife to his cheek, would speak to him suddenly; De Morgan on turning round would receive the point of the knife in his face. At last the cowardly aggressor was caught and thrashed. Owing to his infirmity, De Morgan never joined in the sports of other boys; he seems to have spent his time in drawing caricatures and devouring books.

After passing from one private school to another, he went, at the age of sixteen and a half, to Cambridge, and entered at Trinity as a by-term man. At his first college examination he only stood at the top of the second class, but the next year there was more mathematics in the college examination, and he was found at the head of the first class. His tutor, in writing to his mother, who was very anxious as to his success, said, "He is not only in our first class, but far, very far the first in it." His mother was continually exhorting him in letters "not to disregard good advice," "not to be so wilful." The wilfulness consisted in mathematical reading beyond the bounds marked out by his tutors, and in the study of metaphysics and mental philosophy. He had not completed his twenty-first year when he gained the fourth place in the Mathematical Tripos of 1827, the order of the list being Gordon, Turner, Cleasby, De Morgan. His place, though it failed to declare his real power or his exceptional aptitude for mathematical thought, would have been sufficient to secure for him a fellowship; and he would no doubt have found a congenial field for work at the University, but conscientious scruples prevented his signing the tests which at that time were required from those who took their degree of M.A. as well as from all fellows of colleges.

On taking his B.A. degree he entered at Lincoln's Inn, and for two years read for the Bar. During this period he made the acquaintance of Mr. W. Frend, his future father-in-law. They met at the office of the *Nautical Almanac* in Gray's Inn, and were introduced by their common friend Lieut. Stratford, who had recently been appointed editor, and comptroller of the office. Mr. Frend had been a Second Wrangler and he possessed decided mathematical tastes, but between the two sympathy in matters of morals and principle formed a stronger bond than similarity of pursuit. Mr. Frend had sacrificed good prospects as a clergyman to his conscientious scruples, and he was an earnest advocate of religious liberty. He had been one of the first to propose the establishment in London of a university in which the highest academical teaching should be given to Jews, Dissenters, and others, without reference to religious differences; and in 1826, when at length the University of London was founded, Mr. Frend suggested to De Morgan that he should apply for the Professorship of Mathematics. He was one of thirty-two candidates, but the committee on whom the election devolved found amongst his testimonials letters of such weight that he was elected unanimously. In writing to Mr. Frend he says:—

"You seem to fancy that I was going to the Bar from choice. The fact is that of all the professions which are called learned, the Bar was the most open to me; but my choice will be to keep to the sciences as long as they will feed me. I am very glad that I can sleep without the chance of dreaming that I see an indenture of five parts or some such matter held up between me and the 'Mécanique Céleste,' knowing all the time that the dream must come true."

The classes opened in the following November, and De Morgan began, as he afterwards confessed,

"to teach himself to better purpose than he had been taught, as does every man who is not a fool, let his former teachers be what they may."

In May, 1828, he was elected a Fellow of the Astronomical Society; in February, 1830, he took his place on its Council, and in 1831 he was elected honorary secretary. It is not easy to say how much of the usefulness and prosperity of the Society during the years in which he filled this place was due to his energy and judgment at difficult junctures. His work at the Society brought him into immediate contact with all its transactions and with all concerned in them; and as he never left London and was known to be always at hand, much more than the routine duties of an honorary secretary fell to his share. He drew up documents, wrote letters and obituary notices, and passed the *Memoirs* of the Society through the press.

De Morgan's acquaintance with his colleagues on the Council of the Astronomical Society became in several cases intimate friendship; his chief friends were Mr. Baily, Sir John Herschel, Sir George (then Mr.) Airy, the Rev. Richard Sheepshanks, Admiral Manners, and Mr. Galloway. He had a strong regard for Mr. Sheepshanks. Among some descriptive remarks written after the death of Sheepshanks, De Morgan says:—

"He was the man from whom I learnt more than from all others of the way to feel and acknowledge the merits of an opponent. I have known many men cheerfully and candidly admit the good points of an antagonist, but hardly another besides Sheepshanks who would in the course of opposition systematically select them, bring them forward, and maintain them against those of his own side."

Mrs. De Morgan states that this reference to an opponent points to Sir James South. Sir J. South joined Mr. Babbage, who had accused some members of the Astronomical Society of being in a conspiracy against him, and this accusation elicited from De Morgan the following description of his relations with three of his friends:—

"The only conspirators named were MM. Airy and Sheepshanks. These two and myself lived together in intimate friendship, officers of the Astronomical Society through a long course of years,.....we three, and each for himself, deciding that he was a rational and practicable man, and that the other two, no doubt worthy and rational, were a couple of obstinate fellows. Francis Baily thought the same of all three. I suppose we were an equi-tenacious triangle. But never a sharp word, I am sure, passed between any two of the four. Men of science are not always quarrelsome."

The reason of Babbage's hostility was that he had obtained grants from the Government for the construction of a calculating machine. Through the influence of scientific friends and of Sir Robert Peel and the Duke of Wellington one thousand

pounds after another had been granted, until a sum of over twenty thousand pounds had been spent, but the engine was not constructed. Babbage was continually enlarging and altering his plans, and the drawings for his engine were not even completed. The Government at last refused to pay any more, and Babbage spent the rest of his life in abusing the Government and in quarrelling with the scientific men who would not recommend the Government to continue their grants. Sir James South was also an advocate of the endowment of research who thought himself ill-used by his contemporaries. He had obtained a pension of 300*l.* a year from the Civil List, but desired further aid. This, together with a lawsuit with respect to the cost of an astronomical instrument, caused him to withdraw from the Astronomical Society. Sir J. South's dislike to De Morgan was so great that it led him to challenge the professor to a duel—a challenge which, of course, was not accepted.

In 1846 Adams and Leverrier, independently of one another, solved the inverse problem which led to the discovery of Neptune. Opinion on the Council of the Astronomical Society was much divided as to the award of their gold medal; after long discussion no decision was arrived at, and the award went by. But the body of the members would not leave things as they were, and a special general meeting was called to discuss the propriety of suspending the by-laws and of reconsidering the whole question. De Morgan wrote:—

"The Society has given to both M. Leverrier and Mr. Adams the full value of twenty medals, or rather a prize of a higher order than any medal. All the bases of the discussion take for granted that both these gentlemen possess more than the ordinary share of merit to which under usual circumstances medals are awarded. In all but the mere gold which goes to the manufacture the discoverers have had their medals over and over again."

Ultimately testimonials were given by the Society, and the question of the medals was dropped. De Morgan had an objection to medals, and, indeed, to all honours which cannot be awarded without competition. In writing to Prof. Michael Foster with respect to University College, he says the existence of medals and scholarships is of very small importance compared with the evils of competitive examination; he considered the striving of one against another for the highest place amongst boys and young men to be among the crudities of an imperfect system, and as ineffectual in gaining the desired end as its moral tendency is bad. Hence his objection to marks in looking over examination papers. He was a most successful teacher, and he held that he could judge of the merits of a competitor from his whole work, but he always refused to reckon the merits by marks. He suggested that perhaps our ancestors' system of disputations, in which a man read a dissertation on a subject of his own choosing, and could be cross-examined on his own argument, was preferable to the method now in vogue. With such a system of examination many would be plucked for not understanding their own meaning. In 1848 he gave an introductory lecture on this subject at University College. Sir John Herschel wrote to him, "I was greatly delighted with your protest against the cramming system in your opening lecture"; and Dr. Whewell wrote:—

"I see you have been kicking against examination reading. So far good. But is your college going to do anything that will really diminish it? I should like to hear how any attempt of this kind prospers. I think the object an excellent one, and have some notions of my own as to the way in which it may be forwarded."

De Morgan doubted the advantage of the honours granted by learned societies, and thought that medals had never produced scientific work, but that the discussions with respect to them had frequently hindered it, bringing in feelings of rivalry or friendship which were injurious to science. Everything in the nature of show connected with scientific titles and honours he judged it better, so far as he was personally concerned, to avoid, even going so far as to refuse the president's chair at the Astronomical Society, which was earnestly pressed upon him; he also declined to allow himself to be put in nomination for the Royal Society. His views with respect to the constitution of the Royal Society and its influence upon science will be found in the 'Budget of Paradoxes,' and are well worthy of attention.

The amount of literary work accomplished by De Morgan may be judged of by the list of writings given at the end of the volume, where the titles of books, memoirs, and papers occupy fifteen pages. The articles which he contributed to the 'Penny Cyclopædia' are said to amount to one-sixth of the whole. It is to be regretted that no collection has yet been made of his articles on the history of astronomy published in the 'Companion to the Almanac' and elsewhere; they would form a most interesting and valuable volume of reference. The last of his articles written for Mr. C. Knight, the editor of the 'Companion to the Almanac,' on the question of the marriage of Newton's niece Catherine Barton with Newton's patron, Lord Halifax, was never published. The MS. seems still to be in the possession of Mrs. De Morgan; and it is to be hoped that it will be printed, as the subject is one to which De Morgan had given special attention.

De Morgan remained a firm supporter of University College and its principle of excluding religious tests till the year 1866, when the Council, in making an appointment to the Chair of Logic and Mental Philosophy, refused one of the candidates on account of his religious opinions, or rather on the ground of his religious status. Dr. Martineau was personally unknown to De Morgan; but, acting on the conviction that the institution to which he had devoted the best years of his life was forsaking the leading principle on which it had been founded, he felt it his duty to resign his professorship. The letters which passed between Prof. De Morgan and the Council of the college, the statement of the Senate, and other matters connected with this question, are very impartially given by Mrs. De Morgan. His retirement from the college with which he had been connected for nearly forty years, and to the welfare of which he had devoted so much energy, was a great blow to De Morgan, and the disappointment, together with grief at the death of a son who had inherited his mathematical talent, brought about the illness which terminated his useful life in March, 1871.

Household Stories from the Collection of the Brothers Grimm. Translated by Lucy Crane, and done into Pictures by Walter Crane. (Macmillan & Co.)

THESE fifty-two stories represent about a quarter of the entire number collected together by the joint exertions of the brothers Grimm and their invaluable assistant Frau Vichmännin. The lamented translator did her work, on the whole, with much spirit and intelligence, together with a fair amount of accuracy, though not unfrequently there is more evidence of mother wit than of knowledge, and words which are of importance to the story are omitted altogether. Difficult bits of idiom are sometimes excellently rendered, and at the next moment we come upon a passage which implies a total cessation of the writer's power of thinking. How, for example, could any one make such a blunder as to translate "die sieben jungen Geislein" "the seven goslings," and "eine alte Geis" "an old goose"?—an error persisted in even in spite of the strong hint which must have been conveyed to the translator when she had to write the words, "And the mother bleated goodbye, and went on her way with an easy mind." Miss Crane, however, let her goose bleat and proceed on her way, and went on with the story entirely untroubled by such a departure from a goose's ordinary habits; and she glided over the little difficulty which she must have encountered when she found that the parent bird had paws, and translated her last words of caution to her offspring, "Seid auf eurer Hut vor dem Wolf, wenn er herein kommt, so frisst er Euch alle mit Haut und Haar," by "He will eat you up, skin, bones, and all." Mr. Crane has fallen into the same error, and gives us very pretty head and tail pieces depicting the seven little goslings, quite regardless of the fact that such tiny creatures as these would have been as nothing to the wicked wolf, whose greediness in devouring six young kids at one fell swoop led to his own destruction; for he was so gorged by his meal that he rolled out of the house—not "strolled," as Miss Crane rendered it, but rolled heavily and painfully—and was not even able to return whence he came, but lay down under a tree hard by the home of his victims and fell into a sound sleep, snoring so loudly that the very branches of the tree beneath which he was lying trembled. His sleep was so profound that he was not even aware that on the mother goat's return she cut his body open and released her six children, who were still alive, for in his eagerness he had swallowed them whole. Having done this, she put heavy stones in their place that he might not miss them, and sewed him up again. As soon as he awoke he went to a well to drink, and the stones made him overbalance himself and fall in. When released from their captivity the little kids "herzten" their mother, but "herzten" ought not to be translated "comforted."

There are numbers of bits of careless translation, such as "Sie ward getröstet," "She became more trustful"; "Das möcht,

ich auch lernen," "I must learn to play too"; "Erlösen" is not to benefit, nor yet should "Ihre zwölf Brüder, die sie erlöst hatte," be changed into "Her twelve brothers that she had lost." "Aschenpattel gehorchte, weinte aber," does not mean "Aschenpattel, when she heard that, could not help crying"; and "Das ward dem König gemeldet" has a very different signification from "Now the king was angry." Still worse is it to render "seltsame" "the same." Here the idea in the translator's mind was evidently that "seltsame" had something to do with "selfsame." Such lapses as these might have been corrected had the accomplished translator lived to revise her work once more. Every one who reads German at all knows that "ofen" does not always mean "oven."

Miss Crane translated 'Der Machandel Baum,' a story which presents many difficulties, owing to its being in Platt Deutsch, much better than any one else who has yet attempted it. "Machandel Baum," though it seems natural enough to translate it "almond tree" (Mandelbaum) is, Grimm suggests, "Wachholder," the juniper, a tree credited by folk-lore with the possession of an unusual amount of alertness and life, and also with the power of restoring youth. Mr. Crane has apparently had doubts about the "Machandel Baum" being an almond tree, for the tree in his illustration has no resemblance to one. Marleenken, too, is Marianchen, or Marie Annchen. It would have been better to call her Marlinchen, for there is nothing German about Marjory. Miss Crane, in her version of this very fine story, lost sight of the sense of the continual presence and prompting of the Evil One, which adds so much to the force of the original. An overmastering fate seems to drive the wretched woman to crime. A point is missed in the story, too, by translating "Dö höörd een up," "Here one of the men looked up." In the original, twenty miller's men were at work when the bird began to sing, and its song was so beautiful that one by one they left off working altogether to listen. "De bäwelste Schuuflad" is the top drawer, and not the nearest. Miss Crane, however, succeeded better with this story than with 'Von dem Fischer un syner Fru,' in the Pomeranian dialect, in which she takes great liberties in the way of free translation and omission of difficult passages. "Zyraat" is not a gateway, any more than "Tüffel" is a foot or "Trabanten" are pages; and it is too much to change "De Mann was noch meist in'n Slaap, awerst he vörschrock sik so, dat he uut dem Bedd füll. He meend he hadd sik vörhöörd, un reef sik de Ogen uut, un säd," into "The man was so fast asleep that when he started up he fell out of bed. Then he shook himself together and opened his eyes, and said," &c.

With all these drawbacks, and though we cannot help feeling that these stories would have been not only prettier, but infinitely more valuable, if the poetical simplicity of the original had been more closely adhered to, Miss Crane's translation is still much better than any of those on which the infancy of the present generation was fed. It is very readable, and the dialogue is always brisk and lifelike. Her choice, too, fell on some of the best stories in Grimm's collection. What delighful stories they are, and what a strange world of almost abject homeliness intermingled with the wildest romance they take us into!—a world where every lovely princess can cook and wash and spin, or play the part of cow-herd, goose-girl, or scullery-maid, quite as well as the meanest of her father's subjects; and no matter how low her fortunes have sunk, she is always able to carry about with her three gorgeous dresses in a portable form, and that quite as easily as the fair heroines in Mrs. Radcliffe's novels transported the lutes with which they were wont to assuage their sorrows. It is a world where the tragedy of a lifetime is revealed to a king's daughter by seeing her brother's shirts at the great washing. It is the only world in which it is possible to eat your cake and have it. The random heroes of these stories set out in search of some almost unattainable good thing, disobey every direction which has been given for their guidance, yet win the longed-for prize at last. They give away all they have, and find it returned sevenfold into their bosom; they sell their children to the devil, but contrive not only to outwit him, but to retain the wealth with which he has endowed them. They offer up their lives or their children's lives in generous sacrifice; their heads are cut off or their limbs hewn asunder; yet somehow or other they are always restored to life and love, and that, too, with the object for which they sacrificed themselves attained.

We have left ourselves little space to speak of the illustrations, which are often very good. On the whole, we prefer the headpieces to the illustrations proper, though that to 'Mother Hulda' is remarkably graceful. We cannot help feeling, however, that the lilies which form the subject of the headpiece to the story of the 'Twelve Brothers' have been conventionalized until they have lost all resemblance to lilies or to anything else but bad and inefficient iron-work. Besides, they were not lilies at all. In the original we find, "Zwolf Lilienblumen, die man auch Studenten heisst." The flower really was either a narcissus or a small species of pink, sometimes called "Feder Nelke," and very often "Studenten Nelke" or "Studenten Lilie," because it is much worn by students in the button-hole of their coats. The book is prettily got up, and is sure to be a great favourite both with children and older folks.

Readiana. By Charles Reade. (Chatto & Windus.)

False modesty is not among Mr. Charles Reade's foibles, but he must not be accused of originating the idea of collecting the scattered fragments which compose the volume called 'Readiana.' He has, however, sanctioned its publication and even written a preface for it. But it was Mr. Chatto who "thought it worth while to ransack the files" for Mr. Charles Reade's "personal convictions on various subjects." The result is a curious mixture. The book is not only a collection of Mr. Reade's personal convictions, it contains also a number of letters on Cremona fiddles and on builders' blunders, some narratives of unremembered heroes of every-day life, and one short story. Mr. Reade's arguments upon the Tichborne case and upon the rights and wrongs of authors may fall under the head of convictions. In such a medley the value of the contents must necessarily be diverse. The letters on Cremona fiddles are the most instructive, and are, indeed, of permanent interest; but Mr. Charles Reade is no doubt right when he says in his preface, with pardonable vanity, that his honest and lasting convictions are worth something, and will be better learnt from this volume than discerned from a study of his novels. But it is because he is an able novelist that the public will care to hear his personal opinions—their intrinsic value he not unnaturally overrates. His position as a writer of fiction, though recognized in England, is perhaps underestimated. In America certainly he takes one of the foremost places among living English novelists, and in France probably he would be ranked almost as high. As no man is the best judge of his own attainments, it is not surprising to find Mr. Reade saying in a letter to the *Daily Telegraph* on the Penge murder:—

"Though I write novels at one time, I can write logic at another, and when I write a novel I give the public my lowest gifts, but I give them my highest when I write in a great journal upon life and death and justice."

This volume by itself contains enough to show that such a judgment is mistaken. Mr. Reade's energetic denunciations, with all their apparatus of logic and their exuberance of metaphor, are neither calculated to arrest one's attention nor to convince one's reason; but even in the little story called 'The Box Tunnel,' slight as it is, the reader feels at once that he is in the presence of a master of his art. Mr. Reade has not the gift of persuasiveness. Take the instance of his letters on the Tichborne case. His object was to convince his readers that the Claimant was beyond a doubt Arthur Orton. He treats the matter in a combative style, and groups the facts to fit in with his logical method, and yet it is obvious that he is not half so convincing as Lord Chief Justice Cockburn was. Mr. Reade despised the art of the story-teller, which was just what he ought not to have done. The Lord Chief Justice in his summing-up deliberately chose the narrative method and left his hearers to draw the irresistible conclusion, knowing that the right way to carry conviction to people's minds is to leave them something to exercise their minds upon. If Mr. Reade had recognized the fact that his greatest gifts were those of the novelist, he could have put the story of the Tichborne case in such a way as to make one almost willing to read it again. As it is, few readers will dare to face the elaborate study of the doctrine of coincidences.

The papers which have the most lively interest at the present moment are those on the rights and wrongs of authors, and Mr. Reade's defence of copyright—if its style be not too polemical to allow it to be called a defence—is really a powerful pleading. But it is irksome to read on account of the excessive vigour of the language in which it is written; and it is disfigured by such useless arguments as the following:—

"I will only say that if any statesman or practical lawyer, or compiler of law books, who either by word of mouth or in print has told the

public 'copyright' is a 'monopoly,' dares risk his money on his brains, I will meet him on liberal terms. I will bet him a hundred and fifty pounds to fifty copyright is not a monopoly and is property."

In his letters on Cremona fiddles Mr. Reade is admirable. Here is the true enthusiast giving the result of researches which have been delightful to him, and for once not seeking to crush us with his pitiless logic. He speaks now with a genuine tenderness, and his vigorous style only adds warmth to the expression of his affection for the marvels of the fiddle's mechanism, the delicacy of its curves, and the lost secret of the Cremona varnish. One tale of the romance of fiddle-dealing is charming. It is too long to give in full. There was a certain precious violoncello at Madrid. It was a genuine Stradiuarius. The local maker, one Ortega, had put in a new belly and sold it, keeping the old belly in his shop. M. Chanot, "the best judge of violins left now Tarisio is gone," lighted upon the old belly and bought it. Tarisio then discovered it, and pestered Chanot till he sold it for a thousand francs, and told him where the remainder of the fiddle was to be found. The owner was persuaded to part with it for four thousand francs, and Tarisio "sailed exultant for Paris with the Spanish bass in a case. He never let it out of his sight. The pair were caught by a storm in the Bay of Biscay. The ship rolled; Tarisio clasped his bass tight, and trembled. It was a terrible gale, and for one whole day they were in real danger. Tarisio spoke of it to me with a shudder. I will give you his real words, for they struck me at the time, and I have often thought of them since: 'Ah, my poor Mr. Reade, the bass of Spain was all but lost.' Was not this a true connoisseur? a genuine enthusiast? Observe! there was also an ephemeral insect called Luigi Tarisio, who would have gone down with the bass, but that made no impression on his mind. *De minimis non curat Ludovicus.* He got it safe to Paris. A certain high priest in these mysteries, called Vuillaume, with the help of a sacred vessel, called the glue-pot, soon re-wedded the back and sides to the belly, and the bass, being now just what it was when the ruffian Ortega put his finger in the pie, was sold for 20,000 fr. (800*l.*). I saw the Spanish bass in Paris twenty-two years ago, and you can see it any day this month you like, for it is the identical violoncello now on show at Kensington numbered 188. Who would divine its separate adventures, to see it all reposing so calm and uniform in that case? *Post tot naufragia tutus.*"

The Early Days of Christianity. By Frederic W. Farrar, D.D. 2 vols. (Cassell & Co.)

It does not happen to every scholar to write six big volumes of exposition, illustration, and commentary upon the New Testament within the limits of a few years. Some exhaust their power and spend most of their lives upon one part of the sacred volume, content to have produced something, however small in size, which throws fresh light upon inspired writings. But all are not equally gifted, neither do all minds arrive at satisfactory conclusions with like rapidity.

In the volumes before us Canon Farrar has attempted to set forth the distinctive characteristics of the work and writings of St. Peter, St. James, St. Jude, St. John, and the author of the Epistle to the Hebrews. To give a clearer conception of the letters he has sometimes furnished a close and literal translation, sometimes a free paraphrase, sometimes a rapid abstract, sometimes a running commentary. The materials are divided into five books, entitled "The World"; "St. Peter and the Church Catholic"; "Apollos, Alexandrian Christianity, and the Epistle to the Hebrews"; "Judaic Christianity"; and "The Earlier Life and Works of St. John." This is a wide field to traverse, presenting many difficulties; but the writer passes over it with steady step, conscious of his ability to perform his work, or, at least, of an honest purpose to do so. These volumes are the result of wide reading and independent thinking. All the talents of the author come out in it prominently—his pictorial power, rhetorical sweep, comprehensive knowledge of history ancient and modern, familiarity with the classics of Greece and Rome, liking for poetry. His descriptions attract because they sound grandly. Readers will hardly expect much evidence of acuteness or depth. Neither need they be disappointed in finding little deviation from traditional views. Cathedral canons are not the men to give out opinions widely divergent from the current creeds.

In the execution of his task Dr. Farrar is not equally successful throughout. Some books of the New Testament are excellently treated, others not. The Epistle to the Hebrews, which occupies the greater part of the first volume, is admirably handled. Adopting Luther's conjecture that Apollos wrote it, the Alexandrian character of the treatise and its differences from Paulinism are convincingly shown. In like manner the Revelation is satisfactorily discussed. Here the author coincides with the view of the best critics that the downfall of paganism is depicted, Nero being the Antichrist-beast whom the Christians at Rome had terrible cause to fear. The commencing chapters of the first book, especially the first on the moral condition of the world, are in the canon's happiest manner, for he shines in historical description. In the whole of the second book, comprising both epistles of St. Peter and that of St. Jude, the treatment is inadequate. The "Church catholic" can hardly be linked on to St. Peter. Neither can the description of St. James and his epistle be commended. It is admitted that he was a representative of Judaic Christianity; but that he was its leading representative in the apostolic time cannot be conceded. As to the epistles of St. John, all three are ascribed to one and the same author, the Apostle John. The discussion of St. John and his writings, his life, tendencies, and character, will not meet with the approval of competent scholars.

The attentive reader will observe how poorly the sufferings of the Christians addressed in St. Peter's first epistle are explained by the supposed spread of the Neronian persecution into the provinces—an idea which cannot be sustained, notwithstanding Orosius. And it is curious to notice how the character of James, bishop of Jerusalem, is drawn in connexion with the epistle assigned to him. He was half a Jew, an imperfect Christian; he differed from St. Paul in his conception of the new religion, yet the divergence was not fundamental. The canon has a salutary fear of attributing to the second century the writings with which he is occupied, and therefore he places them as well as he can in the first. He is aware of the opinions entertained by critics of no mean ability who judge the New Testament writings more by internal than by external evidence; but he cannot see as they do, and is sometimes disposed to treat them with contempt. He acknowledges his indebtedness to Baur and Pfleiderer, but is far from accepting any of their extreme conclusions. He makes concessions, but they are comparatively small. The traditional view is not abandoned in its essential parts.

Like many others, the canon avails himself of a process of balancing that may be readily abused, and we do not think he has rightly applied it in many instances. Thus the first part of the ninth chapter in book ii. gives the arguments against the genuineness of St. Peter's second epistle fairly and strongly, but takes refuge in the conclusion that though we have not here the words and style of the apostle, yet he lent to the epistle "the sanction of his name and the assistance of his advice," so that "it is still in its main essence genuine as well as canonical." We cannot congratulate Dr. Farrar on his estimates of authorities when he puts into the scale against Renan Schmid, Guericke, Windischmann, Thiersch, Alford, and Brückner, who are said to be as capable of deciding a point in criticism, in respect to learning and genius, as the Parisian scholar; Brückner all the while being wrongly cited because his opinion for or against the genuineness of St. Peter's second epistle is undecided. The reconciliation of the view of St. James and St. Paul about justification is unsatisfactory; but it is very easy in the hands of one who starts with the assumption that St. James uses the three words "faith," "works," "justification," in a different sense from St. Paul's. The conciliation of St. John as he appears in the Apocalypse and in the fourth gospel is also accomplished with little effort, in the face of De Wette's critical axiom that the author of the one could not be the author of the other. It is assumed that there was an immense development in the mind of St. John during the quarter of a century that elapsed between the Apocalypse and the gospel. The fall of Jerusalem, and with it the abolition of the old covenant, had been a revelation to the apostle, and the result was that the fiery Jewish Christian became the mild, deep-thinking, mystical preacher of love. The ideas of a man of sixty years of age or more, of a narrow and impetuous spirit, were revolutionized. None can object to the attempt to minimize the differences between the Apocalypse and the gospel; but these should be stated fairly, for it is incorrect to say that Christ is called "the Word" in both.

Much space is given to the first epistle of St. John, of which it is said, but not correctly, "The genuineness of the epistle may be regarded as beyond suspicion." Abler scholars than the canon have more than suspected it. He puts into it a good deal more than the author meant, and follows Haupt too much. But this is a thing to which he is prone, and it is observable enough in other instances. That the gospel and the epistle were written in Patmos, the one a practical accompaniment of the other, is most improbable,

though the conjecture was hazarded by Hug, Ebrard, and Berger.

Credit is due to the author for bringing out so clearly the divergences of the sacred writers. His pages demonstrate the fact that their types of thought differed considerably. He is careful, however, to state that the differences did not go so deep as to reach fundamental belief. Indeed, he can almost do away with dissonances by the light words, "When the apostles differed from each other, it was only in the spirit of mutual respect and affection in which Luther differed from Melancthon, and Bossuet from Fénelon."

Notwithstanding the extent of the work and its many excellences, we do not believe that a correct picture of primitive Christianity can be got from it. The author's remarks on the Ebionites, Nazarenes, St. Peter, and even St. James show that he does not apprehend the early state of opinion regarding Christ and his work upon earth. The appearance of the Gnostics is also misunderstood and antedated.

It is almost unnecessary to specify the suppositions and statements and details which are improbable or incorrect. Main facts are usually given faithfully, and mistakes are few. The references are also right, except in a very few instances. In vol. ii. p. 264 (note) N. de Lyra does not apply the fallen star to Arius and Macedonius, but to Pelagius. In the passage from Pirke Aboth (vol. i. p. 511, note) "maturity" is a wrong rendering. It is hazardous and even incorrect to say that "there are many distinct allusions to St. Peter's first epistle in the epistle of St. Clemens to the Corinthians." Gundert and Weiss may think so; but the dictum is without evidence. There is a very weak apologetic argumentation in vol. i. pp. 353–358; and the unwarrantably strong language in vol. ii. pp. 242, 243, 245, against opinions that have much in their favour, deserves reprobation. In considering the charge against the Christians of having been the authors of Rome's conflagration in the time of Nero, the hypothesis of Schiller, Renan, Hausrath, and Langen is adopted, viz., that it originated in the fanatical hatred of the Jews, favoured by Poppæa and Aliturus, which is most improbable, as is the interpretation of the second beast in the Revelation (chap. xiii.). In the fourteenth excursus there is a laboured attempt to get rid of the presbyter John at Ephesus by identifying him with John the apostle; but it is as unsuccessful as preceding efforts with the same object. It enables the canon, however, to attribute the second and third epistles all the more easily to the apostle. The second excursus, giving the patristic evidence for St. Peter's visit to Rome, shows how little value belongs to such testimony. The proof of that apostle's visit to the imperial city, like that of St. Paul's second imprisonment there, is insufficient. Still, if the author's imagination has sometimes carried him away, if he indulges in preaching, if he has turgid, irrelevant paragraphs, if the volumes could be abridged without material loss, if he has put into the sacred writings too much modern theology, these very features may commend the big work to a numerous class. The following is an example of the canon's style:—

"By Messianic exultation, by eschatological enthusiasms, by the sense of the glory and the dignity of redeemed manhood, by the revealed equality of all men in the sight of Him Who is no respecter of persons, by the conviction of the dwindling littleness of human distinctions in the light of eternal life, they might, if they were not warned, be naturally tempted to a demeanour which would seem contemptuous towards earthly authority. Nay, more; the fearful spectacle of the power of the world wielded by those who were but too manifest servants of the power of darkness—the sight of Antichrist seated in his infamy upon the world's throne—the daily proof of odious wickedness in high places—the constant expectation of that archangelic trumpet which would shatter the solid globe, and of that flaming epiphany which should destroy the enemies of Christ—might lead them into defiant words and contumacious actions."

Here and there the rebukes administered to the *odium theologicum* which inspires too many of the so-called religious newspapers and magazines of the day are praiseworthy. What can be finer than this?—

"There is something distressing in the swift instinct with which an unchristian egotism has first assumed its own infallibility on subjects which are often no part of Christian faith, and then has sped as on vulture's wings to this passage as a consecration of the feelings with which the *odium theologicum* disgraces and ruins the Divinest interests of the cause of Christ. It must be said—though I say it with the deepest sorrow—that the cold exclusiveness of the Pharisee, the bitter ignorance of the self-styled theologian, the usurped infallibility of the half-educated religionist, have ever been the curse of Christianity. They have imposed 'the senses of men upon the words of God, the special senses of men on the general words of God,' and have tried to enforce them on all men's consciences with all kinds of burnings and anathemas, under equal threats of death and damnation. And thus they have incurred the terrible responsibility of presenting religion to mankind in a false and repellent guise. Is theological hatred still to be a proverb for the world's just contempt? Is such hatred—hatred in its bitterest and most ruthless form—to be regarded as the legitimate and normal outcome of the religion of love? Is the spirit of peace never to be brought to bear on religious opinions? Are such questions always to excite the most intense animosities and the most terrible divisions? Is the Diotrephes of each little religious clique to be the ideal of a Christian character? Is it in religious discussions alone that impartiality is to be set down as weakness, and courtesy as treason? Is it among those only who pride themselves on being 'orthodox' that there is to be the completest absence of humility and of justice? Is the world to be for ever confirmed in its opinion that theological partisans are less truthful, less candid, less high-minded, less honourable even than the partisans of political and social causes who make no profession as to the duty of love? Are the so-called 'religious' champions to be for ever, as they now are, in many instances, the most unscrupulously bitter and the most conspicuously unfair? Alas! they might be so with far less danger to the cause of religion if they would forego the luxury of 'quoting Scripture for their purpose.' The harm which has thus been done is incredible:—

> Crime was ne'er so black
> As ghostly cheer and pious thanks to lack.
> Satan is modest. At Heaven's door he lays
> His evil offspring, and in Scriptural phrase
> And saintly posture gives to God the praise
> And honour of his monstrous progeny."

These are noble words, and he who utters them has the true spirit of a scholar, however insufficient his investigations. Some will regret that the magniloquent language peculiar to the writer indifferently conceals the weakness of the critical faculty, which, though possessed in a measure, is kept within the safe bounds of intelligent traditionalism. The tone is liberal, the charity abundant; but the main lines of conservatism are preserved. The results of a far-reaching criticism have no chance of acceptance, and are all but ignored in many cases; or, if they are not, they are treated as things outside the pale of a good ecclesiastic. The author has not advanced our knowledge of the weighty subjects which his book handles; rather has he contributed to stop free inquiry within the modern churches. Whether he *can* stop it need not be said. But we admire his courage, the extent of his reading, his swiftness of execution, his confidence in himself, his wealth of epithets, and his candid acknowledgment of indebtedness to heretics from whom he differs most widely. His work will be popular with preachers, for a good part of it approaches the nature of preaching.

NOVELS OF THE WEEK.

Lost in the Crowd. By the Author of 'Recommended to Mercy.' 3 vols. (White & Co.)

A Golden Bar. By the Author of 'Christina North.' 3 vols. (Hurst & Blackett.)

For King and Kent: a Story of the Great Rebellion. With Notes. By Col. Colomb. 3 vols. (Remington & Co.)

Katinka; or, Under the Veneer. By R. J. Langstaff Haviland. 3 vols. (Chapman & Hall.)

Under Orders. By the Author of 'The Invasion of India from Central Asia.' 2 vols. (Allen & Co.)

The Blackest of Lies. By Albany De Fonblanque. 3 vols. (Remington & Co.)

Julian Ormonde. By W. C. Maughan. 2 vols. (Paisley, A. Gardner.)

'Lost in the Crowd' is a commonplace sensational book, written with enough vivacity for its purpose, and interlarded with such scraps of French and other tongues as may gratify the literary taste of that section of the public which feeds on the sensational novel. The leading incident is of a very harrowing nature. Poor Claudine Montez is an octoroon who in early life has been sold by her own father to a wealthy young Englishman. She gets separated from him by an accident, and is supposed to be dead. Many years afterwards, when she has married a German prince, she discovers that her son by D'Arcy Mainwaring, who has been adopted as his father's heir, is in enjoyment of the family estates and position, and quite unconscious of the story of his birth. Gerald, for so the young man is called, has married a lady of great beauty, but ill brought up and, as the author puts it, an "ill-endowed-by-nature girl." She is not in love with her husband. Indeed, she thinks too often of a certain Lord Arthur, with whom she had some passages before marriage:—

"She could not banish from her memory the time when, had he but said *the word*, had he whispered in her ear the lover's prayer, 'Be mine, my sweet one—poverty with thee is better than the world's wealth without thee,' she would (and, ah! how thankful is she *now* that the temptation to give up 'all for love' had never with its maddening hopes, its soul-entrancing visions of future bliss, assailed her)

have flung herself upon the breast of the adored one and sobbed out there her promise to be his."

Some of the minor characters, such as Mrs. Brudenell and the American, are well drawn, though Gerald is a poor creature, and there is more bathos than pathos throughout.

'A Golden Bar' is a story of the slightest possible texture. The heroine's feelings of regret for her adopted grandfather are so strong as to prejudice her at once against his legitimate heir. Of course the veriest tyro at once perceives that to none but Bertram Heseltine will Iris Durant ever give her affections. But a weary interval of cross purposes intervenes before aversion blossoms into love. The formal little French boy is rather well described, as is a certain Letty, a hoiden who marries a grave baronet, and is the indirect cause of his brother's death by an accident. "Would you like to be married?" "Immensely!" is candid, and no doubt pleased Sir Louis. If there is little to remember, there is nothing to object to in this domestic story.

'For King and Kent' is a novel with a purpose, and the purpose, such as it is, is thoroughly carried out. Col. Colomb is as ardent a royalist as was any one of those who resisted to the death at "Bristol storm" or held Pontefract Castle "post mortem patris pro filio." Two hundred and thirty years have not cooled the ardour of party passion, and the colonel of to-day is as bitterly one-sided in his judgments as any refugee can have been at the time that Oliver was ruling at Whitehall. We have met with ladies and very young men who had got this strangely distorted view of history into their heads, but it is seldom that a gentleman who has a wide knowledge of the incidents of the time writes as if almost every Puritan—Presbyterian and Independent alike—was a scoundrel, and every one who fought for the king a pattern of heroic virtues. The notes to the tale show that its author has studied the history of Kent in 1648 in contemporary documents, printed and manuscript, with no ordinary care, yet the result has been that he has reached the conclusion that all the right was on the side of those who fought for the monarchy. This would be a serious matter if Col. Colomb were writing history. It is harmless in a novel—perhaps, indeed, adds something of psychological interest to the narrative. This was not needed, for as a tale of adventure 'For King and Kent' is a decided success. There is not much love-making in it, but what there is is straightforward, honest love with a charming seventeenth century flavour. Lady Anne and Margaret are mere shadows, but they are shadows of a very different tint, and are destined to cling to the memory long after the plot of the book has been forgotten. Rupert Lendall, the hero, is certainly no shadow. He draws his own character very clearly in what purports to be his autobiography. A London apprentice of gentle blood, he joins in the Kentish petition, serves under Goring, Lucas, and Lisle at Colchester, is concerned in the revolt of the ships, and is, indeed, mixed up in every affair of danger and blood in that part of the world during the fiercest time of the civil war. How often he was in peril of death we have not counted. Yet the story is so deftly put together that those who can get over the preliminary historical difficulties and consent to believe for a time that a good many very well-known people were almost exactly what we are sure they were not, will enjoy the hero's escapes by sea and land, his fighting and his love-making, almost as much as if they were reading a bit of genuine autobiography. Col. Colomb has introduced a novelty in dedication literature. We are accustomed to books each volume of which is inscribed to a separate person, but here we have the whole tale divided into short sections, every one of which is dedicated to some one whose ancestors fought for King Charles I.

There is much that is fresh and attractive in 'Katinka; or, Under the Veneer.' The significance of the second title is not very manifest, for the story has unusually little of the surface manners and conventionalities of society to which the word "veneer" has been applied. It deals with the fortunes of Katinka Hartholz, the supposed daughter of a circus clown, and its leading characters belong to at least seven different nationalities, so that its tone is essentially cosmopolitan. Katinka herself begins to learn the craft of a horse rider, and, being disabled in the circus, is taken in charge by a Russian colonel, an old friend and patron of her father's, who sends her to live with his sister at Nice. Here her life is for a time refined and happy. She is courted by a handsome Hungarian officer, whose love she returns; and she has scarcely a care in the world until her generous host is assassinated by a jealous young Jew, who persecutes her with his unwelcome attentions. After this she returns to her father, now acting at a theatre at Carlsbad. As he treats her brutally, and plays into the hands of the Jew, she flees to Vienna, and is there befriended by the Honourable John Chatteris, an English friend of her Hungarian lover. So much for the nationalities, of which the author is evidently rather proud. Scraps of the various languages, in addition to numerous Latin mottoes from "Horatius" and others, are freely introduced; and of course there are French scraps to follow suit. The style is that of an amateur, but not in a very obtrusive degree; and whilst the English is not always unexceptionable, and the spelling is occasionally strange (as in "payed" for *paid*), there is really plenty of substance in 'Katinka,' with no slight promise of better things. Mr. Haviland has a wide range of experience, and gives his readers the full benefit of what he has seen and heard.

In two exceptionally thick volumes the author of 'The Invasion of India from Central Asia' tells the story of an Anglo-Indian colonel, who, possessing rather too much zeal to please the officials of his time, finds that to be "under orders" may be much the same thing as to be under suspicion and under the ban. Col. Bellasyne, however, has his consolation in his own high sense of duty, and a true love at home who waits and suffers for him—Verona Aston. One Viscount Rockingham is the rather comical villain of the book. He lavishes pecuniary benevolence on Miss Aston's father, having set his mind on overcoming her repugnance to himself; and her mother backs him up in the stale old way by appealing to her to save the family from ruin, by suppressing Bellasyne's letters, and by constant petty persecution. In the end, however, she is constrained to abandon the struggle; but Rockingham does not. He even tries to kidnap the scornful beauty as she is on her way to join her betrothed husband in India. The second volume is chiefly concerned with Indian intrigues, and, being more the result of direct observation, is the most interesting part of the novel. The author proses a good deal, and makes his characters prose, but his book is, nevertheless, quite readable. He clearly stands in great awe of the Indian Viceroy, referring to him vaguely as "X." "From Simla," we read, "came a most flattering and courteous telegram from His Excellency the X." The veneration even extends to bricks and mortar, as, "Douglas dined at X—— House." Perhaps this is in accordance with Anglo-Indian etiquette, but it looks odd.

Mr. Albany De Fonblanque's new story is very prepossessing at the outset, not a little disappointing towards the middle, and fairly engrossing as it approaches the end. It is full of plot throughout, which constantly developes and ramifies, sometimes naturally, sometimes in a most improbable manner, but always in such a way as to sustain the curiosity of the reader. Many of the characters, again, are admirably drawn, with vigorous imagination, good taste, and consistency; but in two or three of them there is the same flaw of improbability as there is in the plot. The heroine is wrapt in more or less of mystery from the first chapter to the last. Introduced to us as a paragon of virtue and fastidious purity, she is soon afterwards represented to have been sadly besmirched in her early youth, and is found threatening to expose the villainy of the man who had ruined her. In all but this Pearl Herbert is well fitted to be a heroine of romance, and whatever her sins may have been in the past—they are not clearly signified—she is made to expiate them bitterly. Her later adventures, indeed, are sensational and fantastic in the extreme. She is kidnapped, chloroformed, drugged "by curare administered hypodermically," shipwrecked, saved by her former betrayer, all in the course of a few days. The characters of her lovers, and of the American Judge Ranlett, the father of one of these, are more naturally described. So, too, is Lady Pembury, one of the moths of society, whose elopement is a somewhat dramatic business. It is clear that Mr. De Fonblanque gives his readers abundance of incident and variety, but he must put a better check on his imagination if he would write a really powerful novel. His colours are too bright and his canvas too crowded for a satisfactory work of art. His style is trenchant as a rule, but he should correct his proofs more carefully. "Tiste" for *teste* and "Qui bono" are specimens of his printer's errors. There is no generally known educational theorist of the name of "M. Paul Burt." There is no bad grammar (as Mr. De Fonblanque says there is) in the phrase, "To treat me thus! *me!* who made him!" On the other hand, 'The Blackest of Lies' is rich in pungent quips and observations.

Mr. Maughan gives us in the form of a novel what is really little more than a passenger's log-book of his voyage round the

world. A few home scenes at the beginning serve to make us acquainted with the characters of the story, some of whom are thrown together on board the yacht Manzanita, and visit sundry parts of the earth under exceptionally pleasant conditions. There is room for plenty of romance and adventure within the limits here indicated, but Mr. Maughan does not care to make the most of his opportunities in this respect. What he wants, apparently, is facts, and he accumulates a great quantity of valuable information, economical and other, some of which ought to be incorporated in the next text-book of geography that is published. Thus at Batavia the travellers meet a merchant, who enlightens them on the coffee and sugar industries of Java. This implies three or four pages of "posting up," whereof one sentence may here suffice:—

"The duty at present upon all sugar exported, except what goes to Holland, is 3 per cent., and under the new tariff all sugar will pay an *ad valorem* duty of 1¼ per cent."

It must not be supposed that 'Julian Ormonde' is all like this. The romantic and the sensational are freely woven into the economical plot, and a couple of promising unions round off the narrative in conventional style. As the author observes in regard to one of these—

"A fair promise was given to the world that this auspicious event would merge in one clear flame the rays which, hitherto, had shone in two separate lights, whose orbit was now the same, and whose radiance was derived from no earthly source."

Of some novels it may be said that a moral or didactic purpose is revealed between the lines of the fiction; but in 'Julian Ormonde' the romance is conspicuously displayed between chapter and chapter of statistics.

CHRISTMAS BOOKS.

Red Cloud. By Lieut.-Col. Butler, C.B. (Sampson Low & Co.)

Holiday Time at Forest House. (Marcus Ward & Co.)

The Farm in the Karoo. By Mrs. Carey-Hobson. (Juta, Heelis & Co.)

Facing Death. By G. A. Henty. (Blackie & Son.)

In the King's Name. By G. Manville Fenn. (Same publishers.)

Rex and Regina. By Mrs. Marshall. (Nisbet & Co.)

THE author of 'The Great Lone Land' has furnished a stirring tale of the prairies to Christmas-keeping youth. It is impossible to criticize its incidents, which are minute in detail and beyond the reach of ordinary experience. The readers of Col. Butler's other works are aware that he rates the American Indian more generously than is usual in these days of reaction against Fenimore Cooper and his imitators. Red Cloud is a romantic Indian, last of his tribe, and a patriot in a wider sense than tribal feuds generally allow.

'Holiday Time at Forest House' is a pretty tale for young children. The events are of a purely domestic character. Of the *dramatis personæ*, one of the best is "the Bobby," and little Jackey is a most lifelike urchin. When his brother returns from school he hides in the hayloft. "'I thought you'd know where I should be, Artie,' he said, innocently, 'because I told you, before you went, I should be in the loft.' 'That's why I came,' said Artie, putting his arms round the little boy; 'but why did you hide, Jackey?' 'Because I thought you might be different, but you aren't,' said Jackey, as he blinked away a tear." He is only five years old, and a brave enough boy.

In 'The Farm in the Karoo' Mrs. Carey-Hobson has written a book of adventure for young people. The author, who has lived for many years in the Cape colony, has known how to utilize those parts of her experience which are calculated to fascinate the mind of an average boy. Her heroes are three English youths who are sent together to enjoy a twelvemonth's ramble in South Africa. One is a delicate student with a strong turn for botany, and the other two are spirited lads eager for sport of any kind. Their several idiosyncrasies invest the narrative with that sort of individual interest which prevents the more instructive chapters from assuming a too didactic character. The best part of the book is that which describes the inland journey made by the three friends in a bullock waggon, and their prolonged sojourn with a wealthy and hospitable settler in the Karoo country, through whom they gather a practical knowledge of ostrich farming, wild-cattle hunting, and other phases of pastoral existence at the Cape. The work, which contains an abundance of anecdote and personal incident, completely fulfils its modest aim.

'Facing Death' is a story of the Staffordshire mining district. The hero, who is equally remarkable for moral and physical courage and for strength, mining skill, and mathematical ability, is a wholesome and inspiriting example for boyhood, though it is not given to many boys to face the adventures he finds in and about the Vaughan pits. The tale is well written and well illustrated, and there is much reality in the characters, though the incidents are naturally rather thickly strung together.

'In the King's Name,' a sea story of the last century, will be a favourite. A young midshipman who is serving in a coastguard schooner falls into the hands of some smugglers and Jacobites, and has to make his escape from his impromptu prison near the Sussex coast. This he effects triumphantly, to the joy of certain comic sailors, who are a little overdrawn.

To christen a child "Of James" or "O James!" seems a strange freak of nomenclature, but this is what Mrs. Marshall has done to poor Hamish Stuart. It is well when it is desired to impart a Celtic ring to a name to see that one's declensions are right. Of course Shamus (Seumas) is the nominative case. The Stuarts are rather oddly quartered in the neighbourhood of Norwich, and the story, which is pleasant, though more suited to girls than boys, is partly connected with life on the Yare. The pictures are pretty.

OUR LIBRARY TABLE.

THE third annual appearance of Mr. T. R. Clifford's work *What Her Majesty's Inspectors Say* (Jarrold & Sons) sufficiently proves that the work supplies a want felt in the scholastic world. It is a methodically arranged pamphlet of about 200 pages, giving in convenient form the opinions of H.M. inspectors on the various subjects taught in the schools under their inspection, and detailing the changes, for better or worse, that have lately occurred. The new issue is adorned by a likeness of the present Vice-President, who, naturally enough, receives no stinted praise from the compiler. Mr. Clifford's preface, although rather heavy reading, gives an interesting *résumé* of the changes made in public elementary education since the period before 1861, in which happy time "the system of school inspection was simple and satisfactory," and "H.M. inspectors of schools were almost invariably distinguished for their educational abilities." Mr. Clifford is hardly satisfied with H.M. inspectors of the present day; and the prosiness of his introductory remarks is enlivened by the spite of a paragraph referring to inspectors, of whom some "were civil, careful, and considerate in their examinations, while others were curt, ill-tempered, and exacting in their demands." Mr. Clifford's pamphlet should have been freer than it is from typographical errors. One of H.M. inspectors, according to the summary, wonders whether certain human beings belong to the *genus home*, while others may reasonably object to having their names not only spelled wrongly, but in more than one way.

Two books that may be classed together are the elaborate *Charities' Register and Digest*, published by Messrs. Longman, and made more valuable by an excellent introduction from the pen of Mr. C. S. Loch, of the Charity Organization Society; and a sensible tractate on *Method in Almsgiving*, by Mr. W. M. Moggridge, which Mr. Murray publishes. The latter gives a great many useful hints.

Two editions of the *Arabian Nights' Entertainments* are on our table. The more important is a reprint of Lane's well-known translation, edited by Mr. E. S. Poole and published by Messrs. Chatto & Windus, who deserve the thanks of the public for producing a standard work at a very low price. The other is a well-printed and tasteful issue of the ordinary version of the *Thousand and One Nights*, which Messrs. Nimmo & Bain send us. The volumes are convenient in size, and those who prefer, as many do, the time-honoured version will not find a more convenient edition than this. It is illustrated with Lalauze's well-known etchings. The same publishers send us a nice reprint of *Vathek* and *Rasselas*, which together fill one handsome volume.

WE have several other new editions on our table. The most important of these is Mr. Forman's reissue of his "epoch-making" edition of *Shelley*. In the notes are embodied the results achieved by the editor's untiring investigations since the issue of the edition of 1876–7. Mrs. Shelley's notes and preface are now given in a connected form. Messrs. Reeves & Turner are the publishers.—Mr. J. D. Lewis has published a second edition (Trübner & Co.) of his excellent edition of *Juvenal*. The notes have been much enlarged.—Messrs. Ward, Lock & Co. send us an edition, in one volume, of *D'Israeli's Curiosities of Literature*; Messrs. W. P. Nimmo & Co. a collection of English letters under the title of *The British Letter-Writer*, a volume full of excellent reading.

MR. FROWDE has sent us two handsome volumes which do not call for detailed criticism, and yet are so carefully turned out that a brief notice seems somewhat unjust of them. The first is the *Parallel New Testament, Greek and English*. The Greek text adopted by the revisers of 1881 is printed on the right-hand page, with the various readings given by Archdeacon Palmer. On the left-hand page are printed, in parallel columns, the English versions of 1611 and 1881. The second contains the authorized version of the Old Testament, and after that the authorized and revised versions of the New printed in parallel columns. It is needless to say that the type and general "get-up" of these books are worthy of the high reputation of the Clarendon Press.—Mr. Clay has sent us a very handy little copy of the two versions of the *New Testament*, and also a *Parallel New Testament* similar to that sent us by Mr. Frowde, with the exception that the Greek text has been edited by Prebendary Scrivener. For the body of his text Dr. Scrivener has followed Beza's of 1598, while Archdeacon Palmer adopts that of Stephanus of 1550.

THE Report of the Free Public Library at Sydney, New South Wales, shows that the total number of visits to the library during 1881 was larger than in any preceding year, except in 1879, during which period the International Exhibition was open.

THE Artistic Stationery Company has sent us some note-paper for which we cannot profess to care, and some elaborate Christmas cards, many of which are excellent. Still better are the Calendars sent to us by

the company. They are graceful specimens of appropriate ornamentation.—Messrs. Hildesheimer & Faulkner have forwarded a number of prize designs for Christmas Cards by various artists. Madame Dubourg's flowers and those of Mr. W. G. Sanders deserve praise, and so do Miss Aumonier's landscapes. Mr. G. Marks's have suffered in the printing, and so have those of Mr. A. Glendinning, jun. Some of Mr. Mackley's floral designs are good. The contributions of Mrs. Duffield and Miss Ludovici are also excellent.

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Anderson's (W. H.) Fasti Apostolici, a Chronology to the Martyrdom of SS. Peter and Paul, cr. 8vo. 2/6 cl.
Copinger's (W. A.) Thoughts on Holiness, Doctrinal and Practical, 18mo. 2/6 cl.
Dod's (M.) Book of Genesis, cr. 8vo. 2/ cl.
Good News (The) in Africa, Scenes from Missionary History, by Author of 'Come to the Supper,' cr. 8vo. 3/6 cl.
Holy Thoughts on Holy Things, compiled by the Rev. E. Davies, 8vo. 7/6 cl.
Lindesie's (A.) Reconciliation, or Peace with God, an Argument for the Christian Faith, cr. 8vo. 5/ cl.
Plummer's (Rev. A.) The Gospel of St. John, 12mo. 6/ cl.
Walsh's (W. P.) The Decalogue considered with more Especial Reference to Sunday-School Work, 12mo. 2/6 cl.

Law.

Law of County Courts, compiled by S. Smith, cr. 8vo. 2/6 cl.
Robbin's (L. G. G.) Scottish Land Statutes, cr. 8vo. 18/ cl.

Fine Art and Archæology.

Cave-Browne's (J.) Lambeth Palace and its Associations, Introduction by Archbishop of Canterbury, illus., 21/ cl.
James's (M. E.) How to Decorate our Ceilings, Walls, and Floors, illustrated, cr. 8vo. 4/ cl.
Modern Etchings of Celebrated Paintings, with an Essay by J. W. Mollett, 4to. 31/6 cl.
Our Sketching Club, by Two of the Artists, with 100 illus., 7/6
Some Well-known Sugar'd Sonnets, by W. Shakspeare, Resugar'd, with ornamental borders, by E. J. Ellis and T. J. Ellis, 4to. 15/ bds.

Poetry and the Drama.

Kemble's (F. A.) Notes upon some of Shakespeare's Plays, 7/6
Leigh's (H. S.) Strains from the Strand, cr. 8vo. 5/ cl.
See Saw, a Book of Song, illustrated, and with Original Music by W. M. Hutchinson, fcap. 4to. 5/ cl.
Wilkinson's (T. C.) The Conquest, and other Poems, 12mo. 3/

Philosophy.

Mivart's (St. G.) Nature and Thought, an Introduction to a Natural Philosophy, 8vo. 10/6 cl.

History and Biography.

Diaries and Letters of Philip Henry, 1631-96, ed. by M. H. Lee, cr. 8vo. 7/6 cl.
Foster's (F. E.) Men of Note, their Boyhood and School Days, cr. 8vo. 2/6 cl.
Harris's (S.) Old Coaching Days, illustrated, 8vo. 16/ cl.
History of Antiquity, from the German of Max Duncker, by E. Abbott, Vol. 6, 8vo. 21/ cl.
History of the Year (The), from Oct. 1st, 1881, to Sept. 30th, 1882, cr. 8vo. 6/ cl.
Memoir of Annie Keary, by her Sister, cr. 8vo. 6/ cl.
Records of the Life of the Rev. W. H. Havergal, by his daughter, Jane Miriam Crane, cr. 8vo. 6/ cl.

Geography and Travel.

Baxter's (Right Hon. W. E.) A Winter in India, illus., 5/ cl.
Farrer's (R. R.) A Tour in Greece, 1880, illustrated by Lord Windsor, roy. 8vo. 21/ cl.
Hay's (W. D.) Brighter Britain, or Settler and Maori in Northern New Zealand, 2 vols. 8vo. 21/ cl.
Macgregor's (Major-Gen. Sir C. M.) Wanderings in Balochistan, 8vo. 18/ cl.
Poole's (R. S.) The Cities of Egypt, cr. 8vo. 5/ cl.
Roberts's The Holy Land, Vol. 2, 4to. 18/ cl.
Stone's (O. M.) Norway in June, illustrated, cr. 8vo. 15/ cl.
Whately's (M. L.) Behind the Curtain, Scenes from Life in Cairo, cr. 8vo. 3/6 cl.

Philology.

Ciceronis (M. Tulli) Pro C. Rabirio Perdvellionis Reo Oratio ad Quirites, with Notes by W. E. Heitland, 8vo. 7/6
Palmer's (A. S.) Folk Etymology, a Dictionary of Verbal Corruptions, &c., 8vo. 21/ cl.

Science.

Allen's (G.) The Colours of Flowers as illustrated in the British Flora, cr. 8vo. 3/6 cl.
Harley's (Dr. G.) Treatise on Diseases of the Liver with and without Jaundice, 8vo. 21/ cl.
Husband's (H. A.) The Student's Pocket Prescriber, 64mo. 3/
Kirby's (W. F.) European Butterflies and Moths, 4to. 35/ cl.
Landon's (F. G.) Algebra for the Use of Colleges, &c., 4/6 cl.
Morgan's (C. L.) Water and its Teachings in Chemistry, Physics, and Physiography, 18mo. 2/6 cl.
Ransome (A.) On the Relation of the Chest Movements to Prognosis in Lung Disease, 8vo. 7/6 cl.
Richter's (O.) Chemical Constitution of the Inorganic Acids, Bases, and Salts, 8vo. 3/6 cl.
Wilson's (A.) Chapters on Evolution, 7/6 cl.

General Literature.

Buckland's (A.) Story of English Literature, cr. 8vo. 5/ cl.
Carey's (R. N.) Wooed and Married, a Novel, cr. 8vo. 6/ cl.
Church's (A. J.) Stories from Livy, cr. 8vo. 5/ cl.
Corkran's (A.) The Adventures of Mrs. Wishing-to-Be, and other Stories, cr. 8vo. 2/ cl.
Crake's (Rev. A. D.) Fairleigh Hall, 12mo. 3/6 cl.
Dixie's (Lady F.) In the Land of Misfortune, illus., 8vo. 18/
Fenn's (G. M.) Poverty Corner, 12mo. 2/ bds.
Forrester's (Mrs.) I have Lived and Loved, 3 vols. 31/6 cl.
Gow's (G.) New Light through Old Windows, cr. 8vo. 2/ cl.
Handbook (The) of Plain and Fancy Needlework, cr. 8vo. 2/6
Hardy's (T.) A Laodicean, cr. 8vo. 6/ cl.
Hocking's (S. K.) Sea Waif, a Tale of the Sea, cr. 8vo. 2/6 cl.
Hooper's (M.) Good Plain Cookery, cr. 8vo. 2/6 cl.
James's (E.) Our Servants, cr. 8vo. 2/6 cl.
Jordan's (W. L.) The Standard of Value, cr. 8vo. 5/ cl.
Joynes's (J. L.) Adventures of a Tourist in Ireland, cr. 8vo. 2/6
Layton Croft, by the Author of 'The Torn Bible,' cr. 8vo. 2/6
Linton's (E. L.) Witch Stories, new edition, 12mo. 2/6 cl.
Mac Donald's (G.) Orts, cr. 8vo. 6/ cl.
Marryat's (F.) Phyllida, new edition, cr. 8vo. 3/6 cl.
Mitchell's (E. H.) The Diamond Ring, a Tale, cr. 8vo. 5/ cl.
Mongredien's (A.) Wealth Creation, cr. 8vo. 5/ cl.
Mulholland's (R.) Four Little Mischiefs, 12mo. 2/ cl.
Murray's (D. C.) Val Strange, 3 vols. cr. 8vo. 31/6 cl.
New Arabian Nights (The), Select Tales, not included by Galland or Lane, translated by W. F. Kirby, cr. 8vo. 4/6 cl.
On the Rock, and other Short Allegories, by Author of 'Under the Limes,' cr. 8vo. 2/6 cl.
Payne's (A. G.) Choice Dishes at Small Cost, 12mo. 3/6 cl.
Phillips's (E. C.) St. Aubyn's Laddie and the Little Wouldbe Soldier, illustrated, cr. 8vo. 2/6 cl.
Pitman's (E. R.) Florence Godfrey's Faith, cr. 8vo. 3/6 cl.
Play Hours and Play Time, printed in colours, demy 8vo. 3/6
Turner's (C. E.) Studies in Russian Literature, cr. 8vo. 8/6 cl.
Walsh's (J. H.) Modern Sportsman's Gun and Rifle: Vol. 1, Game and Wildfowl Guns, 8vo. 15/ cl.

THE LATE PROF. PALMER.

THE intelligence received at the Admiralty from Col. Warren leaves, unhappily, no room for any further hope. Palmer and his party have been murdered. They were surrounded, captured, taken into the mountains, and then, after two or three days of captivity, they were done to death. For a long time his friends sought comfort in the gleams of hope afforded by possibilities and by conflicting rumours. There was a persistent report that two Englishmen had been killed—where, then, was the third? Alas! the third Englishman was the Sheikh Abdullah, Palmer himself, whom the murderers took for a Syrian effendi. Then it was reported that an Englishman had been seen in the Northern Desert: this Englishman might be Palmer; then it was argued that because Palmer had just gone through the desert alone and unprotected, relying on his knowledge of the people and their language, no harm would happen on a second visit. "It is impossible," said one who had witnessed his power of managing natives, "that any Arab should kill Palmer." There was also the report that he had escaped with the Sheikh Meter Abu Sofieh, and had been carried into Arabia. It is now, however, certain that he is dead; he was not betrayed by any of the Arabs whose friendship he had gained on his first journey, nor was he murdered for the money he had with him, for the murderers knew nothing of it, and the money escaped them. The authors of the crime have to be sought in Cairo, Nakhl, and El Arish. That they will be duly sought and punished, we entertain no doubt. The matter has been placed in the best hands; Col. Warren is no stranger to the wily Oriental. Mean time, the only consolation for this most terrible misfortune is the thought that no soldier ever died more bravely for his country than Palmer; that no more gallant achievement has ever been recorded in history than that first journey of his in which, alone and unprotected, he turned back the tide of fanaticism, and persuaded the countless hordes of the desert to sit down in quiet and become the friends of the Feringhee. A brief record of this journey, drawn up from day to day in letters to his wife, has arrived in England. An official report was drawn up by Palmer for Admiral Seymour, and will, perhaps, some day see the light.

Edward Henry Palmer was born at Cambridge on August 7th, 1840. I believe he was a posthumous child; in any case, his parents both died when he was quite young. He was privately educated, and did not attend the Perse Grammar School. His first master in Oriental languages was the Rev. George Skinner of Jesus, chaplain of King's College, one of the very few Cambridge men who in those days—there are not many now—took up a study for which the University offered no rewards. Perhaps to young Palmer it seemed as if there was no place for him and his favourite studies at Cambridge, while an opening seemed possible in London, probably through family interest. He therefore left Cambridge and came to town, with the view of entering upon a mercantile career. One knows little of his London life; there can be, indeed, little to tell of a young man's early work in a City house. He is said to have learned French and Italian during these years of City life, and it is certain that he carried on also his Oriental studies.

It was in the year 1863 that he determined to give up whatever chances he had in the City of the Golden Pavement, and entered himself at St. John's, Cambridge. He spent his undergraduate time in reading a great deal of Arabic and Persian, and as little Latin and Greek as possible. A third class in the Classical Tripos marked the extent of his attainments in those languages. Indeed, he never pretended at all to be a classical scholar. He took his degree in the year 1867, and it is very greatly to the credit of the Society of St. John's that they recognized his Oriental studies by electing him a Fellow in the same year. This election was, indeed, an endowment of research. The first chance of visiting the East occurred in 1869, when Capt. (now Sir Charles) Wilson went out on the Sinai Survey Expedition, accompanied by Capt. Palmer, R.E., the Rev. F. W. Holland, and E. H. Palmer. The business of the "pundit" was to investigate the traditions, dialects, and antiquities of the Sinai peninsula. He developed during this journey a wonderful power of quickly apprehending and acquiring dialectic differences, and took his first lessons in the art of managing the difficult tribes of Sinai. Soon after his return in 1870 he made arrangements with the Committee of the Palestine Exploration Fund for a journey of exploration in the very little known Negeb or South Country and the desert of the Tih. This he accomplished at very small expense in company with the late Mr. C. F. Tyrwhitt Drake, who was assisted by a grant made by the University from the Worts Travelling Bachelors' Fund. His report of the results of the journey was published in the *Quarterly Statement* of the Palestine Exploration Fund, and has been republished in the book of special papers belonging to the 'Memoirs of the Survey of Western Palestine.' He also wrote a popular account of the same expedition, called 'The Desert of the Exodus.' In the same year, by the resignation of Mr. Theodore Preston, who had long been non-resident, the Lord Almoner's Professorship of Arabic became vacant, and was given by the late Dean of Windsor to Palmer. This preferment, although only worth 40*l.* a year, enabled him to keep his fellowship and to marry. The stipend of the professorship was also increased by the University to 300*l.* a year on condition of his giving lectures in Persian and Hindustani. In the year 1874 he was called to the Bar, and although he never seriously considered the law as a profession, it was one of his chief pleasures to go on circuit, to conduct an occasional case, and to study the curious phases of life presented by a county assize. I believe, however, that he showed considerable power in the exercise of advocacy.

Between 1871 and the present year the real work of his life was done. It is wonderful to consider how vast a quantity of work he got through during these ten years. It must be remembered, too, that the work was accomplished in the face of ill health—he was always suffering from asthma—and domestic affliction caused by the long illness

and death of his first wife. A revision of Henry Martyn's translation of the New Testament into Persian; an Arabic grammar; an Arabic manual; a Persian dictionary; a report on the Bedawin of Sinai; a translation into Arabic of Moore's 'Paradise and the Peri'; an edition, with an English translation, of the Arab poet Boha ed Din Zohair; a translation of the Koran; a history of Jerusalem; a life of the Caliph Haroun al Raschid; the 'Song of the Reed,' chiefly from Arabic and Persian sources; a volume of verses in Romany, written with Miss Janet Tuckey and Mr. Charles Leland; and a translation of the Swedish poet Runeberg (with Mr. Erikr Magnusson), make up together a goodly show of work in a short ten years. But besides these books he wrote occasionally for the *British Quarterly Review*—one of his papers on 'The Secret Sects of Syria' was a very remarkable article—for the literary journals, for the *Saturday Review*, and for several of the monthly magazines. He translated and transliterated the long lists of names procured by Capt. Conder during the survey of Western Palestine, and he was appointed joint editor, with me, of the memoirs of that great work. He was also engaged in preparing a set of manuals and grammars for Messrs. Trübner & Co. at the time when he consented to go out to the desert for the Government. It is impossible for any one to be actively connected with the Palestine Exploration Society without being forced to take an interest in the manifold topographical questions which agitate the minds of the members. Palmer, who took strongly from the beginning a view antagonistic to that of Mr. James Fergusson, contributed for his share of the controversy an account, from the Arab historians' descriptions of the building, of the much disputed Dome. Concerning his linguistic attainments, it is difficult to enumerate the languages which he had acquired because he was continually learning new ones. Arabic, Persian, Hindustani, Urdu, are some of the Eastern tongues with which he was familiar. He knew Turkish, but not, I think, so well. As regards European languages, he knew French, German, Italian, and Swedish, with its cousins of Denmark, Norway, and Iceland. He knew some Polish and some Russian, but I do not know how far he could be called a master of these languages. He could talk Romany as well as any gipsy on the road. It is a curious fact that he once came across Romany-speaking gipsies in Moab. A striking illustration of his facility and mastery of language occurs to me. We were going together to visit the Foreign Sailors' Home at Limehouse. In the road, just before we arrived at that institution, he espied a friend in charge of a cart filled with baskets—one Stanley or Smith—with whom he exchanged five minutes of question and greeting in Romany. On the steps of the Home were two men basking in the sun: one of these was a Lascar from Calcutta, the other a burly negro who hailed from the Soudan, and talked some kind of Arabic. In the conversation which followed, both men having a budget of grievances to unfold, it was evidently little or no effort for Palmer to pass from Arabic to Hindustani and back again, turning from one to the other while both talked at once. It is not uncommon to find scholars who have so far mastered languages as to be able to read the literature of many tongues with ease and pleasure, but it is rare indeed to find a man who can speak with equal ease in all or any of the languages he has studied. Palmer was by no means a mere man of books; there was nothing in his ordinary speech, except his extraordinary flow of anecdote, to show that he was a scholar at all. He was a man of small stature, quiet manners, and gentle voice. Yet he was a man who at once impressed every one with whom he came in contact. Perhaps it would not be too much to assert that he had no business or private relations with any man who did not straightway become his friend. Therefore, because he was concerned in many things, he was a man of many friends. It is beyond any power of words to express the loss which those who enjoyed his intimate friendship have suffered by his untimely death.

Another thing: this rare linguist, this extraordinary scholar, possessed to a remarkable degree that power which enables men to become conjurors, thought-readers, so-called spiritualistic mediums. The science of legerdemain had no mysteries for him; he could cheat the senses so that you saw, and steadfastly maintained that you saw, the thing which was not. When he attended a séance Palmer's spirits would begin their own independent manifestations, to the unspeakable discomfiture of the professional who was preparing to fetch along his Katy and his Peter; he could read thought as well as Mr. Bishop, or you might blindfold his eyes and he would lead you to the spot where you had concealed the thing agreed upon; and all, as he was careful to explain, without any supernatural mystery, good spirits or evil spirits, whatever. No doubt the possession of this extraordinary sympathetic faculty stood him in the greatest stead in dealing with the Arabs of the desert. No one else, in fact, could do with these wild people what he could do. He had many methods: he laughed with them or at them; he refused to be moved by their threats; he ordered them; he assumed that they were going to do what he wanted; if necessary he cursed them—he had the gift of Ernulphus in cursing, he knew the whole armoury of Arab cursing; he cursed until they grovelled at his feet and implored him to remove those curses, when they would do all that the great sheikh demanded.

Again, he was an excellent actor: he could "render" a scene with the greatest fidelity and skill, he could multiply himself and personate alone a play of many characters, he could represent to the very life any man he chose to study. And latterly he developed a new power, that of drawing caricature portraits. There exists at his house a portfolio of water-colour drawings in which the features of many friends are depicted with the most good-natured and truthful satire. Another remarkable thing was that although he read very little English literature, and professed to be entirely ignorant of English poetry, he wrote verse with great ease and fluency, both translations and original verse. I hope that when his papers are examined there will be found the materials for giving a glimpse of this side of a many-sided man.

These few words are weak and feeble indeed. Had the man been of lesser power, of lower nature, I could doubtless have spoken more firmly. One wonders whether he ever knew or suspected in the least how great and rare a man he was—how much his friends respected him, and with what bitter hearts they would mourn his loss.

WALTER BESANT.

NOTES FROM OXFORD.

November, 1882.

As was to be expected, the first visible sign that the new statutes have become law has been the election to official or tutorial fellowships of tutors and lecturers who had by marriage forfeited those which they formerly held. In one college only has there been an unfortunate exception to the general rule. The refusal of the governing body of Christ Church to reappoint one of their ablest tutors indicates the existence of a spirit of intolerance almost unknown outside the precincts of the cathedral. It is certain that the annals of other colleges can furnish no precedent for the summary dismissal of a tutor of proved efficiency and experience on the strength of opinions expressed by him, not recently or in his capacity as tutor, but some years ago, and this, too, in the teeth of the known wishes of nearly all the educational staff. We had hoped that such *autos de fe* were out of date, and we welcome as an augury of better things in Christ Church the appeal for tolerance made by the Regius Professor of Divinity in a sermon recently published. The toleration he asks for is the toleration of orthodoxy by those who are not themselves orthodox, and the request is reasonable enough; but we hope that it may be taken as evidence that the professor is in favour of equal toleration on his own side, and that he at least heartily disapproves of the silly piece of academical persecution in which so many of his colleagues were engaged at the very time when his pathetic appeal was made.

It is pleasant to turn from this unfortunate scandal to other points in the working of the new statutes. Two of the recent vacancies in the professoriate have been filled up, and the appointments made form a good omen for the future. The new Regius Professor of Hebrew, Mr. Driver, is a sound scholar and a sincere and devoted student of his subject, who will, moreover, as a canon of Christ Church, exercise a wholesome influence in giving a more intelligent direction to the zeal of his brethren. Of Mr. Wallace it is perhaps enough to say that he is in every way a worthy successor of Prof. Green. For the Vinerian Professorship of English Law, which is to be filled up before Christmas, there are, it is believed, only two candidates: Sir William Anson, now Warden of All Souls' and formerly Vinerian Reader, and Mr. Albert Dicey, with either of whom the University would be more than satisfied. The election to the new Waynflete Professorship of Physiology, which has been founded by Magdalen College with such praiseworthy promptitude, will also take place this term; and early next year we may hope to see a successor to Sir H. Maine in the Chair of Jurisprudence. The foundation of the Lincoln Professorship of Archæology has been necessarily delayed, owing to the rejection by the House of Lords of the new statutes made for the college. We are not, however, without hope that all difficulties may be got over, and that classical archæology may at last have its official representative in the University.

Scarcely second in importance to the reinforcement and extension of the professoriate is the better organization of our ordinary teaching. The basis of such an organization has been supplied by the Boards of Faculties which the new statutes direct us to create. To these Boards the Commissioners entrust the duty of arranging and publishing lists of the professorial and other lectures to be given in the subjects of each faculty during term, and of calling attention to deficiencies in the provision made for instruction, and we may, therefore, fairly look to them for some relief from the confusion and waste involved in our present system. It will also be a considerable saving of labour if, as is proposed, the functions of the existing Boards of Studies are transferred to these new boards. Another step in the right direction has been taken by removing the examinations, as far as possible, to the very end of term, and thus leaving our short periods of work free from the distracting interruption of the "Schools."

There is, as usual, a good deal in the way of new building to be reported. At Magdalen the new wing is almost entirely roofed in, and the architect, Mr. Bodley, may be heartily congratulated on the skill with which he has reproduced the grace and symmetry characteristic of the most beautiful of Oxford colleges. In the Bodleian, besides the never ending external repairs, considerable internal alterations have been made in connexion with the appropriation by the library of the "Old Schools." At Lincoln the new sets of rooms are finished, and those at Brasenose nearly so; at the east end of Broad Street a wooden hoarding screens from view the first beginnings of the Indian Institute; and lastly, at Somerville (Ladies') Hall a new wing, containing twelve rooms, has just been completed and opened.

As a last item of news it may interest your readers to know that Mr. W. Ramsay, Fellow of Exeter College, intends before long to deliver

XUM

in the hall of that college two lectures on the 'Early History of Asia Minor,' in which he will describe the results of his own and other recent researches in that country. It should also be added that the fund which the Council of the Hellenic Society is raising for the purpose of enabling Mr. Ramsay to continue his explorations now amounts to about 300*l*. More than this, however, is required for the purpose, and further donations are urgently needed. P.

THE JEWS OF COLCHESTER.

Eggesford, North Devon, Nov. 6, 1882.

MAY I make one comment on the interesting discovery that my friend Dr. Neubauer announced in these columns last week? The document that he has just unearthed cannot, I think, claim to contain the first mention of the Jews of Colchester. In 1240, eighteen years before its date, when Henry III. summoned a Jewish Parliament to Worcester, Aaron de Colecester, Arcel de Colecester, Isaac fil. Benedicti, and Jacob fil. Vinis (or Vivis) are entered in the list of members as representatives of the Jews of Colchester (the roll is printed at length in Margoliouth's 'Jews of Great Britain,' 1846, pp. 324–6). I believe that I have also noticed several references to the Jews of the town in State papers of earlier dates in the same reign, but I have not my notes at hand to verify this statement. A writ of 1268, quoted in Tovey's 'Anglia Judaica' (p. 40), mentions the Jewish schools of Colchester, and the fact sufficiently proves that the Jewish community there was of considerable standing. S. L. LEE.

THE HAMILTON MANUSCRIPTS.

As the purchase of this collection by the Prussian Government has excited the attention of amateurs all over the world, we may as well give a description of a few of the treasures belonging to it; but it must not be supposed that this by any means exhausts its riches:—An account of all the ceremonies performed at the funeral of Anne de Bretagne, entitled "Commemoration et Avertissement de la Mort de tres Chrestienne.....Souveraine Dame Madame Anne, deux foiz Royne de France, Duchesse de Bretaigne.....par Pierre Choque, Roi d'Armes de Bretaigne," a manuscript on vellum, executed about 1514, with 10 miniatures, containing full-length portraits of the queen and of distinguished personages in their robes of ceremony.—Alexandre de Macedone, a French romance of chivalry, ornamented with 98 miniatures representing events related in the romance, heightened with gold and silver: a work of great beauty.—Antiphonale, cum Notis, a truly splendid manuscript of the early part of the fifteenth century. This formed the fourth volume of a series of choral books belonging to some important church in Italy. It contains the Antiphons for Easter Day, and the first page is entirely occupied by a grand capital R, beginning the word "Resurrectio." Within this are representations of the resurrection of Christ, the descent of the Holy Spirit, and the Last Supper, surrounded by a grand border. There are three smaller paintings in the volume, all of equal beauty with the first. The first miniature, being the full size of the page, is no less than 2 feet in height by 16 inches in breadth.—Navigation d'environ le Royaume d'Ecosse de Jacques V., Roy d'Ecosse, par Nicolas de Nicolay, Sieur d'Arfreville, a manuscript on vellum, with the original mariner's compass let into the cover, and containing a folding map of Scotland. This manuscript appears to have been made for the Duke of Guise, whose arms are painted on the cover. The book was printed at Paris in 1583, and a copy of it was sold in the Beckford sale last June for 140*l*. This is probably the only MS. of the work in existence.—Le Blason de tous les Royaulmes et des Chevaliers de la Table Ronde, a vellum manuscript of the fifteenth century, with 1,540 drawings of coats of arms richly emblazoned.—A romance of chivalry, entitled 'Artus, Lancelot du Lac et les Chevaliers de la Table Ronde,' a manuscript of the thirteenth century on vellum, with 17 rude paintings of the events recorded in the romance.—La Cité de Dieu de Sainct Augustin, traduite en François par Raoul de Praelles, a fourteenth century manuscript on vellum, ornamented with 23 very fine paintings, with diapered backgrounds. The first miniature shows the translator presenting his work to Charles V. of France, surnamed Le Sage, for whom no doubt this splendid manuscript was executed.—Bedæ Venerabilis Historia Ecclesiæ Gentis Anglorum, a manuscript of the tenth century, with the name of the English scribe, "Gulielmus Clericus ad Manus suas me fecit."—Bestiarium: De Creatione Mundi; De Natura Bestiarum, Volucrum, Herbarum, Serpentium, Vermium, Apum, Arborum, et Hominum, a most important and interesting manuscript of the twelfth century, executed in England, and containing 106 most curious paintings of animals. On the fly-leaf is an inscription dated 1187, and giving a list of manuscripts presented by Philip, Chancellor of the Cathedral of Lincoln, to God and the Church of St. Mary and St. Cuthbert de Radeford for the use of the brethren, in which this Bestiarium is included. It is one of the earliest, as it is certainly one of the finest, manuscripts known of this kind.—Biblia, cioe tutto il Testamento Vecchio, a manuscript of an Italian version of the Old Testament Scriptures, dated 1396, decorated with a very fine full-page painting of the Serpent tempting Adam and Eve, and 11 other beautiful miniatures.—Boccaccio, Il Decamerone, a most valuable fourteenth century manuscript. The famous 'Decameron' is one of the rarest of all mediæval writings to be found in manuscript. It would, perhaps, not be too much to say that fifty manuscript copies of Dante or Petrarch might be found for one Boccaccio. This is accounted for by the destruction of copies which took place from time to time at periods of religious fervour and excitement. This fine volume is perfect and in excellent preservation. — Chansons, a volume of ancient French *chansons*, including: Le Chevalier Ancian, Anciano Enamorat, Enamorat Maquerelle, Regnault de Trye, Chambrillac, Duc d'Orleans, Lionnet de Coelmes, Jacques Dorliens, Jehan de Mally, Yuri, François Daubergicourt, and Bastart de Couci. It is decorated with 12 miniatures. This important ancient text appears to have belonged to René of Anjou, whose arms, partially obliterated, occur in the border to the first page. —Chronycle of Englonde, manuscript of the beginning of the fifteenth century. Inserted is a long holograph letter from Sir Walter Scott respecting the volume. He writes: "I cannot believe it has ever been printed"; and he goes on to say that although Caxton, in his 'Fructus Temporum,' has copied many passages, yet many others do not occur, especially that prophecy of Merlin "which is said to have spurred Glendower to his rebellion, related by Shakespeare, the 'Mirror for Magistrates,' and Holinshed," and which, he says, "I believe to exist nowhere else but in your manuscript." — Cnutonis Magni, Regis Angliæ, Gesta, a vellum manuscript written about 1036 by an English scribe. It is dedicated to Emma, the widowed queen of Canute, and has a drawing of the author presenting his book to her. This valuable manuscript originally belonged to the monastery of St. Augustine at Canterbury. It appears to have been written immediately after the death of the king.—Coustumes et Usages de Beauvoisins, par Philippe de Beaumanoir. The manuscript is dated 1283, and is ornamented with 74 miniatures in the early French style.—Cretin (Guillaume), Debat entre deux Dames sur le Passe Temps des Chiens et Oyseaulx, a poem on hunting, a manuscript on vellum of the fifteenth century.—Besides the famous Botticelli Dante there are in the collection no less than six very valuable manuscripts of the 'Divina Commedia,' four of which date from the fourteenth and two from the fifteenth century.—A French translation of the 'Paradiso' into verse, by F. Bergaigne, a beautiful little manuscript on vellum, of the sixteenth century, with 7 very beautiful miniatures. It is dedicated to Admiral Gouffier, and has his arms emblazoned in gold and colours. It has never been printed.—Du Guesclin: Le Roumant de Bertran du Glaisquin, jadis Chevalier et Connestable de France, in verse, manuscript of the fifteenth century.—Fabliaux et Poesies des XII. et XIIIe Siecles, a valuable manuscript of the fourteenth century, containing forty different poems. — Furness Abbey: Registrum Cartarum et Scriptorum Monasterii Sancta Mariæ de Furness, A.D. 1412, per Venerabilem Willelmum Dalton Abbatem, a most important and valuable volume. It is beautifully written on vellum, and has sixty-eight emblazoned coats of arms of the abbots of Furness, the benefactors of the abbey, and other eminent persons, and is altogether one of the most sumptuous volumes of the kind ever compiled. On the fly-leaf is a poem of sixteen lines, stating that this second part of the Register of Furness Abbey was compiled by William Dalton, the abbot, and that John Stell was the scribe. One line makes the following curious assertion with regard to the penmanship: "Hunc John Stell digitis monachus scripsit sine penna."—Le Pelerinage de la Vie Humaine, par Guillaume de Guilleville, a fine manuscript on vellum, dated 1457, and decorated with 281 remarkable miniatures. — Hieronymi (Sancti) Epistolæ, a beautiful Italian manuscript of the fifteenth century, enriched with an exquisitely painted first page, which represents the saint writing in his cell. This painting is of extraordinary excellence and beauty. A similar page, but much less elaborate and important in its character, occurred in a vellum printed copy of 'Augustinus de Civitate Dei,' which was sold in the first part of the Sunderland sale for 1,000*l*. This page recalls the work of Giovanni Bellini, or some other artist of the period of almost equal excellence.—Among the Horæ Beatæ Mariæ Virginis is one that is probably unique in its style. The whole of the vellum pages are gilt over with mat gold, the text is written in delicate Italic characters, and the work is richly decorated with 46 very beautifully painted miniatures.—Huon de Bordeaux: Le Roman du Loyal Comte Huon, in verse, a manuscript on vellum of the fourteenth century, being dated 1341. It is ornamented with 76 curious paintings illustrating the romance.—There are three fine specimens of the work of the famous calligrapher Nicolas Jarry, one of them, dated 1652, being especially beautiful, both as a specimen of his writing and as a most exquisite example of the binding of Le Gascon. The outside of the binding is a marvel of careful and tasteful tooling, only to be surpassed by the execution of the *doublure*, or inside tooling of the covers. This little gem was from the library of Count Macarthy, sold in Paris in 1789, and even in those days it sold for 1,210 francs, which would then have been esteemed an extravagant price. It is now probably worth nearly ten times that sum.—Judas Machabeus, a romance of chivalry in French verse, ornamented with 23 miniatures. — Languedocque, a manuscript of the thirteenth century, containing a collection of different pieces in the dialect of Languedoc.—Andry de la Vigne, Sacre de la Royne Anne de Bretagne, Epouse de Louis XII., son Entrée didens Paris, Couronnée, et Souper. This is ornamented with three large paintings of the coronation, entry into Paris, and public banquet. On the binding are the arms and device of Cardinal de Bourbon (Charles X. of the League).—St. Louis: Sainct Loys, jadis Roy de France, sa Vie et Canonisation, with four miniature portraits of the saint. A former possessor, M. Buquesnoy, describes it as "exemplaire unique, acheté de l'inventaire de M. de Senicourt pour 1,207 francs, 1766."—Marguerite de Valois, Royne de Navarre, ses

Nouvelles (l'Heptameron), a manuscript on paper made for Queen Catherine de Médicis, with her arms on the fine old blue morocco binding.—Missale secundum usum Fratrum Ordinis Beatæ Dei genitricis Mariæ de Monte Carmeli, a grand manuscript on vellum, written for the use of the Cathedral of Angiers and enriched with about 50 fine miniatures.—Le Livre du Roy Modus et de la Royne Racio, lequel fait mencion comment on doit deviser de toutes manières de chasses. It is in prose and verse, written about 1380, and is illustrated with 78 curious miniatures of field sports. This is the most ancient book in the French language on the chase. — Preparatio ad Missam in usum SS. Pontificis Leo X., a magnificent manuscript made for the use of Pope Leo X. in the celebration of the Holy Office. The first page is occupied by a grand miniature of Pope Leo X. seated on a throne beneath a canopy, surrounded by ecclesiastics, one of whom offers to him the golden shoes. Besides numerous other beautiful decorations, there are 29 exquisitely painted portraits of Leo X. in the various vestments employed in the celebration of the Pontifical Mass. This beautiful volume is attributed to the celebrated miniature painter Marco Attavante.

Space is not available for a further description, or much might be said of the codices of classical authors, many of which would probably be valuable to critics and scholars, but the interest and importance of which are only to be ascertained by a careful examination. We may say, however, that there are few Latin classical authors who are not well represented.

ENGLISH AUTHORS AND AMERICAN PUBLISHERS.

100, Harley Street, Nov. 7, 1882.

THE encomiums upon the liberality of Harper & Brothers in dealing with English authors, mentioned by your various correspondents in the last number of the *Athenæum*, will hardly be verified by the bulk of English literary people.

Last Christmas I published, through my good friends Messrs. Smith, Elder & Co., 'The Journals and Letters of Caroline Fox,' the exclusive right to publish which in the United States was bought by Messrs. J. B. Lippincott, of Philadelphia, who at once printed them in an attractive little volume at the cost of 1¼ dollars.

Long before those gentlemen could properly realize their venture, Harper & Brothers, without permission, payment, or previous communication with either editor or publisher, produced a vile reprint of the book for 20 cents, disfigured on its paper cover with an equally vile woodcut copy of Mr. Herkomer's finely etched portrait of the authoress, which they impudently add is "printed through the courtesy of Messrs. J. B. Lippincott & Co.," whatever that may mean.

The book as properly printed and issued by Messrs. Lippincott would probably have had as great a success in America as it has had here; but the vaunted liberality of Harper & Brothers (in helping themselves to what does not belong to them) has effectually prevented this.

HORACE N. PYM.

November 6, 1882.

WITH reference to Mr. Clark Russell's letters, if the testimony of so obscure an author as myself is worth anything, I should like to record it in favour of Messrs. Harper.

Some three years ago those gentlemen republished in America my novel, 'Tom Singleton, Dragoon and Dramatist.' No first sheets were sent to them—I had never had any communication with them, direct or indirect; yet they sent me an honorarium. There was no legal obligation upon them to do this, and I consider that they acted with generosity.

W. W. FOLLETT SYNGE.

MR. W. K. SAWYER.

LAST week's *Athenæum* contained the announcement of Mr. Sawyer's sudden death from typhoid fever; but it is fitting that something more than the brief notification of his decease should be stated of so well-known, able, and popular a representative of London journalism, the more so that by far the larger, and probably the more valuable, portion of his work was one that has not been, and could not be, known to more than a few fellow toilers. Born at Brighton on the 26th of July, 1828, William Kingston Sawyer became a journalist whilst quite a boy, educating himself in the columns of a small local paper by various kinds of journalistic work. Amid less ambitious labours he issued, in 1846, a little volume of verse entitled 'Stray Leaves,' said to have attracted the notice of Horace Smith, and which was followed in 1849 by another collection of verse, styled 'Thought and Reverie.' Meanwhile the young author's local reputation was considerably increased by slight dramatic pieces and political satires. In 1861 Mr. Sawyer obtained the editorship of a London journal, and from that time to his death, on the 2nd of this month, he continued to edit various metropolitan publications of more or less importance, the best known of which were the *South London Press*, *Funny Folks*, and the *Mirror*. To the public, however, Mr. Sawyer was only known as an active contributor to many leading magazines, and as the author of two popular volumes of poetry. 'Ten Miles from Town,' published in 1866, met with a very favourable reception, and ran through two editions. It contains some charming pieces, such as the Heinesque little lyric 'Nymph and Satyr,' 'The Painted Window,' 'At the Opera,' and 'Victory in Defeat.' 'The Legend of Phillis,' published in 1872, was Mr. Sawyer's last volume, and fully sustained his reputation as a writer of highly cultivated and thoughtful verse. Early in life Mr. Sawyer wrote and published several serial stories, some of which were reprinted in the United States; but of late years such of his labour as was not absorbed in editing was put into brilliant essays of a biographical or antiquarian cast, or expended in humorous articles for comic publications. Some of his songs have attained considerable popularity, and his lighter verse may be found in all collections of *vers de société*. A selection from his writings is about to be made, and will be issued in an *édition de luxe*. Mr. Sawyer was buried in the extra-mural cemetery of his native town on Monday, the 6th, in the presence of a large gathering of literary friends. We who have known him for more than twenty years have never heard an ill word of him; he was invariably genial and considerate, always ready to encourage the youthful aspirant who displayed any trace of talent, and was a friend whose ready aid and practical advice might always be relied on in the hour of need.

THE SUNDERLAND SALE.

THE sale of the fourth portion of the Sunderland Library was begun by Messrs. Puttick & Simpson on the 6th inst. The following are the prices fetched by a few of the most important works sold on Monday, Tuesday, and Wednesday:—Martinus Polonus, La Cronique Martiniane de tous les Papes, folio, Paris, Anthoyne Verard, 1503, 39*l*. Peter Martyr, Opus Epistolarum, vellum, folio, Compluti, Michael de Eguia, 1530, 61*l*.; Peter Martyr, De rebus Oceanis et Orbe Novo decades tres, Thomas Maioli's copy, folio, Basil, Jo. Bebelius, 1533, 50*l*. Maximilianus Transylvanus, De Moluccis Insulis, Colon, Cervicornus, 1523, and two other tracts, 34*l*. Valerius Maximus, Factorum et Memorabilium libri novem, folio, Moguntina, per Petrum Schoyffer de Gernshem, 1471, 32*l*.; Valerius Maximus, another copy, printed on vellum, 1471, 194*l*. La Mer des Histoires, Paris, Pierre le Rouge, 1488, 21*l*. 10*s*. Milles et Amys, small folio, Paris, Ant. Verard, *s.a.*, 112*l*. Missale ad usum insignis Ecclesiæ Sarisburiensis, folio, Paris, Joa. Amazeur pro G. Merlin, 1555, 40*l*. Jan Edouard du Monin, Nouvelles Œuvres, 12mo., Paris, Jean Parant, 41*l*. The Works of Sir Thomas More, Knight, black letter, Sir William Roper's copy, small folio, London, 1557, 21*l*. Thomas Morton, New English Canaan, Amst., Jac. Fred. Stam, 1627, and one other tract on Virginia, small 4to., 24*l*. Musæus, Opusculum de Herone et Leandro, small 4to., Venetiis, Aldus, *circa* 1494, 39*l*.; Musæus Les Amours de Leander et Hero, par Clement Marot, small 8vo., Paris, Charles l'Angelier, 1541, 49*l*. Naberat, Sommaire des Privileges octroyez a l'Ordre d. S. Jean, Anne of Austria's copy, folio, 1629, 80*l*. Nicolas I., Maximi Epistolæ, John Grolier's copy, old calf, small folio, Romæ, Franciscus Priscianensis, 1542, 215*l*.

Literary Gossip.

WE are glad to hear that there is in preparation a 'Dictionary of National Biography,' in a large number of volumes, to be published quarterly by Messrs. Smith, Elder & Co. Mr. Leslie Stephen has accepted the arduous duty of editing this important work, and many of the readers of the *Cornhill Magazine* will regret to learn that this new claim on his time and attention will necessitate his relinquishing the editorship of a magazine which he has for many years successfully conducted.

MISS RHODA BROUGHTON'S new novel is to be called 'Belinda.' The first chapters will appear in the January number of *Temple Bar*.

WE understand that not only one, as we announced last week, but three new volumes by Mr. Allingham are shortly to appear, two —'Evil May Day, and other Poems,' and 'Ashby Manor: a Play'—next month, the third early in the new year. The form of publication will have some novelty.

PROF. NICHOL, of Glasgow University, has in the press a work on American literature which, in the form of an historical sketch, will bring under review the writers of America from the colonial period down to the present time. It will be published by Messrs. A. & C. Black.

MESSRS. SAMPSON LOW & Co. will publish Mr. Archibald R. Colquhoun's account of his travels and explorations in Southern China, of which we gave a description a fortnight ago.

MESSRS. CASSELL & Co. will shortly publish the conclusion of Sir Gavan Duffy's 'Young Ireland,' under the title of 'Four Years of Irish History, 1845–49.' It deals with memorable incidents in the modern history of Ireland—the secession by which the authority of O'Connell was overthrown, his compact with the Whigs, the great famine, and, for the first time, the secret history, minutes of council, and private correspondence connected with the abortive insurrection headed by Smith O'Brien. The book is written not only from personal knowledge, but is founded on unpublished documents and the correspondence of nearly every one deeply concerned in these transactions.

MESSRS. TRÜBNER & Co. have in the press a translation of Spinoza's 'Ethics' by Mr. W. Hale White. It will be accompanied by a short preface and a subject-index.

XUM

THE executors of the late Rev. N. P. M. Lushington Pilson are in the awkward position of being charged with a bequest which neither of the universities of Oxford or Cambridge, to whom he offered it, appears willing to accept. But the fashion of leaving considerable sums of money to the universities for the advocacy of sectional interests does not seem to have been extinguished by the abolition of university tests, for the will of the deceased gentleman, dated in 1875, requires the appointment of a preacher of strictly Evangelical or Low Church views to preach in the university pulpit at least two sermons annually upon the past history and religion of the Jewish nation, and the prophecies relating to its return to Judea and its restoration to its former glory.

ST. DAVID'S COLLEGE, Lampeter, which has been already affiliated to Oxford University, has applied for affiliation to Cambridge also. It is not generally known that this college has the power to grant the B.A. degree. Although specially designed for the education of persons intended for the ministry of the Church of England in South Wales, it is open to Nonconformists.

IN the last Cambridge Higher Local Examination, in Group A (English) the work done showed much improvement, yet one-third of the candidates in this group failed. In Group B (Languages) the Latin and French papers are favourably reported on, while the Greek and German were decidedly inferior. The examiner in German protests against the German character being maintained in writing. The power to apply the principles of arithmetic is still said to be weak. In Group D the answering in both logic and political economy was, on the whole, inferior; but in constitutional history it was more satisfactory. The papers in the natural science subjects were fairly well done. In music a deficiency in harmony is commented on by the examiner. The 961 candidates (mostly women) obtained 167 first classes, 294 second classes, 589 third classes, and there were 360 failures.

SEVERAL theological works are announced for the present season. Messrs. T. & T. Clark promise the 'Life of Jesus Christ,' by Prof. Bernhard Weiss, and the second volume of the 'New Testament Theology' of the same author; 'A History of Charity in the Primitive Church,' by G. Uhlhorn; the Schaff-Herzog 'Encyclopädie of Religious Knowledge' (on the basis of Herzog's 'Real Encyclopädie'), edited by Prof. Schaff; 'A Commentary on St. Paul's Epistle to the Romans,' by Principal David Brown (forming part of the series of "Bible Class Handbooks"); and 'A History of the Apostolic Church,' by Prof. Schaff. Messrs. Griffith & Farran have in the press a book on 'Parish Work,' by the Rev. E. Collett, Vicar of Bower Chalke; and Messrs. Kegan Paul, Trench & Co. a work on the Papacy by Mr. J. N. Murphy, author of 'Terra Incognita.'

THE Leopardi family have sent to every person who has written upon their illustrious ancestor a fine portrait of the poet, taken from a bust that has been executed by Prof. Luigi Guglielmi. This bust, which is to stand in the portion of the family library devoted to the works of and on the poet, is unfortunately no likeness taken from the life, but a creation of the sculptor's, evolved from the death mask of Leopardi and a sketch taken of him in his youth by Lolli, and pronounced faithful at the time of its execution. Prof. Guglielmi's bust does not show the poet's deformity contracted after his sixteenth year, and hence at the very first aspect the bust differs widely from that on the Pincian Hill. The face is emaciated, but there is none of the pained suffering look with which the world is more familiar, and which caused a striking resemblance between the portraits of Heine and Leopardi. Prof. Guglielmi presents us rather with Leopardi the philologist than Leopardi the poet. It is a sweet and noble face, but as he represents it, it is devoid of the divine afflatus.

MR. RICHARD COOKE, who for the past five years has conducted the *Galloway Gazette*, has been appointed to the editorship of the *Hull Packet* and *Hull and Lincolnshire Times*. He is succeeded by Mr. Roderick Innes, who has been on the staff of the *Glasgow News* since 1873.

MR. RENNELL RODD, a young writer who has been a good deal ridiculed for the manner in which his first book was brought out, is about to publish immediately a new volume of poems. He is anxious to disclaim any connexion with the "æsthetic" school, with which he has been identified. He had, it seems, nothing to do with the odd garb in which his former volume appeared.

THE death is announced of a distinguished Italian philologist, Prof. Napoleone Caix.

SCIENCE

Ancient Scottish Lake-Dwellings or Crannogs. With a Supplementary Chapter on Remains of Lake-Dwellings in England. By Robert Munro, M.D., F.S.A.Scot. (Edinburgh, Douglas.)

MAN in the early days of his history was so constantly exposed to bodily dangers, that when he began to build houses he selected the most favourable localities for such protection as he needed, and he found none more favourable than lakes and the tops and slopes of mountains. Vestiges of a very large number of these abodes are existing in different parts of the world; they exist, in fact, in the four quarters of the globe. With the ruins of hill-dwellings we have been long familiar, for the simple reason that they are recognizable without difficulty; but the submerged remains of lacustrine habitations have only received attention in the second half of the present century. In our schoolboy days we read of them in classical authors, and we cannot but wonder now that the information thus acquired should have lain so long disused, and led to no active antiquarian researches in this direction, notwithstanding the references to Irish crannogs which have been made from time to time since the middle of the eighth century.

The author of the work before us says that the Scottish crannogs were first brought to the notice of antiquaries by Mr. Joseph Robertson in 1857, who read a paper upon them to the Society of Antiquaries of Scotland, which paper was not printed in their *Proceedings* until 1866. This, however, was not the earliest discovery of such remains, for Mr. Robertson's paper called forth a communication to the same society from Mr. J. Mackinlay, who stated that in 1812 he had found two artificial islands in the small mossy lake called Dhu-Loch, Bute. This discovery was made forty-one years before an unusually dry summer brought to light the ancient station at Meilen, on the Lake of Zurich. Since 1854, when Mr. F. Keller began his explorations in Switzerland, a considerable number of lake-villages have been met with in every direction in that country and in other countries, our own included.

Dr. Munro describes the construction of two classes of artificial islands in Scotland: 1. Wooden platforms secured and protected by piles driven into mud-shallows, on which huts were erected; 2. Dwellings constructed upon heaps of stones dropped upon a solid bank beneath the waters. These two kinds may have been, he thinks, contemporary, the one or the other kind having been resorted to according to the nature of the shoal on which they were erected, whether soft or compact. Both classes were connected with the shore by means of an artificial causeway and drawbridge.

Two hundred and seventy illustrations accompany the text, and represent the excavations as well as a variety of articles found during their progress. By means of these we are enabled to institute a comparison between the crannogs of Scotland and the lake-dwellings of Switzerland, from which comparison it appears that the former belong to a much later period than the generality of the latter. It has been observed that in Switzerland some of the artificial islands were occupied by men of the stone age only, others by men who used both bronze and stone implements and no iron, and that others yielded iron articles in addition to stone and bronze. In Scotland the crannogs were erected, according to the author, by "one and the same people for a special purpose, and about the same time, or at least within a comparatively limited period"; and we are led to conclude, from the character of the exhumed relics, that the period of their erection was not much, if at all, earlier than the Roman invasion, and that the lake-dwellers had been influenced by Roman civilization, and their habits moulded by it.

It may occur to some minds that these island homes must have been indefensible in severe winters when the lakes were frost-bound. It is possible that this may have been the case, and Dr. Munro remarks accordingly that hill-forts are not unfrequently found in their neighbourhood, which may have served as places of refuge at these times, and as an example he refers to Machermore, Glenluce.

The canoes, some of which were the hollowed trunks of large oaks, point to a period when trees of large size were growing in the districts where they have been found. Oaks of such a size, the author says, do not now grow in these districts, yet he does not deduce from this fact that the period was very remote; on the contrary, he believes that, although it might be prehistoric in one sense, it was close upon the dawn of European history when Britain was extensively covered with forests.

Dr. Munro has incorporated in this readable volume "a *résumé* of the observations made by previous writers," in order that it may comprise "all that is actually known of ancient British lake-dwellings up to the present time"; and as he says in the preface that he is indebted to several gentlemen, whom he names, and whose archæological attainments are well known, for assistance rendered in various ways, our readers may be assured that they will find very much to interest and instruct them in the perusal of the work.

ASTRONOMICAL NOTES.

In the *Athenæum* for October 7th (p. 467) we referred to the spectroscopic observations of the great comet by MM. Thollon and Gouy, and the interesting circumstance of the existence of the double sodium band (D_1 and D_2) in the spectrum, observed by them at Nice on September 18th. In a later communication to the French Academy (*Comptes Rendus* for October 23rd) they state that the cloudiness of the sky at Nice prevented their obtaining any more spectroscopic observations until the 9th of October, and then, about an hour before sunrise, they were able to examine the spectrum again, and found that the sodium rays as well as the other brilliant rays (all which were also noticed on September 18th by Mr. Lohse at Lord Crawford's Observatory, Dun Echt, as mentioned in the *Athenæum* for September 23rd, p. 406) had disappeared:—"On ne voyait que les quatre bandes ordinaires du carbone; la bande violette se distinguait parfaitement, bien qu'elle fût très faible; les autres étaient très brillantes, particulièrement sur le noyau." Prof. H. C. Vogel, Director of the Royal Observatory at Potsdam, communicates to *Astronomische Nachrichten*, No. 2466, some spectroscopic observations of the comet made early in October, by which it appears that the sodium bands were still visible on the morning of the 8th, although they had become very faint in comparison with the carbon bands. MM. Thollon and Gouy, after another interruption from cloudy weather, again observed the comet's spectrum on the morning of October 16th, about four o'clock, when the spectrum, seen in a splendid sky, was of the same character as on the 9th:—"Les bandes avaient diminué de longueur, mais leur éclat avait à peine changé. Le spectre cométaire, comparé à celui d'une flamme d'alcool, montrait avec ce dernier la plus frappante ressemblance." As if to reassure total abstainers, they are careful to add that this does not in any way imply the presence of alcohol amongst the constituent elements of the comet; for all the compounds of carbon give the same bands, and they have merely selected alcohol as the most convenient example.

Dr. Oppenheim, of Berlin, has computed an orbit of the small comet discovered by Dr. Schmidt near the great comet on October 8th. Some of the elements present a similarity with those of the great comet, but there are also considerable differences in others, and the question of a direct connexion between the two comets would thus appear to be doubtful. The perihelion passage of the small comet he finds to have taken place on September 24th, about midnight. An orbit of it has also been computed by Dr. Hind.

ANTHROPOLOGICAL NOTES.

The Society of Northern Antiquaries of Copenhagen has issued to its foreign members, as for 1881, a translation of a paper by Mr. F. Schiern, entitled 'An Ethnographic Enigma of Antiquity.' The enigma is, Who were the "Indians" said, in a passage quoted from Cornelius Nepos by Pomponius Mela and also by Pliny, to have been given to Q. Metellus Celer, Proconsul of Gaul (62 B.C.), by the King of the Suevi? Various answers have been given: They were Slavs, Picts from Britain, Caribs or other individuals of American race, genuine Indians, Finns from Lapland. To the last-named opinion, which is that of Huet, Bishop of Avranches, Mr. Schiern inclines, and he supports it by learned arguments.

The *Journal* of the Anthropological Institute for November contains the conclusion of Mr. E. H. Man's excellent paper, in the nature of a monograph, 'On the Aboriginal Inhabitants of the Andaman Islands.' Mr. Man corrects many statements as to these people, especially in connexion with their social and marital relations, which have been too hastily made by former travellers, and which his closer acquaintance with them has shown to be untrue. He asserts that, judging these savages by the standard of their treatment of their women, they are qualified to teach a valuable lesson to many of our fellow countrymen; self-respect and modesty characterize their intercourse with one another; the young are early instructed in the duties of hospitality, while the aged and helpless are objects of special attention. The statements "that the Andamanese have no proper names," "that their girls are distinguished by the wearing of flowers," and "that the communal marriage system prevails"; the loose accusations of promiscuous intercourse and incest; and the opinion that they make no lamentation at death, are among those shown by Mr. Man to be unfounded. He gives also much original information as to their beliefs, traditions, and customs.

Messrs. John E. Price and F. G. Hilton Price furnish an account of their excavations of tumuli on the Downs at Brading, in the Isle of Wight. Among the objects found was a portion of the antler of a red deer, perforated to receive a handle and form a hammer. This affords a rare and interesting illustration of the application of animal products in prehistoric times to the construction of implements.

Mr. A. L. Lewis contributes a schedule of eighteen of the stone circles of Southern Britain, observed with relation to external objects and the points of the compass. This has a value of its own, apart from the generalization he seeks to deduce from it with regard to the relation of these circles to the east and north-east, from which, indeed, he would derive the eastward position of our English churches.

Dr. Beddoe has investigated about fifteen thousand English surnames belonging to various classes of the population, with a view to ascertain the light they throw on the admixture of races, and furnishes details of the results. Mr. Park Harrison has, for the same purpose, entered upon an elaborate study of the facial outline.

SOCIETIES.

Geological.—*Nov.* 1.—Mr. J. W. Hulke, President, in the chair.—Prof. L. Lartet, of Toulouse, was elected a Foreign Correspondent of the Society.—The following communications were read: 'On the Hornblendic and other Schists of the Lizard District, with some Additional Notes on the Serpentine,' by Prof. T. G. Bonney,—and 'Notes on some Upper Jurassic Astrorhizidæ and Lituolidæ,' by Dr. R. Häusler.

Archæological Institute. — *Nov.* 2. — Lord Talbot de Malahide, President, in the chair.—The Chairman spoke of the loss the Institute had sustained in the deaths of Mr. E. P. Shirley and Mr. Carthew, and referred in terms of great satisfaction to the meeting that had lately been held at Carlisle. —The Rev. H. Whitehead sent a paper on an ancient paten from Hamsterley, co. Durham, which he exhibited, and which would appear from the date-letter to be the earliest piece of hall-marked plate that has hitherto been noticed, and to bear the mark of the year 1439, seven years earlier than the Pudsey spoon. —Mr. R. S. Ferguson exhibited and sent a paper on a parchment pedigree of Chambers of Raby Coat, co. Cumberland.—Mr. W. M. F. Petrie read a paper, the first of a series, on the domestic remains of ancient Egypt, in which he considered the condition of the mass of the people as shown by their dwellings and remains, describing the barracks of the Pyramid masons uncovered by him at Gizeh, the private houses at Memphis and Tel el Amarna, the barracks of the Theban garrison, and the Ptolemaic and Roman sites near Gizeh. Examples of very rude stone implements from the last-named sites were exhibited. The general parallel of the histories of Italy and Egypt was also sketched, and attention drawn to the great changes in ancient Egyptian history and the importance of studying it at first hand and not through the medium of Greek ideas.—The Bishop Suffragan of Nottingham sent some notes on the discovery of three tree coffins in Grimsby churchyard, which he thought were probably either of the Saxon or Danish period.—Precentor Venables laid before the meeting a sketch of a Roman sepulchral inscribed stone recently found in Hungate, Lincoln, with notes upon it by himself and the Rev. J. Wordsworth, the inscription reading:—

V L
· EC · ALAE · II
ASTOR · VIXIT
ANNIS · LXX

The second ala of the Astures was stationed on the Roman wall at Chesters (Cilurnum). Mr. Venables also sent a sketch of an early sepulchral slab, exhibiting interlaced work, lately found in lowering the ground at the west front of Lincoln Cathedral, with remarks upon this memorial.—Mr. S. Knill exhibited a drawing of excavations in Leadenhall Street, showing considerable remains of a Roman pavement lately discovered.—Mr. J. H. Middleton exhibited a drawing of a chalice at Little Farringdon, *circa* 1470, and made some remarks thereon.—Among other objects exhibited were a bronze mortar lately found at Colchester with Roman remains, by Mr. E. Peacock; a British urn of great size, fragments of two others, and a quantity of bones, discovered a short time ago at Acton, by Mr. Hedges; a beautiful knife-handle, decorated with nielli of Italian character, found in the moat at Kirkstead, co. Lincoln, by Mrs. Cartwright; five old swords, by Mr. H. Hems; drawings of the font at St. Peter's, Ipswich, by Miss M. Burton; and a drawing of the west end of Ashford Curbonell Church, co. Salop, showing an arrangement of a very unusual kind, by the Rev. J. S. Tanner.

Linnean.—*Nov.* 2.—Sir J. Lubbock, Bart., in the chair.—Prof. J. C. Ewart, Mr. G. Fry, and Lord Walsingham were elected Fellows.—Mr. A. P. W. Thomas drew attention to a series of specimens under the microscope and diagrams illustrative of the life history of the liver fluke (*Fasciola hepatica*). His experiments show that the embryos of the fluke as free cercariæ burrow into and develope within the body of *Limnæus truncatulus*, and thereafter pass with the herbage into the stomach and ultimately liver of the sheep. Salt added to the sheep's diet is found to act as a prophylactic.—Mr. W. T. Thiselton Dyer exhibited a specimen of, and made remarks on, the plant producing *Cassia lignea*, and on the native implements used in the collection and preparation of the cassia bark in Southern China.—Mr. C. T. Druery showed two proliferous forms of *Athyrium filix fœmina*, a family hitherto remarkable for its unproliferous nature. Both examples appeared simultaneously, not the least significant feature being their extreme precocity, since bulbil-bearing ferns are proliferous only on their ripe fronds and when much further developed.—Mr. F. Crisp exhibited preparations in illustration of the views of Drs. Loew and Bokorny on the difference between dead and living protoplasm, viz., the power of the living organism to reduce silver salts in a very dilute alkaline solution.—Prof. E. Ray Lankester exhibited and made remarks on a series of marine organisms dredged by him last summer in the fjords of Norway.—Mr. T. Christy exhibited specimens of the plant producing menthol.—Mr. J. G. Baker showed a specimen of *Lycopodium complanatum* collected in Skye by Prof. Lawson.—Sir J. Lubbock then read his tenth communication 'On the Habits of Ants, Bees, and Wasps.' Two queen ants have lived with him since 1874, therefore are eight years old, and they laid eggs last summer. His oldest workers are seven years old. Dr. Hermann Müller's objection to the author's experiments on the colour sense of bees had been anticipated. The preference of bees for blue is strongly indicated by Müller's own observations on flowers. Sir John also now records further experiments with reference to the power of hearing. Some bees were trained to come to honey which was placed on a musical box on the lawn close to a window. The musical box was kept going for several hours a day for a fortnight. It was then brought into the house and placed out of sight, but at the open window, and only about seven yards from where it had been before. The bees, however, did not find the honey, though when it was once shown them they came to it readily enough. Other experiments with a microphone were without results. Bees are popularly, and have been ever since the time of Aristotle, supposed to be influenced by clanging kettles, &c. Experienced apiarists are now disposed to doubt whether the noise has really any effect, but Sir John suggests it

XUM

as possible that the bees hear only the higher overtones at the verge of or beyond the range of human hearing. He timed a bee and a wasp, for each of which he provided a store of honey, and he found that the wasp began earlier in the morning (at 4 A.M.) and worked on later in the day (till 8 P.M.). It might be that the wasps are less sensitive to cold. Moreover, though the bee's proboscis is admirably adapted to extract honey from tubular flowers, the wasp on the other hand appears able to swallow it more rapidly.—A paper was read 'On Medicinal Plants of North-West Queensland,' by Mr. W. E. Armit. Among these are a species of *Aristolochia* and a croton; also *Grewia polygama*, a specific for dysentery; *Careya arborescens*, used for poultices; *Erythræa australis* and *Andropogon citriodora*, tonics in febrile complaints; and *Euphorbia pilulifera* and *Datura australis*, valuable in cases of asthma.—A remarkable malformation of the leaves of *Beyeria opaca*, var. *linearis*, from Yorke's Peninsula, South Australia, was described by Mr. O. Tepper. —Dr. F. Day exhibited specimens in illustration of a paper read by him 'On Variation in Form and Hybridism in *Salmo fontinalis*.'—Afterwards Mr. H. N. Ridley read 'Some Teratological Notes on a Carex, a Grass, and an Equisetum.'

CHEMICAL.—*Nov.* 2.—Prof. Abel, V.P., in the chair. —It was announced that a ballot for the election of Fellows would take place at the next meeting (November 16th).—The following papers were read: 'On Dihydroxybenzoic Acids and Iodosalicylic Acids,' by Dr. A. K. Miller. The author has succeeded in preparing the sixth dihydroxybenzoic acid, five being already known. It was obtained by heating salicylic acid and iodine in alcoholic solution. Two iodosalicylic acids were formed, which yielded two distinct dihydroxybenzoic acids when heated with potash.—'On Crystalline Molecular Compounds of Naphthalene and Benzene with Antimony Trichloride,' by Messrs. W. Smith and G. W. Davis. By melting three parts by weight of antimony trichloride with two of naphthalene minute crystals were obtained, $3SbCl_3$, $2C_{10}H_8$; similarly with benzene a body $3SbCl_3$, $2C_6H_6$ was prepared.—'Additional Evidence by an Analysis of the Quinolin Molecule that this Base belongs to the Aromatic Series of Organic Substances,' by Messrs. W. Smith and G. W. Davis. The authors have studied the effect of exhaustive perchlorination (by heating with antimony pentachloride) on quinolin; perchlorethane, perchlorbenzene, and nitrogen were obtained.—'On Orcin and some of the other Dioxytoluols,' by Mr. R. H. C. Nevile and Dr. A. Winther.—'On the Varying Quantities of Malt Albumenoids extracted by Waters of Different Types,' by Messrs. E. R. Moritz and A. Hartley.—'On the Derivatives of Ethylene-chloro-bromide,' by Dr. J. W. James.

ROYAL INSTITUTION.—*Nov.* 6.—Hon. Sir W. R. Grove, Manager and V.P., in the chair.—Capt. W. de W. Abney and Mr. G. W. Rendel were elected Members.

SOCIETY OF BIBLICAL ARCHÆOLOGY.—*Nov.* 7.—Dr. Birch, President, in the chair.—The papers read were: 'Some Recent Discoveries bearing on the Ancient History and Chronology of Babylonia,' by Mr. Theo. G. Pinches.—and 'On a Demotic Papyrus containing the Malediction of an Egyptian Mother on her Son embracing Christianity,' by M. E. Révillout.

MEETINGS FOR THE ENSUING WEEK.

MON. Education, 7½.—'How Examinations can be made of Greatest Use in School Work,' Mrs. Bryant.
— Surveyors' Institution, 8.—President's Opening Address.
— Royal Academy, 8.—'Demonstrations,' Mr. J. Marshall.
— Geographical, 8½.—'Exploration through Southern China, from the Mouth of the Sikiang to the Banks of the Irawadi,' Mr. A. R. Colquhoun.
TUES. Horticultural, 11.—Scientific and Fruit and Floral Committees.
— Photographic, 8.
— Civil Engineers, 8.—'Recent Hydraulic Experiments,' Major A. Cunningham.
— Zoological, 8½.—'Report on the Additions to the Society's Menagerie,' the Secretary; 'Supplementary Notes on the Anatomy of the Chinese Water-Deer (*Hydropotes inermis*),' Mr. W. A. Forbes; 'Habits of the Aye-Aye of Madagascar in its Native State,' Rev. L. Baron; 'Natural Position of the Family *Dipodidæ*,' Mr. G. E. Dobson.
WED. Meteorological, 7.—'Certain Types of British Weather,' Hon. R. Abercromby; 'Use of Kites for Meteorological Observation,' Prof. E. D. Archibald; 'Meteorology of Mozufferpore, Tirhoot, 1881,' Mr. C. N. Pearson.
— Royal Academy, 8.—'Demonstrations,' Mr. J. Marshall.
— Society of Arts, 8.—Opening Address by Dr. C. W. Siemens.
— British Archæological Association, 8.—'Hoard of Bronze Bracelets at Brading, Isle of Wight,' Mr. C. Roach Smith; 'Antiquarian Features of the recent Meeting of the Horners' Company,' Mr. J. Compton.
— Geological, 8.—'Drift-beds of the North-West of England and North Wales, Part 2, Their Nature, Stratigraphy, and Distribution,' Mr. T. M. Reade; 'Evidence of Glacial Action in South Brecknockshire and East Glamorganshire,' Mr. T. W. E. David.
THURS. Royal, 4½.
— Linnean, 8.—'Flora of Madagascar,' Mr. J. G. Baker; 'Cerebral Homologies in Vertebrates and Invertebrates,' Prof. Owen; '*Passifloræ* from Ecuador and New Granada,' Dr. M. Masters; 'Pinsch's Fruit Pigeon,' Mr. E. P. Ramsay; 'Mollusca of Challenger Expedition, XVI.,' Rev. H. Boog-Watson.
— Historical, 8.—'Pestilences, their Influence on the History of Nations,' Mr. J. F. Palmer.
— Chemical, 8.—Ballot for the Election of Fellows; 'Chemistry of Tartaric and Citric Acids,' Mr. B. J. Grosjean; 'Contributions from the Jodrell Laboratory, Kew,' Messrs. C. F. Cross, E. J. Bevan, and S. S. Webster; 'Constitution of some Bromine Derivatives of Naphthalene,' Mr. R. Meldola.
FRI. Royal Academy, 8.—'Demonstrations,' Mr. J. Marshall.
— Philological, 8.—'Deficiencies in the Anglo-Saxon Dictionary of Profs. Bosworth and Toller,' Mr. J. Platt.

Science Gossip.

THE session of the Royal Society will commence on Thursday, the 16th inst.

AT the anniversary meeting of the Royal Society, on St. Andrew's Day, the Fellows named in the following list will be proposed for election as Council and Officers:—President, W. Spottiswoode; Treasurer, Dr. J. Evans; Secretaries, Prof. G. G. Stokes and Prof. M. Foster; Foreign Secretary, Prof. A. W. Williamson; other Members of the Council, Prof. W. G. Adams, J. Ball, Dr. T. L. Brunton, Prof. H. Debus, F. Galton, Prof. O. Henrici, Prof. T. H. Huxley, Prof. E. Ray Lankester, Prof. J. Lister, Prof. J. Prestwich, Prof. O. Reynolds, Prof. H. E. Roscoe, the Marquis of Salisbury, O. Salvin, W. W. Smyth, and E. J. Stone.

THE Delegates of the Clarendon Press have determined to issue a series of translations of important original papers in foreign languages on biological subjects, and have committed the editing of these memoirs to Dr. Michael Foster, Dr. Pye-Smith, and Dr. Burdon Sanderson. It is proposed that the series should begin with a single volume of about 750 pages, to be divided into three parts: the first to comprise the treatise of Prof. Heidenhain on 'The Physiology of the Process of Secretion'; the second a series of four papers by Prof. Goltz on 'The Functions of the Brain,' and a memoir by N. Bubnoff and Prof. Heidenhain on 'Excitatory and Inhibitory Processes in the Motor Centres of the Brain'; and the third a series of memoirs by Prof. Engelmann on 'The Structure and Physiology of the Elementary Contractile Tissues.' It is intended that each part shall be complete in itself.

PROF. GEORGE M. MINCHIN will publish very shortly at the Clarendon Press a work on 'Uniplanar Kinematics of Solids and Fluids, with Applications to the Distribution and Flow of Electricity.' It aims at supplying a deficiency in the course of mathematical physics usually pursued by the higher class students in our colleges and universities, by enabling them to enter into the study of kinetics with clear notions of acceleration and other leading conceptions which belong to the province of kinematics.

THE President and Council of the Geological Society will hold a conversazione in the rooms of the Society on Wednesday, the 29th inst.

DR. CAMERON, M.P., is about to republish a paper he lately read before the Philosophical Society of Glasgow, in which he pointed out the strong analogies in, and close relations between, the minute organisms that have been shown to be the active causes of fermentation, putrefaction, and disease.

THE *Journal* of the Scottish Meteorological Society, with table for the eighteen months ending June, 1880, has been received. It contains several papers of general as well as of local interest.

REFERRING to Prof. Newton's communication to the *Athenæum* of last week, Mr. Van Voorst informs us that the copyright of Yarrell's 'History of British Birds,' both as to letterpress and illustrations, is vested in him. Anything that Prof. Newton may write will therefore not be "Yarrell." The agreement as to the editing of the fourth edition of that work was cancelled in May last. Part xv., containing the conclusion of vol. ii., by Prof. Newton, followed by the pigeons and some of the game birds by Mr. Howard Saunders, who has undertaken the completion of the work, is now ready.

MR. LYNN desires to correct the reference in his letter to us of the 28th ult. to a work of Kitchiner. The quotation there given is from the second part ('Of Telescopes,' published in 1825) of 'The Economy of the Eyes,' and the mistake was made owing to this being bound up in the copy at the Royal Astronomical Society with the 'Practical Observations on Telescopes,' &c. Mr. Lynn is obliged to Mr. W. H. Wesley, assistant secretary of the Society, for pointing this out. The Mr. Ward referred to in his letter is Mr. Thomas Ward, of Northwich.

MR. J. H. BLAKE, President of the Norwich Geological Society, sends us his address delivered at the anniversary meeting, 'On the Conservancy of Rivers, Prevention of Floods, Drainage, and Water Supply.' This address so carefully summarizes all that has been said on these important questions that we are glad to direct attention to it.

M. JULES SIMON will, it is stated on good authority, succeed M. Mignet, Perpetual Secretary of the Academy of Moral Sciences, who has recently resigned, after having held the office since 1835.

PROF. THORPE on the 24th of October delivered, as President of the Yorkshire College Students' Association, an address on 'The Story of the Origin of the Metric System.' The syllabus of the society, which was founded in 1877, gives a list of many excellent papers to be read during the present session.

FINE ARTS

The EIGHTEENTH ANNUAL EXHIBITION of WATER-COLOUR DRAWINGS by ARTISTS of the BRITISH and FOREIGN SCHOOLS is NOW OPEN at Thomas McLean's Gallery, 7, Haymarket.—Admission, including Catalogue, 1s.

Closes November 16th.

PHOTOGRAPHIC SOCIETY'S EXHIBITION, at the GALLERY, 5, Pall Mall East, NOW OPEN DAILY, from Ten till Dusk, 1s. Monday, Wednesday, and Saturday Evenings, Seven to Ten, 6d.

DORÉ'S GREAT WORKS, 'CHRIST LEAVING the PRÆTORIUM,' 'CHRIST ENTERING JERUSALEM,' and 'MOSES before PHARAOH,' each 33 by 22 feet, with 'Ecce Homo,' 'The Ascension,' 'Dream of Pilate's Wife,' 'Soldiers of the Cross,' 'A Day Dream,' &c., at the DORÉ GALLERY, 35, New Bond Street. Daily, Ten to Six.—1s.

The Graphic Arts: a Treatise on the Varieties of Drawing, Painting, and Engraving, in comparison with Each Other and with Nature. By P. G. Hamerton. Illustrated. (Seeley, Jackson & Halliday.)

THIS is one of the most carefully prepared books of the year. Author, illustrators, printers, and publishers have vied with each other in the production of a volume which is in every respect solid, tasteful, and complete. It is dedicated to Mr. Robert Browning, in whom the author sees "the representative of a class that ought to be more numerous—the class of large-minded persons who take a lively interest in arts which are not specially their own." There is, of course, a considerable number of gentlemen who take "a lively interest in arts," yet owe their knowledge of them to their inner consciousness, and treat fine art as if it were subordinate to letters, and designed to supply material for logical distinctions and learned criticism. These critics are the heirs of the *cognoscenti* and *dilettanti* who exasperated Hogarth, and goaded poor Haydon to furious speeches. Mr. Browning's sympathy with art, it is needless to say, is of a very different sort.

So far as a book can effect such an object this one will do much to educate the public. Those who choose to read it may learn what an etching is and what an engraving; "silver point" need be no mystery to the critics of the time to come; and the learned Theban who refused to see the difference between a port-crayon and a pencil-case may be led to doubt the authority of his dictionary. But that terrible word "chiaroscuro" will still perplex amateurs, and "ordonnance," "tone," and

"tint" remain to be explained to the general public. Our author confines himself in the first portion of his book to the various modes of delineation in black and white, such as pen and ink, washes, silver point, and lead pencil, then follow red, black, and white chalks and charcoal. He affects the French term *sanguine* for red chalk, and this we think a needless distinction. The remaining sections treat of water and oil monochrome painting; pastel; tempera; fresco, and its substitutes; painting in oil and varnish, and water colours; and "painting on tapestry" (it should be "painted tapestry"); wood engraving; etching and dry point; line engraving; aquatint; mezzotint; and lithography. These are the graphic arts of Mr. Hamerton. We think he might have conveniently grouped them in two classes: (1) those which affect varieties of colour, and (2) those which are monochromatic, or exercised in black and white, singly or together.

"Painting on tapestry"—or rather "painted tapestry," for we prefer the usual designation—is, roughly speaking, executed in tempera on unprimed canvases. Mr. Hamerton has overlooked the fact that the process is ancient, its accepted object being to imitate, at a very cheap rate and readily, the effect of woven tapestries. In employing this method the artist has no need of the services of the weaver, but paints his design at once. He thus commands an altogether higher process than that which flourished at Arras, Brussels, and Beauvais. Its disadvantages are great—liability to injury by damp and friction, the difficulty of cleaning at all, and the impossibility of cleaning well. It is a mere abuse of the mode to employ it to imitate woven tapestries. That it is by accident only that Mr. Hamerton has overlooked the antiquity of painted tapestries is shown by his reference (p. 299) to M. Godin's treatise on the old as well as the modern employment of this mode of decoration—a book which mentions the fine series of such examples in the Hôtel Dieu at Rheims, to which M. Vitet first called attention as comprising not fewer than twenty-seven examples, to say nothing of others in the Garde Meuble, Paris. We reviewed M. Godin's work in *Athen.*, No. 2719, p. 732, and there mentioned more than one example of tapestry-painting in England. Surely that is a mistake which states, "The colours (pigments) for tapestry-painting are all used as glazes."

Apart from the amount of knowledge systematized in this book—apart from the facsimiles, woodcuts, etchings, and line engravings—the reader of its four hundred pages may find pleasure in the careful and concise definitions, the clear arguments, and the illustrations of each mode of draughtsmanship and painting. Of course we are far from accepting every one of Mr. Hamerton's dicta. For instance, in the earlier pages it is stated:—

"It is impossible to shut one's eyes to the incapacity of graphic art for reasoning with the spectator; and this, from the educational point of view, is a very serious incapacity indeed."

Accordingly our author proceeds:—

"Even drawing done for educational purposes only, and not for pleasure, can never be anything more than an illustration of oral teaching, an assistance which every wise educator would gladly welcome, and which is far too much neglected."

Now, we have always understood that the claim of those who maintain the value of drawing as a means of education for the mind as well as for the eye and the hand is that the art should not be degraded to a mere craft, but that the student should exercise his analytical faculties, and be led to think about what he has seen and delineated. The gist of Mr. Hamerton's remark lies, of course, in the word "reasoning," and his words refer to the teacher's practice of reasoning with pupils. As to reasoning with pupils, we fear few teachers do anything of the kind. But the advocates of drawing intend the pupil to reason for himself, and this, if it can be attained, is a very satisfactory process indeed. In fact, the author himself goes almost as far as we should venture to do on behalf of drawing as a means of educating the mind when he quietly laughs at Cardinal Newman's advice to young men likely to be seduced by charms of drawing, "to remember the distinction between education and accomplishments, and.....not to forget that drawing is only an accomplishment." Mr. Hamerton rightly remarks that our fathers excluded the graphic arts from the education of gentlemen "because they do not seem to have reasoned or thought about the matter." The educational views of the eighteenth century were expressed by Pope in his lines on the Countess of Burlington cutting paper:—

Pallas grew vapourish once, and odd;
She would not do the least right thing
Either for goddess, or for god,
Nor work, nor play, nor paint, nor sing.

Jove frown'd, and, "Use," said he, "those eyes
So skilful, and those hands so taper;
Do something exquisite and wise—"
She bow'd, obey'd him—and cut paper.

Cutting paper was a sort of draughtsmanship practised by the fair Minervas of the eighteenth century—every one remembers how effectually Mrs. Delany charmed her royal friend by this means.

Mr. Hamerton adds, with a sharpness which would have pleased Pope, that "a number of able and influential persons" have been good enough to recognize the fact that "the graphic arts are much more than accomplishments." They are, says our author, gathering courage as he goes on, "a discipline not only for the eye, but for the mind." He gives the reason for this, and arrives at the very conclusion the Greeks attained two thousand years ago. Still we are not quite satisfied that the declaration which follows is forcible enough:—

"Literature itself has gained greatly in recent times by the study of drawing and painting. Some of the clearest modern writers—Thackeray, Théophile Gautier, William Black, William Morris—have acquired from the graphic arts some of the good qualities which make their writings what they are; and many others, amongst whom Browning stands first, have shown so true an interest in these arts, that it may be presumed they have found mental nutriment in them, and not amusement only."

Mr. Hamerton's delicate touches do not end with assurances that the arts of Phidias, Da Vinci, Buonarroti, and others have been helpful to the writers he has named. He continues to argue, with fine humour of the solemn sort, that there may, after all, be something precious in the fine arts as a means of education, not to say of mental development—things which are not invariably the same. After describing the mental activity and intellectual energy of several modern artists, he insists on the fact that "it is a remarkable proof of the educating influence of art itself that these men, whose general education is so limited, should so often have the subtlety and delicacy of perception which belong to extensive culture."

The insight and courage of the author are shown in many of these pages, but never more so than in respect to Michael Angelo, whom he cites as a bold and learned user of the pen and ink, whose example is, nevertheless, not invariably to be followed without fear:—

"In his case there was sometimes a peculiarity which it is not desirable that anybody should imitate. So long as he kept within the bounds of real drawing his work was full of grandeur; but he sometimes, in the exuberance of an overheated imagination, passed beyond drawing altogether and exercised himself in the flourishes of calligraphy. A bold and rapid pen-sketch of his, representing three reclining figures, is distinctly executed with the dashing curves and flourishes of the calligraphist. It looks as if it had been done by some clever writing-master, as a flourishing translation of a study by a learned artist. M. Angelo, in this design, appears to have been intoxicated with his own facility and to have lost the self-control without which there can be no truthful modulation of line."

Mr. Hamerton's analyses of the technique of Buonarroti, Raphael, Titian, Rembrandt, Giorgione, and other old masters are admirable for discrimination and acumen. They are, in fact, better than his appraisement of several modern draughtsmen of renown.

Every one should read the capital account of silver point and its uses. We share Mr. Hamerton's regret that this exquisite implement has been virtually abandoned; but that it is not entirely thrown aside is proved by the delightful specimen of Sir F. Leighton's skill which faces p. 96. The cause of the neglect of this method by the moderns is that few of them are able to draw with the unerring purity and precision it demands. Of the three chalks combined on tinted paper Watteau made the best use, a fact on which Mr. Hamerton has not laid enough emphasis. In speaking of the fascinating but difficult technique of drawing in charcoal our critic praises MM. Allongé, Lhermitte, Lalanne, and Appian, but he has forgotten the fine works of Mr. Wallis in this mode. The essay on Indian ink is careful, humorous, and almost exhaustive, but in the instructions we fail to find any notice of the ready test of rubbing the stick against the teeth. Scent, gilding, blackness, and gloss are inferior to this test of that equableness of texture which is the prime quality of the material. We agree with Mr. Hamerton in condemning the harsh terms used by Töpffer in regard to sepia; Töpffer's unreasoning fanaticism in favour of Indian ink led him to abuse the delicate product of the cuttle-fish. The notes on camaïeu and pastel are first rate, and in the account of tempera the student will find the following just criticism of a subject which has been much studied:—

XUM

"Tempera has often been used for large cartoons, such as those which bear the name of Raphael at South Kensington and those of Giulio Romano in the Louvre. As the subject of this book is not the imaginative but the technical side of art, it is not our present business to enter into an examination of the Cartoons as inventions of the painters' minds. Such a study would require a long chapter to itself, but it may be observed here that the imposing mental powers of Raphael, and especially the majesty of some of his figures, have led many people to overrate the technical merits of the Cartoons. In the first place we ought not to forget that they were not done for themselves, but only to serve as guides for tapestry weavers, who cut them into long strips for their own convenience; and, again, although Raphael composed them, they were in great part executed by his pupils, especially by F. Penni. Subsequent repaintings and restorations have not improved them; but, whatever be their history, the fact that there is a great deal of crude painting and bad colour in them is undeniable."

Mr. Hamerton might have added that in their present state these celebrated works are marred by a great deal of very bad drawing and coarse modelling. The ponderous hand of Thornhill did not touch them with impunity, nor was it the first to injure them. Something like the original freshness, delicacy, and beauty of the surface and technique of the Cartoons may be seen in the background of the 'Miraculous Draught of Fishes.' Very little else in the architecture, draperies, or faces of the seven designs is so genuine.

Of all the chapters in this book there is none we should more willingly quote at length than that which deals almost exhaustively with the history of the attempts to introduce fresco painting into this country, and the difficulties which beset the artists who essayed to use that process in the Houses of Parliament. Maclise was the wrong man for fresco, and it would have been well for him had he never heard of the stereochrome process. Dyce succeeded with pure fresco, though our author has overlooked the fact, where his colleagues nearly all failed more or less completely. Finally, here, very vigorously and faithfully summarized, is the true criticism on fresco as long since accepted by all competent painters. It shows how completely mistaken were the artists and patrons of 1844.

"It may, I believe, be considered now a settled truth about fresco that, *unless it is worked upon afterwards in tempera*, it is of necessity a slight form of art. It gives, in a rapid and very abstract manner, some of the results of studies done deliberately in other and more convenient ways. It does not, in itself, permit the quiet development of forms or the deliberate correction of thoughts, and therefore it is not so much an artist's process as a process by which a clever and skilful workman could give results already reached in better forms of art. This is clearly proved by the fact that all frescoes whatever are copies—copies done in many cases by the same artists who did the originals, but still copies of cartoons. Nobody that we ever heard of composed frescoes on the *intonaco* as oil pictures are frequently composed on the canvas itself. The mental suffering occasioned amongst English artists when they attempted it was probably due in great measure to an over-estimate of its rank amongst the fine arts. M. Angelo had practised fresco, and had said something disparaging of oil in comparison with it; so an idea had got abroad that fresco was a peculiarly great art, which ought to inspire the artist to very high achievements, and every English artist who attempted it conscientiously tried to do his best. They all overshot the mark. Fresco ought to be looked upon as a slight and cheap art, to be done without much effort, and without any attempt at elaborate finish. It ought to be considered successful when it decorates a wall effectively and brilliantly, and comes tolerably near the colouring intended by the artist."

In spite of all this there is a good deal to be said for fresco, and Mr. Hamerton says much which is too long for quotation, although to the point. Still he concludes by rejoicing in the failure to revive the process as "a happy deliverance from a form of art which imposed most objectionable material conditions upon the artist." Of the stereochrome or water-glass process our author has better hopes, but he does not seem to know that the chief cause of the defective state of the 'Interview between Wellington and Blücher' (not the "Meeting," as we have it here) is the reckless use of the silicate solution on the painted wall. The parts where least of this fluid was shed are those which still appear as they were left by the painter. Where the plaster was flooded the work is obscured.

The section on oil painting is full of interest, and the same may be said of that on water-colour painting, while it is a pleasure to read Mr. Hamerton's hearty condemnation of those who practise art translation in wood engraving, or rather wood cutting, by what he justly calls false methods. From the remarks on etching and engraving we may quote the following:—

"People who are accustomed to regulate their conceptions of things by names without troubling themselves to inquire into their nature, are not aware that etching is much employed by engravers. They use it generally in the first stage of a plate to get the drawing in, but they bite lightly, so that the etching may be afterwards overpowered by the work of the burin. There are, however, many passages in some plates by engravers which are etched and left so, and not unfrequently rebitten, especially foliage, foreground plants, the fur of animals, rugged touches upon rocks, and, generally, what we are accustomed to call picturesque things. As in a painter's etching the work of the burin is often dissimulated by a rebiting in the same lines, so the engraver may hide his etched work by retouching it with the burin when the nature of the line allows the burin to go well into it."

The employment of etching in the service of even severe line engraving is happily illustrated by transcripts from two states of a plate engraved by Mr. Lumb Stocks after P. Veronese's 'St. Helena' in the National Gallery; one state shows the so-called etching, the other the etched and line work in combination. The drawing proper is in the etching "done," as Mr. Hamerton, p. 333, phrases it, "with a steel instrument technically called a needle, but which is sometimes blunt and sometimes sharp, as the artist happens to require." The lines thus delineated are then bitten with acid, and finished by deepening them with a burin, or engraving tool proper. A curious example of the use of the etching needle is given:—

"The minute truth attainable by the etching needle in the representation of objects has led to its employment for medical purposes. Dr. Whittaker, the clinical demonstrator at the Glasgow Infirmary, has found it very valuable for the illustration of disease, since every touch on his plates is his own, and not liable to alteration by some engraver destitute of pathological knowledge."

The real difference between etching and engraving is explained in Mr. Hamerton's remarks on the use of implements proper to each:—

"The etching needle is held in the hand like a pencil or silver point, and is therefore an instrument which can be used by any artist accustomed to the ordinary tools of a draughtsman. The burin is held like nothing else, like no other tool ever invented; the working end of it is held between finger and thumb, and the impulsion is got by pushing against a buffer with the lower part of the palm of the hand. The etching needle requires no appreciable force, and will turn in any direction at once; the burin requires considerable force, and will only turn in curves."

Many of the prints which enrich this sumptuous volume are facsimiles of plates produced by Messrs. Dawson & Co., MM. Goupil & Co., Brunet-Debaines, Jeens, and A. Durand.

Eastern Carpets. Twelve early Examples, with Descriptive Notes by V. T. Robinson, and a Preface by Sir G. Birdwood. (Sotheran & Co.)—This sumptuous folio, bound in white that is much too delicate to stand the atmosphere of London, is enriched with twelve engravings, beautifully drawn and faithfully coloured, of the choicest examples which Mr. Vincent Robinson, a great importer of Eastern fabrics and accomplished critic of their art and craftsmanship, has been fortunate enough to collect. Every leaf of the letterpress is of hand-made paper; the margins are noble, the edges uncut; the pure warm tint of the paper deserves admiration; and the learned and tasteful preface of Sir G. Birdwood is printed on one side only of each page. Mr. Robinson has supplied to each print a page of learned description and history. Before commenting on Mr. Robinson's share in this volume, we may borrow a note or two from Sir G. Birdwood. Sir George says that the notices of the use of carpets by ancient writers are few and vague. Nevertheless he seems partially to refute himself by his quotations. If by no means so many as we might have hoped for, still the passages he cites are singularly interesting. The subject of his preface is most fascinating, but we could hardly venture to deal fairly with it without drawings, such as these before us, or, what are even more needful, very numerous diagrams of forms and sketches of colour. We beg the author, whose 'Industrial Arts of India' has instructed many, to carry to a much greater extent the essays and illustrations this book contains. Here is a characteristic passage, rich in suggestions: "It is not possible in these few pages to give all the proofs derived from Assyrian sculptures, Greek and Roman mosaics, and Saracenic encaustic tiles; but there can be no doubt that the Oriental pile-carpets of to-day, all of which, excepting the few purely Assyrian types found in India, have a Saracenic character, are the same in make and design as those of the Sassanian age, the same as carpets have been made from the earliest Egyptian, Indian, Babylonian, and Assyrian antiquity. Under every variation of style and local manner of drawing and dyeing, they have always been ornamented with the same patterns, the knop and flower, the Tree of Life, and, in Persia and India, the representations also of favourite national flowers and certain mythical and natural animals." Again: "A deep and complicated symbolism, originating probably in India and Babylonia, pervades all Oriental carpets. Thus the carpet itself symbolizes space and eternity, and the general pattern, or 'filling' as it is technically termed, the fleeting finite universe of animated beauty. The colours used in its decoration are the perfect seven—indigo,

porcelain blue, green, yellow, orange, crimson, and rose-red. Each of these colours has its special signification. The figures represented in the design, whether mythological or natural, human, bestial, and [or] floral, are also all symbolical. The lion is the symbol of the sun, the day, summer, victory, dominion, and glory; the antelope and unicorn of the moon and serene night. So, again, the phœnix, as seen in carpet No. 3, is the prismatic-tinted day, life, *et cetera;* and the dragon, represented in the same escutcheon with the phœnix, is the dark, stormy night, death and destruction. Even conventional representations of men hunting wild beasts have a symbolic meaning. So have the representations of the natural flowers of Persia—the rose, pink, anemone, narcissus, crocus, violet—their symbolic meaning generally following that of their colours. Even the flagrant irregularities, either of drawing or colouring, to be noticed in every Oriental carpet, and invariably in Turkman and other nomad carpets, have a hidden meaning, their intention being to avert the evil eye, and secure good luck." Without daring to accept everything that the sympathies of our author with Oriental art have led him to say, we are at one with him in deploring the mischief done by those who have induced the possessors of immemorial skill in decorative design to corrupt their precious and almost unique inheritance of art. The magnitude of the blunder of those officials who have striven to deprive the world of Indian art, can only be measured by those who have fully studied the matter. The drawings of Miss Julia Robinson, made for her brother's book, are worthy of the literary setting furnished by him. She has been exceptionally happy in securing the services of Mr. Griggs as the chromo-lithographer of her fine and faithful studies.

THE luxury of modern connoisseurship could not be better displayed than in the *Illustrated Priced Catalogue of the Hamilton Palace Collection*, which has reached us from Messrs. Remington & Co., and comprises cuts from *L'Art*, and a complete version of the catalogue of the recent great sale of works of art, with the prices obtained for the examples, and the names of the purchasers. The book is admirably printed on flexible toned paper, and very tastefully bound, with uncropped edges and other features of modern good taste—that is, not in the ugly and crude "Queen Anne" style of typography, paper, and binding, which is as clumsy as it is easy to reproduce. Old-fashioned connoisseurship was satisfied with very rude sale catalogues that required no binding. Even George Robins's *magnum opus* on the Strawberry Hill sale, and the priced list which followed it, were but simple affairs compared with this version *de luxe*, which might have been improved by notes, stating into whose hands have passed the lots bought by dealers, and anecdotes of the examples and the sale. They may be supplied by the ately finished volume of *Art and Letters*.

ART FOR THE NURSERY.

Fairy Tales. By Hans Christian Andersen. (Sampson Low and Co.)—This pretty book is bound in dark blue, and there is a swallow printed to the life on either side. The illustrations consist of "pictures in colour" after original designs by E. V. B. The conception and naïf designing, the pretty and dainty affectations of the lady's art, have a characteristic charm. But chromo-lithography, however carefully employed, does not lend itself to the reproduction of the best element of art in colour. We have not, of course, seen the original "pictures" drawn by the Hon. Mrs. Boyle, and no doubt, as in a former case, when we ventured to doubt the success, or at least the fineness, of the reproduction of her work, we shall be told that she is quite satisfied.

Pictures from the Poets, by T. Pym (Gardner), comprises little designs, printed in sepia and bistre, of children in various occupations and amusements; they possess no marked character nor important quality except neatness without completeness of execution; the drawing is indifferent throughout. — *Wee Babies* consists of lightly tinted outlines of simple character, representing babies and children of larger growth, their parents, brothers, sisters, and nurses. They are the works of "Ida Waugh," and they are creditable to her; they accompany verses which, in more than one sense of the term, are characteristically puerile, and were written by Amy E. Blanchard. Messrs. Griffith & Farran publish the book; they likewise publish *Fly Away Fairies*, and *Baby Blossoms*, by Miss L. Clarkson, which comprise infantile verses and designs printed in colours, of fairy legends and heroics. We cannot say much for the poetry or the art of the books; the verses are the better of the two.—*The Kitten Pilgrims*, by R. M. Ballantyne (Nisbet & Co.), an heroic legend of kittenhood and cathood, with capital designs by the author, who has represented thus victorious achievements of the travelling champions, and delineated the events with considerable spirit, skill, and animation. Many of the designs are admirable in their way, and cleverly drawn. This is a capital book for children.—*Old-Fashioned Fairy Tales*, by Juliana H. Ewing, contains, besides the veracious histories in question, which, though simple, are well worth reading and clearly printed for the delight of infants, a few indifferent larger cuts, and some dainty vignettes and letter-pieces by Messrs. A. W. Bates and G. Browne. The fanciful but not admirable cover is the work of Mr. R. André. The book is published by the Society for Promoting Christian Knowledge.

NOTES FROM NAPLES.

OUR Naples Correspondent writes, under the date of October 30th:—

Two events of archæological interest have occurred this week in Naples. The first was the annual visit of the members of the Royal Academy of Archæology, Literature, and Fine Arts to Pompeii, the other the visit to Pompeii of the Austrian ambassador, when a special excavation was made. Many and interesting objects were found on this last occasion, among them the skeletons of two men, probably slaves, as they lay on the staircase leading to the kitchen. There were found also *lucernæ*, large plates, one of which had been mended with ligaments of lead, jugs, vases of terra-cotta, so fine as to appear almost as if they had been made of metal. The objects in bronze and iron were numerous, but more interest was attached to the fragments of plaster of an upper room. These are being collected and arranged in the hope of obtaining important details of the splendid painting. The visit of the Naples Archæological Society was a pleasant annual outing, less for the purpose of any special excavation than for a general survey of what had been done during the year. Of course, principal attention was devoted to the most recent excavations, and here—to pass over many frescoes of greater or less merits, and statuettes of Apollo and Mercury—was shown to the visitors a bronze *lucerna* suspended before the household gods, as is the custom still in every part of Italy to hang a light before a picture or image of the Madonna. Amongst the objects found in a neighbouring house, and which was exhibited to the archæologists, was a bronze speculum, in excellent preservation, destined, in all probability, to command the attention of modern professors of surgery. The remarkable fresco called the 'Judgment of Solomon' has been already noticed. In the same house in which it was found there were frescoes of Egyptian scenes, as the chase of the crocodile and hippopotamus, and a banquet with obscene groups. The frescoes have all been detached from the walls. Yet the house had a special interest for the visitors, and the 'Judgment of Solomon' was brought under discussion. Different opinions were expressed about its meaning, but the general sentiment was that it was *not improbable* that the Biblical legend had penetrated into Pompeii, as the Alexandrines, who together with their costumes and their ideas would import their literature, must certainly have possessed the Septuagint translation of the Bible. Difficulties, however, were expressed by some as to this interpretation of a picture "on which science has not yet said the last word." An excavation was afterwards made, which produced articles of interest to few except the archæological. There were, however, exceptions, such as a little vessel of silver in fragments; some precious stones, as an amethyst and a jasper, with an "incision" of slight value; lastly, the fragment of an amphora, with an inscription partly illegible from the incrustations upon it, and an amphoretta with the following inscription repeated three times: "Liquamen optimum A. Umbricii Scauri." In one inscription "optimum" is written "optumurum." Similar amphoretti of "liquamen" (a kind of condiment) have been found in the house of M. Lucrezio in Pompeii.

THE DISAPPEARANCE OF ANCIENT WALLS.

Jerusalem.

VERY many of the cities of Palestine and the surrounding countries were celebrated for the strength of their walls.

Among Phœnician cities Tyre was one of the most famous in this respect (Josh. xix. 25, Ezek. xxvi. 4, Amos i. 10), although to appreciate this fact fully we need to supplement the Biblical record with what is to be found in the annals of Assyria, Babylonia, and Greece.

In Philistia we find that Gath, Jabneh, Ashdod, and Gaza were defended by strong walls (2 Chron. xxvi. 6, Amos i. 7).

Not much is said of the walls of Damascus, yet enough to show that they were the pride of its king (Jer. xlix. 27).

If we go east of the Jordan we find the fenced cities of Moab mentioned (2 Kings iii. 19), and likewise others located in the country just north of Moab (Numb. xxxii. 17). Some of the latter were built, or perhaps rather rebuilt, by the children of Reuben and the children of Gad, among which were Dibon, Jaazer, Jogbehah, Beth-nimrah, Beth-haram, Heshbon, and Nebo (*ibid.* verses 34-38).

Still further north, in the kingdom of Og, there were threescore cities which were fenced with high walls, gates, and bars (Deut. iii. 5, 1 Kings iv. 13).

To leave groups and to glance at individual cities, we find that the walls of Rabbath of the children of Ammon were noted for their strength (2 Sam. xi. 20, Amos i. 14), and the same was true of this place in the Greek period, long after the close of the Hebrew records.

Far in the north, just east of the Sea of Galilee, stood the city of Aphek, whose walls were famous for having caused the death of no less than twenty-seven thousand Syrians, the enemies of Israel (1 Kings xx. 30). What was the occasion of the falling of this wall? Was it by miraculous power, or was it the result of an earthquake, to which that region is subject, occurring at that particular juncture?

Abel, or Abel-beth-maachah, north-west of Lake Merom, was likewise defended by walls, which in the revolt of Sheba were besieged by Joab and the army of David (2 Sam. xx. 15).

Further south, in Western Palestine, nineteen of the cities of Naphtali are described as fenced cities as early as the days of Joshua (Josh. xix 35-38 .

The walls of Beth-shean are mentioned as the place where the bodies of Saul and his sons were hung up by his enemies after his defeat in Mount Gilboa (1 Sam. xxxi. 10, 12).

The walls of Samaria were of such strength that the city could resist a siege of great length and severity (2 Kings vi. 26, 30, x. 2).

XUM

Both the upper and the lower Beth-horon were fenced cities, having walls, gates, and bars, in the time of Solomon, who, indeed, built them (2 Chron. viii. 5).

The fenced cities of Judah seem also to have been numerous (Josh. x. 20, 2 Chron. xi. 5–10), among which are mentioned Beth-lehem and Hebron.

I shall close this list of walled cities by a reference to Jericho. The house of Rahab, who secreted the spies of Joshua, was upon the wall of the city. The wall, in a miraculous manner, was to fall down flat when all the Israelites should shout and the rams' horns should be blown. This result followed, and thus the first conquest of the Hebrews on the west of the Jordan was complete (Josh. ii. 15, vi. 5, 20).

I shall refer also to a few places that are mentioned by Josephus. The walls about some of these cities or towns were built, or rather rebuilt, by Josephus himself. Others were built by Herod the Great, and still others had existed from remote times.

In Galilee there were Sepphoris, Gischala, Mount Tabor, Jaffa, Jotapata, Tiberias, and Tarichea. East of the Jordan there were Gamala, Seleucia, Sogane, and Gadara. In Judea there were Masada and Jericho, and opposite Jericho was Beth-aramptha.

From these lists, gathered from the Old Testament and from Josephus, I have purposely omitted the name of Jerusalem.

What has become of the walls that once defended the cities of Moab and Bashan, of Naphtali and Judah? Heshbon, which was fortified by the children of Reuben, was fortified a second time by Herod the Great, but not a trace of these walls remains. Fik, the modern representative of Aphek, east of the Sea of Galilee, is a large village in ruins, with, however, some inhabitable houses. The ancient walls have disappeared. The same is true of nearly all the places that I have mentioned. About the *old* Tiberias there are still the remains of walls, and the fortifications around the summit of Mount Tabor are still to be seen. The walls of Gamala are an exception to the general rule, for they are sufficient even now to convince one of their strength in ancient times. Beth-haram of Joshua's time, the Beth-aramptha of Josephus, which Herod the Great fortified anew and renamed in honour of Julia, the daughter of Augustus, is now represented by some very meagre ruins and a few mounds in which may lie buried important relics.

In some respects Jericho furnishes the best example of the disappearance of ancient walls. In the first place, there is no dispute about the locality; in the second place, the strength of the defences of this city in former times is a well-known fact; and, thirdly, the entire absence of any traces of ancient walls is a fact that has been observed by thousands who have visited this locality.

I could give some suggestions as to the manner in which these walls have disappeared, but my object in this paper was simply to call attention to the fact of their disappearance in so many cases. It will be seen how the work of the explorer is complicated and rendered difficult. After all the evidence has been carefully gathered and is found to fix a certain site in a certain locality, some would-be critic appears and says, "But the place is entirely destitute of antiquities!"

This objection appears plausible, but it is often worthless and even absurd, as is readily seen in the case of Jericho. The using of ancient ruins as quarries, and the removal of building materials from one locality to another, are facts with which the explorer in Palestine soon becomes familiar and which seem to be more true of this country than of any other. SELAH MERRILL.

Fine-Art Gossip.

TO-DAY (Saturday) the season of sales by Messrs. Christie, Manson & Woods will be begun by the dispersion of a number of modern pictures, including works attributed to Nasmyth, Landseer, Bonington, Crome, Constable, Morland, Duverger, Daubigny, and Cotman.

DRAWINGS intended for exhibition by the new Dudley Gallery Art Society—a body to which we referred last week as occupying the well-known premises at the Egyptian Hall, Piccadilly—must be sent to that gallery on Monday, February 12th next. A limited number of works by non-members will be accepted, subject to selection, and comprising not more than three by each artist. A majority of the committee of the Dudley Gallery of former days has, as everybody knows, cast in its lot with the Institute of Painters in Water Colours, and, with a proportion of outsiders, will occupy the new Piccadilly Galleries, near Duke Street, next spring, to which premises the Institute is, as we stated last week, now removing.

MR. MILLAIS's important figure-picture of 'Pomona' has been bought by Mr. Neck, of the Avenue Road, for 2,500*l*. Mr. Tooth, of the Haymarket, is exhibiting the work.

AT a meeting of the Council of the Archæological Institute held on the 8th inst., an invitation from the Mayor and Corporation of Lewes for the Institute to make that town the headquarters of the annual meeting in 1883 was accepted.

A VALUED Correspondent suggests that it would be a convenience to visitors to the National Gallery who go there for the more particular study of the various schools of painting if the catalogue numbers of pictures removed for cleaning and otherwise were fixed to the walls. This practice is adopted at Hampton Court and generally on the Continent. Foreigners are often much bewildered by the absence of the numbers of removed paintings. Those visitors who cannot distinguish the guardians of the galleries by their costume, official staves, or badges must needs be troubled by the omission to mark the sites of absent examples. At least a dozen pictures are not now on the walls nor represented by their numbers.

NOTWITHSTANDING several complaints and remonstrances of correspondents, we have not been yet informed of the approaching publication of the revised catalogue of the ancient pictures in the National Gallery. Surely it would be worth while to reissue the old catalogue, which is a great deal better than none.

THOUGH slightly incoherent, the following letter is intelligible:—"An unintentional libel in description of our church of St. Paul's, Haggerston, was published by you on Saturday week, the 28th ult. I trust to your fairness to admit my exposure of it. The statement is that 'the most hideous church ever erected, that of St. Paul's, Haggerston, has lately been improved by the addition of a spire.' This description has been sent to you in malice or in mischief, or in both, or, if in neither, in sheer unreason. The addition of a spire is a truth: the description of the church is an absurd misrepresentation. The church without and within is a really beautiful one. It is the work of one of the first church architects, Mr. Arthur Blomfield, and it is worthy of his great reputation. I feel sure that you would not willingly allow anything untrue or unkindly to be quoted (as this has been quoted) from your columns. I do not, therefore, doubt that you will publish this indignant contradiction. If the arthor of this description is not a wilful libeller he is a hopeless lunatic.—S. J. STONE, Vicar of St. Paul's, Haggerston." We are sorry to have shocked our correspondent. No one appreciates more highly the works of Mr. Blomfield, and we simply made a mistake about the invocation of the church. "The most hideous church ever erected," which we now forbear to name, is in Mr. Stone's neighbourhood, although not his, and so far as we know retains all its terrors.

SINCE the 30th of October the public has been admitted to see the new granite monument erected to the memory of Leopold Robert, who committed suicide in Venice forty-seven years ago. A sum of 6,000 francs was collected by the Swiss committee for the purpose of purchasing the site and building the truncated pyramid. It measures three mètres in height, is constructed in pink granite of the Bernese Oberland, and is adorned with a medallion portrait of the painter in a bronze.

WE hear that the amount realized for pictures sold from the Liverpool Autumn Exhibition exceeds 6,000*l*.

IT is proposed to acquire a lease of some buildings near St. Mary-the-Less at Cambridge for the new Museum of Archæology and to adapt them to the purpose. The idea of erecting a new building has been abandoned, as no freehold site could be obtained adjacent to the Fitzwilliam Museum.

MUSIC

THE WEEK.

CRYSTAL PALACE.—Saturday Concerts.
ST. JAMES'S HALL.—The Popular Concerts. Mr. Walter Bache's Recital.

The programme of last Saturday's Crystal Palace Concert contained less on which to offer criticism than that of any previous performance this season. The date being the twenty-fifth anniversary of the death of Mendelssohn, the music of that master predominated, though the selections were not entirely of a nature to do him honour. Not a word could be said against the 'Lobgesang' and the 'Fingal's Cave' Overture as suitable representative works, and the performance of the latter was as near perfection as possible. An Adagio in E flat from the twelfth of the early symphonies was announced and the usual analysis printed, but another movement in E was substituted without explanation. The occasional performance of one of these juvenile compositions merely as a curiosity may be excused, but nothing can justify such an inartistic proceeding as the transformation of the Pianoforte Scherzo in E from Op. 16 into an orchestral piece. Herr Hofmann, who is responsible for this barbarism, has inserted scale and other passages for which there is no authority in the original. There was but slight applause after the performance, and the audience would certainly have been better pleased with one of Mendelssohn's genuine *scherzi*—say that from the 'Midsummer Night's Dream' music—as an example of his unequalled skill in this class of composition. Some interest was aroused by the announcement of two numbers from Mr. Mackenzie's 'Jason,' the great tenor *aria* in the first scene to be sung by Mr. Edward Lloyd, and the intermezzo "On the Waters"; but the former of these was withdrawn at the last moment, on account of "the exacting nature of the tenor music in the 'Lobgesang,'" according to a printed slip inserted in the books of words. Miss Marian Fenna and Mrs. Hutchinson were the vocalists in the miscellaneous part of the programme, the lady last named deserving commendation for her rendering of the fine air "When I am laid in earth," from Purcell's 'Dido and Æneas.' To-day the novelty will be a symphonic poem entitled

'Visegrad,' by Smetana, and Miss Marie Wurm will play Schumann's Pianoforte Concerto.

Up to the present time only pieces of minor importance have been added to the repertory of the Popular Concerts. Last Monday Madame Néruda introduced a Ballade in G minor for violin, by her brother, Herr Franz Néruda. The piece is numbered Op. 42, and was originally written with orchestral accompaniment. The principal theme has a singular effect from the use of F natural in place of the usual major seventh of the scale, but otherwise it has but little individuality, though well written for the solo instrument. It was, of course, played to perfection, and the audience insisted upon an encore. Mdlle. Janotha played five numbers of Schumann's 'Kreisleriana,' Op. 16, in her very best manner. These charming pieces might be rendered with more passion and energy, but certainly not with more delicacy or poetic feeling. Mdlle. Janotha was less happy in the pianoforte part of Mendelssohn's Trio in C minor, Op. 66, a work requiring power and brightness rather than a dreamy, abstracted style. Haydn's delightful Quartet in F, Op. 77, No. 2, was also included in the programme. Miss Annie Marriott was not altogether successful in Spohr's "Rose softly blooming" and two charming songs by Jensen, "O lass dich halten" and "An der Linden," the effect being marred by her indulgence in the tremolo. This, however, may have proceeded from nervousness rather than defective voice production. To-day's programme includes Schumann's Quintet in E flat, Beethoven's Quartet in F, Op. 18, and the Sonata Pathétique, the executants being the same as at all previous concerts this season.

Mr. Walter Bache, the energetic and enthusiastic apostle of the gospel according to Liszt, gave a pianoforte recital at St. James's Hall last Monday afternoon, the entire programme of which was selected from the original compositions of the great pianist whom his former pupil delights to honour. We fear that to a considerable extent he is preaching in the wilderness, and that those who really admire Liszt's music as a whole not only are, but are likely to continue, a very small minority. We cannot say that in the interests of art we think this a cause for much regret. We should be the last to deny the true poetic spirit, nay even the genuine inspiration, to be found in many of Liszt's ideas; but by the side of much that is lovely we also find a great deal that is wild, rhapsodical, and even crude. This is more especially true of his larger compositions. Some of his smaller pianoforte pieces and many of his songs are full of real charm; but when he essays a wider flight, and endeavours to enlarge the boundaries of musical art by the extension of existing forms, he too often becomes vague and incoherent, and sometimes positively ugly. For this among other reasons an afternoon concert consisting entirely of Liszt's music is no slight trial to the patience, and it might be added to the temper also. Such a musical abortion as the so-called Prelude and Fugue on the theme 'Bach,' with which Mr. Bache opened his recital, is enough to drive away the most long-suffering of hearers. As a specimen of absolute hideousness it is probably almost unparalleled—no small matter for thankfulness, be it said; while as an example of the strict style of composition, we will only say that if this be a fugue, then those of Bach certainly are not, for they belong to quite a different domain of art. It was an error of judgment on the part of Mr. Bache to put at the head of his programme a work so calculated to exasperate. The great Sonata in B minor which followed the fugue was first introduced to a London audience by Mr. Oscar Beringer at a recital some two and a half years ago. It is far less offensive than the Prelude and Fugue just noticed, and it contains some charming ideas, especially in the slow movement; but it is an example of that unsuccessful attempt spoken of above to enlarge the forms created by the old masters beyond the bounds of their possibilities. Here again we can only repeat in so many words what we have said of the Prelude and Fugue—if this be a sonata, then those of Beethoven are not, for the two forms have hardly anything in common—one might as well call an ellipse a circle; there are points of general resemblance, and that is all. We should rather define Liszt's work as a very clever rhapsody on original themes. After these two pieces, trying alike to player and hearers, the rest of the programme was a relief. The Études and other smaller pieces which Mr. Bache played show Liszt in a far more genial mood; and two songs, excellently given by Mr. Arthur Oswald ('Die drei Zigeuner' and 'In Liebeslust'), were among the most enjoyable items of the afternoon. Though we have spoken unfavourably of some of the pieces selected for performance, it would be unjust not to mention Mr. Bache's truly masterly playing. Whether as an executant or from an artistic point of view, he has never been heard to more advantage.

Musical Gossip.

Mr. Dannreuther will give his annual series of four musical evenings on Thursdays, November 16th and 23rd, December 7th and 21st. He will be assisted by Messrs. Ludwig, H. Holmes, A. Gibson, Carl Jung, H. Hill, and B. Albert, instrumentalists, and Misses Anna Williams and Annie Butterworth, vocalists. The programmes are more than usually interesting, the novelties including a Trio in E minor by Goldmark, Op. 33; a String Quintet by Mr. Henry Holmes; six vocal duets by Tschaïkowsky, Op. 46; five Novelletten for pianoforte trio by T. Kirchner, Op. 59; three Intermezzi for clarinet and piano, by Mr. Villiers Stanford; and songs by Mr. Dannreuther and Mr. Hubert Parry.

Mr. A. J. Hipkins is preparing a lecture on the history of the pianoforte, to be delivered at the Society of Arts after Christmas. He intends to approach the subject rather from the technical than the musical point of view, and to include reference to the interesting instruments from which the pianoforte is derived.

Miss Agnes Zimmermann, the pianist, has, we learn from German papers, been playing with great success at Hamburg. She has accepted an engagement to play there again in February next at the Philharmonic Orchestral Concert, and meanwhile will continue her tour in Germany, appearing at the Gewandhaus, Leipzig, at Frankfort, and at Aix-la-Chapelle.

The first of two Richter Concerts was given at St. James's Hall on Thursday evening, too late for notice this week. The second will take place next Tuesday, when Mr. Dannreuther will play Brahms's new Pianoforte Concerto, recently performed by Mr. Oscar Beringer at the Crystal Palace. The programme will also include the Overture to 'Euryanthe,' the introduction and closing scene from 'Tristan und Isolde,' and Beethoven's C minor Symphony.

At Mr. Charles Halle's second concert at the Free Trade Hall, Manchester, on Thursday week, Handel's 'Israel in Egypt' was given. The programme of the third concert, last Thursday, comprised Mozart's Symphony in G minor, the Overtures to 'Der Freischütz' and 'Anacreon,' and Mendelssohn's Violin Concerto, played by Madame Norman-Néruda.

Mr. Stephen S. Stratton gave the second of his chamber concerts at the Masonic Hall, Birmingham, on the 30th ult. The works brought forward were a MS. String Quartet in G, by the late Charles Lucas; Beethoven's Sonata in E flat, Op. 31, No. 3; Tartini's Violin Sonata in G minor; Mendelssohn's Trio in C minor; and Mozart's String Quintet in D.

The death is announced of Herr Gustav Nottebohm, the distinguished musical historian, at Gratz on the 31st ult. He was born on November 12th, 1817, at Lüdenscheid in Bavaria, and has rendered great service to musical history by his publication of thematic catalogues of Beethoven's and Schubert's compositions, as well as by his careful and minute analyses of Beethoven's sketch-books.

We have received from Messrs. Goddard & Co. a pamphlet entitled 'Reflections upon Ch. Gounod's Sacred Trilogy, "The Redemption,"' by Joseph Goddard. The writer examines M. Gounod's new oratorio both from a technical and an æsthetic point of view, and he dwells largely upon the religious feeling which pervades it. We can recommend the little essay as worthy of perusal.

The prize of 1,000 francs offered by the Musical Department of the Belgian Academy of Fine Arts for the best pianoforte trio has been awarded to M. Joseph Callaerts, of Antwerp. Nine works were sent in for competition, and the jury state that in quality they show great advance on those sent in on previous occasions.

Wagner's 'Tannhäuser' has lately been produced in St. Petersburg, this being the first performance of the work in Russia. It is said to have been enthusiastically received.

The *Musikalisches Wochenblatt* announces that Herr Max Bruch, the conductor of the Liverpool Philharmonic Society, intends next year to visit the United States, in order to conduct performances in the principal cities of his larger choral works.

M. Franz Rummel, a pianist well known to our London audiences, was announced to play Liszt's Concerto in E flat last Sunday at M. Colonne's concert at the Châtelet, Paris.

DRAMA

Shakespeare's Tragedy of Hamlet. Edited by Karl Elze. (Sampson Low & Co.)—Dr. Elze tells us in his introduction that his object has been "to reproduce Shakespeare's original manuscript, that manuscript which he sold to the Lord Chamberlain's players." In order to attain this end he has collated the first and second quartos and the first folio, being careful to note the minutest differences in spelling; and his rule has been to accept the reading of two of the old copies wherever they are in agreement against the third. The division into acts and scenes, as it is not found in the quartos and only partially in the folio, has not been marked. By diligently noting the variations in the spelling Dr. Elze hopes that he may have some success "in establishing a critical law which may tend to lessen the influence of in-

XUM

dividual taste." For our own part we are at a loss to see how any "critical law" can possibly be based upon the casual agreement or disagreement of three unknown copyists. Turning at random to Dr. Elze's notes, we find such items as the following (p. 112): "*Combate*] QA and FA; QB: *combat*,"—"*Conqueror*] Q Aand FA; QB: *conquerour*,"—"*Moity*] QA and FA; QB: *moitie*"; and so on. What useful object can be served by such notes as these we are unable to discover; for Dr. Elze knows that there is not a shred of evidence to show that any of the quartos of Shakspeare's plays were printed from the author's manuscripts; and he takes occasion to remind us in his introduction that indifference to orthography had risen in Shakspeare's time to such a height that people were in doubt how they should spell their own names. As to the division into acts and scenes, Dr. Elze's views are very pronounced. "That the poet," he holds, "did not divide his plays into acts and scenes is shown by the quartos and supported by other evidence." There being no proof that a single quarto was published from an authentic manuscript of Shakspeare's, the theory is built, so far as the quartos are concerned, on sand, and what the "other evidence" may be we are not informed. But to help us in arriving at a decision we have several manuscript old plays in our national collection, and we have the evidence derived from the practice of such dramatists as Webster and Ben Jonson, who supervised the publishing of their own works. One of the most interesting of extant manuscript collections is a folio (Eg. 1994) containing fifteen plays. Some of the pieces in this collection have no division into acts and scenes, and only the most meagre stage directions; but in many cases the division is most accurately marked and the stage directions are very full. In the 1616 folio of his works Ben Jonson invariably marks the division into acts and scenes, and gives full stage directions. Webster seems to have neglected the division at first and to have adopted it afterwards. 'The White Devil,' 1612, is not divided, but in the 'Duchess of Malfi,' 1623, the acts and scenes are properly marked. Of course, Dr. Elze may plead that his aim was "to reproduce Shakespeare's original manuscript" as "sold to the Lord Chamberlain's players," and without the additions that it might or might not have received if intended for publication. The bewildered reader will ask himself why the learned editor should have taken such a project in hand. Even if we were in possession of a quarto corrected by Shakspeare's own hand we could not be sure for a moment of reproducing "Shakspeare's original manuscript." Those who have any acquaintance with Elizabethan manuscripts know how capricious is the use of contractions. No rule can be laid down, for we find a word contracted in one line and spelt in full in the next. Sometimes these contractions may become a source of grave corruption. For instance, the word "faint" might be written "fāit," and the stroke over the vowels being omitted—a very common occurrence—"faint" would appear as "fait," which a compositor would readily change into "fat." We have little or no doubt that in the well-known passage, "He 's fat and scant of breath," the proposed emendation "faint" should be adopted. It is astonishing that an editor who takes the trouble to note the minutest differences in spelling should have passed over without remark the divergence between the first quarto and the later copies in the Play scene. All that Dr. Elze tells us is that "QA is different." Dr. Elze should certainly have given the text of the first quarto in full. The sweet, equable lines of the player king's opening speech in the first quarto came from no hand but Shakspeare's, and they afford the surest proof—proof amounting to absolute certainty—that the play had undergone considerable revision before it took the form in which it was issued in 1604. The evidence derived from the Play scene has been specially emphasized in Mr. Swinburne's 'Study of Shakespeare,' a book not less remarkable for excellence of criticism than for eloquence of language. But it is time to mention what we consider to be the good points in Dr. Elze's volume. The *apparatus criticus* is singularly complete; every difference of reading is chronicled with the most faithful care. To the textual notes Dr. Elze has added a considerable quantity of exegetical matter, and here his wide reading appears to advantage. Wisely avoiding the hopeless corruptions over which innumerable commentators have spent their ingenuity, he addresses himself to illustrate uncommon forms of expression; and he is never at a loss for an apposite quotation. The note on "the swaggering up-spring reales" (p. 133) is interesting and conclusive, and some instructive remarks will be found on the word "hebona" (pp. 140–41). Dr. Elze's proposed emendations deserve to be mentioned with respect. We forget the name of the commentator who wished to alter, in 'As You Like It,'

> Books in the running brooks,
> Sermons in stones,

to

> Stones in the running brooks,
> Sermons in books;

but it is on this principle of reducing everything to downright prose, of transmuting the gold into dross, that many editors seem to proceed. To these apostles of common sense the notion of taking "arms against a sea of troubles" seems the height of folly, and they briskly substitute "siege." Dr. Elze, a man of taste and an accomplished scholar, is guilty of no such absurdities as these. He does not even condescend to notice that brilliant emendation (Dr. Leo's, if we remember right) "leaded poleaxe" for "sledded Polack." When he has an emendation to propose he puts his case well. The following passage (IV. vii.) undoubtedly presents some difficulties:—

> The other motive
> Why to a public count I might not go
> Is the great love the general gender bear him,
> Who dipping all his faults in their affection
> Would, like the spring that turneth wood to stone,
> Convert his gyves to graces, so that my arrows,
> Too slightly timberd for so loud a wind,
> Would have reverted to my bow again
> And not where I had aim'd them.

Here the folio corrects "loud arm'd" of the second quarto (in the first quarto the passage does not occur) to "loud a wind," but for the quarto's "aim'd them" reads "arm'd them." The real difficulty assuredly lies in the word "gyves"; the rest, by combining the readings of the second quarto and the folio, becomes perfectly intelligible. Theobald (to whom, it should never be forgotten, we owe the finest emendation in the whole range of Shakspearean criticism) proposed to read "gybes" (*i. e.*, gibes) for "gyves." The change involved is very slight, for *v*'s and *b*'s are often barely distinguishable in Elizabethan writing; and the required sense is very happily restored. Dr. Elze, who strangely makes no mention of Theobald's emendation, would turn "gyves" into "graves" (*i. e.*, greaves), and "so loud a wind" into "so solid arms." We do not for a moment believe that "graves" is the right word, but the reading "so solid arms" deserves consideration from the fact that the quartos are unanimous in reading "arm'd" or "arms." The editor adds a long and scholarly note in support of his emendation. We cannot take leave of this volume, which we heartily recommend as a very valuable book of reference, without stating that in one place Dr. Elze's ear seems to be at fault. The Ghost's parting words to Hamlet stand in the first quarto:—

> Hamlet adue, adue, adue, remember me;

in the second quarto:—

> Adiew, adiew, adiew, remember me;

and in the first folio:—

> Adue, adue, Hamlet: remember me.

An editor who follows the second quarto may be pardoned, but surely the reading of the first folio is the true one. Properly punctuated, the line,

> Adue, adue! Hamlet, remember me,

with the pause after the second "adue" and the impressive trochee to follow, has the most pathetic effect. Dr. Elze prints, on his own responsibility,

> Hamlet, adue, adue, remember me,

a very wooden reading.

Dramatic Gossip.

Mr. Boucicault is at present engaged in preparing a version of 'Don Quixote,' in which Mr. Irving is to play the Don. The character is within Mr. Irving's reach, and should be suited to his talents. In Durfey's 'Don Quixote' the part of Sancho, taken by Doggett, appears to have been the more important of the leading *rôles*, Don Quixote being assigned to Bowen and afterwards to Powell. Don Quixote, in Fielding's comedy 'Don Quixote in England,' appears a comparatively subordinate character, the principal part being that of Squire Badger, taken first by Macklin and subsequently by Shuter.

The first production of 'The Silver King,' the new drama by Messrs. H. A. Jones and H. Herman, is fixed for Thursday next. The play is in five acts.

The Court Theatre will reopen on Tuesday with a performance of Mr. Godfrey's comedy 'The Parvenu,' preceded by a new comedietta of Mr. Julian Sturgis. The latter piece is for two characters only. It will be supported by Miss Carlotta Addison and Mr. Arthur Cecil. No change is made in the cast of 'The Parvenu.' 'Comrades,' a new comedy by Mr. Bolton Rowe and Mr. Brandon Thomas, which is in preparation, will serve to bring back to the theatre Mr. Boucicault, jun., and to introduce two recruits to the company, Mr. Mackintosh and Mr. Coghlan.

A revival of Halliday's 'Little Em'ly,' promised for Wednesday night at the Court Theatre, did not take place.

A melodrama in six acts and nine tableaux, by Mr. James Willing, jun., has been produced at the Standard Theatre under the title of 'The Ruling Passion.' To deal with the characters or the story of this elaborate work is needless. As in previous pieces of its class, the chief attraction to the public consists in the representation of scenes with which it is assumably familiar—with scenes in Piccadilly and *fêtes* at the Crystal Palace. Miss Louise Moodie played the dual *rôle* of the heroines, who are twin sisters, and Mr. Leathes acted in his later and very pronounced style as the villain.

In his five-act play 'Un Roman Parisien,' produced at the Gymnase Dramatique, M. Octave Feuillet has departed from his customary method. One of the most confirmed sticklers for the dramatic unities, he has supplied a piece the action of which extends over many years, and in order to bring together his hero and heroine, he kills the husband of the one and the wife of the other. In spite of these defects the play is one of the strongest he has written, and has obtained a complete success. The principal characters are well supported by Madame Pasca, Mdlle. Brindeau, and MM. Achard, Saint Germain, Landrol, and Marais.

'La Rue Bouleau,' a three-act comedy by MM. Ferrier, Vast, and Ricouard, with which the rechristened Théâtre des Menus-Plaisirs has reopened, is a failure. 'Empoisonnée,' a one-act *vaudeville* of M. Thomy, obtained some success, but is, of course, too slight a piece to sustain the fortunes of the theatre.

LITERATURE

The Merv Oasis: Travels and Adventures east of the Caspian. By E. O'Donovan. 2 vols. (Smith, Elder & Co.)

Modern journalistic enterprise has produced two curious developments which bid fair to assume even greater importance in the future than they have hitherto attained—we mean the "interviewer" and the special correspondent. The former is not everywhere appreciated at the same value—witness Mr. Herbert Spencer's recent experiences; but the objections levelled against his activity are often directed against the particular method of application rather than against the general principle: where an interviewer has tact as well as brains there can be no doubt that the results should often be valuable. The special correspondent can boast of an earlier origin and a fairly established reputation, but even from him we may look for greater things in the future. He is as yet only tolerated in civilized warfare; for him to penetrate among savage or semi-savage nations argues greater courage, because of their complete inability to realize or believe in the functions of so artificial an outcome of civilization. Mr. Stanley with a powerful escort of armed followers could afford to deride the suspicions of the natives; Mr. MacGahan was supported by the presence of the Russian army; but Mr. O'Donovan's visit single-handed to the Tekke stronghold during a time of wild excitement is an instance of daring to which we are precluded from applying the harsh term "foolhardiness" by the excellence of the present book. So far as we can tell, Mr. O'Donovan's work consists in the main of the letters published in the *Daily News*, supplemented by such of them (and these must have been pretty numerous) as failed to reach their destination. The result is a very readable book, that stands out pleasantly and prominently among the rather heterogeneous mass of literature which the approach of Christmas calls into existence. Anecdotes and incidents of travel are plentifully strewn through its pages, and the detailed descriptions of the trans-Caspian regions and their inhabitants supply us with information about an important region—a sort of half-way house between Europe and Asia in times past, and an arena of political interest at the present day.

The first of Mr. O'Donovan's two volumes is devoted mainly to the shores of the Caspian and to Northern Persia, the lower course of the Atrak river and Asterabad, and the eastward section of the Atok, from Askabad towards Merv. Mr. O'Donovan's chief object was doubtless to attach himself to the Russian headquarters and witness the course of the Turcoman campaign, but this hope was dispelled by summary expulsion from Chikislar—a piece of treatment for which it is difficult to account except by the supposition that it proceeded partly from international jealousy, and partly from a desire to keep the plan of the campaign secret. Mr. O'Donovan was thus compelled to take refuge on Persian territory, where he traversed ground known to us from the writings of Col. Baker and the late Capt. Gill, Major Napier, Col. MacGregor, and other travellers. But the very full and novel details he brings to light help the reader materially to understand the situation of affairs on this frontier.

The Turcoman raids have long enjoyed an ugly notoriety, but Mr. O'Donovan points out clearly that the supposed sufferers, the Persians, are not so free from blame in the matter as might be supposed. For instance, the governor of Derguez, an extensive border province, did not at all relish the suggestion that he should complain to the Turcoman chiefs and hold them responsible for the forays on his people. He much preferred the plan of a counter raid against the offenders—an arrangement which often resulted in his subjects recouping more than personal losses, while he himself got all the ransom money of the prisoners and no small share of the other booty besides. It is openly acknowledged that the Khan would lose at least 1,600*l.* a year of his income were the marauders suppressed. Again, both sides cordially approve of the practice, cattle-lifting and its attendant fighting being looked upon by both Turcomans and Persians as a respectable and exciting pursuit, just as fox-hunting is in an English sporting county. There would have been, therefore, much to be said in favour of a policy which would have allowed the border population of both nations to "stew in their own juice." The intervention of Russia, however, has altered the whole situation. If she has done nothing better, she has helped to liberate forty thousand slaves, has closed the slave markets of Khiva and Bokhara, and is securing a peaceful state of things along the north of Persia. Mr. O'Donovan appears to anticipate the development of an extensive trade when once the East Caspian railroad shall have reached the eastern confines of the Atok. Such a consummation should be gladly hailed by most people, especially if it change the Turcomans from nomad marauders into peaceful agriculturists, and lead to the regeneration of the once famous oasis of Merv. But it is probable that the achievement of this by Russia, and the prospect opened up to us by Mr. O'Donovan of a Russian army marching through Persia and being received everywhere with open arms, would not be viewed with unmixed satisfaction over here.

The description of Oriental towns given by Mr. O'Donovan is vivid and artistic, though he never attempts to disguise the inconvenience with which he had to put up. Indeed, Northern Khorassan would seem to be one of the most unpleasant spots on the globe in some respects. There is a particularly poisonous insect, called the *garrib-gez* (lit. "bite the stranger"), against which Europeans are specially warned, for its bite is sometimes fatal. Besides such every-day amenities as snakes and scorpions, there is a dangerous entozoon produced in the system by drinking impure water, similar to the guinea-worm of English writers; while the normal dirt and unhealthiness of even the more important towns make living in them a very trying penance.

One of the most interesting passages in the work relates to Meshed. This city is *par excellence* the Holy City of the Shiite Mohammedans, and scarcely yields in sanctity to Mecca itself. Its proximity to the north-eastern frontier of the Shah's dominions makes it a strategical point of importance, and at the time of Mr. O'Donovan's visit a thousand men were encamped outside its walls as a protection against the Turcomans. Unlike many other Persian towns, its streets are thronged with a motley assemblage of traders:—

"This tall slight man, with delicately cut features, large dark eyes, and stately pace, is an Arab merchant from Baghdad. These two odd-looking little old men, with mouse-coloured faces and red marks between the eyes, clad in dark monkish-looking gowns and sandals, are traders from Bombay, and for the moment the guests of Abass Khan, the native British Agent here. They halt and salute me elaborately as I pass. Half a dozen Merv Turcomans, with calm, resolute air, and keeping well together, come next with their usual sauntering step and upright carriage. They look as if they were taking stock and meditating how best to effect a wholesale sweep of the goods displayed around them. A little further on we meet some jaunty-looking handsome young men in dark tunics and sombre-tinted turbans, one end of the cloth stuck up cockade-wise in front, the other hanging upon the neck. One of them carries a small circular shield of iron, embossed, inlaid, engraved, and ornamented as the shield of Achilles. Held by the scabbard and thrown carelessly over his shoulder is an exceedingly curved Indian-looking sword with wonderfully small bulbous iron handle. He is an Afghan chief accompanied by his friends. I am not acquainted with them, but they bow and smile pleasantly as they recognize my nationality. I remarked the same thing of all the Afghans here, and the town was full of them, both traders and refugees. They all invariably smiled and saluted me. At Kuchan it was the same thing. I have met many of them from Cabul, Candahar, Jelalabad, and Herat; some of them had taken an active part in the late war, but none seemed to bear the slightest ill will towards Englishmen on that account. With me they were most friendly, and many, in view of the occupation of their native country, spoke of themselves as already British subjects. This surprised me all the more that it was so completely at variance with what I had heard every day about Afghan fierceness of temper and the wild love of independence which characterizes them."

Meshed would appear to be a wonderful field for numismatists. Mr. O'Donovan assures us that ancient Greek and Persian coins abound and can be had for little more than their bullion value. This may be traced

chiefly to the popular taste, which inclines to cheap jewellery and ornaments rather than to coins, and also to the absence of counterfeits, which are readily manufactured to meet the demand in more accessible towns.

Mr. O'Donovan's second volume is devoted more particularly to the Merv Oasis, and the vicissitudes which he here underwent lend quite a dramatic interest to his narrative. The suspicion with which he was first regarded was perhaps natural. The ignorant Mervlis could scarce be expected readily to tell an Englishman at a glance; a newspaper correspondent was to them an incomprehensible entity; and there was a general and all-pervading dread that the Russians might be dispatching spies to Merv to facilitate the advance of their troops. Confidence was, however, restored by the reassuring testimony borne to Mr. O'Donovan's true character by Abass Khan, the British Agent at Meshed, to whom reference was made; and from that moment a friendly attitude was uniformly assumed towards the special correspondent of the *Daily News*. The way in which he improved on this so as to gain the general respect and confidence of the Merv community reflects no small credit on Mr. O'Donovan's tact. Aided partly by his knowledge of the Jagatai Tartar dialect, partly by diplomatic abilities of no mean order, and partly by judiciously conciliating two of the principal chiefs by a handsome present apiece, the "bloodless revolution" was effected, the result of which was to land Mr. O'Donovan in the position of principal member of the triumvirate with which the government of affairs rested. The wish of the Mervlis was, of course, to gain, through him, the support of the British Government against the encroachments of the Russians. To steer a course which would offend neither Turcoman nor Russian was not easy, and it is much to Mr. O'Donovan's credit that he used this opportunity so well. His object throughout was strenuously to dissuade the Turcomans from provoking Russian hostility by raids, and to exhort them to live peaceably on their lands. Whether this wholesome advice has borne or will bear good fruit hereafter it is difficult to say. If there be any truth in the rumours of Russian military movements on the country of the Saruks, which lies southward of Merv, it would appear that the work of annexation and consolidation is going steadily on without reference to the Merv Turcomans, whose importance has dwindled to nothing, first through the crushing defeat at Geok Tepe, and next by the fact that they are now practically outflanked by the annexation of the Akhal Tekke country. Much as we may regret the persistent recurrence of the Central Asian question, we fear it cannot be disguised that events are rapidly shaping towards its revival in the country which Mr. O'Donovan has traversed and described. To have at hand so much positive, unbiassed, and recent information as this book contains regarding an area of proximate political importance should prove no small gain to our diplomatists.

Memoir of Annie Keary. By her Sister. (Macmillan & Co.)

THIS story of a singularly sweet and beautiful life, told simply and unassumingly by the only person who could tell it aright, has a strange pathos. The incidents in it are nothing; there is little variety, little that is tragic, until the brave, uncomplaining end; yet the life is intensely interesting. The pathos lies not in the subject, but in the fact that the life had to be written so early. Annie Keary—she was Annie or Aunt Annie to all who knew her, and somehow it was difficult to call her Miss Keary—was not in the least sad herself, and though her quiet life had its sorrows and bitter trials it was rich in love. She was not of a nature to be lonely. Her gentle character drew friends around her wherever she went, and her friends never left her or ceased to feel the quickening power of her influence. In wielding this influence she was happy, and her chief joy was to work upon other natures, to help them in doubt and difficulty, to keep the ideal and spiritual life awake in them. Whether as a mother-aunt to her brother's children, as a friend of workhouse girls, a worker in hospitals, among the poor, in reformatories, she is always the same sympathizing, helpful guide. The book is full of letters written to those whom she had befriended in their time of need and with whom a lifelong affection was the result. As the reader peruses them he can understand in some degree the tender reverence which she inspired in people of all shades of character and mind. None ever went to her with his troubles without coming away stronger to bear them, and to have been her friend meant to many to have been lifted into a higher world.

There is a part that cannot be touched upon in a review which many will find more attractive than anything else in the volume. This is not the place to enter into the earnest workings of a deeply religious spirit. Those who would know how one who was keenly open to intellectual argument met the altering phases of the last thirty years must read the memoir itself, and when they have begun they will not stop. At present we prefer to confine ourselves to the more public side of Miss Keary's life, and see how the memoir bears upon her literary career.

It is interesting to notice that it was in a sober, puritanical family life, "with its strictly kept Sunday, Quaker-like plainness of costume, and emptiness of all amusement," its plan of trying to "throw dishonour on the flesh," and inculcation that "the next best thing to not having good looks was not knowing that you had them," that Annie Keary, like the Brontës, developed her imagination. The chapter on her childhood is one of the most charming parts of the book; for the fairy tales and adventures in the land of fancy which have delighted two generations of children in 'Blind-Man's Holiday,' and other of her stories, grew up out of the games and amusements of the playroom in a dull house at Hull. From earliest childhood Annie Keary was a story-teller. She made the nursery a palace—a kingdom, as with a magician's wand. There were days

"when the higher powers would be taken away from the house by outside duties, and the small domain would be untenanted save by the children: and then there ensued a delicious time. After racing for hours from hiding place to hiding place; after seeing, hearing, feeling, escaping from such dangers as those of the Den of Thieves; after the excitement of long blindfolded journeys to Magic Land, and of actual contact with the wonders there, grown-up people and nurses might talk as they pleased, might call things by commonplace names, might scold and trouble and fuss, but they could not rob us of the knowledge of the truth, they could not shut us up in the prison world from which we had had such escape, not for many many days at least."

When this creator of Magic Land for herself and her brothers and sisters grew up, she began to tell and write the same delightfully mysterious fancies for other children. It was for her nephews and nieces that most of her early tales were written, and these children's books were among her most successful achievements. The cause of her success was simple—she loved children, and thus she came to know them well. At her brother's house in Staffordshire,

"everything she did was inspired by or turned towards what was the centre of her life—her care of the children. Whatever new thing she learned of bird, or insect, or flower, whatever beauty she discovered in written book or living action, she took straight to them as a mother-bird carries treasure to her nest. All changes of the hours, every season of the year, she set and turned to the requirements of nursery life; in summer time, the little garden and the field, the banks of the canal close by, the bluebell woods further away, had each their changing pleasures; the nursery, nay, the whole house, in winter afternoons and in the evening fireglow, were no less the inspirers of games or quaint weird fairy tales. Some of the prettiest of her children's fairy tales, 'Little Wanderlin' amongst them, were written for that nursery. In writing it was always necessary for her to realize her hearers, and she never gave shape to her fancies more pleasurably than she did when fashioning for that one child-audience she loved so well."

That necessity of "realizing her hearers" applies to her later and larger writings. She did not take seriously to literature till she was past thirty, when the sorrow of leaving the home in Trent Vale and the death of her father and two favourite brothers had thrown her back upon herself.

"The first shaping of her tales was especially a happiness to her. The nucleus of these was always some little cluster of persons whom she suddenly seemed to find in her mind, and who, as she lived in thought with them, became more clearly known to her, whose natures unfolded themselves as regularly, according to some inward law, as a flower blossoms and a fruit reaches its perfection. Tales were never suggested to her by events, it was always character that developed plot, and it never seemed to her as if she invented characters. She used to say that her heroes and heroines were quite alive and real, and that they spoke and acted of themselves independently of her control. As long as any tale was upon the stocks, she lived in it, with a sort of double life, which kept her, as only imagination can keep people, from the narrowing effects of routine or the roughening of little daily cares."

She wrote anywhere—in the midst of talk, at a bedside, never in a place apart. Yet "the act of expression was often a great effort to her; she used to say it took her twice as long and wasted twice as much of her force as it need have done, because of a certain slowness of mind which her early habit of living in dreams that lead to no result had engendered."

Still she wrote "doggedly on," on her bad days as well as her good days, and was happy or unhappy according as the day was fruitful or not. The pleasure of writing outweighed the pain; but when the book was finished there came a reaction—there seemed to be "something startlingly prosaic in the work done compared with the doing of it"; and besides, the ideal companions of many happy weeks or months had suddenly departed. And then came the ordeal of the reviews: "She never got enough used to little rubs against the world not to suffer by them; even the seeing of her own name in print was something of an annoyance to her, and she never got over an absolute dread of reading a review." Annie Keary was ever too diffident and self-mistrustful. 'Castle Daly,' her best novel, though she curiously disliked writing it and was surprised at its success, first gave her confidence, and we can trace the result in the firm hand which drew the characters of 'A Doubting Heart,' her last book. The actors in these and her other novels may be traced in real life in the memoir; and the charming scenes in the south of France which we meet in 'A Doubting Heart' are reproduced in some delightful letters from Pégomas. We can only refer to the Egyptian letters, which are full of faithful yet imaginative pictures, and show the wakeful, observant eye that is apparent not only in the book she afterwards published, the 'Early Egyptian History,' but in all her works.

There is only one fault to find with the memoir, and that is that there is not enough mention of the writer. Miss Eliza Keary has studiously ignored the large part she herself played in her sister's life. In another biographer self-effacement might be a virtue, but in this instance the omission of almost all reference to the narrator takes away from the completeness of the narrative.

Bædæ Historia Ecclesiastica Gentis Anglorum. Edidit Alfred Holder. (Freiburg and Tübingen, Mohr; London, Williams & Norgate.)

Even in our own country the 'Ecclesiastical History' of Bede has of late years attracted more readers than formerly, and the volume before us shows that the book has its interest also for students on the Continent. There appeared in 1838 among the publications of the English Historical Society an edition of the 'Historia' by Stevenson; ten years after, Petrie's edition was issued among the 'Monumenta Historica Britannica'; then in 1869 came the Clarendon Press edition; and a year or two ago two books with notes by Profs. Mayor and Lumby were published by the Pitt Press, and a promise was held out that the rest would follow. The work is so intimately connected with the story of our own land that we need not wonder that Englishmen are attracted by the words of a countryman of twelve hundred years ago, and from the prospectus of the series of which this volume forms part it would seem that our German neighbours are finding in him something which interests them, though this is the first edition of Bede's history which has been published in Germany since 1688.

In conjunction with one or two fellow labourers, Dr. Holder has recently set about issuing in a neat form a series of texts designed to constitute a sort of treasury of literature relative to early German history. Tacitus on the origin and geographical position of the Germans, Eginhard's brief life of Charlemagne, Jornandes's account of the history and deeds of the Goths, and the four books of Nithard's history have already been issued, and show the character of the series. They are now followed by the text of Bede, and the Danish history of Saxo Grammaticus is soon to come.

The writings of Bede are well deserving of all attention, both for the historical information they supply and as a monument of one of the most diligent workers of his time. The 'Ecclesiastical History' is but a tiny fragment of his voluminous labours. At the close of this volume, which is the fruit of his ripest age, he enumerates more than thirty works which he had written, many of them of large extent and prepared with much care. In his treatise on the Acts of the Apostles he had access to a valuable MS. which seems to be at present among the treasures of the Bodleian, and he has not failed to notice and comment on various readings in such wise that his remarks have their interest for Biblical students of to-day. Of course the largest portion of the works of a monk of the seventh century must be in connexion with Biblical subjects; but Bede has left something of another character, too. Some of his letters remain; he wrote the lives of such of the abbats of Wearmouth as he had known; he laboured on orthography, chronology, and rhetoric, and wrote a book of hymns and another of epigrams.

He was born in Northumberland, A.D. 672, and at the age of seven was entrusted to the care of Benedict Biscop, abbat of Wearmouth, and under him he was educated. In the monastery of Wearmouth and in the adjoining abbey of Jarrow, to which Bede seems at the end of his life to have been specially attached, he spent the whole of his life—a life of incessant study and teaching. His death took place A.D. 735, and he was busy with his literary labours almost till he drew his last breath. The account of his last hours has been written by the loving hand of a pupil who was present. He tells how, though worn out with difficulty of breathing, and suffering from a swelling in his feet, apparently from dropsy, the zealous teacher was still unwearying in his work. He had in hand a translation of the Gospel of St. John, and he only concluded it on the day on which he died. That work done, he asked to be laid down on the floor of his cell in the place where he had been ever wont to pray, and, with his head supported in his pupil's hands, died as his feeble voice was uttering a *Gloria Patri* as an act of thanksgiving for the work which he had been permitted to complete.

Of Bede's numerous works none other has the wide interest that attaches to the 'Ecclesiastical History.' It was finished two years before his death, and consists of five books. The first contains in its first twenty-two chapters, by way of prefatory matter, a brief notice of the history of Britain and its inhabitants from the time of Cæsar's invasion till the introduction of Christianity among the Angles by the missionaries who were sent over under Augustine by Pope Gregory the Great. This book carries the story of English Christianity down to the death of that pontiff in 604. The second book contains the further history down to 633, the year in which died Edwin, king of Northumberland. The third book ends 635, at which date Wighard had been sent from England to Rome to receive consecration from the Pope as Archbishop of Canterbury; but he having died there, the Pope selected the famous monk of Tarsus, Theodore, to be archbishop, and in him provided a most vigorous head for the Church in Britain. In the fourth book we are told much of the reforms which were introduced by Theodore, and the history is continued till the death of St. Cuthbert, 687; while the final book brings it down to 731, and contains a most interesting account of the various episcopal sees then existing in the land, and of the peaceful state of the whole country—so peaceful that there was, as it were, a beating of swords into ploughshares, for many of the nobles left the secular life and became members of one or other of the flourishing monasteries.

The text of Dr. Holder's edition is a reprint of that of John and George Smith (Cambridge, 1722), which is drawn from the earliest MS., that in the Cambridge University Library. This important MS. is probably contemporary with Bede himself, being in a hand of the eighth century. It was bequeathed to the Cambridge Library by Dr. Moore, Bishop of Ely. The volume, a large quarto, is beautifully written, and appears to have been carried at one time into France, and to have belonged to a monastery dedicated to St. Julian. It was brought to England afterwards, and came into Bishop Moore's hands by purchase. In printing a text derived from such a source Dr. Holder has done well, for the Smiths' edition was carefully put forth, and when a book has to be sold at a small price, a reprint of a standard text is perhaps all that can be expected. The editor knows that there are various readings which deserve to be chronicled, and in a couple of pages at the end he has registered such as he could gather from English editions already printed. But there is something still to be done for Bede's text, and if each editor would take some single good MS. and record the results of his comparison thereof with the texts already in existence, we should soon be able to restore the correct reading in those places where even the earliest MS. is here and there defective. And there is material at hand for such a work. In the Cotton collection of the British Museum is a MS. second only to the Cambridge one in importance, and in these days, when so many German students visit us and labour there, it seems a pity that Dr. Holder did not by the sacrifice of a few weeks of his time make his neat volume not merely useful to those who will read it as a part of the treasury of early German history, but to those students to whom a correct text is the highest recommendation which a volume can possess.

English Men of Letters.—Sterne. By H. D. Traill. (Macmillan & Co.)

Mr. Traill's volume is brilliantly written and picturesque. He has drawn copiously from Mr. Fitzgerald's 'Life of Sterne,' no doubt, but then he has not followed the time-honoured precedent in such cases of

abusing the source from which he draws. Perhaps, however, he is new to the biographical business. It is, no doubt, the infirmity of all biographers to forget points which the omniscient critic is apt to remember. Mr. Traill assumes without inquiry that, because he has never seen the York edition of the first volumes of 'Tristram Shandy' of 1759, that edition never existed, forgetting that in a world so "crammed with books" there must be many volumes which Mr. Traill has never seen. We have already given reasons (*Athenæum*, March 2nd, 1878) for taking the view that the edition printed by John Hinxham, bookseller in Stonegate, in 1760, was not the first edition of these first volumes. Again, Mr. Traill gives serious attention to the scandal that the purse of gold given to Sterne by Warburton after the publication of the first two volumes of 'Tristram Shandy' was given as a bribe, to prevent Sterne from satirizing the bishop in the forthcoming volumes as the tutor of Tristram. Here Mr. Traill forgets a point of importance. He forgets that the present of a purse of gold from a great man to a little one was as fashionable a proceeding then as the invitation to a country house is now, and that nothing else would have so greatly delighted Warburton as to play the part of patron. This fact, coupled with the frankness with which Sterne in his correspondence speaks of this present as a thing to be proud of, makes the scandal unworthy of the pages of discussion that Mr. Traill devotes to it. There are other things which Mr. Traill forgets, but other critics are sure to discover them and generously point them out to him. This monograph, on the whole, does credit to the writer and credit to the series.

It is in the more difficult portions of his task, in his remarks upon Sterne as a humourist, that Mr. Traill proves himself to be a critic of insight as well as a writer of brilliance. We say this notwithstanding that we do not always agree with him in his critical judgments. His somewhat elaborate comparison between Sterne and Cervantes, for instance, seems to indicate a willingness to accept conventional classifications without inquiry. Contemporary humour, for the most part, even among cultivated writers, is in temper either cockney or Yankee, and both Sterne and Cervantes are necessarily more talked about than studied, while Addison as a humourist is not even talked about. In gauging the quality of poetry —in finding for any poet his proper place in the poetic heavens — there is always uncertainty and difficulty. With humour, however, this difficulty does not exist if we bear steadily in mind that all humour is based upon a simple sense of incongruous relations, and that the quality of every man's humour depends upon the kind of incongruity which he recognizes and finds laughable. If, for instance, he shows himself to have no sense of any incongruities deeper than those disclosed by the paredist and the punster, his relation to the real humourist and the real wit is that of a monkey to a man; for although the real humourist may descend to parody, and the real wit may descend to punning, as Aristophanes did, the pun and the parody are charged with some deeper and richer intent. Again, if a man's sense of humour, like that of the painter of society, is confined to a sense of the incongruous relations existing between individual eccentricity and the social conventions by which it is surrounded, he may be a humourist no doubt—according, at least, to the general acceptation of that word, though a caricaturist according to a definition of humour and caricature which we once ventured upon in these columns; but his humour is jejune, and delightful to the Philistine only. If, like that of Cervantes and (in a lower degree) Fielding, Thackeray, and Dickens, a writer's sense of the incongruous is deeper than this, but is confined nevertheless to what Mr. Traill calls "the irony of human intercourse," he is indeed a humourist, and in the case of Cervantes a very great humourist, yet not necessarily of the greatest; for just as the greatest poet must have a sense of the highest and deepest harmonies possible for the soul of man to apprehend, so the greatest humourist must have a sense of the highest and deepest incongruities possible. And it will be found that these harmonies and these incongruities lie between the very "order of the universe" itself and the mind of man. In certain temperaments the eternal incongruities between man's mind and the scheme of the universe produce, no doubt, the pessimism of Schopenhauer and Novalis; but to other temperaments—to a Rabelais or Sterne, for instance—the apprehension of them turns the cosmos into disorder, turns it into something like that boisterous joke which to most temperaments is only possible under the excitement of some "paradis artificiel." Great as may be the humourist whose sense of irony is that of "human intercourse," if he has no sense of this much deeper irony—the irony of man's intercourse with the universal harmony itself—he cannot be ranked with the very greatest. Of this irony in the order of things Aristophanes and Rabelais had an instinctive, while Richter had an intellectual enjoyment. Of Swift and Carlyle it might be said that they had not so much an enjoyment as a terrible apprehension of it. And if we should find that this quality exists in 'Tristram Shandy,' how high, then, must we not place Sterne! And if we should find that Cervantes deals with the "irony of human intercourse" merely, and that his humour is, with all its profundity, terrene, what right have critics to set Cervantes above Sterne? Why is the sense of incongruity upon which the humour of Cervantes is based so melancholy? Because it only sees the farce from the human point of view. The sad smile of Cervantes is the tearful humour of a soul deeply conscious of man's ludicrous futility in his relations to his fellow man. But while the futilities of 'Don Quixote' are tragic because terrene, the futilities of 'Tristram Shandy' are comic because they are derived from the order of things. It is the great humourist Circumstance who causes Mrs. Shandy to think of the clock at the most inopportune moment, and who, stooping down from above the constellations, interferes to flatten Tristram's nose. And if Circumstance proves to be so fond of fun, he must be found in the end a benevolent king; and hence all is well.

While, however, it is, as we say, easy in a general way to gauge a humourist and find his proper place, it is not easy to bring Sterne under a classification. In Sterne's writings every kind of humour is to be found, from a style of farce which even at Crazy Castle must have been pronounced too wild, up to humour as chaste and urbane as Addison's, and as profound and dramatic as Shakspeare's. In loving sympathy with stupidity, for instance, even Shakspeare is outdone by Sterne in his "fat foolish" scullion. Lower than the Dogberry type there is a type of humanity made up of animal functions merely and to whom the mere fact of being alive is the one great triumph. While the news of Bobby's death, announced by Obadiah in the kitchen, suggests to Susannah the various acquisitions to herself that must follow such a sad calamity, to the fat foolish scullion scrubbing her pans on the floor it merely recalls the great triumphant fact of her own life, and consequently to the wail that "Bobby is certainly dead" her soul merely answers as she scrubs, "So am not I." In four words that scullion lives for ever.

Sterne's humour, in short, is Shakspearean and Rabelaisian, Cervantic and Addisonian too—how, then, shall we find a place for such a Proteus? So great is the plasticity of genius, so readily at first does it answer to impressions from without, that in criticizing its work it is always necessary to carefully pierce through the method and seek the essential life by force of which methods can work. And this much may be granted to Mr. Traill—that Sterne having, as a student of humorous literature, enjoyed the mirthful *abandon* of Rabelais no less than the pensive irony of Cervantes, it was inevitable that his methods should oscillate between that of Rabelais on the one hand and that of Cervantes on the other, and that at first this would be so without Sterne's natural endowment of humour being necessarily either Rabelaisian or Cervantic, that is to say, either lyric or dramatic, either the humour of animal mirth or the humour of philosophic meditation. But the more deeply we pierce underneath his methods the more certainly shall we find that he was by nature the very Proteus of humour which he pretended to be. And after all this is the important question as regards Sterne. Lamb's critical acuteness is nowhere more clearly seen than in that sentence where he speaks of his own "self-pleasing quaintness." When any form of art departs in any way from symmetrical and normal lines the first question to ask concerning it is this: Is it self-pleasing or is it artificial and histrionic? That which pleases the producer may perhaps not please us, but if we feel that it does not really and truly please the artist himself, the artist becomes a mountebank and we turn away in disgust. In the humorous portions of Sterne's work there is, probably, not a page, howsoever nonsensical, which he did not write with gusto, and therefore, bad as some of it may be, it is not to the true critic an offence.

If we do not follow Mr. Traill in his comparison between Sterne and Cervantes, still less do we follow him when he compares Sterne with Shakspeare, and sets against one of the great scenes in 'Tristram Shandy' the camp scene in 'Henry V.' It is generally admitted, we think, that in high comic drama no one else ever came so near to

Shakspeare. Yet Sterne had but one side of Shakspeare's humour—the humour of Jaques and Hamlet, not the humour of Falstaff or Sir Toby Belch. When Mrs. Draper (Sterne's Eliza), in the remarkable letter to Mrs. James, first made generally public in the *Athenæum* of March 8th, 1878, spoke of the "sensibility and frolic vivacity of Yorick," she characterized very happily the only side of Sterne's humour which his contemporaries recognized, and one might say the only side which was recognized at all till the Germans studied him more philosophically and took him up for imitation. There is not much "frolic vivacity" in a German; and Richter and Musæus and the others, not knowing what to do with the frolicsome element of Sterne's humour, left that alone (Heaven be praised!) and took up the humour of Yorick—the humour of sweet melancholy which as a literary quality had been, one may say, invented by Shakspeare in the humorous portions of Hamlet's speeches, and worked to the full in 'As You Like It' and other plays. When Carlyle took to imitating Richter and the German humourists generally he inserted, alas! a "frolic vivacity" of his own. Now, if the frolic vivacity of a German is a thing not to be desired, what is it to the frolic vivacity of a humourist who is at once a dyspeptic, a Calvinist, and a Scotchman? However, we got Hamlet and Jaques back again — a little more elephantine in movement and entirely spoiled in temper, but still our old friends.

Not that "sweet melancholy" of itself can be called Shakspearean, it is Elizabethan; but when "sweet melancholy" is steeped in a nature rich, generous, deep, and loving, it becomes the humour of Yorick. Though it has nothing to do with the sublime, apprehending Nature, indeed, only in her softer aspects, it considers man in relation to the great mystery of life and death (apart from any irony of human intercourse), and in relation to lower forms of life—to the stricken deer, the loaded ass, the frightened field mouse, and even the daisy. Its highest and deepest expressions are in Hamlet and Jaques; its lowest and feeblest in the 'Physiognomic Travels' of Musæus, in the affected novels of Mackenzie, and in the 'Gleanings' of that once famous sentimentalist Samuel Jackson Pratt. But after Shakspeare there is no one in this respect comparable with Sterne. For Sterne's very infirmities of character came from a sweet and a lovable nature. No man has been more shamefully libelled. Sift the evidence against him, and it will be found that his misdeeds were a little harmless flirtation; dying unexpectedly and alone (as a gentleman, it seems, has no right to die); suffering his sleeve-links to be stolen from his wrists when dead, and permitting the body-snatchers to steal his corpse.

"Yorickism" is, there is scarcely need to say, the very opposite of the humour of Swift. One recognizes that the universe is rich in things to laugh at and to love; the other recognizes that the universe is rich in things to laugh at and to hate. One recognizes that among these absurd things there is nothing else so absurd and (because so absurd) so lovable as a man; the other recognizes that there is nothing else so absurd and (because so absurd) so hateful as a man. The intellectual process is the same, the difference lies in the temperament — the temperament of Jaques and the temperament of Apemantus. And in regard to misanthropic ridicule it is difficult to say which fate is more terrible, Swift's or Carlyle's — that of the man whose heart must needs yearn towards a race which his piercing intellect bids him hate, or that of the man, religious, conscientious, and good, who would fain love his fellows and cannot. It is idle for men of this kind to try to work in the vein of Yorick. It needs the sweet temper of him who at the Mermaid kept the table in a roar, or of him who, in the words of the "cadet of the house of Keppoch," was "sometimes called Tristram Shandy and sometimes Yorick, a very great favourite of the gentlemen." Sterne, like Jaques and Hamlet, deals with "the irony of human intercourse," but what he specially recognizes is a deeper irony still — the irony of man's intercourse with himself and with nature, the irony of the intercourse between man the spiritual being and man the physical being—the irony, in short, of man's position amid these natural conditions of life and death. It is in the apprehension of this anomaly—a spiritual nature enclosed in a physical nature—that Sterne's strength lies.

Man the "fool of nature," prouder than Lucifer himself, yet "bounded in a nutshell," brother to the panniered donkey, and held of no more account by the winds and rains of heaven than the poor little "beastie" whose house is ruined by the ploughshare—here is, indeed, a creature for Swift and Carlyle and Sterne and Burns to marvel at and to laugh at, but with what different kinds of laughter! There is nothing incongruous in the condition of the lower animals, because they are in entire harmony with their natural surroundings; there is nothing more absurd in the existence and the natural functions of a horse or a cow than in the existence and the natural functions of the grass upon which they feed; but imagine a spiritual being so placed, so surrounded, and so functioned, and you get an absurdity compared with which all other absurdities are non-existent, or at least are fit quarry for the satirist, but hardly for the humourist. That Sterne's donkey should owe his existence to the exercise of certain natural functions on the part of his unconscious progenitors, that he should continue to hold his place by the exercise on his own part of certain other natural functions, is in no way absurd, and contains in it no material for humouristic treatment. To render him absurd you must bring him into relation with man; you must clap upon his back panniers of human devising or give him macaroons kneaded by a human cook. Then to the general observer he becomes absurd, for he is tried by human standards. But to Yorick it is not so much the donkey who is absurd as the fantastic creature who made the panniers and cooked the macaroons. All other humour is thin compared with this. Besides, it never grows old. It is difficult, no doubt, to think that the humour of Cervantes will ever lose its freshness; but the kind of humour we have called Yorickism will be immortal, for no advance in human knowledge can dim its lustre. Certainly up to the present moment the anomaly of man's position upon the planet is not lessened by the revelations of science as to his origin and development. On the contrary, it is increased, as we hinted lately in speaking of Thoreau. If man was a strange and anomalous "piece of work," as Hamlet knew him under the old cosmogony, what a "piece of work" does he appear now! He has the knack of advancing and leaving the woodchucks behind, but how has he done it? By the fact of his being the only creature out of harmony with surrounding conditions. A contented conservatism is the primary instinct of the entire animal kingdom, and if any species should change, it is not (as Lamarck once supposed) from any "inner yearning" for progress, but because it was pushed on by overmastering circumstances. An ungulate becomes the giraffe, not because it is uncomfortable in its old condition and yearns for giraffe-hood, but because, being driven from grass to leaves by natural causes, it must elongate its neck or starve. But man really has this yearning for progress, and, because he is out of harmony with everything, he advances till at last he turns all the other creatures into food or else into weight-carriers, and outstrips them so completely that he forgets he is one of them. If Uncle Toby's progenitors were once as low down in the scale of life as the fly that buzzed about his nose, the fly had certainly more right to buzz than had that over-developed, incongruous creature Capt. Shandy to be disturbed at its buzzing, and the patronizing speech of the captain as he opens the window gains an added humour, for it is the fly that should patronize and take pity upon the man.

And while Sterne's abiding sense of the struggle between man's spiritual nature and the conditions of his physical nature accounts for the metaphysical depth of some of his humour, it greatly accounts for his indecencies too. Sterne had that instinct for idealizing women and the entire relations between the sexes which accompanies the poetic temperament. To such natures the spiritual side of sexual relations is ever present; and as a consequence of this the animal side never loses with them the atmosphere of wonder with which it was enveloped in their boyish days. Not that we are going to justify Sterne's indecencies. Coleridge's remark that the pleasure Sterne got from his double entendre was akin to "that trembling daring with which a child touches a hot teapot because it has been forbidden" partly explains, but it does not excuse, Sterne's transgressions herein. The fact seems to be that if we divide love into the passion of love, the sentiment of love, and the appetite of love, and inquire which of these was really known to Sterne, we shall come to what will seem to most readers the paradoxical conclusion that it was the sentiment only. There is abundant proof of this. In the 'Letter to the Earl of ——,' printed by his daughter, after dilating upon the manner in which the writing of the 'Sentimental Journey' has worn out both his spirits and body, he says:

"I might indeed solace myself with my wife (who is come to France), but in fact I have long been a sentimental being, whatever your lordship may think to the contrary. The world has imagined because I wrote 'Tristram Shandy'

that I was myself more Shandian than I really ever was."

Upon this passage Mr. Traill has the pertinent remark:—

"The connubial affections are here, in all seriousness and good faith apparently, opposed to the sentimental emotions—as the lower to the higher. To indulge the former is to be 'Shandian,' that is to say, coarse and carnal; to devote oneself to the latter, or, in other words, to spend one's days in semi-erotic languishings over the whole female sex indiscriminately, is to show spirituality and taste."

Now, to men of this kind there is not uncommonly, perhaps, a charm in a licentious double entendre which is quite inscrutable to those of a more animal temperament. The incongruity between the ideal and the actual relations brings poignant distress at first, and afterwards a sense of irresistible absurdity. Originally the fascination of repulsion, it becomes the fascination of attraction, and it is not at all fanciful to say that in Uncle Toby and the Widow Wadman Sterne (quite unconsciously to himself perhaps) realized to his own mind those two opposite sides of man's nature whose conflict in some form or another was ever present to Sterne's mind. And as we say, it has a deep relation to the kind of humour with which Sterne was so richly endowed. After one of his most sentimental flights, wherein the spiritual side of man is absurdly exaggerated, there comes upon him a sudden revulsion (which at first was entirely natural, if even self-conscious afterwards). The incongruity of all this sentiment with man's actual condition as an animal strikes him with irresistible force, and he says to man, "What right have you in that galley after all—you who came into the world in this extremely unspiritual fashion and keep in it by the agency of functions which are if possible more unspiritual and more absurd still?"

No doubt the universal sense of shame in connexion with sexual matters, which Hartley has discussed in his subtle but rather whimsical fashion, arises from an acute apprehension of this great and eternal incongruity of man's existence—the conflict of a spiritual nature and such aspirations as man's with conditions entirely physical. And perhaps the only truly philosophical definition of the word "indecency" would be this: "A painful and shocking contrast of man's spiritual with his physical nature." When Hamlet, with his finger on Yorick's skull, declares that his "gorge rises at it," and asks if Alexander's skull "smelt so," he shocks us as deeply in a serious way as Sterne in his allusion to the winding up of the clock shocks us in a humorous way, and to express the sensation they each give there is, perhaps, no word but "indecent."

NOVELS OF THE WEEK.

Two on a Tower. By Thomas Hardy. 3 vols. (Sampson Low & Co.)

Kept in the Dark. By Anthony Trollope. 2 vols. (Chatto & Windus.)

Nadine: the Study of a Woman. By Mrs. Campbell Praed. 2 vols. (Chapman & Hall.)

I have Lived and Loved. By Mrs. Forrester. 3 vols. (Hurst & Blackett.)

Fond or Faithful? By Richard Fitzgerald. (Remington & Co.)

Children of the World. Translated from the German of Paul Heyse. 3 vols. (Chapman & Hall.)

Mr. Hardy may fairly claim for his last novel the credit of having added to the novelist's stock of "properties" and "business." We have known military novels, sporting and dramatic novels, law and police novels, musical novels, but an astronomical novel never. Indeed, since Lorenzo varied his wooing with references to the rather unscientific astronomy of the period, we do not believe that star-gazing has been employed with half the ingenuity shown by Mr. Hardy's lovers, either as a pretext for or accompaniment of the tender passion. While he was about choosing alliterative titles, he might as well have taken 'Comets and Courtship,' at least for an alternative. An odd atmosphere of astronomy pervades the whole book; even the mark of a whip on a lady's cheek is compared to a meridian, and other similes of the kind abound. But besides this, the story itself departs widely from received models. The courtship of a mere lad by a woman some years his senior is not a familiar theme in English fiction, nor by any means an easy one to develope, least of all when the heroine is already a married woman. But Mr. Hardy passes, it must be admitted, with a very skilful tread over the hazardous ground which he has selected. In order to bring about the case of conscience, with which, it would seem, no novelist who respects himself can nowadays dispense, it was absolutely necessary that the lady should be married. But she is about as little married as it is possible to be without being single; that is, her husband, after treating her badly, has gone off to travel in Africa. Even so she holds herself on the whole in an admirable restraint, aided perhaps by the preoccupation of the young astronomer, which hinders any advance on his part until the news comes which, as she supposes, sets her free. The author in fact has imagined and described a woman with whom few of his male readers will not fall in love. They will accordingly be inclined to resent the terrible dilemma into which he brings her; all the more so because it is pretty certain that a woman of the character which the author assigns to her would not have felt it to be so terrible. Her solicitor, if he was worth his salt, ought to have been easily able to find a way of escape. Evidence from Central Africa would surely not have been very difficult to manipulate in any fashion that might be necessary. Again, the way out of her difficulty which she actually takes is little short of revolting, even allowing for the fact that she is in a state of deadly terror, and exposed to the machinations of a brother who is in a quiet way one of the biggest blackguards that we ever met with in an English novel. The stratagem by which Maxime de Trailles sends Calyste back to his wife in 'Béatrix' is respectable compared with Louis Glanville's expedient for saving his sister's reputation. After this the reader has little need to complain of the melancholy ending which Mr. Hardy, who appears to take the doleful and cheerful views of things in impartial alternation, has given to his last story. As matters stood, it could perhaps hardly have ended otherwise. The rustics are as Shakspearean as ever; but we must still take leave to doubt whether one Dorsetshire village ever produced quite so many Touchstones at one and the same time. We wish Mr. Hardy would, for once in a way, try his hand at "transliterating" the dialect; it would probably add *vraisemblance* to the conversation. Also we wish he would not invent impossible names. Surely no woman since the world was was ever christened "Viviette"; and when or where was "St. Cleeve" canonized? However, these things may be; but it is quite certain that when Lady X marries Bishop Y she does not become Lady Y. Attention to small points of this kind does no harm to the best novel.

'Kept in the Dark' is an amusing "society" story, told in the well-known style of the author about whose health society is now genuinely anxious. Sir Francis Geraldine is an ill-conditioned baronet (his baronetcy is quite an inseparable accident of the man). When he is thrown into contact with the spirited, rather fastidious Cecilia, the blending of oil and vinegar, according to the poet, has been attempted. So they part; but the baser lover is determined the world shall not say he was jilted, and when the lady is married to an honest, rather jealous and pig-headed adorer, he makes mischief in revenge. In this he is aided by a certain Miss Altifiorla, who in Cecilia's maiden days commended herself to her by a certain lofty treatment of hypothetical lovers, but to obtain a real one, even such a one as Sir Francis, condescends to treachery. Yet the precious pair are well matched, and this time the baronet escapes from the impending noose. His wavering mind has been decided by a premature flourish of trumpets in the local newspaper, in which the noble Italian ancestors of the lady (the Fiascos and Disgrazias) are brought into undue prominence. There is not a little that is funny in Sir Francis and his hangers-on. The serious Mr. Western is properly brought to reason, but the process is not specially interesting, though his sister, Lady Grant, is one of the lifelife yet commonplace portraits so frequent in our author's gallery.

Mrs. Campbell Praed displays exceptional power and penetration in her story of Nadine Senguin, the wayward daughter of an English father and a Russian mother, "whose nature," as she pleads in apology for herself, "is her destiny." The story professes to be founded on fact, and there is nothing in its matter or spirit to throw doubt on this profession. The author, having found a subject, treats it without fear or affectation, bent on making a faithful study of her heroine's character, but in no way sacrificing the dramatic value of her incidents, which not only engage the reader's attention, but play, as incidents ought to play, the leading part in the development of the analysis. Less careful hands might have produced anything but a pleasant narrative from the materials employed by Mrs. Campbell Praed with unquestionable success. The adventures of Nadine are quite out of the ordinary course of a woman's experience, and their relation may possibly shock the nerves of some undiscriminating readers. The scene, for instance, in which she drags the inanimate body of her lover from her room at midnight, and the yet more vivid scene in which, a few months after this, she visits

the room of another lover as an abject suppliant for his good offices, border on a region which is generally avoided by novelists. But in 'Nadine' the author disarms reproof such as would fall heavily enough on any unlucky writer who might tread the same path without her discretion and delicacy. It is fair to concede to Mrs. Campbell Praed the liberty of treatment which her tact, her vigour, and her manifest good faith entitle her to demand. She might even have ventured on twice as much detail and expatiation as she has seen fit to use. The thinness of the story may detract a little from its romantic effect, but there is enough romance in 'Nadine' to satisfy the majority of readers.

Mrs. Forrester's new book is much like her others. It contains a rambling account of indiscriminate love-making and fashionable scandal. The characters are not distinctive. They would do for any men and women of weak principle and strong passion, and might easily be constructed from a very slight acquaintance with the worst sort of good society and some rather more considerable study of the society papers. Readers who like a story or who can appreciate a careful drawing of character will find 'I have Lived and Loved' intolerably wearisome. The book consists chiefly of conversation or chatter about the trivialities of every-day life and the weak points in men and women who love their neighbours' wives and husbands, and it is often put in language—no doubt true to life—such as, "Do you fancy that I am a woman to be thrown over like you did Ella Scott?" Three volumes of gossip about people whose virtue and honour are of the thinnest kind cannot be very interesting. It need not be from any squeamishness that one dislikes such stuff. One does not read novels to find in them merely a repetition of the wearisome, sickening, and ill-natured tittle-tattle of real life.

Mr. Fitzgerald tells a simple, pure, rather tame and hackneyed love story, in language which is fairly correct and easy, though too high-flown in parts for the vapidity of the action. Two "soldier-brothers" love the same lady; one suspects the other, very needlessly, of unfair play; the first dies; the second, an irreproachable but dull young man, marries the maid; and together they renew their pledges over the tomb of their friend. The author does his best to vary the monotony of his picture; but his lights and shadows are too conventional to throw out the principal figures in full relief. Unsophisticated and unexacting readers will thank Mr. Fitzgerald for his story; but he would have better pleased a greater number if he had provided either more to quarrel with or less to be indifferent about.

We wonder how far the anonymous translator of the first of Paul Heyse's longer works (published some ten years ago) was well advised in bringing it before an English public. Will English readers have patience to wade through three closely printed volumes, of which the double purpose is an elucidation of the Schopenhauer philosophy and an exposition of that which is not new, namely, the fact that religious professions are no guarantee for morality; that freethinkers are frequently the sternest moralists; and that as many vices and iniquities are practised in the name of religion as in the name of liberty? A heroine whose life is unconscious Schopenhauerism, a hero who woos his love in scholastic terms borrowed from Spinoza, are *dramatis personæ* that an English reader is tempted to pronounce heavy. At the best, Heyse's method, charming as it often is in short stories, is not suited to lengthy fictions. Still, as a whole the book, though inordinately long, is not devoid of interest; it will attract the thoughtful reader, though scarcely suited to the usual novel-reading public. Heyse's mind is too original for him ever to put pen to paper and not bring forth something striking. The translation is very unequal. Conversations are mostly rendered with spirit and fidelity, but German idioms have too often been retained, and in the long sentences much affected by the author the translator has occasionally bungled hopelessly. But the task he set himself is not simple. Heyse's peculiarly German style and method of thought are anything but easy to represent in the more direct English tongue.

LAW BOOKS.

The Law of Life Insurance, with a Chapter on Accident Insurance. By Charles Crawley, M.A. (Clowes & Sons.)—Mr. Crawley's book is the most important English work on the law of life insurance which has appeared since the publication in 1868 of the second edition of Mr. Bunyon's work on the same subject. In that interval the law of life insurance has grown considerably in extent by reason both of legislation and of judicial decisions, and a work dealing with the entire subject, including the alterations and additions which have been made since the appearance of Mr. Bunyon's book, was wanted by the legal profession and, to some extent, by the public also—a want which Mr. Crawley's book seems to us satisfactorily to meet. The work comprises, among other things, an introductory chapter giving an interesting historical sketch of life insurance in England and abroad; chapters on the contract of life insurance, and the assignment, performance, and avoidance of it; a chapter on insurance against accidents, a branch of the subject likely to be greatly extended; chapters on the composition and classification of life insurance companies, the powers of directors, the amalgamation of companies, the novation of the insurance contract, and the winding up of insurance companies. In an appendix the existing statutory enactments bearing on the subject are furnished, together with forms of assignments, mortgages, settlements, &c., of policies, and a list of existing English companies. The importance of the subject itself, particularly in the United Kingdom, may be measured by the facts stated in the following paragraph, which is extracted from Mr. Crawley's introductory chapter: "In France there are twenty companies assuring 80,000,000*l.*; in Germany there are fifty companies assuring 100,000,000*l.*; while in America, in the State of New York alone, there are thirty companies assuring 295,000,000*l.*; and finally, in England, where in the year 1853 the total amount assured was 150,000,000*l.*, at annual premiums amounting to 5,000,000*l.*, there are at the present date 107 companies furnishing returns to the Board of Trade, and assuring 425,000,000*l.*, and 10½ millions were paid in losses during the past year." Mr. Crawley's book will be a welcome addition to the library of the lawyer, and will be found of use by that part of the public which is interested in the subject of life insurance.

The Law and Practice regulating Merchant Shipping in relation to its Registration and to Unseaworthy Ships, Grain Cargoes, Improper Loading, Sea Fishing Vessels, Yachts, Quarantine, &c. By T. J. Pittar. (Olver.)—This work, the author informs us, "is offered to the public in consequence of the demand which has been found to exist on the part of shipowners and of the official classes for some guide to the mode in which the law relating to the registration of shipping is administered." Besides the very important Merchant Shipping Acts, 1854 and 1876, the work contains much information respecting the rules and regulations affecting merchant shipping, yachts, sea fisheries, &c., and there is an important chapter, by Mr. W. D. Chester, on quarantine. The book is well adapted to meet the requirements of shipowners and other persons interested in the species of property with which it deals. At a time, moreover, when much attention is being devoted to the simplification of the tenures of land, it may not be amiss to call the attention of persons outside the classes to which we have just referred to the extreme simplicity of the laws regulating the ownership and transfer of shipping.

A Police Code and Manual of the Criminal Law. By C. E. Howard Vincent. (Cassell & Co.)—This work is an abridgment of Mr. Vincent's 'Police Code,' noticed in these columns some months ago. The arrangement of the work is similar to that of the larger one. In respect to size and shape, as well as to the contents, it is well adapted to be a pocket companion of the policeman. To it is prefixed an "Address to Police Constables on their Duties," by Mr. Justice Hawkins, which contains much valuable advice.

The Handy Book on the Law and Practice of Joint Stock Companies, with Forms and Precedents. By Anthony Pulbrook. (Effingham Wilson).—Mr. Pulbrook, solicitor, who has already brought out one or two small works on companies, does good service by presenting directors and shareholders with a very convenient little "handy book," which they may carry in their pockets and refer to at a moment's notice, "even in the heat of discussion at a meeting." The value of the book lies in its simplicity. It is a law book in a certain sense, but not a law book for lawyers, having no references to decisions of the Courts, or even to the particular sections of the Acts with which it deals. In a plain, practical way, however, it describes the effect of modern legislation, and to such good purpose that an attentive reader may easily learn to play his part in the formation and administration of a company. The general public, too, may here learn how shares which ought to remain for ever at a discount are cunningly forced up to a premium, and simple-minded folk are eased of their superfluous cash.

OUR LIBRARY TABLE.

A NUMBER of new editions are on our table. The reissue of Dr. Guest's *History of English Rhythms*, sent to us by Messrs. George Bell & Sons, will be warmly welcomed by scholars. It has been revised by Prof. Skeat, whose name is a sufficient guarantee for the competence with which the editorial work has been done. Prof. Skeat has been wisely sparing of additions to the text, but many misprints have been corrected, the quotations revised, and an index added. The publishers are to be congratulated as well as the editor on this excellent edition.—Dr. Kehrbach has begun an edition of the collected works of J. F. Herbart (Leipzig, Veit & Co.). They are arranged in chronological order, and the editor has evidently bestowed much pains on his task. J. Smidt's recollections of the philosopher are prefixed.—Another edition of Rollin's *Ancient History* (Ward & Lock) testifies to the abiding popularity of that work.

First Aid to the Injured, a valuable set of lectures to ambulance classes by the well-known surgeon Prof. Esmarch, of Kiel, has been excellently translated into English by H.R.H.

XUM

Princess Christian. The directions given are very clear and precise, and a knowledge of them ought to be possessed by every one, whatever his station of life. Messrs. Smith & Elder are the publishers.

We have on our table the *Report of the Free Libraries Committee of the Borough of Sheffield*, which complains much of straitened means; an *Index Catalogue to the Lending Department of the Free Public Library* at Plymouth; and a *Catalogue of the Reference Library in the Derby Free Libraries*. The last is compiled by Mr. Heath and seems well done. The Plymouth catalogue is issued without the promised "Index to Periodicals," which Mr. Wright, the librarian, explains was not ready in time.

We have also on our table *Journalistic London*, by J. Hatton (Low),—*Travels in South Kensington*, by M. D. Conway (Trübner),—*London University Questions and Solutions*, by J. E. A. Steggall (Van Voorst),—*The Eclogues and Georgics of Virgil*, translated by the Rev. J. M. King (Stanford),—*Notes on Chemical Calculations, with Examples*, by A. Vinter (Batley, Newsome),—*A Manual for the Social Science Congress*, by J. L. Clifford-Smith (The Congress's Office),—*The Coward Science*, by C. Adams (Hatchards),—*John Ruskin's Thought and Teachings*, by E. J. Baillie (Pearce),—*Life and Nature Studies*, Parts I., II., and III., by H. Nisbet (Edinburgh, Brown),—*Colonists' Handbooks: Queensland* and *New South Wales* (S.P.C.K.),—*Shearer's Tourist's Guide to Stirling* (Stirling, Shearer),—*Bedfordshire Notes and Queries*, Part I., edited by F. A. Blaydes (Bedford, Hawkins & Ransom),—*Story after Story*, by the Author of 'Cheerful Sundays' (Gardner),—*Odd or Even*, by Mrs. Whitney (Ward & Lock),—*My Favourite Story-Book* (Gardner),—*A Brave Fight*, by E. N. Hoare (S.P.C.K.),—*Princess Opportunity*, by C. M. Phillimore (S.P.C.K.),—*"With Swallow's Wings,"* by C. Temple (S.P.C.K.),—*Fast Friends*, by H. F. E. (S.P.C.K.),—*English Proverbs*, by E. B. Mawer (Kerby & Endean),—*Autumn Leaves: Acrostics from the Poets* (Liverpool, Howell),—*Poems*, by L. Porri (Simpkin),—and *Faith, its Pleasures, Trials, and Victories*, by J. Warlow (Longmans).

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Adamson's (H. T.) The Millennium, or the Mystery of God Finished, cr. 8vo. 6/ cl.
Homiletical Library (The), edited by Canon Spence and Rev. J. S. Exell: Vol. 1, Advent to Christmas, 8vo. 7/6 cl.
Life-Education (The) and Wider Culture of the Christian Ministry, Lectures by James S. Wilson, 12mo. 6/ cl.
Metcalfe's (W. M.) The Reasonableness of Christianity, 5/ cl.
Newman's (H. S.) The Young Man of God, Memories of Stanley Pumphrey, cr. 8vo. 3/ cl.
Outlines of Sermons on the Old Testament, cr. 8vo. 6/ cl.
Phelps's (A.) Men and Books, or Studies on Homiletics, 7/6 cl.
Steel's (the late Rev. T. H.) Sermons at Harrow School and Elsewhere, with a Memoir by H. Nettleship, cr. 8vo. 7/6
Wordsworth's (C.) Triennial Address delivered at the Visitation of the Diocese of Lincoln, Fifth Series, cr. 8vo. 2/6

Law.

Smith's (F. J.) Quarter Sessions Practice, roy. 12mo. 20/ cl.

Fine Art and Archæology.

Art Needlework, a Complete Manual of Embroidery in Silks and Crewels, 4to. illustrated, 10/6 bds.
Crane's (L.) Art and the Formation of Taste, Six Lectures, with illustrations by T. and W. Crane, cr. 8vo. 6/ cl.
Dresser's (C.) Japan, its Architecture, Art, and Art Manufactures, roy. 8vo. 31/6 cl.
History of Fashion in France, from the French of Challamel, by Mrs. C. Hoey and Mr. J. Lillie, imp. 8vo. 28/

Poetry and the Drama.

Clay's (C. M.) The Modern Hagar, a Drama, 2 vols. 21/ cl.
Cradle Songs of Many Nations, music by Heinhold L. Herman, illustrations by Walter Satterlee, 4to. 10/6 cl.
Newell's (E. J.) The Sorrow of Simona and Lyrical Verses, 12mo. 3/6 cl.
Saunders's (J.) Love's Martyrdom, a Play and Poem, 12mo. 5/
Webster's (A.) In a Day, a Drama, cr. 8vo. 2/6 cl.

Philosophy.

Veitch's (J.) Hamilton, 12mo. 3/6 cl. (Philosophical Classics for English Readers.)

History and Biography.

Bloomfield's (Bareness G.) Reminiscences of Court and Diplomatic Life, 2 vols. 8vo. 28/ cl.
Creighton's (L.) Stories from English History, illus., 3/6 cl.
Egypt, Native Rulers and Foreign Interference, by Baron de Malortie, 8vo. 4/ cl.
Hutton's (J.) James and Philip van Arteveld, cr. 8vo. 10/6 cl.
Lindsay's (T. M.) The Reformation, cr. 8vo. 2/ cl.
Malleson's (Col. G. B.) The Founders of the Indian Empire: Vol. 1, Lord Clive, 8vo. 20/ cl.
Morison's (J. C.) Macaulay, 2/6 cl. (English Men of Letters.)
Morton's (E. J. C.) Heroes of Science, Astronomers, 8vo. 4/ cl.
Paris in Peril, edited by H. Vizetelly, illustrated, 2 vols. 25/ cl.
Picton's (J. A.) Oliver Cromwell, the Man and his Mission, 8vo. 7/6 cl.
Prentiss's (Rev. G. L.) The Life and Letters of Elizabeth Prentiss, Author of 'Stepping Heavenward,' 8vo. 7/6 cl.
Stratford's (J.) Wiltshire and its Worthies, 6/ cl.
Tyerman's (Rev. L.) Wesley's Designated Successor, Life, Letters, &c., of the Rev. J. W. Fletcher, 8vo. 12/ cl.

Geography and Travel.

Holley's (G. W.) Falls of Niagara and other famous Cataracts, illustrated, 8vo. 7/6 cl.
Tristram's (H. B.) Pathways of Palestine, Second Series, folio, 31/6 cl.

Philology.

Curti (Quinti Rufi) Historiarum Alexandri, Lib. 8-9, 9-10, literally translated by H. J. Le Knight, cr. 8vo. 2/6 swd.
Kastner's (V.) Elements of French Composition, 12mo. 2/ cl.
Lallemand (H.) and Tempère's (J.) French Grammar for the use of Colleges and Public Schools: Part 1, Accidence, 3/
Ritchie (F.) and Moore's (E. H.) Manual of Greek Verbs, with Rules for the Formation of Tenses, &c., cr. 8vo. 2/6 cl.

Science.

Bowman's (F. H.) The Intermediate Text-Book of Physical Science, 12mo. 3/6 cl.
Lock's (A. G.) Gold, its Occurrence and Extraction, 52/6 cl.
Nicols's (A.) Zoological Notes on Wild and Domestic Animals, illustrated by T. W. Wood and F. Babbage, cr. 8vo. 7/6 cl.

General Literature.

Ballantine's (Mr. Serjeant) Some Experiences in a Barrister's Life, new and cheaper edition, cr. 8vo. 6/ cl.
Barlow's (G.) A Life's Love, new edition, cr. 8vo. 6/ cl.
Earley's (W.) The Garden Farmer, Profitable Market Gardening, cr. 8vo. 2/ cl.
Geraldine Hawthorne, by the Author of 'Miss Molly,' 7/6 cl.
Giberne's (A.) The Nameless Shadow, cr. 8vo. 5/ cl.
Helps's (A.) Animals and their Masters, new edition, 2/6 cl.
Henty's (G. A.) Winning his Spurs, illustrated, cr. 8vo. 5/
Lewis's (Mrs.) Infant Class Management, with Specimen Object Lessons, cr. 8vo. 2/ cl.
Lyall's (Sir A. C.) Asiatic Studies, Religious and Social, 12/ cl.
Middlemass's (J.) Patty's Partner, a Novel, 3 vols. cr. 8vo. 31/6
Mrs. Gander's Story, by H. A. H., illustrated by N. H., 3/6 cl.
Moggridge's (M. W.) Method in Almsgiving, a Handbook for Helpers, cr. 8vo. 3/6 cl.
Onley's (M.) The Myrtles of Merrystone Mill, cr. 8vo. 2/ cl.
Payn's (J.) Cecil's Tryst, 12mo. 2/ bds.
Pope's (J. J.) Number One, and How to take Care of Him, a Series of Popular Talks on Social and Sanitary Science, 2/
Proctor's (R. A.) The Great Pyramid, Observatory, Tomb, and Temple, illustrated, cr. 8vo. 6/ cl.
Readings for the Seasons, by Right Hon. Earl Nelson, 3/6
Recreations and Studies of a Country Clergyman of the Eighteenth Century, being Selections from the Correspondence of the Rev. Thos. Twining, cr. 8vo. 9/ cl.
Smith's (R. H.) Cutting Tools worked by Hand and Machine, 12mo. 3/6 cl.
Talbot's (Hon. T.) The Granvilles, an Irish Tale, 3 vols. 31/6
Tale of Two Fair Women (A), 12mo. 2/6 cl.
Thompson's (E.) Wit and Wisdom of Don Quixote, 3/6 cl.
Valentine's (Mrs.) The Amenities of Home, 12mo. 2/6 cl.
Watson's (W. H.) The Angelic Pilgrim, an Epical History of the Chaldee Empire, cr. 8vo. 6/ cl.
Weatherley's (F. E.) Sixes and Sevens, illus. by Dealy, 6/ bds.
When and Where, a Book of Family Events, edited by Douglas and Sophie Veitch, 3/6 cl.

COPYRIGHT IN TITLES.

Edinburgh, Nov. 13, 1882.

I am glad to see this subject being ventilated in your columns. I sincerely hope that the letters of Mr. Hogg and Mr. Walter Besant may inaugurate some earnest and united effort of authors and publishers to secure such a system of registration of titles as will protect the rights of their inventors and, at the same time, be so readily comprehensible and available as to render the duplication of them avoidable within the term of copyright. The uselessness of Stationers' Hall for this purpose is well known.

The importance of a title is in many instances so great, and it is so frequently invented before the work to which it is to be attached is completed, that there should be a distinct recognition of property in a mere title when duly registered. At present *no such right exists*. Mr. Besant appears to share a very common belief that it does. I have not got the papers here to enable me to give the exact date, but I believe it was on the 9th of November, 1876, that the Master of the Rolls decided, in the case of Henderson *v.* Maxwell, that a book or a periodical was non-existent until after publication. Therefore the registration of a title at Stationers' Hall, even five minutes before publication, did not secure copyright, but the registration even one minute after publication did secure it; so that titles registered before publication must be registered again after publication in order to become property in the eye of the law. To meet this difficulty it is allowable to register again at Stationers' Hall any time before commencing an action, and even when in court on payment of a penalty. The registration of a title before the work it represents is, therefore, valueless.

A title *ought* to have protection as soon as it is discovered, but only for a limited period—say two years. If publication of the book or periodical did not follow within that period, all rights to the title to lapse; if publication ensued within the period, the proprietorship to continue for the usual term of copyright.

I would suggest that there should be a meeting of authors and publishers at an early date to consider the whole question of the best means of securing copyright in titles and of establishing an efficient system of registration.

Charles Gibbon.

THE CAMBRIDGE UNIVERSITY EXTENSION SCHEME.

The scheme originated in 1873 by the University of Cambridge for bringing higher education within reach of the inhabitants of populous centres by means of lectures and classes continues to manifest a most satisfactory degree of vitality. After an existence of nearly ten years the University Syndicate is able to show results which unmistakably prove that the desire for higher education is deep and widespread. Not only have courses of lectures been given in a large number of towns, but the movement has in several instances resulted in the establishment of permanent institutions, as at Nottingham and Sheffield. There are also strong indications of growing interest in districts where lectures have either never yet been given or where, after a course or two, they were abandoned. The most notable instances of this revival are Derby and Leicester, two of the towns which, with Nottingham, formed the first circuit where courses were given. After a few years the lectures were discontinued at the two towns referred to, but recently have been resumed with success.

As the local lectures scheme has now been in operation several years, and seems destined in future to play an important part in the higher education of the people, it may not be uninteresting to state its objects, to sum up the progress of the work, to describe some of the difficulties and hindrances in the way of success, and to offer some criticisms upon the suggestions made for the future development of the movement with the view of securing a greater measure of permanence. The purpose of the university extension or local lectures scheme is to provide the means of higher education for persons engaged in the regular occupations of life. The scheme

by experience has been found to meet the wants of three different sections of the community: (1) persons at leisure during the day, especially ladies; (2) clerks and others engaged in business who have only the evenings at their disposal; and (3) working people. The proportions of these elements in the different audiences vary at different centres and at different courses of lectures according to the nature of the subject and the time of the lectures. Day courses at a high fee have been attended chiefly by ladies, while at certain mining centres in Northumberland cheap evening courses on political economy and history have attracted audiences composed almost exclusively of working miners. One of the features in the arrangements made by the Syndicate with Hull was the establishment of special classes designed to meet the requirements of teachers in elementary schools. These classes proved to be eminently successful. The importance of this section of the work cannot easily be over-estimated, and as the demand grows for more highly qualified teachers in elementary and secondary schools, pupil teachers will doubtless avail themselves more generally of the advantages offered by this educational scheme.

The University Syndicate has no funds at its disposal for the establishment and maintenance of the lectures, and it has for that reason been necessary from the first that the scheme should be supported by local effort. The obligation, therefore, that rests upon each centre to defray the cost of the lectures, makes it essential either to charge high fees or to obtain funds by subscriptions or otherwise. Where the fees are high the students are necessarily restricted to those who are comparatively well-to-do. The majority of centres, however, have been able without serious difficulty to establish subscription funds sufficiently large to justify the committees in fixing the fees well within the means of those in receipt of average weekly wages. In order to encourage continuity of work the Syndicate a few years ago instituted Vice-Chancellor's certificates, which are obtainable by students who hold six term certificates. The subjects of the courses have generally fallen under literature and history or science, and some of the subjects already treated of by the university lecturers have been Shakspeare's dramatic art, development of English literature, periods of English prose and poetic literature and of English history, European history, Greek history and literature, constitutional history, political economy, modern astronomical discovery, conservation of energy, light and spectrum analysis, sound and the elements of music, electricity and various branches of physics, chemistry, geology, and physiology. From this list it will be seen that even in the choice of subjects the University adapts itself to the special needs of the people. In some centres courses of lectures have been given for years without any advance being made towards the establishment of local colleges. Nevertheless the establishment of permanent institutions is the end towards which the whole scheme tends wherever the population is large enough to admit of it. The affiliation of local colleges with the universities will, it is believed, make the extension of university teaching a means of strengthening the old universities, and will at the same time secure a guarantee for efficiency in the management of the local institutions themselves. The universities are represented on the governing bodies of the affiliated colleges, and students from those colleges, under conditions by no means difficult, are excused the first university examination (the Previous at Cambridge and Responsions at Oxford), and are admitted to an honours examination for degree on a shortened term of residence. The attempt to popularize higher education by means of the special method of the local lectures scheme, involving lecture, class, syllabus, and weekly papers, has not been confined to Cambridge, although Cambridge took the lead and the bulk of the work has been done under the supervision of that university. Oxford adopted a similar scheme, but unfortunately it never got into practical working order. Some four years ago a similar movement was started in Northumberland and Durham in connexion with the University of Durham. In the spring of this year Cambridge received a proposal from Durham suggesting that the universities of Cambridge and Durham should combine for the management of the lectures in that district. The proposal was favourably received, and satisfactory arrangements have been made. The local lectures scheme has met nowhere with a more earnest and enthusiastic reception than on Tyneside. Large audiences of from 300 to 500 people have attended the lectures at three out of the four Tyneside centres. The pitmen of South Northumberland have already obtained two full courses — one on political economy and one on history—and a third on mining is in progress this term. A strenuous effort is now being made to induce the labour organizations — co-operative societies and trade societies—to take up the question of higher education, with a view to organizing throughout the district full courses of lectures and classes on a variety of subjects. This marks a new and interesting departure in the education of the masses. If once co-operative and trade societies interest themselves in the extension of higher education among the people, progress may be expected to be rapid and widespread.

The work which is being done by the London Society for the Extension of University Teaching in the Metropolis is similar to that done by Cambridge. The Society was founded a few years after the starting of the Cambridge movement, and limits its operations to London. The Society's work is making steady progress.

The story of the growth of permanent institutions in towns where university local lectures have been given is highly interesting. In some cases the part played by the local lectures scheme has been so slight as to amount to nothing more than suggestion, while in others the local college has grown directly and obviously out of the lectures. University College, Nottingham, and Firth College, Sheffield, are the most striking instances of the latter, while at Leeds the adoption of the local lectures scheme led eventually to the addition of a literature department to the Yorkshire College of Science.

Since the establishment of the scheme in 1873 lectures have been given in upwards of seventy towns with varying degrees of success. There are abundant proofs that the movement is gathering strength and increasing in vitality. The resumption of the lectures in towns where they were discontinued some years ago is an encouraging circumstance, and with the experience of the past the rocks on which some of the earlier efforts were wrecked will be avoided.

At present the progress of the movement is limited, not by the demand for higher education, but by the fact that the lectures can only be adopted: (1) in populous centres where the fees are sufficient to meet the expenses; (2) in centres where private munificence makes up the financial deficiency; (3) in districts where local literary and scientific institutions take upon themselves a considerable share of the pecuniary liabilities. Nothing has been more completely proved by past experience than that the hindrances in the way of university extension are purely financial and are not in any sense due to indifference to higher education.

It has been already pointed out that the University is compelled to charge the centres such a sum for the lectures as shall fairly remunerate the lecturer. The local committees are, therefore, driven in some cases to fix the fees so high that clerks, artisans, and persons of small means are, to a large extent, excluded from the benefits of the scheme. The difficulty of obtaining permanent subscriptions is very great, and the tendency is for the whole financial burden ultimately to fall on a few enthusiastic supporters of the movement. The cost of a course is usually 65*l.* or 70*l.*—45*l.* to the University for teaching, and 20*l.* or 25*l.* for local expenses, including proportional share of the lecturer's travelling expenses between the several centres associated in the lecturing circuit. An attendance of 280 students paying 5*s.* each would be required to clear expenses. A larger fee would be beyond the means of persons earning average weekly wages. Audiences of 300 or thereabouts have only been got where the fee has been lower than 5*s.* There seems here a fair case for Government aid. If the Education Department would recognize the lectures and classes on some such footing as night schools, and make a grant of 5*s.* on the average attendance at each course, under conditions that would not interfere with the freedom of the movement, the difficulty, as far as the centres are concerned, would be at an end. In centres where pupil teachers attend the lectures a further allowance might be made with advantage. There may be, and no doubt there are, difficulties of detail which would have to be overcome; but there can be no valid reason for not recognizing the local lectures and classes and allowing the same grant for average attendance as is allowed to night schools, where the teaching is altogether of an elementary character and now less needed than teaching of a more advanced kind. If this were done higher education would be brought fairly within the reach of people whom it was hoped to reach by means of the local lectures scheme. There is every reason to believe that the movement would gladly be taken up in smaller towns than is now possible if the financial difficulty were overcome. In the days before the passing of the Elementary Education Act night schools were necessary to supply the elementary instruction now given in day schools. The results of the nine years' work indisputably show that there is a strong desire for education of a higher kind, such as is given by the Cambridge local lectures, and it only needs that some scheme should be devised by which the fees paid by students could be supplemented without the strain caused by constant appeals for donations and subscriptions for the movement to make still more rapid advances. Whatever development awaits the university extension movement, there can be no question that Cambridge has already done a great work in popularizing higher education and bringing it directly before the people in an available form, both as regards the method of teaching and the choice of subjects taught. How great that work is cannot now be measured, but it is growing in many directions and is undoubtedly destined to play an important part in the future intellectual development of the people.

FIELDING'S PORTRAIT.

53, Hugh Street, Eccleston Square.

As the sculptor selected to execute the bust of Fielding, perhaps I may be allowed the opportunity of saying a few words relative to the possibility of obtaining a likeness from the only available material—the profile drawing by Hogarth. Mr. Austin Dobson's excellent letter of October 28th appears to establish pretty conclusively that this was made from sittings; but the point is not very material, as a drawing made by Hogarth from his tenacious memory would be quite as good a likeness. The criticisms advanced by Mr. Clark Russell apply pointedly to the portrait prefixed to Roscoe's edition of Fielding's works, and probably to most other portraits filled up by the engravers according to their own fancy, but not to the original drawing, which is simply an outline. This drawing, in which the artist seems to have laid aside for a while his well-known propensity to caricature, represents a most noble face, with a slightly

amused and sarcastic expression. The nostril and the eye are well drawn, and the indications of form, which only an artist, perhaps, would understand, numerous and certain. It can be best studied in the Print Room of the British Museum or in the earliest edition of Fielding's works by Murphy, who describes it as "an excellent drawing," which "recalls to all who have seen the original a corresponding image of the man." Now one profile generally agrees with the other; had "one eye had a droop or leer," it is probable a man who loved caricature as Hogarth did would have seized upon it; possibly a sculptor might prefer to omit, or but slightly indicate, such a defect had it existed. Thus we have for our purpose the two sides of the face, and, studying them, can be absolutely sure such a nose could no more have "dwindled into a pimple" than become as large as an elephant. Whether the eyebrows were exactly alike or not is not very important. One can even tell from this beautifully drawn profile that the nose was fine in the bridge, the upper lip curled and not much depressed in the centre, together with a number of important facts as to the full face which experience teaches can be deduced from the profile. Further, in the descriptions of Fielding he is everywhere spoken of as eminently handsome, and the portrait which did not give that impression would be a failure. I have seen the bust at Eton, but do not know the sculptor's name. I venture, then, to assert that from Hogarth's most suggestive drawing, added to a knowledge of anatomy and a study of Fielding's character, a bust at least equal in fidelity to that drawing may be produced; and I can only add that, the work being still unfinished in clay, I shall be happy to show it to any one interested who will do me the favour to call at my studio, my ambition being to execute a portrait of the great novelist which, like his fame, "shall not be for an age, but for all time."

MARGARET THOMAS.

ENGLISH AUTHORS AND AMERICAN PUBLISHERS.

Swansea, Nov.

I HAVE been away from London ever since Mr. Sampson Low's letter appeared in the *Athenæum*, or I should have replied to it last week. My answer to Mr. Low need consist of no more than a reiteration of the statement I made in the other letter, *i.e.*, that I have never received a penny from America on account of my books there. I was speaking about this to an American judge a few nights ago, and he advised me to abandon Great Britain as my native land and become an American citizen. "There 's no other chance," said he, whittling a lucifer match and then picking his teeth with it. I suppose there is no other chance. Meanwhile some good ought to be done by the publication of such letters as that printed in your columns last week signed by Mr. Pym. I wish Mr. F. W. Robinson's letter had been to the same purpose, for I respect him too heartily as a writer not to grieve to find him among the opponents of the British authors' grievance—the grievance of men whose estate is in their ink-bottles, and whose toil is pretty nearly that of the galley slave.

W. CLARK RUSSELL.

Crown Buildings, 188, Fleet Street, Nov. 14, 1882.

MR. HORACE N. PYM'S letter in the last number of the *Athenæum* is misleading. Permit me to state that Messrs. Harper & Brothers issued the reprint in question by arrangement with Mr. Pym's American publishers, the Messrs. Lippincott, of Philadelphia; that Messrs. Harper & Brothers paid the Messrs. Lippincott therefor; that the woodcut which Mr. Pym is pleased to asperse was the same as that used in the "attractive little volume" issued by Messrs. Lippincott; and that Messrs. Harper & Brothers in the case of Mr. Pym, as in all other cases, followed their invariable rule of paying for early sheets—a fact to which the "bulk of English literary people" cheerfully and kindly testify.

SAMPSON LOW.

FEMALE EDUCATION IN INDIA.

ABOUT a year ago I translated for the *Athenæum* a portion of a Sanskrit ode addressed by a lady Pandit, named Ramā-bāī, to the Berlin Congress of Orientalists. Unhappily she has since become a widow, but we find her as active as ever in striving to promote female education in India. In her evidence just given at Poona before the Educational Commissioners, who are now examining witnesses in every part of India, she urged four things—more liberal Government grants towards female education, the training of female teachers for girls' schools, the providing of suitable school-books for girls, and the creation of a female medical profession. But the interesting circumstance connected with her visit to the capital of the Maratha country was that the educated natives got up a protest against the idea that female education was neglected in their part of India.

The president of the Commission (Dr. W. W. Hunter) was invited to a meeting of the Native Ladies' Association (the Arya-Mahilā-Sabhā) of Poona. There, to his astonishment, he beheld an assembly of 280 native ladies, mostly of the Brāhman caste and all unveiled, who, with many European ladies and gentlemen, had come to hear an address from the lady Pandit Ramā-bāī.

After the Panditā's speech an enlightened Maratha Brāhman (Mr. Ranade) called the president's attention to the fact that in the Maratha country native women were allowed almost as much liberty as in Europe. They held meetings, had their own way, and went about freely in the public streets unveiled and without restraint. In former times it was not unusual for noble ladies to attend durbars, traverse the country on horseback, and even command armies. From what I myself saw of the Maratha people in 1875–1877, I can bear testimony to the fact that the spread of Muhammadan customs in India had little effect in curtailing this ancient liberty; and I trust the advent of the Commission will stimulate the liberal Brāhmans of Poona to make efforts for its still further extension. Poona has always been a great centre of progress and focus of enlightenment, and it is to be hoped that the news of this recent demonstration will penetrate the *pardahs* of every Indian household throughout the length and breadth of the land. It is an earnest of a brighter future for our Eastern empire that the light of day is at length beginning to find its way through the shutters and curtains which have hitherto darkened Indian homes. Assuredly the regeneration of India depends to a great extent on the re-elevation of her women to their ancient status and on the reanimation of the dry bones of her family life.

MONIER WILLIAMS.

NOTES FROM BERLIN.

THE undulating line by which the history of civilization is wont to be represented shows itself clearly, with its alternate ups and downs, in the taste of the public. For many years past our critics have declared that the special task of the dramatic art of the present time is to choose its subject from the present time, to depict the passions which animate us, to touch on the defects which mark our society, to show the ideals which are attainable by us. In one word, our theatre must, it was said, be modern in order to be able to fulfil its mission, to really please us, to move us, to seize hold of us. The public appeared to adopt this dictum. Its horror of bare legs and cavalier boots, of tragedies drawn from antiquity and of mediæval dramas, had become a proverb. It spoke of these productions of the higher culture with hypocritical respect and a wry face. It insisted that the Court Theatre, which has for its vocation to look after the highest class of art, should support the lofty efforts of well-meaning poets by producing their plays; but with this was its conscience satisfied, and it stayed at home on the evenings when this sort of drama was produced, and the players declaimed the sonorous verses with the rolling *r* and displayed the noble folds of the toga to empty benches. Great and enduring success attended only the modern pieces, in spite of the unsatisfactory nature of the plots, the petty interests that swayed the characters, the mistakes about society, the exaggerations and the impossibilities.

For some time past a revolution of opinion has declared itself. The public and its guides the critics appear to have grown weary of the portrayal of our little sorrows and joys. The ambitious commercial notabilities who seek after titles, orders, and social position; the intriguing widows, still young enough to marry, who endeavour to make up for the loss of feminine attractions by obtaining influence in society; the youthful artists, usually painters who possess extraordinary talent; the precocious girls, and other hackneyed characters, have appeared on the boards too often, and the candid spectator in the stalls says now, "I do not go to the theatre to find again the society that I can meet any day in my own house." And when he recognizes in this person and that a weakness of which he is himself conscious, he is altogether disgusted, and says the theatre is not intended to make people uncomfortable. Œdipus, who marries his mother Jocasta—that is the great tragedy which he now understands, and which thrills him without making him uncomfortable! for if he has many sins to lay to his own charge, if he does a doubtful kind of business on the Stock Exchange, if through servility and worthlessness he has worked his way upwards, and has sacrificed his own flesh and blood to his presumptuous extravagance; at any rate, he has not this to reproach himself with—he has not married his mother.

Richard Wagner, who of all creative artists o our Fatherland has enjoyed the greatest success and attained the widest influence, may have contributed by his 'Nibelungen' to reconcile the playgoers, who so long had shown themselves shy and distrustful of subjects derived from other times and manners, to the mighty themes and giant figures of the Sagas and of the distant past. But we need not trouble ourselves about the origin of the present taste: it exists, and fashion is once more favourable to tragedy and the drama in the grand style.

The young writer to whom this revolution has proved most profitable is Ernst von Wildenbruch. For years he knocked in vain at the doors of the managers; not one was opened to him. In spite of this he wrote piece after piece, until at length the director of a Berlin theatre took compassion on him. 'Die Carolinger' obtained at the Victoria Theatre an astounding success. And deservedly. It is the work of a highly gifted man, whose language is forcible and harmonious, who knows how to manage his verse, who possesses a keen understanding of the dramatic method of handling his material, and a very delicate appreciation of theatrical and decorative effects. Even in his mistakes, for instance, his striving after excessive pathos, a true poetic talent is shown. This great and deserved success has turned the attention of other theatres to the younger generation of writers, and has caused the representation of one piece after another of the hoarded-up stock, all with considerable, some even with signal, success. With his 'Carolinger' and 'Harold' Wildenbruch has become the poet of the day. Every other morning the journals sound his praises, and, as always happens in such cases, with a certain intentional exaggeration. Wildenbruch is hailed as the liberator of our dramatic literature from the state of weakness to which the playwrights who have hitherto been popular had reduced our poor stage. We are now, in fact, assisting at the same comedy that the French went through some time ago, when they held up M. de Bornier, the lucky author of the 'Fille de Roland,' with eager delight as a rival to Augier, Dumas, and Sardou. Our criticism at present extols Wildenbruch as highly as it can, with the

obvious purpose of depressing Wichert, Moser, Bürger, and others, whose names have appeared too often on the playbills. If one were to take seriously the flights of fancy in which some writers indulge, one would be forced to believe that the dramatic muse, after she had kissed Shakspeare and had bestowed a passing grasp of the hand on Schiller and Goethe, has roused herself to clasp Wildenbruch to her bosom. Such exaggerations correct themselves, and luckily do not alter the fact that Wildenbruch is a capable writer for the stage. It is to be hoped, however, that his head will not be turned by his panegyrists or his talents injured by excessive adulation. If they be, a bitter process of disillusionizing awaits him, for the wave that has borne him aloft will fall back in accordance with the well-known law of nature.

Our Court Theatre, following the tendency of public taste, opened the season with a play the scene of which is laid in remote ages. 'Skalden Kunst' is the title of the piece, and the author is Felix Dahn, the place Ultima Thule, the time the end of the fourth century, therefore even more remote than Thule. I have avoided speaking of the scene of the plot, for the piece really involves no plot. For a ballad of twenty couplets the matter would probably have sufficed: for a drama it is far too scanty. The old king is at feud with his son, and the singer reconciles them through the might of his song, about which Schiller has said in splendid verse everything that is worth saying, and about which the wild beasts must have talked in the days of Orpheus of blessed memory. The singer marries the king's daughter. The poet, a learned professor at Königsberg, to whom we are indebted for one of our most remarkable novels, 'Der Kampf um Rom,' has on this occasion also produced a respectable literary work. The current criticism has the suitable expression for it, "It is animated by a kindly culture," but it is tiresome on the stage, and already, after being played a few times, the piece has been buried. The number of mourners was small.

More successful, but also not so successful as usual, has Gustav von Moser been with his 'Reif-Reiflingen' at a theatre devoted to farce and comedy. Moser is the most fertile and lightest of our comic writers. He endeavours to entertain his audience, and this he almost always succeeds in doing. A lightly constructed plot, in which one amusing situation follows another; amusing characters that are brought on the boards when they are wanted, and stand aside at the writer's bidding, without one's caring to inquire what has become of them; an easy, not very choice, but still fresh dialogue — such are the ingredients of all his plays. He has introduced a good comic type, the Prussian lieutenant as he exists in real life. Owing to the long years of peace our lieutenant was, down to the sixties, in bad odour, and he played in literature a *rôle* by no means to be envied, often exceedingly ridiculous. He was laughed at as a fop and fool, who laid exaggerated stress on a faultless exterior, scented himself, made his spurs clash, rattled his sword, without ever drawing it from its sheath, and courted all girls and young wives. The great wars which we have waged since then have placed the much ridiculed lieutenant in quite a different light. One has conceived a respect for this young fop who possesses the noblest virtues of man, bravery, love of duty, and a sense of honour, and it is Moser who first has acclimatized this version of the lieutenant in a thoroughly realistic way in our dramatic literature. He has represented him as a human being with many laughable qualities, which under ordinary circumstances might pass for absurdities, but which at the same time give way to an earnest resolution when earnestness is needed. He has delineated him as a lovable companion, polite towards women, educated, and attentive to duty. The first piece in which this modern lieutenant appeared was 'Der Veilchenfresser.' Moser wished with this rather tasteless title to create a so-called "Geflügeltes Wort," but he did not succeed. The 'Veilchenfresser' is intended to describe the officer who passes for a social fop, but in a given moment shows himself a man of honour. Still more successful was this character in a subsequent comedy, 'Krieg im Frieden,' the hero of which, Reif-Reiflingen, an exceedingly clever sketch of our young officers, caused the unusual popularity of the play. This success caused Moser to make the same figure the hero of his last comedy, again very clever and very amusing. But the old experience, that the second parts of successful works which were finished with the first never come off rightly, has again been verified.

There is, then, nothing very remarkable or agreeable to announce regarding the beginning of the season. I shall merely mention as a curiosity that the theatre which was founded some years back with a view to improving the taste of the masses by the performance of classical works at low price—the National Theatre—now brings out dull comedies which only last through seven unsuccessful performances—abortions that are supposed to provoke to pity, to the awakening of the sense of art, to the purification of the taste, to the advancement of talent! PAUL LINDAU.

THE SUNDERLAND SALE.

WE continue this week our report of the Sunderland sale at the rooms of Messrs. Puttick & Simpson, beginning with the books sold on Thursday, the 9th, and ending with those disposed of last Wednesday:—Ochinus, A Tragœdie, or Dialoge of the Uniuste Usurped Primacie of the Bishop of Rome, Englishet by Bp. Ponet, black-letter, a quarto bound in contemporary brown calf, Lond., for Gwalter Lynne at Byllyngesgate, 1549, 85*l.* Les Ordonnances de l'Ordre de la Toison d'Or, printed on vellum, 4to., 24*l.* Ovidius, Opera, 3 vols., old morocco, fol., Romæ, C. Sweynheym et Arn. Pannartz, 1741, 85*l.*; Ovidius, Opera Omnia, 3 vols. fol., Venetiis, Jacobus Rubeus, 1474, 60*l.*; Ovidius, Opera, 2 vols., Bononiæ, Baldasarem de Azzoguides, 1480, 51*l.* Oviedo y Valdes, De la Natural Hystoria de las Indias, in Toledo, por Remon de Petras, 2 vols., 1526–57, 48*l.*; Oviedo y Valdes, Coronica de las Indias, fol., Salamanca, Juan de Junta, 1547, 61*l.* Libro del Famoso Cavallero Palmerin de Oliva, fol., Toledo, Lopez de Haro, 1580, 17*l.* 10*s.* Parthenius, Pro Lingua Latina Oratio, John Grolier's copy (damaged), sm. 4to., Venet., Aldus, 1549, 15*l.* Paschalius, Henrici II. Galliarum Regis Elogium, fol., Lut. Par., M. Vascosanus, 1560, 16*l.* Petrarca, Sonetti, Canzoni et Trionphi, printed on vellum, wanting leaves 1 and 21, sm. fol. (Venet., Vindelinus de Spira), 1470, 280*l.*; another edition (imperfect), sm. fol., Padua, Martinus de septem arboribus Pratensis, 1472, 30*l.*; another edition, sm. fol., Venet., 1473, 25*l.*; Petrarca, Gli Trionfi, con la Expositione di Bernardo Glicino, 1475, 35*l.*; Petrarca, I Triumphi, col Comento di B. Glicino, containing, besides the woodcuts belonging to the book, a set of six plates, engraved on metal (attributed to Filipino Lippi), which are probably unique, 1,950*l.*; Petrarca, Le Cose Volgari, printed on vellum, contemporary Venetian brown morocco binding, Vinegia, case d'Aldo Romano, 1501, 50*l.*; Il Petrarca da Dolce e G. Camillo, printed on vellum, sm. 8vo., Vinegia, G. Giolito, 1558, 22*l.*; Petrarca, Il Libro degli Huomini Famosi, fol., Polliano, Verona, 1476, 34*l.* Omnia Platonis Opera, *editio princeps*, fol., Venet., Aldus, 1513, 31*l.* Plautus, Comœdiæ Omnes, Venetiis, 1472, 90*l.*; Plautus, in ornamental Lyonese binding, sm. 8vo., Lugd., 1513, 17*l.* Plinius, Historia Naturalis, lib. xxxvii., *editio princeps*, Venetiis, Joannes de Spira, 1469, 82*l.*; another copy, 70*l.*; another edition, Romæ (*edit. secunda*), Sweynheym et Pannartz, 1470, 11*l.* 10*s.*; another edition, printed on vellum, fol., Venetiis, Nicolaus Jenson, 1472, 220*l.*; Plinius, Epistolarum, lib. viii., 1471, 17*l.* 10*s.* Plutarchus, De Liberis Educandis, 39 ll. (the first book printed at Parma), Parmæ, And. Portila, 1472, 13*l.* Pontanus, De Bello Neapolitano et de Sermone, printed on vellum, Naples, Sigismundum Mayr, 1509, 45*l.* Samuel Purchas, Hakluytus Posthumus, fol., Lond., H. Featherstone, 1625–26, 55*l.* Quintilianus, Institutionum Oratoriarum ad Victoriam Marcellum, printed on vellum, illuminated, fol., Romæ, 1470, 290*l.*; Institutiones Oratoriæ, fol., Romæ, Sweynheym et Pannartz, 1470, 26*l.*; another edition, fol., Venetiis, Nic. Jenson, 1471, 22*l.* Rabelais, Grãds Annales du Grand Gargantua, 12mo., 1542, 320*l.*; Gargantua et Pantagrueline Prognostication pour lan 1535, et les Horrible Faicts, in 1 vol. (first edition of Rabelais with a date), 320*l.*; La Vie du Grand Gargantua et Pantagruel, Roi des Dipsodes, 2 vols., 1542–3, 280*l.*; Tiers Livre, Tholose, 1546, 95*l.*; Tiers Livre, Lyon, 1552, 91*l.*; Le Tiers Livre et le Quart Livre (wants title and 4 prel. ll.), 1552, Paris, 171*l.*; Le Quart Livre, 1553, 91*l.*; Le Cinquiesme et Dernier Livre et le Voyage et Navigation des Isles Incogneuës, 1565–74, 96*l.*; L'Isle Sonante, 1562, 26*l.* The Petrarchs and the editions of Rabelais have been the main centres of attraction in this instalment of the library. On Thursday, the fortieth day of the sale, the total was 448*l.* 17*s.* The fourth instalment of the library fetched 10,129*l.* 8*s.* The gross total amounts to the large sum of 46,672*l.* 13*s.*

Literary Gossip.

THE Middlesex magistrates have appointed a special committee to consider whether some better accommodation cannot be afforded for the ancient records of the county, and whether their use cannot be facilitated by the preparation of a calendar. Many of the earliest documents, it is alleged, are perishing from damp. The magistrates of the North and West Ridings of Yorkshire have, as we pointed out last year, set a good example in this respect.

THE Forty-third Annual Report of the Deputy-Keeper of the Public Records, which is about to be presented to Parliament, will contain, besides the continuations of the Calendars of Patent Rolls and of the Duchy of Lancaster Records, the beginning of a Calendar of Privy Seals, &c., of Charles I.; some documents relating to the conspiracy of the Earl of Cambridge against Henry V.; a report on libraries in Sweden containing MSS. pertaining to English history, by the Rev. W. D. Macray; a like report on the State archives of Stockholm, by Mr. W. H. Bliss; and a report on the Canadian archives, by Mr. Douglas Brymner.

THE appearance of the late Dr. A. C. Burnell's translation of 'Manu' is now ensured beyond question, as the manuscript has been found to be in a fit state to go to press. The important introduction has, on careful examination, also turned out to be perfect, showing the last touches of the hand of the writer.

MR. GUY LE STRANGE, one of the editors of the modern Persian play 'The Vazír of Lankurán,' will complete and carry through the press the English-Persian dictionary left in an incomplete state by his late friend Prof. E. H. Palmer. 'The Vazír of Lankurán,' the first modern Persian play ever printed in Europe, will appear shortly, the editors being Messrs. Haggard and Le Strange. The volume will comprise the Persian text, explanatory notes, a glossary, grammatical introduction, and English

translation. M. Charles Schefer, the director of the École des Langues Orientales Vivantes at Paris, will use the work as a text-book for his *cours* in the second half of this session — a great compliment to English scholarship.

'PEARLS OF THE FAITH,' the new poem by Mr. Edwin Arnold, will be ready for publication in Christmas week. The American publishers will also have a large edition ready for sale during the holiday season.

'THE SERPENT PLAY: A DIVINE PASTORAL,' is the title of Dr. Gordon Hake's new poem, to be almost immediately published by Messrs. Chatto & Windus.

MR. RUSKIN, who lectures at the London Institution on December 4th, has changed his mind about his subject. It will be not 'Crystallography,' as announced, but 'Cistercian Architecture.'

THE first instalment of Mrs. Lynn Linton's story, of which we have before made mention, will appear in one of the magazines in January. Talking of stories in magazines, it may be worth mentioning that a well-known periodical is at present embarrassed by the failure of a novelist, who is not at present in England, to supply the conclusion of his tale. All the chapters that he has sent have been published, and for the last two months the editor of the magazine has been forced to put in padding to fill the void. As the publishers have paid for the whole story, they are wondering whether its title, 'Fortune's Fool,' may not be supposed to apply to them.

THE report on the manuscripts of the Dean and Chapter of St. Paul's, upon which Mr. Maxwell Lyte has been for some time engaged under the authority of the Historical Manuscripts Commission, is now completed. It is very bulky, for an abstract of every document of value which has not been quoted in printed works is given. The Commissioners will publish this report next year in the general report of their proceedings. Mr. Lyte has also completed a report on the manuscripts of Eton College.

THE December number of the *Vyestnik Evrop'y* (*Messenger of Europe*) will contain a production from the pen of M. Tourguénief, entitled 'Verses in Prose.' It consists, according to the *Novoe Vremya*, of a series of sketches composed during the author's recent illness at Bougival, and reflects some of his personal surroundings during the last six years.

MESSRS. WYMAN & SONS will publish before the end of this month the volume of selections from the Wentworth papers in the British Museum, chiefly illustrating political and social life during the reign of Queen Anne, which we noticed last year as being in preparation by Mr. J. J. Cartwright. The greater number of the letters printed in the volume were addressed by friends and relatives in London to Lord Raby (afterwards Earl of Strafford) when he was ambassador at Berlin and the Hague.

AMONG the works now in the press for the Rolls Series are 'The Register of St Osmund,' edited by the Rev. W. H. Jones, of Bradford-on-Avon, and the index volume (the seventh) of Dr. Luard's edition of Matthew Paris. The first volume of Mr. C. T. Martin's 'Register of Archbishop Peckham's Letters,' in the same series, will very shortly be published.

MR. A. J. DUFFIELD, who has recently visited the scenes of the earliest discoveries of Columbus and his companions, will publish shortly 'American Days: the Romance of a Lost Kingdom.'

SOME new novels may be mentioned. Miss Betham-Edwards, author of 'Kitty,' will contribute a serial story to *Good Words* next year, entitled 'Pearla; or, the World after an Island.' Miss Hoppus, the author of 'Five Chimney Farm,' has in the press a novel, to be published by Messrs. Hurst & Blackett, called 'A Story of Carnival.'

OWING to the very limited number of competitors during recent years for the Gilchrist Scholarships, tenable at the London University by natives of India, the Gilchrist Trustees have decided on substituting one scholarship of 150*l.* annually for India, for the two scholarships at 100*l.* hitherto offered. The tenure of the scholarship may be extended from four to five years should the holder prove worthy. The new arrangement is to come into force in 1884.

THE opinion of the ratepayers of Belfast has been taken as to the adoption of the Free Libraries Act there, and the result is strongly in favour of the project, the number of votes for the adoption of the Act being 5,238, and in opposition to it 1,425.

BY a resolution of the 23rd of October the Society of Sons of St. George at Philadelphia determined to found a library in the handsome St. George's Hall they occupy. They had already received many donations from booksellers and others in London. While they will not neglect general literature, they propose to give their collections a distinctive character. The history of the United States has been too often treated as if it began with the Declaration of Independence, and they therefore hope to bring together works of English authors dealing with the controversy on this side of the Atlantic, and with the principles, dating far back in the common history, on which the discussions were based and the details of the American Constitution and legislation were founded. They hope at a later time to obtain works illustrative of the stay of the Americans in England and their influence on the mother country. Separate funds are to be devoted to the library, so as not to trench on the benevolent functions of the institution.

THE Clarendon Press promises immediately two new volumes of the "Sacred Books of the East," edited by Prof. Max Müller; the new part of the "Anecdota Oxoniensia," Aristotle's 'Physics,' book vii., a transcript of the Paris MS. 1859, collated with the Paris MSS. 1861 and 2633 and a MS. in the Bodleian Library, by Mr. R. Shute, M.A.; a volume of 'Selections from the Dialogues of Plato,' with introductions and notes by Mr. John Purves, M.A., and a preface by the Master of Balliol; and an edition of Corneille's play of 'Horace,' with introduction and notes by Mr. George Saintsbury. The most notable feature of the last-named book will be the prolegomena.

THE new enterprise of Mr. Gardner, of Paisley, the *Scottish Review*, will appear next Monday. It contains articles on 'The Progress of Theology in Scotland,' 'Letters in America,' 'The Poems of Dr. W. C. Smith,' 'Thomas Carlyle's Apprenticeship.' 'The State of the Highlands,' 'Commentators and the Book of Genesis,' &c.

MR. W. SATCHELL has in preparation 'Gentleman Jack, and other Poems,' by Miss May Probyn, whose previous volume met with a favourable reception. The same publisher also announces a volume of 'Country Essays,' by the Rev. M. G. Watkins; and a collection of Spanish legends, with many illustrations, by Mrs. Middlemore, entitled 'Round a Posada Fire.' The 'Bibliotheca Piscatoria,' by T. Westwood and T. Satchell, is now nearly through the press and will be issued next month. This will also be published by Mr. Satchell.

MESSRS. WARD, LOCK & Co. have made arrangements for the publication (beginning with the new year) of the *Atlantic Monthly* simultaneously with the issue in America. To the January number Mr. Henry James, jun., will contribute a dramatized version, with new characters and incidents, of his well-known story 'Daisy Miller.'

OF new theological books we may mention one or two. Messrs. A. & C. Black promise 'Thoughts for the Weary and the Sorrowful,' by the late Dr. Alexander Raleigh. 'The Gospel of the Secular Life' is the title of a work by the Hon. W. H. Fremantle, Rector of St. Mary's, Bryanston Square, and Canon of Canterbury, which will shortly be published by Messrs. Cassell & Co.

A CORRESPONDENT writes:—

"The Polish Society of the Friends of Science and Literature in Posen celebrated on November 8th a double solemnity, namely, the twenty-fifth anniversary of its establishment, and the opening of its museum, lately erected. The building is splendid; filled in every department with books, prints, paintings, and objects of art. It contains three galleries of paintings. That of Polish artists, ancient and modern, is capacious, lighted from above, and important as well from the artistic as from the historical point of view, for it possesses a collection of portraits of the politicians and beauties celebrated under the reign of the last King of Poland. The gallery of foreign painters boasts of works attributed to Gentile da Fabriano, Domenichino, Guido Reni, Andrea del Sarto, Carlo Dolce, Palma Vecchio, Salvator Rosa, Van Dyck, Ruysdael, Poussin, Lesueur, Lancret, Cranach, Velazquez, Murillo; altogether more than 400 masterpieces. There are in another department more than 15,000 prints. Two separate libraries contain above 100,000 works. The numismatic cabinet comprises about 15,000 medals. Of great importance is the archæological collection, and it has been pronounced by such an authority as Herr Virchow more valuable than any other in the German Empire. It is now all open for the use of the public."

THE deaths are announced of Mr. George Rose, better known to the public as "Arthur Sketchley" and the creator of "Mrs. Brown," and of Mr. A. G. Constable, a son of Scott's publisher and the author of a work on Afghanistan.

SCIENCE

Synopsis of the Classification of the Animal Kingdom. By H. A. Nicholson. (Blackwood & Sons.)

THE title of Prof. Nicholson's latest book brings to mind the 'Introduction' of Prof.

Huxley, and, curiously enough, the two books contain almost the same number of pages. Here, however, the resemblance ends: the one contained definitions "of all the most important orders of the animal kingdom"; the other has no definitions "even of the shortest sort," save only for the sub-kingdoms. In palliation of this Prof. Nicholson explains that his work is intended to be a "mere guide to a line of study." Bearing in mind these limitations, we would ask whether the learned professor thinks it well for a zoologist to commence his studies with the examination of what are certainly parasitic and are almost as certainly degraded forms; and if not, why he takes as his first class of the *Protozoa* the *Gregarinida;* or whether he thinks so little of the presence or absence of a nucleus as to justify the union of non-nucleated and nucleated forms in the same class. So far as it shows us what our earlier ignorance led us to do, we all willingly recognize the moral of the brilliant discoveries by Boettcher and Hertwig of the nucleus in the mammalian red blood-corpuscle and the *Foraminifera* respectively. Attention, on the other hand, is to be given to the micro-chemical researches of Brandt and Miescher on nuclein; and the differences between *Protamœba* and *Amœba* seem still to be so great that the grouping of the two in the same class must be regarded as most misleading.

Leaving aside these lowly forms, we find the author retaining the long obsolete division of the *Annulosa*, and exhibiting within the limits of that group a neglect of the results of some of the most important investigations of later years. The retention of *Peripatus* among the *Myriopoda*, after the admirable investigations of Prof. Moseley and the lamented Prof. Balfour, argues an incompetence to recognize definite facts and their morphological value which is absolutely fatal to the book's value as a guide to students. An error no less characteristic and remarkable follows immediately, for we find that the first sub-class of the *Insecta* (*Ametabola*) contains forms which are clearly descended from winged insects, and others which as clearly have never had wings at all. For Mr. Nicholson the researches of Sir John Lubbock and others on the morphology of the *Collembola* have evidently all been in vain.

When we come to the fishes we find the old, old story repeated. *Amphioxus*, without a heart, an ear, or a liver; the hag, with no specialized jaw arch; and the shark, with all the essential characters of a vertebrate, are all placed in "orders" which, so far as our instructor lets us know, are to be regarded as of equal value. In spite of the researches of, notably, Prof. Flower, the *Camelidæ*, *Tragulidæ*, and *Cervidæ* are, among others, three of the families of the *Ruminantia;* and, as may be supposed, man has a distinct order to himself.

The author has made references to authorities an essential part of the work, and we may therefore point out to him that, although Dr. Dobson's 'Monograph of the Asiatic *Cheiroptera*' is well worthy of mention, he should rather, on the principle that the less is contained by the greater, have referred to that naturalist's 'Catalogue of the *Cheiroptera* in the British Museum.' It is really too absurd to see Mr. Mivart's popular book on the common frog standing between Günther's 'Catalogue of the *Batrachia*' and Duméril (not "Dumeril") and Bibron's 'Erpétologie Générale.' The title of the only complete work on *Myzostoma* is conspicuous by its absence. Chun's great work on the *Ctenophora* should certainly have been mentioned, and the not unknown name of Hertwig have found a place in the bibliography of the *Radiolaria*.

We have looked in vain for any notice of *Dicyema* or *Rhopalura*, although Prof. E. van Beneden regards them as representiug a group of equal value with either of the two other great divisions of the animal world; of *Neomenia* and *Chætoderma*, perhaps the simplest of molluscs; of the enigmatic *Astrophiura* or the instructive *Ctenaria;* but we have not failed to find such old-world mistakes as Myri*a*poda, *Æ*driophthalmata, Arbac*ia*dæ, and Cest*u*m veneris.

In what has gone before we have kept ourselves to what have seemed to be actual faults of commission or omission, neglecting to observe the want of a general or philosophic grasp of the essential points of a classificatory naturalist, and this we have done because there can be no common platform between the writer and ourselves. It is quite credible that ill-taught students may ask for synoptical tables, but he who is engaged in the work of modern zoology knows that these, save when they appear as the tentative schemes of some many-sided investigator, are hardly worth the paper they are printed on, and he who has to do with examinations and examinees knows only too well to what base uses and what evil ends works like the present may be put; while he who is acquainted only with English zoology will know that Mr. Pascoe's work, unsatisfactory though it is, is better far than this, of which we have thought it our duty to point out the more glaring and typical mistakes.

GEOGRAPHICAL NOTES.

Mr. Colquhoun's recent paper on his journey through the Southern China borderlands is a most interesting narrative and a valuable contribution to geography, dealing as it does with a line of country which is comparatively unknown. But considered in the light of a trade route of the future, we venture to think that the line he proposes can scarcely hope to oust its rivals, the Irrawaddy and Yang-tsze routes. The difficulties of diverting trade from its established channels in a totally new direction are always considerable, and more than ever so where a large tract of country has to be traversed before the waterways are reached. The subject, however, is well worthy of further consideration, and should Mr. Lepper's proposals, now before the Indian Government, lead to any expedition from the Assam side, the question of the trade of South-Western Yunnan might advantageously be included within the scope of the investigation. The interesting facts mentioned by Mr. Colquhoun about the peculiar excellence of the so-called Po-erh tea are not new, though they are little known to general readers. Baron von Richthofen, in his letters on the Chinese provinces, published at Shang-hai in 1872, discussed at length its admirable qualities and the desirability of encouraging its export. It is said, on good authority, to be more refreshing than any other kind, and although strong does not irritate the nerves as other green teas do, while, if prepared in the Chinese way, it will bear seven infusions without losing strength or flavour!

The Royal Geographical Society may be congratulated on the November number of their *Proceedings*, which contains several interesting papers. First comes an article by Col. H. Yule, C.B., on the ancient sea route to China from Western Asia, wherein the various localities mentioned by the author of the 'Periplus of the Erythræan Sea,' by Ptolemy, Cosmas Indicopleustes, and the Arab geographers, receive careful indication. There is one part of the subject, however, on which Col. Yule does not dwell—we mean that section of the route which extended from the head of the Red Sea to India. Those comparative geographers who may be desirous of extending their researches in this direction will find an elaborate and lengthy article by Mr. Rehatsek in the *Journal* of the Bombay branch of the Royal Asiatic Society for 1881, in which he treats fully of the various emporia and other places which existed along the coasts of Arabia and the Persian Gulf. The next paper, by Mr. Nelson, of the United States Signal Service and the Smithsonian Institution, describes a sledge journey made over completely new ground in the delta of the Yukon, in Northern Alaska, during the years 1878–79. The length of the journey was 1,200 miles in all, and this was accomplished in dog sledges over a low-lying, sterile, and frozen country, peopled at rare intervals by a pure-blooded Eskimo population, numbering in all about 3,000. Mr. Nelson says these people present one of the richest fields open to the ethnologist anywhere in the North. They retain their complicated and primitive system of religious festivals and other ceremonies, while their work in ivory and bone and all their weapons and utensils bear evidence of considerable skill. A map and paper illustrative of part of the Bolivian table-land are contributed by Mr. J. B. Minchin, in the course of which he remarks that the vast sheet of water which formerly occupied the site of Lake Poopó and a great part of the Andean table-land, situated at an average altitude of from 12,000 to 13,000 feet above the level of the sea, must have covered a total area of no less than 20,000 miles. In this lofty region silver is the only metal worked to any extent, the annual export amounting to between eight and ten million dollars. With railway communication, which might be easily brought down to the port of Iquique, the export of the metal would doubtless increase largely.

A Russian expedition into Central Africa is to be undertaken next year, under the direction of M. Sholtz-Ragozinsky, and a vessel is being got ready for the voyage out. It is intended to acquire some land and establish a meteorological station at Cameroon Bay, and then to push inwards.

Capt. Bove and the other members of the expedition dispatched by the Argentine Government to Tierra del Fuego have returned to Buenos Ayres. Staaten Island and the land within the new Argentine boundary have been carefully examined, and existing charts rectified in many important particulars. Capt. Bove advocates the occupation of Staaten Island as a sheep station, and speaks hopefully of the chances of the fisheries of that quarter.

Dr. Jorge Fontana, whom the Argentine Government sent to the Pilcomayo to inquire into Dr. Crevaux's murder, has returned without meeting with traces of the French explorer. He entered the Pilcomayo on July 31st, and ascended it, partly in a steam launch, partly in a boat, as far as the Bolivian frontier. The river is believed to be navigable throughout this distance from January to July. The subprefect of the Bolivian province of Gran Chaco has been more successful. He had an interview with some Tobas Indians on August 2nd at San Francisco Solano. They denied having participated in the murder, and charged their neighbours, the Noctenes and Tapietis, with the deed.

Dr. G. A. Fischer, the former companion of Denhardt, intends to leave Pangani in the course of this month with an Arab caravan

XUM

bound for Lake Samburd. The Hamburg Geographical Society has granted 760*l.* towards the expenses of this expedition.

ASTRONOMICAL NOTES.

HERR ZELBR, of the Imperial Observatory at Vienna, has carried on an ephemeris of the great comet until the 1st of next March, and it seems not unlikely that it may be observed with the aid of a large telescope until nearly that time. About the middle of December the southern declination will amount to more than 30°, but after that the comet will move towards the north, and the southern declination on March 1st will be only 15°. The calculated brightness at that time will be only one-hundredth of what it was on the 6th of October, but on December 16th it will be one-tenth of the latter, or about half what it is now. During the absence of moonlight in the first half of December the comet may therefore probably be still followed with the naked eye, rising in our latitude about midnight. Nothing more has, we believe, been heard of Schmidt's "companion" comet.

Venus is now on the meridian at half-past one in the afternoon; but, her southern declination still exceeding 27°, she sets a few minutes before five o'clock, less than an hour after the sun. Mars is approaching conjunction with the sun, which he will reach on December 10th at a distance from him of little more than half a degree in declination. Jupiter and Saturn, we need hardly remark, are visible all night (weather permitting), the latter being on the meridian about half-past eleven, and the former at a few minutes after two in the morning, rising about a quarter before six in the evening.

The sky was so overcast in the neighbourhood of London last Monday night that there was no opportunity of looking for the Leonids, but it is not likely that any considerable number would have been seen under any circumstances. The richest part of the meteoric ring is now nearly at its greatest possible distance from us. It follows the comet of 1866 (which was discovered by Tempel on December 19th, 1865, and passed its perihelion on January 11th, 1866), and its period is thirty-three and a quarter years, so that it is now a little past aphelion. The next brilliant display of meteors of this stream will therefore not take place until the year 1899; but it is desirable to keep watch as far as possible upon the whole extent of the ring.

The number of the *Comptes Rendus* for the 6th inst. contains a note from M. Cruls, by which it appears that information was received at Rio on the 10th of September of the discovery of the great comet, but it was not seen at the observatory there until the morning of the 12th, and for ten days after that clouds interfered with its actual observation, although it had in the mean time been seen in several other parts of Brazil. The number also contains a good series of observations of the comet from October 10th to November 5th, made at the Lyons Observatory by M. Gonnessiat.

SOCIETIES.

ASTRONOMICAL.—*Nov.* 10.—Mr. E. J. Stone, President, in the chair.—Messrs. R. Bryant, A. L. Kaye, and J. McCarthy were elected Fellows. Prof. H. G. van de Sande Bakhuyzen, of the Observatory of Leyden; Dr. W. Döllen, of the Pulkowa Observatory; Dr. W. Klinkerfues, of the Göttingen Observatory; Dr. H. Schultz, of the Upsala Observatory; and Prof. H. C. Vogel, of the Potsdam Observatory, were elected Associates.—Prof. Pritchard read a paper on certain deviations from the law of apertures in relation to stellar photometry, and on the applicability of a glass wedge to the determination of the magnitudes of coloured stars. He said that he had been engaged for some time in observing the magnitudes of stars with a wedge photometer. In the course of this research a doubt arose as to the perfect accuracy of the law which assumes that the amount of the light transmitted varies with the aperture of the telescope. The late Mr. Johnson found that one of the halves of his heliometer transmitted more light than the other in the ratio of 1,000 to 924; he had therefore discarded the method of limiting apertures, and from a series of experiments which he had made with the wedge photometer, he concluded that the measures made with the instrument might be depended on to one-thirteenth of a magnitude. He hoped shortly to present a catalogue to the Society giving magnitudes of all naked-eye stars from the Pole to the Equator, down to, and including, stars of the fifth magnitude.—A paper from Mr. Gill, on observations of comets, 1881, II. and III., of Wells's comet, and of the great comet of 1882, was read. Mr. Gill described how he had first observed the comet which was now visible on the 8th of September, while returning from the observatory at the Cape of Good Hope. Observations of its place were secured with meridian instruments as well as with the great Indian theodolite. Mr. Finlay, first assistant at the Cape Observatory, described the changes of the comet's nucleus as it approached the sun. On Sunday, September 17th, he observed it, close to the sun's limb, with a six-inch equatorial, power of 110, and a neutral-tinted wedge; he watched it during the greater part of the day, till at $4^h\ 50^m$, Cape time, it came up to the sun's limb and was suddenly lost sight of. Mr. Elkin, of the Cape Observatory, also watched the comet up to the sun's limb, and saw it disappear at $4^h\ 50^m\ 52^s$, Cape time. The observation was made as accurately as the observation of the occultation of a star of the fourth magnitude can be made at the limb of the full moon. Before coming up to the limb the nucleus and a small portion of the tail seemed scarcely inferior in brilliancy to the sun's surface. It was not possible at the time to say whether the comet was passing behind the sun or in front; subsequent observations proved that the comet was passing between the earth and the sun—the comet was quite invisible when upon the sun's disc.—The following papers were also presented: 'Observations of Comet *b*, 1882, made at Windsor, New South Wales,' by Mr. J. Tebbutt,—'The Fireball Radiants of August 9–11,' and 'The Markings of Jupiter,' by Mr. W. F. Denning,—'The Electric Light in Observatories,' by Mr. W. S. Franks,—'Elements of Comet III. (Schäberle), 1881,' by Mr. H. T. Vivian,—'On a Probable Assyrian Transit of Venus,' by the Rev. S. J. Johnson,—'The Great Comet of 1882,' by Mr. F. C. Penrose,—'Observations of Comets *a*, *b*, and *c*, 1882, made at the Royal Observatory, Greenwich,' by the Astronomer Royal,—'Solar Eclipse of 1882, May 17th, observed at Meerut, India,' by Major A. B. Brown,—and 'Sextant Observations of the Great Comet of 1882,' by Capt. G. Cochrane.

METEOROLOGICAL.—*Nov.* 15.—Mr. J. H. Laughton, President, in the chair.—The following new Fellows were elected: Rev. J. Brunskill, Messrs. F. B. Buckland, C. F. Casella, W. H. M. Christie, A. Cresswell, R. S. Culley, C. Morris, O. L. O'Connor, H. Parker, A. Rowntree, and D. R. Sharpe.—The papers read were: 'On Certain Types of British Weather,' by the Hon. R. Abercromby.—'On the Use of Kites for Meteorological Observation,' by Prof. E. D. Archibald. In this paper the author advocates the use of kites for meteorological observation, and describes the mode in which they may be best flown so as not to be mere toys, but scientific instruments, capable of ascending to great heights, remaining steady in currents of varying velocity, and of being manipulated with ease and rapidity by the observer.—'On the Meteorology of Mozufferpore, Tirhoot, 1881,' by Mr. C. M. Pearson.

INSTITUTION OF CIVIL ENGINEERS.—*Nov.* 14.—Sir W. G. Armstrong, President, in the chair.—The paper read was 'On recent Hydraulic Experiments,' by Major A. Cunningham.

MATHEMATICAL.—*Nov.* 9.—Mr. S. Roberts, President, in the chair.—Mr. W. M. Hicks was admitted into the Society.—The Chairman spoke on the loss the Society had sustained by the death of Prof. W. Stanley Jevons during the recess.—After the new Council had been elected, and the chair taken by the newly-elected President, Prof. Henrici, Mr. Roberts read his address, entitled 'Remarks on Mathematical Terminology, and the Philosophical Bearing of recent Mathematical Speculations concerning the Realities of Space.'—The following communications were made: 'On In- and Circum-scribed Polyhedra,' by Prof. Forsyth,—'Note on Quartic Curves in Space,' by Dr. Spottiswoode,—'Note on the Derivation of Elliptic Function Formulæ from Confocal Conics,' by Mr. J. Griffiths,—'On the Explicit Integration of certain Differential Resolvents,' by Sir J. Cockle,—'On Compound Determinants,' by Mr. R. F. Scott,—and 'On Unicursal Twisted Quartics,' by Mr. R. A. Roberts.

NEW SHAKSPERE.—*Nov.* 10.—Rev. W. A. Harrison in the chair.—Mr. F. J. Furnivall read a paper by Miss M. L. R. Smith, 'On some of the Textual Difficulties in "Hamlet."' The paper first dealt with the relation of Quarto 1 to Quarto 2, and the development that the characters of the women undergo in the latter. An emendation was suggested before the line "As stars with trains of fire." "Sallied flesh," the reading of the quartos, was upheld against the "solid flesh" of the folio; and the reading "for to drink" of the second quarto against the other readings "to drink deep."—'On the Disputed Reading "Chief in That" (I. iii. 74),' a short paper by Prof. W. T. Thom, of Virginia, was read.

PHYSICAL.—*Nov.* 11.—Prof. Clifton, President, in the chair.—Prof. Rowland exhibited some of the new concave diffraction gratings of his invention, and photographs of the spectra obtained by him.—A letter was read by Prof. Guthrie from Capt. Abney, testifying to the great advance made in the definition of spectra by these gratings, and the ease with which they can now be photographed.—Mr. W. Brown read a paper proving that the doctrine of the conservation of energy necessarily implied a system of central forces.—Prof. L. P. Thompson read a paper 'On some Historical Notes in Physics.' He showed that Davy employed the spark between two carbon points, *i. e.*, the electric light, as early as 1802; that Franklin's experiment in boiling is given in Boyle's 'New Experiments touching the Spring of the Air'; and that P. Reis's 1861 telephone was designed to transmit speech, and based on the human ear. One of Reis's early telephones was shown by him.

ARISTOTELIAN.—*Nov.* 6.—Mr. S. H. Hodgson, President, in the chair.—Mr. E. B. Bax and Mr. F. T. Atkins were elected Members.—Miss M. S. Handley read a paper 'On Leibnitz and Wolf to Kant,' which was followed by a discussion.

SHORTHAND.—*Nov.* 8.—Mr. C. Walford, President, in the chair.—The following new Members were elected: Messrs. A. H. Hill, H. J. Infield, Reed, jun., and P. Powter, as Fellows; Messrs. W. G. Bridge, J. Scott, G. F. Pearse, and C. E. Dormer, as Associates.—The President delivered the opening address of the session, reviewing the first year's work of the Society. All who had heard or read its proceedings would concur that the Society had shown sufficient reasons for its existence. He made a suggestion that a standing committee might be appointed, to which should be referred all new systems, with a view to decide whether they had any merits.—Mr. Lewis read a paper giving an account of some MS. notes left by his father, the late Mr. J. H. Lewis, on the bibliography of shorthand, apparently intended for use in a subsequent edition of his 'Historical Account of Shorthand Writing.'—The Rev. Prof. Hechler moved, and Mr. E. Guest seconded, that a congress of shorthand writers of all nationalities should be convened in London, and the matter was referred to the Council for consideration.

MEETINGS FOR THE ENSUING WEEK.

MON.	Asiatic, 4.—'Malagasy Place-Names,' Rev. J. Sibree, jun.	
—	Aristotelian, 7½.—'Locke to Berkeley,' Mr. G. White; 'Berkeley to Hume,' Mr. A. M. Ogilvie.	
—	Royal Academy, 8.—'Demonstrations,' Mr. J. Marshall.	
—	Institute of British Architects, 8.	
TUES.	Colonial Institute, 4	
—	Statistical, 7½.	
—	Civil Engineers, 8.—Discussion on Major Cunningham's Paper 'On Recent Hydraulic Experiments'; 'American Practice in Heating Buildings by Steam,' by the late Mr. R. Briggs.	
WED.	Royal Academy, 8.—'Demonstrations,' Mr. J. Marshall.	
—	Society of Arts, 8.—'Icemaking and Refrigeration,' Dr. J. Hopkinson.	
THURS.	Royal, 4½.	
—	Telegraph Engineers, 8.—'Telegraphs used during the Operations of the Expeditionary Force in Egypt,' Lieut.-Col. C. E. Webber.	
FRI.	Royal Academy, 8.—'Demonstrations,' Mr. J. Marshall.	
—	Quekett Microscopical, 8.—'Statoblasts of the Fresh-water Sponges,' Mr. B. W. Priest.	
SAT.	Physical, 3.—'Liquid Slabs,' Dr. F. Guthrie; 'Rainbows formed by Reflected Light,' Mr. W. Ackroyd.	

Science Gossip.

DR. STERRY HUNT stated at a meeting held in Montreal on October 26th that the American Association for the Promotion of Science would meet in 1884 at Newhaven, and so arrange their gathering that the members of the British Association then visiting Canada would have the opportunity of attending both meetings.

PROF. KEIL has produced two colossal statues, one of George Stephenson and the other of James Watt. These are being completed in the studio of Herr Bock, the German sculptor, and are intended for the new Polytechnic at Charlottenburg, near Berlin.

DR. FLEITMANN, of Iserlohn, well known as the inventor of a process for welding nickel, has published a striking result showing the rapid formation of mineral veins. Two years since the bottom of a stable pit was rammed hard with common clay containing iron. It has served for storing dung for that period, water being thrown in occasionally to prevent overheating. It having

become necessary to remove the pit, it was found that the clay had lost all colour, and was divided by numerous fissures from ¹ in. to ¼ in. in width, which were filled with iron pyrites. The iron oxide of the clay was changed, by the action of the organic matter and the water containing sulphate of ammonia, into ordinary mundic (sulphate of iron), which deposited itself in the fissures.

M. A. GUYARD, in the *Moniteur Scientifique Quesneville*, states that he obtains oxygen in the cold by the action of concentrated nitric acid upon the permanganate of potash. He states that the gas is evolved with great regularity and that it becomes perfectly pure if washed in a weak alkaline solution.

M. H. PELLET has drawn the attention of the Academy of Sciences to the "reciprocal influence of metals." His experiments lead him to believe that all metals are slightly volatile, and he thinks this is proved by some of them having a characteristic smell. He has shown that if two metals face one another the vapours (?) of the one may be condensed on the surface of the other, and thus cause molecular changes. This deposit of the foreign metal may, he says, be revolatilized and the original state restored. These results are not new. In the *Comptes Rendus* for 1842 will be found a paper, by M. Ludwig Moser, 'Sur les Images produites à la Surface d'un Metal Poli par la Proximité d'un autre Corps,' in which the author attributes the phenomena to "invisible light." In the *Philosophical Magazine* for 1843 (p. 412) there is a paper 'On the Spectral Images of M. Moser,' by Mr. Robert Hunt, who was disposed to refer those images to heat radiations.

M. DE CANDOLLE presented to the Académie des Sciences at the séance of the 2nd of October a volume which he has published under the title of 'The Origin of Cultivated Plants,' forming one of the series of the "Bibliothèque Scientifique Internationale." The volume, which is of especial interest, treats, said M. de Candolle, "d'un sujet sur lequel beaucoup d'erreurs ont été répandues, depuis l'antiquité jusqu'au milieu du siècle actuel."

FINE ARTS

The EIGHTEENTH ANNUAL EXHIBITION of WATER-COLOUR DRAWINGS by ARTISTS of the BRITISH and FOREIGN SCHOOLS is NOW OPEN at Thomas McLean's Gallery, 7, Haymarket.—Admission, including Catalogue, 1s.

VENICE EXHIBITION.—A COLLECTION of DRAWINGS and PAINTINGS OF VENICE and VENETIAN LIFE by MODERN ARTISTS is NOW ON VIEW at the Fine-Art Society's, 148, New Bond Street.

CARL HAAG.—A SERIES of SKETCHES of EGYPTIAN SUBJECTS by this ARTIST are also ON VIEW at the Fine-Art Society's.—Admission to View, including Venice Exhibition, 1s.

VENICE EXHIBITION includes MR. BUNNEY'S 'FRONT of ST. MARK'S,' painted for Mr. Ruskin.

DORÉ'S GREAT WORKS, 'CHRIST LEAVING the PRÆTORIUM,' 'CHRIST ENTERING JERUSALEM,' and 'MOSES before PHARAOH,' each 33 by 22 feet, with 'Ecce Homo,' 'The Ascension,' 'Dream of Pilate's Wife,' 'Soldiers of the Cross,' 'A Day Dream,' &c., at the DORÉ GALLERY, 35, New Bond Street. Daily, Ten to Six.—1s.

ART FOR THE NURSERY.

FROM Messrs. Routledge & Sons we have received *The Milkmaid* and *Hey Diddle Diddle*, which are illustrated in his characteristic manner by Mr. R. Caldecott. Though not quite equal to the best of the artist's designs, these coloured cuts are full of fun. The pigs dancing in the great scene where the cow jumps over the moon will make a deep impression. 'The Milkmaid' is the better book, and the pictures in it could hardly be improved.

Messrs. Osgood (Boston, U.S.) send us a little book called *Grandma's Garden*, containing verses of sentiment and sentimental verses about home gardens, a few rubricated ornaments of no account, and a showy cover printed in colours.—From Messrs. Kegan Paul & Co. we have received a pretty little collection of verses by "Ethel Coxhead," called *Birds and Babies*, with twenty-three pleasing illustrations in outline, mere vignettes and tailpieces.—*Little Wide Awake*, edited by Mrs. S. Barker (Routledge & Sons), is a "coloured annual for children." Some of the highly coloured woodcuts are pleasing enough to be acceptable, while others are gaudy enough to injure the æsthetic faculties they ought to gratify, if not to guide to higher things.—From Messrs. De La Rue & Co. we have *Rumpelstiltskin*, with illustrations in colours by Mr. G. R. Halkett, the well-known story by the brothers Grimm. The cuts are by no means beautiful, but the delineation of the greedy monarch is excellent. From the same firm we have *The May Pole*, illustrated by designs in the manner of Mr. Caldecott by C. A. Konstam and E. and N. Casella. The imitations are tolerable; we should have preferred an original mode of design.—Messrs. F. Warne & Co. have issued a case containing a dozen little books illustrated with coloured designs by Mr. G. Lambert. Very small children, whose art education has been neglected, may receive them with gratitude; to others we cannot recommend them. The *Oak-Leaf Library*, another case from the same publishers, contains six similar books suited to tastes a little more developed, and they are of somewhat better quality.—Messrs. Marcus Ward & Co. have employed Mr. Thomas Crane to decorate a volume of descriptive verses, which is called *Abroad*, with pictures in colours representing the incidents of a journey made by children from London to Paris and back. The pictures are tolerably good (that of a steamer's deck is the best), but they might have been more spirited. The *Crèche* at Rouen deserved more animated treatment.—Very tastefully bound and printed is the book Messrs. De La Rue have named *Monthly Maxims*, consisting of "rhymes and reasons to suit the seasons." It is illustrated by Mr. R. Dudley. The designs are of unequal value, and differ much in taste and style. The prettiest include dainty things such as Cipriani drew, and others which we refer to the Adams. The more modern instances are but poor and generally commonplace. Mr. Dudley's verses are unfortunate, because he tries to be witty when he is only jocular.

PICTURES AND DRAWINGS OF VENICE.

THE principal, if not the most artistic pictures in the collection of views of Venice that is now exhibiting in the gallery of the Fine-Art Society are works by Mr. J. Bunney, a *protégé* of Mr. Ruskin's, whose death we noticed the other day. Mr. Bunney was famous for the diligence and skill with which he made literal representations of parts of the city, the greatest labour of his life being the large *Front of St. Mark's*, which is No. 41 in this collection. It gives a straight view, in parallel perspective, of the façade. It was executed with wonderful care, delicacy, and patience. It occupied for the first hours of the morning not fewer than twenty months of "scirocco days." Accordingly it embodies, with fidelity which is its own reward, the lurid illumination and almost shadowless effect of the peculiar state of the atmosphere. In the ordinary sense of the term there is but little picture-making about it. We have the sculptures, mosaics, coloured marbles, many-tinted pinnacles, and their accompanying domes that are more picturesque than beautiful. Every part is very faithful, but, apart from the associations of the subject—and in this respect it has no advantage over a good photograph—it is utterly devoid of pathos. Much better as a work of art is the *Horses of St. Mark* (39A), a powerful and brilliant picture which we have noticed before as full of daylight and colour and very solid. The next best picture by Mr. Bunney is the *Giant's Stairs, Ducal Palace* (58), which is remarkable for the exquisite finish and crispness of its draughtsmanship and the purity of its local colour. Nearly equal to the last is *North-West Angle of the Church of San Marco* (85).

The biography of Mr. Bunney which precedes the Catalogue records the course of a well-spent and unpretending life which terminated with so little pecuniary profit that the artist's family are poorly off. Some of his pictures are omitted in the Catalogue. *In St. Mark's* is a very impressive and pathetic interior, and there is much dignity about its gloomy tones and sombre colour. *The Choir of St. Mark's* is even more interesting from the time-faded look of its wall paintings and its carvings, its columned baldachino and statues of bronze, its numerous lamps, and its tesselated floor. It would have been well for art if before Sir Gilbert Scott smeared the interior of Westminster Abbey with a varnish of lac some student as devoted as Mr. Bunney had done for the English building what he did for the Venetian. Of Westminster Abbey before it was gaumed all over with lac only a very few drawings by Mr. Boyce and others preserve a veritable record.

Artistically speaking, the best picture here is Heer van Haanen's *The First Dip* (16), a scene on the steps at the end of a passage in Venice. A little boy is about to make his first essay in the water, being secured at the waist with a rope which his brother holds, while his sister, her skirts daintily tucked between her knees, watches the adventure with an intense interest which is expressed with amazing skill, energy, and good fortune. This is a fine piece of colour, wealthy in tones, boldly and firmly painted with exemplary care that has succeeded in hiding all signs of labour by the frankest sort of handling.—Contrasting with the power of this piece of fine art and the self-denying fidelity and scrupulous care shown in Mr. Bunney's architectural subjects are a number of pretentious sketches, the shallowest we have seen for many a day, by Miss Clara Montalba. It is hard to see why such things as these and the coarse *Bridge of Sighs* (60) by Mr. MacWhirter should be hung in the same room with the works of Mr. Bunney, or such masterly paintings as Mr. Poynter's *A Canal* (36) and *Venice, Moonlight* (37). The contrast is painful.—A body of studies by Mr. D. Law, Nos. 46 to 54, are well worthy of attention.—Some pencil sketches by Mr. Ruskin are on a screen; see Nos. 90 and 92.—The contributions of M. A. N. Roussoff are cleverly drawn. Several of this artist's fine architectural studies have charmed us before now.—We notice again with great pleasure Mr. Marks's well-known *Franciscan Sculptor and his Model*, which represents with admirable spirit the carving of a gargoyle.—*The Dogana* (103), by Herr G. Munger, sparkles with light. The execution is very rough. See likewise, by the same, *Venice* (112) and *P. and O. Steamer off Venice* (119); and Mr. Farrer's *Lion of St. Mark's and Piazzetta* (107), comprising the tower-like column which so many artists have delineated with success.

E. V. B.'S ILLUSTRATIONS.

Huntercombe, Maidenhead.

As your reviewer, in the *Athenæum* of last week, appears to think that I am no doubt "quite satisfied" with the cheap five-shilling reissue of Hans Christian Andersen's 'Fairy Tales,' illustrated by E. V. B., which has just come out, I feel it almost impossible not to answer that it makes me quite miserable. The first edition, published in 1871 at 25s., was wonderfully well done; the coloured engravings were most beautiful, as such. This later work—though I know from good authority that "hundreds of pounds have been spent upon it"—is just as unlike the first edition, from which it is copied, as it is bald and untrue, and altogether false, in both colouring and drawing.

I should be very sorry to say anything that might interfere in any way with the sale of the book for the sake of its publishers, for whom I have a great regard. But in justice to my own much-travestied art I must protest that I am not "satisfied."

E. V. B.

NOTES FROM ROME.

THE discovery just made at Pompeii, of a fresco representing the judgment of Solomon, has taken everybody by surprise. Who would ever have conceived that a scene inspired by the Holy Bible would be discovered on the walls of an absolutely pagan, dissolute, materialistic town? The picture, of which I have a careful reproduction before me, belongs to the burlesque *genre;* and although the caricaturist has somewhat exaggerated the conventional deformity of his various personages, still every particular of the Biblical account can be easily recognized. In the right corner of the scene King Solomon, sceptre in hand, sits on a raised platform or tribunal, between two assessors. He has already told the officer to make two portions of the baby; the false mother is waiting to receive her half in perfect indifference, whereas the real one bursts into a fit of despair, kneeling before the king, tearing her hair, and showing her grief in every way. All this is expressed in a bright, spirited, funny tone. The executioner, attired like one of Lecocq's characters, brandishing a knife six times larger than the baby; the equerries-in-waiting, and the gentlemen of the black rod, with legs as thin as a toothpick and craniums as large as a jar; the assessors making faces at the poor mother, and enjoying the performance, — all these details make the picture extremely curious.

Many conjectures have been proposed to explain the unexpected appearance of this picture at Pompeii. Some one thought that the house may have been purchased by a wealthy Jew; the conjecture, however, is not consistent with the fact that every other detail of the house is of an absolutely pagan character, which no honest Jew could ever have accepted or tolerated. Others think that the legend of the judgment may have found its way in foreign tradition and literature; but we have no evidence or testimony on this fact. The best, in fact the only satisfactory, explanation which can be suggested is this. It is true that the Romans held the Jews in such contempt that they never cared to inquire about their history and literature. Roman ignorance on this subject is certified by the absurdities written by Tacitus and others whenever they speak of the Jews (and of Christians). On the other hand, the Alexandrine school, especially after the translation of the LXX., was very well acquainted with Hebrew archæology, history, and tradition. The lovely episode of Solomon's judgment may have become popular in Alexandrian well-to-do circles. At Pompeii there was a large and wealthy colony of merchants from Alexandria. No wonder if one of them chose to decorate his house with frescoes the subjects of which were derived from legends very popular in his mother country. And what renders this supposition all the more probable is that in the same room other frescoes have been discovered representing Egyptian scenes, such as crocodile hunting on the banks of the Nile, pigmies, and so on.

Not far from this house (belonging to Regio VIII., Insula VII., of Fiorelli's survey, and surrounded by the Via dell' Abbondanza, dei Teatri, e dei XII. Dei) a lararium, or domestic shrine, has been found in a wonderful state of preservation. The niche is supported by two pillars painted in imitation of marble, and enclosing a picture of the Fortuna between two Lares. On the steps of the altar there were seven statuettes of precious material and workmanship. One was taken away at the moment of the catastrophe by the fugitives, perhaps because it was the most precious or the most venerated of the whole group. The six others have been found in their proper places. The first represents Apollo Citharoedus, the figure being of bronze, the accessories, such as the crown of laurel, the lyra, &c., of silver. The second, made of bronze, of silver, and of ivory, has undergone a curious transformation. At first it was made to represent Mercury; then, with the addition of the proper clothing and attributes, it was turned into an Æsculapius. The others represent Mercury, Hercules, and two Lares. Three of them are perfect jewels of art, and coated with the loveliest sapphire patina. The others are of inferior workmanship.

Between the column of Phocas and the temple of Saturn, at the foot of the Clivus Capitolinus, the foundations of some mediæval granaries have been demolished, as they obstructed the view of the north-east corner of the Basilica Giulia, and prevented us from digging on the site of the triumphal arch of Tiberius. Among the heterogeneous materials with which those foundations had been patched up, two first-rate inscriptions have been discovered. The first one describes the demonstrations of honour and of sorrow voted by the Senate at the death of T. Flavius Sabinus, on the motion of his brother, the Emperor Vespasian. The Senate, after recalling with gratitude the services rendered to the Empire by the deceased, when Governor of Moesia, when Commissioner for the Census of the Gauls, and when Prefect of Rome, agrees that his clypeus, or medallion, shall be placed in the Senate hall; that the funeral shall be *censorium;* and, lastly, that his statue shall be raised in the Forum of Augustus. The second inscription contains the list of the treasurer and superior officers of the Ærarium Saturni for the years 15–20 of our era. It joins with and completes a fragment of the same document published in the 'Corpus I. L.,' vol. vi. n. 1496.

RODOLFO LANCIANI.

Fine-Art Gossip.

THE Marquis of Bute has lent to the Department of Science and Art, for exhibition in the Bethnal Green Museum, the whole of his collection of pictures, some years since removed from Luton Hoe, and long stored in an otherwise empty house in Eaton Square. Many choice specimens are included in this gathering, which will be opened to the public at Christmas. The collection was formed by the third Earl of Bute, and is rich in Low Country pictures. Among the noteworthy examples are Rubens's boy seated on a dresser looking at his nurse, with fruit painted by Snyders; the original sketch or study for the 'Adoration of the Magi' at Mechlin; Van Dyck's portrait of Viscount Stafford as a youth, in a black dress; Terburg's portraits of a gentleman and his wife in a library; Metsu's old woman feeding a spaniel, from the Braamcamp Collection; an old man with a white beard, by G. Dou; a mother scolding her daughter, by F. Van Mieris; an interior of an hostelry, comprising figures of a guest and the hostess disputing about his bill, by De Hooghe, dated 1658; four capital pictures by Jan Steen; three by Teniers; three by A. Van Ostade; two by Brauwer; three by Berchem; four by A. Cuyp, including the morning landscape with a gentleman on a grey horse, which was at the Academy in 1870, and 'Orpheus instructing the Beasts'; two by Hobbema; two by Van de Heyde; a large example by A. Elzheimer; and others by Neefs, Steenwyck, Berckheyden, Van der Neer, Wouwermans, J. Ruysdael, Swaneveldt, Du Jardin, and Le Duc. The Italian pictures comprise specimens ascribed to Del Sarto, Garofalo, Bonifazio, Paris Bordone, Tintoret, P. Veronese, Guercino, Feti, S. Rosa, Claude, and N. and G. Poussin. A fine Velazquez is the portrait of Innocent X.

MR. ALMA TADEMA has lately made great progress with some pictures besides the 'Meeting of Antony and Cleopatra,' which we have already described. 'Shy' shows a beautiful girl sitting, or half reclining, at the base of a pillar in a Roman building of white and coloured marbles in a vivid golden illumination. She hides her brows with her upraised arm, and looks out of the shadow at us. A smile seems to pervade every feature of her fair and rosy face, which are set in pale gold hair. She holds a scroll in her left hand, as if she had been conning a task. She wears a cream-white and pale citron garment. The cause of her emotion is the stealing forward of her lover, a big, dark, loutish Roman, who is about to place in her lap a huge bouquet of roses of the ruddiest hue. His black tunic and sea-green toga assort with his dark carnations, and contrast with the gay hues of the damsel's robes and her fresh carnations, and the sun-flushed marble of the building. 'A Foregone Conclusion' depicts a staircase in a temple of fine white marble, its sculptured frieze, red roofs, tall vases, and rich statuary forming a vista which lies in glowing light and is dashed with masses of clear shadow. At the extremity of the view are the turquoise-coloured sea and azure sky. At the very edge of the darkest shadow, at the opening of a corridor in the foreground, are two girls, the one clad in a green dress, the other in citron. They halt playfully, and await the coming up of a sedate lover in a yellow tunic and rose-coloured toga, which glows like the sumptuous blossoms he has brought for a gift to one of the damsels, thus indicating the nature of the foregone conclusion which has given a title to the picture. This is one of the most animated and piquant of Mr. Tadema's designs, and the picture charms us by the richness and crafty arrangement of its light and shadow, its fine scheme of colour, and the subtlety with which the sunlight reflected from the marble floor into the foreground shadows projects upwards shadows of its own from the figures, so that we have at once light in shadow and shadow in shadow. 'Betwixt Venus and Bacchus' is a large water-colour drawing, showing the cortile before a temple of the wine god, the sunlit façade of which, surmounted by its acroteria of panthers in bronze, is reared on high against the cloudless firmament, which has softness of its own, as if it absorbed the light and, being saturated, reflected none. A warm-tinted wall divides the court from the immediate precincts of the temple; over its summit lean the crimson blossoms of a Judea tree. A large sundial is mounted on the wall-plate above the heads of a priestess and a priest, who are grouped at the basin of a white marble fountain surmounted by a statue of Venus Anadyomene in the act of dressing her hair. The priestess, clad in appropriate skins and holding a thyrsus, lingers at the side of the basin and contemplates the reflection of her face in the water which it contains. The priest, whose dark vestments contrast with the brilliancy of the rest of the picture, calls the attention of his companion to her duties in the temple. More than one of these pictures is destined for collections in the United States.

M. DE NEUVILLE is now in England, making studies and collecting information for a picture which he is painting of the Egyptian War. He and Mr. Woodville will shortly go to Egypt, commissioned by the Fine-Art Society to paint episodes of the late campaign.

THE private view of the Winter Exhibition of the Society of British Artists is appointed for Saturday next, the 25th inst. The gallery in Suffolk Street will be opened to the public on the following Monday.

WE have to record the sudden death, on the 10th inst., of Mr. Edward Bowring Stephens, A.R.A., the fortunate sculptor of busts and other works. The son of a statuary, he was born in Exeter, and last month he completed his seventy-sixth year. He was a pupil of Baily, R.A., and the Royal Academy. He obtained the gold medal for sculpture in 1843; he went to Rome shortly before this event, and in due course produced, besides many busts, several statues which have been much admired in his native city and its neighbourhood, where he had warm friends. His first contributions to the Academy appeared in 1838, and comprised four subject

sculptures, including 'Narcissus,' 'An Arcadian Nymph,' and 'Maternal Love.' From this date he was a very frequent exhibitor with the society, of which, simultaneously with Sir Frederic Leighton and Mr. Calderon, he was elected an Associate in July, 1864. He exhibited 'Maternal Love' at the British Institution in 1844.

It is intended to signalize the recent opening of the new art collections and other treasures at Derby by forming as numerous a gathering as may be of the works of Wright of Derby, and placing them before the public as one of the attractions of the coming season. A peculiar interest will thus be given to an event which is important because it may be accepted as the first of a series commemorating the foundation of local museums and art collections in various parts of the country by local efforts, aided by liberal gifts analogous to that for which the Derby Museum owes much to Mr. Bass. Several towns in the North and the Midlands are actively promoting the foundation of such museums.

Mr. Millais's 'Pomona,' as we mentioned last week, is being exhibited to the public in Mr. Tooth's gallery in the Haymarket. It is hardly worthy to be reckoned among the masterpieces of the artist, but it can boast of many of the characteristic charms of his designs and a considerable share of his skill. It is the life-size figure of an English damsel of eight years old, who might have been the playmate of that Miss Penelope Boothby whom Reynolds immortalized. 'Pomona' might have gone to school with the child whose likeness is called 'Cherry Ripe'; but the portrait of the latter is the more successful. 'Pomona' wears a white dress and a mob cap, and a sea-green sash and trimmings; in her hand are some apples, more apples are in a little wheelbarrow at her knee. Her features have a very sweet expression, and her cheeks the wholesome plumpness and pleasant redness of the best of apples. The scheme of the colour and chiaroscuro of the picture is very pretty, but it involves no novelty, while the execution of the picture is by no means so searching as it might be.

Messrs. Adam & Charles Black, of Edinburgh, have in preparation, to be published in a demy quarto volume about Christmas, 'Modern Athenians,' a series of contemporary portraits of notable Edinburgh characters, drawn and etched between 1837 and 1847 by the late Mr. B. W. Crombie. The pictures will be printed from the original plates, and embody portraits of Sir Walter Scott, Profs. Wilson, Aytoun, and Bell; Lords Cockburn, Jeffrey, and Murray; Sir Thomas Dick Lauder, Lord Provost Adam Black, and other Edinburgh celebrities. The pictures will be accompanied by illustrative letterpress and biographical sketches by Mr. William Scott Douglas. The impression will be limited to 750 copies.

In the recent conflagration at the Sydney Exhibition, 350 pictures belonging to the Art Society of New South Wales perished. It is feared that Mr. F. Madox Brown's important 'Chaucer at the Court of Edward III.' is destroyed. It was the first example in which sunlight was veritably depicted on a large scale, with blue shadows and orange lustre, in connexion with figures. It was begun in 1847, from studies made at least two years before, and exhibited at the Academy in 1851 (No. 380); again at the Paris International Exposition, 1855; it gained the 50*l.* prize at Liverpool in 1859; and appeared with Mr. Brown's collected works in Piccadilly in 1865. It was bought for the Sydney Gallery in 1875. It contained several portraits, including those of the late Walter H. Deverell, and Dante Rossetti, Mr. W. Rossetti, and Prof. John Marshall.

We understand on excellent authority that the collection of drawings made by J. Doyle for the celebrated "H. B." caricatures, to buy which has, as we have already reported, greatly crippled the resources of the Print Room, was a few years since offered for sale by public auction in London without eliciting a bid. The Print Department must be in a bad way at present, because not only are these examples to be paid for out of its funds, but also the large collection of Japanese drawings lately obtained.

The report of the fifth annual meeting of the Society for the Protection of Ancient Buildings has been issued. It expresses a hope that an impression has been made in many influential quarters, and on the public at large, in favour of the object of the Society. Otherwise good and ill fortune has attended its action. It was in some degree successful in its efforts in behalf of the west window of Tewkesbury Abbey, the central towers of Wimborne Minster and Studland Church, and other structures. Audley House, the Water Gate, Norwich, Meriden Church, and other buildings have been defended with good results. On the other hand, the fate of Deepham Church, Norfolk, illustrates the history of hundreds of similar remains: "Many years of utter carelessness and neglect to spend the small sums needed to keep out the wet have reduced the roofs to such a state that, as most modern architects would say, nothing short of complete renewal is possible. A large sum is then collected, under the pretence of saving an old building, the old roof is cleared away, and an expensive and worthless modern copy put in its place. The stupidity of such a course is apparent, as a fraction of the sum wasted on the new roof would have kept the old woodwork safe and strong for generations to come." When a committee of the Society pointed out to Mr. Ewen Christian, who is, for the second time, charged with the "restoration" of Deepham Church, that it would be undoubtedly possible to save the old work by a careful arrangement of bolts, straps, and iron work, applied in an honest, straightforward manner, without any attempt at concealment, that accomplished architect "objected to the use of iron recommended by the committee, on the ground that this employment of iron was not mediæval"!

A Correspondent, referring to Mr. Beavington Atkinson's letter to us, writes:—"I noticed a complaint in the *Athenæum* that some of the Nuremberg pictures had been sent to Munich. When I was at the former place lately I understood from the custodians that many of the examples had been lent by the King from his private collections, in order to form as good a series as possible of the South German schools. It is very possible that the works indicated by Mr. Atkinson were parts of his Majesty's collection, and as the Nuremberg gallery is under the control of the Pinacothek authorities, such changes as those in question might easily and with propriety be effected. The St. Moritz Kapelle seems so admirably well adapted for that special collection that I am sorry to hear it has been taken to the Germanisches Museum."

MUSIC

THE WEEK.

Crystal Palace.—Saturday Concerts.
St. James's Hall.—Richter Concerts.

Last Saturday's concert at the Crystal Palace opened with the very interesting MS. Concert Overture, No. 4, in F, by Mr. Thomas Wingham, a young composer whose name had several times previously appeared in the programmes of these concerts. Mr. Wingham was a pupil of the late Sir Sterndale Bennett, and the influence of his master is to be traced in the grace and finish of his music. The overture played on Saturday was first performed at these concerts on February 16th, 1878. It bears the motto from Gray:—

Fair laughs the morn, and soft the zephyr blows,
While proudly riding o'er the azure realm
In gallant trim the gilded vessel goes,
Youth on the prow, and Pleasure at the helm.

In illustrating these lines Mr. Wingham has produced a tone-poem which, in our opinion, surpasses anything from his pen which we have yet heard. The themes of the overture are extremely attractive, and their treatment shows a practised hand. In some of his other works Mr. Wingham has been found wanting in contrast of orchestral colouring; no such charge can be brought against the present overture. The scoring is not only well balanced, but sufficiently varied, and the impression left by the music as a whole is one of unmixed pleasure. Mr. Manns once more deserves our thanks for his ready recognition of English art.

A novelty, and one of unusual musical value, was the symphonic poem 'Visegrad,' by Friedrich Smétana. The composer, who was born in 1824, is a native of Bohemia, and was for several years conductor of the National Opera at Prague, a post which deafness compelled him to relinquish in 1874. He has composed many operas in the Bohemian language, besides orchestral pieces and chamber music. A symphonic poem, 'Vltava,' was produced last season with success at the Crystal Palace, and the work given on Saturday confirms the impression previously formed as to his remarkable powers. We learn from the programme that 'Visegrad' is the first of a cycle of three orchestral pieces in which the composer sets forth the glories of his native land. Named after the celebrated fortress of Visehrad (to give it the Bohemian spelling), it deals with the warlike side of the country's history. The work is divided into three sections, the first depicting the fortress in its former splendour, the second illustrating its decline and final downfall in bitter conflicts, and the third representing Visehrad as a silent, desolate monument of past renown. Here the composer has an opportunity for legitimate programme music—nothing is attempted which it is not fairly within the province of the art to express; and in its treatment we think Smétana has been completely successful. The principal subject of the first movement, bearing some slight affinity to the "Walhalla" theme in Wagner's 'Ring des Nibelungen,' is stately and dignified. Within the castle knights and warriors assemble for the tournament, martial strains resound, and the pomp and circumstance of the mimic war are presented by the orchestra. The second portion of the work, a very cleverly treated *fugato*, is more intricate and more difficult to appreciate at a first hearing; but the *finale*, representing Visehrad as the shadow of its former self, is of great poetic beauty. The stately theme of the opening reappears, but with such changed surroundings that the effect produced is one of sadness, and not, as before, one of triumph. As a whole, the symphonic poem must be pronounced a most impressive and beautiful tone-picture, set off by picturesque and often gorgeous instrumentation. It was well received, though less warmly than it deserved, for its merits are of too refined an order to be fully recognized at a single hearing. The work deserves to be repeated at an early oppor-

XUM

tunity. The remaining orchestral pieces at this concert were the Prelude to 'Lohengrin' and Haydn's ever fresh and charming Symphony in D (No. 7 of the "Salomon" set). The pianist of the afternoon was Miss Marie Wurm, who played Schumann's Concerto in A minor. We learn that Miss Wurm has been studying under Madame Schumann, and her reading of the work was similar in many points to that of her talented instructress. The concerto was played with a clearness of detail and an insight into its spirit which deserve great praise. Miss Wurm must also be commended for the comparatively moderate speed at which, following the example of Madame Schumann herself, she played the *finale*. Many pianists treat this last movement as if it were an "Étude de Vélocité," thereby robbing it of much of its charm. The pace adopted on Saturday was as nearly as possible that prescribed by the composer in his score. Miss Mary Davies was the vocalist at the concert.

The crowded state of St. James's Hall at the first of the two autumn Richter Concerts, which took place on Thursday week, proved conclusively that the name of the great Viennese conductor had lost none of its attractiveness for our music-lovers; but the unusually prolonged applause which greeted Herr Richter on his taking his place was probably something more than a mere welcome or a recognition of his unrivalled ability as a conductor. It is no secret that one principal object of his visit is to be able, if possible, to make up to the members of his orchestra some of the money which they lost during last summer's German opera season. As he was not only under no obligation, legal or moral, to do this, but was himself one of the heaviest losers, his disinterested conduct should not be allowed to pass without notice, and we believe that the knowledge of the fact we have just mentioned had something to do with an ovation such as has not often been seen in a concert-room. The programme provided for the first concert was in every way excellent. It differed from most in the fact that it contained no solo music, either vocal or instrumental, but the various numbers were so well selected and so happily contrasted that no sense of weariness was experienced. The orchestra, which numbered ninety-two performers, was virtually the same as that of the Richter Concerts of last season, and the playing throughout the evening was as fine as has ever been heard in St. James's Hall. The first piece in the programme was the now familiar Prelude to Wagner's 'Meistersinger,' given with a clearness of detail, a finish, and a spirit which could not have been surpassed. To this succeeded Mr. C. Villiers Stanford's Serenade in G, composed for the last Birmingham Festival, and heard on this occasion for the first time in London. Like Mr. Manns, Herr Richter is always willing to do what he can for English music, and the present is by no means the first occasion on which he has shown his readiness to encourage native talent. A better choice could not have been made. Mr. Stanford's work gains upon rehearing, and the favourable verdict of the Birmingham audience was emphatically confirmed at St. James's Hall. In spite of occasional suggestions, not amounting to reminiscences, of Beethoven and Schumann, the general character of the music is decidedly fresh, and with more than the average of individuality; it also possesses the great merit of perfect clearness. Mr. Stanford knows exactly not only what he has to say, but the best way of saying it, and his music, in consequence, produces an immediate impression on the first hearing. Each movement of the serenade was most warmly received, the playful *intermezzo* receiving, as at Birmingham, the honour of an encore. Liszt's 'Hungarian' Rhapsody in F (No. 1), which was played twice at the Richter Concerts last season, is one of the most pleasing of its composer's works, the piquant airs being set off by the most brilliant orchestration. The performance was magnificent throughout; in the *finale*, taken, as usual, at a tremendous pace, the violins of the orchestra had special opportunities for display, of which they availed themselves to the utmost. The first part of the concert concluded with the Prelude to 'Parsifal,' which was recently given at the Crystal Palace under Mr. Manns. As before, the solemn and impressive character of the music produced its full effect on the audience. The Prelude to 'Parsifal' will never be popular in the sense in which, for example, the Overture to 'Tannhäuser' is popular; it is too serious in tone, and loses more apart from the work to which it belongs; but assuredly the oftener it is heard the more it will be appreciated as a piece of sacred music. The performance was admirable, Herr Richter's *tempo* being slightly quicker than that adopted by Herr Levy at Bayreuth. A splendid performance of the 'Eroica' Symphony formed the second part of the concert.

The second and last concert of the present series took place on Tuesday evening, the most interesting feature of the programme, at any rate to musicians, being Brahms's Second Pianoforte Concerto in B flat. It will be remembered that this important work was introduced to English hearers at the first Crystal Palace Concert this season, and a notice of it appeared in No. 2869 of the *Athenæum*. As we stated then, its length and elaboration necessitate more than one performance in order to arrive at a full comprehension of its value and significance. The music of Brahms appeals in general to the head rather than to the heart, and when he plays upon the emotions, as in the 'Deutsches Requiem,' he reaches them through the intellectual faculties more directly than is the case with other eminent composers. In addition to this his works are frequently planned on a large scale, and consequently require concentrated attention for a time difficult to sustain by many hearers. Mendelssohn set the example of shortening and simplifying the concerto form; but Brahms has in this instance amplified it to symphonic proportions, and in mere length the B flat Concerto exceeds every other example in existence. It is almost needless to say that to those who had heard it at the Crystal Palace the performance last Tuesday was more impressive, but not because it was finer in any respect. The accompaniments were uniformly well rendered, but Mr. Dannreuther, who undertook the solo part, was more satisfactory in the third and fourth than in the first and second movements. The work was favourably received, but there was little enthusiasm, which was not surprising, as it was probably a novelty to the majority of those present. The greatest favour was reserved for two Wagnerian selections, the prelude to the third act of 'Die Meistersinger,' and the introduction and close from 'Tristan und Isolde.' The effect produced by these pieces, but especially by the latter, was simply electrical, and we have seldom witnessed a greater display of feeling in the concert-room. Both excerpts were superbly rendered, and Herr Richter once more proved himself unequalled in the direction of Wagner's music. The concert opened with the Overture to 'Euryanthe' and closed with Beethoven's C minor Symphony. At the close Herr Richter was twice recalled to the platform, a compliment rarely, if ever, before paid to a conductor in London.

Musical Gossip.

A NEW high-class musical association has been formed, somewhat after the plan of the Bach Choir, to be called the Handel Society. The rehearsals for vocal and instrumental members commenced this week at No. 4, Carlton Gardens, with Mr. F. A. W. Docker as conductor. The works now in preparation are Handel's 'Belshazzar,' Utrecht 'Jubilate,' Funeral Anthem, 'The Ways of Zion,' and Water Music, together with compositions by Gluck, Brahms, and Raff.

THE Popular Concert on Monday does not require extended notice. It was chiefly remarkable for Mdlle. Janotha's performance of Chopin's Sonata in B minor, Op. 58, which had only been heard twice previously at these concerts. It is not in works written in classical form that Chopin's genius most readily manifested itself, and the B minor Sonata, like its companions, is unsatisfactory as a whole, though it contains some beautiful ideas, notably the second subject and continuation in the first movement, and the leading theme of the *largo*. The Polish pianist was thoroughly *en rapport* with the music, and she has rarely been heard to greater advantage. The audience made its customary demand—in this case extremely unreasonable—for an encore, and Mdlle. Janotha responded with an exquisite rendering of Chopin's Berceuse, Op. 57. The concerted works in the programme were Mozart's Quartet in D, No. 7; Haydn's in C, Op. 33, No. 3; and three numbers of Schumann's 'Stücke im Volkston' for pianoforte and violoncello. Mr. Harper Kearton was favourably received in airs by Weber and Mendelssohn. He sings tastefully, but he would do well to adopt a more animated style. On Monday next a Quartet in D, by Dvorák, Op. 23, will be performed for the first time.

WE have received the catalogue of works performed at the Monday and Saturday Popular Concerts during twenty-four seasons, from February 14th, 1859, to April 3rd, 1882. In all about 710 works have been introduced, by 92 composers. German music, of course, largely preponderates. Beethoven stands at the head of the list with 91 works, the next in order being Mozart, 58; Haydn, 56; Bach, 54; Schumann, 52; Mendelssohn, 50; Chopin, 34; and Schubert, 31. English is only represented by 9 composers and 20 works, or less than ·03 of the whole.

A LETTER has been recently addressed by Mr. T. L. Southgate to a daily contemporary on the subject of the contemplated sale of the library of the late Sacred Harmonic Society. It is no secret that one of the chief musical societies of America is desirous of purchasing the library *en bloc*. Mr. Southgate strongly protests against

its being allowed to leave the country, and we cordially endorse his arguments. The library is in many respects unique, being especially rich in early English music, both printed and manuscript, and in works of musical history and literature. It will be nothing short of a national loss if this fine collection is allowed to go to America. We earnestly hope that the negotiations which it is understood have taken place between the Committee of the Sacred Harmonic Society and the Royal College of Music may lead to a satisfactory issue. The British Museum would be the best of all places for the library; but if the Trustees decline to purchase, it would be well for the promoters of the Royal College to take advantage of the opportunity, which will certainly not recur, before it be too late.

Mr. W. E. Evans, the well-known harmonium manufacturer, has patented an improvement in American organs which seems likely to be of great value. The general complaint with regard to those instruments has been the monotony of their tone. Mr. Evans's patent consists in the application to them of the "expression" as met with in the ordinary harmonium. The arrangement is very simple, and can be fitted without difficulty to any American organ, while the advantage in adding to the resources of the instrument can hardly be over-estimated.

At the first concert of the Brixton Choral and Orchestral Society, which took place at the Gresham Hall last Monday, Handel's 'Jephtha' was performed under the direction of Mr. W. Lemare.

At Mr. Henry Holmes's concert on Wednesday evening a Pianoforte Quartet in C by Mr. Algernon Ashton was performed. The composer is an Englishman, but has resided for several years in Germany, and was for a time a pupil of Raff. His work, however, reflects some of the mannerisms, without much of the spirit, of Brahms. Of the four movements a *romanza* in A flat is decidedly the most interesting; but in general the style of the music is eccentric and wanting in clearness of design. Such, at any rate, was the impression on a first hearing, which, of course, is no decisive test of the value of an elaborate composition. In the performance the admirable pianoforte playing of Madame Haas is deserving of mention. At the next concert, on the 29th inst., a String Quintet in E by Mr. Holmes will be performed.

Messrs. A. Burnett and Ridley Prentice are giving a series of six subscription chamber concerts at the Conservatoire Lecture Room, Blackheath, assisted by such excellent and well-known artists as Messrs. E. Howell, W. H. Hill, A. C. White, and H. Lazarus. The first concert took place on the 7th inst., and the second is announced for next Tuesday. Residents in the neighbourhood of Blackheath will do well to avail themselves of the opportunity offered them by these concerts.

The Dundee Amateur Choral Union announces a grand musical festival to be held in the Kinnaird Hall on the 24th, 25th, and 26th of January next, to commemorate the twenty-fifth anniversary of the society's existence. Gounod's 'Redemption' and Handel's 'Israel in Egypt' will be given, under the direction of Mr. Henry Nagel, the conductor of the Union; and there will also be a grand orchestral concert, including Beethoven's 'Choral' Symphony. This concert will be conducted by Mr. Manns. A sketch of the history of the society is affixed to the prospectus of the festival, from which it appears that since its foundation fifty-three choral works of greater or less dimensions have been given, while at the orchestral concerts no fewer than twenty symphonies, forty-four overtures, and twelve concertos, besides a very large number of miscellaneous pieces, have been brought forward.

Mr. Charles Salaman, who has already written music to love songs in several languages, notably Greek and Latin, has just completed a musical setting of the original text of a Hebrew love song by Rabbi Jehuda ben Sabbathai Hallevi, of Barcelona, who lived about A.D. 1150. This song will shortly be published.

Anton Rubinstein is at present in Leipzig superintending the production of his opera 'Die Makkabäer.' It is said that he is engaged upon a new sacred lyric drama, the subject of which is taken from the Song of Solomon.

An extremely interesting paper on Mozart's 'Don Juan,' read by M. Gounod before the Académie des Beaux-Arts in Paris, has been reprinted in the last two numbers of the *Ménestrel*.

DRAMA

THE WEEK.

Globe.—'The Promise of May,' a Rustic Drama in Prose, in Three Acts. By Alfred Tennyson.
Court.—'Picking up the Pieces,' a Comedietta in One Act. By Julian Sturgis.—Revival of 'The Parvenu,' a Comedy in Three Acts. By G. W. Godfrey.

It is doubtful whether under the most favourable circumstances 'The Promise of May' could have obtained more than a *succès d'estime*. Such small amount of interest as the English public is prepared to manifest in pastoral drama has in the present instance been exhausted by the two adaptations of 'Far from the Madding Crowd,' which have respectively held possession of the Globe and the St. James's theatres. In France even, where a comparatively large section of the public has a genuine taste for art, the pastoral dramas of George Sand have taken no strong hold upon the public. Such chance as 'The Promise of May' might have possessed was marred by the conditions of the performance. The work was indeed, so far as the stage is concerned, unedited. A practised hand might easily have removed the blemishes which are due to ignorance of the stage. Whatever dramatic quality Mr. Tennyson may possess—assumably a very modest amount—a total absence of what may be called stage-craft is exhibited in his new piece. Apart from the fact that 'The Promise of May' is weighted with a purpose—often a dangerous element in a play—the manner in which people are brought on the stage, allowed to show so much of their character as they are capable of revealing, and then dismissed, is indicative of a novice. Oppressed, it may be assumed, with the weight of Mr. Tennyson's reputation, those who took part in the representation hesitated to remove what they knew to be defective or dangerous, and the result was a work so crude as to be from the stage point of view childish. The man on whom falls the chief weight of the action comes on the stage and thinks aloud. His speculations, which, though dealing with theological and political rather than ethical subjects, recall the opening portion of 'Maud,' are overheard by the rustics of the village in which he has been spending some days in idleness and mischief, and suggest, very naturally, grave doubts as to his character. A species of nineteenth century Iago, he holds continual commune with himself as to the motives of his actions and the consequences to which they may lead. As a means of showing character this method may in modern days be sparingly employed. To render audible to others aside or soliloquy is the clumsiest expedient ever adopted. In the most commonplace and old-fashioned melodrama the "I must dissemble" of the villain is intended only for the public. That Mr. Tennyson intends the character of Edgar to be accepted as serious is extremely curious. In a portion of the literature of the *Régence*, with which those who seek to study the growth of Revolution are compelled to scrape acquaintance, men so cold-blooded and cynical as this may be found. Edgar is, however, presented as having somewhere within reach a species of heart. He is sorry for his victim, and in this respect differs from De Valmont. His penitence is, however, in its manifestation almost more cruel than his original crime. That there may not exist somewhere, in a world full of curious products of wickedness and disease, a being answering to Edgar cannot, perhaps, be said. If, however, he is to be accepted as an individual, it is necessary to afford such insight into his nature as may make his actions intelligible. To show him, on the other hand, as the natural outcome of those doubts which wrung the heart of a Leopardi is, with all due respect for Mr. Tennyson, simple arrogance. Looked at in any light, Edgar is a caricature or a phantom. The audience, puzzled with him at first, ended by laughing at him. His unblessed speculations moved derision, his notions of compensation provoked frank hilarity. It is possible, though we fail to see how it was to be done, that a different rendering of the part might have softened down what was most extravagant. Taking his part in exemplary earnest, Mr. Vezin presented a gentleman of staid demeanour and philosophical collectedness uttering such sentiments as seemed to suggest that he was playing a dual *rôle*, and was himself the Mephistopheles to his own Faust. With the character of Edgar fell the play. Dora and Eva, the two heroines, were agreeable enough; Farmer Dobson, a species of Northern farmer at the age of thirty to forty, was virile and sympathetic; and the lads and lasses and the yokels generally were fresh and natural. The presence in a story, however, of a being like Frankenstein removes the whole into fairy land, and those who had dealings with Edgar took from his mere presence a reflection of unreality. Some excellent acting was shown by Mrs. Bernard Beere as Dora, Miss Ormsby as Eva, and Mr. Kelly as the Farmer. The last-named actor, indeed, postponed for an act the fall of the play. That a venture so spirited as that of the new management should commence in disaster is scarcely less a subject of regret than that Mr. Tennyson should have incurred the open, if not too generous ridicule of any section of his countrymen.

'Picking up the Pieces,' a duologue of Mr. Julian Sturgis, produced at the reopening of the Court Theatre, proves in stage representation less attractive than had been anticipated. Its delicacy and quiet humour scarcely compensate for the absence of dramatic interest; the whole seems long, and the *dénoûment* not too probable. It is to be hoped that another dip into the attractive collection whence this work is taken may prove more satisfactory. The trifle was adequately supported by Mr. Arthur Cecil and Miss Carlotta Addison. 'The Parvenu'

XUM

retains its power to amuse. Well acted throughout, it obtains in one character—that of Mr. Ledger, the self-made man—an interpretation that approaches greatness.

Dramatic Gossip.

A DEFENCE of the character of Edgar in Mr. Tennyson's new play appeared in Thursday's *Daily News* as "from a correspondent." The correspondent is, we believe, Mr. Lionel Tennyson, and it may be presumed that the explanation given in the letter is in harmony with the Poet Laureate's own view of his agnostic hero.

A MEMORIAL in behalf of Miss Kelly, the celebrated actress, now in her ninety-third year, having been some time back presented to the Prime Minister, Mr. Gladstone has just awarded her a grant from the Crown of 150*l.* Many eminent names were subscribed to this memorial, and Mr. Charles Kent greatly exerted himself in the matter. Miss Kelly, who is still happily in full possession of her faculties, enjoyed for thirty-six years a wide celebrity in her profession. During that period she was associated on the boards of Drury Lane and Covent Garden Theatres (as well as on those of the Haymarket and the English Opera House) with Mrs. Siddons, John Kemble, Edmund Kean, Munden, Mrs. Jordan, and other distinguished contemporaries. It is curious to remember that she made her first appearance before the public so far back as the last century, namely, in the December of 1799, when, as a little sprite of nine, she stepped on to the stage of Drury Lane in her uncle Michael Kelly's opera of 'Blue Beard,' marching in the children's perspective procession, turban on head, and scimitar in hand, among the retainers of the Boy Blue Beard. The representative of this character, throned that night in a miniature howdah on a baby elephant, was, fourteen years afterwards, to take the town by storm as Shylock, and win the recognition of posterity as Edmund Kean. Miss Kelly was the original of "Barbara S——" in the 'Essays of Elia,' and to her Charles Lamb inscribed two of the most graceful of his sonnets.

IN a communication made the other day to the Cambridge Antiquarian Society Dr. Pearson called attention to the fact that the Three Pigeons, at the point where the road from Thame to Abingdon crosses that from London to Oxford, is probably the spot where Goldsmith laid the scene of 'She Stoops to Conquer.'

MISCELLANEA

A Prophecy Fulfilled.—In my leisure reading I have stumbled upon a curious instance of poetical seership. The recent British acquisition of the island of Cyprus has fulfilled in a remarkable manner the following prophecy of the poet John Hughes, written about the year 1703. The passage is to be found in Cantata i. of his 'Poems for Music':—

> When Beauty's goddess from the ocean sprung,
> Ascending, o'er the wave she cast a smile
> On fair Britannia's happy isle,
> And raised her tuneful voice, and thus she sung:
> Hail Britannia! hail to thee,
> Fairest island of the sea!
> Thou my favorite land shalt be.
> *Cyprus too shall own thy sway,*
> And dedicate to me its groves, &c.

This ingenious man—writer, musician, and draughtsman—was born in the year 1677. He was the schoolfellow of Dr. Isaac Watts and a friend of Pope and Addison, the latter of whom he induced to finish the tragedy of 'Cato' and bring it upon the stage. Hughes's own drama, 'The Siege of Damascus,' may be described as the pilot engine of a lengthy train of stage "Sieges." His 'Essay on the Pleasure of being Deceived' well repays a reading.

CHARLES RICHARD PANTER, LL.D.

TO CORRESPONDENTS.—C. P.—J. B. R.—received.
S. G.—We cannot answer such questions.
No notice can be taken of anonymous communications.

SAMPSON LOW, MARSTON & CO.'S *LIST.*

Now ready, imperial 8vo. very choicely bound in new satin-wood pattern, gilt edges, 28s.

The HISTORY of FASHION in FRANCE; or, the Dress of Women from the Gallo-Roman Period to the Present Time. From the French of M. AUGUSTIN CHALLAMEL by Mrs. CASHEL HOEY and Mr. JOHN LILLIE. With 21 Coloured Plates after Drawings by F. Lix, and Tailpieces by Scott.

Now ready, large imperial 4to. in tasteful extra binding, gilt edges, 3*l.* 3s.

FLORENCE: its History. The Medici —The Humanists—Letters—Arts. By CHARLES YRIARTE. Translated by C. B. PITMAN. Illustrated with 500 very fine Engravings.

TAHITI. By Lady Brassey, Author of 'Voyage of the Sunbeam,' &c. Fcap. 4to. very tastefully bound, cloth extra, with 31 'Autotype Illustrations, from Photographs taken by Colonel Stuart-Wortley, 21s. (Not 15s. as previously advertised.)

A THOUSAND YEARS HENCE. Being Personal Experiences as Narrated by NUNSOWE GREEN, Esq., F.R.A.S. F.S.S. Ex-V.P.S.S.U.D.S. (Ex-Vice-President of the Shoreditch and Spitalfields Universal Discussion Society). Crown 8vo. cloth extra, 6s.

ART and ARCHÆOLOGY: an Illustrated Dictionary of Art and Archæology. By J. W. MOLLETT, B.A. With about 750 Wood Engravings. Small 4to. strongly bound in cloth, 15s. [*Nearly ready.*

Now ready, in crown 8vo. cloth extra, 7s. 6d.

ANCIENT GREEK FEMALE COSTUME. 112 Full-Page Plates and 30 smaller Illustrations. With Explanatory Text and Passages from the Greek Classic Writers. Drawn and Arranged by J. Moyr Smith.

GREAT HISTORIC GALLERIES of ENGLAND. Containing 36 Photographs from Paintings by Celebrated Artists. Imperial 4to. cloth, gilt edges, 2*l.* 12s. 6d.

The ETCHER, Containing 36 Plates, the Original Etched Work of the best Artists. Imperial 4to. cloth gilt edges, 2*l.* 12s. 6d.

Nearly ready, Vol. VII. 4to. cloth extra, gilt edges, 25s.

MEN of MARK. A Gallery of 36 Permanent Cabinet Photographs of Men distinguished in the Senate, the Church, in Science, Literature, and Art, the Army, Navy, Law, Medicine, &c.

FLOAT FISHING and SPINNING in the NOTTINGHAM STYLE; being a Treatise on the so-called Coarse Fishes, with Instructions for their Capture. Including a Chapter on Pike Fishing. By J. W. MARTIN, the "Trent Otter." With Illustrations. Crown 8vo. cloth, 2s. 6d. [*Ready.*

STUDIES in RUSSIAN LITERATURE. By CHARLES EDWARD TURNER, English Lector in the University of St. Petersburg. Crown 8vo. cloth extra, 8s. 6d. [*Ready.*

ENGLISH DRAMATISTS of TODAY. By WILLIAM ARCHER, M.A. Crown 8vo. cloth, 8s. 6d.

Now ready, small fcap. 4to. cloth extra, 6s.

Sir ROGER DE COVERLEY. Reimprinted from *The Spectator*. With 125 Woodcuts engraved by J. D. Cooper from Designs by C. O. Murray, and with Steel Etching.

Fcap. 4to. cloth extra, 12s. 6d.

JOURNALISTIC LONDON; being a Series of Sketches of Famous Pens and Papers of the Day. By JOSEPH HATTON. Profusely Illustrated with Portraits of distinguished Editors and Writers for the Press. [*Ready.*

Now ready, fcap. 4to. cloth extra, gilt edges, 5s.

ROCK ME to SLEEP, MOTHER. With 18 charming Illustrations drawn and engraved in America, and printed on the best paper by Messrs. R. & R. Clark, of Edinburgh.

TRISTRAM (Rev. Canon),—PATHWAYS of PALESTINE: a Descriptive Tour through the Holy Land. Illustrated by 44 Permanent Photographs. 2 vols. folio, cloth extra, gilt edges, 31s. 6d. each. [*Ready.*

Crown Buildings, 188, Fleet-street, E.C.

TINSLEY BROTHERS' *NEW PUBLICATIONS.*

Now ready at all Booksellers' and Railway Stalls, price 1s.
TINSLEYS' CHRISTMAS ANNUAL for 1882.

LAST CHRISTMAS EVE. By RICHARD DOWLING, Author of 'My Darling's Ransom,' 'Sweet Inisfail,' &c. Profusely Illustrated by HARRY FURNISS.

"The story is by Richard Dowling, in his very best style, certainly in great and laudable advance of his former writings, excellent as they have been. We cannot but be surprised at the knowledge of life and character displayed, as well as at the capacity the author shows for startling incident and clear and dramatic development of the narrative. It is, indeed, intensely dramatic; but it is not our purpose here to enter into particulars concerning the plot, for a short story would lose its zest by so doing, and it is better that the reader should himself go in for the slow process of gratification. Tinsleys' Christmas story now occupies the leading position, almost the sole one, as competitors have one by one dropped off and left the field to the victor. The illustrations are, if a little rough, graphic and very numerous, following the story throughout in all its salient parts."—*Court Journal.*

NEW WORK BY THE AUTHOR OF 'MEMOIRS OF A CYNIC.'

LEGION; or, the Modern Demoniac. By WILLIAM GILBERT, Author of 'Shirley Hall Asylum,' &c. 1 vol. crown 8vo. [*Just ready.*

The ROYAL DUKES and PRINCESSES of the FAMILY of GEORGE the THIRD. A View of Court Life and Manners for Seventy Years, 1760–1830. By PERCY FITZGERALD, M.A., Author of 'The Life of George the Fourth,' &c. In 2 vols. demy 8vo. price 25s.

PARIS in PERIL. Edited by Henry VIZETELLY, Author of 'Berlin under the New Empire,' &c. In 2 vols. demy 8vo. 25s. With numerous Engravings.

WITH a SHOW THROUGH SOUTHERN AFRICA, and PERSONAL REMINISCENCES of the TRANSVAAL WAR. By CHARLES DU VAL. 2 vols. demy 8vo. with numerous Illustrations. [*Just ready.*

TWO NEW VOLUMES OF VERSE.

STRAINS from the STRAND. By HENRY S. LEIGH, Author of 'The Carols of Cockayne.' 1 vol. crown 8vo. price 5s.

LUNATIC LYRICS. By Alfred GREENLAND, Jun. Crown 8vo. cloth gilt, price 7s. 6d.

"It is altogether a most amusing little book, and exhibits considerable poetic power."—*Judy.*
"Light, fanciful, and witty....The book is very tastefully got up."—*Pictorial World.*

THE NEW NOVELS.

A GIRL'S DESTINY. By E. C. CLAYTON (Mrs. Needham), Author of 'Playing for Love,' &c. 3 vols. [*This day.*

PATTY'S PARTNER. By Jean MIDDLEMASS, Author of 'Sackcloth and Broadcloth,' 'Dandy,' &c.

BURIED for GOLD. By A. C. SAMPSON, Author of 'Crushed Beneath his Idol,' 'The Scarborough Belle,' &c. 3 vols.

TALBOT'S FOLLY. By W. B. GUINEE. 3 vols.
"A clever and amusing book."—*Morning Post.*
"The whole book is readable."—*Academy.*
"The election at Ballymaquirk and the occasional glimpses of the House of Commons are capitally done."—*Athenæum.*
"Mr. Guinee is a genuine humourist, who knows by instinct how much an appreciation of the grim and the sorrowful sides of life have to do with the creation of true humour....It is conspicuously full of vigour and spirit, full of human nature, and not seldom flashing out into brilliancy."—*Globe.*

SWEET INISFAIL. By Richard DOWLING, Author of 'The Duke's Sweetheart,' &c. 3 vols.
"Mr. Dowling is nothing if not a concocter of plots, and in 'Sweet Inisfail' he carries his readers at once into a well-contrived mystery, which keeps their attention fully engaged to the end of the story....A most exciting and readable romance."—*Athenæum.*

PROPER PRIDE. Second Edition. 3 vols.
"The story is a very good one, brightly written, and interesting to the end; the episodes of which the scene is laid in India—and notably the Afghan portions—are especially well given."—*Morning Post.*
"An exceedingly clever story....it abounds, moreover, in telling situations, some of them admirably comic, while others are touching; and it is thoroughly original."—*Times.*

GLADYS: a Frivolous Novel. By "TRAMIO." 3 vols.
"A highly interesting novel, and has the advantage over other publications of the kind in that the reader is enlivened by flashes of wit and humour, a qualification conspicuous by its absence in the ordinary novel of the day....The book is replete with excellent dialogue, and the many characters are tolerably original and admirably executed."—*Life.*

CHUMS: a Tale of the Queen's Navy. 3 vols.
"A rollicking, rattling story of naval life, which will doubtless find many readers to appreciate it. It is in parts decidedly clever, whilst it brims over with humour from beginning to end."—*Athenæum.*

Just ready,
A NEW NOVEL BY THE AUTHOR OF 'CYNTHIA.'

LEMUEL; or, the Romance of Politics. By the AUTHOR of 'CYNTHIA.' 2 vols.

TINSLEYS' MAGAZINE, for DECEMBER,
Will contain the Opening Chapters of a New and Powerful Story, entitled 'UNDER a BAN,' by the Author of 'Lady Ottoline.'
PRICE ONE SHILLING, MONTHLY.

The Thirty-first Volume of TINSLEYS' MAGAZINE will be ready early in December, price 8s. cloth gilt.

LITERATURE

In the Land of Misfortune. By Lady Florence Dixie. (Bentley & Son.)

IN this work Lady F. Dixie shows no abatement of her well-known zeal in the cause of the Zulu king, but, at the same time, the condition of Zululand is only one of many subjects in which she endeavours to interest her readers. She has, in fact, given a lively narrative of the somewhat extensive tour which she made in South Africa last year. The voluminous literature of the Zulu and Transvaal wars has rendered the public painfully familiar with much of the ground which she has traversed. She has, therefore, exercised a wise discretion in confining herself to her personal experiences while "trekking" in Natal, the Transvaal, the Free State, and Zululand. These are related with amusing frankness; but the unconventional freedom of the writer's style enables the reader to picture to himself more vividly than he could otherwise do what it is to live in the veldt or to explore the mountain ranges of the Drakensberg. Lady F. Dixie is a vehement politician, and the Transvaal convention and the Zulu settlement alike excite her passionate indignation. It was at Estcourt that she first heard that Sir Evelyn Wood had come to terms with the Boers, and although she does not condescend to argument, she loses no opportunity of abusing the policy which culminated in the re-establishment of the Transvaal state. Incidentally she pays a tribute to the skill of the Boers as marksmen. In riding along the road between the Ingagane river and the town of Newcastle, she passed several ambulances filled with wounded soldiers, the great majority of whom, she says, had been shot in the left arm by the unerring aim of the Boers. At Newcastle she met Sir E. Wood, and with him visited the battle-field of the Ingogo, where there were still many ghastly traces of the sanguinary fight. She ascended the Amajuba on the side which was climbed by the victorious Boers. She says:—

"In some places the ascent was very steep, but had the advantage of complete shelter in large disjointed masses of rock, behind which the attacking party could advance almost unperceived by those above, to whom they must have presented a somewhat similar appearance to rabbits among rocks and ferns—no sooner seen than immediately lost sight of—mere snap shots not practicable with a rifle."

The ease with which she ascended the mountain makes her think that the daring of the Dutch burghers has been exaggerated. Moreover, she reminds her readers that the Boers are thoroughly trained from childhood to physical exertion of this kind. She does not appear to see that similar causes have always contributed to the superiority of one nation over another in war, and that, from a military point of view, the Boers are justly entitled to credit for having stormed the British position with a minimum of risk and loss to themselves. Lady F. Dixie was delighted with the view which rewarded her pluck when she reached the highest point of the mountain. From it

"the distant peaks of Basutoland were visible, and the countries of the Orange Free State, the Transvaal, Zululand, and Natal extended in circling panorama around."

It is impossible to doubt that the scene was as majestic as she describes; at the same time we might be pardoned if we distrusted the imagination of a writer who, in referring to the falls of Howick, in Natal, declares that "for beauty, size, and magnificence they far outrival the cataracts of Niagara." We feel sure that no one will contest with Lady F. Dixie the originality of this observation.

The author, accompanied by her husband, spent some time with the 15th Hussars in the Drakensberg, and then marched with the troops under General Buller to Potchefstroom. This turned out to be a mere military parade, while the journey was marked by no incidents more exciting than a conflagration in the veldt, caused by the carelessness of a cook in setting fire to the grass round his tent, and an occasional hunting excursion in which the game exhibited a wariness very trying to the patience of the sportsman. Potchefstroom is described as "a long line of houses nestling in weeping willows." The English residents gave no welcome to the troops when they entered the town, but shut up their houses and remained indoors, while the Boers were impassive spectators of the scene. The brave defence of the fort at this place by a handful of English, who suffered from scarcity of food and water, was one of the few events of the war calculated to awaken feelings of satisfaction. The Boers displayed no valour, for they are said to have compelled their prisoners, as well as large numbers of Kaffirs, to perform the most dangerous work of the siege. From Potchefstroom Lady F. Dixie rode to Pretoria, where Sir Hercules Robinson and Sir E. Wood were engaged in settling the affairs of the Transvaal. She attended several sittings of the Court, and was present when a deputation of Kaffir chiefs made a pathetic appeal to the Royal Commissioners to be allowed to remain British subjects. Pretoria is situated in the midst of a charming country. She visited the great Wonderboom ("wonderful tree"), whose foliage is ample enough to afford shelter for hundreds of persons, and in the suburbs of the town she rambled through pleasant groves of orange and lemon trees.

It appears to be the destiny of every traveller in South Africa to meet with an accident of a more or less formidable description to his horse, his ox, or his waggon, and no work on that region would be regarded as complete which did not contain one or more hairbreadth escapes. Lady F. Dixie could not expect to escape the fate of her predecessors. Her special adventure took place in a ride from Harrismith to Bloemfontein, and as described by herself can hardly fail to excite the envy of other travellers who have made the same journey only to find it at once fatiguing and prosaic. She says that the start was made at midnight by the mail-cart, a crazy open vehicle, from which the passengers brushed away the snow before settling themselves on the back seats for their wild ride. The way was rough beyond the imagination of any untravelled European, and the four white horses tore along with the cart bumping behind them, the driver being apparently perfectly reckless whether his fares kept their places—which they did by holding on firmly to the back rails—or were thrown out into the road. He, however, evinced a pleasing consciousness that they had lives to be protected during a certain stage by handing each of them a loaded pistol, with the warning that this particular district was notorious for the depredations of miscreants equally willing to rob the mail and murder the passengers. These tactics on the driver's part served effectually to banish the drowsiness induced by fifteen hours of wearisome travel; and the situation was rendered more piquant by a meeting with a riderless horse, which, on reaching Bethlehem, the next halting-place, the travellers found to be a steed which had left the town that same day bearing a master who allowed the loafers of a public-house to know that he carried 200*l.* in cash secreted about his person. On leaving Bethlehem the party passed into the hands of a Hottentot coachman named Dirk, who drove a post-cart drawn by six horses, and who set off with a break-neck recklessness that boded ill for the safety of the passengers. Lady F. Dixie, who was in the centre of the cart, kept a strict look-out, and though she could not prevail upon Dirk to go slower, she more than once managed to avert an overthrow. At length she became certain that they had turned off the main road, such as it was, and were driving rapidly over the veldt. Her observation had been quickened by an interrogation from her ill-favoured Jehu as to whether she or "the master" possessed watch and money; and as the said "master," her husband, was short-sighted, she set herself to oversee the course of events. She twice called his attention to the fact that they were out of their course, but he proved as deaf as a post, till suddenly he stopped and announced his intention to outspan on a desolate spot, uttering at the same time "a long low whistle, which was answered by another whistle not far off." The lady then made a sudden grasp at the reins, and set the horses off into a full gallop in the direction of what she supposed to be the main road. Her instinct proved correct, and the road was reached without further hindrance from the driver, who seems to have been more tipsy than intentionally criminal. After a little more riding, during which drowsiness crept over the passengers, a sudden shock brought them once more to their full senses. Lady F. Dixie, springing to her feet, saw

that "the horses were just about to trot headlong into a yawning cleft in the veldt quite twenty feet down." She seized the reins, and by main force pulled the animals back from what must have been almost certain death to the entire party. When the danger was fairly over she restored the reins to the Hottentot, but that incorrigible person, with drunken sullenness, started his horses once more into full speed and then suddenly dropped the reins. The road was down hill, and the situation most perilous, but the lady scrambled over the front of the vehicle on to the pole, and managed to regain the reins. Her husband came to her assistance, the brake was put on, and eventually a wayside house was reached about five o'clock in the morning and relays obtained. Dirk took advantage of this pause to slip indoors and fall into a profound slumber, from which nothing could rouse him. A Boer guide was therefore pressed into the service for the remaining forty miles, but Lady F. Dixie kept the reins in her own hands, and an hour before the appointed time drove her Majesty's mail-cart into the town of Winburg, to the great surprise of the inhabitants.

If we except this highly sensational journey, the most interesting chapters of Lady F. Dixie's work are those in which she records the details of her visit to Zululand. Sir E. Wood had appointed to meet the principal Zulu chiefs at a picturesque spot close to the Inhslazatye mountains, and she and her husband were invited to join the Governor's party. Sir Evelyn was accompanied by a mounted force whose supplies filled a hundred waggons:—

"I think I hear my readers say, 'All that for three squadrons of cavalry!' And yet so it ever is. A like number of Boers could have done the journey we were undertaking comfortably with half a dozen, or an equal number of Zulus could have tripped in one day the distance we proposed to do in ten."

The party visited the field of Kambula, which they found thickly strewn with Zulu graves; and mounting to the summit of the ruined earthworks, Sir E. Wood gave his companions a description of the battle. After visiting the grave of Capt. Ronald Campbell, whose heroic death will long be remembered, they ascended the Inhlobane, where General Buller's famous fight with the Zulus took place, and where they found a number of Zulu skulls and the bleached bones of many horses. They also rode to the spot where the Prince Imperial was killed. Near the memorial cross erected by command of the Queen they found several Zulus, two of whom belonged to the party that killed the prince. The author gives an interesting account of the meeting at Inhslazatye. She declares that the chiefs were only allowed to answer a series of official questions, and were practically prohibited from speaking their minds or making known their wishes on the subjects which they had most at heart. For this she was prepared by an incident of the journey. A Zulu whom the party met by the way was interrogated as to whether the people were satisfied with Sir G. Wolseley's settlement of the country; but when she proposed to ask him whether his countrymen would like to see Cetywayo back again, she was not allowed to put the question. At Inhslazatye, however, she had abundant opportunity of ascertaining what were the feelings of the Zulus, and she came to the conclusion that the great body of them were as devoted as ever to their old king. She accompanied General Buller to Ulundi, the former capital of Zululand; but the place was so utterly destroyed that even that gallant officer could not find the site for some time, while "in many places large heaps of skeletons told a silent tale of the bravery of a vanquished nation." It is unnecessary to follow Lady F. Dixie in her views of the Zulu question. When her narrative was written there was still some uncertainty as to the fate of Cetywayo; but, as our readers are aware, the Government have made arrangements for his return to Zululand by the end of the year. The book contains several spirited illustrations from sketches by Major Fraser and Capt. C. F. C. Beresford, R.E.

Social Life in the Reign of Queen Anne. By John Ashton. 2 vols. (Chatto & Windus.)
Court Life below Stairs; or, London under the First Georges. By J. Fitzgerald Molloy. 2 vols. (Hurst & Blackett.)

Readers of the late Dr. John Hill Burton's 'History of the Reign of Queen Anne' cannot fail to have remarked the small part played in that work by literature and manners. There were, indeed, chapters upon "London" and "Intellectual Progress"; but the former was mainly topographical, while the latter, although it rendered disproportionate justice to Tom Brown "of facetious memory," could scarcely be regarded as an adequate exposition of the great age of Addison and Swift. It is true that Dr. Burton excused himself for his brevity upon the ground that the authors of Queen Anne's day were "among the living literature of the present age"—a proposition concerning which there may be two opinions. But even supposing it to be correct, it scarcely affords a reason for neglect of the subject in a new history of the time. And the shortcomings in this respect of Dr. Burton's otherwise erudite volumes were the more disappointing in that what he disregarded was what accident had most led us to desire. To write a life of Queen Anne had been the long announced intention of Mr. Thackeray; and although those chapters in his famous novel which relate how Capt. Esmond made the campaign in 1704–8 were sufficient guarantee that he would not neglect Marlborough's wars, it was equally certain that he would dwell with especial willingness upon domestic and literary affairs. When his death took this hope from us, it was still rumoured that Mr. James Hannay might undertake the task. To Mr. Hannay had fallen the duty of annotating the 'English Humourists' during the author's absence in America, and he was known to be as keen a student of the eighteenth century as Mr. Thackeray himself. But, as Herrick sings (after an older lyrist), none can

e'er decline
The doom of cruel Proserpine,

and Death again deprived us of our expectation. The social history of Queen Anne's reign was still unwritten, and it remained unwritten when Dr. Burton published his book in 1880.

This is the more remarkable in that the subject is one which presents unusual facilities for effective treatment. It lies within the narrow compass of a dozen years. Not only is the material abundant, but it is material of special quality. Throughout the entire century there were essayists and to spare, but the essayists of this period have one manifest advantage—they were first in the field and they were freshest. Again, besides being the first, they are the best. The *Tatler*, the *Spectator*, and the *Guardian*, which contained the most individual and enduring work of Steele and Addison, were all begun and completed *Anna regnante*. Beside these, a host in themselves, there are Swift's invaluable 'Journal to Stella' and Gay's 'Trivia'; there are the works of Defoe and Ward and Brown; there are intelligent foreigners like Misson; and lastly, though this advantage was not confined to the reign of Anne, there are newspapers and manuscripts innumerable.

That Mr. Ashton has finally supplied this long-felt want it would, perhaps, be too much to assert. To be a second Thackeray or Macaulay is not vouchsafed to every one; and Mr. Ashton's function has been that of investigator and collector rather than artist and historian. With commendable diligence he has assembled a vast number of "documents," advertisements and what not, which he has skilfully grouped in chapters illustrating the education, food, dress, amusements, science, art, and manners of the time. His book is, in fact, a valuable and trustworthy collection of *mémoires pour servir*. If he has not absolutely constructed a picture of the later Augustans, he has supplied the materials from which it may be constructed. In these pages the reader may wander at will in that lesser London of which Covent Garden and Leicester Square were the centres. He may marvel at its narrow streets, its pouring kennels, and its creaking signs, and pick his way fearfully between the jumble of carts and waggons and wheelbarrows. He may listen to those manifold London cries which sprightly Mr. Will Honeycomb styled the *ramage de la ville*; or, duly equipped with well-combed periwig and cinnamon coat, with agate-headed cane and gold snuffbox (the last being filled with the best Oroonoko or Bergamot), take the air with the *beau monde* in the Mall or the Parade. He may pay his morning visit to Clarinda (whom he will probably find in the elegant disorder of the toilet), and advise her in the placing of a patch. There will be talk, no doubt, of the day's *Spectator* (which Cupid and Veny are tearing in the corner), and of the latest doings of the excellent Sir Roger de Coverley. If her ladyship is specially gracious, he will (perchance) call for his chair and swing away between his Irish bearers to cheapen a tortoiseshell fan at Mrs. Thody's or a set of tea-dishes in the Strand as "a gift for his fair." If, on the contrary, she has the vapours, or has broken her Nankin bowl, he may console himself with the pretty sirens—those "agreeable females," as Steele calls them—who preside in the shop-rooms over the Exchange, or take a pair of sculls to the New Spring Garden at Vauxhall, or perhaps (in desperation) throw a main at the Groom Porter's. He

may dine lightly at Robin's or luxuriously at Pontack's, and spend the evening at Will's or the Bedford. Or he may drop in at Drury Lane, and listen to that admirable mimic Mr. Richard Estcourt as Pounce in the 'Tender Husband'; or (having duly obtained his ticket at White's Chocolate House) repair to the Queen's Theatre in the Haymarket to assist at the new opera of 'Camilla'; in either case having a wholesome distrust at his return of possible Mohocks and Hawkubites. With Mr. Ashton's book all things are feasible, provided the reader carry with him a decent amount of curiosity and a fairly good memory. And as Mr. Ashton, with commendable and indeed unusual honesty, gives chapter and verse for his statements, our pilgrim may be moderately sure that his imaginings will possess a certain verisimilitude.

Of course, in an undertaking of this kind, those who have travelled any part of the attractive ground from which Mr. Ashton has returned are sure to have to complain of something left unchronicled. We think, for example, that in his chapter on "Servants" he might have drawn more largely on Steele's *Spectator*, No. 88; and in his chapter on "Daily Life" we miss the same writer's admirable picture of the "Silkworm" of the shops (*Spectator*, No. 454). Without much anachronism he might have included under "Carriages" that graphic description, from Vanbrugh and Cibber's 'Provok'd Husband,' of Sir Francis Wronghead's journey to London; and the account of Mrs. Verbruggen would have been the better for the addition of that delightful vignette in the 'Apology' which describes her acting in 'Melantha.' And where is the excellent portrait, less poetized than Sir Roger, of the Tory foxhunter from the *Freeholder*? These, however, are matters of opinion, and Mr. Ashton has given us so much which is new that we willingly condone their absence. Of minor errors his book seems fairly free; the worst we have discovered being the assigning of 'Robinson Crusoe' to 1772. "White's," we may add, was burnt down in 1733, and not 1723. There is another error of omission: the book is worthless without a detailed index, which we trust may be added hereafter.

Mr. Molloy's volumes can scarcely be said to claim so much attention as Mr. Ashton's. His subject, which may be roughly described as an expansion of the ground covered by Thackeray in his lectures on the first two Georges, is scarcely new, nor does he attempt any specially novel treatment. He writes in a sufficiently brisk and fluent style, and he has made free use of the swarming memoirs of the period. But his work has a certain air of haste, which is not diminished by such lapses as "Denis" for Dennis (the critic), "Wilkes" for Wilks (the actor), and so forth. Farquhar did not write the 'Beau's Stratagem'; nor did Pope speak of Sporus as "a mere cheesecurd of asses' milk." Gay, too, died worth considerably more than 3,000*l*. But Mr. Molloy's pages contain abundance of amusing anecdote, and literal accuracy is, perhaps, not to be expected in such an atmosphere of gossip and scandal as the Court of St. James under Queen Anne's successors.

Asiatic Studies, Religious and Social. By Sir Alfred C. Lyall, K.C.B., C.I.E. (Murray.)

This volume consists of a series of essays reprinted from the *Fortnightly Review*. It has the great merit, rare in such reprints, of being thoroughly homogeneous and even consequent in its treatment of the subject. For this, though many-sided, is essentially one—the life, to wit, in the widest and deepest sense of the word, of the people of India; and each essay deals with this and with the causes which have moulded it in the remote past from a different point of view. Thus, while much is said about the character of Brahmanism, there is no useless iteration. In one place we partly learn what Brahmanism is by what it is not—*i.e.*, by its contrast with the definite theological systems of Christianity or of Islam; in another we are reminded that it has no definite connexion with morality; in a third of its comprehensiveness and practical power of assimilation. Mr. Monier Williams, as we remember, dwells also on the last characteristic, as he does on the intensely religious character of the people. Sir A. Lyall, too, speaks of them as

"having for ages been absorbed, beyond all other people upon earth, in attempting to decipher the way of the gods with mankind and the tokens of divinity."

But our author, though his regard for the welfare of the people is equally undoubted, does not share the sympathetic optimism of Mr. Monier Williams with regard to their religion. He writes from a standpoint somewhat markedly neutral and unembarrassed; his deductions from the phenomena with which his Indian career has made him familiar are worked out with equal caution and acuteness, in a clear, fresh, incisive style which is very attractive, though with occasionally an ultra-Socratic familiarity of illustration, of which we should not complain but that it sometimes degenerates into a smartness a little at variance with the dignity of the subject. Speaking of the famous war between the two Rajput chiefs for the hand of the Princess of Oodeypur, he writes:—

"The dispute was compromised upon the basis of poisoning the princess, a termination which may fairly illustrate the real nature of barbaric chivalry."

This is surely rather severe from an author who, far from undervaluing the Rajput chivalry, considers it not merely superior to anything else of the kind in India, but almost unique there. Even from an antiquarian point of view its interest is very great, the relations of the higher chiefs and landowners to their head having only, as he points out, a surface resemblance to feudalism, than which it is in reality far more primitive and independent; and he remarks wisely on the patience and care needed to prevent such qualities, and the classes who possess them, being crushed out by our system of government, which tends rather to foster the

"soft weak populations which swarm in the tropical low-lying regions.....which have no real political future, and only damage free institutions by burlesques that we shall some day become tired and ashamed of bringing out under the patronage of her Majesty the Queen."

Our modern "protected autocrat," too, is often an inferior being to the native ruler formerly produced by a rough process of natural selection.

The writer contrasts vividly the effect respectively of the definite and organized Western creeds, and of the loose, undigested, but all-pervading pantheism of India on the life, character, and point of view of their adherents, illustrating the latter by descriptions full of interest, drawn from his own experiences in those parts of the country which have been least affected by external influences. The pictures presented and the considerations they suggest merit the most serious attention of the statesman, and of those who, though not statesmen, have yet a voice in the destinies of these people. And, in consideration of the valuable material placed at their service, the mythologist and the comparative philologist must forgive the hand which, not perhaps without a dash of satisfaction, upsets some cherished conclusions. The author's local experience, combined, we ought to add, with his exceptional powers of observation and reasoning, gives him a great advantage. If Mr. Grote, he says, had had the opportunity of observing, under his eyes as it were, the formation and growth of various divine myths, he would have seen no difficulty in conceding to these a nucleus of actual fact. To Prof. Max Müller's classification of Brahmanism as a non-missionary religion whose influence is "dead and gone," the author opposes its incessant activity in adopting and assimilating other beliefs. Mr. Freeman's statement that "the Greeks were the first people who made free commonwealths" can hardly be taken without qualification when we find in India very ancient societies, stringently controlled by definite laws and usages. But these essays should have a wide range of interest for other readers than the politician and the student. The author is desirous of setting right more than one commonplace fallacy of Indian history, by which the English character suffers unjustly. Some of these he traces back to Burke's speeches, and others to Macaulay's essays, where certain plain facts are sacrificed to rhetorical effects. But, as he acutely adds,

"in these days the difficulty of eradicating a convenient theory is enormous, because the habit of general reading disseminates it so widely, and because even men who could collect and examine their own facts find it so much easier to go to the standard books of reference, where they can find some ready-made theory which helps them to arrange their facts; in short, because over-indulgence in book reading and too implicit reliance on authorities produce an atrophy of the observing faculty."

The philosophical mind is not always disinclined to prophesy, but Sir A. Lyall's few forecasts are marked by the same caution and sound judgment as his other deductions. The unsettling of religious belief must have a profound and immense effect on the life of a people for whom life dissociated from religion is as yet an inconceivable proposition. Even if—which in the present state of religious feeling in Europe seems unlikely—we were capable of supplying them with a faith in place of that which we are, so to speak, involuntarily taking from them, it is doubtful, Sir Alfred thinks, whether they could receive it, for miracles are still a matter of daily experience in India, so that no teaching which could not show present credentials of that

kind would be generally accepted. And after all, as he points out, although it is consonant with all Asiatic feeling that the State should be identified with religion—a system which greatly enhances the power of the State, as is conspicuously seen in China, where the State supports three religions—yet if the religion suddenly decays, such strength becomes a source of weakness. One great gift at least, he says, it is distinctly in our power to give the natives, namely, the higher political morality; and meanwhile he preaches patience, and deprecates the "wild abuse" of caste, and the

"general unwisdom of demolishing old-world fabrics which no one is yet prepared to replace by anything else."

Believing, however, that the religious development of the people has been retarded by centuries of political disturbance, he would fain hope that it may have a prosperous issue under the "Pax Romana" which we have established. But in feeling

"certain that wider experience, and.....the general education of modern life, must soon raise even the masses above the mental level that can credit contemporary miracles and incarnations,"

he seems to forget the first-class pilgrimage parties from London to Lourdes.

We feel that we have hardly done justice to the author's comprehensive survey of the most striking phenomena of Indian life. He shows us how the most widely varying mythologies and social conditions are to be found, not stratified in history, but at present existing side by side in different parts of the country, thus demonstrating to the student the actual stages of social or religious progress, elsewhere only to be arrived at by deduction or from ancient tradition. His description of the mode of formation and development of each of the two institutions into which society crystallizes, "the grouping of men by their folk and their faith, by kinship and worship," shows a close study of these complex questions, and combines ingenious and well-balanced reasoning with a happy sprinkling of picturesque or humorous illustration—qualities, we may add, which distinguish the work throughout.

Foreign Secretaries of the Nineteenth Century. By Percy M. Thornton. Vol. III. (Allen & Co.)

It is unfortunate for Mr. Thornton that an obvious mistake about a notorious matter of fact at the opening of the first chapter shakes our confidence in the accuracy of the author. He describes Lord Melbourne's enjoyment of the scenery on his way from London to Brighton on the 14th of November, 1834, as damped by the melancholy occasion of his visit to the king, "to propose certain ministerial rearrangements necessitated by the death of his colleague Lord Spencer (better known in history as Lord Althorpe)." Everybody, we thought, was aware that at the time of this supposed sentimental journey Jack Althorp, as Brougham insisted on calling him, was not only alive, but likely to live. If biographers would only consult the peerage before ascribing pathetic reflections to statesmen of quality, it would save their critics the ungracious task of correcting the press after publication. The Lord Spencer who really did die about the period in question, to the no small discomfort of king, cabinet, and country, was an old gentleman of seventy-seven who had not been in office for twenty-five years, and who never had been a colleague of Lord Melbourne. No doubt the son was as able as the father; but in biography above all things it is just as well to have the right man in the right place. The incidents of the memorable five weeks that followed the Whig Premier's drive to Brighton would furnish, one would imagine, tempting material for several paragraphs in a sketch of his Tory successor, who for that interval discharged among other functions those of Foreign Secretary of State, with more energy and efficiency than several of the indolent patricians who, in the days of hereditary jobbing, exercised patronage and drew pay for mismanaging foreign affairs. H. B.'s caricature of a "United Cabinet," in which different figures of the duke were portrayed as sitting round the council table, is one of the best bits of the pictorial history of England in our own times, for he was at once Home and Colonial Minister, First Lord of the Treasury, and director-general of everything else besides. The smallest additional information as to how he filled so many departments simultaneously would be thankfully received by the curious about official characteristics. But the singularity of the position does not seem to have struck Mr. Thornton. He passes it over in silence to make room for reflections and forecasts that he says may have passed through the mind of Sir Robert Peel on his way to England from Rome to undertake the government. If Sir Robert had left behind him a diary disclosing that he was thinking about Mazzini's "theories and designs" just then, we should of course believe it; but, wanting such evidence, we own we are perplexed, not persuaded, by being told that as

"in December, 1834, the coming Prime Minister of England passed by Turin and Geneva over the execrable roads he was called on to traverse, visions of a future wherein the uprising of the Italians against their Austrian masters, and of consequent European disorder, played no unimportant part, must have afflicted one so mindful of the signs around him."

One of the first acts of the Tory Foreign Secretary was the nomination of Lord Londonderry as Minister to Russia, a selection which, it is said, "seems to have been wise." But how could an appointment be wise which drew down the censure, not only of Whigs and Radicals in opposition, but of Stanley and Graham and their friends, without whose aid in discussion and division it was certain the new government could not stand?

Mr. Thornton does justice to the memory of the illustrious soldier by recalling his successful intervention between the Carlists and Christinos in Spain, who, until the mission of Lord Eliot and Col. Gurwood, were in the constant habit of slaughtering their prisoners in cold blood. Equally creditable was the tender of good offices at Paris and at Washington to put an end to the differences that had arisen regarding American claims to compensation for mercantile losses and for losses inflicted during war upon unarmed vessels belonging to the Republic. On a smaller scale the controversy raised many of the same questions that recently were discussed and decided between ourselves and the United States by the arbitrators of Geneva. Time was not afforded the duke to prove his fitness for the office of Secretary for Foreign Affairs. He possessed the singular advantage of personal acquaintance with all the chief ministers of continental states and with many of the reigning princes. But it is difficult to rise from a study of his correspondence with a belief that even his common sense and genuine loyalty to his country would have enabled him to surmount the prejudices in which he had been brought up, and which the circumstances of his previous life had led him to regard as sound. An opinion quoted from Raikes's diary seems, indeed, to justify, so far as it goes, the claim for foresight often made on his behalf. The Romanoffs, he said, would never make a cordial alliance with France so long as they were able to stave off revolutionary movements among their own people.

The outlines of Palmerston's six years' management of foreign affairs recall transactions once regarded as of critical importance, but the magnitude of which has gradually diminished, until the world feels disposed to question their claim to the place assigned them by some admirers. Palmerston's third tenancy of the Foreign Office was, indeed, more fruitful of lasting results, though it drew down upon him at the time a more formidable because a more concentrated amount of hostility from the military despotisms of the Continent. His antagonism to Metternich reached its climax in 1847, when Lord Minto was sent to Italy with a sort of roving commission to intercede with the tottering governments of the peninsula on behalf of their disaffected subjects. The English envoy failed, indeed, to induce any of the Italian princes to reject the promptings of Vienna, and to conciliate the moderate Liberals who could alone have eventually stood between them and revolution. But in the following year they learned too late the truth of Palmerston's friendly warnings, and his farsightedness was finally vindicated by the events of 1859. Mr. Thornton touches lightly on the once bitterly contested policy of Palmerston in recognizing the *coup d'état* of the 2nd of December, a policy which led undoubtedly to his eviction from the Foreign Office.

By far the most notable passage in the present volume is that which professes to acquaint the world with the substance of a document so extraordinary that, without meaning any personal disrespect to Mr. Thornton, we must decline to accept it in the form in which it is now presented on any evidence less conclusive than its actual production. The habit of analyzing fragmentary historical documents should lead to scepticism regarding their superficial meaning. Specifically and literally the expressions in an excerpt torn from its preface and sequence, its explanatory heading and initialled postscript, may be true; and yet the meaning and tendency of the mutilated revelation may be entirely the reverse of truth. It requires but slight acquaintance with international affairs and little ingenuity of suggestion to supply an introduction, a side note, or a summing up that will change the whole drift and bearing

of the most unequivocal-looking statement; and when he is suddenly presented with what purports to be a clandestine assurance given by three English ministers to a foreign despot that they will use all their influence to promote his wishes, to the frustration of those of our nearest and strongest ally, the critic feels bound to ask, What brought about the alleged communication, and under what conditions, expressed or implied, was it given?

During the Czar's visit to England in June, 1844, three cabinet ministers — Sir Robert Peel, the Duke of Wellington, and Lord Aberdeen—signed, we are told,

"a secret memorandum promising to exert their personal influence on behalf of the Greek as opposed to the Latin Church at Jerusalem, and so practically to forward Russian claims to the guardianship of the Holy Places, as opposed to those of France, who was to be ignored in the matter. This memorandum, to a certain extent favouring Russia's claim to a protectorate of the Greek Church, was never placed in the Foreign Office archives, but was forwarded in succession from one English Foreign Secretary to another, until.....poor Lord Aberdeen (Wellington and Peel being dead) was called on for his pound of flesh in 1853. In Sir Theodore Martin's 'Life of the Prince Consort' .....it is.....clearly told, first, that he (Nicholas) never mentioned State affairs at Court, and..... that 'He (Nicholas) asked for nothing whatever, has merely expressed his great anxiety to be on the best terms with us, but not to the exclusion of others.' Now, as the gist of the secret agreement was the exclusion of France, it is clear that at this moment the contents and nature of that document were unknown at headquarters in London. The signatories doubtless contemplating that they had given an earnest of their individual bias, and not subscribed to a pact binding upon others."

That something may have passed in conversation, and may have even been reduced to writing, between Baron Brunnow and Lord Aberdeen, to which in private notes, never meant for any other eyes, the most reticent of soldiers and the most suspicious of premiers confidingly signified their assent, and which in the course of diplomatic transmutation could be made to look like an official or semi-official pledge, sufficient for the time being to appease the exacting temper of the Czar, is not inconceivable. But that anything more was ever really obtained for future use from the three Englishmen most unlikely to be entrapped into such a transaction it is hard to believe. It is said to have been kept from the knowledge of the Queen and Prince Consort, who up to that time were on terms of intimacy and friendship with Louis Philippe. But that it should never have been divulged in the troubled times that followed, tries the resources of credulity. The supposed signatories and their Muscovite confidant have indeed long since passed away; but three ex-Secretaries of State are living who, according to the strange story, must have had cognizance of the anti-French memorandum, to say nothing of a troop of subordinates, English and Russian, through whose hands it must have passed. Considering how few of the most important secret engagements have eluded discovery in modern times, it is hard to imagine how in a case like this secrecy could have been preserved.

About Lord Aberdeen's foreign policy there is little to be said, and Mr. Thornton does well in tacitly admitting it. The earl's function, as he seems to have thought, was quietly to draw the charge out of each gun which the viscount had kept loaded. In his desire to refresh the popular memory of the good deeds of Sir Robert Peel, our author incidentally ascribes to him and his Foreign Secretary the merit of ready acquiescence in Lord Ashley's Ten Hours' Bill. But historic truth compels us to recollect how rigidly the Tory Cabinet of 1844 resisted Lord Ashley's plea for limiting the labour of women and children in factories, and what credit they took with the mill-owners for defending the freedom of capital from what they were pleased to call communistic encroachment, while they refused as yet to yield freedom of trade. It was not by the help of Peel or the Peelites that "Short Time" was carried, but by the unexpected conversion of the Whig Opposition, negotiated by Mr. Charles Buller. The characteristic anecdote, indeed, was told at the time of Lord Melbourne, who, being an invalid at Brockett, knew less than usual of what was going on in town, that on learning that Lord Russell had agreed to put ministers in a minority by voting for the ten hours' limit, he exclaimed, "Ah! Johnny, that was too short a turn."

Perhaps the most agreeable portion of this volume is that which relates to Lord Russell. Like the rest, it is less of a portrait than an exhibition, with somewhat quaint and fantastic devices of historical illustration, of the pedigree and life story of the "great little man," as Sir J. Graham used to call him, and gives, after all, no clear notion of the great little man himself. To relate how the broad lands of Woburn were wrenched from the friars and conferred on Mr. John Russell, of Kingston Russell, in Dorsetshire; how the Ionic quadrangle replaced the old monastery, and what pictures and statues were in due time collected there; how the Bloomsbury property came from the Wriothesleys to swell the ducal domains; and how at the close of the last century it was the fashion with Whig lords to cry down Oxford and Cambridge, and confide the training of their sons to Edinburgh professors, is all very well, but it has little to do with the occupancy of the Foreign Office by a spare old gentleman not particularly versed in continental politics. Neither do we make out exactly what our author would have us infer from the visits of the future statesman to the Duke of Wellington's camp in Spain. There are anecdotes that might have been told about his sojourn there and at the quarters of Lord William Bentinck which, if duly authenticated, go to prove—well, nothing particular. But why relate the voyage outwards and home without even these? The gradual rise (and it was very gradual) of Lord John in Parliament would be a much more instructive study. For ten years or more he gave slight promise of ever being anybody of consequence. Ambition he had in abundance, and neither ability nor application was wanting, as his well-known 'Essay on the Constitution' sufficiently proves. In the nursery he was called "the wonder"; yet though made a pet of by Lady Spencer and Lady Holland, his name was seldom mentioned among the young men of his time. And so little progress had he made when the great crisis came in 1830, that Lord Grey, aristocrat as he was, could not find room for him in his first cabinet; and he had to be content with no higher office than that of Paymaster of the Forces. By way of compensation he was named one of the committee of four to prepare the Reform Bill; and when their alternative suggestions were revised and blended he was entrusted with the task of introducing the measure. The unexpected lengths to which it went diverted attention from the didactic frigidity of its parliamentary editor; but in committee, though the brunt of the battle fell on Lord Althorp, he played not a bad second. For his reward he was raised to the cabinet, but without any advancement in office, while Stanley was promoted at the same time to be Secretary of State. The disparity of their respective positions was, indeed, wide, and of their future competition for supreme power nobody dreamt probably in 1833 save the still unappreciated scion of the house of Bedford. Within twelve months, nevertheless, he had driven his seemingly irresistible rival out of the Government, and asserted his own claim to be leader of the Commons. Thenceforth he may be said to have exercised the chief influence in Liberal legislation, while Palmerston was allowed to direct and control the foreign policy of the country. As leader of Opposition Lord John sustained his character for skill in discerning the changes in popular opinion and for tact in turning them to account, and on the fall of Sir Robert Peel nobody else was thought of for Prime Minister. Yet his warmest adherents never said that he raised his reputation as a statesman in his six years of premiership. By continental despots he was regarded with dislike rather than fear, because he gave Palmerston *carte blanche* to lecture them all round and to hint at giving help to their subjects, though help, after all, was never given. But while Hungary and Sicily and Poland were, or thought they were, encouraged to resist, and were then left without aid, it deserves to be remembered that in 1850, when the envoys of the great military powers, in concert with the whole strength of the Tory party, backed by powerful organs in the press, and aided by the section in Parliament led by Mr. Cobden, threatened to drive Lord Palmerston from Downing Street, Lord J. Russell manfully identified his own fate with that of his colleague, and was cordially supported out of doors by whatever influence the refugees could exercise in England.

It was certainly a mistake on the part of Lord J. Russell ever to covet the guidance of a department of the details of which he knew little. For though he prided himself on being able to say a sharp and clever thing off-hand, his punctilious and pragmatical habit of mind made him slow in the composition of State papers, and exceedingly hard to persuade when modifications were suggested in council. It is right, however, to remember that during his last tenure of the post of Foreign Secretary, although he refused firmly to be drawn into intervention in favour of the Northern States during the Civil War, he resisted all the pressure that was put on him to take part with the South.

We cannot in these columns discuss the

contrasted characteristics of living statesmen whose acts and words still belong to practical politics. It is no ground for complaint against Mr. Thornton that he has carried his narrative down to the fall of Lord Beaconsfield, but the latter portion of this volume falls outside our scope.

The Roxburghe Ballads. Edited, with Special Introductions and Notes, by the Rev. J. W. Ebsworth, M.A. With Woodcuts drawn after the Original Illustrations. Part X., beginning Vol. IV. (Hertford, Austin & Sons.)

THE present volume—the first under the editorship of Mr. Ebsworth—contains some seventy ballads, fifty of which form the anti-Papal group proper. In order to find room for this number space has been economized by printing many of the less valuable ballads in smaller type; by avoiding unnecessary repetition of woodcuts; and by cutting down as far as possible the introductions and notes to the several ballads. The editor divides the contents into five groups, of which the last, that of the anti-Papal ballads proper, as it is the largest, so is it the most valuable, both historically and socially. Throughout it we see manifested a bitterness of spirit, a meanness and spite, and an unchristian rancour and foulness of language which we in these days can hardly understand. For a Papist no treatment could be too bad, no language too strong. To be a Papist was to be a criminal; to be a Jesuit was to be a traitor; to approve of or to sanction in the slightest degree any approach to rites or ceremonies, which to Calvinists appeared to savour of Popery, was to risk the fate of the aged Archbishop Sharp, when

> At noon a crew
> Of psalm-singing villains beset and slew
> The good archbishop on Magus Moor.
> Burley and Hackston with some few more
> Answered his prayers with a rascal laugh
> And split his scull with a Jeddart staff.

The group of anti-Papal ballads, as the editor remarks, bears a striking resemblance to the evolution of an historical play with mingled tragedy and comedy, beginning with the denunciation by the perjured Titus Oates, "the Salamanca Doctor," of the sham Popish Plot, and the execution of Coleman and the Jesuits, and ending with the flight of James and the downfall of Popery in England. Mr. Ebsworth is not one to mince matters or to disguise his sentiments under flowery or soft language. Very outspoken is he on the brutal ill-treatment of the Roman Catholics after Oates had started the ball. And justly so, for it is almost impossible for sober-minded people of these days to understand the insane hatred and fear with which the Papists were regarded in the closing years of the reign of Charles II.—hatred and fear which would be ludicrous had the results not been so lamentable.

The group of anti-Papal ballads does not begin till p. 94, the earlier portion of the volume being occupied with miscellaneous pieces of a lighter kind, some of which—as, for instance, the 'Delights of the Bottle,' 'The Prodigal Son Converted,' &c.—give a truthful and lively portraiture of the jovial tavern life of the Cavaliers during the days of the Stuarts. It was a period of national coarseness, and some of the ballads are consequently broader in humour and freer in expression than is desirable, but, as Mr. Ebsworth justly says, even this coarseness is not without its use, for it serves to guide us in an estimate of character. Otherwise some people might be misled into admiring too keenly the easy-going morals and the cheerful companionship of these roisterers, who sang the "delights of the bottle and charms of good wine," and ruined their own healths in drinking those of others.

As already stated, this is the first volume of Roxburghe Ballads issued under the editorship of Mr. Ebsworth, and the members of the society are to be congratulated on having amongst them one so eminently capable of filling the post vacated by Mr. Chappell, and so ready and willing to devote ungrudgingly his time and his great knowledge of the subject to their service. The present volume is, of course, entirely one-sided, and there is a consequent amount of sameness in the contents; this even Mr. Ebsworth appears to have felt, but he has, nevertheless, contrived to infuse no small amount of liveliness into them by the wideness and fulness of his notes as well as by the quaintness of the woodcuts, and the reader will look forward with glad anticipations to the two following parts, which the editor promises "before Twelfth Night, 1883."

NOVELS OF THE WEEK.

Mrs. Lorimer. By Lucas Malet. 2 vols. (Macmillan & Co.)

A Stranger in a Strange Land. By Lady Clay. 3 vols. (Sampson Low & Co.)

Eve Lester. By Mrs. A. M. Diehl. 3 vols. (Bentley & Son.)

'MRS. LORIMER' is a clever study. The characters are all well drawn. The heroine had been brought up in the depth of the Midlands, in the house of her uncle, the squire and hereditary rector of the parish. She is introduced as a young widow to whom two years of married life had suggested wider possibilities. The ladies of the district viewed her with mixed sensations. They regarded trouble and loss as dignified; so that while they pitied the girl whom they had seen grow up from babyhood,

"at the same time a delicate flavour of annoyance tempered their sympathetic interest, inasmuch as this young creature appeared to them somewhat in the light of a prodigal, who, at her still tender age, had managed to run through the stock of experiences that last most women their whole lives. She seemed in some way to have got quite an unfair start of them."

And then she had not married the man whom they had all selected for her as a husband. Her aunt's calm and narrow nature was oppressive:—

"Mrs. Mainwaring cultivated the old-fashioned notion that people should sit a great deal in their bedrooms when they were in sorrow. Her own greatest trouble in life, perhaps, was that she had never had what most people would reckon to be any real trouble at all. She had never had one of those comfortable and ostensible troubles which give you the right of remaining upstairs and pulling the blinds down."

Small differences between the aunt and her niece arose about trifles and made life uncomfortable. Mrs. Mainwaring was shocked by her niece desiring to make some modification in her mourning within six months of her husband's death. A scene between the aunt, the niece, and the maid, where the question is discussed, is given with a distinctness and a lightness of touch which make one fancy that the author must be a woman. The book shows one or two other feminine traits—a certain want of the merrier kind of humour, a continued earnestness, and a charming delicacy of perception. When Mrs. Lorimer can bear the constraint of the country life no longer, and goes to London, she tries the dangerous experiment of learning friendship from a very modern young man, who "preferred contemplating his fellow creatures from a standpoint of philosophic calm to any more practical occupation." He is very well pictured. It is with regard to him that the author exclaims:—

"Domestic joys, the sacredness of home,—yes, we are quite conscious of the magnitude of these blessings; but I grieve to say there are moments when we would exchange them willingly—almost with alacrity—for that slim figure, bunch of Parma violets, well-cut coat, air of gentle resignation, and enchanting immunity from near relations!"

That "air of gentle resignation" is admirable. The story is sad in its ending, and it is carried too far. For "a sketch in black and white," as the author calls it, the last two chapters are unnecessary.

Lady Clay's heroine is the daughter of an impossible sort of person, who, under the mesmeric influence of a villain, turns Mormon as well as gambler, and drives his English wife to flight and then to poverty and death. "Ellie" is brought up in a workhouse and afterwards adopted by a rich man who was once a gardener at her mother's home. A great deal is made of the workhouse and of the matron and master, who are described as coarse oppressors. The workhouse children, like all the lower class of personages in the book, are described as talking a sort of Cockney Irish, evidently believed by the author to be the national tongue of England. The entire absence of any resemblance to life in this respect, as in many others, mars what has in parts the elements of a good story. Ellie has nothing very original about her; when in the workhouse she is despairing and rebellious, when she has escaped she behaves as well as the generality of ladies. She is too much influenced by the offensive candour of a certain Mrs. Langton, though it has the good effect of clearing up the true nature of the attachment between her guardian and herself. Of this Mrs. Langton, as of other vulgar and unpleasant characters, we see more than we could wish: "Mrs. Langton was so overpowered at the honour of dining with a lord that whenever he ventured a remark to any one she responded with a low bow that dipped her lace cap-strings into her soup once, and several times into the sauce." The idea and the description are equally matched, whatever be the merit of either. The "lord" is the lover of Bella, the stepdaughter of Mr. Norton, Ellie's protector, and his courtship is meant to be a humorous representation of the imbecility of his kind: "'Would you—I mean could—could you marry me?' 'I'm afraid not.' 'Awfully hard to put it right. Never tried before. Love you. Lots of tin. Can't you?'" &c.

Altogether 'A Stranger in a Strange Land' is weary reading.

'Eve Lester' may make the ordinary reader wonder at times whether he is still in his right mind. The heroine is the motherless daughter of a misogynist, a rich freethinker who is the head of a motley society called the Brotherhood of Freedom. The hero comes to live in the neighbourhood of the misogynist under an assumed name, pretending to be secretary to a mysterious patron who is never seen. A country parson and his wife and an Italian sculptor who is also a pianist and a poet are the other principal characters. The story, which has little action, seems to have some objects, partly to show that the womanliness of woman is innate—to use the semi-philosophic language which Mrs. Diehl often affects—and partly to prove something with regard to freethinking, though it is not clear what that something is. The misogynist freethinker, who has sounded the depths of all philosophies and all religions, is an exceedingly vain and exceedingly silly person, and allows himself to be duped by a smiling millionaire in the City, and ends by partly losing his wits. Such a fate might easily befall any philosopher who is not versed in business, and Mrs. Diehl has not made it clear whether she meant it to be a retribution justly coming upon the misogynist and the freethinker, or a mere incident to help out the story.

CHRISTMAS BOOKS.

Brothers of Pity, and other Tales of Beasts and Men. By Juliana Horatia Ewing. (Society for Promoting Christian Knowledge.)
Light in the Gloaming. (Same publishers.)
The Dreadful Cousin. By S. M. Sitwell. (Same publishers.)
Ruth Allen's Foundling. (Same author and publishers.)
Hector: a Story for Young People. By Flora L. Shaw. (Bell & Sons.)
The Princess and Curdie. By George Mac Donald, LL.D. (Chatto & Windus.)
Coming; or, the Golden Year. By Selina Gaye. (Seeley, Jackson & Halliday.)
Rosy. By Mrs. Molesworth. (Macmillan & Co.)
Decima's Promise. By Agnes Giberne. (Nisbet & Co.)
A Baker's Dozen. By L. H. Apaque. (Society for Promoting Christian Knowledge.)
Our Little Ones: Illustrated Stories and Poems for Little People. William T. Adams (Oliver Optic) Editor. (Griffith & Farran.)
Every Boy's Annual. Edited by E. Routledge. (Routledge & Sons.)
Every Girl's Annual. Edited by A. A. Leith. (Same publishers.)

The volume entitled 'Brothers of Pity, and other Tales of Beasts and Men,' is a reprint from *Aunt Judy's Magazine*. Like all Mrs. Ewing's work, it is far above the average of the story-books rained down on the heads of the rising generation. The story of the quaint little dreamer is very attractive. As he pores over pictures in old books his imagination is fired by the "masked faces and solemn garb" of the "Fratelli della Misericordia," who "bind themselves to be ready in their turn to do certain offices of mercy, pity, and compassion to the sick, the dying, and the dead.....They work with covered faces, and are not known even to each other.....Each takes his turn when it comes round to nurse the sick, carry the dying to hospital, and bury the dead." Musing over the old Italian brotherhood and bewailing his youth and weakness, the child determines to be a Brother of Pity to all little beasts and insects. How he spent his summer in the loving work is charmingly told, and his adventure in the moonlight with the burying beetles is a weird little tale.

'Light in the Gloaming' is rather a sentimental tale of a worldly sea-captain who married a girl of Puritanical family, and was not unnaturally bored, but was finally reclaimed in his blind old age from his evil ways by his daughter "Bonnie."

The "dreadful cousin," whose advent in a young family was expected to put an end to all the fun, turns out to be "just a bundle of niceness," as the youngest boy in the book remarks. "She gived me such a lot of sugar with my pudding, and she lended me her paint-box, and showed me how to make the colours, and I'm just dreadfully glad she came."

'Ruth Allen's Foundling,' also by Mrs. Sitwell, is a tale of the usual village schoolmistress who finds and adopts a stolen child. After the lapse of years the child is restored to its parents and the benevolent schoolmistress is rewarded.

'Hector' is a pretty story of child life by the author of 'Castle Blair.' The children frolic in France instead of in Ireland, and the fun and the pathos of village life are pleasantly portrayed. Hector and Zélie are a little too fond of interfering in the love affairs of the villagers, but they manage to enact Providence in a most successful fashion.

'The Princess and Curdie' is another of Dr. George Mac Donald's wonderful fairy tales, full of strange parables and mystic moralities. The illustrations, by Mr. James Allen, are not unsuccessful, though rather pretentious.

'Coming; or, the Golden Year,' is a rather whimsical, but not uninteresting rhapsody, where we pass from the extremest realism in a children's hospital to ghostly tales on the mountain side in Tyrol. The drift of the book seems to be that we should labour "among the outcast, the poor, and the sad, trying to lighten the dark places of the earth."

It is not easy to see the good of delineating for children the mental struggles of a somewhat morbid and self-conscious child; yet such is the gist of Mrs. Molesworth's 'Rosy.' It is a thousand pities, for instance, to feed a child on such food as the description of Rosy after one of her tantrums, lying on the floor, "with wearied, swollen eyes, and panting breath, and aching head, feeling or fancying that no one loves you, that the world is all wrong, and there is nothing sweet or bright or pretty in it, no place for you, and no use in being alive..... What *can* be more wretched?" Beata, Rosy's foil throughout the book, is a sweet little unselfish girl. To her Rosy confides her struggles against her unhappy nature: "All of a sudden I thought it would be nice to be good—not pretending, but *real* good—never cross, and all that. And so I fixed I would be quite good, and thought how pleased you'd be.....And it was all right for a while, but then when mamma began talking about Mr. Furniture, and how nice he was, and his daughter, and you knew all about them and I didn't, *it all went away.*" The strain of being "real good" is too much for Rosy and she relapses: "I'll fix just to be naughty again to-morrow, for a rest, you know. How would it do, I wonder, if I was to be good and naughty in turns? I could settle the days, and then the naughty ones you could keep out of my way." "It wouldn't do at all," said Bee, decidedly. And so the precocious little imps go on. Fixie, Rosy's little brother, is one of Mrs. Molesworth's more natural and engaging characters; his quaint sayings relieve the introspection of the older children. "Is mice the same as mouses?" said Fixie; and when Bee nodded, "Why don't you say mouses, then?" he asked; "it 's a much samer word." Poor little Fixie's love for "mouses" brings all the children into sad trouble, but all comes right in the end.

'Decima's Promise' is really a terrible story, not in its treatment, but in the incident on which the whole story hinges. Decima is a wild, heedless girl, "a misguided character," says her aunt, "an uneducated one. She is not womanly, and her principles are vague.....There seems to be no fixed principle of duty, still less any mastering desire to serve God and to do His will. Dessie has evidently set before herself a model of what she considers a 'clever' girl, and she does her best to act up to that model. She is not natural.....she is constantly acting a part." The reclamation of such a heroine is, of course, the plan of the book. But in order to accomplish this desirable end was it necessary to kill her baby nephew? The life of the babe for the soul of the girl, and who shall decide which is worth the most? Baby Hubert was done to death through the carelessness of Decima and of a young nurse, and lest the nurse should lose her place Decima gives a promise not to tell. For months she is tormented in her mind as to whether she should keep or break this promise; meanwhile little Hubert wastes away, stricken by a mysterious disease which baffles the doctors. At last Decima decides the point in casuistry which frets her mind for so long; she breaks the promise she never should have made and tells of the fatal fall, and the same day the child dies. Decima lives on, a sadder and a wiser girl. The book, repulsive in plot, has not much in treatment to recommend it. The bad French governess has been well known to all readers of fiction since the days of Mdlle. Panache, and the episode of Mdlle. St. Roque is not particularly amusing, while surely it was unnecessary to repeat the stale story of the impatient German, who, thinking of his native "bekommen," exclaimed, "When *shall* I become a bowl of soup?"

'A Baker's Dozen' is thirteen children, not loaves. Dorothea Ainslie volunteers to take charge of this appalling group—seven Owens, two Seatons, and four Holmeses—during the holidays, and this is the chronicle of their adventures, amusing enough and exciting too. The book will amuse boys.

'Our Little Ones' is a reprint. The letterpress is not very interesting, and the illustrations, though announced as American, are not quite up to the standard with which we have become familiar in more than one American magazine.

The two annuals published by Messrs. Routledge are established favourites. Each of them contains a quantity of excellent reading, both the tales and the miscellaneous articles being adapted to the readers for whom they are intended. It would be well, however, to omit the coloured illustrations; they are coarse and crude. Boys and girls ought to be trained by good examples to appreciate harmonious colouring.

OUR LIBRARY TABLE.

The Teacher's Prayer Book, by Alfred Barry, D.D. (Eyre & Spottiswoode), has been sent to us, with a lithographed circular which saves us any trouble in reviewing it. Messrs. Eyre & Spottiswoode say that the book "is edited by the Rev. Canon Barry, whose great experience as a teacher, his [*sic*] good churchmanship, high standing as a scholar, and logical faculty ensure for his work a standard value." If a cursory examination of Dr. Barry's book may be relied on, there is not much reason to dispute this commendation; and no more need be said than to express regret that so much experience, and scholarship, and logical faculty have been expended on what, after all, is a mere compilation, or rather commonplace book, gathered from a number of recent publications about the Prayer Book.

We have on our table several excellent works published by Messrs. Ward & Lock. Among these is the second volume of *The Universal Instructor*, a serial admirably adapted to the wants

of those who desire to educate themselves. The articles on zoology by Mr. Bettany, on English grammar by Miss Toulmin Smith, and on French by M. Kunz are especially good. The first instalment of *The Child's Instructor* is promising. *Amateur Work* will be invaluable to any one with a turn for mechanics and neat in handling tools.—To Messrs. Cassell we are indebted for their excellent sixpenny almanac for 1883.

A LARGE number of Christmas cards are lying on our table. Some of them show that the invention of the producers has been overtasked, and they are in consequence fantastic rather than elegant. On the other hand, many are simple and effective. The cards of Messrs. Marcus Ward & Co. are more gorgeous and elaborate than ever, and as a whole show a considerable advance.—Messrs. Raphael Tuck & Co., who are among the most energetic of the card publishers, have boldly enlisted Royal Academicians in their service. Mr. Marcus Stone has been the most successful of the painters thus employed. Mr. Poynter, Mr. Leslie, and Mr. Yeames have hardly been so happy. The cards of Mr. Herbert and Mr. Dobson are very like their contributions to Burlington House. Some of the other Christmas cards sent to us by Messrs. Tuck are excellent in design and colour, and certainly "the outsiders" beat the Academicians in this branch of art.—Prang's American cards, imported by Messrs. Ackermann, are somewhat unequal, but many of them are very nicely executed.—No other designs are so uniformly good as the prize designs of Messrs. S. Hildesheimer & Co., which display a sounder knowledge of the limits of chromo-lithography than most of those we have seen this season. Too many of their rivals seem to neglect this matter altogether.

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Gospel of St. Mark in Gothic, the translation by Wulfila edited by Rev. W. W. Skeat, 12mo. 4/ cl.
Heavenly Counsel in Daily Portions, Notes from the Bible Classes of M. L. Charlesworth, ed. by H. M. Barclay, 3/6
Hebrew Text of the Old Covenant in a modified Roman Alphabet, ed. by Rev. T. Jarrett, 2 vols. 8vo. 21/ cl.
Pulpit Commentary: St. Mark, Exposition by Bickersteth, Homiletics by Thomson, 2 vols. roy. 8vo. 21/ cl.
Sacred Books of the East: Vol. 14, The Sacred Laws of the Aryas, translated by G. Bühler, Part 2, Vasishtha and Baudhayana, 8vo. 10/6 cl.; Vol. 18, Pahlavi Texts, translated by E. W. West, Part 2, 8vo. 12/6 cl.
Savile's (Rev. B. W.) Fulfilled Prophecy in Proof of the Truth of Scripture, 8vo. 10/6 cl.
Withers's (J.) The Messiah King, cr. 8vo. 5/ cl.
Yorke's (J. F.) Notes on Evolution and Christianity, 8vo. 6/ cl.

Poetry.

Epics and Romances of the Middle Ages, adapted from Wagner by Macdowell, and edited by Anson, 8vo. 7/6 cl.
Gay's (Mr. John) Fables, with Memoir by A. Dobson, 6/
Old Norse Sagas, cr. 8vo. 2/6 cl.
Reeve's (A.) Lights and Shadows, 12mo. 3/6 cl.

History and Biography.

Conway's (M. D.) Emerson at Home and Abroad, 8vo. 10/6 cl.
Graves's (R. P.) Life of Sir William Rowan Hamilton, Knt., Vol. 1, 8vo. 15/ cl.

FACSIMILES OF NATIONAL MANUSCRIPTS OF IRELAND, PART IV.

THE forthcoming part of this work, printed by Government, and edited by Mr. John T. Gilbert, F.S.A., under the direction of the Master of the Rolls in Ireland, illustrates the period from the reign of Edward VI. to that of James I. It contains facsimiles of interesting and valuable documents, maps, and drawings, reproduced in accordance with the originals in dimensions, colouring, and general appearance. Of the reproductions in the present part the following is a brief notice:—

1. Royal letters addressed to Thomas, Earl of Ormonde, with autographs of Edward VI., King Philip, and Queen Mary, from the originals in possession of the Marquis of Ormonde. 2. The elaborately ornamented patent for the re-establishment, in 1554, of the Earldom of Kildare, from the original document, which is preserved in the archives of the Duke of Leinster. 3. Pages from the Council Book of Ireland, 1558, with autographs of the Viceroy and members of the Privy Council there. 4. Gaelic letters, 1561, from Shane O'Neill, Chief of Ulster, whose visit to Queen Elizabeth is chronicled by Camden and other writers. 5. A map of Ireland, 1567, showing the districts occupied at that date by the lords, chiefs, and clans, and with entries in the writing of Sir W. Cecil, Secretary of State. 6. Latin letter of Torlogh, Chief of Tyrone, styling himself "Princeps O'Neill," addressed to the Viceroy and Council in Ireland. 7. Receipt from Donall, the "MacCarthy Mór," 1569, for a "purple robe of state, coronet, and collar of gold," presented to him by Queen Elizabeth on the occasion of his being created Earl of Clancare or Clancarty. 8. Documents connected with the proceedings of the Government in Ireland in relation to hostile movements by Sir Edmund Butler and other brethren of the Earl of Ormonde. 9. Address to Queen Elizabeth in 1569, with autographs and seals of the principal ecclesiastics and laymen in the counties of Kilkenny and Tipperary. 10. Record of transactions of the Lord Deputy, Sir Henry Sydney, and the Government at Dublin, with the Irish sept of Cavenagh or Kavanagh, in 1569-70. 11, 12. Letters of the Lord of Upper Ossory and his son, Sir Barnaby Fitz-Patrick, the favourite companion of Edward VI. Horace Walpole and others who have written on the subject of King Edward and Fitz-Patrick do not appear to have been acquainted with these curious letters. 13. Holograph letters of Gerald, the unfortunate Earl of Desmond, and Eleanor his countess. 14. Gaelic letters to and from James Fitz-Maurice in connexion with his attempt against the rule of Queen Elizabeth in Ireland. 15. Map of the north-east of Ireland, about 1580, showing the principal places on the route from Dublin to the then important town of Knockfergus or Carrickfergus, in Ulster. 16. A statement in Latin, written by a Brehon, or professional native jurist, in 1571, in reference to old Irish law. 17. Letter of Elizabeth Fitz-Gerald, "the fair Geraldine" of the Earl of Surrey. 18. Letter of Miler Magrath, the Archbishop of Cashel, who contrived to possess himself of four bishoprics, with a great number of benefices, and was referred to by Strafford as "that wicked bishop Meilerus." 19. Address to Queen Elizabeth from the chief personages of Munster and Kilkenny, with their seals and signatures, in reference to the death of the Earl of Desmond. 20. A unique and interesting drawing, elaborately coloured and gilt, of the year 1582, representing an Irish foot soldier fully equipped, with coat of mail, sword, and axe. 21. Journal of the House of Lords in Ireland, 1586, the contents of which have hitherto been unnoticed. 22. A primer of the Irish language prepared for the use of Queen Elizabeth by Christopher Nugent, Baron of Delvin, the original of which is in the Shirley collection. 23. A drawing made in 1597 of the attack by the Viceroy, with the English forces, on the Fort of Blackwater, in Ulster, which at that time was regarded as of high value in a military point of view. 24. A contemporary plan of the engagement between the English and Irish at the Blackwater, 1598, with referential notes in the handwriting of Sir George Carew, sometime Viceroy of Ireland. 25. Letters from the Lords Justices at Dublin to the Privy Council in England on the "disaster at the Blackwater" in 1598. 26. Drawing by Capt. Charles Montague of the engagement in which he took part between Sir Henry Harington's forces and the Irish of Wicklow, during the viceroyalty of Robert, Earl of Essex, in 1599. 27. A drawing containing numerous figures and representing the capture of the Earl of Ormonde by O'More

XUM

and some of the Irish of Leinster in 1600, with observations in the writing of Sir George Carew, who was present on the occasion. 28, 29. Letters of the Countess and Earl of Ormonde, while the latter was detained in the hands of his Irish captors. 30, 31. Gaelic proclamation by Hugh O'Neill and a letter from him in English signed as Earl of Tyrone. 32. Letter written in the Tower of London to the Earl of Salisbury in 1602 by Florence MacCarthy, the apprehension of whose influence over his countrymen in Munster led to his detention in England as a State prisoner for nearly forty years. 33. Intercepted letter addressed in 1602 to the Governor of Galicia by Donell O'Sullivan, and dated from his castle of Bearehaven, which subsequently maintained an "obstinate and resolved defence" against Queen Elizabeth's forces. 34. A Gaelic letter written to Robert Nugent, Superior of the Jesuits in Ireland. 35. The anonymous letter addressed in 1607 to the Clerk of the Privy Council in Ireland and transmitted to the Lords of the Council in England, with certificate signed by the Lord Deputy, Sir Arthur Chichester, and the members of the Privy Council in Ireland. 36. A page from the elegantly written volume of Irish genealogies preserved in the Carew collection. 37. The patent issued in 1616 to Sir Gerald Moore on his advancement to the title of Baron of Mellifont, under the Great Seal of Ireland. The original, with miniature portrait of James I., and elaborate emblazonment of arms and allegorical devices, is preserved in the archives of the Marquis of Drogheda. 38, 39. Specimens of Anglo-Irish heraldry, containing the escutcheons of the peers and principal families in Ireland in the early part of the reign of James I. 40. Drawing of the Fort of Charlemont in Ulster, erected in the reign of James I. by Sir Toby Caulfield, first Baron of Charlemont. As a frontier post Charlemont Fort was of great importance and underwent various vicissitudes of war.

In an appendix to this part are given facsimiles of pages of an ancient Psalter of Christ Church, Dublin, and of ornamental initial letters from the MS. in the Irish language known as the "Book of Mac Richard Butler." The Psalter, executed towards the middle of the fourteenth century, and now in the Bodleian Library, is one of the finest volumes of its time and class produced in these countries. The pages copied from it in the present part are replete with elaborate and varied artistic ornamentation in colours and gold, with fine initial letters and floral borders of rare elegance and beauty. These reproductions from the Psalter include highly finished miniatures, amongst which may be specially mentioned some which contain delineations of fools and grotesques, and representations of performances with musical instruments.

The contents of all the specimens are fully noticed and printed opposite to the facsimiles. Descriptions are likewise given by the editor of the various manuscripts from which the specimens have been taken. Several original documents of historical importance hitherto unpublished are also printed in this publication in elucidation of the facsimiles.

ENGLISH AUTHORS AND AMERICAN PUBLISHERS.

100, Harley Street, Nov. 20, 1882.

In reply to Mr. Sampson Low's letter in your last impression, I beg to say that Messrs. Lippincott's "attractive little volume" containing Caroline Fox's journals *has no portrait*, none having been supplied them; the vile woodcut in Messrs. Harper's reprint being merely a tracing or copy of the etching by Mr. Herkomer in the first English edition of the book, over which Messrs. Lippincott had no power whatever. Whether Mr. Low's letter or mine is the more "misleading" your readers can judge from this.

In regard to his other remarks, as they in no way lead me to modify my previous statements, I shall not further encumber your columns with a useless discussion on a matter of fact.

HORACE N. PYM.

Crown Buildings, 188, Fleet Street, Nov. 22, 1882.

THERE is a substratum of truth in what Mr. Clark Russell has said in your columns about his books in the United States; but really I think his wrath has been somewhat misdirected. If he had applied his vigorous pen in attacking those who have injured him most in America—I mean those American freebooters who are using, and whose interest it is to use, the most determined efforts to prevent an international copyright treaty with this country—he would have done good service; but instead of doing so, he has chosen by implication, if not in fact, to attack the very publishers who are doing more even than they could reasonably be expected to do to checkmate these depredators by issuing English books as cheaply as their unauthorized opponents, and yet (frequently to their own loss) securing at least some payment to English authors.

Mr. Russell must pardon me for saying that I think he is not quite ingenuous when he avers that he has never received a farthing from America. Messrs. Harper's agent, Mr. Sampson Low, has already stated in your columns that Messrs. Harper have *paid* for what they have used of his books, therefore *they* are blameless. I may venture to say, further, that when Mr. Russell sold his copyright to his English publishers, he had no longer any right to expect even "a farthing" from America. Whatever sum came from America surely belonged to those who had already paid him for all his rights—including America. I may also be permitted to say that the sum mentioned in Mr. Low's letter is not quite correctly stated. Only a small portion of that sum is referable to the books specified by Mr. Russell—viz., 'A Sailor's Sweetheart' and 'The Wreck of the Grosvenor'—out of which small portion an honorarium *was* handed to Mr. Russell, not, it is true, by Messrs. Harper, but by his English publishers. Another portion was for a work since published under the conditions already mentioned, which gave Mr. Russell no claim to any of it. A third portion pertains to a work not yet published, and, owing to subsequent arrangements, has not been, and probably will not be, paid except through some other channel.

I freely admit, therefore, that Mr. Russell has ground for complaint that he has not been adequately remunerated for the great popularity of his books in America, and I heartily sympathize with him; but my argument is that he does not attribute the blame to the proper quarter.

It should be borne in mind that Messrs. Harper are the only publishers through whom Mr. Clark Russell has received any payment, although they are by no means the only publishers who have published his books.

Perhaps G.W.S., who telegraphed to the New York *Tribune* the substance of Mr. Low's letter (with an incorrect comment), will correct his statement and remove the reflection therein cast upon the English publishers.

EDWARD MARSTON.

THE letters you have published bearing witness to the liberality shown by Messrs. Harper & Brothers in their dealings with English authors must be highly gratifying to that eminent firm, which has always been proud of its "liberality," and which, if I am not mistaken, actually printed a catalogue of its publications for distribution at the Paris Exposition of 1878, containing a statement of the exact number of dollars it had expended in presents to foreign writers.

At the same time it is only fair to warn inexperienced authors that Mr. Sampson Low's repeated statement about Harper & Brothers' "invariable rule of paying for early sheets" must not be taken to mean that they have adopted any rule which precludes them from following the time-honoured practice of publishing unauthorized editions of English books without payment. Messrs. Harper no doubt pay for early sheets; it is improbable that they could obtain them on any other terms; but should an author omit to send them "early sheets," or should he send his "early sheets" to some other publisher with whom Messrs. Harper have a feud (Mr. Froude could give some interesting experiences on this point), or, worst of all, should he commit the unpardonable sin of attempting to supply his Transatlantic readers with an English-printed edition, he would, if his book was worth anything, run an excellent chance of having it included in the valuable "Franklin Square" collection, an honour unsullied by any mere pecuniary reward.

It is one of the fundamental articles of the American publishers' creed that no book is worthy of consideration which has not an American imprint. It was their insistence on this point, and the care with which they made it obvious that it was for themselves and not for the English authors that they sought protection from the so-called "pirates" of the West, that probably rendered abortive Messrs. Harper's schemes for an international copyright treaty. When it became clear to authors that their interests were to be made subsidiary to those of American printers and paper-makers, their zeal, not unnaturally, abated. In spite of this I read in *Harper's Weekly* for September 16th that the failure of the negotiations "is undoubtedly due to the hostility of the British publishers." These selfish and unscrupulous persons insist, according to the writer in *Harper*, "that the British author shall not be paid a copyright in the United States unless the British publisher manufactures the book." Now, as the writer in *Harper's Weekly* must certainly have been in a position to know the facts of the case, I have no hesitation in denouncing the above statement as a deliberate and disgraceful attempt to mislead the public. The "British publisher" had little to say about the matter, for he felt that it was one that did not greatly affect himself; but when asked his opinion as to the advisability of embodying Messrs. Harper's proposals in a treaty, probably did say that he thought it would be better for the United States to grant copyright to foreigners on the terms on which it is at present granted to American citizens—that is to say, to allow them to get their books printed at home or abroad as may seem most desirable to themselves in each individual case. This view, though not in itself unreasonable, was not favourably received by those who were agitating for a treaty, ostensibly in the interest of foreign authors, but really for the sake of protecting their own printing presses; and accordingly, when the negotiations fell through, the English publisher, who in reality had little or nothing to say in the matter, was singled out as a convenient scapegoat. A.

30, St. James's Road, Brixton, Nov. 20, 1882.

LET me assure Mr. Clark Russell that I am not "an opponent of the British authors' grievance," and that my sympathy will be always with my brother novelists. I only wrote to bear witness in my own case to Messrs. Harper's fair dealing in the matter of advance sheets, and this as an act of simple duty to those with whom I have worked very amicably, and to whom I am considerably indebted. I am certain Mr. Russell in my place would have done the same; and if in future agreements with English publishers for his stirring stories he will merely add the clause, "*The author reserves to himself all foreign rights*," I feel confident he will be enabled to treat direct for advance sheets with almost any American publisher whom he may select to represent him.

F. W. ROBINSON.

XUM

Stanley Place, Chelsea, Nov. 20, 1882.

I HAVE read with a good deal of pain the attacks on Messrs. Harper which have lately appeared in the *Athenæum*. Will you allow me to say, on the other side, that for some years past, ever since the publication of 'Patty,' Messrs. Harper have always paid me for any of my works that they have printed? Moreover, they have sent me a cheque as soon as they have received the copy or sheets, even when they have not been able to use the work for a space of time. In the case of 'Patty' I received Messrs. Harper's cheque through Messrs. Macmillan, although I had not made any stipulation about American rights.

It seems to me that the simple way is, either to reserve the American right of publication in making an arrangement with one's English publisher, or else to ask a larger price for one's book or article than one would expect to receive for merely the right to publish in England.

I am sure that many other English authors will be ready to testify to the fair dealing and prompt payment of Messrs. Harper & Brothers.

KATHARINE S. MACQUOID.

Literary Gossip.

A NEW feature will appear in the *Illustrated London News* with the beginning of the coming year. The number for January 6th will contain the first instalment of a new tale, entitled 'Yolande,' by Mr. William Black.

MR. MOZLEY, in his recently published 'Reminiscences of Oriel College,' pays a just tribute to Palmer, of Worcester College, and expresses his indignation that so learned a divine should have been allowed to die without receiving any preferment. It is true that Palmer was tabooed by the bestowers of patronage—as, indeed, all the leaders of the Oxford movement were till Mr. Gladstone became Prime Minister; and most of them had then passed away. Fortunately, however, Mr. Palmer, of Worcester, is still among us, and is employing his old age in bringing out, under the editorship of the Rev. Malcolm MacColl, a revised and partly rewritten edition of his great work, the 'Treatise on the Church of Christ,' which has been out of print for forty years. Dr. Newman reviewed the book in the *British Critic* when it was first published, and this review, which is highly laudatory, Cardinal Newman has lately republished. In his *Apologia*, too, he calls Palmer "the only really learned man among us," *i. e.*, among the leaders of the Oxford movement; and adds that Father Perrone, the Roman theologian, saluted the 'Treatise on the Church' as the work of "a foe worthy of being vanquished," and thought little of the other Oxford writers in comparison.

IN a circular just issued Mr. MacColl states that the new edition of Mr. Palmer's book has been undertaken at the urgent suggestion of Mr. Gladstone, who has at the same time permitted Mr. MacColl to publish a letter in which Mr. Gladstone gives a brief sketch of the kind of book which an experience of "fifty years of adult life" leads him to regard as "the most rational of all" in the way of Christian apologetic. This experience Mr. Gladstone describes as spent "in the *mêlée* of systems, dogmatic and undogmatic, revealed and unrevealed, particularist, pagan, secular, anti-theistic, or other, which marks the age." Mr. MacColl also quotes from a recent letter of Dr. Döllinger, in which the great German theologian says of the work:—

"English theological literature possesses nothing comparable to it or which could replace it. The study of such a work should be an indispensable requisite for every candidate for holy orders."

He thinks that the republication of the book, revised up to the requirements of the day, "would be a real boon to Christendom"; and he offers his own aid in the work, which he regards as arduous. Among the subscribers to the new edition are the Archbishop of Canterbury, the Bishop of Durham, and most of the bishops, the Lord Chancellor, Mr. Gladstone, the Marquis of Salisbury, the Marquis of Bath, Sir Stafford Northcote, Mr. Childers, Mr. Beresford Hope, the Dean of St. Paul's, Dr. Liddon, the Earl of Glasgow, the Dean of Carlisle, the Earl of Strathmore, the Earl of Rosebery, the Dean of Norwich, and the Hon. and Rev. W. H. Fremantle.

MADAME DE NOVIKOFF is engaged in writing a biography of the late General Skobeleff.

DR. SMILES has in the press a biography of the veteran engineer and inventor Mr. James Nasmyth, whose steam hammer has done so much solid work in the world as to justify the adoption by its inventor of the motto *Non arte sed marte*. Mr. Nasmyth's varied accomplishments as an astronomer, an artist, and an archæologist give promise of a volume of unusual interest, while his personal reminiscences extend over a large part of the present century. M. Paul Rajon has etched for the book one of his best portraits, after a painting by Mr. George Reid, R.S.A.

MR. W. D. HOWELLS, who is writing his new novel in a retired place in Switzerland, has known nothing of the animated discussion which his remarks in the November number of the *Century Magazine* have called forth from the English press. He writes to a friend who has called his attention to the subject that he has not even seen the magazine itself, and cannot recollect what he said about Dickens and Thackeray. But he is sure that he has been misprinted or misunderstood if he seems to be disrespectful to those great writers. "I always thought myself," he says,

"quite unapproached in my appreciation of the great qualities of Dickens and Thackeray, and I can hardly believe that I have 'arraigned' them. I suspect that no Englishman could rate them higher than I do."

The eminent novelist goes on to say that he only waits to see the *Century Magazine* and "what my offence in it against the great shades amounts to," to write further on the subject; and he is now determined, on the earliest opportunity, to carry out a design which has long been in his thoughts, namely, "to say my say about the art of Dickens and Thackeray in full." Next to a new novel from the pen of Mr. Howells, no contribution of his to literature would be more welcome than such a study.

AT their last meeting the members of the Council of the Camden Society, after expressing their regret at the loss of their late colleague, Mr. Daniel Tyssen, and of their late auditor, Mr. Hill, proceeded to select the books to be issued in the following year. It had been arranged at a previous meeting that Mr. Scott's 'Diary of Gabriel Harvey' should be published in the present year. As, however, Mr. Scott finds that in order to annotate the book properly it will be necessary to keep it back for a few months, Dr. Grosart will edit at once the account of the Cadiz expedition of 1625, which is probably the work of Glanville, and which exists in the library of the Earl of St. Germains. For next year the Society will probably have, in addition to Gabriel Harvey's Diary, a volume of selections from the Lauderdale papers, throwing great light upon the management of Scotland in the early part of the reign of Charles II., to be edited by Mr. Osmund Airy, and, unless these two books run to great length, a volume of the Miscellany, which will contain, with other interesting matters, some unpublished letters of the Earl of Strafford, and a poem, probably writtten by Cartwright, on Strafford's illness in 1640. The Council has also in view for publication in the year 1884–5 a very interesting volume of the correspondence of Secretary Nicholas, to be edited by Mr. Warner, and the volume of the privy purse expenses of Henry, Earl of Derby, afterwards King Henry IV., part of which was prepared for the press by Dr. Pauli before his death.

ON the afternoon of the 17th inst. an Early Scottish Text Society was inaugurated by a meeting held in Edinburgh. Many literary men and antiquaries were present, Prof. Æneas J. G. MacKay acting as chairman. The Rev. Walter Gregor submitted an account of the manner in which he had originated the scheme, and intimated that both in England and Scotland leading scholars were sanguine of its ultimate success. From America and the Continent assurances of support have been received, several foreign libraries have been added to the list of subscribers, and everything is in train for early publications. Prof. Skeat, Mr. Furnivall, Dr. Murray, and other members of the Early English Text Society offered at an early period to help in the editing of the Scottish society's literary ventures. In order that the society may be safely launched nearly one hundred subscribers are required in addition to the present membership, which now stands above two hundred. Prof. MacKay pointed out to the meeting what scope for practical work lay before a Scottish Text Society, and moved, "That the meeting, having heard with interest Mr. Gregor's statement, resolve to use every effort to place the society on a working basis." Mr. Gregor was appointed honorary secretary, while Messrs. W. Blackwood & Sons were named as the society's publishers.

MR. EDMUND W. GOSSE has printed privately ten copies of a very interesting memoir of Thomas Lodge, the Elizabethan poet and romance writer. It will be remembered that Mr. Gosse is editing Lodge's works for the Hunterian Society.

IT is generally said that when Benjamin Franklin first came to England he was employed at Palmer's printing office on the second edition of Wollaston's 'Religion of Nature,' and in fact Franklin himself asserts as much; but Mr. Solly will try to prove, in an article in the December number of the

Bibliographer, that it was the third edition, published in 1725, after the author's death, upon which Franklin worked.

Some rather important changes of action are signalized by the latest report of the Cambridge Local Examinations and Lectures Syndicate. The first proposal is to provide for backward students a possibility of entering the junior examination up to the age of seventeen; and these students are to be placed on a separate list, after that of the candidates who have passed the examination at the ordinary age of sixteen. A second proposal is that the Syndicate shall be empowered to examine schools or parts of schools, instead of, as now, the whole of the scholars of a school individually. The latter course causes great expense to the school and entails arduous labour on the examiners. It is suggested that a sufficient report on the efficiency of a school may be given without a detailed examination of the scholars. This part of the work of the Syndicate has increased largely, as they now examine about eighty schools annually. Under the new regulation they would probably gain a great share of the inspection of secondary schools throughout the country. A third proposal is that the Syndicate be empowered to co-operate with the University of Durham in conducting courses of lectures and classes in the Durham district.

The Joint Board appointed by the Universities of Oxford, Cambridge, and London has made a report to the London Society for the Extension of University Teaching, in which satisfaction is expressed that the regulations have been more carefully observed during the past year than on previous occasions, especially with respect to the adoption of the class in connexion with the lecture. It still complains of the syllabuses, though in several cases, it says, there is a marked improvement, and suggests that the Council should undertake the printing of the syllabuses, thus getting over the local difficulties as to expense. The reports of the lecturers and examiners for the past year are pronounced satisfactory, and indicative of progress with respect both to the extent and the quality of the work done. There is, the report adds, some idea of granting an advanced certificate to those students who shall have gained a certain number of certificates in any of several specified branches of study.

The Council of the new University College at Dundee have this week appointed professors for the chairs of mathematics and natural philosophy, chemistry, engineering, and English language and modern history, the chair of classics and ancient history to be occupied by Mr. Peterson, the principal. The regular work of the college will begin with the winter of next year.

The *United Service Gazette* has been purchased by Mr. Rance. The valuations for the purchaser were made by Mr. Wellsman (C. Mitchell & Co.).

Prof. Packard has written the history of Bowdoin College, Maine. In it he says he remembers Hawthorne in the "recitation room" with "the same shy, gentle bearing, black, drooping, full, inquisitive eye, and low musical voice that he ever had," and Longfellow, two seats behind Hawthorne, a fair-haired youth, blooming with health and early promise.

The Advocates' Library in Edinburgh is about to be considerably enlarged, the extension being necessary owing to the constantly increasing addition of books to its shelves.

It appears from the Administration Report of the Central Provinces of India for 1881–82 that the average attendance at schools during the year was only 58,135 out of a population of nearly ten millions, and that only 4·7 per cent. of the whole male population were returned as under instruction or able to read and write. It is stated that a considerably larger percentage of Mohammedans than of Hindus avail themselves of the education offered at the schools of the province and are employed under Government.

The death is announced on the 17th of last month of Rao Bahadoor Dadoba Pandurung, one of the oldest social and religious reformers in Bombay and a well-known scholar and *littérateur*. He rose to a high position in the Bombay Educational Department, and was the author of various works, including a pamphlet on Swedenborg which was much admired by the Swedenborgians in this country.

The Corporation of Shrewsbury proposes to adopt the Free Libraries Act and to form a library, reading-room, and museum, intending to utilize the buildings forming the Grammar School, which is being removed, for that purpose. A subscription, which so far considerably exceeds 2,000*l*., has been started to effect the object in view.

A requisition, signed by 9,401 ratepayers of Hull favourable to the establishment of a public free library, was presented to the Mayor of Hull last Saturday, requesting him to convene the statutory meeting with a view to the adoption of the Libraries Acts. This is the third attempt made to obtain a public library for Hull, two previous efforts, in 1857 and 1872, having been unsuccessful. On the present occasion the working men of the town have, through their trade and friendly societies and other organizations, taken a warm interest in the movement.

The death is announced of the Rev. Thomas Milner, author of 'Universal Geography,' the 'Gallery of Nature,' and many other works. From Switzerland comes the news of the death of Gottfried Kinkel, best known in this country as one of the leaders of the Baden insurrection, but highly esteemed in Germany as a poet and novelist. Since 1866 he had been a professor of *Kunstgeschichte* at Zürich.

A new book by the Bishop of Rochester, entitled 'Christ's Claim on the Young,' will be issued next week.

Mr. Edward King, the author of a work on the Southern States since the war and of a volume of poems and also a successful American journalist, has written a novel, which will shortly be published both in this country and the United States. It will be entitled 'The Gentle Savage.'

The books sold at the last day of the Sunderland sale, the 16th inst., included the following: 'Rhetores Antiqui Græci,' the Aldine collection, 2 vols., Venet., Aldus, 1508-9, 19*l*.; Sabellicus, 'De Vetustate Aquileiensis Patriæ,' printed on vellum, 22*l*.; Sagard Theodat, 'Le Grand Voyage aux Pays des Hurons,' Paris, Denys Moreau, 1632, 29*l*. 10*s*.

Dr. Hyde Clarke writes to us with reference to a letter of M. de Lacouperie's which we published some time ago:—

"As it is now too late to take up such a controversy at length, I beg permission to say that I see no reason to qualify in any respect the statements I have laid before your readers."

SCIENCE

SCHOOL-BOOKS.

The Four Rules of Arithmetic. By W. Wooding, B.A. (Longmans & Co.)—It is a mistake to think of teaching the first four rules of arithmetic by means of a book. The only effectual method is oral instruction. Few children would have the patience to read Mr. Wooding's lengthy remarks, or, if they had, would always clearly understand them. The first definition is not a model of distinctness or accuracy:—"*Number* is the name given to a class of words, by the use of which people say *how many* things they are talking about." Mr. Wooding is profuse in his directions as to what is to be done, but scarcely ever explains the reasons on which they are founded, thus omitting what constitutes the chief value of the subject as a discipline of the mind. On the other hand, his miscellaneous examples are well calculated to call the thinking power into exercise. The account of the history of numeration is interesting and in the main correct.

Euclid. Books I. and II. Edited by Charles L. Dodgson, M.A. (Macmillan & Co.)—We agree with Mr. Dodgson that for ordinary educational purposes the system of geometrical teaching so well known to the school world under the venerable name of Euclid is superior to any of its modern rivals, and we are glad to find that, although the editor has not hesitated to make many not inconsiderable changes by way of alteration or abridgment of language, no real change has been attempted either in Euclid's "methods of proof or in his logical sequence." This edition of the first two books seems to be intended for the use of beginners in geometry who have not the advantage of competent instruction, and these will unquestionably find it of the greatest service. The introduction and appendices will be read with profit by those scholars who are not content with a parrot-like acquaintance with Euclid, but wish to derive a maximum of information and mental discipline from the propositions. Mr. Dodgson explains his reasons for emending the generally received school texts, these reasons being mostly sound and always instructive. Exception may, however, be taken to some of the verbal changes; for instance, in the enunciation of the forty-eighth proposition we read "the square described on one side," &c., while in the page facing this proposition we read in a definition "the square of the line," &c. A boy working at Euclid without help might well be perplexed by this use of two different propositions under like circumstances, the more so as the use of one involves the geometrical, while that of the other involves the algebraical, conception of a square. In spite, however, of one or two such defects, we can recommend this edition, the type and arrangement of which are commendably clear, for the use of young students.

GEOGRAPHICAL NOTES.

Mr. Stanley is at present at Nice, recruiting his health, but intends shortly to return to the Congo. In the mean time Dr. van den Heuvel and Lieut. Schaumann, an Austrian, have left Antwerp on board the Harkaway, with instructions to make a reconnaissance in advance of the fifth Belgian station established at the confluence of the Kuango with the Congo, and consequently

far above Stanley Pool. The Harkaway takes out a cargo of calico, small mirrors, beads, garments embroidered in gold, scarlet dressing-gowns, and other articles coveted by the negroes, and will bring back ivory, palm oil, copal, and ground-nuts.

The telegraph announces the arrival of Lieut. Wissmann at Zanzibar. Dr. Pogge and Lieut. Wissmann started from the west coast of Africa as long ago as December, 1880. It was originally their intention to proceed to the residence of the Muata Yanvo, but finding the road closed by war, they turned to the north, and in November, 1881, reached Mukenge's town on the Lulua. From here both travellers started for Nyangwe on the Lualaba. Dr. Pogge then turned back, as originally intended by him, whilst Lieut. Wissmann continued his journey to the east. This is the fifth time Africa has been crossed by a European between the Atlantic and the Indian Ocean, Livingstone, Cameron, Stanley, and Serpa Pinto being the only explorers who have preceded Lieut. Wissmann in this feat.

Mr. Hubert Bancroft, the San Francisco publisher, who is the author of an elaborate history of the native races of the Pacific States, has nearly ready for the press the first volume of a still vaster undertaking, upon which he has been engaged for fifteen years. His new work is the history of the region from Central America to Alaska during three centuries. The work will extend to at least thirty volumes. The first volume will contain new particulars concerning the discovery of the American continent, and facts about Columbus which throw a new light upon his character.

The death is announced of the Italian traveller and man of science, the Marchese O. Antinori, at the age of seventy-one. His first travels in Africa were made between 1859 and 1861, and led to the publication of his 'Catalogo di una Collezione di Uccelli fatta nell' Interno dell' Africa Centrale Nord.'

The good people of Calvi in Corsica have quite made up their mind that their town gave birth to Christopher Columbus, and are about to erect a monument in honour of the great discoverer of the New World.

Dr. Arthur Krause arrived at Bremen at the beginning of this month, after an absence of eighteen months in the Chukchi peninsula and Alaska. The natural history collection secured by him and his brother is looked upon as the most important result of their expedition. The ethnographical collection is now on exhibition at Bremen.

We are in receipt of the 'Annual Report of the New York State Survey for the Year 1880,' signed by Mr. James T. Gardner, the director. The progress made is slow, which is not surprising if we bear in mind that the total annual expenditure does not quite reach 12,000 dollars. A chain of triangles extending right across the state, and connecting the United States coast survey with Lake Erie, has been completed, and is exhibited on the five charts which accompany the report. Gross errors in the older maps were once more revealed, and the area of the state appears to be 300 to 400 square miles less than has been hitherto assumed.

The November number of Petermann's *Mittheilungen* abounds in information on the movements of African travellers. Dr. Emin Bey writes from Lado, July 18th, 1882. Perfect quiet reigns in his province; his stores are full of ivory, rubber, ostrich feathers, tamarinds, and oil; and his relations with the big native chiefs grow more friendly from day to day. At the time he wrote this letter Dr. Emin was preparing to pay a visit to Dr. Junker in the Niam-niam country, and after his return he proposes to ascend the Sobat in a steam launch. F. Lupton Bey's last letter is dated Jangay, May 10th, 1882. In it he gives a few latitudes which materially affect our maps of the countries to the west of the Upper Nile. The lake referred to in this letter, as well as in a letter published in the last number of the *Proceedings*, is evidently the Koeydabo of Count Escayrac de Lauture, the Birket Metuáse of Poncet, and the "vast lake" heard of by Heuglin and Miani. Dr. Junker reports from Gango, on the western frontier of the Momvu country, about his successful journey through the region to the south of the Welle. From information obtained by him it appears that the Makua or Welle, *i. e.*, "river," is really the Upper Shari, whilst the Nepoko, a river rising far to the east, is identified by him with Stanley's Aruwimi. Dr. Junker has by this time probably returned to his station at Ndoruma's, and speaks hopefully of his chances of exploring the western Niam-niam countries. Turning from the Nile to the Benue, we find that Herr Flegel left Wukari on April 18th for the south-east, and arrived at Bakundi on the 26th of the same month. Bakundi is the capital of a new province of the empire of Sokoto. M. J. M. Schuver, the Dutch traveller, is reported to have arrived at Khartum.

ASTRONOMICAL NOTES.

THE great comet appears to have been first seen by Dr. Gould at Cordoba on the 6th of September. Mr. Finlay, as already mentioned, noticed it at the Cape on the 8th, but in the mean time it had also been seen in Australia at Sydney, as it was soon afterwards at Melbourne. It has already been stated in the *Athenæum* that it cannot be identical with both the comets of 1843 and 1880, with a supposed rapidly shortening period; and it now appears, from the latest determination of its orbit (calculated by Messrs. O. C. Wendell and S. C. Chandler, jun., of Harvard College Observatory, Cambridge, U.S.), that it is, in fact, identical with neither, but that, although the orbit does deviate slightly from a parabola, it is best represented by a very elongated ellipse with a period of several thousands of years. In that respect, therefore, it would seem to resemble the great comet of 1680, which came within an equally short distance of the sun; and the theory, of which so much has been heard lately, of its approaching absorption by the sun must be definitely abandoned. Dr. Oppenheim, of Berlin, has computed an ephemeris for the remainder of the year from the elements just mentioned of the Harvard College astronomers, from which it may be useful to extract the places until the 17th of December, when the moon is in her first quarter and after which not much more is likely to be seen of the comet, except with large telescopes. These places are subjoined, and are for midnight at Berlin:—

A telegram to the *Times* from New York announces the death of the distinguished astronomer Dr. Henry Draper.

SOCIETIES.

ROYAL.—*Nov.* 16.—The President in the chair.—Prof. V. Ball, Mr. C. B. Clarke, Mr. R. T. Glazebrook, and Prof. J. C. Malet were admitted into the Society.—The following papers were read: 'On the Nerves of the Frog's Lung,' by Dr. W. Stirling,—'Notice of Portions of the Skeleton of the Trunk and Limbs of the great Horned Saurian of Australia (*Megalania prisca*, Ow.),' by Prof. Owen,—'On the Relation of particular Structural Features in certain Leaves to the Phenomena of Nyctitropism and Movements incident on Stimulation by Concussion,' by Mr. D. D. Cunningham,—'On the Continuity of the Protoplasm in the Motile Organs of Leaves,' by Mr. W. Gardiner,—and 'Note on the Discovery of Bacilli in the condensed Aqueous Vapour of the Breath of Persons affected with Phthisis,' by Dr. A. Ransome.

GEOLOGICAL.—*Nov.* 15.—Dr. J. G. Jeffreys, V.P., in the chair.—Mr. J. E. Thomas and Mr. J. Williams were elected Fellows.—The following communications were read: 'On the Drift-Beds of the North-West of England and North Wales, Part II. Their Nature, Stratigraphy, and Distribution,' by Mr. T. M'Reade,—and 'On the Evidences of Glacial Action in South Brecknockshire and East Glamorganshire,' by Mr. T. W. E. David, communicated by Prof. J. Prestwich.

ASIATIC.—*Nov.* 20.—Sir Bartle Frere, Bart., President, in the chair.—The following were elected—as Resident Members, Major-General R. P. Anderson, Capt. Fairman, Dr. A. H. Howe, Messrs. W. E. Windle, E. H. Whinfield, F. B. Morse, and J. Fenton; as Non-Resident Members, H.H. the Prince Prisdang Chowsai, Right Hon. Sir J. Fergusson, Bart., Sir J. D. Gordon, Dr. S. D. Bhabha, Dr. J. Anderson, Rev. O. Minos, Rev. J. Sibree, Messrs. E. C. Baber, H. Soltau, and G. Geflowski.—A paper was read by the Rev. J. Sibree, jun., 'On Malagasy Place-Names,' in which he pointed out that the coast nomenclature shows naturally the parts taken by the Portuguese, the English, and the French in its discovery, while it at the same time retains some traces of a very early Arabian colonization; and mentioned the various names given to the island by natives and foreigners. The native names he showed to belong, as a rule, to the Malayo-Polynesian stock of languages, some of the more obscure ones being probably relics of an aboriginal race. The names applied to the various geographical features of the island were then described, particularly those referring to the mountain ranges. Many examples were given showing how strikingly descriptive these were of natural features—height, prominence, bulk, including also the ideas of mystery, dread, inaccessibility, &c., and giving also the appearance of various of the hills, as rocky, bare, wooded, &c. Many mountains, Mr. Sibree added, bear the names of animals and of birds; others are known by personal names. The river and lake names were then noticed in the same order of classification as that of the mountains; to these were added the names of the towns and villages.

BRITISH ARCHÆOLOGICAL ASSOCIATION.—*Nov.* 15.—Mr. T. Morgan in the chair.—It was announced that the autumn Congress would be held at Dover.—The memorial in favour of the preservation of the ancient Tolhouse at Great Yarmouth had been presented, and the Town Council have resolved to preserve the building. It is about to pass into the hands of trustees, and to be devoted to some local use.—The quaint Rectory House of St. Paul's, Deptford, a building of triangular plan, the work of Sir J. Vanbrugh, is about to be demolished, the site having been sold for building purposes.—Mr. Loftus Brock described a portion of the Roman wall of London now being removed at Finsbury Place. It is nine feet two inches thick, of similar construction to what has been already noticed of the wall elsewhere.—Mr. W. G. Smith exhibited several prehistoric stone implements.—Mr. W. Myers produced a fine collection of Egyptian antiquities of early date and a series of flint arrow-heads from Chiusi and Perugia. Several fragments of fictile vessels of Egyptian manufacture were inscribed with receipts for the delivery of wine to the garrison of Thebes.—Mr. F. Petrie referred to the frequency of similar inscriptions on ancient Egyptian sites, although but little attention has hitherto been bestowed upon them.—The first paper was by Mr. C. H. Compton, 'On the Archæological Features of the Recent Exhibition of the Horners' Company,' an exhibition which was visited by 7,000 persons during the four days that it was open. There were a large number of prehistoric objects, mainly recovered from London, exhibited by Mr. H. S. Cuming and others. Among the objects placed on the table were two or three examples of the Jewish *shofar* or horn, used in synagogues on the day of the new year, including that from the synagogue in Bevis Marks. These were so similar in form to the horn found in the Thames, now in Mr. Cuming's collection, as to render it all but certain that the latter is a relic of the presence of the Jews in England in mediæval times, prior to their expulsion. It was recognized as a *shofar* both by Mr. A. A. Newman and by Mr. Adler, who described its use. Its form has not been changed since the destruction of the Temple of Jerusalem.—The second paper was by Mr. R. Smith, on the discovery of a hoard of bronze armlets grouped around a single lance-head, in what was probably an ancient cemetery, at Brading, Isle of Wight.

ANTHROPOLOGICAL INSTITUTE. — *Nov.* 14. — Mr. Hyde Clarke, V.P., in the chair.—Mr. R. W. Felkin exhibited a Darfur boy who was rescued from slavery and brought to England by him in 1879.—Mr. F. Galton exhibited a box like a backgammon board, containing trays of weights that he had arranged for testing the delicacy of the muscular sense in different persons. A sequence of small weights was employed, numbered in succession 1, 2, 3, that differed by equally perceptible differences as calculated by Weber's law. Consequently, if a person A could just distinguish between, say, 1 and 3, he could also distinguish between any two weights two grades apart, as 2 and 4, 3 and 5, &c. Again, if another person B has twice the obtuseness of A, he would be able to distinguish only one grade where A could distinguish two, therefore he would just be able to distinguish between 1 and 5, 2 and 6, and so on. Generally the number of grades between the weights that any person can distinguish has to be found by trial, and that number becomes the measure of the coarseness of his sensitivity. The weights used were blank cartridges filled with shots and wadding, care being taken that the shots were distributed equally; they were arranged in trays, each holding a sequence of three. The person who was tested had to arrange the cartridges in the tray that was handed to him in the order of their weights. Some provisional results were mentioned, namely, that men had, on the whole, more delicacy of discrimination than women, and intellectually able men more than others; also that highly and morbidly sensitive women were not remarkable for their powers of discrimination. It is generally supposed that the blind have greater powers in this respect than other people, but Mr. Galton did not find this to be the case with a number of blind boys examined by him.—A discussion followed, in which Prof. Croom Robertson, Dr. Camps, Mr. Sully, Dr. M. Granville, Dr. Mahomed, Mr. C. Roberts, Prof. Thane, and others took part.

NUMISMATIC.—*Nov.* 16.—Mr. J. Evans, President, in the chair.—Messrs. W. S. Bird, Hyde Clarke, T. W. Greene, and W. G. L. Harvey were elected Members.—Mr. A. J. Evans exhibited a very beautiful tetradrachm of Alexander the Great, with a wreath in front of the figure of Zeus on the reverse (Müller, 548), and a tetradrachm of Macedonia as a Roman province, signed by the Quæstor Æsillas (*circa* B.C. 90).—Miss A. Lucas sent for exhibition a rare silver medallion of the Emperor Geta with the three monetæ on the reverse and the legend AEQVITATI PVBLICAE.—The Rev. H. C. Reichardt communicated a description of an inedited coin of John Hyrcanus I., similar in type to the coin of Alexander Jannæus figured in Madden's 'Coins of the Jews,' p. 85, No. 2.—Mr. H. Montagu exhibited a Tower crown of Charles I., with the harp mint mark, which differed from the ordinary type (Hawkins, 474) in having a plume over the shield on the reverse.—Mr. R. Day exhibited some specimens of the so-called Cork siege pieces, or money of necessity, which are assigned by Lindsay in his 'Coinage of Ireland' to the year 1641. Mr. Day, however, was able to prove that the coins in question were subsequent to 1677, one of the specimens being restruck on a token of that date.—Mr. Bliss exhibited a pattern for an English halfpenny of the decimal coinage struck in 1859.—Mr. A. Durlacher exhibited specimens in silver and bronze of a medal struck in commemoration of the fiftieth season of the Sacred Harmonic Society, founded in 1832.—M. Terrien de Lacouperie communicated a paper on Chinese paper money, and exhibited a specimen of that currency issued in the reign of the Emperor Hien-Tsung of the Tang dynasty, A.D. 806. M. de Lacouperie remarked that the object of this paper money was to save merchants and travellers from the necessity of sending or carrying about great quantities of weighty copper money. The metal was deposited by the merchant with the Government, and he received in exchange a note which was payable at any Government office. The specimen exhibited was from the famous collection of Chinese coins formed by the Tamba family of Daimios of Japan during several generations, a collection which is said to contain none but undoubtedly authentic specimens.—Mr. B. V. Head read a paper by Dr. A. Smith, 'On the Date of the Earliest Money struck in Ireland,' none of which Dr. Smith thought was anterior to the reign of the Hiberno-Danish Sihtric III., King of Dublin, a contemporary of Æthelred II., sole monarch of Saxon England, whose coins were imitated by the Dublin king.

LINNEAN.—*Nov.* 16.—Mr. F. Crisp, Treasurer, in the chair.—Mr. O. T. Olsen and Surgeon J. N. Stone were elected Fellows.—Dr. W. C. Ondaatje exhibited and made remarks on some Ceylon plants, among which were the fruit of *Randia dumetorum*, a remedy for dysentery, the leaves of *Sethia acuminata*, an anthelmintic, and the resin of *Semecarpus gardneri*, from which a black varnish is prepared.—Mr. W. T. Thiselton Dyer called attention to a specimen of *Cycas beddomei*, a new species from Southern India.—Mr. F. P. Balkwill exhibited a series of British *Foraminifera* under the microscope, and he said a few words on the special mode of mounting the same.—Mr. F. J. Hanbury showed a large fungus grown in a City wharf cellar, which Mr. G. Murray pronounced to be a species of *Lentinus*.—Mr. C. Stewart exhibited a specimen of *Pilobolus*, explaining his observations on the projection of its sporangia.—Mr. J. G. Baker read a paper 'On the Flora of Madagascar.' It contains descriptions of 140 new species of polypetalous dicotyledons obtained by the Rev. R. Baron and Dr. G. W. Parker. Some are of widely spread tropical genera, such as *Eugenia*, *Crotalaria*, &c.; others are of more familiar temperate types, *Alchemilla*, *Clematis*, and *Polygala*. Still others are characteristic of the Cape flora, now noted for the first time from Madagascar, such as *Sphedamnocarpus* and *Sparrmannia*. There is an interesting new genus of Malpighiaceæ (*Microsteira*), allied to the American *Hiræa*. Representatives of *Hibbertia* and *Rulingia* are interesting from their being characteristically Australian genera; Mr. Baron has rediscovered *Rhodolæna alterola*, a showy plant originally found by Du Petit Thouars a century ago. Dr. Parker has paid special attention to the drugs, esculents, and timber trees of the island, and catalogued 300 native names of the same.—A note by Mr. E. P. Ramsay 'On the Type Specimen of Finsch's Fruit Pigeon' was read.—Dr. M. Masters read a communication 'On the *Passifloræ* collected in Ecuador and New Granada by M. E. André.' Of *Tacsonia* nine species are mentioned, of *Passiflora* twenty-nine species, four being new. Some are of special interest structurally, the excellence of the specimens enabling ample examination of the curious flower structure to be made.—A paper was read 'On Cerebral Homologies,' by Prof. Owen. He compares the brain of the locust and the cuttlefish with that of the fish and other higher forms, and he summarizes as follows: that the homologies of the primary divisions of the brain in molluscs are the parts known in articulates as the supra- and sub-œsophageal ganglions with their commissural cords; that the typical relations of these parts to the gullet are the same in both great divisions of invertebrates; and that the homologies of the parts in question with the vertebrate brain are affected solely by the altered relation, that of the gullet and mouth.—A paper was read 'On *Cassia lignea*,' by Mr. W. T. Thiselton Dyer.—Thereafter the 'Sixteenth Contribution to the Mollusca of the Challenger Expedition,' by the Rev. R. Boog-Watson, was read, in which were described the families *Fissurellidæ* and *Cocculinidæ*.

ZOOLOGICAL.—*Nov.* 14.—Prof. W. H. Flower, President, in the chair.—The Secretary read a report on the additions made to the menagerie during June, July, August, September, and October, and called attention to certain interesting accessions.—A letter was read from Mr. E. L. Layard respecting a specimen of *Schœnicola platyura* received by the British Museum from the late Mr. Cuming.—Prof. F. J. Bell exhibited some examples of *Lymnæus truncatulus*, lately discovered to be the chief host of the larvæ of the sheep-fluke.—Prof. Flower exhibited and made remarks upon the skull of a young chimpanzee from Lado, in the Soudan, sent to him by Dr. Emin Bey, which exhibited the deformity called "acrocephaly," associated with the premature closure of the fronto-parietal suture.—Mr. H. E. Dresser exhibited and made remarks on specimens of *Melittophagus bochmi*, Reichenow, and *Merops dresseri*, Shelley, which he showed to be identical.—Letters and communications were read: from Mr. W. A. Forbes, containing some supplementary notes on the anatomy of the Chinese water-deer (*Hydropotes inermis*),—from the Rev. L. Baron, containing notes on the habits of the aye-aye of Madagascar in its native state,—by Mr. G. E. Dobson, on the natural position of the family *Dipodidæ*,—by Prof. F. J. Bell, on the genus *Psolus*, relating its literary history, and giving an enumeration of the described species, attention being directed to the extensive distribution of *P. fabricii* and to the variations during growth: after the description of other known forms, two new species (*P. peronii* and *P. ambulata*) were described; for the latter a new subgenus was suggested, and the genus itself was divided into three subgeneric groups; and on a crinoid from the Straits of Magellan, obtained by Dr. Coppinger during the voyage of H.M.S. Alert, which was referred to a new variety of *Antedon eschrichti* of the Arctic seas,—by Mr. W. H. Neale, on the natural history of Franz Josef Land, as observed in 1881-2 during the stay of the Eira expedition,—and by Dr. G. Jeffreys, the fifth part of his list of the mollusca procured during the expeditions of H.M.S. Lightning and Porcupine. This part, which embraced the species from the *Solenoconchia* to the *Calyptræidæ*, comprised sixty-nine species, of which twenty-two were now for the first time described or figured. The geographical, hydrographical, and geological range of all these species was given, as in his former papers; and the author especially noticed the points of agreement between the deep-water mollusca from the American and European expeditions.

CHEMICAL.—*Nov.* 16.—Prof. Dewar, V.P., in the chair.—It was announced that a ballot for the election of Fellows would take place at the next meeting (December 7th).—The following communications were made: 'Contributions to the Chemistry of Tartaric and Citric Acids,' by the late B. J. Grosjean. This paper was compiled by Mr. Warington from the laboratory note-books left by the author.—'Contributions to the Chemistry of Bass Fibres,' by Messrs. C. F. Cross and E. J. Bevan. The authors detail further experiments showing that lignified fibres are to be regarded as a chemical whole rather than the mixture which was necessitated by the incrustation theory.—'On the Oxidation of Cellulose,' by Messrs. C. F. Cross and E. J. Bevan. Cellulose is converted into an amorphous substance, $C_{18}H_{30}O_{16}$, oxycellulose.—'On the Analysis of certain Vegetable Fibres, Ananassa, Musa, Phormium, Linum, Urtica,' &c., by Mr. C. S. Webster.—'On the Constitution of some Bromine Derivatives of Naphthalene,' Part III., by Mr. R. Meldola. The author concludes that Glaser's *a* dibromnaphthalene and Meldola's metadibromnaphthalene are isomeric and not identical. The author has also obtained by the diazo reaction *β* dibromnaphthalene, m.p. 81°; a new tribromnaphthalene, m.p. 113°-114°; a second melting at 63°, &c.—'On the Constitution of Lophin,' Part II., by Mr. F. R. Japp. The author brings forward fresh proofs that this body has the constitution of an anhydro base, and not that ascribed to it by Radziszewski.

PHILOLOGICAL.—*Nov.* 17.—Dr. Murray, President, in the chair.—Mr. J. Platt, jun., read a paper on the new Anglo-Saxon dictionary. He regretted that the University of Oxford had elected to reprint the old errors of Bosworth's time, especially since no scholar would undertake to edit such a work, so that it had to be trusted to an unknown hand; hence there was little improvement even where the book advanced beyond the part finally revised by Bosworth himself. The account given by Mr. Platt of the faulty arrangement of the dictionary—its want of scholarship in the treatment of the letters *æ*, *ea*, *eo*, *þ*, and the short and long vowels, its arbitrary spelling of its catchwords and inserting them under different spellings in various places, its inattention to the rules of Anglo-Saxon grammar, and apparent ignorance of Germanic and general philology — was scarcely credible, but for the examples given. It was also shown that very little care had been taken in reading for the dictionary, many words having no reference to them, and many more being left out altogether. An argument for the shortness of the *a* prefix (as in *arisan*) refuted the general idea that it was long; and the general law that Germanic languages accented their prefixes before nouns and adjectives, and left them unaccented before verbs, was fully explained.

HISTORICAL.—*Nov.* 16.—Mr. C. Walford in the chair.—Mr. J. F. Palmer read a paper 'On Pestilences, their Influence on the History of Nations.'—A discussion followed, in which the Chairman, Miss Marshall, Messrs. O. A. Ainslie, Alderman Hurst, T. Pagliardini, C. T. Saunders, and Dr. Zerffi took part.

MEETINGS FOR THE ENSUING WEEK.

MON. Institute of Actuaries, 7.—President's Address.
— Education, 7½.—'Marking,' Mr. H. W. Eve
— Royal Academy, 8.—'Demonstrations,' Mr. J. Marshall.
— Shorthand, 8.—'Origin of Modern Shorthand Signs,' Mr. E. Pocknell.
— Geographical, 8½.—'M. Lessar's Reconnaissance Survey from Sarakhs and Merv to Herat,' with Remarks by Major-General Sir H. C. Rawlinson.
TUES. Anthropological Institute, 8.—'Language and People of Madagascar,' Dr. G. W. Parker.
— Civil Engineers, 8.—'American Practice in heating Buildings by Steam,' Mr. R. Briggs.
— Photographic, 8.
— Zoological, 8½.—'Sternum of *Notornis* and its Sternal Characters,' Prof. Owen; 'Identity of *Amoglossus lophotes*, Günther, with *A. grahamani*, Bonap.,' Mr. F. Day; 'International Colour-Scales for Scientific Purposes,' Dr. A. B. Meyer.
WED. Royal Academy, 8.—'Demonstrations,' Mr J. Marshall.
— Society of Arts, 8.—'Collisions at Sea,' Capt. J. H. Colomb.
— Geological, 8.—'Recently Uncovered Sandstone Rocks showing Glacial Wear and Scratches at Stoneleigh Rusthall, near Tunbridge Wells,' Rear-Admiral T. A. B. Spratt; 'Mechanics of Glaciers, more especially with Relation to their supposed Power of Excavation,' Rev. A. Irving; 'On Mr. Dunn's "Notes on the Diamond-Fields, South Africa, 1880,"' Mr. F. Oats.
— Literature, 8.—'On St. Thomas's Hospital and, incidentally, on Southwark, chiefly from a MS. belonging to the Earl of Ashburnham,' Mr W. R. Rendle.
THURS. Royal, 4.—Anniversary.
— Antiquaries, 8½.—'Six Matrices of Mediæval Seals,' Mr. R. Day, with Remarks by Dr. C. S. Perceval; 'Antiquarian Researches in Illyricum,' Mr. A. J. Evans.
FRI. Philological, 8.—'Initial Imitations in the Celtic, Basque, Sardinian, and Italian Dialects,' Part I., Prince L. L. Bonaparte.

Science Gossip.

WE learn that the proposition for a testimonial to Richard Trevithick, first made in the columns of the *Athenæum*, has been warmly taken up,

and that at a meeting held at the house of the Society of Arts last week a preliminary committee was formed to carry the plan into effect.

Of the twelve Lowell Lectures which Dr. William B. Carpenter is now giving at Boston, U.S., the first six are on marine geography, the rest on psychology. Mrs. Kate Gannett Wells, author of 'Lessons in Ethics,' has given a reception in honour of Dr. Carpenter, which was attended by many men of science and letters.

Mr. A. G. Vernon Harcourt, F.R.S., has been appointed General Secretary of the British Association, in the room of the late Prof. F. M. Balfour.

MM. Piette and Krizik, at an agricultural gathering at Lundenburg, in Germany, have been driving an ordinary threshing machine by electricity, attaining to a speed of 1,400 turns a minute, and illuminating at the same time the yard in which the machines were exhibited.

M. Camille Kœchlin, in the *Moniteur Scientifique Quesneville*, states that he has solved the problem why aniline blacks become green. The aniline blacks formed in the cold are greenable, but if developed at a temperature higher than 70° Centigrade they are ungreenable.

Ritter Franz von Kobell died at Munich on Sunday, the 12th inst. In 1823 he held a post in the Konservatorium der Mineralogischen Sammlungen, and in 1834 he was appointed Professor of Mineralogy in the University of Munich. F. von Kobell was better known throughout Germany as a dialectic poet than as a mineralogist.

Prof. Liversidge sends us the *Journal and Proceedings* of the Royal Society of New South Wales for 1881. The anniversary address delivered by the President, the Hon. Prof. Smith, gives an interesting account of the birth, growth, and decay of the Philosophical Society of Australasia, and of the revival of the Royal Society as if from the ashes of the Philosophical. Its prospects are good, and the contents of its *Journal* are excellent.

The Reports of the Mining Surveyors and Registrars of Victoria for the quarter ended June 30th, 1882, state that 90,079 oz. 11 dwt. of alluvial gold have been obtained, and that 123,315 oz. 6 dwt. were raised by mining on quartz reefs.

FINE ARTS

The EIGHTEENTH ANNUAL EXHIBITION of WATER-COLOUR DRAWINGS by ARTISTS of the BRITISH and FOREIGN SCHOOLS is NOW OPEN at Thomas McLean's Gallery, 7, Haymarket.—Admission, including Catalogue, 1s.

VENICE EXHIBITION.—A COLLECTION of DRAWINGS and PAINTINGS OF VENICE and VENETIAN LIFE by MODERN ARTISTS is NOW ON VIEW at the Fine-Art Society's, 148, New Bond Street.

CARL HAAG.—A SERIES of SKETCHES of EGYPTIAN SUBJECTS by this ARTIST are also ON VIEW at the Fine-Art Society's.—Admission to View, including Venice Exhibition, 1s.

VENICE EXHIBITION includes MR. BUNNEY'S 'FRONT of ST. MARK'S,' painted for Mr. Ruskin.

FINE-ART EXHIBITION GALLERY, 53, Pall Mall.—NOW ON VIEW, THREE CELEBRATED WORKS by JOHN MARTIN, R.L., and 400 Works by other Artists.—Admission, 1s; Catalogue, 6d.
ROBERT HOPKINS, Manager.

DORÉ'S GREAT WORKS, 'CHRIST LEAVING the PRÆTORIUM,' 'CHRIST ENTERING JERUSALEM,' and 'MOSES before PHARAOH,' each 33 by 22 feet, with 'Ecce Homo,' 'The Ascension,' 'Dream of Pilate's Wife,' 'Soldiers of the Cross,' 'A Day Dream,' &c., at the DORÉ GALLERY, 35, New Bond Street. Daily, Ten to Six.—1s.

ILLUSTRATED BOOKS.

The most sumptuous gift-book of the season which has yet come before us is Messrs. Sampson Low & Co.'s English version of the *Florence* of M. Charles Yriarte, translated and slightly condensed by C. B. Pitman, with all the admirable woodcuts and *photogravures* of the original French edition, which we reviewed at some length in September, 1881 (*Athen.* No. 2811, p. 343). The translation is clear and spirited, if not quite exact and complete; we miss, for instance, the useful "Table Alphabétique des Matières," &c., with which M. Yriarte's volume terminated. The woodcuts are nearly as good as in the French edition; indeed, their excellence is quite surprising when it is remembered how many impressions must have been taken from the blocks or transcripts of them.

Lorna Doone: a Romance of Exmoor. By R. D. Blackmore. (Sampson Low & Co.)—This is the twentieth edition of Mr. Blackmore's novel. It is enriched with elaborate and delicately cut landscapes and figure designs, all drawn on wood and most carefully printed on smooth-faced paper. Unluckily every part of the cover of the book except its green tint is more or less ungraceful and unfit. Of the landscapes it is hard to say which is the most carefully and finely wrought; but, creditable as they are to every one concerned in their production—and not a few of the pretty vignettes and letter-pieces are equally noteworthy—we cannot but regret that so much labour has, to a great extent, defeated itself. These illustrations are too fine and delicate to stand the printing press. The execution is so very delicate that only India proofs from the blocks in their pristine state could do them justice. A bolder mode and broader treatment would have better suited the purpose, and would have preserved all the beauty, pathos, and even the brilliancy which distinguish most of the views of the Exmoor region, the splendour of the skies, and the manifold veils of lights and shadows in the intermediate air. These cuts are by Mr. F. Armstrong and Mr. W. H. J. Boot. On the other hand, the bolder but equally well drawn figure pieces supplied by Mr. W. Small have fared better; some of these are first rate in their way, well designed and learnedly drawn. More than twelve hundred copies of this *édition de luxe* were sold within a week of publication.

English Rustic Pictures. Drawn by F. Walker and G. J. Pinwell. (Routledge & Sons.)—This is a reproduction on India paper of fifteen designs by each of the designers named in the title, together with the verse and prose for which the respective works were originally prepared. They embrace some of the most beautiful and characteristic of Walker's drawings on wood, and not a few of the attractive and expressive contributions of his fellow illustrator. The brothers Dalziel engraved the blocks for various publications, and they are here again employed with a surprisingly good result. The printing has been very careful, and the volume has been "got up" with taste and care, and is protected by a goodly cover of vellum and well-applied gold. In such designs as 'School' the fine sense of fitness and graceful homeliness of Walker are seen at their best. The drawing of the cupboard, one leaf of the door of which is open, and the rich local tones of the wall are delicious enough to have moved A. Van Ostade to envy, because along with his feeling for style, his firmness and frank touch, there is a refinement which was not his. That Walker was sometimes compelled to try to make bricks without straw is shown by several of these designs, and the fact has a little pathos in it; see the cottage and figures of 'Rain,' which has not a particle of human interest or power in it. 'Broken Victuals,' the old wayfarer watched by the pitying daughter of the cottager, is a little sickly; but the delineation of the wall and its accessories, though confined to the homeliest objects, could not be better, and charms us by its broad, rich, local colour and fine tone. The little damsel in the thicket, here called 'Spring Days,' is not only a pretty design, but embodies some of the happiest of Walker's qualities, as in the exquisite draughtsmanship of the hazels and underwood. 'Summer Days' is a masterpiece of rustic drawing, beautiful in style, and firm as fine skill and deep love for nature could make it. 'Autumn Days' displays a larger style than usually occurs among Walker's works. It would be interesting to know how long the possessor of that beautiful style which is so finely shown here had studied from the antique before he qualified himself in this particular way. Mr. Pinwell's work and manner are well represented here; but it is unfortunate that they are forced into comparison with Walker's genius, tact, and skill. They lack the animation and the breadth of Walker's works, and they owe very little to their designer's sense of style. Of that he had but little. There is much finish in these drawings—see the background of 'The Journey's End,' a landscape, and that of 'Shadow and Substance,' in which a lady in white stands on the bank of a placid stream. We doubt the correctness of the treatment of the reflection of her white skirts, which is almost equal in lightness of tone—*i. e.*, whiteness—to the solid figure. Mere force of contrast between the splendour of the shining water and the shadow-laden white garment would surely cause the reflection to appear in very deep tone, if not almost black. Very successfully laboured are the background accessories and figures of 'Sailor's Love,' but it lacks gradation in the tones and richness as well as variety of local colouring. The distance and foreground are each right in general tones, but they contradict each other and appear like drawings made apart, in differing foci.

Bedford Park, a portfolio of lithographs (Harrison & Sons) by Messrs. V. Brooks, Day & Sons, professes to represent some of the more attractive buildings of the new paradise at Chiswick. The views are the work of several draughtsmen, and each is vividly coloured in green and red and blue, with little or no mitigation of the garishness of the colours or the lustre of the daylight. We will not answer for the correctness of the scale of proportion between the red houses and the little gardens surrounding them.

Our Sketching Tour. By Two of the Artists. (Griffith & Farran.)—The letterpress of this book is trivial. The vignettes are not quite so silly.

THE COURTS OF JUSTICE.

On Monday week the great work of Street will be opened by her Majesty in person. The Queen will enter the building by the chief portal on the south or Strand side, and thus reach the Central Hall, at the north end of which a daïs will be erected. When the ceremony is over her Majesty will make a circuit of the surrounding courts, and leave by the Carey Street or north entrance. The opening of the Courts of Justice is a grand event in the history of English architecture, and, although Street did not live to see the crowning of his labours, his reputation will stand higher than ever in the opinion of his countrymen.

When the drawings sent in competition were publicly exhibited we criticized each architect's plans in detail, and concluded by expressing a hope that Street's design would be adopted. We have recorded the troubled history of the competition and the fusion and confusion which attended the awards. The disputes that followed and the squabble about sites are familiar to our readers. There is no need to speak again of the muddle attending the enormous and, in the main, most unnecessary and wasteful changes of the general arrangements, and the deplorable extravagance thanks to which vast sums of money lay unused, and time was squandered by the meddling of would-be ediles. It was not our business to comment on those contractors' troubles which added to the worries of the architect, but we could not fail to sympathize with Street when he had to vanquish the economical scruples of the authorities, who would fain have denied us the noble stone vault of the Central Hall. Street struggled with one "economist" after another, gaining point after point; the stone vault was secured, and so was the graceful *flèche* which surmounts it and gives character to the ridge of the roof externally; but even now the

fair proportions of his original plans have been greatly reduced in scale and dignity, and the immediate future will have to build that which could have been erected at once at much less cost, though it may be allowed that the large reduction of sculptured decorations was beneficial. Although he was victorious in the main, there can be no doubt that the difficulties with which he had to contend, not less than his too ardent desire to complete his task, told heavily on him and shortened his life.

The public has for some months been able to form an idea of the exterior of the great building on the north, partially so of the south side, in a less degree of the western façade, and wholly so, so far as the narrow lane allowed, of the eastern side. The design as constructed differs very materially from that which we admired during the competition, and many changes of plan, proportions, and decorations have been effected. The majestic Record Tower has been given up, and the south front is less satisfactory than the original façade on paper promised to be. When the hoarding is completely removed it will be better seen, and certainly nothing could be finer or more stately than the great Strand portal. The peculiarly French quality of much of the architecture of this part of the building gives piquancy and largeness where modern English designers have notoriously failed—that is, in their treatment of porches. If the public is not charmed by this refined and beautiful feature it will be because the work is in advance of popular knowledge and taste.

Taken, however, as a whole, the southern front makes a rather unfavourable impression, because its portions seem to be too numerous, and crowded within a space inadequate for their display, and not sufficiently in harmony with each other. Taken individually, the Clock Tower, the south-western angle, the screen of arches, and the opening to the inner quadrangle could, we think, hardly be better. The Clock Tower is worthy of its place in the centre of a great thoroughfare, but the clock face is not successful, because the figures are not legible. The tourelles at the angles of the main building, between which comes the south portal, and their somewhat uncouth and disproportioned caps of stone, are inelegant. The fenestration, however, of this façade and of the rest of the building deserves the most careful study for its variety, grace, richness, and appropriateness. Of the north façade we have previously written at some length. Every feature of it is admirable, and, above all, it faithfully expresses the use of each part of the work of which it is the exterior. Adaptation of decoration to construction, and of both to use, is, so to say, the master-key to the planning, construction, and decoration of the Courts of Justice.

The western front—the whole of which will, no doubt, soon be hidden from the Strand point of view by the erection of buildings which the folly of false economists postponed—seems to us, in more respects than one, the finest part of the exterior. At least it is so as a whole. Its elements have those qualities of elegance and fitness which lovers of Gothic architecture recognize as the peculiar glory of their favourite style. The staircase, terrace, fenestration, rooflines, and elementary proportions are thoroughly good, and justify, if that were needed, the choice of the architect when he decided that the Gothic mode of art was, *par excellence*, English, and determined to devote his genius and learning exclusively to Gothic architecture. Of course the western façade was, on the whole — the eastern front being out of the question — the least difficult to design of the fronts, the interior plan being everywhere the ruling quantity in the problem of designing well and arranging skilfully for the service of many generations of judges, lawyers, and suitors.

The visitor will notice the fine design of the corridor by which he enters the central hall from the great portal. The central hall itself will surprise those who do not know that one of the grandest and purest pieces of modern architecture has been added to the enrichments of London—a hall the elegance of which attests the fineness of the Early English style when combined with decorations approaching the wealth and abundance of the period succeeding that happy mode of Gothic design. The lofty stone vault, groined in graceful accord with the shafts that spring from the floor, is a masterpiece of beauty. Very picturesque is the opening from the south on the floor level. The winged staircase is severe and careful in character, and at the meeting point the landing supplies a well-arranged balcony. The wall-arcade of the lower tier, which ascends from the floor to the upper level, and its emphasizing string course, commend themselves by their decoration and thoughtful finish to the observer who is familiar with the great examples of the style they represent with singular felicity. The larger openings of this arcade have charming diapers, and hood-mouldings of admirable design. The tesselated pavement of the hall, upon which Street lavished much care, is more classic than Gothic—no uncommon characteristic of mediæval examples, the greater number of which are found in Italy. The style has none of the angularity and rigidity which mark inferior antique works of the kind as well as modern imitations. Its general design should be studied from the balcony at the Carey Street extremity of the hall. Beneath this balcony, which corresponds to that on the south side, we enter the hall on the floor level. The north balcony is a balcony proper, not a landing like its companion. It forms the extremity of the long vestibule of the north external portal, and is on a level with the floors of the belt of courts and their common corridor which constitute the first floor of the building.

Entering from the north side of the building, or ascending to the level of the courts by the staircases of the south side, the visitor finds himself in the common corridor, and may well notice its simple design and the serviceable character of its architecture. The courts proper, which surround the corridor as it surrounds the central hall, are lined with oak and fitted with desks and seats for the lawyers and their clients, the witnesses, the judges, and the juries. Most of the courts are lighted by clearstories; and some of them possess roof lanterns in addition to the side windows. Ample illumination is thus afforded. Street's chief object in planning the whole structure was so to elevate the courts that top lights should be available in all of them. The daïs in each court, its canopy, approaches, and seats, differ from the corresponding features of the other courts. A vast amount of ingenuity has been developed in contriving the oaken fittings of these rooms. Every instance demands peculiar notice. Each court differs in beauty and elaborateness from its fellows, but not one of them is without high architectural merit.

As to the plan of this great structure, it may be broadly described as embracing two quadrangles and their surrounding buildings. The eastern quadrangle is an open courtyard, giving access for carriages to the offices on the ground floor and basement. The upper surrounding floors are accessible by staircases opening from this quadrangle. The large flight of steps on the north side, the handsome windows over it, and the recessed porches on the western side constitute the chief features of this quadrangle. The western quadrangle has been devoted to the great hall. Generally speaking the ground floor throughout the building comprises offices and their corridors of communication, which, as a whole, form the ceinture of the great hall on that level. No mode of planning could provide ample and direct daylight for every one of those corridors. None of them can be called dark, but as the courts must needs be on the first floor above them, there was no possible means of affording top lights for the lower passages. The double avenues of some of the larger ground floor corridors—divided as they are by cylindrical piers, and vaulted in brick with stone ribs, every vault being lofty, and of an acute lancet form—are extremely graceful and impressive in their light and shade. Very few of the rooms of this level are not amply supplied with daylight. The first floor and the courts proper, which on the plan are external to this passage, we have already described. A minor corridor encloses the belt of courts and gives access to the private rooms of the judges and to rooms devoted to the use of counsel and their clients and other persons directly concerned. Each court is thus furnished with its system of satellite rooms, all communicating by the minor corridor which encloses them. Broadly speaking, these satellite groups form the external belt of the mass of the building, of which the focus is the great central hall. This central hall is a true Salle des Pas-Perdus, and is designed for the transaction of the ordinary business of lawyers and their clients—a sort of neutral ground for interviews. More private business and the meetings of jurors before they take their places in the courts proper are provided for in the satellite chambers on the first floor.

Without the aid of models it would be impossible to describe fully the highly ingenious manner in which the floors of this vast structure are disposed. Suffice it to say that the public in general—a body offensive to the architectural, official, and legal mind, and usually styled "loafers"—is cut off from the other three classes of frequenters of the new courts. The "loafer" circulates on the topmost floor, uses corridors appropriated to him, and is at liberty to study the proceedings of the courts from balconies which have been designed to afford him that pleasure without interfering with the business of the other classes. The judges need not encounter the bar, and suitable arrangements prevent juries, witnesses, and advocates from interfering with each other.

A PAIR OF ANCIENT CHALICES.

Brasenose College, Oxford, Nov. 20, 1882.

A DISCOVERY, as I venture to think of the highest interest, has just been made at this college. The chapel possesses a very fine pair of chalices with patens, previously supposed to be modern. But I have examined them closely, and find every sign of antiquity about them, and a clear hall mark of the year 1502. The chalices are each 7 inches high, the patens each 7¼ inches across. In design both chalice and paten correspond in almost every detail with those at Nettlecombe figured in Mr. Cripps's 'Old English Plate'; but I hope to send a fuller description later.

There were, I believe, only six old chalices known to exist in England, and of these the sixth has only just been brought to light by my friend Mr. J. H. Middleton. Of the remaining five, two are in Oxford—one at Corpus Christi College, dated 1511, one at Trinity College, dated 1527. Oxford may now claim to possess four out of eight known chalices, the earliest of these four being the pair at Brasenose.

A. J. BUTLER.

Fine-Art Gossip.

MR. WATTS's equestrian group of Hugh Lupus, Earl of Chester, which it is intended to erect at Chester, has been sent to be cast in bronze, and will before long receive those comparatively unimportant touches the artist proposes to bestow upon it. We described it some time ago.

SIR F. LEIGHTON has made great progress with his large rondel for the dome of St. Paul's, which is the central element of the vast and

complex decorative scheme of which Mr. Poynter undertakes the more comprehensive part. On this part Mr. Poynter is labouring earnestly and continuously. Readers will remember the model of the whole of these works in the last Academy exhibition, which we described at length beforehand.

Mr. Hughes has lately finished the large signboard of a very ancient hostelry at Canterbury, called the Sir John Falstaff. The picture now swings in its proper place over the side of the public way. Sir John is depicted in an attitude of defence and readiness for the "men in buckram," and crying, "Thus I bore my point." It is a pleasant thing to know that the owner of an inn of renown, a lady, wanted a good picture on the old signboard. There was a hard fight with the civic authorities as to the preservation of the board in its place. They had the good sense to yield at last, and taste and vested rights were thus, for once, in accord. Mr. Hughes is painting charming portraits of the children of Mr. Godfrey Lushington at Pyports.

No better mode could be found of impressing the public with the signal merits and extent of Street's labour at the Courts of Justice than that of exhibiting all the sketches, designs, plans, elevations, and sections at large, whether of construction or of decoration, which were made by the architect during the execution of his task. It is well known that the designs and drawings of all the details in every part of this vast building were his—the decorative elements carved in stone and wood and all the works in iron and brass, and even, we understand, the furniture of the scores of rooms attached to the Courts proper. His drawings amount to many hundreds, and possess extraordinary interest and beauty. If displayed on screens in the Great Hall they would enhance the reputation of the artist and be in the highest degree instructive to the world. It is in this hall that the monument of its designer, for which subscriptions are invited, is to be erected, not, of course, in the centre, where doubtless the statue of her Majesty will be placed, but in a niche in the side wall.

The Society of Antiquaries opens the session of 1882–3 on Thursday next, the 30th inst., when the first part of an important paper by Mr. Arthur J. Evans, F.S.A., 'On Antiquarian Researches in Illyricum,' will be laid before the Society. Mr. Evans has discovered numerous Roman inscriptions which are not to be found either in Mommsen's 'Corpus' or in the supplements to that work published from time to time in the *Ephemerides*.

The winter exhibition of sketches and studies by members of the Society of Painters in Water Colours is appointed to be opened to the public on Monday, December 4th. The private view will occur on the Saturday preceding.

A series of articles on the coins of different nations will be published in the *Antiquary* during next year. The principal contributors are Messrs. R. Stuart Poole, Barclay V. Head, H. A. Grueber, C. F. Keary, Percy Gardner, and Stanley Lane Poole.

The Fine-Art and Industrial Exhibition at Manchester was opened on Sunday last free of charge, to afford an opportunity to the artisan class to visit it. Nearly 14,000 persons were admitted.

It appears that the damage done by gas in the Opéra, Paris, to M. Baudry's pictures is not quite so serious as was anticipated. The coat of soot deposited by the numerous burners, and greatly augmented in thickness and extent by an unwise arrangement of the gaseliers, has been in a large measure, if not entirely, removed by the use of bread. The idea of employing electric illumination for the interior of this theatre has been, for the present at least, abandoned. An improved mode of burning gas and more complete removal of the products of combustion are now in view.

A committee has been formed in Paris with a view of arranging for a series of lectures on art to be delivered on Sundays in the Louvre and the Luxembourg. The lectures will be begun next month.

The Exposition des Arts Décoratifs, Paris, will be closed on the 30th inst.

The French landscape painter M. E. F. Dessain is dead. He was born in June, 1808, and gained the Grand Prix de Paysage in 1827. The German subject painter Prof. J. R. Hübner, of Dresden, who was born in Silesia in January, 1806, died lately in the Saxon capital. He was long a professor in the Academy of his native city, and director of the famous gallery of pictures. He painted a great number of pictures, of which 'Samson destroying the Temple' and the 'Dispute of Luther and Eck' were the best known.

The German newspapers say that in a sarcophagus in the collection of Prince Charles Antony von Hohenzollern at Sigmaringen have been found the bones of the Cid and Ximena! The bones are said to have been carried off in 1808, after the battle of Burgos, from the tomb of the Cid by two French officers. King Alfonso, it is said, has made a formal request for the return of the relics.

The Russian Government, not usually too forward in matters educational, has promised a large number of duplicates from the Hermitage and other imperial collections to the proposed Museum of Fine Arts at Kiev, as soon as proper guarantees for its permanent maintenance are forthcoming. This is setting a good example in the matter of distributing duplicates, which are too often left to moulder forgotten in central dépots.

MUSIC

THE WEEK.

Crystal Palace.—Saturday Concerts.
St. James's Hall.—Popular Concerts.

The programme of last Saturday's Crystal Palace Concert was of modest proportions and comparatively subordinate interest. It was headed by Mozart's Symphony in G minor, which was given in its original shape, that is, without the clarinet parts. According to "G.," these are no improvement; but on this point we venture to disagree with the eloquent annotator. It is a matter on which, of course, difference of opinion may be allowed; but no one is likely to dispute the assertion that the rendering of Mozart's most imaginative symphony on this occasion was masterly, leaving absolutely nothing to be desired. Another performance of rare merit was that of Beethoven's Pianoforte Concerto in G by Mdlle. Janotha. The subdued brilliancy and chastened vigour of the work are precisely adapted to set forth the qualities of the Polish pianist in the most favourable light, and it is impossible to imagine a purer, more refined, or more technically accurate interpretation of the concerto. The cadences introduced by Mdlle. Janotha are, we believe, from the pen of Madame Schumann. Mr. F. Corder's Nocturne in B flat for orchestra, produced only ten days previously at Mr. Kuhe's Brighton Festival, was the only novelty of the programme. It is an elegant, agreeably written little piece, quite unpretentious in every respect, and will neither enhance nor detract from the reputation of the composer. To a certain extent, alike in its themes and in the orchestral colouring, it is suggestive of the modern French rather than the modern German school. The vocalist, Madame Howitz, who made her first appearance in England, can scarcely be said to have created a favourable impression. Her rendering of Mendelssohn's "Hear ye, Israel," showed her to be the possessor of a powerful but apparently ill-trained soprano voice, the false intonation of several comparatively easy intervals creating a most unpleasant effect.

The Pianoforte Quartet in D, Op. 23, by Dvorák, played on Monday evening at the Popular Concert, was not an absolute novelty in London, as it was performed at one of Mr. Charles Halle's recitals in May last, and was briefly commented upon at the time. An earlier work than either the Sextet in A or the String Quartet in E flat, which had been previously introduced at these concerts, it bears the signs of immaturity together with unmistakable evidence of its composer's individuality. Diffuseness and a certain want of homogeneity are the chief faults in the first and last movements, as if the composer had commenced without a clear and definite idea of what he intended to say. The subjects are all more or less tinged with local colour, the Slavonic element being most apparent in the theme with variations in B minor which constitutes the slow movement. This is the most interesting portion of the quartet, and none the less so for the air of melancholy which pervades it. The audience followed the work with evident pleasure, the applause being as hearty as if it were an old favourite. Mr. Charles Halle gave an excellent rendering of Schubert's Sonata in A, No. 2 of the posthumous set. The effect of this work is injured by the excessive length of the first and last movements, in which the themes are reiterated until the hearer is conscious of a sense of weariness. This detracts from, but does not altogether destroy, the charm of the sonata, which is thoroughly Schubertian from beginning to end. Madame Norman-Néruda played Handel's Violin Sonata in D with her customary brilliancy, and, also as usual, adopted a very un-Handelian *tempo* in the *allegro* movements. The concert concluded with Haydn's Quartet in E flat, Op. 71, No. 3. Miss Santley sang, with exquisite charm of style, Mozart's "Zeffiretti lusinghieri" from 'Idomeneo,' and a song by Gounod, 'Esclave et Reine.'

Musical Gossip.

The first of Mr. John Boosey's London Ballad Concerts was given at St. James's Hall on Wednesday evening. The vocalists who appeared were Mesdames Clara Samuell, Mary Davies, Sterling, and Damian, and Messrs. Lloyd, Maybrick, and Oswald. Madame Norman-Néruda performed two solos on the violin, and Miss Maude Valérie White and Mr. Sidney Naylor were at the pianoforte. The South London Choral Association, under the direction of Mr. L. C. Venables, sang a selection of part songs. There was only one new ballad in the programme, "Thy hand in mine," by Blumenthal, rendered by Mr. Edward Lloyd.

The performance of 'Elijah' by the Albert Hall Choral Society on Wednesday evening was in all respects equal to the high standard now attained by the Society. The choruses were rendered with perfect precision and immense power, while the orchestra, though strong in numbers, seemed feeble by comparison. Of the soloists Madame Albani, Mr. Maas, and Mr. Santley were alike in good voice, and have

never been heard to greater advantage. The contralto music was shared between Madame Fassett and Miss Emily Dones, both of whom were efficient. Mr. Barnby conducted and Dr. Stainer was the organist.

Mr. Charles Halle has accepted the appointment of conductor to the newly organized Sacred Harmonic Society. A series of concerts will be given after Christmas, to include a performance of M. Gounod's 'Redemption' on February 23rd. Choral rehearsals commenced this week at Neumeyer Hall under the direction of Mr. W. H. Cummings, the chorus being substantially the same as that of the old society, and under the same superintendents.

On the 14th inst. Handel's oratorio 'Esther' was performed by the Cambridge Musical Society, with the following principals: Miss C. Elliot, Mr. Vernon Rigby, and Mr. H. Blower, the orchestra being largely supplemented by a London contingent, and led by Mr. F. Ralph. Considerable interest was shown in the work, it being seldom heard, and no pains were spared to render it in a successful manner. The new organ in the Guildhall, erected recently by the combined efforts of the Town and University Musical Society, was used for the occasion, being played by Mr. F. Dewberry. Mr. W. C. Dewberry conducted.

The unexpected death, at Kensington, on the 17th inst., of Mr. Carl Engel, the well-known collector of musical instruments and learned writer upon them, will cause a universal feeling of regret. We need not dwell on the circumstances, which were of a painful nature. The fine collection of instruments at South Kensington, embracing rare specimens from all parts of the world, was partly gathered by him, and the catalogue describing them, a masterpiece of lucid arrangement, was from his pen. It is understood that his *magnum opus*, a voluminous work describing all the instruments known in the world, and intended as an extension to the South Kensington catalogue, will be published under the auspices of the Department of Science and Art. It is, fortunately, completed. Other works by Mr. Engel, notably those on Eastern and national music, have long been accepted as of standard authority, not only in this country, but wherever music is cultivated. Mr. Engel, who was a native of Hanover, but had lived for the greater part of his life in this country, was only sixty-four years of age when he died.

It is worthy of mention that Mr. Cowen's 'Scandinavian' Symphony either has been or will be performed at the following places during the present winter season: Liverpool, Brighton, Crystal Palace, Aix-la-Chapelle, Birmingham, Edinburgh, Glasgow, and Paris, at the last-named place under M. Lamoureux. It is safe to assert that no previous symphony by an English composer has ever created such wide-spread interest.

At Mr. Charles Halle's fifth concert at the Free Trade Hall, Manchester, last Thursday, the programme included Beethoven's C minor Symphony, the Overtures to 'Jessonda' (Spohr) and 'Ferdinand Cortez' (Spontini), and Brahms's Concerto in B flat, played by Mr. Halle. Mdlle. Lemmens was the vocalist.

Mr. Villiers Stanford, whose 'Veiled Prophet' was produced with marked success in Germany last year, has for some time been engaged on another work, which he has now all but completed, in the shape of a grand opera, in a prologue and three acts, on the subject of Savonarola. Mr. Stanford has had as his dramatic *collaborateur* Mr. Gilbert A'Beckett, who has endeavoured to invest the text with a literary value hitherto almost unassociated in this country with an operatic libretto.

The Highbury Philharmonic Society commences its subscription concerts next Monday. Gade's 'Psyche' will be performed.

It is announced that Signor Arrigo Boïto, the composer of 'Mefistofele,' is shortly to be married to the celebrated Italian *prima donna*, Mdlle. Borghi-Mamo.

At the Opéra Comique, Paris, two new operas, each in one act, have been produced. These are 'La Nuit de Saint-Jean,' by M. Paul Lacome, and 'Battez Philidor!' by M. Amédée Dutacq. Neither appears to have been more than moderately successful.

Herr Pollini, the manager of Hamburg, has secured the copyright for Germany of M. Gounod's 'Redemption,' which he intends to perform in the principal German cities.

Franz Liszt lately visited his biographer, Fräulein Lina Ramann, in Nuremberg, on his way to Venice, where he purposes to spend some weeks as the guest of Richard Wagner.

Ambroise Thomas's 'Hamlet' was produced at Madrid on the 14th inst. with great success. The principal parts were sustained by Mdlle. Sembrich and M. Lhérie.

DRAMA

THE WEEK.

Princess's. — 'The Silver King,' a Drama in Five Acts. By Henry A. Jones and H. Herman.
Adelphi.—'Love and Money,' a Drama in a Prologue and Five Acts. By Charles Reade and H. Pettitt.
Strand.—Reopening. 'The Heir-at-Law.' By Colman the Younger. 'Frolique,' in One Act and Three Scenes. By H. J. Byron and H. B. Farnie.

New melodramas have been added to the repertories of the Princess's and the Adelphi theatres. The more conspicuously successful of these is 'The Silver King' of Messrs. Jones and Herman. This is, indeed, as good a specimen of the kind of work which now finds favour with the public as the stage under present conditions is likely to see. It took from the commencement of the performance a firm hold upon the public, and at the close it was received with overwhelming applause. The reception was, moreover, decisive, and the verdict of the first night's audience is likely to be that of hundreds of successive audiences. Against this there is nothing to be said. The merits of 'The Silver King' are individual, its defects are in the main those belonging to the class. A feeling of bewilderment is inspired by the ideas concerning the government of the universe which win acceptance when we see the response supposedly accorded to prayer. However, delighting in the escape of a character with whom, in spite of his faults, it has been taught to sympathize, the public accepts the position as it stands, and learns to regard as moral teaching which is, in fact, the most cynical conceivable. This is in no sense arraignment, at least of the individual play. Childishness of this kind is inherent in melodrama, and 'The Silver King' is a good piece of its class. Such other blemishes as are traceable in it are due to the circumstances under which it is produced. Great as is the triumph of the novelty, it would have been greater and more firm had the actor to whom the principal part is assigned not been the manager also. Traces of complaisance to a manager-actor are not seldom apparent. A man, thus, who has in disguise wormed out the secret of a murder and robbery, does not seek to escape from the four desperate ruffians who hold him in their power in a place out of reach of succour, and who have the strongest conceivable motive to detain and dispatch him. He proclaims aloud his discovery, then seizes a weapon and fights his way through his enemies. A scene, again, describing a dream, is introduced, which is scarcely more in place than would be a soliloquy of Hamlet. These things authors would not supply except at the bidding of a manager-actor, nor would a manager fail to detect their weakness were they assigned any one but himself. Here is another proof that the happiest conditions for the stage are encountered when those in highest authority do not act. Mr. Barrett is an excellent manager when he is not himself in question. He mounts his pieces and arranges stage effects with a clearness of insight and a knowledge that few of his fellows can rival; he acts impressively and well, and is an actor to whom the public has learnt to look for high things. He is, however, too constantly upon the stage, and a lightening of the piece would attend a more widespread distribution of the interest. Many of the scenes in 'The Silver King' are highly dramatic, and the whole is creditable and successful work. Some distance has to be retraced before we encounter a melodrama of purely English origin with equal merit. The chief honours of the representation belong to Mr. Barrett, whose performance has much quietude and intensity. Mr. E. S. Willard as the villain acts admirably. His performance in its line has rarely been surpassed. The general representation is satisfactory, though Miss Eastlake disappoints the high expectations formed concerning her, and is spasmodic. The perfection of the details speaks highly for the intelligence brought to bear upon the production.

In some respects the new drama of Messrs. Charles Reade and Henry Pettitt is even more shapely than that with which it is classed. In a manner worthy of the highest praise it places before the public almost as postulates the incidents most difficult of acceptance, and having thus cleared the way it proceeds with the action, the whole of which is simple and comprehensible. It is, however, weaker than 'The Silver King,' in respect of depending for its chief effects upon incident rather than upon character. The worst blemish in it consists of comic situations which interrupt the action and are distasteful to the public. Few dramatists know better than Mr. Reade how to touch the heart. The foolish and conventional scenes of farce which are introduced cause, accordingly, no serious mischief. So soon as the direct and forcible appeal to sympathy of the girl wishing to save her father's life is felt, all memory of shortcoming is forgotten; and when, in the mine which has crumbled in, the daughter is seen dying in presence of the father her heroic effort has failed to save, the wave of emotion carries away the public. One comic scene, however, introduced in the concluding act, the purpose of which is chiefly explanatory, wearies the public when its enthusiasm is over and seriously imperils success. When this portion of the play is removed, 'Love and Money' will take its position as a success. The only performance calling for special notice is the representation by Mr. Clynds of the hero, who may claim to be a new type of character. This has genuine merit. Miss Amy Roselle is also seen to advantage as the heroine.

Few houses have known more of the tinkering which in past years converted into a species of theatre what was originally intended for a residence, and few have passed through more remarkable vicissitudes, than the Strand Theatre. At length a thorough change has been made, and a building which was in turns the home of a panorama, a chapel, and a place of unlicensed entertainment, is now a full-sized theatre. The promised production of 'The Comedy of Errors' is postponed—it is to be hoped it is not abandoned—and the house reopens with 'The Heir-at-Law.' Mr. Clarke's representation of Dr. Pangloss is so familiar that there is no need to dwell upon it. Nothing in the remainder of the cast calls for mention. One or two of the female parts are, indeed, played with signal incompetence. 'Frolique,' with which the entertainment concludes, is an adaptation of a French *vaudeville* which has already supplied Drury Lane Theatre with 'The Follies of a Night,' an adaptation by Planché produced forty years ago. In this Mr. Clarke plays a different line of character, and shows to advantage a quietude of style in low comedy and a power of facial play which are at present unrivalled. The novelty has some agreeable music of the lightest order, and constitutes an agreeable *baisser de rideau*.

LITERATURE

Reminiscences of Court and Diplomatic Life. By Georgiana, Baroness Bloomfield. 2 vols. (Kegan Paul, Trench & Co.)

Lady Bloomfield's chatty volumes are not a weighty contribution to history; still she writes easily, and when she has to portray character she displays—what so few women can command—a considerable sense of humour. She tells the story of her life clearly and without affectation, and what she has to say often concerns the names and deeds of those whose occupation it has been, in the words of Burke, to make history. Of course, there are mistakes in the book—for instance, a well-known saying of Bishop Phillpotts is attributed to Whately; and the cynical reader will be amused by the effect upon the writer of the atmosphere in which she has lived. A few civil words from an emperor or a king seem to give Lady Bloomfield a singular amount of pleasure. Nor does the charm wear off with years. To the end of her book she carefully records the politeness of every grand-duke or grand-duchess who spoke to her. And in few instances does she venture to judge a royal personage, though she is quick in gauging, and gauging sensibly enough, the characters of less exalted people. Almost the only crowned head of whom she speaks unfavourably is the late Queen of Prussia. In this instance political feeling overcame her profound reverence for royalty.

The youngest child of Thomas Henry, second Baron Ravensworth, Miss Liddell at an early age became a maid of honour. Her duties were not severe, and, unlike Madame D'Arblay's, her experiences of court life were far from being unhappy. "I have a nice sitting-room, with a pianoforte," she writes to Lady Ravensworth. "I hear the duties are very easy, and that except at meals, or when the Queen sends for us, we may sit quietly in our rooms, which is just what I like." The hours were very regular—breakfast at ten, lunch at two, and dinner at eight. "Our chief duty seems to consist in giving the Queen her bouquet before dinner, which is certainly very hard work! and even this only happens every other day." In the evening whist or some round game at cards was the chief amusement at the Castle.

"I had to play at Nainjaune, or some such game, after dinner. I did not know it the least, but soon learnt. I made some mistakes at first; but, luckily, always to my own disadvantage, which delighted Prince Albert, who is charmed whenever any one fails to claim the forfeits or prizes. I suppose I may consider myself very lucky, as I got up having won exactly threepence. We are obliged to have a supply of new shillings, sixpences, fourpences, and other penny pieces."

Shortly after her arrival the new maid of honour was taken over the Castle by the Controller of the Household, and the plate and china rooms especially impressed her. "They are really most magnificent and interesting," she notes:—

"I could scarcely have imagined such a display of gold plate, which is by far the largest collection in the world, and is valued, I am told, at above two millions sterling. Some of the cups executed by Benvenuto Cellini are lovely. I think I admired some of the china even more than the plate, especially one service of Sèvres and one of old Chelsea. The kitchen was a curious sight enough; and I could not help reflecting how little I thought, in eating my simple dinner every day, of the preparation and expense which attends what comes as a matter of course. The fire was more like Nebuchadnezzar's 'burning fiery furnace' than anything else I can think of; and though there is now no company at Windsor, there were at least fifteen or twenty large joints of meat roasting. Charles Murray told me that last year they fed at dinner a hundred and thirteen thousand people. It sounds perfectly incredible; but every day a correct list is kept of the number of mouths fed; and this does not include the ball suppers, &c., &c., but merely dinners."

Miss Liddell, when in attendance on the Queen, heard various good stories which she has done well to record. Sir Robert Peel told her that one day, happening to be at a City dinner, he sat next a famous Alderman Flower, whilst Canning sat on the other side of the alderman. Placed in this position,

"he heard Flower remark to Canning, 'Mr. Canning, my Lord Ellenborough (the Lord Chief Justice) was a man of uncommon sagacity.' So Canning bowed assent, and said he believed he was; but asked what gave rise to the observation at that moment, upon which Alderman Flower answered, 'Why, sir, had he been here he would have told me by a single glance of his eye which is the best of those five haunches of venison!'"

Lady Bloomfield also tells a curious anecdote about her own father, who isolated himself from the younger members of his family on account of his dislike to the noise of children. "It is said," she writes,

"that one day my father was walking in Portland Place, when he met a nurse carrying a baby in her arms; and being struck by the beauty of the infant, he inquired whose it was. The nurse, much astonished, answered, 'Your own, Sir Thomas!'"

We give another story:—

"I dined at Montagu House last night, and had the pleasure of meeting the Bishop of Oxford (Samuel Wilberforce). I was told a funny story about him the other day, viz., that when he was dining with a large party, a poor curate who was deploring the large family he had to educate with a very small income, said, 'Do you know, my lord, I have nineteen children?' Upon which a very red-faced woman with a squeaky voice exclaimed, 'Only fourteen by me, Mr. Jones!'"

The anecdotes scattered throughout the volumes are the chief feature of the book, the politic remarks of neither Lord Bloomfield nor his wife being remarkably profound. A story told by the Queen is amusing, though it has appeared in print before:—

"An Inspector was examining the children at the Duke's school. Among other questions he asked the meaning of the word 'grace,' upon which the children all exclaimed with one accord that it meant the Duke of Rutland!"

Here is a laughable incident in Miss Liddell's experiences:—

"Yesterday, when the Queen went through the house, we had to pass through ——'s room, and lo! his best wig and whiskers were put out on a block on the drawers. Luckily, —— was not with us, it was such a funny incident."

Lady Bloomfield is a little superstitious, and of her ghost stories and tales regarding mesmerism one may be given:—

"Princess Schwarzenberg, perished at Paris in the great fire which took place at the Austrian Embassy. She had left her youngest children here at Vienna. The Cardinal being then a baby of six months old was in his cradle one night, when suddenly his nurse, an old and very respectable, but by no means either a clever or imaginative woman, fell down on her knees and exclaimed, 'Jesu Maria, Joseph! there is the figure of the Princess standing over the baby's cradle.' Several nurserymaids who were in the room heard the exclamation, though they saw nothing, but to her dying day the nurse affirmed the truth of the vision, and there being then no telegraphs, it was not for many days after that the news of the Princess Schwarzenberg's untimely fate reached Vienna."

At the end of three years Miss Liddell gave up her appointment as maid of honour to marry Mr. Bloomfield, the only son of Lord Bloomfield, who was then Envoy Extraordinary and Minister Plenipotentiary at St. Petersburg. This union compelled the bride to exchange England for Russia. The Emperor Nicholas she thought "the finest, handsomest man I ever saw, and his voice and manner were most attractive." The Empress

"was seated when I went in, but rose to meet me, and then desired me to sit down beside her. She looked very thin, but not so ill as I expected, and her face bore the traces of great refinement and beauty. Her eyes, which were blue, were set deep in her head, and the expression was more intelligent than pleasing. Her voice was soft, but she spoke rapidly and with decision. Her Majesty was dressed in a plain black velvet gown made high and with long sleeves. She wore a small coquettish black hat and feather, which was fastened by a handsome diamond aigrette, and she had on a magnificent pearl necklace composed of five rows, each pearl as large as a hazel nut, which rested on her knees as she was sitting. I remained about half an hour with her Majesty, who talked a great deal on various subjects. I mentioned that I had lately received a letter from the Queen; this seemed to astonish her not a little, and she said, 'Comment donc, mais de sa vraie propre main! Est-il possible que la Reine ait le temps d'écrire des lettres!' The Empress admired the Queen's activity, and said the Emperor had been so much struck by it, and that she believed that Queen Victoria and the Queen of Greece were the only two female sovereigns who occupied themselves so much, mind and body."

Count Nesselrode was one of the most agreeable men Mrs. Bloomfield met, but his polished manners can hardly have been derived from his mother:—

"She was very kind to me, but was rather an alarming woman, with brusque manners, and I was not a little astonished at seeing her hold out her pocket-handkerchief by the corners and spit into the middle of it! She smoked a great deal, but was clever and agreeable, and talked pleasantly."

In the summer of 1851 Lord Bloomfield, who had succeeded to the title some years previously, was sent to Berlin. At the breaking out of the Crimean war feeling at Berlin set strongly against England, and the position of the Bloomfields was both arduous and uncomfortable. The King was civil, but the Queen was positively rude. She almost cut Lady Bloomfield, and showed on many occasions how hostile she was. Only after the marriage between the Princess Royal and the heir apparent to the throne of Prussia did a more cordial feeling spring up. "At the first reception," says Lady Bloomfield concerning the arrival of the royal bride,

"the Princess Royal made a most favourable impression. Her manner was quiet, dignified, and self-possessed, but she found a kind word to say to every one. After the presentations, which were very numerous, Her Royal Highness polonaised with twenty-two princes. She looked remarkably well, and her dress was very becoming. I did not see much of Her Royal Highness, as the feeling of jealousy ran so high it was not considered advisable, and we studiously avoided giving any cause of offence."

Many readers will remember the malicious rumours that were circulated about the domestic misery which attended upon this marriage—reports as true as the rest of malevolent gossip. "We dined the other day at Prince Frederick William's," writes our author,

"and I had a pleasant chat with him after dinner. He laughed at the reports which have been circulated of his marriage being unhappy and of his ill-treating his wife, and certainly it would not be possible to see a happier couple."

After a stay of nine years at Berlin, Lord Bloomfield was sent to Vienna, the mission at that capital having been converted into an embassy. "You are fully entitled to that distinction," wrote Lord John Russell to him, "and it will be a fit climax to your diplomatic career." Shortly after her arrival Lady Bloomfield had to go through the solemn ceremony of receiving the society of Vienna, which must have been somewhat of a confusing ordeal:—

"I sat in full court dress upon a sofa in the middle of the drawing-room at the Embassy, and the person of highest rank present, after being introduced, sat down next to me till a lady of still higher rank arrived, when she immediately got up and gave up her place. This went on till all the society had been introduced to me, and lasted for three evenings; every one being in court dress. One of the chamberlains presented the gentlemen, and after my receptions were over, I was expected to return the visits."

The fatigues undergone by crowned heads are greater, however, than those suffered by meaner mortals. Lord Bloomfield writes after the coronation at Pesth in 1867:—

"I have just had my audience of the Emperor King, and was most pleased to see him so well. He told me he had no headache yesterday, which he expected to have, and altogether he seemed as well as could be expected under the circumstances."

And in the same year, when the Garter was sent to the Emperor, he writes:—

"I have been discussing with Prince Constantin Hohenlohe the great question of the Emperor's dress when he will be invested with the Garter; and Beust and I were arguing the subject last night, when he said that he had been telling the Emperor that after all there is no costume so neat as knee-breeches, and that he does not despair of bringing him round to the idea. I suppose his Majesty is practising civil clothes, for he would have to wear them at Paris, so the question of breeches will not be so outrageous a one to press on his consideration."

As has been hinted, the value of this book from a political point of view is slight. It is noteworthy that, unless these volumes do him an injustice, the British Ambassador at Vienna had as little suspicion that the Prussians would be victorious in 1866 as any reader of the daily papers in London.

On some Ancient Battle-fields in Lancashire and their Historical, Legendary, and Æsthetic Associations. By Charles Hardwick. (Manchester, Heywood.)

MR. HARDWICK'S book contains little that is new, but it is pleasant reading and instructive for all that. The battle-fields of Lancashire have on more than one occasion been the scene whence a new departure has been taken in our history, and they are worth contemplating from the point of view of the imagination as well as from that of scientific history. We do not know all about a man when every authentic detail of his life is tabulated; we still require to know how his personality affected his contemporaries, and this we best gather from the legend and folk-lore that surround his name. Our notions of the emperor Charlemagne would be more imperfect than they even now are if the dreams of his admirers were lost or forgotten. The fact that succeeding ages worshipped him as a saint in the

> Urbs Aquensis, urbs regalis,
> Regni sedes principalis,
> Prima regum curia,

is evidence of his own strongly marked personality and of the need which the age felt for such a deliverer from mere rapine and chaos. So is it with our legendary Arthur; we none of us can do more than guess whether he was once a living hero or is but the picture of the aspirations of a subject people gathering round more ancient legends which it is possible may have had a solar origin. For Mr. Hardwick to quote Whitaker, the Manchester historian, is waste of time. Whitaker's mind was of a character which rendered him as incapable of weighing evidence where mythology was a part of it as Geoffrey of Monmouth himself. Mr. Daniel H. Haigh's testimony as to Arthur is more valuable. He was an accurate scholar and knew how to sift evidence, and comprehended that though there could be no degrees of certainty there were many of probability. He held that a substratum of history might be found under the Arthurian legends. If he were right, Lancashire may lay claim to have been the scene of some of the hero's battles. It must be borne in mind that Scotland, Cumberland, Wales, Somerset, Cornwall, and Brittany are all able to put in claims for much that Arthur did.

Mr. Hardwick has some sensible remarks on heraldry, the only fault of which is that they are far too short. The "science of blazon" has been so corrupted by foolish and selfish persons, and has been so constantly used as a symbol of a very noxious sort of vanity, that very few persons have given to its early history the careful study that it deserves. It may be true—indeed, we believe that it is little short of certain—that formal heraldry originated at about the time of the Crusades, but personal symbolism is far earlier. Men reasoned, some of them acutely enough, before the first book of logic was written to give instruction in the art, and so we may be sure that persons, families, and races had signs to distinguish them before the science of the thing was heard of, or the curiously obscure language invented by which its symbolism is expressed. The horse, the raven, and the dragon were familiar here as badges before the Crusades were dreamt of, and, as Mr. Hardwick points out, races widely separated from ours have animal and vegetable badges. The tribes of Australia are distinguished by such things, which serve as a crest or *kobong*. Mr. Hardwick might have pointed out that so late as the sixteenth century country folk who could not write were accustomed to use their sheep marks as a signature. Many of these sheep marks are identical with what are called the ordinaries in heraldry.

It is not reasonable to object to a book of this sort on the ground of its discursiveness. There are many passages in it which stimulate thought. For example, on Walton Flats is a mound planted with trees. It is regarded by the country folk as the grave of some of the Scotchmen who fell in the great battles of 1648, though it must be really of far earlier date, for in 1855 Mr. Harland found there evidences of Roman occupation. Faith in the modern legend is, however, so strong that a workman who had found a bronze coin there said that it was a halfpenny with a Scotchman on it in place of Britannia. It was a second brass Roman coin, the soldier on the reverse suggesting to the uninstructed workman who found it a kilted Highlander.

Recreations and Studies of a Country Clergyman of the Eighteenth Century. (Murray.)

A PIOUS wish to preserve for a time the memory of a relative who, in his own day, was a person of repute, has induced Mr. Richard Twining, the well-known tea merchant and banker in the Strand, to publish some extracts from the correspondence of his great-uncle, the Rev. Thomas Twining. The book, though modest and pleasant enough in its way, is of little interest to the public. The reader who may turn to it, hoping to find even such a meagre picture of a country parsonage as is given by Mr. Austen Leigh in his memoir of Jane Austen, will be entirely disappointed. Of parochial gossip or incidents of ordinary provincial life Mr. Twining's letters, or at least those here published, contain absolutely nothing. The editor has, perhaps, been too anxious to exhibit the merits of his great-uncle or to show how intimate he was with one or two persons of note. But whatever the cause may be, we learn nothing from these pages, save that the Rev. Thomas Twining was a musician of great enthusiasm and some proficiency, a good classical scholar, and a person of excellent taste in English literature. He was born in 1735 and died in 1804. He was some time a fellow of Sidney College, Cambridge, curate in charge of Fordham, near Colchester, and finally rector of St. Mary's Church in the latter town. He corresponded on terms of intimate friendship with Dr.

Parr, Dr. Burney, and Dr. Hey, then Norrisian Professor at Cambridge. Most of his letters here collected are addressed to Dr. Burney or to his half-brother, who was carrying on the business in the Strand. They are written with great spirit and vivacity. "I consider your brother," said Dr. Parr in a letter to Richard Twining in 1816,

"as possessing a talent for epistolary writing certainly not surpassed by any of his contemporaries; wit, learning, languages ancient and modern, the best principles of criticism and the most exquisite feelings of taste, all united their various force and various beauty."

The letters, no doubt, were most agreeable to receive, but are of a kind which does not improve by keeping. We should be glad to hear of Fordham and Colchester and Cambridge for their own sakes, but little or nothing is said of these places. Events important enough to the history of England and of the world were taking place elsewhere, but Mr. Twining knows them only by hearsay. The Wilkes trial, the Lord George Gordon riots, the French Revolution, and the great French war are mentioned only casually in the correspondence. The sole detail which it adds to our knowledge of these events is that in the winter of 1802 a French invasion was so certainly expected that Mr. Twining fled from Colchester to Cambridge. Even the musical gossip, of which there is great abundance, is not particularly interesting. We learn, indeed, that Mr. Twining bought a piano as early as 1774, that Emanuel Bach and Jomelli were favourite composers among English amateurs, that Haydn was received with rapture, and that even persons of taste would not stir out of doors to hear an opera of Cherubini; but these matters can occasion little surprise or delight, and the rest of the musical talk is absolutely dull. It is of more importance to note that there was a country clergyman who in 1784 read Chaucer and Milton's prose works with appreciation, and protested vehemently against the Johnsonese language and the Johnsonian criticism of poetry. Indeed, in all his literary judgments Mr. Twining gives proofs of a taste which for his time was truly admirable. He stands up boldly for Swift, and frequently quotes Fielding; he depreciates Warton and Pope, and is loud in his praises of Gray. Opinions of this sort were real contributions to a great literary movement, and do more to give Mr. Twining a claim on the notice of posterity than his translation of Aristotle's 'Poetics' or his theory of Greek choral music.

Wanderings in Balochistan. By Major-General Sir C. M. MacGregor, K.C.B. (Allen & Co.)

No better criterion could be desired of Sir Charles MacGregor's capacity to write than this book. His readers had followed him with interest in his lively and spirited description of a tour through the varied scenes of Northern Persia, but in the present case his lot was cast in a different region. For sterility and monotony the deserts of Balochistan are unrivalled, except, perhaps, by the sandy wastes east of Lob Nor. Yet about an uninviting subject like this Sir C. MacGregor has succeeded in compiling a book which will steadily retain the reader's attention. And the cause of this is not far to seek. It is certainly not the real subject-matter of the book, for that is topographical details of the driest description—in more senses than one. It lies more in the elastic spirits of the author; the energy with which he grapples with his task (for this journey partook of the character of an official mission); the common sense and large-heartedness of his views; his good humour even at the occasional expense of his own nationality, for whom, nevertheless, he has the natural pride of a Scot; the touching references here and there to the tenderest home associations; and the daring which carried him triumphantly through many an ugly crisis in a land of notorious robbers. Col. MacGregor's journey seems to have had its origin in a casual remark made by the author to Lord Salisbury (then Secretary of State for India) that Mekran and the country inwards would be a fitting field for exploration. Although the object of the expedition is thus vaguely described, we conceive there can be no harm in stating that, so far as we know, its main aim was to determine the practicability of landing troops on the Mekran coast in case of necessity, and utilizing the inland route thence as a line of advance upon Western Afghanistan. Supported by the Council of India, Lord Salisbury had no scruple in consenting to the project, and in September, 1876, Sir C. M. (then Colonel) MacGregor, accompanied by Capt. Richard Lockwood of the Punjab Cavalry, set out on his enterprise.

For some reason or other the records of the journey have been long allowed to repose in obscurity. The bare official results were laid before Government several years ago, we believe, but, owing to their semi-confidential nature, it was deemed advisable not to publish them. From the author's diary, which forms the skeleton and much of the flesh of the present book, most of the confidential matter has, however, been eliminated, and what objection there could have been to its earlier production we know not. However, better late than never; and though the geographers may have been balked, the general public will find the pages as fresh as if penned during the present year.

Much interest cannot attach to the purely geographical portion of the narrative. Of course it was Col. MacGregor's province to study the topography of the route, but in the first place the country had been already partly traversed by Major Beresford Lovett, and in the next the strategical importance of the Mekran routes has greatly waned since the construction of the railway from Jacobabad towards the Bolan Pass, by which Afghanistan has been made much more accessible to India. From Gwadur on the coast to Panjgur, a distance of about two hundred miles, the country calls for little notice. At the latter place a guard of some thirty natives was enlisted as a protection for the Englishmen in their journey into the deserts northward, which stretch away to the Helmand river and the frontiers of Afghanistan. This bodyguard contained some fellows of very ruffian-like aspect, and probably not more respectable than the lawless sons of the desert whom they were to keep at a distance. They were armed with matchlocks of the most antiquated construction, fit only for a museum, coupled with powder which never went off without a preliminary "fizz," and bullets that were any shape but spherical. However, this force acquitted itself very well on the whole—a significant proof of the old truth that much may be done with the rawest and most indifferent material provided only it be efficiently led. And of Sir C. MacGregor's capacity for leading Asiatics and for acting promptly in moments of danger the readers of this book can have but one opinion. As he explains, calamities like the loss of his shaving brush fill him with despair, but the sudden appearance in the tent of a robber with a loaded pistol and the revolt of Mahmud Khan, the most powerful and influential of the bodyguard, who announced his intention of helping himself to certain goods of the Englishmen by force, only served to inspire Col. MacGregor with the calm of determination. The way in which he behaved in these two critical moments was admirable, and as the story would only be spoilt by curtailment we heartily recommend readers to peruse it for themselves.

There is no doubt that the inhabitants of the Baloch deserts are not an agreeable set. Pottinger writes thus of them: "Bound by no laws and restrained by no feelings of humanity, the Namisare the most savage and predatory of Baloches." Accordingly when Col. MacGregor's party came across a posse of these worthies the situation was not without its anxieties, but his plan with all such individuals was to address them as if he took it for granted that they would not only obey but be willing to obey any of his orders. He therefore accosted the chief after this wise:—

"I have sent for you as your name is well known to me, and I wish you to do some work for me. 'Whatever you order will be done,' he replied. I bowed—as much as to say, Of course I never doubted that.' I then told him I should be very much obliged if he would send me some sheep and supply me with a guide to Zirreh."

Both these he agreed to furnish at once, and, as the narrative shows, became a good friend.

The *Ultima Thule* of Col. MacGregor's wanderings was a place called Shah-Godar, close to where the Afghan, Baluch, and Persian boundaries unite. To the natives Col. MacGregor's desire to reach this point was not wholly intelligible, and small wonder, we can hardly help remarking, when we reflect on the terrible deserts lying between, and the fact that Shah-Godar itself appears to be nothing but a heap of ruins. However, the perils of the sands were happily overcome, though there can be no doubt that the party were in real danger more than once, owing to the want of water. One gigantic process of desiccation would appear to be steadily at work in these Asiatic deserts and the regions contiguous. What the causes may be is a question for physical geographers; but whether due to the reckless felling of forest timber or increased irrigation, it cannot be denied that the sandy wastes are year by year encroaching more and more on the river basins. The Helmand, for instance, used formerly to inundate a large area, and in old maps there will be seen situated at its embouchure a huge lake similar in shape to the analemma which mys-

XUM

tified our juvenile mind when endeavouring to master "the use of the globes." Sir F. Goldsmid's expedition, however, revealed the fact that the lake had shrunk to extremely small dimensions, and Sir C. MacGregor's journey proved that no inundations had since occurred. A glance at his map will show a row of depressions close to the former Helmand or Seistan swamp, which look suspiciously like the remains of one vast lake. Whether modern science will ever be able to step in and restore their water supply to these parched tracts is a difficult question, but one which may profitably occupy enterprising military and civil engineers hereafter.

The conclusion of Sir C. MacGregor's volume tells of the illness and death of Capt. Lockwood, his friend and faithful partner in these travels. With that taste and feeling which one would have expected, the author has put his late friend's portrait in the place of honour as a frontispiece to the volume, and the earnest, intelligent, and resolute expression of the face bears out all that we read of him. He was fortunate in witnessing the completion of an enterprise which has yielded information that will probably prove of signal utility to Government, and fortunate also in a friend who has borne such honest testimony to his worth.

Les Grands Écrivains de la France.—La Bruyère. Par G. Servois. (Paris, Hachette & Co.)

There is probably no series of library editions of the literature of any country, now in course of publication or recently published, which can be compared with the "Grands Écrivains de la France," so long directed by M. Adolphe Regnier, in the three points of handsomeness, moderate price, and completeness of editing. But, for reasons which are obvious enough to those who look a little below the surface, such a series is exposed to one great disadvantage—the length of time which almost necessarily elapses between the beginning and the completion of its different parts. Men who possess at once competence for the work and ability to devote their whole time to it are necessarily rare. M. Regnier, however, seems in all cases (and rightly) to have preferred completeness and delay to hurry and insufficient work.

The now complete edition of La Bruyère which is before us is a remarkable example of this. La Bruyère is by no means a voluminous author, and the whole of this edition—even with the apparatus usual in these "Grands Écrivains" of an entire lexicon, of elaborate indices, and of an album of portraits, plates of arms, and facsimiles of letters and documents—extends only to three volumes or six parts. Yet seventeen years have passed since the issue of the first two volumes, containing the whole text, and four since the issue of the indices and lexicon, the latter of which was compiled for M. Servois by M. Regnier the younger, now dead. The work has only just been completed by the appearance of the biographical notice and the album. Thus at last we have what may be called a definitive edition of La Bruyère. The apparently disproportionate time spent on the text and on the critical and biographical apparatus respectively is easily accounted for. La Bruyère is not at all a difficult author merely to edit. His work is not large in amount; and though in proportion to its amount it is almost excessively full of allusions and other points requiring explanation, the abundance of early "keys" and the like illustrative matter (which has been thoroughly treated by the diligence of the late Édouard Fournier) makes the task of interpretation one of ordinary judgment and care rather than one necessitating tedious research. Speaking generally, we may say that M. Servois has used both care and judgment most satisfactorily. He is especially to be commended for not sharing the exaggerated scepticism of his predecessors respecting the posthumous 'Dialogues on Quietism,' the evidence for which, if not entirely conclusive, is certainly preponderant. But with regard to the biography of the author there was very much more to be done than mere arrangement and selection of easily accessible materials. Sainte-Beuve said, less than half a century ago, "Nothing, or next to nothing, is known of La Bruyère's life"; and Sainte-Beuve certainly would have known something if there had been anything to know. Something was added between the date of the remark and that of M. Servois's researches, but not much. It would, perhaps, be still rash to say, even after those researches, that much is known; but it certainly may be doubted whether they have left much for any one else to find out. What we have here is still rather information about the family of the essayist, about his friends, his enemies, and his employers, about the inventories of his property and the price he paid for his offices, than about himself strictly speaking. Some additional letters, however, which M. Servois printed in 1865, may be said really to increase our personal knowledge; but on the whole La Bruyère must be admitted to rank among the not small class of famous writers whose writings are, and are always likely to be, the main source of information about them. Of those writings it is difficult to conceive a better edition than the present. The ideal of a standard edition of a classical writer is that it shall be as far as possible self-contained—that the reader shall not be obliged to interrupt his reading to rummage among dictionaries and encyclopædias for information necessary to enable him to understand or appreciate his author. Of course this ideal may be, and often is, pursued too far. No editor is bound to give merely trivial information, or information which a moderately liberal education may be trusted to supply. But it is in the discernment of what does and what does not come under this exception that the virtue of an editor consists. M. Servois possesses that virtue eminently. He is diligent in noting variants, in tracing and, if necessary, completing quotations, in explaining allusions, in identifying persons mentioned, in supplying minor historical particulars. The late M. Regnier's lexicon-concordance (for in fact it is both) relieves the notes of much matter which would otherwise find a place there. These lexicon-concordances, which include distinct and elaborate grammatical treatises, may be said to be, on the whole, the most remarkable feature of the series, and it is rather humiliating to reflect that, except in the case of Shakspeare and perhaps one or two other writers, we have hardly anything corresponding to them in English. The labour which they represent must be enormous, and it must be almost entirely a labour of love, for they are not things that attract the general reader. The deceased author of the present example, M. Regnier *fils*, also accomplished for M. Lalanne's 'Malherbe' a similar task; and the two, containing as they do more than a thousand closely printed pages, represent, in a manner singularly interesting and important, the earliest and the latest state of seventeenth century French.

Of the album of this edition of La Bruyère it is enough to say that it represents the essayist's signature as varying. It has sometimes been said that he repudiated any claim to nobility (as Treasurer of France he was officially noble, but that is different) by signing "Delabruyère" in one word. It appears that though he sometimes did this it was not his invariable practice. Autographs exist with the capital B. Oddly enough, however, in the examples given the capital B is connected with the a, while the small b is separated from it.

NOVELS OF THE WEEK.

Damocles. By Margaret Veley. 3 vols. (Smith, Elder & Co.)
The Price She Paid. By Frank Lee Benedict. 3 vols. (White & Co.)
The Laird's Secret. By J. H. Jamieson. 2 vols. (Blackwood & Sons.)
Florence Godfrey's Faith. By Mrs. Emma Raymond Pitman. (Blackie & Son.)
Le Capitaine Burle. Par Émile Zola. (Paris, Charpentier.)
La Petite Sœur. Par Hector Malot. 2 vols. (Paris, Dentu.)

There is a good deal of fascination in Rachel Conway, the beautiful and high-minded girl over whose head the sword of Damocles impends. She has given her affection, or thinks she has, to a cheerful, commonplace youth, to whom she is engaged to be married. Before the intended event she learns two facts—that she is unexpectedly an heiress, and that there is in her blood the taint of insanity in an aggravated form. When she breaks off her engagement, of course "Charley" attributes her conduct to a base motive, not to the self-denying spirit in which she accepts the fate of celibacy. Very different is the attitude of the agnostic Lauriston, who loves her too well to seek to shake her resolution. A disappointed man and a widower, he allows her to think his affections buried in his first wife's grave rather than obtrude himself on the heart that he knows might so easily be his. We wish the outward sign of his agnosticism had not been the shrugging of his shoulders, a habit which would render the noblest character detestable. The real manhood which underlies the little affectations of this "superior person" will reconcile the reader to an interesting, if sombre figure. Rachel is altogether charming, though she certainly bears traces of the Rutherford malady. "Sometimes," she said,

"I fancy I must be a little mad already.....the sane people don't seem to be so very sane. When I am doing what they do I feel now and then as

if we were all mad together. Then we are talking and reciting and dancing and smiling, in hot little drawing-rooms, and knowing all the time that the lights will go out, and the darkness come, and that we must go away and die alone, ...and I think of all there is to see in the world, of lovely sunsets and sunrises, and skies, and seas, and hills, while we are all huddled together, and too busy to take any notice."

There is much method in this madness, and we wish it were catching. Both Lauriston and Rachel would have been the better for some slight share of common sense, such as is possessed by cousin Dick, who in his way is as honourable as Lauriston, without his pretensions. The sadly vexed question of duty in such cases as Rachel's is well stated in this book.

A Pennsylvanian farmhouse is the scene of a pleasant new story by the author of 'Saint Simon's Niece.' The farmhouse is the property of the heroine, P. French, as she styles herself—a remarkably pretty young woman, with a brave and heroic temperament, which is thoroughly put to the proof. She takes into her house a lackadaisical young lady from New York, Miss Georgia Grosvenor, who has broken down at the close of a lively season, and comes to the Wachuset farm in order to recover her tone. The two girls fall in love with each other at first sight; and indeed they are both sufficiently charming to justify any one in falling in love with them. That is the opinion of a trio of young men, all of them very good fellows in their way. One of these is a neighbouring farmer; another is a New York gentleman, a recognized suitor of Georgia's, who follows her down to Wachuset; and the third is Georgia's brother. Amongst them there is some delightful play of nature and fancy, which carries the reader easily along to the end of the third volume. Mr. Benedict's style is bright, fluent, and, on the whole, attractively fresh. The book is full of conversation, brisk and pointed, in the New England fashion, but at the same time there is quite enough of incident to save it from the peril of monotony. Such exaggeration and efflorescence as this novel contains—and both are conspicuous—become less obtrusive as the plot unfolds itself. In the earlier chapters they are at times rather annoying in their approximation to mere silliness; but as the narrative proceeds it gains in gravity, so that in the last volume the subject is more worthily treated than in the first. The impression left on the reader's mind when the story has been told is decidedly favourable to the author, who has assembled excellent materials and has used them very skilfully. The course of true love at Wachuset is difficult, and disturbed by many currents; but it finds its way at last into a peaceful haven. It will be worth anybody's while to read for himself how this happy goal is arrived at.

We confess to thinking 'The Laird's Secret' must have been better in its original form. The one incident upon which the plot depends occupies a few chapters at the end of the book, with which the long narrative which precedes them has the slightest possible connexion. To the uninitiated Southron the animus displayed by the loyal daughter of the manse against "Popery," as exemplified in an Episcopalian Ritualist, will seem odd and overstrained; but there is nothing really exaggerated in the description, nor in the polemic interest of the villagers in the same matter. The book, indeed, is one which could not have been written by an English author, and in that way is remarkable. To those who have no interest in local colour and no perception of subtle national differences most of the early chapters will be simply dull. To more intelligent readers there will be some charm in so genuine a narrative of modern country life and ways of thought. But in no point of view will the story be very exciting. The matrimonial mess which Mr. Scott makes of his affairs, owing to his ignorance of the Scotch marriage law, is sufficiently harrowing in its consequences to the Fitzjames family; but the author is too femininely kind-hearted to leave her friends long in trouble, and so drowns the unlucky first wife with the simplicity of a child. To secure the permanent happiness of the village, Morton, the "Jesuit" factor, is obliged to take his departure, and, what is obviously regarded as an equally signal triumph of virtue, the Episcopal chapel is closed.

Florence Godfrey's father was the head overlooker in a Manchester cotton factory, the proprietors of which were ruined by the American civil war, and the first scenes of Mrs. Pitman's story illustrate the cotton famine of 1863. When the family are thrown out of work by the failure of the cotton supply, Florence's brother "Alf." determines to emigrate to Australia; and before long the rest of them are compelled to follow him. From this point the tale alternates between the emigrants and a Sunday-school teacher who stays behind in Manchester. Almost everybody whom Mrs. Pitman cares to write about is intensely religious. There is not a villain in her story; her good people are exceedingly pious, and also, it must be confessed, uninteresting. Florence's faith is nothing peculiar to herself; it is the faith of her family, her friends, and her acquaintance—the faith of the Manchester Sunday school, rarely rising above the time-honoured texts and songs on which its foundations were originally laid. But it produces good works and honest endeavours; and if Mrs. Pitman has not written an amusing novel, she may be content to think that she has enforced a lesson in piety.

M. Zola's new book contains six short stories, which are altogether inferior to the two collections known as 'Contes à Ninon,' and, with the exception of some sketches of the outskirts of Paris under the title of 'Aux Champs,' quite unworthy of the author of 'La Faute de l'Abbé Mouret.'

From M. Zola to M. Malot is a vast change indeed, for of all French writers of talent M. Malot produces the healthiest romances. 'La Petite Sœur' is, like a dozen of his other books, pretty enough, a trifle goody, and rather spun out towards the end.

CHRISTMAS BOOKS.

Stories from Livy. By the Rev. A. J. Church. (Seeley, Jackson & Halliday.)

Winning his Spurs: a Tale of the Crusades. By G. A. Henty. (Sampson Low & Co.)

The Cruise of the Snowbird. By Dr. Gordon Stables, R.N. (Hodder & Stoughton.)

Daisy Snowflake's Secret: a Story of English Home Life. By Mrs. G. S. Reaney. (Same publishers.)

The Diamond Ring. By Elizabeth Harcourt Mitchell. (Masters & Co.)

Anna Cavaye; or, the Ugly Princess. By Sarah Doudney. (Hatchards.)

Little Bricks. By Darley Dale. (Nisbet & Co.)

Sea-Waif. By Silas K. Hocking. (Warne & Co.)

An Old-fashioned Thanksgiving, and other Stories. By Louisa M. Alcott. (Sampson Low & Co.)

When Papa comes Home: the Story of Tip, Tap, Toe. By the Author of 'When I was a Little Girl.' (Macmillan & Co.)

The Story of a Shell: a Romance of the Sea. By J. R. Macduff, D.D. (Nisbet & Co.)

A Little Pilgrim in the Unseen. (Macmillan & Co.)

Fairleigh Hall: a Tale of Oxfordshire during the Great Rebellion. By the Rev. A. D. Crake. (Mowbray & Co.)

Prof. Church's Christmas book this year differs from its predecessors in this, that it is not nearly so close a translation from the classical original. The massive periodic style of Livy is not easily reduced to the simple narrative which Prof. Church affects, and he has therefore been compelled to omit at every turn some dependent sentence or subsidiary clause which in Latin is admirably terse and effective, but which could hardly be rendered in English at all without either clogging the principal sentence or acquiring for itself undue importance. These omissions, however, are almost the only alterations which Prof. Church has allowed himself to make in Livy's language. The tales of ancient Rome as here presented are, in all essential details, translated almost word for word from the Roman historian. They comprise all the famous and magnificent legends that describe the growth of the Eternal City from the birth of Romulus down to the tragedy of the Caudine Forks. The stories of Tarquin and Brutus, Coriolanus and Cincinnatus, Camillus and Manlius, and the rest, are here repeated and lose nothing in the telling. It is needless to say year after year with what grace Prof. Church has performed his part. He is by this time *hors concours* in his art, and those who have read his earlier books will know what to expect in his last. We need only mention further that the illustrations to the present volume are taken from designs by the same Pinelli whose drawings were used in the previous 'Stories from Virgil.'

Mr. Henty's "Tale of the Crusades" is *after* 'Ivanhoe.' What relation the Earl of Evesham bears to Thomas de Multon, Cnut to Gurth, and the outlaws to Robin Hood and his merry men, grown-up readers will decide. As the coming race is as ignorant of Scott as of Defoe, these authors may furnish forth hundreds of purveyors of diluted romance for many a year to come. But the *vraisemblance* of old is gone. Scott would not have named a Norman Sir Rudolph, nor created an Earl of Evesham by patent *temp.* Ric. I.

'The Cruise of the Snowbird' is prettily illustrated. The luxuries of the yacht are almost too elaborate, and the Highland part of the book is somewhat stagey, nor are we satisfied with the attempts at Welsh and Irish brogue, praiseworthy as they are. But the Arctic adventures, including the extraordinary encounter with a pirate and the equally curious intervention of Seth, the Yankee trapper, in such latitudes, will satisfy the cravings of ingenuous youth.

In 'Daisy Snowflake's Secret' a teetotal moral is applied in the most uncompromising fashion. Every other person in the book is a sot. The rector's wife is a confirmed drunkard; so is her charwoman, corrupted by her example. The doctor orders alcohol to his patients with a view to increasing his practice; the grocer smuggles brandy into households, wrapped up with tea and starch and "put down" as general grocery. The publican's wife drives a roaring trade of her

XUM

own, sending out her husband's goods as "medicine." Drunkenness is a great evil, no doubt; but Mrs. Reaney is not content with pointing this moral, for she frankly adopts the doctrine which maintains that moderation in the use of alcohol is quite as heinous as excess. There will be many who will not readily follow Mrs. Reaney's teaching, and others will hesitate to adopt the view that it is desirable for young girls of eighteen to conduct religious services among "men and women of the roughest type," praying, singing, and preaching, until, like poor Daisy, they are wrought up to a most unhealthy state of religious excitement. What with its rabid teetotalism and its sensational religion, the book leaves an unpleasant impression, although it is well meant. Mrs. Reaney's books are apparently popular in certain quarters; it is perhaps unfortunate, therefore, that they are not written in better English.

'The Diamond Ring' is a "do-me-good" tale for girls: church restoration and parish work play a conspicuous part in it. Four girls compete for the diamond ring left "to the most worthie" by their grandmother. Their adventures during the year of trial form the tale. Florence's escapade is rather ridiculous, and the hackneyed part of the mysterious stranger is not particularly well played by Gerald Fairfax.

Anna Cavaye is a poor little *incomprise*, and her story is the peg on which hangs a somewhat complicated arrangement of lovers long severed and finally brought together. The little "ugly princess" is by far the most interesting personage, and there is a haunting charm in "the poor little sulky face, hopelessly and pathetically plain."

The doings of "the little bricks" are strange and wonderful. All the children seem to be free from the fetters with which inconsiderate elders are wont to bind the young. Two of them run away, encamp in a boat at Hammersmith, and spend their days sightseeing in London by way of avoiding recapture. Roughing it does not suit poor May; she dies from the effects of the exposure, and her death, of course, reclaims the naughty brother. The frontispiece of this tale is ghastly.

'Sea-Waif' is another of Mr. Hocking's tales of boyish adventure. It is quite as good as its predecessors.

Miss Alcott's books are so well known that they need no recommendation. The lovers of 'Little Men' and 'Little Women' will hail with joy the 'Old-fashioned Thanksgiving' and accompanying stories.

'When Papa comes Home: the Story of Tip, Tap, Toe,' is apparently written for the amusement of very young children; it is well fitted for this purpose.

'The Story of a Shell' is a popular exposition of the natural history of the sea, well fitted to attract boys and girls who have a turn for natural history.

The accomplished author of 'A Little Pilgrim' almost disarms criticism in a preface which is also an apology: "The sympathetic reader will easily understand that the following pages were never meant to be connected with any author's name. They sprang out of those thoughts that arise in the heart when the door of the unseen has been suddenly opened close by us, and are little more than a wistful attempt to follow a gentle soul which never knew doubt into the new world, and to catch a glimpse of something of its glory through her simple and childlike eyes." This is a graceful plea, but it can scarcely be accepted as an adequate justification of a work which, if it is taken seriously at all, must be considered as an attempt both at a 'Purgatorio' and a 'Théodicée.' Perhaps the day is past for such performances, but in any case they are themes hardly fitted for any but a great poet or a great philosopher. To adult readers, few of whom nowadays can claim never to have known doubt, 'A Little Pilgrim' will seem too childlike, while for children, who will read it simply as a tale, it is surely over-sentimental and not particularly attractive. But really criticism is wholly at fault in such a case. Sympathetic readers will like the book and scorn the critic; for unsympathetic readers it is not written. The latter class is likely to be the larger perhaps, but the former is the one to which the author appeals.

Mr. Crake has written several tales of a similar kind to 'Fairleigh Hall,' and relating to earlier periods of the national history. He has some power as a story-teller, but it is cramped by having to describe a time that is unfamiliar. Oxfordshire and the counties that adjoin it seem to be well known to him, as he describes several of the places he has occasion to mention as if he had really seen them. This is an advantage, but it hardly makes up for a blunder of such magnitude as that of thinking that Robert Bertie, Earl of Lindsey, who died in the service of the king from wounds received at Edgehill, was called "Lord Lindsay." Not content with this, he shows the fulness of his misconception by indicating that he thinks Lindsay to have been the family name. This he does by telling his readers that one of his fictitious characters, "Sir William Lindsay," was "of the family of the noble lord who fell at Edgehill." Blunders in family history, confounding Scotchmen and Englishmen, Lincolnshire and the Lowlands, may be forgiven, for though grotesque they do not much distort our views of history; but surely it is impossible to pardon a gentleman who teaches us that after the battle of Worcester subordinate officers could catch fugitive royalists and put them to death, by a process which he may imagine to have been a court-martial, but which it is certain that the authorities in London—the Parliament and the Lord-General alike—would have considered murder. England was then in a state of war, revolution if you will, but at no time was authority, civil or military, so far relaxed that men's lives were at the absolute mercy of their captors. Many other strange things are to be met with which will be quite new to the students of seventeenth century history. It was, of course, to be anticipated that nearly every Puritan would have a Scriptural name or some fancy imitation of one; but we did not expect to find a Puritan minister represented as teaching his flock that it was an "impossibility that any member of the Church of England who used her Prayer Book, and clung to her devotional system, could be saved." What some half-mad fanatic then or now may have said we would not presume to guess, but we think it extremely unlikely that any duly appointed minister, whether Presbyterian or Independent, can be proved to have made such an assertion.

SCHOOL-BOOKS.

The Fourth Book of the Meditations of Marcus Aurelius Antoninus. A Revised Text, with a Translation and Commentary, and an Appendix on the Relation of the Emperor with Cornelius Fronto, by Hastings Crossley, M.A. (Macmillan & Co.)—It is high praise of Prof. Crossley's translation to say, as we can with truth, that it occasionally improves on Long's very appreciative version. For instance, *ἐπὶ τῆς γραμμῆς τρέχειν ὀρθὸν*, § 18, is, of course, "run right for the goal," not "along the line." It is a pity that such good work, evidently produced *con amore*, should be confined to a single book. The prefatory remarks on Roman Stoicism are the outcome of much study and reflection. When, however, we read that its ethical teaching "has undoubtedly an affinity with the English character," we feel that Prof. Crossley is more familiar with old Rome than modern England. And, at all events, the interesting passage, § 39, on the subjectivity of evil is at variance with the common belief in a personal author of evil. The rendering before us is a little obscure: "What hurts thee (*κακὸν σὸν*) has no foundation (*ὑφίσταται*) in another's mind.....Where then can it be? In that part of thee where that which forms the opinion about evils (*τὸ περὶ κακῶν ὑπολαμβάνον*) has its seat." Rather turn it, "What is evil to thee has no subsistence in another's mind.....It subsists where thy faculty for forming conceptions of evils has its seat," *i. e.*, evil is only a relative term. *Ὀλίγα πρῆσσε*, § 24, is not "do but few things," but "engage in few affairs." *Ἐννπέστης*, § 14, is not "Thou hast existed in (a whole)," but "Thou didst come into existence," &c. The expression "life is opinion," § 3, 41, conveys no definite idea. Here *ὑπόληψις*="a series of notions." The few blemishes which we have noticed do not materially detract from the value of the book.

The Oration of Demosthenes on the Crown. With an English Translation, Introduction, Notes, and Indices by Francis P. Simpson, B.A. (Oxford, Thornton.)—We are quite willing to accept Mr. Simpson's statement that his "continuous rendering" is "as close as he could decently make it"; but we venture to say that a "purely commentatorial" version might without indecency, or even indelicacy, be made much more literal, and be at the same time much better finished, than that which Mr. Simpson has been content to publish. For example, to take at random § 95, we find "when he jogged your memory (*ὑπομιμνήσκων*) with any untoward act (*εἴ τι δυσχερές*)." Again, by rendering *τὰς βλασφημίας* "libels," and *συκοφαντίας* "malignant fabrications," our translator makes the unlucky orator demonstrate "libels" to be fabrications, first because they are false, and also because *if true* the orator is blameless—a style of argument which would hardly captivate even a Connemara jury. Then *κέχρημαι* is "I dealt" for "I have dealt"; while *τῶν καθ' ὑμᾶς πεπραγμένων καλῶν τῇ πόλει* is rendered "of the noble actions performed by the state in your time," without a note on the order. We prefer "of the achievements honourable to the state which have been performed in your time." Lastly, we have, "For each man in his private life, and a city in her national life, must always strive to conduct their later policy in the light of their noblest precedents." It is a pity that Mr. Simpson did not here conduct his policy in respect to translation in the light of the precedent afforded by the late Mr. Holmes. A little further on we read "offer themselves to the perils," which is curious English. In § 208 *ἀγαθοὺς ἄνδρας* is wrongly annexed to the clause immediately preceding, though sense and rhythm show that it refers to all the ancestors just mentioned. In § 293 the gerundial use of the participle is confounded with the "trajection" by which the noun is occasionally placed between the article and the participle, when "an attributive participle is attended by an object or adverbial expression." This error is also made by Schäfer and Holmes. In a note on the Doric dialect, § 90, a large ignorance is revealed by the phrase "*α* (corresponds) to original *η*," for "original *α* to Attic *η*." Still Mr. Simpson's version shows traces of more reading and greater care than seem available for ordinary "cribs," and his text is probably the best yet published in England; while the index of words and phrases should prove a valuable help to students and editors. The introduction gives a sketch of the history necessary for the understanding of the speech, and an account of the trial with an analysis of the speech of Æschines as well as of Demosthenes' famous reply. The volume is very well got up.

The Œdipus Tyrannus of Sophocles. With Translation, Notes, and Indices by B. H. Kennedy, D.D. (Cambridge, University Press.)—This edition contains several interesting emendations and suggestions, some of which are already familiar to scholars, notably the rendering of *τὰς συμφορὰς τῶν βουλευμάτων μάλιστα ζώσας*,

vv. 44–5, "comparisons of their counsels are in most lively use"; and of τἄμ' ὡς ἂν εἴπω, v. 319, "my things call them what I may." To either of these we prefer the note on ὀθούνεκ οὐκ ὄψοιντό νιν, v. 1271, "that they should not see," &c., for the old "because they should not see," &c.; and the new punctuations, vv. 1337–9, τὸν ἐκ θεῶν | φανέντ' ἄναγνον. καὶ γένους τοῦ Λαΐου τοιάνδ', κ.τ.λ.; and v. 11, στέρξαντες ("resigned") ὡς θέλοντος, κ.τ.λ. We cannot accept the new interpretation of τίς ὁ τρόπος τῆς ξυμφορᾶς, v. 99, "What is the mode of compliance?" for the answer is, "as this (pollution is) bloodshed afflicting the city." We ought to be referred, for the metaphor χείμαζον, back to vv. 22–4, πόλις.....ἄγαν | ἤδη σαλεύει κἀνακονφίσαι κάρα | βυθῶν ἔτ' οὐχ οἵα τε φοινίου σάλου. As for the translation in blank verse, it is very literal, but much of it is not poetry and some is barely English. For example:—

> Creon my brother-in-law, Menoeceus' son,
> I sent unto the Pythian house of Phoebus,
> to ask by doing or by speaking what
> this city I could save. the count of time
> this day disturbs me, what he is about.
> for, beyond likelihood, he is away
> more than the needful time.

We trust it is not destined to become the practice to discard capital letters at the beginning of sentences. This, indeed, is not done in the commentary, which, be it observed, is only corrective of and supplementary to other editions. Plenty of help is given in the indexes, which comprise a general vocabulary, an alphabetical conspectus of the various particles, and a general index, under which cases, moods and tenses, pronouns, and readings are amply treated. We need hardly say that the introductory remarks on the play are full of interest. Again, it stirs one to find a veteran scholar (p. 156) "placing (his) readers under a kind of mental engagement to disencumber themselves.....of that subtle and prevailing prejudice against the new, so obstructive to all truth,.....which Bacon has placed second among his 'Idols of the Tribe.'" The volume is dedicated to the memory of Dr. Bateson, late Master of Dr. Kennedy's college.

Selected Odes of Pindar. With Notes and Introduction by T. D. Seymour. (Boston, U.S., Ginn, Heath & Co.)—Our first impression on contemplating a selection from Pindar's odes is that any one set of fourteen odes would be as good as any other, but reflection soon suggests that 'Ol.' ii., vi., vii., and 'Pyth.' i., ii., iv. must appear in any case. These, then, are given by Prof. Seymour, but not 'Nem.' vii., viii., x., which we are disposed to place next. As to the rest, our powers of choice are exhausted, so that on the whole we are satisfied with Prof. Seymour's list. The text is that of Bergk's fourth edition, which does not follow MSS. so closely as is desirable. "No claim of originality is made for the notes," yet we notice much fresh illustration and indication of grammatical peculiarities. In fact, the commentary at the end of the book is very full and business-like, but critical notes do not come within its scope. Hence on 'Pyth.' ii. 35, Bergk's reading being ποτὶ καὶ τὸν ἵκοντ', we merely find the translation, "Such was the fate of Ixion (such misfortunes befell him also)," without a remark even on the false quantity. A better solution of this problem is ποτὶ καιρὸν ἰόντ', agreeing with the suppressed object of ἔβαλον, cf. Soph. 'Œd. Rex,' 324. It is curious that no editor has seen that in 'Pyth.' ii. 72 γένοι' = "prove thyself." The reading γένοι' οἷος ἐσσὶ· μαθὼν καλός, κ.τ.λ., is a very wanton departure from MSS. on Bergk's part, giving inferior meaning and a doubtful construction—μαθὼν followed by *oratio recta*—which should at any rate be supported by parallel instances. With the reservation that Prof. Seymour has elected in most cases to stand or fall with Bergk, his judgment seems generally good. The short sections of the introduction on Pindar's life and style just touch on some of the points which Prof. Jebb has brought out in his learned paper recently published in the *Journal of Hellenic Studies*. We allude especially to the fresh light thrown thereby on the poet's sympathy with "the most distinctively Hellenic phases" of Hellenic life, and on "certain general forms in which his thought tends to clothe itself." After reading Prof. Jebb's essay Prof. Seymour's treatment of the same topics naturally seems meagre and wanting in insight. The introduction contains a good conspectus of the principal literature of the subject. In a word, Prof. Seymour has accomplished the task which he undertook with ability and care.

Introductory Treatise on Rigid Dynamics. By W. Steadman Aldis, M.A. (Cambridge, Deighton, Bell & Co.)—It is fortunate that the preparation of a book intended to introduce the student to one of the most interesting, as it is one of the most difficult, of the higher branches of mathematics should have been taken in hand by one who both is eminent as a mathematician and has had wide experience as a teacher. The book before us is a clear and comprehensive treatise, in which general principles are clearly enunciated, while little stress is laid on particular problems, and will probably be widely used as introductory to the study of the larger works of Mr. Routh.

The First Six Books of the Elements of Euclid. With Copious Annotations and Numerous Exercises. By John Casey, LL.D., F.R.S. (Longmans & Co.)—The author considers that the great extension of geometrical methods has made such a work a necessity for the student, and has therefore used the syllabus of the Association for the Improvement of Geometrical Teaching to supplement, but not to supersede, the "unrivalled original." Possibly, though we doubt it, there may be a real demand for this book. It would have been wiser if the author had taken a hint from Mr. Todhunter's small Euclid and had printed the text so that the steps should be easily discernible to the physical as well as the mental eye.

Stories for Children from English History, for Standard III., Illustrated, in accordance with the New Code of 1882. (Cassell & Co.)—This book is fairly suited to its purpose; it is, on the whole, interesting—most of the old traditions appear in it; and the illustrations, though they will not bear minute criticism, and though they for the most part enforce the doctrine that history is made up of stories of battles, are calculated to sustain interest.

A Practical Grammar of the Portuguese Language. By C. H. Wall. (Nutt & Co.)—Considering how little Portuguese is studied in this country, it is curious how many grammars of it are published. Mr. Wall has aimed chiefly at giving a colloquial knowledge of the language. He has adopted the system of Dr. Otto, and compiled a work that beginners will find very useful, though we think he might have added to its value by dwelling on the relations between Latin and Portuguese.

Messrs. Chambers send us annotated editions, for use in schools, of *Henry V.* and the *Squieres Tale.* Only a few weeks ago we noticed in these columns Mr. Aldis Wright's excellent edition (in the "Clarendon Press Series") of 'Henry V.,' and we fail to see the need of the present edition, which cannot compete for a moment with the scholarly merits of its predecessor. The notes are altogether too scrappy, and the attempts at paraphrasing are often very awkward. For "The king hath run bad humours on the knight" the editor gives this rigmarole: "The knight is afflicted with sickening humours because of the king's ill-humour." Much more care and taste have been bestowed on the editing of the 'Squieres Tale.' A well-written life of Chaucer is prefixed, and the remarks on Chaucer's grammar are concise and accurate. The explanatory notes are full, and there is a good glossary. We heartily recommend this little book.

OUR LIBRARY TABLE.

A delightful addition to the pretty "Parchment Library" has been published by Messrs. Kegan Paul, Trench & Co., in the shape of a selection from Shelley's letters, edited by Mr. Richard Garnett. The Hitchener letters, which begin the book, are more important from a biographical than a literary point of view. Mr. Garnett has wisely included most of the letters containing descriptions of Italy, as they are among the best of Shelley's. The letter which most people will first turn to is the description of Allegra in her convent school. "Her predominant foible," Shelley says, "seems the love of distinction and display, and this is a plant which produces good or evil, according to the gardener's skill." After describing her pranks, he adds, "Nobody scolded her for these *scappature*, so I suppose she is well treated, so far as temper is concerned. Her intellect is not much cultivated." The whole letter is very interesting.

Prof. David Masson has brought out a pretty and useful edition, in three volumes, of *Milton's Poetical Works.* He has wisely arranged the poems in chronological order. The notes are fuller than in the "Golden Treasury" edition, which, by the way, is out of print, and the memoir has been revised. Prof. Masson appears to great advantage in a book of this kind. The necessity for compression has a chastening influence on his style, and both the life and the introductions to the several poems are pleasant and easy reading, besides being full of information. His publishers, Messrs. Macmillan, would confer a benefit on English literature if they would bring out a series of the English poets in handy volumes like these, and, like these, edited in a competent manner. While thanking Prof. Masson for his excellent work, we would call his attention to the punctuation of Eleg. vii., line 4.

Messrs. Routledge send us a convenient edition of the *Poetical Works of Oliver Wendell Holmes*, which ought to be welcome to the many admirers of the genial poet. It is impossible to read half a dozen pages of his verse or prose without acquiring a feeling of strong personal liking for the writer.

Mr. Gardner may be congratulated on the success of the first number of the *Scottish Review.* The article on 'The Progress of Theology in Scotland' is the most notable. There is much that is good in that on 'The State of the Highlands.' The "Summaries of Foreign Reviews" are well done.

We have on our table that standard work *Fenn on the Funds* (Effingham Wilson & Co.), which should suggest many serious reflections to any politician or economist who takes it up. The exhibition of such an enormous mass of debt is enough to appal the most sanguine of financiers.

From Messrs. Routledge we have received their *Sporting Annual*, an excellent record of the cricket, rowing, and football of the year.—*The Law Student's Annual*, published by Messrs. Stevens & Sons, and edited by Mr. J. A. Shearwood, gives answers to the questions set at the Bar examinations and to those of the Incorporated Law Society, and in other ways endeavours to help would-be barristers and solicitors.—*The Cosmopolitan Masonic Diary* (Kenning) contains much information for Freemasons.

It is difficult to invent year by year new terms of praise for the charming pocket-books and calendars sent to us by Messrs. De La Rue. Suffice it to say that they are invariably characterized by exquisite taste and admirable workmanship. Nothing could be more luxurious and at the same time more really serviceable than the diaries, while the ornamentation of the calendars is singularly good.—Messrs. Marcus Ward & Co. send us a neat *Church Calendar*; *The Calendar for the Library*, of the same firm, is in excellent taste; their *Shakspearean Calendar*

XUM

is hardly so successful. We cannot say we like the habit of using Scripture texts on calendars. Of this practice Messrs. Ward and Messrs. Bemrose send us specimens. The latter firm send us also a *Daily Calendar*.—Messrs. Osgood, of Boston, U.S., have sent us *Kate Sanborn's Sunshine Calendar*, which is not so handsome as its English rivals.

SEVERAL reports of free libraries are lying on our table. That from Swansea speaks of the growth and increasing usefulness of the reference department, while the returns of the central lending library and the branch at Morriston show a slight decrease in the number of borrowers and in the number of volumes issued as compared with the preceding year—a decrease said to be mainly attributable to the want of a supplemental catalogue. This, it is added, is almost ready for publication.—The Cambridge Report for 1881–82 states that the progress of the library during the past year has been satisfactory.—The Manchester Free Libraries appear to be prospering.

WE have on our table *The Customs, Superstitions, and Legends of the County of Stafford*, by C. H. Poole (Rowney & Co.),—*California, for Health, Pleasure, and Residence*, by C. Nordhoff (Low),—*Chronicles of Christopher Columbus*, by M. D. C. (Kegan Paul),—*A Practical Arithmetic*, by G. A. Wentworth and Rev. T. Hill, D.D. (Boston, U.S., Ginn & Heath),—*The Royal Navy List for October*, by Lieut.-Col. F. Lean (Witherby & Co.),—*Until the Daybreak*, by G. M. and E. St. B. Holland (Hawkins),—*Cat and Dog Stories, Pussy Cat Purr, The Book of Shadows*, and *The Three Foolish Little Gnomes*, by W. S. W. Anson (Sonnenschein),—*See-Saw: from 'St. Nicholas,'* with Music by W. M. Hutchison (Warne),—*Tender and True*, by F. Wilford (S.P.C.K.),—*A High Look*, by G. F. (S.P.C.K.),—*A Runaway*, by J. A. Owen (S.P.C.K.),—*Widow Tanner's Cactus*, by the Author of 'Mary Cloudsdale' (S.P.C.K.),—*Scenes from the Pilgrim's Progress*, by R. B. Rutter (Trübner),—*Sermons preached in Toronto*, by the Rev. G. Whitaker (Rivingtons),—*A Commentary on St. Paul's Epistles to the Corinthians*, by J. A. Beet (Hodder & Stoughton),—*Lesser Lights*, by the Rev. F. Bourdillon (S.P.C.K.),—*The Government of God*, by W. W. Smyth (Stock),—*The Service of Humanity*, by S. D. Headlam (Hodges),—*L'Œuvre Demi-Séculaire de la Société de Littérature Finnoise*, 1831–1881, by Dr. E. G. Palmén (Leipzig, Brockhaus),—*Winer's Chaldäische Grammatik für Bibel und Targumim*, by Dr. B. Fischer (Leipzig, Barth),—*Die Kirchlichen Verfassungskämpfe im XV. Jahrhundert*, by Dr. A. Zimmermann (Breslau, Trewendt),—*Das Christentum und die Heutige Vergleichende Religionsgeschichte*, by J. Happel (Leipzig, Schulze),—*Die Gefallene*, by A. Bolte (Leipzig, Bergmann),—and *Die Philosophie als Descriptive Wissenschaft*, by Dr. A. Wernicke (Leipzig, Goeritz & Zu Putlitz). Among New Editions we have *English Proverbs and Proverbial Phrases*, by W. C. Hazlitt (Reeves & Turner),—*Botany and Religion*, by J. H. Balfour (Edinburgh, Oliphant & Co.),—*Keble's Christian Year* (Kegan Paul),—*The Prayer-Book: its History, Language, and Contents*, by E. Daniel (Gardner),—*The Story of the Earth and Man*, by J. W. Dawson (Hodder & Stoughton),—*Cobbett's French Grammar* (Ward & Lock),—*Silver Store*, by S. Baring-Gould (Skeffington),—*The Sportsman's Handbook to Practical Collecting and Preserving Trophies*, by R. Ward, F.Z.S. (Simpkin),—and *Winiscombe Sketches among the Mendip Hills*, by T. Compton (Poole).

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Cambridge Bible for Schools: Acts of the Apostles, XV.–XXVIII., by J. R. Lumby, 12mo. 2/6 cl.
Foster's (C.) Story of the Bible from Genesis to Revelation, cr. 8vo. 6/ cl.
Hobart's (Rev. W. K.) The Medical Language of St. Luke, 16/
Jenner's (Rev. S.) Grain from the Granary, Sermons, 5/ cl.
Oldenberg's (Dr. H.) Buddha, his Life, his Doctrine, his Order, translated from the German by W. Hoey, 8vo. 18/
Spurgeon (Rev. C. H.), Life and Ministry, by Rev. W. Walters, cr. 8vo. 2/6 cl.

Law.

Statutes of the University of Cambridge, with some Acts of Parliament relating to the University, 8vo. 3/6 cl.

Fine Art and Archæology.

Gardner's (P.) Samos and Samian Coins, 8vo. 7/6 cl.
Mollett's (J. W.) An Illustrated Dictionary of Words used in Art and Archæology, sm. 4to. 15/ cl.
Scott's (L.) The Renaissance of Art in Italy, 4to. 31/6 cl.

Poetry and the Drama.

Dugmore's (E. E.) From the Mountains of the East, a Quasi-Dramatic Poem, cr. 8vo. 3/6 cl.
Living English Poets, 1882, 8vo. 12/ parchment.

History and Biography.

Alison (Sir A.), Some Account of my Life and Writings, an Autobiography, edited by Lady Alison, 2 vols. 8vo. 36/ cl.
Feilden's (H. St. C.) Constitutional History of England, 6/
Heath's (R.) Historic Landmarks in the Christian Centuries, imp. 16mo. 10/ cl.
Hudson's (E. H.) History of the Jews in Rome, B.C. 160 to A.D. 604, cr. 8vo. 7/6 cl.
McCarthy's (J.) History of our Own Times, Vol. 4, cr. 8vo. 6/
Our Queen, a Sketch of the Life and Times of Queen Victoria, by Author of 'Grace Darling,' cr. 8vo. 3/6 cl.
St. Anselm, Life and Times of, by M. Rule, 2 vols. 8vo. 32/cl.
Smiles's (S.) Life of a Scotch Naturalist, Thomas Edward, Popular Edition, cr. 8vo. 6/ cl.

Geography and Travel.

Francis's (B.) Isles of the Pacific, cr. 8vo. 2/6 cl.
Hield's (M.) Glimpses of South America (The World in Pictures), cr. 8vo. 2/6 cl.
Tahiti, a Series of Photographs taken by Col. S. Wortley, with Letterpress by Lady Brassey, fcap. 4to. 21/ cl.
Wood's (C.) In the Black Forest, cr. 8vo. 6/ cl.

Philology.

Ciceronis Pro P. Cornelio Sulla, literally translated by C. H. Crosse, 12mo. 2/6 swd.
Demosthenes against Androtion and against Timocrates, with Introduction and Notes by W. Wayte, cr. 8vo. 7/6 cl.
Stewart's (A. T.) Key to Advanced Greek Course, 12mo. 2/6 cl.
Windisch's (E.) Concise Irish Grammar, translated from the German by N. Moore, cr. 8vo. 7/6 cl.

Science.

Colyer's (F.) Pumps and Pumping Machinery, 8vo. 12/6 cl.
Health Lectures for the People delivered in Manchester, 4th and 5th Series, cr. 8vo. 2/6 cl.
Hewitt's (W.) Class-Book of Elementary Mechanics, 3/ cl.
Nops's (M.) Class Lessons on Euclid, Part 1, cr. 8vo. 2/6 cl.

General Literature.

Akers's (E.) Rock Me to Sleep, Mother, sm. 4to. 5/ cl.
Alcock's (D.) The Roman Students, imp. 16mo. 6/ cl.
Anton's (Rev. P.) England's Essayists, cr. 8vo. 2/6 cl.
Arnold's (Rev. F.) Turning-Points in Life, cr. 8vo. 6/ cl.
Austen's (J.) Works, Steventon Edition, 6 vols. cr. 8vo. 63/ cl.
Barbara's Warning, by Author of 'Recommended to Mercy,' cr. 8vo. 3/6 cl.

THE HISTORY OF THE MATICE CZESKA'.

II.

BUT in 1841 better days dawned, and the Matice began to flourish and develope itself. To the great regret of the Council, Count Kolowrat found himself compelled to resign the curatorship, owing to distance from Prague and consequent inability to attend meetings. He was succeeded by John Norbert, Chevalier Neuburg. The title Matice Czeská was resumed, and the greatness of the change of circumstances may be inferred from three letters from Szafarzik to his Russian friend Pogodin. On October 31st, 1840, Szafarzik lamented the unfortunate position of literature in Bohemia, and said that it was impossible to look forward with hope to aught but death. On March 9th, 1841, he wrote that new activity was to be seen in Bohemian literature, and that the Matice was entering upon most important undertakings. And on April 18th, 1841, after informing his friend that a professorship of Slavonic had been offered him in Prussia, he stated that he had refused to sever himself from his Bohemian compatriots, and had proposed Czelakowsky in his stead. To exhibit the increase of interest in the Matice during this period, it will be sufficient to state that in 1845, 445, and in 1851, 490 new members joined it.

In 1843 the first translation from the English language appeared, Jungmann's translation of Milton's 'Paradise Lost'; and in 1847 Shakspeare's 'Romeo and Juliet' was translated by Douch and published by the Matice. A single priest, Josef Schmidinger, alone obtained several hundred new members for the Matice. *Per contra*, in 1845 an information was laid before the Archbishop of Prague against Tomiczek's 'Period of Primæval Man.'

I may now relate the last effort for evil, as regards the Matice, of the Austrian Censorship of the Press. A MS. of Amos Komensky's 'Didaktica' had been found at Lesno, in Poland, and copied for the Bohemian Museum. This was prepared for the press and laid before the Council of the Matice on February 22nd, 1844. But the Censorship forbad it to be printed as having been the work of a Bohemian exile. In vain did the Council offer to omit objectionable passages; nothing could prevail over the stolid determination of the Censorship. This detestable institution came, however, to an end in the year of revolutions, 1848, and in 1849 the 'Didaktica' was printed and published by the Matice. Besides its own issues the Matice also assisted the publication of valuable works, offered prizes for writings on various subjects, made presents of books to military hospitals and poor students, and sold its publications at a reduced rate to schools.

The Matice now began to exchange publications with foreign societies, but an attempt to publish a 'Conversations-Lexicon' in the Bohemian language fell through from untoward circumstances, though the first part, A to Al, was ready for the press.

After 1851 the Matice was looked upon with great jealousy by the reactionary authorities, but it was not until 1854 that a special police official was appointed to attend the meetings of

its Council. Orders were given for the revision of the statutes of both the Museum and the Matice, and the revised drafts were not returned by the Government. Meanwhile general meetings of both societies were prohibited, and in 1859 fresh alterations were ordered to be made in their statutes. Nor was it till 1861 that change of political circumstances brought about a change in favour of the Matice. In 1855 the first volume of Tomek's 'History of the University of Prague' appeared, but the greatest precautions had to be taken to avoid giving offence to the authorities, who were always eagerly on the watch for something to take hold of. In April, 1854, it was determined to publish a complete translation of Shakspeare's dramatic works, and by 1857 thirty-two out of thirty-seven plays were ready; but rapid progress could not be made with the press, owing to the extremely material and realistic tendency of the times. Political circumstances also caused difficulties in publishing works of a practical character, and sometimes the mere name of the writer was a fatal obstacle to the publication of a valuable work.

In order to give people a greater choice of books many works were published by aid of grants from the Matice, and not entirely at its expense. These were sold to members at a cheaper rate, but discontent gradually arose at the non-reception of books gratis. Hence on April 25th, 1860, the secretary announced that 923 members had failed to pay their subscriptions, and were thus not entitled to receive the usual number of books for the year. But it was not till March, 1861, that the Matice ventured to hint at the real cause of its weakness since 1852. Then the manager, Prof. W. W. Tomek, stated plainly that both the Committee of the Museum and the Council of the Matice had found themselves in such continuous uncertainty that it had seemed as if the earth were quaking beneath them. With 1861 the reactionary system of Minister Bach came to an end and better times began again for the Matice Czeská.

The substance of the statutes of both the Museum and the Matice had been approved, but the Government now wished to separate the two and make the statutes of the Matice a supplement to those of the Museum. This advantageous offer of the authorities was gladly accepted, and both sets of statutes finally became law on April 30th, 1862. The Matice thus became, not merely an organic part, but also an independent branch of the National Museum of Bohemia. Nothing now remained but to elect a new curator with a council of twelve, and to arrange the manner in which business was to be transacted under the new statutes and the instructions appended to them. Count John Harrach was the first curator under the new *régime*, and he has been annually re-elected to the present time.

In 1866 the Prussian war put a stop to the meetings of the Council from April to November, but after the conclusion of the war a new law came into force with regard to associations and societies, and the meetings of the Council ceased to be attended by an agent of the police.

On occasion of Dr. F. Palacký's seventieth birthday, June 14th, 1868, a special deputation was sent him with the offering of a splendidly bound copy of the 'Vybor z Literatury Czeské' ('Selections from Bohemian Literature'), which had just appeared. A member's ticket was also presented to the school at his birthplace. Honour was likewise paid to the celebrated botanist Purkyne and to the memory of Erben. In commemoration of the centenary of the birth of Jungmann in 1873, his life, a most interesting record of upward struggles for noble objects under apparently insuperable difficulties, was written by Zelený and published by the Matice. Stitny's work, 'Books of Christian Instruction,' a grand prose composition of the fourteenth century, was also edited by A. J. Vrtátko, and published in commemoration of the same anniversary.

The working of the Matice having been grievously hindered by the original fundamental rule requiring one-third of the income to be annually added to the capital, it was arranged that this rule should cease to be operative as soon as the invested capital reached the sum of 100,000 florins (10,000*l.*). Additional subscriptions, the payment of a long deferred legacy, and more advantageous investments enabled this desirable end to be attained in October, 1867. This was at a time when interest in the Matice appeared to be on the wane, and the number of its subscribing members was decreasing. In order to reawaken the interest of the public, a system was introduced of presenting a certain number of books from old stock to new members on occasion of every payment. This attained the desired result, and in the four years 1877–1880 thirty-three more new members were added to the list than had joined the Matice during the entire thirteen years from 1861 to 1873.

The translation of Shakspeare's dramatic works was completed in 1872. As, after the reactionary *régime* had fully established itself in 1854, it was impossible to dramatize the great deeds of the heroes of Bohemia, recourse was had to the English Shakspeare, as the author best calculated to keep up intellectual and moral life among the Czeskish people. Translations were also published from Æschylus, Sophocles, Aristophanes, Terence, and Plautus.

But if I am to select the works by which the Matice Czeská has specially earned the gratitude of posterity, I shall unhesitatingly enumerate the following:—(1) Szafarzik's 'Antiquities of the Slavonians,' which still remains and is likely to remain the standard work on the subject; (2) Jungmann's Bohemian dictionary; (3) the Czech edition of Palacký's great 'History of Bohemia from the Earliest Times to the Year 1526'; (4) W. W. Tomek's 'History of the City of Prague,' a grand work which undoubtedly places its author in the front rank of the historians of the world. Tomek has now carried his 'Dejiny Mesta Praky' to the conclusion of the fourth volume and the year 1436.

At a meeting on May 21st, 1880, Prof. Karel Tieftrunk was commissioned to write the 'History of the Matice Czeská,' with a view to the approach of the fiftieth anniversary of its foundation. From this carefully written and interesting record the materials for the above sketch have mainly been derived.

The press is now, and has for some time been, as free in Bohemia as in Britain, and the Matice Czeská is unfettered in its work. May it long continue to bring forth out of its treasures things new and old! A. H. Wratislaw.

STERNE AS A PLAGIARIST.

11, Orme Square, W.

In that chapter of Mr. Traill's excellent life of Sterne which deals with the charges of plagiarism, the writer, in commenting on the well-known passage about the death of Tullia which Sterne borrowed from Burton, says that here "the humourist gets the better of the plagiarist, and we are ready to forgive the theft for the happily comic turn which he gives to the passage." The comic turn is given as follows:—"But as soon as he began to look into the stores of philosophy, and *consider how many excellent things might be said upon the occasion*—nobody on earth can conceive, says the great orator, how happy, how joyful it made me."

There is scarcely more originality in the words italicized by Mr. Traill than in the rest of the passage, though in this case the robbery is not so barefaced. It seems, indeed, to satisfy the definition of kidnapping as given in the *Anti-Jacobin*. The second chapter of 'Rasselas,' where the prince moralizes on the causes of his discontent in the Happy Valley, ends in this way:—"With observations like these the prince amused himself as he returned, uttering them with a plaintive voice, yet with a look that discovered him to feel some complacence in his own perspicacity, *and to receive some solace of the miseries of life, from consciousness of the delicacy with which he felt, and the eloquence with which he bewailed them.*"

The idea in the two passages is the same, and when we consider that 'Rasselas' was published in 1759, while the fifth and sixth volumes of 'Tristram Shandy' appeared in 1761, it is tolerably obvious from what source "the man Sterne," as Dr. Johnson called him, derived his witticism. Herbert Wilkinson.

ENGLISH AUTHORS AND AMERICAN PUBLISHERS.

Mr. Marston charges me with disingenuousness, and states, in effect, that I have received money from America on account of two novels. Five or six years ago Mr. Marston sent me a cheque for 10*l.* He wrote that a certain sum of money had been paid to his firm by an American publisher for some right or wrong connected with 'The Wreck of the Grosvenor,' and the cheque was a portion of it. This money, I submit, came to me from Mr. Marston, not from an American publisher. I never recognized a Yankee finger in that very little pie. It was a gift from Mr. Marston's firm—I acknowledged it in that sense—and it had no more to do with my claims upon the American publishers for something of the money they have been making out of me for five or six years past than a cheque sent by Mr. Jones to Mr. Brown, in settlement of a debt owing by Mr. Jones to Messrs. Sampson Low & Co., would have to do with the debit pages of that eminent firm's ledgers. Therefore, if there be any coherence whatever in the simplest kind of logic, I consider I am strictly within the truth when I declare—as I live to swear it—that I have never received a farthing from America.

Mr. Marston says I had no "right" to expect a farthing from America—whatever sum came "belonged to those who had already paid him [Mr. Russell] for his American 'rights.'" Now, what can Mr. Marston mean by talking about American "rights"? Were there such things, I should not be crowding your valuable space with these personal disclosures. How can I sell what I do not possess? If a Boston or Philadelphia or Chicago publisher chose to send me a draft on account of the sale of those books for the reprinting of which Messrs. Harper had paid Mr. Marston a few complimentary dollars, does my friend flatter himself for one moment that his firm would be entitled to it? My simple contention is that until those Americans—of whom I cheerfully admit Messrs. Harper are the least culpable examples—who have profited by the sale of my novels in their States send me a cheque on account of that sale, I have the full consent of my conscience to believe and to publicly assert that I have never received a farthing from that country.

Mr. Marston implies that Messrs. Harper and others have only reprinted three of my books. The fact is they have republished 'The Wreck of the Grosvenor,' 'Auld Lang Syne,' 'A Sailor's Sweetheart,' 'The Lady Maud,' 'An Ocean Free Lance,' and 'My Watch Below'—six! Of the seventh, to which Mr. Marston refers as the third, I had sold the serial rights in this country and Australia—where there are rights to sell—to a firm of newspaper proprietors. Messrs. Harper, I have lately been informed, had agreed to pay Messrs. Low for the "privilege"—it is preposterous to call it "right"—of running that story through one of their home periodicals; but the newspaper owners of the British serial rights have forestalled the Messrs. Harper's date by four weeks, and the Harpers therefore decline to complete their arrangements with Messrs. Low. I am at some pains to mention this, because I want to understand how Messrs. Low's experience corresponds with Mrs. Macquoid's emotional assurance respecting

Messrs. Harper's practice of sending her a cheque "as soon as they have received the copy or sheets, even when they have not been able to use the work for a space of time."

My first letter to you was telegraphed to the New York *Tribune*, and has been answered by Messrs. Harper in a communication to that paper. They state that I wrote to them some months ago complaining of not receiving any payments from America, that they replied to me to the effect that they had paid for everything of mine they had printed; and they add that they concluded, because I did not answer their last letter, I was satisfied. Permit me to inform them through the *Athenæum* that if I did not reply it was because I felt the utter uselessness of repeating a protest which had been met by an assurance that had no reference whatever to my meaning. The publication of their letter has led to several attacks upon me in the American prints, and whilst one paper triumphantly shows how Clark Russell has been refuted, another paper declares that the English author is a chronic grumbler, and that one of them at last has received his quietus. Let me tell these writers that all their angry articles will not alter the truth; and that the only way for the American publisher to refute me is to pay me.

But my share in this controversy now terminates. I had hoped to find more of the old English spirit in the bulk of the correspondence my first communication has given rise to. How can we expect legislation, or any effort in the direction of legislation, when every attempt made by an English author to submit his grievance to the public is neutralized by writers who defend the American reprinters and read "the attacks" made on them with—Heaven preserve us!—"a good deal of pain"? W. Clark Russell.

November 27, 1882.

Mr. Edward Marston in your last number appeals to me to correct a statement telegraphed to the New York *Tribune* with reference to the dealings of his firm with Mr. Clark Russell, and to remove a "reflection therein cast upon the English publishers" of Mr. Russell's novels. My answer is that the telegram of which he complains is, so far as it goes, an exact summary of a letter from Mr. Sampson Low which you published on November 4th. If there be any inaccuracy in my telegram, or any reflection on the firm of Messrs. Sampson Low, Marston & Co., I am not the author of either. Mr. Sampson Low is the author.

I presume that what Mr. Marston objects to is the remark that Messrs. Harper paid Messrs. Low for advance sheets over 200*l.*, which they pocketed without Mr. Russell's knowledge. But if you will refer to Mr. Low's letter you will find this paragraph:—

"That Messrs. Harper & Brothers have paid for Mr. Russell's stories thus far secured from his London publishers between two and three hundred pounds, a fact of which Mr. Russell had probably not informed himself when he wrote to the *Athenæum*."

Thus, on the testimony of Mr. Low, Messrs. Harper had paid for advance sheets, Messrs. Sampson Low, Marston & Co. had received the money, Mr. Russell knew nothing about it. Mr. Marston now says that his partner was mistaken; the Harpers' payments were less than Mr. Low supposed, but out of the sum, whatever it was, an "honorarium" was handed by Messrs. Low to Mr. Russell. It is not for me to determine which of these two conflicting stories is the true one, nor which of them leaves the English firm in the better position. But I may point out that my telegram was sent three weeks ago, when I could hardly be expected to foresee that Mr. Sampson Low's statement on a disputed point touching the business of his firm was to be discredited by his own partner. If Mr. Marston thinks he has suffered, he should apply for redress nearer home. I have, nevertheless, telegraphed to the New York *Tribune* the substance of Mr. Marston's corrections of Mr. Sampson Low. G. W. S.

November 25, 1882.

It may well be doubted if a claim to copyright would cover gratuities received from America. The ordinary form of assignment runs, "entire copyright interest," and it does not necessarily follow that these words carry a right to such receipts. These gratuities are not matters of legal claim outside a special agreement, and while the English law of copyright does not empower an author to claim them, neither does it empower his assignee to retain them; so, while neither the author nor the assignee of a copyright has an exclusive claim, one would think that the advantage, when voluntarily tendered, does belong morally and in equity to the author. This difficulty is properly met by altering the form of assignment thus: "Entire copyright interest and all rights of reproduction"; and I think that where these words are wanting the right properly vests in the author. A. H.

Loyal and liberal is the verdict I have to pass on Harper Brothers, as on all their brethren I have had dealings with on this side of the Atlantic. M. Betham-Edwards,
Author of 'Kitty.'

Literary Gossip.

Mr. Walter Besant writes:—

"I have undertaken to write a biography of the late Prof. Palmer. I shall be extremely grateful for any letters or information which may be of help in making the memoir more complete. Any letters which may be entrusted to me will be treated with the greatest care."

Mr. Besant's address is the United Universities Club, Suffolk Street, Pall Mall.

During the past week the one subject of talk in Paris has been the production of 'Le Roi s'Amuse,' a notice of which will be found in another column. On the 20th ult. M. Victor Hugo gave a dinner in honour of the English visitors who had come over to be present at the representation, and he made a speech referring in well-chosen words to Mr. Swinburne, who was present. The *Figaro* has been amusing the public by publishing the wildest *canards* concerning Mr. Swinburne and his eccentricities during his supposed residence at Etretat. The truth is that Mr. Swinburne's connexion with Etretat was confined to two short visits to a friend some years ago, during which times he saw only the fishermen and the sailors. The anecdotes given in the *Figaro* are without the slightest foundation.

The demand for Rossetti's last published volume is as brisk as ever. Baron Tauchnitz has just issued a reprint of the book. Prefixed to it are a memoir of Rossetti and a critique of his work, both as a painter and as a poet, by Mr. F. Hueffer. The critique is perhaps the most searching and acute that has yet appeared upon Rossetti, and it is certainly the most honest and outspoken. Mr. Hueffer is of opinion that it is as the inventor of a form of the romantic ballad (unique in many of its qualities) that Rossetti will take a permanent place in the hierarchy of English poetry. "In them there is nothing of that sham mediævalism which depends for its chief effect upon a few archaisms of metre and diction." In the sonnets, however,

"the dramatic motive no longer exists. The poet is supposed to utter his individual feelings, and our faith in the genuineness of those feelings is somewhat severely shaken if we find that they are clad in archaic terms and reiterated symbolisms of Love, Hope, Fate, &c., entirely removed from the simplicity of modern diction; in a mode of expression, in short, which a poet of Dante's age might have used if he had been able to read Shakspeare. It may be readily admitted that by means of the language thus created Rossetti achieved rare effects of sonorous beauty and of word-colour, if the term be permissible. But the stream of pure lyrical feeling does not run in artificial channels. It is for this, amongst other reasons, that the present writer cannot concur in the general opinion that on his sonnets Rossetti's claims to immortality must mainly rest."

In answer to this it may be said that if, as judging from Italian models seems to be the case, the original *raison d'être* of the sonnet was a form for the rendering of emotion after it had passed into the monumental stage, the simplicity of Milton and Wordsworth is an English innovation.

Mr. Grant Allen has collected and will republish next week, with Messrs. Chatto & Windus, his papers contributed to the *Pall Mall Gazette*, entitled 'Colin Clout's Calendar.'

Mr. Herman Merivale has in the press a volume of verse entitled 'The White Pilgrim and other Poems, Grave and Gay.' This will be Mr. Merivale's first appearance as a poet.

Mr. Lyall, the proprietor of the *Sportsman* and of the *Perth Constitutional*, has bought the *Whitehall Review*, which will be conducted on the same political lines as heretofore.

Mr. McKie, the Kilmarnock publisher, has promised to hand over to the Burns Museum of that town his perfect collection of the editions of the poet's works, along with his Burns scrap-books, chair, and other articles. The collection, to be known as the "McKie Burns Library," has been secured for 350*l.*, and a committee has been formed to raise the sum by local subscriptions.

Messrs. Griffith & Farran will publish immediately 'A Wonderful Ghost Story; or, Mr. H.'s own Narrative,' reprinted from *All the Year Round*, with hitherto unpublished letters from the late Charles Dickens respecting it. Mr. Heaphy's remarkable experiences attracted considerable attention when they were first related.

Messrs. Macniven & Wallace, of Edinburgh, will publish immediately 'C. Sonnets by C. Authors,' a selection of sonnets edited by Mr. H. J. Nicoll, containing representative specimens of all the most prominent English sonnet writers from Wyatt to Rossetti.

During the last week and the present the extensive collection of mediæval books, early editions of the Bible, Missals, illuminated Horæ, &c., formed by Mr. G. B. Simpson, of Broughty Ferry, was disposed of by auction in Edinburgh. Many of the works were of special interest to Scottish antiquaries. Shakspeare's 'Sonnets' (1599) and various early editions of his poems and plays were also sold.

Fired by the example of other provincial towns, such as Aberdeen, Dundee, and Liverpool, the Lord Provost and other influential citizens of Glasgow have taken active steps towards the erection of a suitable

building for an art gallery, public library, museum, and school of art. The fact that the Mitchell Library has no better accommodation than an ordinary warehouse, and that the city's art collections are stated to be worth more than a quarter of a million, renders the scheme commendable. Several subscriptions of 1,000*l.* have already been intimated. The proposed site, obtainable for 40,000*l.*, adjoins the present Corporation Galleries.

The author of 'Reminiscences of an Old Bohemian' has in the press two volumes of stories, which will be published in January by Messrs. Tinsley Brothers.

Among the latest additions to the library of manuscripts in the British Museum we record the following:—Rentals of Barrington, co. Gloucester, belonging to Llanthony Priory, 1401–1439; Payments for Christ's Hospital, Ipswich, 1574; Court-Book of the Rectory of Great Waltham, Essex, 1584–1623; Arms of English Gentry and Successions of Peers, 1619; the Heraldic Scrapbook of John Pincke, genealogist, seventeenth century; an autograph letter of Edgar Poe; a series of eighteenth and nineteenth century musical books; a Polish metrical translation of Tasso's 'Gierusalemme Liberata,' by D. Corwin-Piotrowski; Gospel lessons, prayers, and meditations in Slavonic, seventeenth century; a series of designs for French medals by S. Leclerc, late seventeenth century; the Rentals and Accompts of the Manor of Repps-cum-Bastwick, co. Norfolk, 1493, 1538–9; a volume of letters of John Stuart Mill, written, in the fifteenth year of his age, to his father, 1820; Supplement to the new edition, in 1750, of Beaumont and Fletcher's Poetical Works, by Benjamin Heath, D.C.L.; Memoirs of the Princess Daschkaw, copied in 1805 by M. Wilmot, with letters and papers in the autograph of the princess; a German Breviary from Cologne, fourteenth century, purchased at the Beresford Hope sale, at which also a copy of Suetonius 'De Vita Duodecim Cæsarum, Libri XII.,' written in 1418, was acquired; copies of letters of Sir Francis Bacon, 1605–1615; and 'The Antiquities of Falde and Coton in Staffordshire,' 1615, from the Ouvry sale. At the Sunderland sale the Trustees of the Museum obtained the commentary of Guido Pisano on the 'Inferno' of Dante, a paper MS. of the fifteenth century, of the greatest interest to students of Dante; a Menæum for the month of February, dated 1431, a Greek palimpsest MS. of which the under writing is a portion of the Gospels written in the ninth century; and a Greek Evangelistarium of the eleventh, and another of the twelfth century.

Mr. George Grierson, of the Bengal Civil Service, and Dr. Hoernle, of the Bengal Educational Department, are about to publish a dictionary of the Behari language. The existence of Behari as an independent language has for some time past been officially recognized by the Government of Bengal.

The death is announced of Mr. C. H. Bayley, who for many years had been engaged upon the history of the county of Worcester. Deceased was a well-known antiquary and archæologist. In 1869 he issued the first of a proposed series of rarities, being 'A True Relation of the Terrible Earthquake at West Brummidge, in Staffordshire,' &c., printed originally in 1676; and early in the present year he also issued 'The Rent Rolls of Lord Dudley and Ward in 1701,' a valuable contribution to local and general history. We have also to record the death of the Rev. J. E. J. Valpy, a son of the celebrated Valpy, and himself a writer on Greek and Latin grammar.

Under the title of 'Hours in a Mosque,' Messrs. W. H. Allen & Co. will publish in January a volume of essays on various phases of Islam by Mr. Stanley Lane Poole, partly reprinted from the *Edinburgh Review*.

A Philadelphia newspaper says that the trustees of the University of Pennsylvania have declined to admit women to the Faculty of Arts as regular students. The practice of admitting them to certain "public" lectures in the second half of each year is still to continue, but they are not to be admitted to the regular studies and the degrees of the University. The trustees couple this refusal with an offer to establish a department in the University for the higher education of women, provided they can obtain an endowment of three hundred thousand dollars for the purpose.

Messrs. Hurst & Blackett will shortly publish a new novel by Alice King, author of 'Queen of Herself,' entitled 'Fettered yet Free,' in three volumes.

SCIENCE

The Life of James Clerk Maxwell. With a Selection from his Correspondence and Occasional Writings, and a Sketch of his Contributions to Science. By Lewis Campbell, M.A., LL.D., and William Garnett, M.A. (Macmillan & Co.)

A large circle of readers will turn with much interest to these memorials of one of the leaders of physical science. Those who have any acquaintance with his writings will be anxious to know something of the man, for there is a raciness in all his productions which speaks of a rich fund of character in their author; and the numerous class who met him at scientific gatherings, or had occasional correspondence with him on scientific questions, will feel a still deeper interest in the history of his life. Nor will these expectations be disappointed. The biographical portion of the work, by Prof. Campbell, of St. Andrews, has been executed with much taste and delicate sympathy. Maxwell's own letters are very numerous and always readable, for it was not in his nature to be dry; and the account of the more important parts of his scientific work, by Mr. Garnett, is eminently clear and judicious.

The volume also contains several unpublished essays by Maxwell on questions of general philosophy, and a collection of poems, including numerous specimens of the scientific squibs and other serio-comic verses for which he was famous. There are also portraits, facsimiles of boyish manuscripts, coloured plates copied from drawings made in his optical investigations, and sketches made by Mrs. Blackburn, when visiting at his father's house, of incidents in his childish history. A few of the materials introduced might with advantage have been suppressed if the book had been intended only for the general public; but to the numerous readers who come to it with strong personal interest from their recollections of the man, all these additions will be welcome, as giving them more knowledge of his ways.

He appears to have lived a happy and healthy-toned life—happy in pleasant companionship, in the pursuit of occupations in which he delighted, and in freedom from the pecuniary obstacles which have hampered the activity or crushed the spirit of many a zealous student. His early boyhood was spent in the country, where he delighted in roaming about with his leaping pole and observing natural objects. He was noted for his remarkable verbal memory, and also for his insatiable curiosity respecting every mechanical contrivance that came in his way. He soon learned to make rough apparatus and perform experiments in various departments of physics.

After the death of his mother, who had given him his first lessons, a tutor was procured for him; but they did not work pleasantly together, and after two years it was decided to send the boy to the Edinburgh Academy. This was a great change for one who had spent all his life in the country; and his first experiences of school were not encouraging, his rustic garb and dialect, together with a natural oddity of manner, leading to a great deal of persecution, which does not, however, seem to have much disturbed his youthful equanimity. This was at the age of ten, and at fourteen he gained the mathematical medal, the highest honour in the school in that department. He was not yet fifteen when his first paper to a scientific society was read—a paper on a new class of oval curves. It was communicated to the Royal Society of Edinburgh by Prof. Forbes, who from this time forward took great interest in Maxwell and showed him every kindness. At sixteen he left the Academy and went to the University, where he studied for three years, paying special attention to mathematics, physics, and mental philosophy. He was allowed the run of the Natural Philosophy Laboratory—a privilege which no other student enjoyed. He then went to Cambridge, entering first at Peterhouse, and then removing to Trinity. He read for the Tripos with Hopkins, but at the same time did not altogether neglect original investigation. Hopkins spoke of him as rather deficient in technical acquaintance with mathematical analysis, but as gifted with wonderful power of thinking correctly on physical subjects. He obtained second place on the Tripos, and was bracketed equal with the Senior Wrangler (Routh) for Smith's Prizes. About two years afterwards he was appointed Professor of Natural Philosophy in Marischal College, Aberdeen; and when his chair was abolished by the fusion of the two Aberdeen colleges four years later, he became professor of the same subject in King's College, London. This appointment he retained for about six years, and then, apparently for the purpose of securing more time for research, he resigned it and retired to the country house which had been the home of his childhood. He quitted his retirement after five years to accept the newly

XUM

founded chair of Experimental Physics at Cambridge in connexion with the Cavendish Laboratory, a post which he retained till his death at the age of forty-eight.

From first to last he was indefatigable in original investigation. His experiments on mixtures of coloured lights, which have done more than those of any other man to establish a quantitative science of colour, were begun at Aberdeen and continued in his London house, where he was often to be seen at an attic window with his "colour box," which was eight feet long and painted black, his neighbours thinking he must be mad to spend so much time looking into a coffin.

While still a student he attacked the problem of the stability of Saturn's ring, and in his Adams Prize Essay he proved that of several hypotheses which suggested themselves, one of them being that of a solid ring, the only one consistent with stability—and therefore the only possible one—was the hypothesis that the ring consists of a multitude of detached bodies revolving round the planet, and comparable, to use his own language, to a shower of brickbats.

In later years he took a leading part in developing what is called the molecular theory of gases; that is to say, the theory that gases consist of detached molecules, moving rapidly in straight lines, and coming into frequent collision with one another as well as with the sides of the vessels in which they are contained.

He is, perhaps, most widely known for his contributions to electricity. One of his early performances consisted in translating Faraday's views on induced electric currents into the language of mathematics; and he subsequently put forward a mechanical theory which accounts at once for the phenomena of electricity, magnetism, and light by actions propagated through a medium of a certain definite mechanical constitution, of which he gives a clear and rational account. Mr. Garnett's exposition of this theory in the work before us will be a great boon to many scientific readers whose knowledge of it hitherto has been extremely vague.

The book contains some excellent specimens of his acuteness in the discussion of metaphysical speculations, the essay entitled 'Psychophysik' being, perhaps, the most notable; and the serio-comic verses combine quaint conceptions with much dexterity in rhyming. As a specimen of the irony to which he was addicted, nothing could be better than the following passage in a letter to Mr. Garnett, which has such a matter-of-fact aspect that it will probably impose upon some unsophisticated readers:—

"Are you aware that the electric flash is entirely due to the resinous particles of electricity? This is well known on the stage, where they blow the particles through a tube over a candle to make stage lightning. The vitreous electricity has nothing to do with it, as you may prove by using pounded glass."

One of the most striking features of the biography is the prominence which is given to the moral and religious aspects of Maxwell's character. He was of an eminently placid disposition, never losing his patience and self-control however severely tried. His religious feelings were strong, and though exceedingly fond of philosophic speculation, he felt no temptation to go with the tide of modern scepticism, but clung lovingly to the faith of his childhood.

Familiar Lessons on Food and Nutrition. By T. Twining. (Bogue.)—This volume is the first part only of Mr. Twining's work, and is intended to serve as a handbook to the Food Department of the Parkes Museum of Hygiene, and there is no doubt that it will be a most serviceable catalogue and *vade-mecum* to the collection. It is, however, far more than a catalogue; for, besides giving much useful information about articles of food, organic and inorganic, it contains some excellent chapters about water, the different phases of fermentation, the preservation of food, wholesome and unwholesome conditions of food, culinary processes, and the like. The classification adopted by Mr. Twining is not the one prevalent in most elementary manuals of what, under the influence of the Education Department, is called domestic economy: it rests on chemical rather than physiological considerations, and avoids "the most incongruous juxtapositions" which result from the discarded system. Mr. Twining divides the proximate constituents of food into—A, organic; B, inorganic. Group A contains nitrogenous food (albuminoids and gelatinoids), non-nitrogenous food (stearoids and saccharoids), and accessory organic principles, *i.e.*, alkaloids, essential oils, alcohol, &c., acids. Group B contains common salt and other components of ash and water. Mr. Twining describes the constitution, property, and use of each article under consideration in easy and familiar manner, abstaining as much as possible from technicalities of any kind, so that visitors to the Parkes Museum who have not gone deeply into chemistry and physics may, with the help of this manual, learn very much which it concerns them to know in order to keep well as long as possible and pay few fees to the medical profession. In compiling a volume intended to be both a manual of instruction and a catalogue, it is difficult to avoid mentioning too many things and saying too little about some of them—at any rate, Mr. Twining has not avoided doing so; thus we would willingly have omitted the account of certain "accessory organic principles" for the sake of fuller description of the remainder. In fact, the usefulness of this handbook would have been increased by a judicious combination of compression and amplification of the subject-matter, while its attractiveness might easily have been enhanced by greater neatness and elegance in composition.

Geology. By A. H. Green.—Part I. *Physical Geology.* (Rivingtons.)—This is a new and enlarged edition of Prof. Green's well-known treatise, which appeared some half-dozen years ago, and was reviewed in the *Athenæum* for April 15th, 1876. The style has been entirely changed, even the title having been altered; a great amount of new matter, principally mineralogical and petrological, has been introduced, and the general get-up of the volume has been much improved: moreover, it issues from another publishing house. Under these altered conditions it may be regarded in large measure as a new work. Only the first volume has yet been issued, though for many years a second part, to be devoted to stratigraphical geology and palæontology, has been promised. Prof. Green's first volume is so useful a book that we hope the second volume will not be much longer delayed.

ANTHROPOLOGICAL NOTES.

The *Revue d'Anthropologie* for October does not give evidence of the same amount of original anthropological work as usual, probably because it *is* the October number. It contains, however, much matter of interest. Dr. Topinard, the editor, continues the discharge of the pious duty he has imposed upon himself of giving to the public the results of the manuscript work left behind by his predecessor Broca, by a list of the craniometric measures and processes adopted by that author, which number 103. As an example of his work, the average results are given of the whole of these 103 observations on 77 male skulls, 41 female, and 6 of uncertain sex, obtained from the western cemetery of Paris. Calling to memory the many opportunities M. Chudzinski and himself had of seeing Broca at work, and of conversing with him upon his method, Dr. Topinard seeks in the present article to supplement the 'Craniometric Instructions' by further explanations, which experience has shown to be required, notwithstanding the precision of those given in that work.

Another article relating to anthropology proper is the conclusion of M. Chudzinski's contributions to the study of muscular variations in human races. Several muscles are mentioned as frequently missing in individuals of white races, and nearly always existing in persons of coloured races, and a summary is given of the supernumerary muscles most often met with. For example, in eight negroes the biceps of the arm was found to be furnished with one or more supplementary muscular bundles.

Three important articles belong to the ethnographical branch of the science. 1. M. Guillaume Lejean concludes his description of the populations of the Balkan peninsula. 2. Dr. M. G. Maget sends from Japan, where he is on a scientific mission from the French Government, under the direction of the Minister of Public Instruction, further observations on the manners of the people of Japan, relating especially to their women, girls, children, costumes, and food. He has patiently observed and fully recorded a number of customs which are gradually becoming more or less modified by European influence, and an opportunity is given in another part of the *Revue* of comparing his notes with those of Mr. Pfoundes. 3. M. A. T. Mondière commences a review of the state of our knowledge of the races of Indo-China, in which he arrives at the conclusions that the savages, who represent not so much the aborigines as the first occupants of the country, are more or less dolichocephalous; that in consequence the basis of the population was probably Dravidian; and that the brachycephalous peoples of Mongol type are later invaders, who have driven the primitive settlers into the forests and mountains; but that invasions have been so numerous and mixtures so frequent that it is doubtful whether there now exists in Indo-China any race not more or less mixed.

It appears that many anthropological communications of interest were made at the meeting of the French Association for the Advancement of Science at La Rochelle, and that though the section met twice every day during the sitting of the Congress, the papers presented could not all be read. The meeting for 1883 will be at Rouen.

ASTRONOMICAL NOTES.

Two hundred and forty-three years have elapsed since first a transit of Venus was seen in Lancashire. The three which have happened since 1639 have, as is well known, been extensively observed, and next week will occur the last until the fourth year of the twenty-first century. As in 1874, not many days will elapse after the transit before we hear whether the sky has permitted of its being seen at most of the stations; but it will be some time before it can be known how far the result will modify our present estimate of the value of the sun's parallax and distance. It appears that the Americans have satisfied themselves that the supposed failure of photography in the matter is solely due to the too great miscroscopical power applied to the photographs, and have prepared to use it again fully on the present occasion. For the benefit of those who must be content to observe the transit in England, we may once

more remind them that it occurs next Wednesday, the 6th inst., and that the ingress will take place at Greenwich a little less than two hours before sunset.

M. Janssen read before the French Academy on the 13th ult. his report to the Bureau des Longitudes on the total eclipse of the sun on the 6th of May next. He refers to the grand discovery made on the occasion of the eclipse of 1868 of the nature of the rose-coloured protuberances or prominences on the sun's limb, which had previously been such an enigma; also to the knowledge which has been acquired in more recent total eclipses respecting the so-called corona. But he remarks that much yet remains to be learnt, particularly with regard to the immense appendages to the corona which have been noticed on several occasions. Are they dependences "de cette atmosphère coronale, ou plutôt ne seraient-ce pas des essaims de météorites circulant autour du soleil, ainsi que l'a suggéré un des membres du Bureau? N'oublions pas la lumière zodiacale, dont il reste à déterminer les rapports avec ces dépendances du soleil." Nor should, he adds, the opportunities be left out of account that may be offered of discovering the small planets which probably circulate in the immediate neighbourhood of the sun, and could only be seen either when passing over his disc or during a total solar eclipse. No occasion of the kind, then, ought to be lost, but the eclipse of May next is especially favourable in respect of the long duration of the totality, amounting where it is a maximum to only one second short of six minutes. The unfortunate part is, as we have already mentioned, that the line of centrality is confined to the South Pacific Ocean, and only crosses land on a few very small islands. Caroline Island has been already mentioned, but M. Janssen points out that there is another still nearer the central line, where the totality will last $5^m\ 33^s$. This is called Flint Island, and its position is west longitude 150° 40′ (from Greenwich), south latitude 11° 30′. At Caroline Island the duration of totality will be $5^m\ 20^s$, or only 13^s less than at Flint Island, and M. Janssen proposes that a French expedition shall be equipped, provided with means of taking observations of the eclipse on both these islands. Let us hope that English astronomy will also be represented.

Dr. Henry Draper, whose death we announced last week, was born in Virginia on March 7th, 1837, but brought up in New York, where his father was Professor of Chemistry in the University, and he himself afterwards became Professor of Physiology. As an astronomer he is principally celebrated for his labours in celestial photography, and especially for his observations on the solar spectrum in 1877, which were considered to prove the existence of oxygen in the sun. But he first became famous in this line by a remarkably fine photograph of the moon; and he was afterwards very successful in photographing the spectra of stars and comets. In 1874 so great was his reputation in this branch of astronomy that he was requested to take charge of the preparation of the various operations necessary for photographing the transit of Venus by the methods decided upon by the American Commission for that purpose at Washington, and of the instruction of the different parties who were to carry them out. This was so ably and disinterestedly performed that he was presented by the Commission with a gold medal struck for that purpose. In 1878 he went on an expedition to observe the total eclipse of the sun which occurred on July 29th that year, and obtained a valuable photograph of the corona at Rawlins, Wyoming territory. His last great achievement in this department was his successful production of a photograph of the nebula in Orion in March, 1881. He published a memoir 'On the Construction of a Silvered-Glass Telescope' in 1864, and a 'Text-Book of Chemistry' the same year. That his career should have been thus early cut off will be a source of deep regret throughout the astronomical world.

The *Nautical Almanac* for 1886 has just been published. The data accepted for the various places and ephemerides, as well as the contents and arrangement generally, are the same as in preceding years. All the planetary places, as well as those of the sun, are derived from Le Verrier's tables; those of the moon from Hansen's tables, using Prof. Newcomb's corrections in forming the right ascensions and declinations, and giving the corrections themselves as applicable to the longitudes and latitudes at the end of the volume. The eclipses of 1886 are only two, both of the sun; neither of these will be visible in England, but the second, which takes place on the 29th of August, will be total, the central line passing over the Atlantic Ocean from the West Indies in a south-easterly direction till it crosses South Africa, at about the latitude of Madagascar, which it reaches. The duration of totality on the west coast of South Africa, at about 12° south latitude (near the town of Benguela), will amount to nearly five minutes. Two occultations of the planet Uranus will take place in 1886, the first in the early morning of February 21st, the second commencing about ten o'clock on the night of April 16th.

We have received the *Memoirs* of the Italian Spectroscopical Society for September. It contains Prof. Tacchini's account of his observations of the total solar eclipse at Sohag, in Egypt, on the 17th of May last, accompanied by an engraving of a photograph showing most distinctly the comet (respecting which nothing else is known), with its nucleus apparently just outside the visible boundary of the corona; and Prof. Riccò's spectroscopic observations of the present great comet (to which he still erroneously attaches the name of Cruls) at Palermo.

GEOGRAPHICAL NOTES.

OUR contemporary *L'Esploratore* publishes a short notice of the last missionary journey performed by the late Mgr. Comboni, in the course of which he penetrated far to the south-west of El Obeid, into the hilly country of the Nuba. On August 8th, 1881, he returned to Khartum, and two months later he died. The map which accompanies this short notice is on a large scale, and possesses considerable value.

The preface to the last Report of the Central African Mission contains some touching details of the events preceding the death of the venerated Bishop Steere, which occurred at Zanzibar on August 27th last.

The Map of Eastern Equatorial Africa, recently prepared by Mr. E. G. Ravenstein, F.R.G.S., and published by Mr. Stanford under the authority of the Royal Geographical Society, deserves more than a passing notice. The development of geographical knowledge in the region referred to, which extends in the map from 10° N. latitude to 20° S. latitude, and from 25° E. longitude eastwards to the coast line, has been especially rapid during the last few years. It was probably this circumstance, as well as the fact of its having formed the theatre of some of the Society's expeditions, which induced that body to sanction the preparation of such an undertaking. The result is eminently satisfactory. Mr. Ravenstein has long been known as a most accurate and painstaking geographer; but we question whether any of his labours will redound more to his credit than the present map. It is impossible to scrutinize any one of the twelve published sheets without being struck with the extraordinary diligence and care manifested in the compilation. The routes and geographical data are carefully delineated and marked with the traveller's name and date. Ethnological details, the character of the country, the political allegiance of the tribes, and all those elucidatory facts which add so much to the interest of a map are carefully noted, and the authority on which the information rests is also given. Among the more recent topographical data may be mentioned Lake Victoria Nyanza, the western shore of which, together with many islands, is based on Pearson's survey, a criterion which, it may be observed, has served to confirm very fairly the general correctness of Stanley's work. So far as we know, this survey has never before been published, and we believe the same remark applies to the routes to Mpwapwa by Carter and Rankin and Capt. Foote, R.N. A useful feature of the map consists in the insertion of the latitudes of places at which observations have been made, while altitudes are scattered with such profusion that Lake Victoria rejoices in the possession of no less than seven, all different, five determined by boiling point and two by aneroid—an *embarras de choix* from which we are rescued by the adoption by Mr. Ravenstein of a mean value of 4,000 feet. The whole undertaking, we may add in conclusion, reflects credit on its author and credit on the Society, and we sincerely trust that it may be decided to continue the map westward, so as to embrace the basin of the Congo and those regions to which the recent researches of Mr. Stanley and the Count de Brazza have attracted so much notice. In that case it might be worthy of consideration whether each sheet should not be published as completed, and their convenience for ready reference enhanced by marginal notes of the numbers of those sheets which should be juxtaposed in piecing together. A complete, recent, and elaborated map of Central Africa, from sea to sea, is an object well worthy of the attention of the Royal Geographical Society, especially at a time when nations are vying with one another in projects to colonize this vast and interesting region.

M. J. L. Poirier has left a legacy of about 8,700*l.* to the Paris Geographical Society, to be expended by them in life annuities to deserving geographical explorers of French origin. None of these annuities is to exceed 60*l.*

SOCIETIES.

ROYAL.—*Nov.* 23.—The President in the chair.—The following papers were read: 'Monthly Means of the Highest and Lowest Diurnal Temperatures of the Water of the Thames, and Comparison with the Corresponding Temperatures of the Air at the Royal Observatory, Greenwich,' by Sir G. B. Airy,—'Experimental Determinations of Magnetic Susceptibility and of Maximum Magnetization,' by Mr. R. Shida,—'On Abel's Theorem and the Abelian Function,' by Prof. Forsyth,—and 'Note on the Recent and Coming Total Solar Eclipses,' by Mr. J. N. Lockyer.

GEOGRAPHICAL.—*Nov.* 27.—Right Hon. Lord Aberdare, President, in the chair.—The following gentlemen were elected Fellows:—Sir J. Marshall, Col. G. De Preé, Major R. N. Sutton, Lieut. G. Cuthbert, Rev. C. F. Forster, Rev. C. M. Reed, Rev. E. F. Taylor, Messrs. W. J. d'Ewes Andrew, F. H. Beaumont, G. W. Brackenridge, W. F. Bridges, A. Carey, E. F. Clifton, E. C. Daniell, W. F. Ewings, S. R. Groom, A. E. Harris, G. W. Harrison, T. P. Hearne, W. B. Irvine, J. Keefe, L. B. de Lamarre, F. Lupton, D. G. F. Macdonald, G. J. McCaul, J. McKillop, G. Mansell, A. J. Marshall, H. B. Morse, A. Oakes, H. B. Robinson, D. Ross, J. D. St. G. Savinon, J. L. Stanley, H. P. Stokes, G. Stronach, S. N. Townshend, A. B. Trestrail, J. Tuck, and C. W. White.—The paper read was 'M. Lessar's Reconnaissance Survey from Sarakhs and Merv to Herat, with Remarks by Major-General Sir H. C. Rawlinson.'

INSTITUTION OF CIVIL ENGINEERS.—*Nov.* 28.—Sir F. J. Bramwell, V.P., in the chair.—The paper read was 'On American Practice in warming Buildings by Steam,' by the late Mr. R. Briggs.

PHYSICAL.—*Nov.* 25.—Prof. Clifton, President, in the chair.—The Secretary read a paper, by Mr. W. Ackroyd, 'On Rainbows produced by Light reflected before entering the Raindrops.'—Mr. S. Bidwell read a paper 'On the Electric Resistance of Selenium.'—Dr. J. Moser read a paper 'On a General Method of strengthening Telephonic Currents.'

ARISTOTELIAN.—*Nov.* 20.—Mr. S. H. Hodgson, President, in the chair.—Miss S. Wood was elected a Member.—Mr. G. White read a paper 'On Locke to Berkeley,' which was followed by one 'On Berkeley to Hume,' by Mr. A. M. Ogilvie.—A discussion then took place.

XUM

MEETINGS FOR THE ENSUING WEEK.

Mon. London Institution, 5.—'Cistercian Architecture,' Mr. J. Ruskin.
— Royal Institution, 5.—General Monthly.
— Musical Association, 8.—'Vocal Culture,' Signor N. Carozzi.
— Aristotelian, 7½. Hume to Kant,' Mr. J. Fenton.
— Surveyors' Institution, 8.—'The Ordnance Maps, and Suggestions for their Improvement.'
— Institute of British Architects, 8.—'Decoration of St. Paul's Cathedral,' Mr. R. P. Pullan.
— Royal Academy, 8.—'Chemistry,' Mr. A. H. Church.
— Victoria Institute, 8.—'Assyrian Inscriptions,' Rev. O. D. Miller.
Tues. Civil Engineers, 8.—Discussion on 'American Practice in heating Buildings by Steam'; 'Sinking Two Shafts at Marsden for the Whitburn Coal Company,' Mr. J. Daglish.
— Society of Biblical Archæology, 8.—'Houses and Householders in Palestine at the Time of Christ,' Rev. W. H. Sewell.
Wed. Entomological, 7.
— Shorthand, 8.
— Society of Arts, 8.—'Artificial Drying of Crops,' Mr. W. A. Gibbs.
— British Archæological Association, 8.—'Phœnician Art in Cyprus,' Major di Cesnola; 'Review of the recent Congress at Plymouth,' Mr. T. Morgan; 'Two Somersetshire Camps,' Mr. C. W. Dymond.
Thurs. Royal, 4½.
— London Institution, 7.—'Beethoven's Earlier Sonatas,' Mr. E. Pauer.
— Royal Academy, 8.—'Chemistry,' Mr. A. H. Church.
— Linnean, 8.—'Tasmanian Plants in South Australia,' Mr. J. G. O. Tepper; 'New and Little-known *Collembola*,' Mr. G. Brook; 'Lichens collected by Dr. Maingay in Eastern Asia,' Dr. Nylander and Rev. J. M. Crombie; 'Genera and Species of *Chalcidinæ*,' Mr. W. F. Kirby.
— Chemical, 8.—Election of Fellows; 'Condensation Product of Phenanthraquinone with Ethylic Acetoacetate,' Messrs. F. R. Japp and F. W. Streatfield; 'Condensation Products of Venanthol,' Part I., 'Condensation Products of Isobutylaldehyde obtained by means of Alcoholic Potash,' Mr. W. H. Perkin, jun.; 'Formula of Lophin,' Mr. H. E. Armstrong; 'Molecular Weight of Basic Ferric Sulphate,' Mr. S. M. Pickering; 'Brominated Compounds obtained in the Manufacture of Bromine,' Mr. S. Dyson; 'Chemistry of Hay and Ensilage,' Mr. F. W. Toms; 'Preparation of Diphenyleneketone Oxide,' Mr. W. H. Perkin.
Fri. New Shakspere, 8.—'Textual Difficulties in Shakspere's Early Comedies,' Mr. F. J. Furnivall.

Science Gossip.

At a meeting held on Wednesday in the Town Hall of Manchester, under the presidency of the Mayor, it was resolved to raise a fund of 50,000*l.* to erect a large museum, or rather series of museums, in connexion with the Owens College, after plans which have been prepared by Mr. A. Waterhouse. Subscriptions amounting to 19,000*l.* were announced in the room, fourteen of them being for the sum of 1,000*l.* each, so that there is every reason to believe that it will be possible to proceed with the erection forthwith. The plans include spacious and well-lighted museums for zoology, botany, geology, and mineralogy, and large laboratories and workrooms, and also a few lecture-rooms, which are sorely needed. The collections which are to occupy the museums are held by the college in trust for the public as well as for its own use, so that the museum will be the "Manchester Museum," and will be open to the public three days in the week. The buildings will, with the present building, form about two-thirds of the college quadrangle, and a lofty gateway tower will connect the museum block with the library and public hall of the future, which will complete the quadrangle.

Dr. Ferrier is preparing for the press a new and enlarged edition of his work on 'The Functions of the Brain,' which will embody many new observations and experiments by the author, as well as a critical examination of the various experimental and pathological investigations of recent years bearing on the question of the localization of cerebral functions.

The new Waynflete Professorship of Physiology at Oxford has for its first incumbent a very distinguished professor in the person of Dr. Burdon-Sanderson, formerly professor at the Brown Institution and recently Professor of Physiology in University College, London, which will keenly feel his removal. Dr. Burdon-Sanderson has rendered valuable services to science by his numerous researches on the causes of contagious diseases, on the question of spontaneous generation, and on the electrical and other phenomena attending the movements of plants. Oxford is to be congratulated on an acquisition which may prove as valuable as that of Dr. Michael Foster, also from University College, has already proved at Cambridge.

We are sorry to hear of the death, on Friday in last week, of Mr. Andrew Pritchard, F.R.S.E. His chief work, 'A History of Infusoria,' reached a fourth edition in 1861, and is now out of print. He was the father of Mr. Baden Pritchard, of the *Photographic News*.

Dr. Siemens has applied his electric system to the cars which are to run on the Portrush Electric Railway, between Portrush and White Rock, which is a distance of about two miles and a half each way. A trial was made on Tuesday, the 21st ult. It was considered a complete success, a speed of ten miles an hour having been attained going and returning.

M. Barthélemy Brunon, a distinguished metallurgist of Rive de Gier, of the district of the Loire, says the *Journal des Mines*, has made some new experiments on iron ore with very remarkable results. Thirty-two pounds weight of African iron ore was placed in fragments in a crucible. When the ore was heated to a red heat a reacting substance was added, and in three minutes the liquefaction of the ore was complete, the produce obtained being pure iron. By means of this process a blast furnace will, it is said, turn out twenty-two tons of iron every fourteen minutes, instead of, as at present, twenty-two tons every twelve hours.

We are glad to hear that the report of Prof. Palmieri's death, which appeared in both German and French journals, is untrue.

Mr. Ellis Lever, of Manchester, has offered a premium of 500*l.* to the inventor of the best portable electric lamp for use in coal-mines. Mr. Burt, M.P., and Mr. Crawford, the secretary of the Miners' National Union, are to render assistance to Mr. Lever in promoting the object which he has in view.

MM. J. L. Soret and Édouard Sarasin, in the *Archives des Sciences Physiques et Naturelles*, publish the third and concluding part of their memoir 'Sur la Polarisation Rotatoire du Quartz.' This part is devoted to the 'Étude de quelques Points Particuliers et Résultats Généraux' relating to rotatory polarisation.

Prof. Ledebur in the *Stahl und Eisen* has given the results of his experiments on the chemical effects produced on coal during combustion at different temperatures. It has generally been thought that a high degree of temperature favours the production of carbonic acid. All Ledebur's experiments indicate a contrary result. At the temperature of 642° Fahr. 78·6 per cent. of carbonic acid was formed and only 21·4 per cent. of carbonic oxide, while at 1292° Fahr., or a cherry-red heat, 62·6 per cent. of carbonic acid was produced and 37·4 per cent. of carbonic oxide; but at a yellow heat, 2012° Fahr., 1·3 per cent. only of carbonic acid was obtained and 98·7 per cent. of carbonic oxide.

M. Cabanellas has presented a paper to the Académie des Sciences in reply to M. Marcel Deprez's statement (see *Athenæum*, October 28th) that he obtained over the ordinary telegraphic wire between Miesbach and Munich a return of energy equal to 60 per cent., a result said to be impossible under the best conditions as to insulation. M. Cabanellas holds that "in the transmission of mechanical energy by means of two identical dynamo-electric machines the ratio of the speeds does not express the value of the return," showing that 20 per cent. only instead of 60 was returned in M. Deprez's experiments.

FINE ARTS

ROYAL SOCIETY of PAINTERS in WATER COLOURS.—The TWENTY-FIRST WINTER EXHIBITION will OPEN on TUESDAY, December 5th.—5, Pall Mall East. ALFRED D. FRIPP, Secretary.

SOCIETY of BRITISH ARTISTS.—WINTER EXHIBITION NOW OPEN, from Ten to Five Daily, at the Suffolk Street Galleries, Pall Mall East.—Admission, 1s. THOMAS ROBERTS, Secretary.

The EIGHTEENTH ANNUAL EXHIBITION of WATER-COLOUR DRAWINGS by ARTISTS of the BRITISH and FOREIGN SCHOOLS is NOW OPEN at Thomas McLean's Gallery, 7, Haymarket.—Admission, including Catalogue, 1s.

FINE-ART EXHIBITION GALLERY, 53, Pall Mall.—NOW ON VIEW, THREE CELEBRATED WORKS by JOHN MARTIN, K.L., and 400 Works by other Artists.—Admission, 1s.; Catalogue, 6d. ROBERT HOPKINS, Manager.

DORÉ'S GREAT WORKS, 'CHRIST LEAVING the PRÆTORIUM,' 'CHRIST ENTERING JERUSALEM,' and 'MOSES before PHARAOH,' each 33 by 22 feet, with 'Ecce Homo,' 'The Ascension,' 'Dream of Pilate's Wife,' 'Soldiers of the Cross,' 'A Day Dream,' &c., at the DORÉ GALLERY, 35, New Bond Street. Daily, Ten to Six.—1s.

Samuel Palmer: a Memoir. By A. H. Palmer. Illustrated. (Fine-Art Society.)

This volume is a son's tribute to his father, and the story that the biographer has to tell is so perfectly in keeping with the spirit of the painter's designs that it is easy to see how completely these works reflected the man. Indeed, the connexion between the life and the labours of artists is much closer than is ordinarily supposed. Palmer's career was not free from pain and disappointment, but it was passed in what may be called learned leisure. The main facts of his life were recorded in these columns on June 4th, 1881, and his son has corrected little in the outline we then gave; but he has added many pleasant details, and his keen sympathy lends a new charm to the story of the painter's art and character.

Naturally the biographer objects to the statement "that Samuel Palmer owed all his technical skill to Mr. Linnell"; but it did not deserve the attention Mr. A. H. Palmer bestows on it. No well-informed writer could adopt an assertion so transparently absurd. That Linnell was Palmer's "guide, counsellor, and friend," and that he was his "friend and teacher" are very different statements. Palmer wrote of himself to Mr. Stephens:—

"I was unacquainted with artists, and time was misused till my introduction to Mr. Linnell, who took a very kind interest in my improvement, and advised me at once to begin a course of figure-drawing, which was, in some sort, carried out at the British Museum."

Linnell introduced him to Blake, and Blake's influence Palmer often spoke of with gratitude. Indeed, it can hardly be overlooked. Mr. Richmond, the lifelong friend of Linnell and Palmer, says that "Mr. Linnell.....in oil painting gave him friendly technical instruction." This seems to have been the extent of the obligation, and it constitutes Linnell the "teacher" of his junior to a considerable degree; but it does not justify the assertion "that Samuel Palmer owed all his technical skill to Mr. Linnell." Doubtless the friends' minds acted and reacted on each other, and both, but Palmer especially, were affected by Blake. Palmer's works attest the force of Blake's influence, nor are his own words to Mr. Gilchrist wanting in emphasis:—

"In him you saw at once the Maker, the Inventor; one of the few in any age; a fitting companion for Dante. He was energy itself, and shed round him a kindling influence; an atmosphere of life, full of the ideal. To walk with him in the country was to perceive the soul of beauty through the forms of matter; and the high gloomy buildings between which, from his study window, a glimpse was caught of the Thames and the Surrey shore, assumed a kind of grandeur from the man dwelling near them."

These words of Palmer serve to interpret his own work. His aim was "to perceive the soul of beauty through the forms of matter," and so to delineate those forms that even beauty subserved that display of sentiment without which landscape painting is no better than photography.

The painter's son has preserved some touching details of the life led by Palmer during the early years spent at Shoreham, in the days when railways were not:—

"Those years of happy life at Shoreham are attractive from their great and almost pastoral simplicity. We have seen how the time glided serenely on, occupied often by designing, more often by literature, and sometimes by ancient and classical music. In summer, long walks were planned among the friends—most frequently for the night—through the wild Kentish lanes and valleys, or to the much-loved Dulwich Gallery. Special spots were chosen, from which a solemn twilight, or fair sunrise, could be seen to the best advantage; and when 'the thunder, that deep and dreadful organ-pipe,' began to mutter far away among the darkening hills, the enthusiasts would hasten out to revel in the wonderful effects that accompany a tempest. In the winter we find them still bathing in the half-frozen Darent, and shortening the long evenings with animated conversation, or with the never-failing poets. There was no distracting bustle or agitation—nothing to be done 'against time.' If a journey to London became necessary, it was accomplished sometimes on foot, sometimes in a country cart or waggon."

Palmer's own account of one of these so-called "evenings with poetry and buttered toast" differs slightly from this. It is much less solemn, and more cosy. Palmer said he loved cosiness, as a cat does:—

"Much as I love my calling, I am a true bookworm, and hope on my return to find, about once a month, a whole day for a Great Read! .....Some place the bliss in action; I, in a dull, pattering, gusty December day, which forbids our wishes to rove beyond the tops of the chimney-pots—a good fire, a sofa strewed with books, a reading friend, and, above all, a locked door, forbidding impertinent intrusion. There should be a light dinner about one o'clock; then a little prosy chat—not too argumentative—just to help digestion; then books again, till blessed green-tea-time winds us up for Macbeth, or Hamlet, and ecstasy!"

Here is an account of the artist's home, such as would delight the domestic gods:—

"Samuel Palmer's study at Furze Hill was a small, comfortable room, to which only a chosen and privileged few were admitted. It had a large bow-window of western aspect, and looked towards Leith Hill, that place of sad associations. Along the opposite end ran curtained shelves, laden with a heterogeneous but precious burden of plaster casts and gems from the antique, waxen models, colours, and the all-pervading books; while in one corner lay the old violin, silent now, upon which, long years ago, in the quiet Kentish village, he had so often fingered many a beautiful old English air, with other sweet and ancient music. On one side were other and much larger shelves, holding portfolios, in which were classified the innumerable sketches of all sizes, in all materials, and of all degrees of finish—a life's selection from Nature's material, landscape and figure. Under these shelves, in box-folios, were the elaborate outdoor studies, English and Italian. Then came that *sanctum sanctorum*, the etching-corner—a rough, home-made cupboard, standing on a chest of drawers, containing, the one a veteran set of tools and stock of copper-plates, new or in progress; the other, a collection of early and touched proofs of former plates, some favourite etchings by other hands, and a few relics of the childhood of the son and daughter who were dead. Hard by there was a simple three-legged easel, upon the sides of which were chalked in short two or three particularly favourite axioms and maxims, a rough painting table, laden with a rack full of china palettes, with brush cases, and many mugs and saucers. Some more book-laden shelves on either side the fireplace, and an easy chair or so, completed the arrangement of the study—a room bare of the smallest pretension to luxury or superficial elegance, yet the birthplace of so many masterpieces of refined beauty and poetic sentiment, and so redolent of literature. Here, while the north wind without was drifting the snow over the desolate landscape, and having sometimes invited to tea a favourite cat of winning manners, Samuel Palmer would light the lamp (for gas was an abomination), and with drawn curtains would 'refresh the fire and have tolerable weather with the poets.'"

It is a pity this book does not contain—in addition to lists of Palmer's contributions to the gatherings of the Society of Painters in Water Colours (1843 to 1881), and of the contents of the Palmer Exhibition of the Fine-Art Society—catalogues of his pictures in oil at the British Institution from 1819, when 'Bridge Scene, a Composition' (141), and 'Landscape, Composition,' by "S. Palmer, jun.," first appeared. To the Institution of 1821 he sent 'Study from Nature at Battersea' (156) and 'Langley Locks, Herts' (278); in 1822 appeared 'A Lane Scene, Battersea' (101); 'Hailsham, Sussex' (106); and 'On the Thames, Evening.' His address was then 10, Broad Street, Bloomsbury—his father's place, we are told. To the Academy of 1819 Palmer sent 'Landscape with Ruins' (257); 'Cottage Scene, Banks of the Thames, Battersea,' probably the picture which appeared afterwards at the Institution (259); and 'A Study' (414). In 1820 he sent 'Wood Scene, a Study from Nature' (185). In 1821 he had 'A Study from Nature, Battersea' (49); in 1823 the Somerset House gallery contained 'View' (32), succeeded in 1824 by 'Landscape, Twilight' (504), and 'Study of a Head' (706); in 1825, 'A Scene from Kent' (384) and 'A Rustic Scene' (410); and in 1826, 'Late Twilight' (570), 'The Skirts of a Wood' (714), and 'A Rustic Scene' (849). He sent no pictures in 1827 and 1828, but in 1829 he was represented by 'The Deluge, a Sketch' (516), and 'Ruth returned from Gleaning' (614). It was not till after 1826 that Palmer removed to Shoreham—not, as this memoir states, "soon after" he sold his first picture at the British Institution, in the beginning of 1819. It is not till 1829 we find him at "Waterhouse, Shoreham, Kent." We do not find that Mr. A. H. Palmer has enumerated among his father's works the woodcut illustrations to 'The Book of Favourite Ballads,' published by Kent & Co. in 1860, 'I Remember,' and 'The Hamlet.'

This book is admirably illustrated by fourteen autotype reproductions from lovely and characteristic sepia drawings and nine woodcuts by S. Palmer. His portrait, facing p. 1, is simply dreadful.

The Great Artists. — Ghiberti and Donatello and other Early Italian Sculptors. By L. Scott. —*Romney and Lawrence.* By Lord R. Gower. (Sampson Low & Co.)—Mrs. Scott rightly regrets that only two volumes of the series to which her work belongs can be appropriated to the early Italian sculptors. She must have found it hard to give even tolerable consistence, much less completeness, to the one that is before us. Here, in less than one hundred pages, she sketches the whole history of the great subject from the time of the Etruscans till that of Michelozzo Michelozzi, who died about 1472. Mrs. Scott has a genuine liking for her subject, and therefore writes with animation and clear insight. Her sketch of the pre-Tuscan sculptors is comprehensive, intelligent, and in accord with accepted opinions. There is not an original thought in it; but it would be hard to put the materials before the reader in a more agreeable guise. The succeeding remarks on the probable superiority of southern sculpture over that of Pisa are concise, but not new to those who have read the history of art in Magna Græcia and Apulia during the twelfth century. Our author puts the arguments about the artistic parentage of N. Pisano very briefly, inclining to accept Signor Milanesi's interpretation against the reading—alleged to be incorrect—of Signor Ciampi. The essential question is, did Niccola derive his stronger inspiration from a Tuscan or an Apulian source? Rümohr, Cavalcaselle, and other critics incline to believe in the Apulian origin of Pisan sculpture, while Cicognara, Perkins, and others lean the other way. Mrs. Scott is hardly right in saying that the "evidence depends on documents" which are confessedly hard to read, while some of them can be read in more ways than one. She is on safer ground when comparing the art of Pisano with that of his forerunners in Tuscany and antique remains there. Neatly as all the arguments have been put by our author, there are in these pages but too many signs of haste in revising proofs of the text. For instance, she says that the relics on the pulpit of Niccola in the Baptistery at Pisa are "so crowded that perspective is sacrificed, and with all his classical learning he still retains the mediæval faults of short figures and large heads, and prefers the use of the drill rather than the chisel for the corners of the eyes and mouth, &c." We are puzzled by this passage. Short figures and large heads are nowhere more common than in late Roman (antique) sculptures, to which we refer Pisano's mannerisms; such defects of taste and proportion are not peculiar or even proper to mediæval carving, while there is hardly one of the late Roman (antique) sarcophagi and cippi which does not show more drill marks in faces and in flowers than Gothic artists bequeathed to us. There seems to be confusion in the following remarks on another alto-relief: "It has all the mediæval faults; the sheep in the foreground show direct study of nature. One is scratching himself with his hind leg." If Mrs. Scott turns to many late classic sculptures, where amorini and wreaths are associated with brutes, she will recognize "direct study of nature" exactly like that of this example. Our author's notice of the gates of Ghiberti is very good indeed.

Lord Ronald Gower may be said to have an ancestral right to be Romney's biographer. Trentham is rich in the painter's likenesses of Gowers, and Lord Gower, the British Ambassador in Paris, and "his Scotch wife," as her grandson designates that lady, received our painter in the French capital with honourable kindness. Lord Ronald has put together a consecutive series of biographical notes on Romney's life and manners which will answer his purpose sufficiently well. He has not overloaded his pages, which are all too few, with criticisms; still the opening sentence of the first chapter contains a just and wise remark: "Romney and Stothard are the most poetic painters of the English school in the eighteenth century." His lordship proceeds to estimate the portraiture and the poetic designs of Romney in a manner with which it is hard to agree. He is disposed to rank the poetry of the designs higher than we can, who greatly prefer the poetry of the portraits. Some of Romney's portraits are quite Greek in their motives and compositions; indeed, it is evident that he sometimes—as in the likeness of Lady Stormont (Countess of Mansfield), which belongs to Earl Cathcart, as well as in the seated figure of Miss Sneyd, which was engraved as "Serena"—borrowed freely and happily the attitudes and compositions of figures on antique gems. Lord Ronald more than once commends the colouring of Romney; but while we heartily accept the verdict we must object to the terms "glory" and "transparent and brilliant,"

which are applied to it on pp. 1 and 24. The biography of Lawrence, by the same author, pleases us more than that of the greater artist. The materials are richer, the criticism is more spirited, and the "local colouring" more powerful. We notice for future correction that a reader may be excused who confuses "the saturnine and malignant Anthony Pasquin (his real name was Williams)," cf. p. 38, with the harmless D. E. Williams, who produced 'The Life and Correspondence of Sir T. Lawrence,' 1831, which is here often mentioned. The former was christened John, and grew up to be a truculent and scandalous critic. At the end of this volume are copious and valuable lists, compiled by Mr. Algernon Graves, of the exhibited and engraved works of Romney and Lawrence. As regards the former of these lists, nothing approaching it has been printed before. As regards the latter, the only similar thing is appended to D. E. Williams's biography, which is neither so correct nor so complete as Mr. Graves's. Our author quotes many anecdotes of Lawrence and his sitters, but he has overlooked that characteristic one of the Duke of Wellington, which relates that Sir Thomas originally intended to pose his grace in the attitude of a Roman statue, standing on one leg and dragging the other behind him. Wellington refused to be thus represented, saying, "No, sir, I usually stand on two legs, and I mean to be painted so." In describing the funeral of Lawrence, Lord Ronald Gower has forgotten that it was attended by an extraordinary number of famous personages. Of the whole list we believe the sole survivors are Mr. Redgrave and Mr. T. Webster. D. E. Williams declared that Lawrence bled to death in consequence of the opening of leech-bites. Ossification of the heart is the cause of death given by Lord R. Gower.

THE MOSQUE AT HEBRON.

As the plan of the mosque at Hebron published by Capt. Conder in the October number of the *Quarterly Statement* of the Palestine Exploration Fund differs in some respects from that which I published in the *Builder* in December, 1864, and afterwards in my work on the Holy Sepulchre at Jerusalem in 1865, I would like to have an opportunity of explaining in what the difference consists.

When I visited Hebron in 1864 I was entirely alone, and having no official position was very doubtful as to what I might be permitted to see or do. But finding the authorities in the mosque very much inclined to be civil, I asked permission to make a few measurements, and fully availed myself of this in order to make the plan in question. I was also allowed to make a few sketches which enabled me to produce the sketch section which I published with the plan.

This measured plan and the section referred only to the mosque properly so called—the *ci-devant* Christian church—which is the only important or interesting building in the Haram area; and I was quite content with having obtained this. The buildings surrounding the courtyard, marked with a different tint in my plan, were erected afterwards by the Mohammedans, and are consequently of more modern date and of a very inferior character, and far less interesting either from an historical or architectural point of view. For these I was content with an eye sketch, sufficient to point out the position of the various tombs and apartments, and it is in them and them only that the difference exists between Capt. Conder's plan and mine. His plan of the mosque confirms the correctness of mine in every respect, but, having more leisure and a recognized position, he was enabled to devote more attention to the buildings surrounding the courtyard, and his plan of them is consequently an improvement on that published by me. This being so, I hope he may be induced to publish his plan on a larger scale, and with more detail than is compatible with the *Quarterly Statement* of the Fund. The building is one of extreme interest to both architects and archæologists. James Fergusson.

THE RUINS AT HISSARLIK.

It may be of some interest to those whose attention has been directed to the results of Dr. Schliemann's memorable labours at Hissarlik if I attempt to mark clearly the point at which the discussion in regard to their meaning now stands.

In 'Ilios' (1880) Dr. Schliemann distinguishes:—

1. Remains of the Greek Ilium, reaching to about six feet below the surface.
2. Below this a Lydian city.

Then:—

3. Fifth prehistoric city.
4. Fourth prehistoric city.
5. Third prehistoric city.
6. Second prehistoric city.
7. First prehistoric city, founded on the native rock, about 52½ feet below the surface, and about 59½ feet above the present level of the plain.

This year the excavations at Hissarlik have been studied by two eminent architects, whose services Dr. Schliemann specially engaged for that purpose—Dr. Wilhelm Dörpfeld, who for five years was at the head of the technical works of the German excavations at Olympia, and Dr. Joseph Höfler. Dr. Dörpfeld's results as to the *periods* of remains which can be distinguished have been indicated by him in the *Beilage* of the *Allgemeine Zeitung* of September 29th, 1882, and by Dr. Schliemann in the *North American Review* of October, 1882, pp. 339 ff.

Dr. Dörpfeld distinguishes:—

1. The Greek Ilium of the *latest* or *Roman* age, down to the same depth at which, according to 'Ilios,' even the earliest traces of the Greek Ilium cease.
2. Remains of a town which, like 1, was not confined to the mound of Hissarlik, but extended over the adjacent plateau.
3. Remains of a town probably confined to the mound.
4. Remains of a smaller town, or rather of a village, confined to the mound.
5. Remains of a large town, which extended over the plateau, and had only a few large buildings on the mound, its acropolis.
6. A few remains of buildings which *may* represent a town distinct from 5: the reasons for thinking it distinct being that some buildings of 5 are above it, and that the ground on which 5 stands appears to have been carefully levelled.

The question now is:—No. 1 being only the latest or Roman phase of the Greek Ilium, what are Nos. 2, 3, 4, 5, 6,—if 6 be indeed distinct from 5?

Taking Dr. Dörpfeld's series, I would explain it thus:—

1. Greek Ilium of Roman age.
2. Greek Ilium of Macedonian age, taken by Fimbria in 85 B.C.
3. Greek Ilium of earlier age, taken by Charidemus about 359 B.C.
4. Possibly the Greek Ilium in its earliest form, when the first Æolic colonists settled on Hissarlik. The evidence of the Hellenic pottery found at Hissarlik (see M. Dumont's 'Céramiques de la Grèce Propre,' ch. i.) seems to favour the view that we have there traces of the *oldest* Hellenic life on the site.
5. A prehistoric city.
6. (If distinct from 5) A smaller prehistoric settlement.

The essence of my view on the question has all along been this:—At Hissarlik we have *not* a thin "topping" of the Greek Ilium, with six prehistoric cities beneath, but remains of the Greek Ilium reaching down far more than six feet, and representing several successive periods of its architectural history: then, below that, a prehistoric residuum. On the other hand, Prof. A. H. Sayce wrote in the *Academy* (Nov. 5th, 1881):—"I should have fancied that the copious illustrations given in 'Ilios' would, of themselves, have prevented any one, however inexperienced in questions of archæology, from asserting that the remains of the Æolic Ilium surely cannot cease at six feet below the present surface of Hissarlik." That, however, is what I do most confidently assert. The evidence on which I rest my belief is that of 'Ilios' itself, and of history, now confirmed by that of my own eyes. At Hissarlik I could see only (1) the Greek Ilium of the Roman age, (2) the earlier Greek Ilium, apparently of more than one period, (3) something older still. But this is a case in which the best opinion on the meaning of the ruins themselves must be that of a resident architect and expert, such as Dr. Dörpfeld. Now I find that Dr. Dörpfeld confirms me as to my (1) and (3), but has not yet said how far my (2) may be recognized in the three strata immediately below (1).

Meanwhile let me only say that I desire to put my view on record, to be confirmed or refuted later.

I should like to add a word on a verbal ambiguity which seems to have escaped the notice of some of my learned opponents, with the result of producing some slight confusion of ideas. With reference to Hissarlik, the word *stratum* has been used as if it connoted *city*. Because I have denied *six distinct prehistoric cities*, I have been treated as if I did not recognize any *succession* of remains at different depths. My view is that several "strata" (since we must use that rather inconvenient word) may, and probably do, belong to the same *city*—viz., the historic Greek Ilium in its successive phases. The inconvenience of the term "strata" in reference to Hissarlik is that it suggests a series of regular layers approximately uniform in depth over the excavated area. What we rather wanted was a term which should denote *ages* or *periods* of buildings, without excluding the notion that some portions of buildings belonging to different periods might stand on nearly the same level, and buildings of the same age on varying levels. The force of this remark will be apparent, I think, to any one who has seen the ruins at Hissarlik.

With regard to the perfectly distinct question as to whether the large prehistoric city (No. 5) is, or is not, the town of Troy as described in the 'Iliad,' my view could be briefly summarized by saying that *it may have been the historical prototype, but cannot have been the immediate original.* To speak of "the ruins of Troy," meaning the actual town described by Homer, is misleading. The poet's *buildings* were fancy-born. This topic will be discussed more fully in the next number of the Hellenic Society's *Journal*. R. C. Jebb.

NOTES FROM ROME.

On the north side of the church of S. Luigi de' Francesi, at the foot of the second chapel, some remains of the Thermæ Neroniano-Alexandrinæ have been found—a mosaic pavement of geometric pattern, with festoons on the border made with pieces of giallo, porfido, serpentino, and africano. The proportions of the design show that the pavement belongs to a very large hall, which was decorated besides with huge granite columns, nearly four feet in diameter. One of these columns lies across the pavement and penetrates underneath the second right chapel of the church. Another lies not very far off; it was discovered some years ago, but could not be removed because the front wall of the vestry house rests upon it. The whole surface of these Thermæ, now occupied by the palaces Giustiniani, Patrizi, Madama, and by the churches of S. Eustachio, S. Luigi, and Salvatorello, is covered with colossal monoliths of grey and red granite, many of which have already been found and removed. Pietro Sante Bartoli relates that when Alexander VII. excavated the

Piazza di S. Luigi, to secure materials for the restoration of the portico of the Pantheon, seven columns were found—three in the piazza itself, two between the churches of S. Luigi and S. Salvatore in Thermis, and two between the Giustiniani and the Patrizi palaces. Fea speaks of four broken shafts discovered by Cardinal Rovarella in February, 1805, in the smaller courtyard of the Palazzo Madama. Within my own recollection five more pillars have been derived from this inexhaustible mine, two of which were taken from the Salita de' Crescenzi, three from the Piazza de' Caprettari. In the block of houses which make the corner of the Via de' Crescenzi and the Piazza della Rotonda there are many such columns still erect on their pedestals.

On the banks of the Tiber, I do not know exactly where and when, a bronze votive object has been found, quite unique as regards shape, size, design, and preservation. It may be briefly described as a votive lamp, shaped as a fluted cornucopia, with three wicks, and a larger hole on the top for the supply of perfumed oil. The sharp end of the cornucopia enters and fits into a kind of scabbard, to which it is fastened with a movable locket. An inscription engraved on the scabbard gives the names of four gentlemen —Sex. Tettius, T. Annius, L. Tattius, and P. Tettienius—at whose expense the votive lamp had been made. This interesting bronze is nearly three feet high.

Two miles from the Porta Portese, in a vineyard belonging to Antonio Jacobini, a sepulchral square whitewashed chamber has been found, belonging to the necropolis of the old Via Portuensis. The tomb had been already robbed of everything; the pavement itself, whether of mosaic or of marble, has disappeared. Signor Jacobini, however, could not tolerate his discomfiture in peace; he dug down to the very end of the foundation walls, until he came across four marble sarcophagi, which had never been disturbed since the burial of their respective owners. Three of them are 7 ft. long, 2 ft. high, 2 ft. 6 in. wide, and appear to be the work of the same *marmorarius*. The narrow sides are decorated with bas-reliefs representing the customary funereal emblems of a griffin slaying a ram, &c. The front is fluted, with the clypeus of the deceased in the centre, and groups of muses or fauns at the corners. The fashion of the hair-dressing of the female figures is the one which prevailed under the empire of Marcia Otacilia Severa; in other words, the sarcophagi belong to the middle of the third century. The bodies of the deceased lay embedded in lime—they had died of smallpox.

Rodolfo Lanciani.

Fine-Art Gossip.

Although before the private view we are not at liberty to criticize the pictures by Mr. Alma Tadema now collected in the Grosvenor Gallery Exhibition, it is allowable to say that the aggregate consists of about 120 works in oil and a proportionate number of drawings in water colours. With few exceptions all the artist's *chefs-d'œuvre* in Great Britain have been borrowed, and, apart from those which, being in public collections in Holland, could not be obtained, all the principal examples in the Low Countries, France, and Germany, including a number of paintings from Mr. Gambart's gallery at Nice. The tax levied on works of art entering the United States forbade Sir Coutts Lindsay obtaining examples from that country, which on returning would be heavily taxed. Nearly all the pictures by Mr. Tadema which have been described in these columns will be seen in New Bond Street. Among the pictures are 'The Education of the Grandchildren of Clotilda' (1861; Paris, 1867); 'The Pyrrhic Dance' (Paris, 1878); 'Hide and Seek'; 'In the Time of Constantine'; 'Sponges and Strigils'; 'A Torch Dance'; 'The Chamberlain of Sesostris' (R.A., 1871); 'Water Pets'; 'After the Audience'; 'A Soldier of Marathon'; 'Agrippina with the Ashes of Germanicus' (1866); 'Ave Cæsar'; 'Fredegonda' (1878); 'Phidias and the Parthenon Marbles' (1868); 'A Sculptor's Model' (1877); 'In Confidence'; 'Tragedy of an Honest Wife' (1875); 'Tarquinius Superbus' (1867); 'Cleopatra'; 'A Roman Amateur'; 'Une Fête Intime'; 'An Audience at Agrippa's'; 'The Vintage'; 'Siesta'; 'A Sculpture Gallery'; 'A Picture Gallery'; 'Pleading'; 'Architecture'; 'Sculpture'; 'Painting'; and a considerable number of portraits. We believe that the most important paintings not obtained are 'Fredegonda and Prætextatus' and 'Venantius Fortunatus and Radigonda.' The private view is appointed for to-day (Saturday).

The exhibition of the works of D. G. Rossetti at the Royal Academy will be limited to important and characteristic pictures, excluding secondary versions of valuable designs and comparatively mn or examples. Notwithstanding this process of winnowing, the collection will be numerous, including the large painting from the Liverpool Gallery and the altar-piece of Llandaff Cathedral. Similar selection will be made of the works of John Linnell, which are to be displayed at the same time and place with the Rossettis.

It now appears that the collection of works of art burned at Sydney, and recently referred to in these columns as probably comprising Mr. F. Madox Brown's 'Chaucer,' was a gathering of loans, and not the Colonial Gallery. Great hopes are therefore entertained that 'Chaucer' and other interesting examples are still in existence.

The Fine-Art Society will open to the public on Monday next "The Graphic Exhibition of Animal Paintings." The private views were appointed for the 1st and 2nd inst.

The 10th inst., the anniversary of the Royal Academy, falling on Sunday, the medals and other prizes of this year will be distributed to the students on Saturday next in the evening. The present being an ordinary year only, the awards embrace the schools prizes and Creswick Prize.

Mr Inchbold writes from the Hôtel Beau Rivage, Montreux, Switzerland:—"I have had some water-colour drawings stolen, and, I fear, others lost in passing through the post. They are all painted near Lake Leman, and are about 14 × 10 inches. Can you find an opportunity of suggesting to picture-dealers and others that should such drawings be offered to them for sale I shall be obliged if they will communicate with me here?"

M. Crauk is putting, says the *Courrier de l'Art*, the last touches to the monument of Coligny which is to be erected near the Louvre. The statue is in the "grand costume d'amiral."

In place of M. Jouffroy, as a sculptor member of the Académie des Beaux-Arts, deceased, M. J. A. J. Falguière has been elected. M. Falguière obtained in the second *tour de scrutin* eighteen votes, M. Crauk fourteen votes, and M. Mercié two votes. M. Falguière was born in 1832 at Toulouse, and became a pupil of M. Jouffroy in the École des Beaux-Arts, Paris. When twenty-five years of age he obtained brilliant success by a model of the infant Moses, which appeared in the *Salon*, 1857. In 1859 he received the Grand Prix de Rome. Among his better-known works are 'Vainqueur au Combat de Coqs,' 'Tarcinus Martyr,' 'Ophélie,' 'Pierre Corneille' (for the Comédie Française), 'La Danseuse Égyptienne,' and that colossal chariot group the model of which has been placed experimentally on the Arc de Triomphe. He contributed several pictures to the *Salons* of 1873 and later, including 'Allée du Château,' 'Lutteurs' (for which he had a second medal in the class of painting), 'Caïn et Abel,' 'Suzanne,' and 'Femme au Poignard.' Next year he will be represented by 'Saint Sébastien.' He won medals for sculpture in 1864 and 1867, a medal of the first class in 1867 (at the Exposition Universelle), a medal of honour in 1868, and a *rappel* of the first-class medal in 1878, at the Exposition Universelle.

M. Paul Mantz, recently appointed Directeur des Beaux-Arts in France, has resigned, in consequence, it is alleged, of official meddling with duties M. Mantz believes himself capable of performing without lay interference.

We hear that the sum realized by the sales of pictures at the autumn exhibition in Liverpool exceeds 6,800*l*.

A loan collection of Italian art is to be opened in the Corporation Galleries, Glasgow, on the 22nd inst. Among the contributors is her Majesty, who will send from Windsor Castle the Cellini shield, besides bronzes and Italian arms. The Duke of Buccleuch has promised to lend a splendid series of prints by Marc Antonio, A. Veneziano, and other early Italian engravers; and Mr. Malcolm, of Poltalloch, has selected fifty drawings by Italian masters from his collection for the exhibition. Mr. J. C. Robinson has undertaken to illustrate the subject of Italian medals, and Sir Robert Hay will contribute decorative armour by Negroli and that other great Italian armourer to whose skill we owe the Cellini shield. The nucleus of the exhibition will be supplied by South Kensington.

We hope to publish in a week or two an account of the cases filled with antiquities that were lately found in the Vatican.

MUSIC

THE WEEK.

Savoy Theatre.—'Iolanthe,' a Fairy Opera in Two Acts. By W. S. Gilbert and Arthur Sullivan.
St. James's Hall.—Mr. Geaussent's Choir.

Utterly opposed as are the extravagant productions of Messrs. Gilbert and Sullivan to the music dramas of Richard Wagner in spirit and intent, they are alike in this, that the literary element is of at least equal importance with the musical in their construction; and it is questionable whether criticism of a new work should not rather come under the head of drama than of music. With *libretti* of the ordinary type Mr. Sullivan might not have sufficient impetus, nor perhaps opportunity, to impart a flavour of high-class musicianship to his scores; but, on the other hand, Mr. Gilbert is fortunate in being associated with a composer whose knowledge and ability enable him to combine the serious with the grotesque—the union of which constitutes the most humorous feature of these singular productions. It will be unnecessary in this place to give a minute account of the course of action in 'Iolanthe,' as the piece has been described at length in the daily prints, and its peculiar merits are not such as may give rise to wide divergencies of opinion. Though, as played last Saturday night, it errs on the score of length and needs a little compression in the second act, it is, on the whole, worthy of Mr. Gilbert's reputation; and in the association of scenes and ideas of every-day life with circumstances utterly at variance with the laws of possibility it is the most striking and laughable since 'H.M.S. Pinafore.' Some persons have professed to discern a political significance in the introduction of the House of Peers as a mark for the author's pleasantries; but it is scarcely reasonable to suppose that the satire is to be taken seriously. For the

rest Mr. Gilbert's method is unique and inimitable; though one or two foolish attempts in the way of imitation have been made, it will necessarily expire with him, and his pieces, therefore, cannot be accepted as the foundation of a national style of comic opera.

Of the music of 'Iolanthe' it is only possible to speak from impressions gained at the performance, as the score is not yet published. The overture is more regular in form than those of previous works, but it is weak in substance, and the opening numbers of the opera also afford slight evidence of Mr. Sullivan's ability. A pompous march and chorus of peers is the first piece that arrests the attention; and the lengthy and elaborate *finale* of the first act includes some extremely effective episodes in which a high degree of musicianship and the spirit of true comedy are displayed side by side. In the second act we note more especially the quaint sentry's song; a pretty duet for female voices, with *pizzicato* accompaniment, "In vain to us you plead"; an admirable caricature of the sentimental ballad; and, most original of all, a "patter" song descriptive of nightmare. Mr. Sullivan has written few cleverer things than the weird accompaniment to this song. Throughout the orchestra is treated with a masterly hand; and though critics may regret that the composer's distinguished talent is not more frequently employed in connexion with higher forms of art, yet it must be freely acknowledged that the score of 'Iolanthe' is as far superior to those of foreign *opéra bouffe* composers as is Mendelssohn's 'Midsummer Night's Dream' to ordinary pantomime music. The performance of the new opera is noteworthy for excellence of *ensemble* and the evidence of first-rate stage management. Of the principals, Mr. Grossmith for humour, and Miss Jessie Bond, Miss Alice Barnett, Miss Leonora Braham, Mr. R. Temple, and Mr. Manners for vocal ability, are worthy of mention. The orchestra and chorus are numerous and of excellent quality, and the *mise en scène* is clever and artistic.

The appearance last season of Mr. Geaussent's choir was warmly welcomed, as the disbandment of Mr. Henry Leslie's choir had left a gap which it was hoped might in time be filled satisfactorily by the new force. It is matter for regret that the concert given on Thursday week showed no advance, but, on the whole, a slight retrogression from the standard of merit attained last year. Faults were perceptible in the arrangement of the programme and, in certain respects, in its execution. High-class works were mingled with compositions which would have been more in place at a ballad concert; and we shall not be far wrong in supposing that the sparse attendance was partly due to the heterogeneous selection, which was not calculated to afford unqualified satisfaction to any section of the public. Mr. Geaussent should appeal directly either to cultured or to vulgar tastes; any attempt to combine the two courses must necessarily fail. With regard to the efforts of the choir there was room for cordial approval. The voices are powerful and of excellent quality, and that as a body they are capable of accomplishing good work was proved by their intelligent singing in Bach's cantata, "O light everlasting," Mendelssohn's motet for male voices, "To the sons of art," and a well-varied selection of madrigals and part songs. Mr. Geaussent is evidently an earnest musician, but as a conductor he shows traces of nervousness—a sense of being ill at ease which is liable to transfer itself to the executants under his control. As all lovers of music would be glad to see the young society placed on a firm basis, it is expedient to indicate at once any shortcomings by which its progress may be retarded. It only remains to be mentioned that the solo music at this concert was efficiently rendered by Miss Marian M'Kenzie, Mr. E. Lloyd, and Mr. F. King.

NEW PIANOFORTE PUBLICATIONS.

Sonatinas. No. 1 in F, No. 2 in B flat. By Oscar Beringer. (Stanley Lucas & Co.)—Mr. Beringer's reputation as a pianist stands so high that any examples of his ability as a composer for the instrument are certain to receive due attention. An earnest musician will always prefer to pay regard to the established laws of form even in pieces of minor significance, and it is only in points of detail that the present compositions differ from the ordinary sonata plan. Each work consists of three movements, the middle section in No. 1 being an *andante*, and in No. 2 a minuet. Of the two we must give the preference to the Sonatina in F, which is pleasing and melodious throughout. Its companion is not free from a suspicion of dryness, owing to the uninteresting nature of the subjects. Both are comparatively easy, No. 1 being perhaps the simpler. The same publishers send us *Scherzetto* in G, by Maude Valérie White—a lively little piece, rather commonplace in style, but likely to please amateurs of modest acquirements.

Ein Tag in der Schweiz; Neues Blumenlied. By Gustav Lange. (E. Ashdown.)—Herr Lange is a prolific writer of drawing-room pianoforte music, the present trifles being numbered Op. 290 and 291. His pieces are frequently distinguished by refined melody and a certain elegance of treatment, and those now before us are not wanting in these qualities, though they can scarcely be said to possess any higher value. In the same category may be placed *Enid*, by Walter Macfarren; *In Shady Vale, Sweet Dreams*, and *A Spring Flower*, by C. E. Pathe; *Air de Danse* (in the style of a *bourrée*), by Henri Latour; and *Dreams of Youth*, by A. Loeschhorn. These are all unpretentious, and may be useful as teaching pieces. *I Pifferari*, a piece for four hands by Sydney Smith, is constructed chiefly on a drone bass, but the effect is not unpleasing.

Messrs. Weekes & Co. send us a second series of six *Favourite Melodies for Violin and Piano*, arranged by Frederic Weekes. The most attractive of these arrangements are Handel's "Largo" (that is, the air from 'Serse' rendered familiar by Hellmesberger's transcription), Gounod's Berceuse, and Rubinstein's melody in F. The pieces are given as simply as possible, without any additions or ornamental passages.

We have also received some specimen numbers of Charles Halle's *Practical Pianoforte School* (Forsyth Brothers). This work furnishes the student with the means of acquiring a complete mastery over the executive difficulties of the pianoforte and also a considerable knowledge of the literature of the instrument. It is divided into five sections, denominated respectively "Elementary," "Easy," "Moderately Difficult," "Difficult," and "Very Difficult." The numbers now before us are selected entirely from the first and second sections, and commence with a pianoforte tutor of the ordinary type, which is followed by easy sonatinas and miscellaneous pieces by Beethoven, Mozart, Clementi, Dussek, Heller, and other composers. Every note is fingered, and each piece is preceded by a page of exercises designed to facilitate the learner in conquering its most trying passages. Teachers of the second grade are likely to find Mr. Halle's 'Practical Pianoforte School' extremely serviceable in the selection of appropriate music for their pupils.

BOROUGH OF HACKNEY CHORAL ASSOCIATION.

The operations of this society frequently merit more attention than those of other suburban musical bodies, not only on account of the serious nature of its aims, but by reason of the completeness which characterizes the work accomplished. A full orchestra of excellent quality is invariably engaged, and no composition is ever presented in a mutilated form on the ground of economy or other unworthy reason. An outline of the arrangements for the present season has already appeared in the *Athenæum*. The first concert was given on Monday evening in the Shoreditch Town Hall with a programme of more than ordinary interest. A work of Beethoven with the words affixed, "First performance in England," must give dignity to any programme, although, of course, it is only compositions of minor importance by the Bonn master which have yet to be heard in this country. The piece introduced on Monday was the 'Opferlied,' or 'Sacrificial Hymn,' Op. 121 *b*, for mezzo-soprano solo, chorus, and orchestra. The words, by Matthisson, were first set as a song with piano accompaniment in 1802; in its present form the work was performed in Vienna in 1824, and published in the following year. Without possessing any striking characteristics the music is gravely dignified, and contains a few genuine Beethoven touches. Gade's cantata 'Christmas Eve' was also virtually a novelty, as it was the first performance in London with orchestra. Though slight in dimensions it is exceedingly charming, and has less of that Mendelssohnian impress which we frequently note in Gade's works. The subject is a dialogue between the angelic host and the shepherds, with *soli* for mezzo-soprano. Eminently religious and almost hymnlike in character, the music derives a large proportion of its effect from the accompaniments, which are most felicitously scored for a large orchestra. The rendering of the works already mentioned left nothing to desire, but the choir was tested more severely in Mendelssohn's 42nd Psalm and Brahms's 'Schicksalslied.' The difficulties of the latter composition were surmounted with apparent ease, and it is impossible to imagine a finer interpretation of one of Brahms's most inspired creations. The voices are not perfectly balanced, the tenors being decidedly inferior in *timbre* to the sopranos and basses; but in all the sections the same earnestness, precision, and intelligence are to be observed; and these are qualities without which it is impossible to give adequate performances of such works as those to which this society devotes its attention. The instrumental items in the programme were Beethoven's Symphony in B flat (admirably played) and Auber's sparkling Overture to 'Le Dieu et la Bayadère.' The soloists of the evening were Miss Damian, Miss Edith Millar, and Messrs. Beckett, Raynham, De Lacy, and Tinney, all of whom were efficient, the lady first named meriting especial commendation. Mr. Prout, as usual, occupied the conductor's desk. At the next concert, on January 22nd, Mozart's beautiful music to 'King Thamos' will be performed for the first time in England, and Cherubini's great Mass in D minor will also be given. H. F. F.

Musical Gossip.

The special feature of interest at last Saturday's concert at the Crystal Palace was the first appearance there of a young American lady violinist, Miss Arma Harkness, a pupil of the Paris Conservatoire, where she gained the first

prize. She chose for her *début* Vieuxtemps's Fourth Concerto, in D minor, a work of no very great musical value, but admirably written as a show piece. The impression produced by Miss Harkness's performance was distinctly favourable. Her tone is pure and of good quality, and she phrases well, her *cantabile* playing in the slow movement being particularly good. Her execution is admirable and her intonation excellent, even in the most difficult passages. She evidently possesses great talent, which experience will probably ripen. The orchestral pieces on Saturday were the second of the 'Leonora' Overtures, the Gavotte from Cowen's 'Language of the Flowers,' and Schubert's great Symphony in C. Mr. Maas was the vocalist. This afternoon Gounod's 'Redemption' is to be performed.

Miss Fanny Boxell gave a concert at the Highbury Athenæum last evening, at which she was to be assisted by Miss Mary Davies, Miss Florence Boxell, Mr. Henry Guy, Mr. Maybrick, M. Sainton, Mr. E. Woolhouse, and Mr. F. Westlake.

The Edinburgh University Musical Society's annual general meeting was held last week, when Sir Herbert Oakeley, President, delivered the address as usual. The professor's free organ recitals at his class-room recommenced last Thursday.

The programme of Mr. Charles Halle's sixth concert, given at the Free Trade Hall, Manchester, on Thursday evening, comprised Mendelssohn's 'Scotch' Symphony, Beethoven's Overture, Op. 124, Mozart's Concerto in D minor, Berlioz's 'Queen Mab' Scherzo, and the Overture to 'Zampa.'

Mr. F. H. Cowen's 'Scandinavian' Symphony was performed on the 11th ult. at the first Philharmonic Concert in New York, under Mr. Theodore Thomas, and met with great success.

The directorate of M. Carvalho at the Opéra Comique, Paris, has just been renewed for a term of seven years. M. Carvalho will shortly bring forward on that stage two new singers: Mdlle. Emma Nevada, a young American, who is spoken of as likely to rival in attraction Mdlle. Vanzandt, and Mdlle. Rolandt—a native of Gratz, near Vienna, and a pupil of Madame Viardot—who it is said will undertake the part of the Queen of Night in the 'Flauto Magico.'

The fifty-sixth season of the Concerts du Conservatoire, Paris, commenced on Sunday week under the direction of M. Deldevez. The works produced were Beethoven's Symphony in D, Saint-Saëns's cantata 'La Lyre et la Harpe,' the ballet airs from Gluck's 'Iphigénie en Aulide,' a chorus from Mozart's 'Cosi fan Tutte,' and Berlioz's Overture to the 'Carnival Romain.'

Gounod's latest opera, 'Le Tribut de Zamora,' was performed for the first time in Antwerp on the 17th ult. under the direction of the composer, who was most enthusiastically received on taking his place at the conductor's desk.

We last week announced that Herr Pollini had secured the performing right for Germany of M. Gounod's 'Redemption.' Our statement was made on the usually trustworthy authority of *Le Ménestrel*. We are requested by the publishers of the work to say that Herr Pollini's right is secured only for Hamburg and Berlin for a limited period.

DRAMA

'LE ROI S'AMUSE.'

Paris, Nov. 23, 1882.

I felt that the revival at the Théâtre Français of 'Le Roi s'Amuse,' on the fiftieth anniversary of its original production, must be one of the most interesting literary events of our time, and so I found it to be. Victor Hugo was there, sitting with his arms folded across his breast, calm but happy, in a stage box. He expressed himself satisfied and even delighted with the acting. The poet's appearance was fuller of vitality and more Olympian than ever. Between the acts he left the theatre and walked about in the square, leaning on the arm of his illustrious poet friend and family connexion, Auguste Vacquerie, to whose kindness I was indebted for a seat in the *fauteuils d'orchestre*, which otherwise I should have found to be quite unattainable, so unprecedented was the demand for places. It is said that a thousand francs was given for a seat. Never before was seen, even in a French theatre, an audience so brilliant and so illustrious. I did not, however, see any English face I knew save that of Mr. Swinburne, who at the end of the third act might have been seen talking to Hugo in his box. Among the most appreciative and enthusiastic of those who assisted at the representation was the French poet who perhaps, in the nineteenth century, stands next to Hugo for intellectual massiveness, M. Leconte de Lisle. And I should say that every French poet, and indeed every man of eminence, was there.

Considering the extraordinary nature of the piece, the cast was perhaps as satisfactory as could have been hoped for. Fond as is M. Hugo of spectacular effects, and even of *coups de théâtre*, no other dramatist gives so little attention as he to the idiosyncrasies of actors. It is easy to imagine that Shakspeare in writing his lines was not always unmindful of an actor like Burbadge. But in depicting Triboulet, Hugo must have thought as little about the specialities of Ligier, who took the part on the first night in 1832, as of the future Got, who was to take it on the second night in 1882. And the same may be said of Blanche in relation to the two actresses who successively took that part. This is, I think, exactly the way in which a dramatist should work. The contrary method is not more ruinous to drama as a literary form than to the actor's art. To write up to an actor's style destroys all true character-drawing; also it ends by writing up to the actor's mere manner, who from that moment is, as an artist, doomed. On the whole, the performance wanted more glow and animal spirits. The François I. of M. Mounet-Sully was full of *verve*, but this actor's voice is so exceedingly rich and emotional that the king seemed more poetic, and hence more sympathetic to the audience, than was consistent with a character who in a sense is held up as the villain of the piece. The true villain here, however, as in 'Torquemada,' 'Notre Dame de Paris,' 'Les Misérables,' and, indeed, in all Hugo's characteristic works, is not an individual at all, but Circumstance. Circumstance placed Francis, a young and pleasure-loving king, over a licentious court. Circumstance gave him a court jester with a temper which, to say the least of it, was peculiar for such times as those. Circumstance, acting through the agency of certain dissolute courtiers, thrust into the king's very bedroom the girl whom he loved and who belonged to a class from whom he had been taught to expect subservience of every kind. The tragic mischief of the rape follows almost as a necessary consequence. Add to this the fact that Circumstance contrives that the girl Maguelonne, instead of aiding her more conscientious brother in killing the disguised king at the bidding of "the client who pays," falls unexpectedly in love with him; while Circumstance also contrives that Blanche shall be there ready at the very spot at the very moment where and when she is imperatively wanted as a substituted victim, and you get the entire *motif* of 'Le Roi s'Amuse,'—man enmeshed in a web of circumstance, the *motif* of 'Notre Dame de Paris,' the *motif* of 'Torquemada,' and, in a certain deep sense, perhaps the proper *motif* in romantic drama. For when the *vis matrix* of classic drama, the supernatural interference of conscious Destiny, was no longer available to the artist, something akin to it—something nobler and more powerful than the stage villain—was found to be necessary to save tragedy from sinking into melodrama. And this explains so much of the complexities of Shakspeare.

In the dramas of Victor Hugo, however, the romantic temper has advanced quite as far as it ought to advance, not only in the use of Circumstance as the final cause of the tragic mischief, but in the use of the grotesque in alliance with the terrible. The greatest masters of the terrible-grotesque till we get to the German romanticists were the English dramatists of the sixteenth and the early portion of the seventeenth century, and of course by far the greatest among these was Shakspeare. For the production of the effect in question there is nothing comparable to the scenes in 'Lear' between the king and the fool—scenes which seem to have very early in his life struck Hugo more than anything else in literature. Outside the Elizabethan dramatists, however, there can be no doubt that (leaving out of the discussion the great German masters in this line) Hugo is the greatest worker in the terrible-grotesque that has appeared since Burns. I need only point to Quasimodo and Triboulet and compare them not merely with such attempts in this line as those of writers like Beddoes, but even with the magnificent work of Mr. Browning, who though far more subtle than Hugo is without his sublimity and amazing power over chiaroscuro. Now, the most remarkable feature of the revival of 'Le Roi s'Amuse,' and that which made me above all other reasons desirous to see it, was that the character of Triboulet was to be rendered by an actor of rare and splendid genius, but who, educated in the genteel comedy of modern France and also in the social subtleties of Molière, seemed the last man in Paris to give that peculiar expression of the romantic temper which I have called the terrible-grotesque.

That M. Got's success in a part so absolutely unsuited to him should have been as great as it was is, in my judgment, the crowning success of his life. It is as though Thackeray, after completing 'Philip,' had set himself to write a romance in the style of 'Notre Dame de Paris' and succeeded in the attempt. Yet the success of M. Got was relative only, I think. The Triboulet was not the Triboulet of the reader's own imaginings, but an admirable Triboulet of the Comédie Française. Perhaps, however, the truth is that there is not an actor in Europe who could adequately render such a character as Triboulet.

This is what I mean: all great actors are divisible into two groups, which are by temperament and endowment the exact opposites of each other. There are those who, like Garrick, producing their effects by means of a self-dominance and a conservation of energy akin to that of Goethe in poetry, are able to render a character, coldly indeed, but with matchless verisimilitude in its every *nuance*. And there are those who, like Edmund Kean and Robson, "live" in the character so entirely that self-dominance and conservation of energy are not possible, and who, whensoever the situation becomes very intense, work miracles of representation by sheer imaginative *abandon*, but do so at the expense of that delicacy of light and shade in the entire conception which is the great quest of the actor as an artist. And if it should be found that in order to render Triboulet there is requisite for the more intense crises of the piece the *abandon* of Kean and Robson, and at the same time, for the carrying on of the play, the calm, self-conscious staying power of Garrick, the conclusion will be obvious that Triboulet is essentially an unactable character. I will illustrate this by an instance. The reader will remember that in the third act of 'Le Roi s'Amuse' Triboulet's daughter Blanche, after having been violated by the king at the Louvre, rushes into the antechamber, where stands her father surrounded

by the group of sneering courtiers who, unknown both to the king and to Triboulet, have abducted her during the night and set her in the king's way. When the girl tells her father of the terrible wrong that has been done to her, he passes at once from the mood of sardonic defiance which was natural to him into a state of passion so terrible that a sudden and magical effect is produced: the conventional walls between him, the poor despised court jester, and the courtiers are suddenly overthrown by the unexpected operation of one of those great human instincts which make the whole world kin:—

TRIBOULET (*faisant trois pas, et balayant du geste tous les seigneurs interdits*). Allez-vous-en d'ici!
Et, si le roi François par malheur se hasarde
A passer près d'ici, (*à Monsieur de Vermandois*) vous êtes de sa garde,
Dites-lui de ne pas entrer,—que je suis là.
M. DE PIENNE. On n'a jamais rien vu de fou comme cela.
M. DE GORDES (*lui faisant signe de se retirer*). Aux fous comme aux enfants on cède quelque chose.
Veillons pourtant, de peur d'accident. [*Ils sortent.*
TRIBOULET (*s'asseyant sur le fauteuil du roi et relevant sa fille*). Allons, cause,
Dis-moi tout. (*Il se retourne, et, apercevant Monsieur d Cossé, qui est resté, il se lève à demi en lui montrant la porte*) M'avez-vous entendu, monseigneur?
M. DE COSSÉ (*tout en se retirant comme subjugué par l'ascendant du bouffon*). Ces fous, cela se croit tout permis, en honneur! [*Il sort.*

Now in reading 'Le Roi s'Amuse,' startling as is this situation, it does not seem exaggerated, for Victor Hugo's lines are adequate in simple passion to effect the dramatic work, and the reader feels that Triboulet was wrought up to the state of exaltation to which the lines give expression, that nothing could resist him, and that the proud courtiers must in truth have cowered before him in the manner here indicated by the dramatist. In literature the artist does not actualize; he suggests, and leaves the reader's imagination free. But an actor has to actualize this state of exaltation—he has to bring the physical condition answering to the emotional condition before the eyes of the spectator; and if he fails to display as much of the "fine frenzy" of passion as is requisite to cow and overawe a group of cynical worldlings, the situation becomes forced and unnatural, inasmuch as they are overawed without a sufficient cause. That an actor like Robson could and would have risen to such an occasion no one will doubt who ever saw him (for he was the very incarnation of the romantic temper), but then the exhaustion would have been so great that it would have been impossible for him to go on bearing the entire weight of this long play as M. Got does. The actor requires, as I say, the *abandon* characteristic of one kind of histrionic art together with the staying power characteristic of another. Now, admirable as is M. Got in this and in all scenes of 'Le Roi s'Amuse,' he does not pass into such a condition of exalted passion as makes the retirement of the courtiers seem probable. For artistic perfection there was nothing in the entire representation that surpassed the scenes between Saltabadil and Maguelonne in the hovel on the banks of the Seine. It would be difficult, indeed, to decide which was the more admirable, the Saltabadil of M. Febvre or the Maguelonne of Jeanne Samary.

AT THE THÉÂTRE FRANÇAIS.

November 22, 1882.

Poet of pity and scourge of sceptred crime—
Titan of light, with scarce the gods for peers—
What thoughts come to thee through the mist of years
There sitting calm, master of Fate and Time?
Homage from every tongue, from every clime,
In place of gibes, fills now thy satiate ears:
Mine own heart swells, mine eyelids prick with tears
In very pride of thee, old man sublime!

And thou, the mother who bore him, beauteous France,
Round whose fair limbs what web of sorrow is spun!—
I see thee lift thy tear-stained countenance—
Victress by many a victory he hath won;
I hear thy voice o'er winds of Fate and Chance
Say to the conquered world: "Behold my son!"

THEODORE WATTS.

Dramatic Gossip.

A MORNING performance of 'The Rivals' to be given next Saturday at the Vaudeville Theatre, signifies, it may safely be assumed, that the run of 'Money' is almost over, and that the fitness of Sheridan's comedy to replace it is to be tried. Two features in the cast are new. These are the Captain Absolute of Mr. Neville and Mr. Thorne's Bob Acres.

THE long deferred opening of the St. James's Theatre is fixed for Saturday next, when 'Impulse,' the new five-act play of Bolton Rowe, will be given for the first time.

MADAME BERNHARDT-DAMALA will revisit London during next summer, and will play in a round of her favourite characters. She will be succeeded by Madame Judic, who, with a portion of the Variétés company, will appear in 'Lili,' the new *vaudeville* of MM. Hennequin and Millaud.

THE death is announced of M. Clément Caraguel, who succeeded Jules Janin as dramatic critic of the *Débats*.

RECENT revivals at the Parisian theatres include 'Le Courrier de Lyon,' at the Gaité; and 'Si jamais Je te Pince,' a three-act comedy of M. Labiche, at the Menus Plaisirs.

'LE VOYAGE À TRAVERS L'IMPOSSIBLE,' a dramatic adaptation of a novel of M. Jules Verne, has been given at the Porte Saint-Martin.

'MONSIEUR LE MINISTRE,' a comedy extracted by M. Jules Claretie from his romance of the same name, is to succeed 'Le Roman Parisien' at the Gymnase.

MISCELLANEA

"Farm" in Prof. Skeat's Dictionary.—Mr. Skeat derives our word "farm" from the A.-S. *feorm*, a feast, and *feorm* from a Low Lat. *firma*, a feast, a farm, a tribute, also a lasting oath, *firma* being connected with Lat. *firmus*, firm, durable. It is also asserted that this A.-S. *feorm* is spelt *ferme* in O.F.; that is to say, in Mr. Skeat's opinion the A.-S. *feorm* and the O.F. *ferme* are closely related as forms of one Low Lat. original *firma* (from *firmus*). Is this a correct account of the relation between the Anglo-Saxon and old French words? I think not. At any rate, it is inconsistent with the information furnished in Ducange (*s.v.*), where we find recorded two words spelt *firma*—terms primarily distinct in meaning, and differing wholly in origin, the F. *ferme* being derived from the one, the A.-S. *feorm* being the source of the other. In the first place we find *firma* (1), a late Latin substantive from *firmus*, rendered "juramentum, sacramentum, prædium alteri elocatum," the idea at the bottom of the term being, as Littré expresses it, "chose *ferme*, établie, convenue, une convention." This *firma* is without doubt the parent of the O.F. *ferme*. *Firma* (2) in Ducange is a barbarous word, rendered "victus, prandium," &c., not of Latin but of Teutonic origin, a Latinized form (used by English writers only) of the A.-S. *feorm* with the same meaning. According to Wedgwood and Leo, this *feorm* is a derivative of A.-S. *feorh*, vita, just as Lat. *victus*, food, is from *vivo*, *victum*. At all events, *feorm* is most probably a pure Teutonic word; it may be noticed that it occurs twice in 'Beowulf.' In the Latin versions of the Anglo-Saxon Laws the word *firma* occurs, (1) after the Conquest in the French sense of rented land, a domain, and (2) in the English sense of food, hospitality. See Schmid, 'Die Gesetze der Angelsachsen' (Glossar, *s.v.* "Feorm"). The O.F. *ferme*, farm, seems to have influenced the meaning of A.-S. *feorm* (see Æðelstan's Laws, *l.c.*, p. 130), and the French word is doubtless the immediate source of our English *farm*.

SAMPSON LOW, MARSTON & CO.'S *LIST.*

BOOKS SUITABLE FOR CHRISTMAS PRESENTS, ETC.

Imperial 8vo. very choicely bound in new satin-wood pattern, gilt edges, 28*s.*

The HISTORY of FASHION in FRANCE; or, the Dress of Women from the Gallo-Roman Period to the Present Time. From the French of M. AUGUSTIN CHALLAMEL by Mrs. CASHEL HOEY and Mr JOHN LILLIE. With 21 Coloured Plates after Drawings by F. Lix, and Tailpieces by Scott.

"Reproduced in the most sumptuous style. The cover itself, emblazoned with a hand-mirror and peacock's feather, is a marvel of taste; and the coloured plates, showing the dresses of the various epochs, are numerous and exquisite. The volume has not merely passing interest, but will be valuable as a book of reference."—*World.*

Large imperial 4to. in tasteful extra binding, gilt edges, 3*l.* 3*s.*

FLORENCE: its History. The Medici —The Humanists—Letters—Arts. By CHARLES YRIARTE. Translated by C. B PITMAN. Illustrated with 500 very fine Engravings.

"One of the handsomest books of the season....A marvel of artistic taste and skill."—*Glasgow Herald.*

"The most sumptuous gift-book of the season."—*Athenæum.*

Now ready, in 1 vol. crown 4to. cloth extra, gilt edges, 31*s.* 6*d.*; or in parchment binding, top gilt, uncut edges, 35*s.*

An ÉDITION DE LUXE of 'LORNA DOONE.' Mr. R. D. BLACKMORE'S Celebrated Novel. Superbly illustrated with the finest Wood Engravings of Exmoor and the neighbouring Scenery, after Designs by Mr. F. Armstrong. Also with Full-Page Engravings of Incidents and Characters in the Story by Mr W. Small and other Illustrations.

"A worthy edition of a fine work."—*World.*

"It is enriched with elaborate and delicately cut landscapes and figure designs, all drawn on wood and most carefully printed....Of the landscapes it is hard to say which is the most carefully and finely wrought; ....the beauty, pathos, and even the brilliancy which distinguish most of the views of the Exmoor region, the splendour of the skies, and the manifold veils of lights and shadows in the intermediate air."—*Athenæum.*

TAHITI. By Lady Brassey, Author of 'Voyage of the Sunbeam,' &c. Fcap. 4to. very tastefully bound, cloth extra, with 31 Autotype Illustrations, from Photographs taken by Colonel Stuart-Wortley, 21*s.*

Now ready, in 1 vol. 8vo. illuminated flexible covers, 21*s.*

ALDRICH'S POEMS. Holiday Edition. The Complete Poems of THOMAS BAILEY ALDRICH Finely Illustrated.

The RENAISSANCE of ART in ITALY. An Illustrated Sketch. By LEADER SCOTT, Author of 'Fra Botolemmeo,' 'A Nook in the Apennines,' &c. Comprising a brief History of the Rise of Italian Art in Verona, Lucca, Pisa, and Ravenna; its Development in Bologna, Siena, Orvieto, and Padua; and its Culmination in Florence, Rome, and Venice. [*Ready.*

This work has been printed with great care on toned paper, medium quarto, and is handsomely bound in cloth, with gilt edges. Price One Guinea and a Half. Embellished with upwards of One Hundred and Fifty Engravings.

MODERN ETCHINGS of CELEBRATED PAINTINGS. Containing Examples of the Etched Work of Unger, Rajon, Waltner, Flameng, and other Masters of the Art, after Pictures by Raphael, Velasquez, Rubens, Rembrandt, Reynolds, Meissonier, and other well-known Painters. With an Essay by J. W. MOLLETT, B.A. Medium 4to. handsomely bound in cloth, gilt top, price 1*l.* 11*s.* 6*d.*

An *EDITION DE LUXE*, on hand-made paper, with proofs of the Etchings printed on India paper. Limited to 50 Copies. Super-royal 4to. half-bound morocco, gilt top, price 3*l.* 3*s.*

ART and ARCHÆOLOGY: an Illustrated Dictionary of the Terms used in Art and Archæology. By J. W. MOLLETT, B.A. With about 750 Wood Engravings. Small 4to. strongly bound in cloth, 15*s.*

NEW NOVELS.

The LADY MAUD. By W. Clark RUSSELL. 3 vols. 31*s.* 6*d.*

"'The Lady Maud' is an exceedingly exciting narrative....Mr. Russell's powers of description of sea and skyscape seem as endless as his subject. They are extraordinarily vivid."—*Daily News.*

WEIGHED and WANTING. By Dr. GEORGE MAC DONALD. 3 vols. 31*s.* 6*d.*

TWO on a TOWER. By Thomas HARDY. 3 vols. 31*s.* 6*d.*

Being the story of the unforeseen relations into which a lady and a youth many years her junior were drawn by studying the stars together; of her desperate situation through generosity to him; and of the reckless *coup d'audace* by which she effected her deliverance.

LITERATURE

Some Account of my Life and Writings: an Autobiography. By the late Sir Archibald Alison, Bart. Edited by his Daughter-in-law, Lady Alison. 2 vols. (Blackwood & Sons.)

Sir Archibald Alison was evidently a happy man. A sense of serene satisfaction pervades these pages. Some of the greatest deeds have been done by men whose lives in their own eyes and in the opinion of the world were a partial failure. Like the old prophets they have had a message to deliver, they have cried vainly in the wilderness, they have fought in solitude with the foul fiends of doubt and unbelief, and have returned sorrow-stricken from the conflict. Alison, on the contrary, although he cannot be said to have swum with the tide, had no misgivings or perplexities. The opinions he formed in youth he held as an old man, and every event of the day served to ratify his judgments. He was never discouraged by neglect, being always certain that his "time would come," and in fighting against free trade and reform—"the most destructive measures ever adopted by the country"—he cared not who might be his foes nor how powerful their arguments. Like Scott's Fitz-James he was ready to face a legion:—

> Come one, come all, this rock shall fly
> From its firm base as soon as I.

"I was sustained," he says, in allusion to his first speech,

> "by a secret confidence in my own powers which, without, I trust, producing any external display of it in manner or conversation, relieved me of disquietude. That calm conviction is one of the most valuable gifts of nature, for it removes equally the perturbation which may produce failure and the vanity which may disfigure success."

One respects courage even when combined with illimitable assurance, and it must be owned that Alison's faith in himself was not wholly unreasonable. He fought his way to fame and fortune with heroic perseverance, and his failings were not those of a weak man.

Archibald Alison came of a good stock. His father, an eloquent preacher, and the author of a once celebrated book on 'The Nature and Principles of Taste,' was the son of a younger son of a good Scotch family; his mother was a daughter of Dr. John Gregory, the author of 'The Father's Legacy to his Daughters,' "which has been translated into all the languages of Europe." Miss Gregory, having lost her mother in early life, was received with "unbounded affection" by Mrs. Montagu of blue-stocking notoriety, under whose roof, it is needless to say, she met the chief literary men of the time. The girl, who was clever and a beauty, had the offer of several brilliant alliances, but resisted them all in favour of the Rev. Archibald Alison. The young couple lived for eight years at Kenley, in Shropshire, "blessed with domestic happiness and a family of six children,"—blessed also, we may add, with the emoluments of a curacy, a vicarage, and a rectory, all of which Alison retained upon becoming minister of an episcopal chapel in Edinburgh. The son writes with unbounded admiration of his father, who is not only praised for high culture and sweetness of disposition, but also for the earnest performance of his clerical duties. Yet we are told that it was generally his habit to stay in bed reading or thinking till two o'clock in the afternoon. Archibald the younger was a precocious youth. At seventeen he resolved to write a book on population in refutation of Malthus, and no sooner was the resolution formed than it was put in execution. "I immediately left the house," he writes,

> "to purchase a book for my MS., and, too impatient to walk, I ran down Bruntsfield Links to the Meadows on my way to Edinburgh, with my head swimming with visions, till fatigue and want of breath compelled me to stop. I returned with a large quarto volume under my arm, and the same evening commenced my labours, which I continued assiduously at every leisure moment through the whole of that summer and the following winter."

One large volume did not suffice the youth; his views upon population required three more of equal size. By the wise advice of his father Alison delayed publication until his argument was matured and larger knowledge acquired. The purpose, however, was never lost sight of; to refute Malthus was his "charge in life," and he relates that on the first vacation after his marriage he recommenced his book on population. Persistent determination, to his credit be it said, marked Alison's whole career. If it were true—which it is not—that genius is the power of taking infinite pains, then must the historian of Europe be accredited with genius. From youth to old age he did nothing by halves, nor did he begin any work which failed, according to the writer's standard, to reach a well-rounded conclusion. No author or student, it may be safely said—not even Southey or Scott—ever laboured with more energy, and, like Scott, Alison had an extraordinary amount of physical vitality. On one occasion he walked thirty-five miles in nine hours; on another, while a member of the yeomanry cavalry, after a drill of six hours on Portobello sands he dined, drove twenty-one miles to a ball, danced all night, drove back, bathed in the sea, and went to another six hours' drill, "without either being in bed or experiencing the least fatigue." Alison's right-hand man in the front rank in this mimic war was Lockhart, and we may observe parenthetically that fourteen or fifteen years earlier Lockhart's great father-in-law was playing the same part on the sands of Portobello, and that there, walking his black horse within the beating of the surge, or going off "as if at the charge, with the spray dashing about him," he composed his battle of Flodden.

Alison has many faults as an historian, but apart from his style, which he allows was exceedingly careless, he does not seem to have spared himself any labour in the prosecution of his work. He had travelled much; had visited, we believe, all the battle-fields he describes; had referred to every source of information, foreign as well as English; had conversed with many of the actors in the events which he records; and before the completion of a work that threatened to be interminable had expended 5,000*l.* on the books needed for the compilation. His readiness of acquisition was extraordinary; what he lacked was the power to use his facts wisely and to judge of them with the wide sympathy and judicial impartiality of a philosophical historian. Alison admits that his vast narrative is unconscionably long, but he is not aware that he preaches and proses, and seems to regret that there was not space enough in his 'History' for additional "considerations." The success of the original work and of the Continuation shows a courage on the part of the public almost equal to that of the author. Thousands of copies were sold, and the book was translated into French, German, and Arabic. The favour it met with in England was not due to the press. Even the principal organ of the Tories never reviewed the 'History' at all, nor mentioned it except in terms of disparagement, and Sir Archibald considers that this reticence in regard to a work which when he wrote had gone through ten editions was owing to personal causes—Macaulay's arch-enemy Croker being also the enemy of Alison. But why, he asks, were the Liberal journals also antagonistic? There could be no personal feeling here, for he did not know one reviewer on either the daily or the periodical press. There must, however, have been a cause for this animosity, and therefore, "after much consideration," he finds it in "the increasing Liberal spirit of the age, and the animosity excited by the sight of an author enjoying a certain amount of popularity, and steadily resisting the growing political feelings of the majority." This is characteristic of Alison. It never occurred to him that the opinions of a man who believed slavery to be unavoidable, who saw in the Reform Bill an instrument of corruption and in free trade the gradual destruction of England's supremacy, who had grave doubts as to the advantage of educating the common people, and who believed that the whole public debt which oppresses the civilized world was the work of democracy, might justly meet with silent contempt on the part of the Conservative press and with something like "animosity" from the author's political opponents.

The bright side of this autobiography is not to be found in the reiteration of obsolete or doubtful political dogmas. Its interest consists in the illustration of unwearied energy crowned with success; in the description, occasionally from a fresh

standing-point, of men who now belong to history; and in the revelation of a character blessed, despite its limitations, with many invigorating and manly qualities. The great houses to which Alison was welcomed as a guest or a friend included several of the most illustrious in the kingdom, and in some of them he was a frequent visitor. His gossip on such occasions is generally marked by good taste, and if there be here and there a touch of scandal it must be remembered that the narrative was not written for immediate publication, and has been kept in the family for twenty years. With regard to statesmen and men of letters Sir Archibald is outspoken enough. Like every one who knew Scott, he does justice to his simplicity and manliness of character, but he considers Wilson superior to Scott in originality—a judgment as unsound as that passed on Mrs. Hemans, who is said to be "decidedly one of the first lyric poets which England has produced." In company with Basil Hall, Alison visited Byron at Venice, and observes, as other critics have done, that he was always aiming at effect: "He seemed *blasé* with every enjoyment of life, affected rather the successful *roué* than the great poet, and deprecated beyond everything the cant of morality." Alison was under the illusion that he himself possessed one great requisite of the historian, a vivid imagination—a gift in his judgment denied to Hallam. He finds fault with that writer and also with Macaulay for talking incessantly and on subjects uninteresting to their auditors. "Hallam," he observes,

"did not strike me from his conversation any more than he does from his writings as a great man. His reputation, like that of all men brought forward or taken up by a party, was probably more considerable with his contemporaries than it will be with posterity."

Lord Macaulay is allowed to have possessed imagination and a prodigious memory, but in spite of his gifts he could not make himself agreeable in society:—

"To women, even the most highly gifted, he was generally distasteful, notwithstanding all his talents and acquirements. I have often heard him styled, by those who in general appreciated conversation the most, a perfect bore. I must own that I have sometimes seen him to be such in company and admitted to be so by his greatest admirers."

If Hallam and Macaulay talked too much, Disraeli was too silent and made no attempt to shine in company. He needed drawing out, and this feat Mr. Wordy on one occasion successfully accomplished:—

"He was seated beside a handsome lady of rank, but they did not get on, and during half the time of dinner he never said a word. I was directly opposite, and seeing this I addressed a question to him about Egypt in reference to his brilliant Oriental descriptions in 'Tancred,' which I had just been reading. The flint struck fire; Disraeli wakened up, and began a series of pictures of the East, its scenery, manners, and ideas, of the highest interest, and even more striking than those contained in his splendid novels."

Of another and greater novelist Alison speaks less favourably. In 1848 Dickens spent two days at Possil, the home of the historian when he left Edinburgh for the post of Sheriff of Lanarkshire. During his stay in Scotland Dickens spoke at the Glasgow Athenæum, and to make a brilliant speech was one of Dickens's accomplishments; yet Alison observes that, "with all his talents, he had neither the general information nor the oratorical powers requisite for distinguished success on such an occasion." Of Dickens's writings he knew little, and remarks, foolishly enough:—

"I never had any taste for those novels the chief object of which is to paint the manners or foibles of middle or low life. We are unhappily too familiar with them: if you wish to see them you have only to go into the second class of a railway train or the cabin of a steamboat."

The truth is Alison was sadly wanting in the sense of humour and had at the same time a high sense of respectability. Humourists, as we all know, from Shakspeare to Charles Lamb, prefer nature to respectability, and get as near to nature as they can by observing and painting "the manners or foibles of middle or low life." Sir Archibald discovered in the burgher class only the low vices of selfishness and cowardice. He seemed to have a fear lest a writer on population and the author of twenty-eight volumes of history might create a little awe or a painful sense of seriousness in general society, and his device for removing this feeling and placing himself on a level with common humanity is described by the writer as follows (he was paying his first visit to Sir E. Bulwer at Knebworth):—

"Sir Edward received us in the kindest manner, and we sat down at seven to a sumptuous dinner to which a number of the neighbours had been invited. I soon saw that he was a little at a loss on what subject to address me; judging from my writings, in direct opposition to the fact, that my conversation would be of a grave and serious cast. I determined in consequence to put him at his ease, as I constantly did in such cases, by saying something ridiculous; and as the conversation had turned on the indelible character impressed, in respect to both external features and internal qualities, by the influence of race, I said to him, looking at his light hair and huge red moustaches, 'I am very glad, Sir Edward, that you and I belong to the same race; we are both Danes or Normans; we shall leave to the black-haired gentlemen the care of pleasing the ladies, and we will confine ourselves to the easier task of conquering the world; and if we do I think we shall not find the ladies very far behind.' He laughed at this unexpected sally, which probably flattered in more ways than one his secret thoughts, and from that moment we became great friends."

Laughter arises from different causes, and that laugh of Bulwer's is suspicious; but that two such men should have found ample topics of conversation and many points of sympathy cannot be doubted, and we can believe Sir Archibald when he adds:—

"After the rest of the company went away, Aytoun, Blackwood, and I, who were living in the house, began a conversation with Sir Edward, which continued from ten till two in the morning, and to no four hours of my life do I look back with more pleasure as a specimen of intellectual strength and varied genius."

The man who relates the story of his life is generally at a disadvantage, since he cannot without some confusion of face sound his own trumpet. In reading this autobiography, on the contrary, the disadvantage is on the side of the reader, for Sir Archibald rarely mentions a mistake in the course of his active life, while his achievements and good fortune call for frequent, and indeed joyous, record in these pages. He was eminently happy in his home and had good reason to be proud of his sons; he was happy in his literary career, and would have been perfectly blessed had it not been for those evil spirits the reviewers; he was happy in his official position as Sheriff of Lanarkshire, which involved no small responsibility and labour; and he was supremely happy in making the most of such opportunities of distinction as fell to his lot as sheriff. One illustration of this may be quoted. In 1843 the eldest son of the Duke of Hamilton married the daughter of the Grand Duke of Baden. The young couple were escorted to Hamilton by the gentlemen and tenantry of the county on horseback.

"As sheriff of the county," writes Sir Archibald, "and an old friend of the family, I went at the head of the latter body and met the Princess when she alighted and received her father-in-law's salute at the foot of the great stair of his palace. A dinner was given the same day in the riding-school of the palace—a large room capable of accommodating five hundred persons — by the Duke to the tenantry and neighbours on the occasion. After dinner the Princess, with her mother-in-law, the Duchess, and her sister-in-law, Lady Lincoln, came into the orchestra, and the Duke requested me to propose the health of the bride. I did so, standing on the table immediately below the ladies; and when I concluded and the hall was ringing with acclamations, the bride stretched out her hand to me in token of gratification, which I, of course, immediately respectfully kissed. The Duchess and Lady Lincoln did the same, and met with the like reception; so that chance brought me into the extraordinary position of kissing the hand of a princess, a duchess, and a countess—all three beautiful women—at one time in the presence of five hundred persons. There is safety in numbers."

Before parting with a work which, despite many characteristic defects, deserves to be read not for amusement merely, but instruction, we may observe, though at the risk of moralizing like the historian himself, that Alison's narrative affords a striking example of what perseverance and directness of purpose can accomplish. At seventy he felt nearly as strong as at twenty-five, and he attributes this happy bodily condition to a variety of occupation. "Either the law or the literature singly," he writes, "would, I am persuaded, have ruined my health or terminated my life, but the two together saved both."

A History of the Papacy during the Period of the Reformation. By M. Creighton. 2 vols. (Longmans & Co.)

If literally interpreted, the title given by Mr. Creighton to the work of which the present volumes are but the first instalment defines pretty closely the exact nature of his subject. This is not, as the reader almost instinctively expects, either a history of the Reformation or a history of the Popes during whose reigns the Reformation took place. It is simply the history of the Papacy—that is to say, of the Roman Curia—during the Reformation period. So far the book answers perfectly to its title; and in working out the subject Mr. Creighton shows learning, accuracy, and clearness. But the question arises, Is not such a book with a subject thus limited very imperfect? and,

secondly, Did Mr. Creighton really start with the intention of making it what it has turned out? or did he wish to produce something different, and find himself forced to restrict his subject in the course of elaboration, owing to defects in his method of treatment? The excessive narrowness of his subject can be easily explained by a simile. The Papacy of the fifteenth and sixteenth century may be compared to a hill one of the slopes of which is called the Reformation, and the other is called the Renaissance, while the extreme and wedge-like crest belongs neither to the Reformation nor to the Renaissance, but to both equally. This narrow hill-top is what Mr. Creighton has chosen as his subject—the Papal Curia in its relations with Reformation and with Renaissance, and no more. He has described the theological and diplomatic business which, openly or underhand, the Papacy was forced to transact by the pressure of the religious and political movements of the times; but he has not explained the nature and origin of those movements. These two volumes (representing, it is to be presumed, about one-third of the whole work) might be described as the history of the relations of the Papacy during the first half of the fifteenth century towards a variety of inscrutable historical changes. They contain most minute accounts of the Councils of Pisa, of Constance, and of Bâle; of the negotiations for ending the great schism, for crushing the Hussites, for assisting the Greek and Latin churches; and of the efforts towards commencing a crusade against the Turks. But of the great changes in the constitution of nationalities, in the mode of thinking and feeling of the men of the later Middle Ages—of all that can, in the modern sense, be called the history of Christendom during the fourteenth and fifteenth centuries—the reader learns nothing. The return of the Popes from Avignon, the Bohemian rebellion, the abortive attempts at reform, the final victory of the Papal autocracy over the oligarchical parliamentary system represented by the councils—all these events and concatenations of events, of which the minutest and most trivial details are given, were the result of so many alterations in the life and thought of men and nations; and Mr. Creighton, ignoring all this life and thought, leaves his reader either to discover for himself the causes of these events, or to accept these events as the quite fortuitous movements of so many unimportant political persons. The fact is that Mr. Creighton has been satisfied with laboriously and intelligently compiling a kind of vast digest of the documents and narratives made by the men who served the Curia in the fifteenth century, with reference to certain ecclesiastical and political squabbles, of the nature and importance of which they could not possibly have had the faintest idea, and which only posterity, by a study of mental and social conditions, has identified as the early manifestations of the great ethical, intellectual, and national movement which we call the Reformation.

As it is with ecclesiastical, so also is it with political history. Mr. Creighton gives with extraordinary clearness and minuteness a full account of the negotiations of the Popes of the late fourteenth and early fifteenth centuries with the various sovereigns of Europe, with France, Germany, Aragon, Naples, Florence,—nay, even with single Italian princelets like Sigismondo Malatesta and isolated *condottieri* like Braccio or Piccinino. But of the conditions which caused foreign nationalities to put forth the claims the repulse of which by the Roman Curia occupies page after page; of the political and social organization or disorganization which produced the complications in Italian, nay, even in Roman municipal affairs, which one Popo after another sought to remedy and succeeded in making worse,—no sufficient account is supplied. Indeed, had one not gained from other sources some knowledge of the state of things in Italy and elsewhere from the date of the return from Avignon to the death of Pius II., one would have no reason to suspect that Italy was during that time in a condition, political, social, and intellectual, at all differing from that of England, France, or Germany; and if Mr. Creighton has not in the present volumes prepared any kind of explanation for the attitude towards Julius and Leo of men like Hutten and Luther, he has not either, in the domain of mere political history, put his readers in a position enabling them to understand the schemes and achievements of the Borgias and Medicis.

Mr. Creighton has, in short, been satisfied with giving his readers a rather unsatisfactory thing, an excellent history of the Roman Curia—a complete description of the crest of the historical hill, as if the crest existed without the slopes. We have said he has been satisfied; perhaps this is a mistake. Perhaps, as we before hinted, Mr. Creighton may not have carried out his own original plan of a history of Catholicism during the Reformation and the Renaissance, prevented from so doing by the accident of having set about his work in a wrong way. No one can fail to be struck by the extremely antiquated mode not only of conceiving history, but of writing it, which characterizes this book, and which strongly suggests that Mr. Creighton must have looked about him for a subject for an historical work, and even begun working upon it, moved by the desire of writing something or other, and not, like most modern historians, incited by a fondness for one period in particular. Perhaps this supposition is erroneous, but it is difficult to believe that a reaction against the modern style of historical writing, with its excessive discursiveness, its constant insistence on social and intellectual conditions, and its perhaps excessive sacrifice of regular narration of events to the presentation of an historical picture, could have gone to the length of making Mr. Creighton deliberately neglect the study of social and intellectual conditions, eschew all attempt at showing his readers the life of a specified time, and limit his history to the recital of bare facts. Again we premise that we may be mistaken, but it is difficult to conceive that disapprobation of the system of painting characters in the course of historical narration, which certain living historians have certainly abused, can have induced a man appreciative of modern methods to finish up each chapter with a little set "character" of a deceased actor in the historic drama; just as it is impossible to conceive that it is from deliberate hostility to picturesque writing that Mr. Creighton has penned the following sentences:—

"The very appearance of Cardinal Correr seemed to carry conviction: he was tall, but so thin and worn that he seemed to be but skin and bones."

"Giovanna's new favourite, Caraccioli, was looking about for some means of getting rid of Sforza, whose *manly frame* might soon prove too attractive to the susceptible queen."

Similar also are the description (suggestive of a certain absence of features) of Braccio as possessed of "an oval face that seemed too full of blood—yet with a look of dignity and power"; and the mysterious account of the injury done to a favourite cardinal of Eugenius II., which runs briefly:—"Suddenly the drawbridge was raised, and Vitelleschi wounded in three places." And no one can deny that Mr. Creighton must indeed have set his face against the dramatic and prophetic manner in which we are accustomed to treat the Popes of the Renaissance, when he remarks upon the elevation of Alfonso Borgia that the family of this prelate were destined in the Papal court "to play an important part."

As might be expected, Mr. Creighton rarely oversteps the limits of his own subject, and consequently of his thoroughly trustworthy information. We may, however, notice his remark that (about the time of Dante), while Italy was turning to classical antiquity,

"the Teutons turned for literary inspiration to nature and to the legendary heroes of their early days.....Teutonic literature was national, and aimed at expressing the rude aspirations of the present in the forms of a legendary past."

The fact happens to be exactly the reverse. Teutonic, *i.e.* German, literature was during its great mediæval efflorescence very much less national than was Italian literature. With the exception of the final re-editing of the Nibelungen legends, the poets of Germany — Wolfram, Gottfried, Ulrich, Walther, Frauenlob, Konrad v. Würtzburg, and Heinrich v. Ofterdingen—were either entirely absorbed in experimentalizing on the most artificial lyric poetry, probably borrowed from abroad, or were treating afresh the tales of Virgil, Dares, and Dictys, and the epics of the Arthurian cycle which had come to them from France or Provence.

Before closing it is but fair to say that, disappointing as must be Mr. Creighton's book to those who expected a history in the modern sense either of the Papacy or of the Reformation, it yet possesses a distinct value and a certain novelty considered as what it really is—a history of the Papal Curia during the fifteenth century; and it will prove not only interesting but instructive to such readers as are already familiar with the Reformation or the Renaissance, enabling them to follow in a clear and business-like way disputes and negotiations which are apt to be rather vaguely set forth in the books of the modern historians.

Skobeleff. By V. J. Nemirovitch-Dantchenko. (St. Petersburg, Devrien.)

This book does not profess to be a biography of the celebrated general whom Russia lately lost, but rather a portrait accompanied by anecdotes. In trying to depict Skobeleff as he walked and talked the author has had to contend with difficulties of

which English readers can have but a faint idea. There were, first of all, the press laws to be encountered. The memoir had to be so written that the censor should find nothing to condemn in it. There were private individuals whose feelings had to be spared, and their relations with the "White General" ignored. And last, but not least, there was that many-headed monster to be propitiated, which exists even in countries where there is no freedom of the press—public opinion. Hampered by these obstacles it was hardly to be expected that the book could prove satisfactory, and indeed it is not. It abounds in padding, and requires much reading between the lines. Still the main object of the author's labours has been achieved, and a fairly life-like portrait of the general will impress itself on the reader's mind.

Mr. Nemirovitch-Dantchenko is particularly qualified for his task, as he was a personal friend of Skobeleff's, and was the correspondent of a Russian newspaper during the campaign of 1877–78. He admires his hero inordinately, and (possibly for better stage effect), in contrasting him with his surroundings, distributes the lights and shades with so partial a hand that the general appears as almost the only brave man in the Russian army, a proposition which it does not require the acumen of a Euclid to pronounce absurd.

Skobeleff has been called the poet of war; perhaps it would be more accurate to define him as the military Byron of Russia. A more daring, a more insubordinate, and a more original mind it has not been the fate of Europe to see for many a long day. If we want to find his equal it is almost necessary to go back to the times of Charles XII., for we shall not find him within the limits of our conventional nineteenth century. He delighted in battle, yet confessed frequently that it was not the bubble reputation, but a soldier's grave, which he sought at the cannon's mouth. He went forth to battle clad in his newest and brightest uniform, mounted on his famous white charger, and waving his white cap in the air. Skobeleff was a wonderful military artist. He must have studied the soldier closely to have acquired so accurate a knowledge of his heart. On one occasion, at the third battle of Plevna, he met his troops flying panic-stricken back to the camp. On seeing him they drew up and saluted. "Ah, my fine fellows," he exclaimed, "you have fought like lions!" The troops recovered their self-respect. Seeing the effect his words had produced upon them, Skobeleff pretended only then to have discovered that they were without their muskets. "Where are your muskets?" he shouted. No one durst answer. "Cowards! I do not want to command such dogs as you. Come, pick up your muskets, and follow me at once!" and, proceeding in the direction where the Turkish fire was thickest, he put them through their facings as though they were raw recruits drilling in the quiet back yard of a provincial barrack. When they had gone through their evolutions he led them against the enemy, and not one of them thought of running away.

Some of the most readable passages in the book are those where Skobeleff and his father are brought together. The former was a spendthrift, the latter a miser. When the Russian army was preparing to cross the Danube it was one of Skobeleff's amusements to go out reconnoitring, and the Turks seem to have singled him out from the first for their particular attention, showering their shots on him whenever he appeared. Sometimes his father would accompany him on these expeditions and reprove him for exposing himself. When the old man's displeasure had reached its height, young Skobeleff would turn laughingly to his companions and say, "Gentlemen, would you like to see my father leave us at once? I can conjure him away at any moment"; and then, addressing his father, he would complain of his penniless condition, in confirmation of which he would turn his pockets inside out and ask him to replenish them. "Ough!" the old general would mutter; "you are always wanting money. I have none myself," and would morosely ride away. The charm was never found to fail. Most of the money Skobeleff had went to his comrades in arms and the soldiers under him. But he was by no means an anchorite, and was fond of jovial company and a bountiful table. He was a soldier first, however, and a man of pleasure afterwards. He never formed any romantic attachments, because he considered that the soldier's heart must remain indifferent to the blandishments of love and unsoftened by the luxury of a home. His whole life was a campaign. He has been reproached with foolhardiness and bravado, but Mr. Nemirovitch-Dantchenko's evidence goes to show that this daring was indispensable to his success, as his troops were young and inexperienced, and required a bold and resolute leader. Nevertheless, in another part of his work he admits that Skobeleff courted death, and hints darkly at the intrigues, jealousies, and petty meannesses of his fellow generals which embittered his life. Indeed, an erratic genius like Skobeleff must have had a startling effect on the pedantic staff of the autocrat's army. The estimation in which he was held by the higher grades is well illustrated in the following anecdote.

About eighteen months after the Russo-Turkish war Mr. Nemirovitch-Dantchenko was on his way to Moscow, his only travelling companion being a general. This personage eyed our author with the contemptuous scorn peculiar to Prussian and Russian military men when they are so unfortunate as to be brought in contact with civilians. After a time he relaxed, however, and condescended to enter into conversation. It came out that he had been in the war. Yes, he had been in the war, but had received no decoration. Why not? Oh! he had not had enough sixpences. Not enough sixpences? No, not enough for those newspaper correspondents. Sixpence a line was what they charged. That was the way to get promotion and orders. The conversation then turned on Skobeleff. The general had known him—a drunken sot! All Skobeleff's fine deeds and bravery had been invented by that fellow Nemirovitch-Dantchenko. He had got drunk one day, and the idea came into his head. He made a good thing of it, too. Then the general knew Nemirovitch-Dantchenko personally? Oh, yes! He had known him well — had seen him rolling about drunk. The civilian ventured to say that he had heard Nemirovitch-Dantchenko was abstemious—almost a teetotaler, in fact—but was flatly contradicted. When they arrived at their destination Nemirovitch-Dantchenko could contain himself no longer. "Most pleasant chat we have had together. May I have the honour of learning your name?" Cards were exchanged. "Why," said the general, "your name is Nemirovitch-Dantchenko! You are not the man who—?" "Yes, the very man." The general disappeared, and Mr. Nemirovitch-Dantchenko has never had the opportunity of renewing his pleasant acquaintance.

Once a member of the Corps Diplomatique asked Skobeleff whether he never felt afraid. The reply is worthy of quotation. "You see, my dear sir," he said,

"you have the *right* to be a coward; a private soldier *may* be a coward; a subordinate officer even can be *excused* for possessing the instinct of self-preservation. But from the commander of a company upwards no justification for cowardice is possible. In my opinion a coward-general is a contradiction in terms, and the less such contradictions are tolerated the better."

That Skobeleff was a general of genius few will now gainsay; and that he was no politician is almost the logical consequence. But it would appear from the book before us that he was far from being an unqualified admirer of autocratic institutions, and his sympathy with the people seems to have been much stronger than his respect for authority.

The work is embellished with portraits of the general and his father; perhaps the most pleasing of these is the picture of Skobeleff as a child.

The Epic of Kings: Stories retold from Firdusi. By Helen Zimmern. With Two Etchings by L. Alma Tadema, A.R.A., and a Prefatory Poem by Edmund W. Gosse. (Fisher Unwin.)

This is a paraphrase in measured prose, based entirely upon Mohl's French translation, of the earlier portion of what Miss Zimmern calls "the immortal epic of Firdusi." It is singular, by-the-by, that the French critics should call the 'Shāh Nāmeh' an epic when it was they themselves who invented the name of "poésie cyclique" to designate precisely such poems as this—poems whose authors, "sans emprunter de la poésie l'art de placer les événements pour les faire naître les uns des autres avec plus de merveilleux, en les rapportant tous à une même action, suivent l'ordre naturel et méthodique de l'histoire ou de la fable."

In discussing the 'Nibelungenlied' on a former occasion we divided all epics into the epic of art and the epic of growth, and under neither of these divisions could we find a place for a cyclic poem like the 'Shāh Nāmeh,' in which, though there is all the self-conscious redaction of writers like Virgil, there is none of the artistic evolution of a central thought which is essential to the epic of art. Indeed, Miss Zimmern does not appear to have studied the subject of the true epic in its relation to cyclic poetry on the one hand and to mere narrative poetry on the other. However, the carefulness and intelligence she displays in her selections from the 'Shāh Nāmeh,' no less than in her graceful renderings of them, are deserving of high praise.

Considering the difficulty, too, of working in the medium she has chosen, the half-metrical prose of the sixteenth century (which she calls "the simple language of the prose of Shakspeare and the English Bible"), she must be allowed to have been not unsuccessful. We have, however, on a former occasion pointed out that what we then called Bible rhythm is *not* "the language of the prose of Shakspeare" nor of any other writer, but in its movement is fundamentally like nothing else in our literature. It is, in fact, as Selden hints, the happy result of an endeavour on the part of the translators of the Old Testament to reproduce the metrical bars of the Hebrew original in a language peculiarly fitted to reproduce those bars. There is probably no other movement in the world so fine as our Bible rhythm, and when it first appeared it was quite a new literary form. There are signs of a demand just now for a literary method that shall be metrical, and yet not dominated by the exigencies of recognized and complex form. It would be a sad thing, no doubt, for poetry if such writing as Mr. Walt Whitman's had any real vogue; but metrical passages such as occur in good measured prose—for instance, in M. Leconte de Lisle's admirable renderings of Greek poetry—are a very different thing, and certainly Miss Zimmern's translations in this volume can be read with great pleasure. The logical structure of modern prose would have added to the incredibility of such fabulous adventures as those of the 'Shāh Nāmeh.' But it is hard for a translator to have to get at Firdusi through M. Mohl, whose language is after all French—the most essentially rhetorical and therefore unpoetic language in Europe.

Miss Zimmern is filled with a genuine love of her subject, and she speaks of Firdusi in the same breath with Homer. "The 'Shāh Nāmeh,'" says she,

"is pervaded by an antique grandeur mingled with what might be called a modern spirit, but which is in reality the expression of its intense truth to human nature, the element that renders it of and for all time."

It is difficult to go so far as this. Nor indeed is the Persian muse fairly represented by the 'Shāh Nāmeh.' With the Persian poets, as with all others, "truth" is, no doubt, the final quest; but with them it is the truth of symbol, not the truth of representation, as with European poets. Hence the highest reaches of the Persian muse are to be found in the great parable epic of 'Youssuf and Zuleika,' and especially in the 'Sálámán and Absál' of Jami. Here, and not in the 'Shāh Nāmeh,' Persian poetry has a distinct and individual place, not only in Asiatic but in universal literature. It is, indeed, because Sufeyism (the ecstatic cultus of the beautiful intent underlying all "the shows of things") is the last and most perfect flower of all poetry that the Persian poets stand so high. What we ask of a literature is that it should give us something of its own. The worship of goodness and beauty—"the rose of the world and its perfume"—is the subject specially characteristic of Persian poetry, rather than the struggles of demigods and heroes whose exploits formed part of a mythology already half forgotten before Firdusi was born. What is wanted by our Western poetry, *blasé* and pessimistic, is the quality of which Persian poetry has so much to give—Sufeyism.

Miss Zimmern seems to think, with Sir William Jones, that Asiatic mythological systems have now a chance of competing with the Hellenic in the poetic methods of modern Europe; and hence this paraphrase seems to have been undertaken. We will state in few words our objections to the view. "Without derogating," says Sir William Jones,

"from the merit of Greek and Latin authors, I cannot but think that our European poetry has subsisted too long on the perpetual repetition of the same images and incessant allusions to the same fables. And if the writings of the Asiatics were better known a new and ample field would be opened for speculation; we should have a more extensive insight into the history of the human mind, we should be furnished with a new set of images and similitudes, and a number of excellent compositions would be brought to light which future scholars might explain, and future poets might imitate."

Since Sir William Jones's time the mythologies of Asia have been worked with vigour by Southey and M. Leconte de Lisle, but with what success as regards engaging the sympathy of the European mind?

In winning the sympathy of the modern world of Europe there is no mythology that can compete for a moment with the Hellenic, unless it be the Scandinavian. Nor, perhaps, is the reason far to seek. It lies in the very nature of the Western mind. It was not till the shadowy demigods and heroes of the Asiatic races crossed the Caucasus and breathed a more bracing air that they became really incarnate—or rather that they really became individual characters. For instance, the hero Irij, the hero Zal, and the hero Zohrab are in character the same person, the virtuous young man who combines the courage of youth with the wisdom and forbearance of age. But among the many qualities of man's mind that became invigorated and rejuvenated by that great exodus from the plains of Asia is to be counted, above all others, his dramatic imagination. The mere sense of wonder, which had formerly been an all-sufficing source of pleasure to him, was all-sufficing no longer. The wonderful adventure must now be connected with a real and an interesting individual character. Given the interesting character, indeed, and, as we see in Homer, any adventure becomes interesting. But dramatic imagination (unless it be Semitic or Chinese) has no place in Asia. The wonderfulness of the world and the romantic possibilities of Fate and Chance—not the wonderfulness of the character to whom these possibilities befall—are ever present to the Asiatic imagination. Drama, in a word, is a growth of the Western mind; and until all mythologies have become so worn out and vulgarized that they are no longer fit subjects for the poet, it will be useless to bring into competition with Hellenic myth such undramatic mythologies as those of Asia, or, indeed, any mythology, however picturesque, save, perhaps, that of Scandinavia. The inherent vitality of Greek myth is best seen, perhaps, in the fact that it has been able to survive, first the vulgarization it underwent in the eighteenth century, and then the revival of the Romantic movement which followed that vulgarization. That much of this vitality is owing to the extraordinary influence of Keats upon subsequent poetry few will deny. And in prosecuting the inquiry, How long will dead mythologies form a true poetic impulse? it is necessary to ask, What, apart from the influence of Keats as a revivifying power, would have been the effect upon Hellenic myth of two such agents as those we have mentioned? The one weakness in the romanticism of Coleridge was, of course, its unsubstantiality, its lack of sensuousness. But Hellenism has now to struggle with a kind of romantic poetry as weird as Coleridge's, and yet as sensuous as Keats's own—the poetry of Rossetti, the real antagonist of neo-Hellenism. If it should succumb to this, we do not see how it can ever be revived as poetic machinery, for the time cannot be far distant when the generalizations of science will be sufficiently familiar to become the *motif* of true poetry. But, be this as it may, no mythology of Asiatic origin will have any chance of being grafted upon the stock of poetical myth preserved by the Western world, and it must be remembered that even in Persia the legends of the 'Shāh Nāmeh' have only a literary life as compared with Mohammedan machinery. Still it is, as Miss Zimmern says, little to the credit of England, the greatest European power in the East, that France should be the first to provide funds for the translation of so important a work as the 'Shāh Nāmeh.' And it is equally surprising that a scholar like Mr. Matthew Arnold, before he set himself to write 'Sohrab and Rustum,' should not have inquired which was a corrupt and which was a pure version of the story.

A striking feature of the volume is Mr. Gosse's narrative poem, 'Firdusi in Exile,' in which is told in charming verse the picturesque story of the poet's exile and death. Mr. Alma Tadema's two etchings are undoubtedly a great addition to the attractions of the book, though they have been the cause of its rather unwieldy size. In the group of Zal and Rudabeh the artist has succeeded in giving to the physiognomies that peculiar expression of European keenness and intentness which demarcates the Persian from any other contemporary Asiatic type.

NOVELS OF THE WEEK.

Val Strange. By D. Christie Murray. 3 vols. (Chatto & Windus.)
Patty's Partner. By Jean Middlemass. 3 vols. (Tinsley Brothers.)
Cosmo Gordon. By Mrs. Leith Adams. 3 vols. (Chapman & Hall.)
Dark Pages. By Mrs. Horace Dobell. 3 vols. (Remington & Co.)
Geraldine Hawthorne. By the Author of 'Miss Molly.' (Blackwood & Sons.)

'Val Strange' is a failure. After 'Joseph's Coat,' and the story called 'Coals of Fire,' which gave a name to three volumes of Mr. Murray's short stories, something much better was to be expected. The author seems to be in uncongenial society when he deals with rich young men and heroes or villains of finance. His wise young man may remind the reader of Mr. Meredith's wise youth in 'The Ordeal of Richard Feverel,' and he is the only well-

drawn character in the book. Mr. Murray has contracted a bad habit of discoursing to the reader, a fault for which, perhaps, Thackeray would have to answer. He, however, used the device sparingly, and never went so far as to relate mere personal experiences. It is needless to say that 'Val Strange' is above the ordinary run of novels; but those who have read Mr. Murray's former works can only read this one with strong feelings of regret.

'Patty's Partner,' like many of Miss Middlemass's stories, is deficient in central interest. Patty is a person for whom it is impossible to care. Her fortunes are followed with profound indifference, and, indeed, it is irksome to have to follow them at all. Still less is the reader concerned for what happens to her middle-aged lover, the manager of the factory in which she is a hand. Some of the incidental characters, however, are fairly drawn, and the description of the struggle for gentility made by a family which has remote aristocratical connexions is given with liveliness, and even with some humour.

There is plenty of movement in Mrs. Leith Adams's new story, if not much depth of either observation or sentiment. Cosmo Gordon is a man of the conventional type of military virtue, with a good deal that is sterling metal under the affected surface of his social polish. The worst side of the author is shown in a coarseness which certain ladies seem unable to avoid when they touch upon theological schools which they dislike. Mrs. Dulcibella Mackenzie and her spiritual guide Mr. Huckleberry are like nothing in life, though they are faithfully based upon former travesties and caricatures. To represent those whose religious shibboleths differ from their own as uneducated, worldly, and sensual is a favourite device of writers of this type. There is little that is remarkable in the other characters. Lady Bulteel is perhaps the best of them—a faded lachrymose lady, with not much head, but a warm heart for the prodigal son, whose return at length gladdens her not much more obviously than it does the bellowing pigheaded baronet who has vowed to forget his existence. Altogether Mrs. Adams seems to possess much facility of description, and her faults are such as will not greatly strike the superficial reader.

The three volumes of horror with which Mrs. Dobell has favoured the world should have been bound in red and black and embellished with skulls and cross-bones, the innocent and cheerful garb in which they now appear being almost a fraud upon the reader. Gruesome as are their horrors, we confess ourselves more shocked by certain solecisms which occasionally impede the flow of misery and crime. Words like "agreeable" for "willing," and such harsh sayings as "a few, down hill, miles away," not unfrequently divert the critic's attention when he has almost succeeded in the conscientious endeavour to be thrilled. Yet a strong effort has been made to cause the flesh to creep. In the first story an estimable man, having slain his friend on the impulse of the moment, drags the corpse down a secret staircase from his own library and packs it in a lumber chest in the cellar. No wonder that he soon drowns himself, and that the lady, the *teterrima causa*, dies heartbroken. In 'A Marriage of Pique' an ill-used wife poisons her husband. Her second spouse and earlier lover discovers the truth, and fleeing in horror is killed in a railway accident. A duel and a suicide mark the third story, 'The Windmill on the Common.' If literary criticism be applicable to such notable work, it may be said that the last tale is the best. There is something really tragic in the undeserved blow which destroys poor Katrine's reason, and her sorrowful history is told with more care than marks the earlier narratives. From a legal point of view the suicide was somewhat hasty. Had Randolph elected to face a jury, and been fortunate in the selection of his counsel, to say nothing of meeting with a judge with a turn for judicial tableaux, it seems at any rate probable that the trial might have lasted long enough for all the parties concerned to have completed the natural span of their existence; while the French court, on the other hand, would at once have condemned him on the prosecutor's word, but "extenuating circumstances" might have forbidden the permanent separation of two lovers.

The author of 'Miss Molly' has chosen a picturesque setting to frame a gracious portrait of high-souled and gentle woman, for such is Mistress Geraldine Calverley. She is what is sometimes called across the water a "revolutionary matron," but has none of the stern attributes one would connect with such a term. The reader first makes her acquaintance in the peaceful garden of her home in a New England village. The War of Independence has but newly begun, and her generous spirit often dwells with enthusiasm on the deeds of her countrymen, notably of one Ralph Calverley, who is daily expected on some recruiting duty at Endicot. He comes, and with him a companion. Phil Honeywood is an easy-natured, gentle-hearted youth, thoughtless of himself, and especially sympathetic with women, who finds himself a warrior by stress of circumstances, and takes up the duty as it is thrown in his way. Compared with his captain Calverley, he does not seem likely to show a steadier faith than the soldier whose whole mind is in his work, who is reticent and immersed in care, and whose name is becoming more and more identified with the cause he has espoused. Both men fall in love with Geraldine in characteristically different fashion. Calverley sees in her a mate worthy of himself, Honeywood a higher nature to which he cannot but aspire. Needless to say, the more masterful wooer is successful. Next to her love for her hero is the old love for her father. When he dies suddenly, having completed nothing of the varied work he was ever beginning, one great sorrow comes into her life. Not the death, but the disappointed hopes, seem pitiful to her. But this great grief is succeeded by a darker trouble when the patriotic leader is found wanting and for ambition's sake deserts the cause which to her is sacred. But her love withstands the shock, and in love's triumph over shame lies the essence of the story. It is needless to dwell upon details, but few narratives impress one more with the truth of their pathos. Of minor characters, the sharp-tempered mother, whose sorrow makes her at last Geraldine's most tender comforter, and honest John Hammond, the English subaltern, whose manly nature is the support of the stricken wife in the darkest hour of her history, and who never forgets in the commonplace happiness of rural life the queenly woman he befriended, are such as to impress the memory. Honeywood, to whom it falls to take the noblest revenge upon his rival, is also thoroughly well drawn.

CHRISTMAS BOOKS.

Men of Note: their Boyhood and Schooldays. By Ernest Foster. (Warne & Co.)
Brother and Sister. By Elizabeth J. Lysaght. (Blackie & Son.)
A Little Wild Flower; or, Rosy's Story. By L. J. Tomlinson. (Shaw & Co.)
Jack and Jill. By Mrs. Stanley Leathes. (Same publishers.)
Lost in the Backwoods. By Mrs. Trail. (Nelson & Sons.)
Stories of the Days of King Arthur. By Charles Henry Hanson. (Same publishers.)
Layton Croft; or, the Story of a Prodigal. By Alice Somerton. (Warne & Co.)
In the Black Forest. By Charles W. Wood. (Bentley & Son.)
Elsie's Adventures in Insect Land. By Gertrude P. Dyer. (Marcus Ward & Co.)
The Belton Scholarship. By Bernard Heldmann. (Griffith & Farran.)
Edward Bertram; or, the Emigrant Heir. By Grace Stebbing. (Marcus Ward & Co.)

Any boy who requires to be urged to exertion and to have his ambition fired may well read Mr. Foster's record of statesmen, lawyers, generals, authors, engineers, and others, the architects of their own fortunes. The early years of a man's life are usually the least interesting and instructive, but as the object of Mr. Foster is to arouse energy and enterprise, the utility of his book in these times, when the battle of life is so severe, can scarcely be doubted.

'Brother and Sister' is a pretty story and well told. The plot is cleverly constructed and the moral is excellent. The author has already published several works, and we hope that this may not be her last.

Very small children will like 'A Little Wild Flower,' which may safely be put into their hands. The same may be said of 'Jack and Jill.'

Mrs. Trail's 'Lost in the Backwoods,' being the reprint of a popular story published many years ago under the title of the 'Canadian Crusoes,' cannot fail to be acceptable to readers in its present form, though we cannot agree with the publishers in thinking that a "new and more descriptive title" was required.

How far Mr. Hanson's 'Stories of the Days of King Arthur' will attract the young readers for whom it is compiled cannot be determined except by experience. The style may prove to be too quaint for them. On the other hand, the stories are exciting enough to appeal to the boyish liking for marvellous adventures. Illustrations by Gustave Doré add to the effect of the book.

'Layton Croft; or, the Story of a Prodigal,' is a tale which girls may peruse with profit. The tale is pleasantly told, and the moral is good. Not much can be said in praise of the illustrations; but the readers who enjoy the text will care but little for the pictures.

Mr. Charles W. Wood has written several books of travel, and his new one, 'In the Black Forest,' which is copiously illustrated, is quite as entertaining as any of them. It will suit readers of various ages: the young who have not visited the Black Forest will be attracted by this account, while their elders may renew in Mr. Wood's pages their acquaintance with familiar and delightful scenes.

'Elsie's Adventures in Insect Land' is an endeavour to lead children to take an interest in

insect life through the medium of a pleasantly told and well-illustrated story. We fear that some of the illustrations will not diminish the distaste which young children have for insects. The magnified gnat is not pleasing to look at, while the illustration of the eyes of a tarantula is as horrible as Victor Hugo's *pieuvre*.

'The Belton Scholarship' suffers from the defect of tameness which attaches to all tales of schoolboy life. Mr. Heldmann has written many such tales, and he has acquired the knack of stringing together incidents in such a way as to please youthful readers. By such readers to whom other books of the same class are not familiar this one may be found fresh as well as entertaining.

'Edward Bertram; or, the Emigrant Heir,' is a spirited tale of adventure with an appropriate ending.

OUR LIBRARY TABLE.

Messrs. George Bell & Sons have sent us *Plutarch's Lives*, translated by Mr. Aubrey Stewart and Mr. George Long. In this version thirteen lives of Roman political leaders, from the Gracchi to Mark Antony, are translated by the late Mr. Long. Mr. Stewart is to be congratulated on his careful and readable translation of the remaining thirty-three. The lives themselves are by this time exempt from criticism. They have become one of the commonest and most beloved of story-books in every language, and it would be as useless and needless to point out signs of credulity and inaccuracy in Plutarch as in the author of 'Robinson Crusoe.' For the same reason a translator of Plutarch is not bound to that nicety of scholarship which would be expected in a version of a less known author. If he can improve the point of a little anecdote by some slight alteration in the arrangement of the words, he is surely at liberty to do so, and every reader will be obliged to him. Hence it is that North's translation, though it was taken only from the French of Bishop Amyot, and is grossly inaccurate in many passages, has still many merits which far outweigh its imperfections. The quaintness and piquancy of North's diction are such that a comic story as he tells it is the more amusing, a pathetic one the more touching, an edifying one the more impressive; and no educated person of our day would attempt to translate Plutarch without in some way trying to recall the inimitable flavour of that old Elizabethan style. Mr. Stewart has successfully done this without sacrificing anything in the minuteness of his rendering. It must be admitted, however, that this sentiment in favour of older English words and constructions is only of recent development. The great English translations of Plutarch previously published are written in the styles of their times. North's version was published in 1579. In 1683–6 Tonson published another "by several hands," with an abominable dedication to the Duke of Ormonde by Dryden. The two Langhornes, John and William, issued a third about 1760. Mr. Stewart's makes a fourth. No better subjects than these translations could be selected for the illustration of the history of English prose style and English literary taste. Published successively at intervals of about a hundred years, they reflect faithfully the fashions of their times. Each writer is endeavouring to tell the same story in the words that most naturally occur to him as representing the flavour of the original. Dryden thinks North is almost unintelligible. Langhorne evidently finds Dryden and his collaborators wanting in dignity. Mr. Stewart complains of Langhorne's pomposity and shows a reaction in favour of North. We regret that the just limits of this notice do not permit us to give specimens of the four styles. Suffice it to say that we have carefully compared many of Plutarch's anecdotes in his four translators, and are of opinion that though North is, on the whole, the most entertaining, Mr. Stewart, as the better scholar, often gives Plutarch's points with more clearness, and has generally a great advantage in point of brevity over any of his predecessors.

A devoted friend and admirer of the late Lord Lytton, it was natural that Mr. C. Kent should be asked to compile the volume sent to us by Messrs. Routledge and entitled *The Wit and Wisdom of Lord Lytton*. Yet it is seldom that a man of Mr. Kent's distinction in literature undertakes the task of selection, and the admirers of Bulwer Lytton may be congratulated on his having consented to do so, and on the manner in which he has performed what must to him have been a labour of love.

The "Anti-Stylograph" sent to us by Messrs. De La Rue is an ingenious invention, and will prove very useful to those who require to carry a penholder about with them. The pen possesses the advantage of having ordinary nibs, and any good ink may be used.

We have on our table *The Adventures of a Tourist in Ireland*, by J. L. Joynes (Kegan Paul),—*Cyclopædia of Australasia*, by D. Blair (Melbourne, Fergusson & Moore),—*Popular History of Egypt*, Parts I. to VI., by Capt. J. W. Watkins (Hagger),—*Historical Handbook to Loughborough*, by the Rev. W. G. D. Fletcher (Loughborough, Wills),—*The Irish Educational Guide*, 1882–3 (Dublin, Mara),—*A Critique on the Criticisms of 'The Simplicity of Life,'* by R. Richardson (Lewis),—*Schiller's 'Maid of Orleans,'* translated by L. Filmore (Griffin),—*Selections from Uhland's Ballads and Romances*, by G. E. Fasnacht (Macmillan),—*Versions in Verse*, by G. Small (Yates, Alexander & Co.),—*Bedlam Ballads*, Part I., by S. C. White (Satchell),—*Verses of Varied Life*, by H. T. M. Bell (Stock),—*Frithjof and Ingebjorg, Poems*, by D. B. W. NOTES FROM OXFORD.

With the death of the Provost of Oriel almost the last of the older gods has passed away. Though a few still linger, the new Olympic circle is nearly complete. The change is not without its importance. Heads of colleges, such as they now are, belong to a different type and occupy a different position from their predecessors, and though new laws and altered manners have in some respects curtailed their powers, yet in others they may very possibly exercise a far greater influence upon the affairs of the University. The stately life apart from men will, it is clear, give way to one of active and visible interposition. As professors, as lecturers in their respective colleges, as administrators of college discipline and finance, the new heads must necessarily be powerful forces in Oxford, and it is worth while to consider the probable direction and effects of their energy. It may be granted at once that since we cannot afford to give a man 1,200*l.* a year without requiring him at least to profess to do something, it is necessary that heads of colleges should have specific duties to perform. It is also desirable that they should be men of ability, energy, and, if possible, learning. But there is one danger against which we shall do well to be on our guard. Two heads of colleges are already also professors, and it is not unlikely that before long such cases will be more numerous. The Commissioners' Statutes indirectly encourage the union of the two offices by allowing colleges to reckon the professorial stipend as part of the income of the headship, and thus to effect a saving in their own expenditure. But this pluralism would, if it became general, be a serious evil. It would weaken the influence if it did not endanger the existence of the professoriate as a distinct element in the university system. If heads are to be vigorous administrators, and professors to be devoted students and diligent teachers, there must be no more professor-heads. Nor, considering the fact that, despite the multiplicity of small posts, there are few prizes in Oxford valuable enough to attract first-rate men, is it expedient to reduce their number by amalgamation. On these grounds

the appointment of Mr. A. Dicey to the Vinerian Professorship of English Law is eminently satisfactory, though against his most formidable rival, Sir W. Anson, no objection could well be urged but the fact that he is already Warden of All Souls'.

The election of Prof. Burdon Sanderson to the Waynflete Chair of Physiology ought to strengthen the position and raise the standard of scientific study in Oxford. Very hard work lies before him, requiring no ordinary amount of patience, tact, and industry; but he will have the warm sympathy of all who desire to see the great scientific traditions of Oxford worthily and adequately represented among us.

Archæologists may be interested in hearing that the small but valuable collection of Greek antiquities from Southern Russia given by Dr. Siemens is now on view in the central hall of the University Museum. These treasures, found in the tombs of Scythian chiefs, are the only specimens of their kind to be seen outside St. Petersburg. The two lectures by Mr. W. M. Ramsay, which were announced in your columns a few weeks ago, have been a decided success. They were well attended, and contributed much valuable information as to the early civilization and history of Phrygia and the central plateau of Asia Minor. On the 14th inst. Mr. Ramsay hopes to give a lecture on the same subject, under the auspices of the Hellenic Society, at 22, Albemarle Street. He will probably return to Asia Minor before the end of the year.

The Association for the Higher Education of Women held its annual meeting on November 29th; Mr. A. Sidgwick was elected secretary in place of Prof. Butcher, and it was determined to organize a system of education by correspondence similar to that which has been in working at Cambridge for some years.

On Tuesday last Mr. A. Toynbee of Balliol delivered, in the hall of University College, an able and interesting criticism of Mr. Henry George's 'Progress and Poverty.' In addition to the members of the Palmerston Club, at whose invitation the lecture was given, there was a large attendance of the senior members of the University. P.

ENGLISH AUTHORS AND AMERICAN PUBLISHERS.

Crown Buildings, 188, Fleet Street, Dec. 4, 1882.

If you will allow me to quote the words of G. W. S.'s telegram to the New York *Tribune* your readers will see that they are calculated, and apparently intended, to convey the suggestion of very unworthy conduct on the part of my firm. These are his words :—

"*The Harpers Vindicated.* — Sampson Low contradicts in to-day's *Athenæum* Mr. Russell's charge against Harpers of reprinting his novels without payment, saying that the Harpers did pay the English publishers for the advance sheets over 200*l.*, *which they pocketed unknown to Mr. Russell.* G. W. S."

The words which I have italicized above are not pleasant, and it is hardly likely that Mr. Sampson Low would have wished *his* words to convey the improper impression which these unquestionably do convey. I do not feel called upon to detail the particulars of our various agreements with Mr. Clark Russell, or to quote the eloquent facts which our ledger would reveal; it is sufficient for me to say that, notwithstanding our friendly sparring in your columns (and I admit that the gloves in his practised hands are heavier than mine), I am quite sure that Mr. Clark Russell will gladly confirm my words when I say that he is perfectly satisfied with the conduct of his English publishers, which certainly he could hardly have been had *he* interpreted Mr. Low's letter in the unfriendly spirit which seems to have animated G. W. S.

Allow me to add that Mr. Sampson Low wrote as the agent of Messrs. Harper in this country, and, as I said in my last letter, the sum he mentioned was not correctly stated. Mr. Russell has partly explained the circumstances, and further detail is certainly unnecessary. I may add, for G. W. S.'s information, that Mr. Sampson Low has not for many years been a partner in the firm with which his honoured name is still associated.

Mr. Russell's trenchant and vigorous letter is not quite impregnable. It reminds me of a house of glass, into which it would be easy to cast pebbles. I have no desire, however, to prolong this discussion. Mr. Russell is quite welcome, in a general sense, to his definition of American "rights," but in the particular sense of his agreement with my firm I am sure he will agree with me to regard them as "contingent interests." Edward Marston.

MISS RHODA GARRETT.

Many of our readers will have seen with regret the announcement of Miss Garrett's death at what must be considered an early age. At forty-one, although a life's work may be done, the mental faculties are in their prime, and it was eminently so in her case. She had conquered the difficulties which until very lately beset the path of any woman who desired to think and act for herself, and had begun at length to enjoy a tardy measure of success. As a house decorator, in partnership with her cousin, the sister of Mrs. Garrett Anderson, M.D., she found congenial occupation, although her powers and her training fully fitted her to carry on the profession of an architect. It is said—we know not on what authority—that the Royal Institute of British Architects refused to admit her; but this is hardly credible. In the humbler walk her remarkably quiet but fastidious taste, her capacity for taking infinite pains, and her power with the pencil enabled her to produce charming domestic effects; but whether she could have succeeded in more ambitious work, as many of her friends believed, we can now, unfortunately, never know. Her high natural spirits, though they kept her up in what was long an almost hopeless struggle, also tended to wear out a naturally fragile constitution. During the few years in which she enjoyed the power of helping others and of offering hospitality to her many friends her house was the cheerful rendezvous of a large circle of strangely opposite shades of opinion, character, and social standing. To them, and to many more of whom no one heard, her loss will be irreparable.

Miss Garrett was the eldest daughter of the late Rev. John F. Garrett, a Derbyshire rector. She was born at Eyam, in that shire, in 1841. Determining when still young to fight the battle of life for herself, she came to London about 1868, but had much difficulty in finding an office open to a lady pupil. It was objected by one architect that she would not be able to go up a ladder. "Fetch one and see," was the fearless rejoinder. Even tradesmen at first refused her business orders, and it was not until the French Exhibition of 1878 that the firm had its first real success. A cottage room exhibited at the Trocadéro attracted great attention, although, from its simplicity and the solid workmanship of the furniture, it did not accord with Parisian ideas and received no prize, being, in fact, all the more conspicuous on that account. From that time orders flowed in, and only the want of health impeded a great expansion of the business. Miss Garrett interested herself very much in all the social, political, and artistic questions of the day. She occasionally, but only at long intervals and with great hesitation, made a public speech, and even those who least agreed with her views confessed to the pleasure of hearing her speak. She was from the first a member of the committee of the Society for the Protection of Ancient Buildings, and was most active in that good cause. She was also a member of the Royal Archæological Institute, and of several societies of a more or less political character.

She was buried on Saturday, November 25th, at Rustington, in Sussex, where she had for some time resided in the intervals of business.

AN UNPUBLISHED LETTER OF THOMAS CARLYLE.

November 30, 1882.

The following letter was written in July, 1867, upon receipt of an intimation from Henry Chorley that, under the will of his recently deceased brother John Chorley (the eminent Spanish scholar), Mr. Carlyle was entitled to a bequest of 1,000*l.* After the death of Henry Chorley in 1872 the letter was placed in my hands, as his literary executor, among other materials for his memoir, but for obvious reasons it was unsuitable for publication at that time. Now that all the persons to whom it refers have passed away, there is no longer any reason for withholding so interesting an expression of the writer's character. If it reflects a tinge of that imaginative exaggeration with which he could suffuse the most prosaic theme, it illustrates still more clearly the spontaneity with which he could give vent to friendly and generous impulses. The nobler side of his composite nature has been so much cast into shadow since his death that these kindly and sympathetic words are too likely to sound strangely from his lips. After reading them, one's regret is increased that, owing to the hasty and ill-advised publication of a posthumous work (evidently composed under the morbid influences of mental and bodily suffering and in reliance upon a treacherous memory), the latest impression left upon his contemporaries by one of the most venerable of modern teachers should have been so harshly distorted.

Henry G. Hewlett.

Chelsea, 11th July, 1867.

Dear Sir,—It is infinitely affecting to me, this generous message from Him who is now gone far away! How little I deserved it of him, how unexpected it is, how little *needed* now, tho' so good and noble!

My Banker's name is "S. Adamson, Esq., British Linen Company Bank, Dumfries, N.B.," or indeed your late dear Brother's Bankers (69, Pall Mall) have always an acc^{t} with me too — but before going to the actual *finis* with this matter, there is something I will crave to mention, which has risen to my mind on occasion of it, and to which I must beg your serious attention for my sake.

I knew generally, or understood, long since by some casual hint or transient question to me by Him whom we have lost, that the bulk of his property (after an event which it was not likely I should ever witness) was to go in literary charities. I think he said to *The Literary Fund*. And once again, long afterwards, I remember to have heard him speak, in reply to some question of mine, about your Brother William's commercial misfortunes. Now if it be that there is any lack, or chance of such, in that *latter* quarter, permit me to urge with emphasis that as there is no shadow of it here, it would gratify me in a much higher and richer degree if I might be permitted to lay down there the actual sum of money in question; retaining *ever* the soul and essence of it, that is to say, the sacred memory of it, which would be among the perennial jewels of my life, more precious far than any gold!

Forgive me for urging this on your most candid, impartial and deliberate *consideration*. For it is a fact, quietly certain as any on the Banker's ledger, that this (if the above surmise have any basis at all) is the mode of disposal which would enrich me most. And I will say no more of it here, but solemnly leave it with you.

Or if you wished to exchange a few words on it with me, as you daily go driving for health, you can nearly every day find me here, till 3 P.M. and after 8 P.M. I leave it with you, but I consider it a thing that greatly and even sacredly concerns us both.

Yours always with many sympathies and thanks,
T. Carlyle.

H. F. Chorley, Esqre.

MR. ANTHONY TROLLOPE.

The illness by which Mr. Trollope was attacked a few weeks ago left so little hope of real recovery that there is not much cause for surprise in the announcement that death has relieved him from further pain. Nor, though he was only in his sixty-eighth year, can his life be said to have

ended before he had done in it an abundance of good work, and perhaps nearly as much as he was capable of doing. During the past thirty-five years he has produced more than fifty novels, besides several volumes dealing with facts instead of fiction, and numberless contributions, anonymous or signed, to newspapers and magazines, which have never been collected into volumes. His pen was active to the end, and the concluding chapters of 'Mrs. Scarborough's Family,' which has been appearing in *All the Year Round* since last May, have not yet been published; but, however much more he might have written had his life been prolonged, and though he had by no means exhausted his power of amusing contemporary readers, he had already written more than enough to satisfy posterity and to provide it with the means of duly estimating his talents.

Genial and large-hearted as he was, fond of club life, and keenly devoted to field sports and other healthy social pleasures, Mr. Trollope preferred to be known to the public chiefly through his works; and unlike some of his contemporaries, who court friendly biographers, if they do not publish their autobiographies while they are still alive, he had the good sense to be generally silent, though without aiming at secrecy, about personal details that were of no real concern to the world at large. He never, we believe, took the trouble to correct a statement, freely reported at the time of his famous mother's death, to the effect that he was only a kinsman of her husband's. Apart from his career as an author, the story of his life may be summed up in the few lines which record that, born in 1815, and educated at Harrow, he became a clerk in the Post Office at an early age, and there worked steadily at his duties, which happily often fitted so well with his personal tastes that he had ample opportunities not only for travelling about and temporarily residing in various parts of the United Kingdom, but also for visiting most of our colonies, until, about nine years ago, he retired from official life. From that time his pen continued to run as easily as it had done during the previous quarter of a century.

Literature was to Mr. Trollope the staff rather than the crutch, as Sir Walter Scott shrewdly declared that it should be; and therein he was more fortunate than his mother, who was fortunate, however, in discovering somewhat late in life that the crutch which she found it necessary to rely on could be handled by her as deftly as a staff. Mrs. Frances Trollope was nearly fifty when her husband's continual lack of success in his calling as a barrister obliged him to take her to the United States, whence she returned in 1832, to be suddenly raised to the position of a popular authoress by her own entertaining, if hardly gracious or graceful, volumes on domestic life in America. Left a widow in 1835, she passed most of the remaining twenty-eight years of her life in Florence, where her eldest son, Mr. Thomas Adolphus Trollope, and her gifted daughter-in-law, Mrs. Theodosia Trollope (whose name is especially familiar to old readers of the *Athenæum*), also resided. The volumes that she wrote after 'Domestic Manners of the Americans,' chiefly novels and gossiping sketches of travel, numbered about a hundred, and most of them had appeared before her equally prolific second son had made much mark as an author.

It was 'The Warden,' published in 1855, that first attracted general attention to Mr. Trollope's skill as a novelist very much above the average; but he had produced at least three earlier novels, and the first of them, 'The Macdermots of Ballycloran,' which appeared in 1847, was in some respects a better book than many of its successors. Treating of Irish life and character with plenty of humour and vivacity, but in a more earnest spirit than Charles Lever's works, then at the height of their popularity, it set forth very cleverly, and with not a little painstaking accuracy, the social and political evils that the author — then, as always, a stanch Liberal — wished to guide English opinion in helping to cure. Pat Brady, the spy, was one of its principal characters, and Mr. Trollope had a serious intention in describing him. "That such a man as Brady," he wrote, "should exist and find employment in a country is a fact which must shock and disgust. It is true that, by paid spies and informers, real criminals may not unfrequently be brought to justice; but those who have observed the working of the system must admit that the treachery which it creates — the feeling of suspicion which it generates — but, above all, the villainies to which it gives, and has given, rise, in allowing informers, by the prospect of blood-money, to give false informations and to entrap the unwary into crimes — are by no means atoned for by the occasional detection and punishment of a criminal." These two sentences indicate the purpose of the book. As similar sentences were often interpolated, and as English people cared less thirty-five years ago than they do now for the redress of Irish grievances, its preachings may have stood in the way of its success. But apart from its preachings, 'The Macdermots of Ballycloran' was cleverly constructed and brightly written, and those who wish to understand how Mr. Trollope wrote and thought at the beginning of his literary life will do well to read this first of his novels.

The main characteristics of his later work as a novelist are too well known for any lengthy mention of them to be necessary here. He soon found in the respectable frivolities of orthodox Church people and English ecclesiastical institutions a field of study quite as congenial to himself as the miseries of Irish peasant life, and more entertaining to the public; and the Prowdies and other notables introduced into 'The Warden' lived again and again in 'Barchester Towers,' and later novels almost as good and amusing, down to 'The Last Chronicle of Barset,' which appeared in 1866. In others, and especially in 'The Prime Minister' and 'An American Senator,' issued in 1876 and 1877, there was more mockery of politicians than of ecclesiastics; while in others again, like 'The Three Clerks,' 'Orley Farm,' 'The Belton Estate,' 'The Small House at Allington,' and 'The Eustace Diamonds,' different aspects of social folly or traditional propriety were chiefly dwelt upon. Always, however, Mr. Trollope was at his best in kindly ridicule of the approved superficialities of life. His satire was rarely profound and his scorn seldom made deep gashes. He was almost as unlike Thackeray as he was unlike Dickens; and if he often excelled both those novelists in the technicalities of plot-making, it was chiefly because he attempted nothing more than the piecing together from realities around him of such every-day incidents and easy-going movements as served his purpose of affording healthy amusement by good-natured sallies at the types and groups of society with which he was most familiar. If he was unlike both Dickens and Thackeray, his art differed as completely from the romancing of Bulwer as it did from the character-painting of George Eliot.

He showed versatility of taste, but not of talent, in his literary exercises outside the province of novel-writing. His 'West Indies' (1859), 'North America' (1862), 'Australia and New Zealand' (1873), and 'South Africa' (1878) were interesting records of unofficial experiences in the course of his official visits to the colonies, but aimed at little more than amusing their readers, and did not always do that. His 'Hunting Sketches' (1865) and 'Clergymen of the Church of England' (1866) were collections of lively newspaper articles that were hardly worth reprinting. His 'Life of Cicero' (1880), though it had distinct merits, did not secure public attention; and in the short book on Lord Palmerston which he published lately he showed what slipshod work a famous writer can venture to offer to the public. Still it is interesting, if for nothing else, as containing a sort of Liberal confession of faith, uttered nearly at the close of a busy life in which the inculcation of Liberal views was never neglected even when they were least openly stated.

NOTES FROM PARIS.

December 4, 1882.

If one were seeking for a moment for beginning a sort of sketch of literary life at Paris it would be really difficult to find a more favourable hour than the present. Parallel, if I may say so, to a political movement sometimes rather disheartening runs a literary movement altogether cheering, active, lively, and well calculated to attract the observer. The recent performance of 'Le Roi s'Amuse' has cast over the present a sort of lustre comparable to the melancholy yet stately splendours of the setting sun. Paris has been bathed in it as in purple and gold, and this week a new drama of an ultra-modern type, the 'Fedora' of Victorien Sardou, will provide new food for public curiosity. People are anxious to see Sarah Bernhardt in this *rôle* designed for her, for her rare gifts and her poetical shortcomings — this Fedora whose complex feminine nature Sardou has crystallized in Cossack flesh and the soul of Cantacuzenes.

Up till now it is announced that 'Fedora' will be produced at the Vaudeville on Thursday, December 7th, but it is not probable that the theatre will be quite ready on that evening, and I am inclined to bet on Saturday the 9th or Monday the 11th. The rehearsals have been necessarily stopped by the sudden departure of the author—summoned to Nice to his mother, who has just died. In opening a door suddenly, when her hand was on the handle she was about to turn, the poor lady stepped back and fell to the ground, smitten by an attack of apoplexy. M. Antoine Sardou, the father of the dramatist, was from home attending a concert. When he reached the house his wife was in the agony of death. She never spoke, and when she was asked where she felt pain, she only touched with her finger her forehead, which had been bruised by her fall.

M. Victorien Sardou had, however, the supreme consolation of seeing her once more. She had been very pretty. Last year, at her silver wedding, celebrated at Marly, we saw this charming lady all smiles, and with her white hair she resembled a *marquise* of the eighteenth century powdered like an almond tree in spring. Death brought back to her face all the freshness of youth, and it seemed to Victorien Sardou that he saw again, asleep, his mother as he had known her in days gone by. He will hasten to return to Nice, where his father, the learned commentator on Rabelais, remains alone, and will take with him to console the old man his grandchildren. Meanwhile he is directing rehearsals—rehearsals both at the Vaudeville and at the Palais Royal, where Madame Céline Chaumont is reviving the *rôle* of Monsieur Garat, originally designed for Déjazet, who looked wonderfully *spirituelle* and young in the costume of a "Muscadin" of the Directory.

The 7th, always supposing that Sardou's piece is produced on that evening, will in a literary point of view have peculiar importance. It will be quite a date. On that day it is more than probable that M. Agénor Bardoux, ex-Minister of Public Instruction, will be named by the Senate a life Senator, and that M. Édouard Pailleron and M. Charles de Mazade will be consecrated Immortals by the French Academy. They are popular, and have abilities above the average. M. Bardoux, who has studied with fervour certain types of lettered judges of the old *régime*, is himself a distinguished specimen of those lawyers who were closely connected in former days with men of letters, and gave force and charm to the literary and liberal middle classes of old France. He knows much; he writes with singular

grace, he has in familiar conversation a most delicate and attractive manner of talking, and as a speaker that glowing eloquence, at once simple and enthusiastic, which he greatly admires in certain English writers of the end of the last century and the beginning of the present. An *écrivain de race*, he published last year a book on M. de Montlosier, his fellow countryman, that did him credit; and in the midst of his contributions, always very striking, to the *Journal des Débats* he has found time to dash off a monograph on Madame de Beaumont, Chateaubriand, and Joubert, the first instalment of which will, I am told, appear in the next number of the *Revue des Deux Mondes*. M. Bardoux has been, after a fashion, living in the literary atmosphere which he describes with much skill, before re-entering by the door of the Senate that political life of which he knows all the disadvantages, but of which he loves all the duties. The Upper Chamber will find him a high-minded, upright, and thoroughly French statesman, and it will be able to boast of having made a selection which will do it credit in the eyes of all people of taste.

I am announcing events which perhaps may not occur, for everything is possible, even the impossible; yet how can one doubt about certain results foreseen and discounted in advance? It is quite certain, for example, that in spite of M. de Cosnac, the editor of the memoirs of the Marquis de Sourches, having become a candidate, and of M. Gounod perhaps, but not probably, offering himself, M. Pailleron and M. de Mazade are as good as chosen Academicians. They have been so, to tell the truth, ever since the drawn battle of six months ago, when the two adversaries, who in reality are two friends, fought for the same *fauteuil*. Each obtained the same number of votes, and it was found necessary to adjourn the election, as was done some years before, when M. Jules Simon presented himself for the first time. An obstinate white ticket, that persisted in not bearing the name either of M. Pailleron or M. de Mazade, caused this delay. It is now known that this white ticket that remained undecided was that of M. Sully Prudhomme, the poet of the 'Justice' and the 'Vase Brisé.' M. Sully Prudhomme got into the Academy through the influence of M. Caro, a great admirer of the young poet, who supported his candidature in the *salons*, at the Institut, at the house of M. de Broglie—in fact, everywhere; and M. Prudhomme declined to vote for a candidate who was supposed at that time to be displeasing to M. Caro, and he also declined to vote against M. Pailleron. He remained neutral.

Now everything is arranged, and the misunderstandings are at an end. M. Caro, who is a man of infinite *esprit* and courtesy, besides being a professor of great ability—who, by the way, professes no longer, and leaves to a deputy his chair at the Sorbonne, where people were hoping to hear and applaud him this very month—M. Caro has forgotten the sallies in 'Le Monde où l'On s'Ennuie,' or at least he has said, as might be expected, that he, an honest man and loyal writer, did not think he had anything in common with the idiot in the comedy who runs after the dowries of heiresses. M. Pailleron has had no difficulty in proving to his friends that in his play he had sketched a general type, and not any particular individual. The affair is forgotten, and M. Pailleron, the candidate of the dramatists, will enter the Academy at the same time as M. C. de Mazade, the candidate of the *Revue des Deux Mondes*.

M. de Mazade is a clever man, very conscientious, and possessing a great deal of shrewd common sense. The reading public of to-day knows him best by his reviews of the fortnight, which appear in the magazine of M. Buloz. He succeeded M. de Forcade, who died of the effects of a fit of mania which attacked him at Venice during the *fêtes* attending the removal of the ashes of Daniel Manin—in fact, before the coffin of the great patriot. Eugène Forcade was celebrated for his quarterly *résumés* of the state of Europe. He was in France a sort of Minister of Foreign Affairs, without a portfolio, but with a pen and ink-bottle. This is the post M. de Mazade occupies to-day. He has also written very valuable books on 'The History of the War of 1870-71,' on the revolutions in modern Spain—of which there have been a good many—on M. de Cavour, on the Comte de Serres, on M. Thiers. Such books are not written for the multitude, but they have real worth, and nobody is astonished to see in the Academy a man whose useful volumes necessarily figure on the shelves of historians and statesmen.

M. Édouard Pailleron, who is to inherit the seat of M. Charles Blanc, the art critic and the brother of Louis Blanc, is more popular than M. de Mazade. He is even extremely popular. His is one of those essentially Parisian and thoroughly French reputations which fashion adopts and which make the fashion. An elegant poet, at once sarcastic and pensive, he does not speak the tortured language of the Parnassians, but the free and clear *langage gaulois* of Mathurin Régnier, which became in a yet more simple and worldly form the style of Musset. He was a little over twenty when he published his first volume, 'Les Parasites,' full of wholesome vigour and the freshness of spring. He made his *début* almost at the same time at the Odéon with a piece in verse bearing almost the same title, 'Le Parasite,' an antique comedy in the style of the 'Ciguë' of Émile Augier. Since then his successes have always been decided; the public, which provokes his wit, has consistently remained faithful to him — in comedy almost social, like 'Les Faux Ménages'; in light poetry, as 'Le Théâtre chez Madame'; in good-humoured satire, as 'L'Age Ingrat,' 'Le Monde où l'On s'Amuse,' and 'Le Monde où l'On s'Ennuie.' Once only, with a sort of *bourgeois* tragedy that, however, had its strong points, 'Hélène,' played by Mdlle. Favart at the Comédie Française, did the author of 'L'Étincelle' experience a check.

"L'Étincelle!" that might well be his watchword. There is in him, in his features, in his plays, something electric and very modern. He pleases by this peculiar address—by his irresistible tone of contemporaneity, if I may say so. Very much liked, Édouard Pailleron collects every week a certain number of friends in the vast Hôtel Chimay, on the Quai Malaquais, where the Ministry of Police used to lodge in the days of the Directory, and part of which the future Academician occupies along with Dr. Charcot. There people talk and laugh, the younger Dumas plays billiards with Eugène Labiche, M. Renan relates his travels in Palestine to M. de Quatrefages, who in turn talks anthropology, or to M. de Neuville, who amuses himself with sketching in an album. The Mondays of M. Pailleron have replaced with a kind of *causerie* which the wind carries off the *Lundis* of Sainte-Beuve.

Paris concerns itself more than is supposed about that Academy which is fair game for chaff, especially when one does not belong to it, but which, in spite of all, keeps itself erect and is regarded as one of the national glories. "It should not be forgotten," said Victor Hugo one evening, in the course of conversation, "that the old Academy forms part of that Institut which is a miniature of modern France." After all, a *fauteuil* at the Academy means something, though there are no *fauteuils* there, only benches. The *fauteuils* of olden days have disappeared. One only is known to exist, that of the first occupant of the place of perpetual secretary, and it M. Camille Doucet, the present secretary, has had repaired, and rightly cherishes as a relic. Yes, rightly. There is a great deal of glory, past and present, in those two words: Académie Française.

Jules Claretie.

Literary Gossip.

Mr. Pater, who is about to leave England for a stay of some weeks in Rome, is engaged on a considerable work written in dialogue form. The scene of it is laid in the Eternal City in the reign of Marcus Aurelius.

The new Conservative monthly is to be edited by Mr. Alfred Austin. It is to be a half-crown magazine, and the articles are to be signed.

The Malagasy envoys now on a visit to this country have brought with them various publications in the native language. They include the recent correspondence between the Malagasy Government and the French consuls, as well as other official documents, which, although issued from a native printing office, are not inferior in point of appearance and typographical accuracy to our own Blue-books. The Malagasy compositors have all been taught by English printers. We may add that at the present time five or six periodicals are printed in the Malagasy language, and enjoy a wide circulation in the island.

Talking of Madagascar, we may mention that the Rev. James Sibree, jun., has completed his work on the oratory, legends, songs, and folk-tales of the Malagasy. It will be issued by the Folk-lore Society. We also learn that the Rev. J. A. Houlder, of Antananarivo, has written a book which he entitles 'Wit and Wisdom of the Hovas.' For many years past Mr. Houlder has been engaged in collecting Malagasy proverbs, of which some 3,000 have rewarded his research.

Mr. W. Satchell has in preparation a volume supplementing and completing Anderson's 'Book of British Topography.' It will contain a list of all works not in the British Museum, and also of the topographical papers in the transactions of societies and in the principal periodicals. Elaborate indexes, synoptical and alphabetical, will practically incorporate both works. To ensure the utmost completeness, this volume will not be put to press until after the publication of the topographical catalogue promised by the Index Society. The work will be as handsomely printed as the 'Book of Topography,' and, like that work, be sold to subscribers at much less than the cost of production; but some expenditure will be saved by limiting the number of copies to what experience has shown to be the actual demand for an important work of this character.

A volume of essays in philosophical criticism is now in the press, under the editorship of Mr. Andrew Seth and Mr. R. B. Haldane, with a preface by Prof. Edward Caird, and will shortly be published by Messrs. Longman & Co. This work is dedicated to the memory of the late Mr. T. H. Green, Whyte's Professor of Moral Philosophy in the University of Oxford.

The volume of facsimiles of Anglo-Saxon charters belonging to the Deans and Chapters of Westminster, Exeter, and Wells, which is being prepared by photozincography at the Ordnance Survey Office, Southampton, will be supplemented by facsimiles of a few other charters existing in private collections, the owners of which have kindly lent them to the Ordnance Office for

the purpose. Among these owners may be named the Deans and Chapters of Winchester and Worcester, the Marquis of Bath, Lord Ilchester, the Salt Library at Stafford, and the Museum at Taunton. The work will shortly be issued under the editorship of Mr. W. B. Sanders.

The Year Book, 11-16 Edward III., which Mr. Horwood was editing for the Rolls Series at the time of his sudden death, will shortly be published, the work of completing the edition having been undertaken by Mr. L. Owen Pike, of Lincoln's Inn. Mr. Pike, who is known to the legal and literary world by his 'History of Crime,' has also been entrusted by the Master of the Rolls with the editing of a further portion of these valuable judicial records.

The Professorship of Páli in University College, Gower Street, once held by Prof. Childers, has been offered to Mr. Rhys Davids.

The English Dialect Society is now issuing its set of publications for the present year. They are: a 'Glossary of West Worcestershire Words,' by Mrs. Chamberlain; Fitzherbert's 'Book of Husbandry,' A.D. 1534, edited, with introduction, notes, and glossarial index, by the Rev. Prof. Skeat; 'Devonshire Plant-Names,' by the Rev. Hilderic Friend; and the second portion of a 'Glossary of the Lancashire Dialect,' by J. H. Nodal and George Milner, containing the words from F to Z. The last-named work was forwarded to the members in March last.

The new and cheaper edition of Mr. Lewis Morris's poems, issued last month, is already exhausted, and another will be ready immediately.

As many as six different translations of Mr. Jenkins's 'Paladin of Finance' have appeared in Russia.

We regret to learn that in the disastrous fire this week at Stanford Court, Worcestershire, the valuable collection of books and manuscripts was almost wholly destroyed. An account, all too brief, of the latter was printed in the first Report of the Royal Commission on Historical MSS. Thanks to the liberality of the late Sir Thomas Winnington, however, many of these treasures were printed by the Camden Society (the 'History from Marble,' by Thomas Dineley, to wit), the Roxburghe Club, &c. The uses of the above Commission in preserving a record of such fragile memorials of the past cannot be too greatly insisted upon.

Mr. C. A. Fyffe, Fellow of University College, Oxford, has undertaken to prepare for Messrs. Macmillan & Co. a school history of Greece.

Under the auspices of the Hellenic Society, Mr. W. M. Ramsay, Fellow of Exeter College, Oxford, will deliver a public lecture on Thursday next, at 4 P.M., on Phrygia, in the rooms of the Royal Asiatic Society, 22, Albemarle Street, W. The following are the main points that will be considered: the religious and social system in Phrygia; the roads in their connexion with Phrygian history; the kingdom of Phrygia; the trade between Phrygia and Greece, and its effects on Greek art and literature; Phrygia and its relations with Christianity in the second century A.D. All persons interested in the subject are invited to attend.

The first volume of the Old Testament Commentary edited by Bishop Ellicott will be published on Monday next by Messrs. Cassell & Co., and the second volume will be ready for issue in January. The contributors to the Commentary will include the Dean of Canterbury; the Dean of Wells, Dr. Plumptre; Canons Barry, Farrar, and Rawlinson; the Rev. A. S. Aglen, Rev. C. J. Ball, Rev. F. Gardiner, Dr. Ginsburg, Rev. W. B. Pope, Prof. Stanley Leathes, Dr. Reynolds, and Rev. C. H. Waller.

Mr. Alaric Watts requests us to state that he is not the author of a novel attributed to him in a morning paper.

At the annual special meeting of the Carlyle Society, held on Monday, the report of the Society was presented, and the following programme for the year was decided on: 1. Continuation of the committees of investigation instituted last year; 2. Formation of a committee for giving lectures and addresses; 3. Institution of an associateship of the Society open to working men; 4. Foundation of a political branch or division of the Society.

The Ottoman Government, having inquired into the management of the mosque libraries, has now instituted an Ottoman Public Library, which is being housed in buildings adjoining the mosque of Sultan Bayazid. With this institution is to be combined the library of the Ministry of Public Instruction. Great efforts are being made to obtain donations from private libraries.

We cannot now do more than mention the death of M. Louis Blanc. We may speak of his literary labours at length next week.

It may perhaps be remembered that last year a very old manuscript was found in the Punjab and sent, by order of the local government, to Dr. A. F. R. Hœrnle at Calcutta, to be by him photographed and deciphered. It turned out to be a mathematical work in an ancient form of the Gáthá dialect of Sanskrit, and is supposed to be the only Buddhist work on arithmetic hitherto known. Dr. Hœrnle's edition of this work, with English translation and full introduction, may soon be expected.

Prof. Bálint has at length completed his Romanized grammar of the East Mongolian (Khalka) and West Mongolian (Kalmuk). To this he has added a chrestomathy of both dialects, which includes alliterative folk-songs, anecdotes, conversations, fables, proverbs, prayers, letters, &c.

SCIENCE

Siberia in Asia: a Visit to the Valley of the Yenesay in East Siberia; with Description of the Natural History, Migration of Birds, &c. By Henry Seebohm. With Map and Illustrations. (Murray.)

This narrative of an adventurous journey as far east as the meridian of Calcutta is a pendant to the graphic account by the same author of his ornithological experiences in 'Siberia in Europe,' a work which we noticed in the spring of last year (March 12th, 1881). In the former journey Mr. Seebohm enjoyed the companionship of a kindred spirit; but on the present occasion he had no one with whom to share the pleasures and sorrows of a naturalist. The idea of this trip was, in fact, entertained and a start made within the brief space of five days. It happened in this wise. Capt. Wiggins, who had broken through the ice of the Kara Sea, and, after exploring the entrance of the great rivers Obb and Yenesay, returned in safety in 1874, again tempted fortune in 1876; but after his steam yacht, the Thames, of 120 tons, had penetrated as far as the mouth of the Koorayika, 1,200 miles up the Yenesay, she was frozen up. Leaving his crew in winter quarters, Capt. Wiggins sledged back to civilization, and on the 23rd of February, 1877, he was ready to return in the same way before the ice and snow broke up. The Petchora valley had, as we have seen, been already explored by our author and Mr. Harvie-Brown in 1875; Drs. Finsch and Brehm in 1876 had partially worked the valley of the Obb; the next great valley was that of the Yenesay, beyond which to the eastward the fauna had been, to a certain extent, investigated by Middendorf, Schrenk, and Radde. Here was an opportunity of filling in the gap under the auspices of a man who knew the route. "I leave in three days," said Capt. Wiggins. "Make it five, and I am with you," was the reply; and on the morning of March 1st they were off.

The journey to Kazan was accomplished amid snowstorms and a persistent thaw, which made the roads inconceivably bad, and the first night of travel beyond Kazan tested Mr. Seebohm's powers of endurance to the utmost. By sunrise the thermometer had fallen to zero, and the roads improved. Beyond Perm the ascent of the Ural Mountains, if they may so be called, commenced: a succession of hills, reminding the author of the Peak of Derbyshire. Near Ekatereenburg, in a more cultivated and level country, the granite pillar was passed which marks the boundary line between the two continents; and without delay the journey was continued for another stretch of 204 miles as far as Tyumain, where the river was full of steamers frozen up in winter quarters: thence to Omsk, over the great steppe of Western Siberia, passing Russian villages where the gilt cross on the church steeple was too often the symbol of drunkenness, dilapidation, and comparative poverty, and Tartar villages in which the crescent was almost invariably the sign of sobriety, order, enterprise, and prosperity. From Omsk—twenty years ago only a village, but now containing from thirty to forty thousand inhabitants—the road continued across the steppes to Tomsk, where the country became hilly and well wooded: a feature which characterized the remaining 369 miles to Krasnoyarsk. Here a south-west wind was blowing, the streets were flooded, and for a time the sledge had to be exchanged for the *tarantass;* but as progress was made northwards matters improved, and the 5th of April saw the travellers arrive at Yenesaisk, ready to enjoy a rest after a sledge journey of 2,431 miles.

Another 723 miles of sledging in a northern direction, descending the Yenesay, brought the author to Toor-ó-kansk, a poor

place of about fifty houses built on an island, and on this portion of the route sledges drawn by dogs—fine bushy-haired fellows with sharp noses and short, straight ears—were first met with. Thence to the winter quarters of the Thames, near the point where the Koorayika flows into the Yenesay, was only a matter of 130 versts, the last two stages being made with reindeer, which seemed to fly over the snow. The crew of the vessel were found to be in good health, and, owing to abundance of lime-juice and regular exercise, no signs of scurvy had presented themselves, whereas of the crew of a schooner belonging to the well-known Russian merchant Sideroff only the mate had survived the winter. Here, on undulating ground covered with forest trees with trunks of two and even three feet in diameter, by the banks of a river which is said to be the third largest in the world, and which had already completed a course of at least two thousand miles, the author's bird-collecting fairly commenced. At Yenesaisk he had engaged the services of a very stupid but quick-fingered Jew, an exile from South Russia, whom it was necessary to provide with birds to skin as quickly as possible in order to get him into practice. It was as yet somewhat too early in the season, but by the 21st of May three species of birds hitherto unobtained by Mr. Seebohm had been added to his list, and now migrants began to arrive apace. The river was rising rapidly, the ship was partially afloat, and on the night of the 1st of June came the crisis. The melting of the snow along the great river in the south was going on so fast that the waters, obstructed by the ice below the Koorayika, were being pressed up that and other tributary streams; the broken ice forced the Thames up the stream, and her rudder, which by an inconceivable oversight had not been made to unship, was broken to fragments. This "battle of the Yenesay," as Mr. Seebohm calls it, lasted for about a fortnight, but in the end the yacht, although sorely strained, was not materially injured. Patched up and refreighted after a delay most galling to the ornithologist, who was longing to get to the breeding-grounds of the waders in the swampy *tundras*, the Thames commenced the descent of the Yenesay, when in a moment, owing to a sudden change of wind, she was vilely cast away on a sand-bank. A council of war was held, and Capt. Wiggins, with a natural hatred of defeat, announced his intention of braving the dangers of the Kara Sea in a little schooner which Mr. Seebohm had caused to be built for excursions at Yenesaisk. Not so the crew of the Thames, who utterly refused to risk their lives on any such foolhardy expedition. The captain was a teetotaler and worked his ship upon teetotal principles, so that there was no glass of grog to restore the fainting spirits of the men, exhausted by fruitless efforts to get the ill-fated vessel off. Finally, after something approaching to mutiny, the Thames was dismantled, and it was agreed that as far as Golcheeka, at the mouth of the Yenesay, the voyage should be continued in the schooner, to which Mr. Seebohm had given the name of the Ibis, in honour of the organ of ornithological literature.

Golcheeka is a busy place, in which during the summer the processes of catching, salting, and storing fish go on throughout the whole twenty-four hours of the day. The mosquitos in the neighbouring swamps are unsurpassed in bloodthirstiness, but on the other hand the ornithological treasures of the *tundras* are considerable. For a full harvest of the rarer eggs Mr. Seebohm was unfortunately a fortnight too late, owing to the way in which he had stuck to his companion Capt. Wiggins. After a good deal of trouble both the Ibis and the wrecked Thames were sold—although Mr. Seebohm never got paid—and the river was ascended by steamer to Koorayika. The trees were in full leaf, the short grass had grown to a height of two feet or more, insectivorous birds were swarming, and it seemed almost impossible to believe that only two months ago the banks of the river had been white with snow. So much had happened in the interval that years seemed to have elapsed. When the travellers came out their journey was a race against the thawing south wind; now the short Arctic summer was drawing to a close, and the homeward journey had to be begun while the rivers were still open. Steamer to Yenesaisk, *talega* to Krasnoyarsk and Tomsk, steamer down the Obb to its junction with the Irtisch, and then up the latter to the Tobol, and so to Tyumain, was the line now adopted. Thence, over the same country previously traversed, but under a very different aspect, Mr. Seebohm returned to Europe.

Such is a brief outline of an adventurous journey, undertaken, indeed, with the primary object of investigating certain points in natural history, but productive in the end of far wider scientific results. The ethnologist will read with interest the remarks of a keen observer, who is no novice amongst Siberian races, on the Samoyedes, who extend from the Kahnin peninsula in Europe to the north-east cape in Asia; whilst the district between the east shore of the gulf of the Tazz and the Yenesay is inhabited by the smaller, although allied race of the Yuraks. South of the latter come the Ostiaks, a much larger race, and respecting these and the inhabitants of the Dolgahn territory, the Yakutsks, and the Tungusks, their affinities and their languages, the author supplies much valuable information. Very interesting also is the description of a small collection—probably unique in this country — of bronze and copper celts and other implements, dug out of the ancient graves between Krasnoyarsk and Minosinsk, and respecting which authorities agree that they are the work of a race antecedent to any now existing in Siberia. Similar relics from the same district have indeed been noticed by Erman, but no examples have been known to exist in a museum of Western Europe. Many of these bronze ornaments and implements are figured as tailpieces to the chapters, and are by no means the least attractive amongst the numerous illustrations. The majority of those at the heads of the various chapters are by Mr. C. Whymper from sketches or descriptions by the author, and never has the scenery of the country traversed been more accurately portrayed. For special merit we may select the Siberian dog sledge; the reindeer sledge on the Koorayika, with the long string of wild fowl migrating northwards along the limpid surface of the great river, now freed from its ice; the winter quarters of the Thames; and the view of the same vessel driving with the ice. Scarcely less successful in conveying an idea of the country are the illustrations of Golcheeka and of the shell mounds on the *tundra;* whilst for absolute beauty many will place the two views of the Kahmin Pass above all others. With regard to the orthography of the names, we may take the opportunity of saying that in nearly every instance we have followed the author, who professes to write phonetically for English readers, the spelling usually adopted in geographies and maps being only adapted to the pronunciation of Germans.

So far we have noticed this valuable work on an almost unknown country from the point of view of the general reader; but it is impossible with the space at our command to do justice to the freshness of description and the vividness of portrayal with which Mr. Seebohm places before us the country and its inhabitants. Even the ornithologist who is already acquainted with the principal results of the expedition, and who has studied, in the pages of the *Ibis*, the list of birds obtained, cannot fail to read with renewed interest the daily narrative of a naturalist's experiences. Considered as the first visit to a strange land, the ornithological results were on the whole satisfactory, in spite of the two shipwrecks which caused the author to arrive too late at the *tundras* for eggs, and to miss the birds of the Kara Sea. No naturalist had previously recorded the breeding habits or described the eggs of the Asiatic golden plover, or of three Arctic species of willow-warbler, or of the mountain accentor, or the young in first plumage of three species of ouzels; the male in breeding plumage of Middendorf's bunting was absolutely new, and many interesting rarities were obtained; to say nothing of some valuable observations on the geographical distribution of species. Upon these subjects it is impossible to enter here, and we lay down the pen regretfully, fearing that, wherever fortune may lead this enterprising field-naturalist, we have probably heard the last from him respecting Siberia in Asia.

ASTRONOMICAL NOTES.

The state of the sky at Greenwich and its neighbourhood last Wednesday was such as to preclude the possibility of seeing anything of the long-expected transit of Venus; not a gleam of sunshine, indeed, was to be seen during the whole day, and we believe the weather was much the same over and around London generally. Whilst on the subject of transits of Venus, it may be not amiss to point out the error fallen into by so many astronomical books in giving 8″·5776 as the final value determined by Encke for the solar parallax from the transit of 1769. He corrected that value in 1835, and assigned 8″·59 from the transit of 1769, stating at the same time that he considered the most probable value from the two transits of 1761 and 1769 was 8″·571. The matter is, of course, only of historical interest, as it is well known now that the true value is about a quarter of a second greater than this. It will be long before another transit of Venus will take place, but other methods are available for confirming and improving our knowledge of the sun's parallax and distance; amongst which we are disposed to assign great importance to observations of some of the small planets.

It has been already mentioned in the *Athenæum*

that the latest determination of the orbit of the comet of 1812 (made by MM. Schulhof and Bossert) renders it probable that it will not return to perihelion until some time in the year 1884. It is possible, however, that this return may take place in the course of 1883, and, even if not, the comet may perhaps become visible before the end of next year. Two more periodical comets are expected towards the close of 1883—D'Arrest's periodical comet, discovered by the late Prof. D'Arrest on the 27th of June, 1851, having a period of about 6½ years, and last seen in 1877; and Tempel's second periodical comet, discovered on July 3rd, 1873, observed again in the autumn of 1878 (the period being about 5¼ years), and due a second time soon after the former, or towards the end of 1883.

We regret to state that the Rev. James Challis, for so many years Plumian Professor of Astronomy at Cambridge, died, after a long illness, on Sunday morning last, the 3rd inst., nine days before completing his seventy-ninth year.

PROF. VON BISCHOFF.

From Munich comes the news of the death of Prof. von Bischoff, the celebrated biologist. Born at Hanover in 1807, he was the son of C. Bischoff, a well-known chemist, who on the establishment of the university at Bonn became a professor there The son studied medicine, and on taking his degree became attached to an hospital at Berlin, and acquainted with Müller and Ehrenberg. His 'Beiträge zur Lehre von den Eihüllen des Menschlichen Foetus' was the earliest of a series of researches which raised him to the first rank among embryologists, but which are too numerous to bear enumeration here. After lecturing on pathological anatomy at Heidelberg for some years he became professor of physiology, and soon afterwards of anatomy also, at Giessen, and was one of the band of illustrious men who raised that little university to high reputation. Like Liebig, however, he listened to the overtures of King Maximilian of Bavaria, and in 1854 he went to Munich. Some years since he retired from his professorship and the charge of the Anatomical Institute in order to devote himself wholly to research. In him Germany has lost one of her most illustrious men of science.

THE 'MACHINA CŒLESTIS' OF HEVELIUS.

The name of Hevelius is such a household word with astronomers, that all will recognize the service which has recently been rendered by Mr. C. Leeson Prince, of Crowborough, in reprinting, with a translation, those parts of his 'Machina Cœlestis' which treat more immediately of the method which Hevelius adopted with respect to the mounting and equipment of his telescopes. Nearly the whole impression of the work itself was destroyed by a fire which, in 1679, burnt down his house and observatory, only a few copies remaining, which had been distributed to friends; it is, therefore, now very rare, and Mr. Prince believes that only three copies are in existence in this country. (One of these, we may remark, with the author's autograph on presentation, is in the British Museum.) The translation was made by Mr. F. H. Forshall, of Eastbourne. Mr. Prince supplements it by a few notes, describing the engravings and some observations of Saturn made by both Hevelius and Gassendi. He takes occasion also to refer to the mistake which has been made in recent years of attributing the discovery of the principal division in Saturn's ring to William Ball, of Mamhead, in Devonshire. Until little more than fifty years ago it had always been rightly assigned to Cassini in 1675; but afterwards a conjecture expressed apparently by Dr. Wallis in 1665 from a drawing made by Ball and his brother was erroneously interpreted into a discovery by them of the duplicity of the ring. Mr. Lynn in 1880 pointed out (as has been mentioned in our columns) how uncertain was this conclusion; and the more recent discovery of the engraving of the drawing (which was unfortunately omitted in most of the copies of the *Philosophical Transactions*, but has been found in a few) has taken away any plausibility from it, the supposed duplicity evidently referring to something quite different, due apparently to an optical illusion produced by the glass employed.

Mr. Prince also gives a description of the telescopes used by himself at his elevated and advantageous position on Crowborough Beacon; particularly of his Tulley equatorial, of 6·8 inches aperture and 12 feet focal length, which was originally constructed for the Royal Astronomical Society in 1826, and came into his possession in 1855.

The book is elegantly printed and very well illustrated. Although at present only printed for private circulation, we hope Mr. Prince will be induced to reissue it for general use; in doing so he will have an opportunity of correcting a few typographical and other errors which we have noticed, particularly the remark inadvertently made that Ball's anonymous correspondent "was either Wallis, Hooke, or Huyghens." It could not have been the last mentioned because "the Person" (so called) in question immediately afterwards wrote to him, and was in all probability Wallis, as Ball's usual correspondent in astronomical matters (see Mr. Lynn's letter in the *Athenæum* of October 14th).

SOCIETIES.

Society of Antiquaries.—*Nov.* 30.—Mr. E Freshfield, V.P., in the chair.—Mr. R. Day, jun., exhibited six matrices of seals, viz., 1, the seal of Thomas Fynyon, Abbot of Combermere, Cheshire (date, middle of the fifteenth century); 2, common seal of the Friars Preachers of St. Bartholomew, London, formerly in the possession of Francis Douce (engraved in the *Archæologia*, xv. 401); 3, seal of the Commissary of the Diocese of Winchester (date, fifteenth century); 4, seal of John Campeggio, Bishop of Bologna, 1553-54; 5, seal of the Prioress of the Monastery of St. Catherine of Siena; 6, small personal seal of the fourteenth century.—Mr. J. A. J. Evans communicated the first part of an elaborate paper on antiquarian researches made by himself in Illyricum. The sites to which Mr. Evans this evening called special attention in full detail were those of Epitaurum, Canali, and Risinium. Architectural remains, inscriptions, coins and gems, Mithraic monuments, traces of Roman roads, and other most interesting particulars were successively passed under review with a wealth of illustration and ingenuity of speculation beyond all praise.

Royal Society of Literature.—*Nov.* 29.—Sir P. de Colquhoun, V.P., in the chair.—The following gentlemen were elected Fellows: The Master of St. John's College, Cambridge, Messrs. C. J. Stone, R. F. Benham, J. A. Acton, W. Rutter, J. H. Heaton, and W. H. C. Dunhill.—Mr. Rendle read a paper 'On the History of St. Thomas's Hospital, from *circa* A.D. 1200 to 1553, from original MSS. and chiefly from a Volume formerly in the Stowe Collection, and now belonging to the Earl of Ashburnham.' This volume, of about 600 pages, was written in the early part of the sixteenth century, and was at first incorrectly named a record of the parish of St. Mary Overy: it is really a collection of charters, &c., referring to the hospital. The first hospital, Mr. Rendle said, was a portion of the priory of St. Mary Overy, and was within its precincts as early as A.D. 1200; this was burnt in 1207, but rebuilt in far greater grandeur in 1228 by Peter de Rupibus, Bishop of Winchester. The bishop's appeal for help, probably the earliest charity sermon on record, is contained in this MS. Mr. Rendle then gave notices, in the words of the documents themselves, of many illustrious people mentioned in them—as of Gower the poet; Fastolfe of the Boar's Head; Nicholson, the painter of the windows in King's College Chapel, Cambridge, and the printer of Nicholson's Coverdale Bible. Reference was also made to the public market of Southwark, *temp.* Richard II., to the court of Marshalsea, and to the other royal courts held in the immediate neighbourhood. Many interesting matters relating to the Jews of Southwark, *temp.* John and Henry II., were also noted. The hospital was rebuilt in 1507, on the site where it remained till quite recently, the ground costing 31*l.* 3*s.* 4*d.* Very nearly the same site was sold by the hospital governors to the South-Eastern Railway Company for 296,000*l.* Mr. Rendle's paper was illustrated by a copy of a map, now in the Record Office, of the later foundation, on which were roughly shown the palace of the French Queen, the Tabard, the house of the Abbot of Hyde, Winchester House, the church of St. Mary Overy, Bermondsey Abbey, &c.

Zoological.—*Nov.* 28.—Prof. W. H. Flower, President, in the chair.—Mr. W. B. Tegetmeier exhibited and made remarks upon the skull of a rhinoceros from Borneo; also the horns of a buffalo and of a deer from the same country.—Mr. J. E. Harting exhibited a South African eagle-owl (*Bubo maculosus*), said to have been obtained many years ago near Waterford, in Ireland.—Mr. R. B. Sharpe exhibited and made remarks on some swifts from the Congo; and a specimen of *Machærhamphus alcinus*, which had been obtained in Borneo by Mr. Everett.—Letters and communications were read: from Prof. Owen, on the sternum of *Notornis* and on sternal characters,—from Dr. A. B. Meyer, in relation to the adoption by naturalists of an international colour-scale in describing the colours of natural objects,—from Dr. W. Blasius, of Brunswick, on a small collection of birds made by Dr. Platen in the island of Ceram: the collection contained forty-nine specimens, referable to twenty-one different species, one of which was new to the fauna of Ceram,—from Mr. E. P. Ramsay, on a new species of *Monarcha* from the Solomon Islands, proposed to be called *Monarcha* (*Piezorhynchus*) *browni*,—by Mr. W. B. Espeut, on the acclimatization of the Indian mungoos (*Herpestes griseus*) in Jamaica, in which the author explained that the object in introducing the mungoos into Jamaica was the destruction of the rats, which had committed serious ravages among the sugar and coffee crops: the first mungooses were introduced in 1871, and so beneficial was the effect produced that the saving to the sugar and coffee planters now was estimated at least at 100,000*l.* a year,—by Lieut.-Col. Godwin-Austen, on specimens (male and female) of *Phasianus humiæ*, Hume, which had been obtained by Mr. M. Ogle on the peak of Shiroifurar, in North-East Munipur, upon the Naja Hills,—and from Mr. A. Thomson, on some observations made by him during the rearing of a species of stick-insect (*Bacillus patellifer*) in the Society's Insect House.

Institution of Civil Engineers.—*Dec.* 5.—Sir W. G. Armstrong, President, in the chair.—It was announced that the Council had recently transferred six gentlemen to the class of Members, and had admitted fifty-eight Students.—At the first monthly ballot for the session 1882-3, nine Members, sixty Associate Members, and six Associates were elected.—The paper read was 'On the Sinking of Two Shafts at Marsden for the Whitburn Coal Company,' by Mr. J. Daglish.

Royal Institution.—*Dec.* 4.—Mr. G. Busk, Treas. and V.P., in the chair.—Dr. A. G. Bartley, Mr. D. E. Hughes, and Mr. G. Law were elected Members.

Anthropological Institute.—*Nov.* 28.—General Pitt Rivers, President, in the chair.—Dr. G. W. Parker read a paper 'On the Language and People of Madagascar.' The language belongs to the Malayo-Polynesian group, being most nearly allied to the Malay proper. The various dialects, numbering more than sixteen, are essentially only one language. It is soft, musical, phonetic, and easily learned by Europeans. Until the early part of the present century it was a spoken language only, but the English missionaries reduced it to its present form, our own English alphabet being adopted with the exception of the letters *c*, *q*, *u*, *w*, and *x*, which have no equivalent sounds in Malagasy. The vowels are four in number, and the consonants sixteen, pronounced as in English, with the exception of *g*, which is always hard (as in *gate*), and *j*, which has the sound of *dz* (as in *adze*). There are only two real diphthongs. In pronunciation every vowel or diphthong must be clearly sounded, and the accents properly placed, because often the alteration of one vowel or of the place of the accent is the only means of distinguishing similar-sounding words. The author then gave the six chief rules of syntax, and explained the grammatical structure of the language. In the second part of the paper the peculiar geographical position of Madagascar was first noticed, its estimated population (from four to four and a half millions), and its chief structural features, with special notice of the central plateau. There are a great many tribes in Madagascar, but all are divisible into two distinct classes, according to their race-origin, Malay and African. Their forms of government are (1) petty absolute monarchies over the greater part of the island; (2) among the Hovas tribe it is nominally an absolute monarchy, really an oligarchy, the head of which has almost regal power. The office of Prime Minister is not peculiar to the Hovas, tribes on the north and west coasts also possessing the same institution, but only among the Hovas is the Prime Minister not only the factotum, but also the "*ex officio* husband to the queen." A short sketch of the new code of Hova laws was next given, this being the

only tribe which possesses a code of laws. An outline of the history of Madagascar was given, showing the origin of the present form of government among the Hovas, the tribe which seeks to possess the entire island. Lastly, reference was made to the French claims against Madagascar now being put forward, and their effect upon British interests.—A discussion followed, in which the Rev. J. Sibree, the Rev. W. C. Pickersgill, Prof. G. Oppert, Mr. A. H. Keane, and others took part.

ARISTOTELIAN.—*Dec.* 4.—Mr. S. H. Hodgson, President, in the chair.—Mr. Gill was elected a Member.—Mr. J. Fenton read a paper 'On Hume to Kant,' which was followed by a discussion.

MEETINGS FOR THE ENSUING WEEK.

MON. London Institution, 5.—'Thomas Carlyle,' Mr. J. C. Morison.
— Education, 7½.—General Meeting.
— Aristotelian, 7½.—Discussion of the President's Address.
— Royal Academy, 8.—'Chemistry,' Mr. A. H. Church.
— Society of Arts, 8.—'Dynamo-Electric Machinery,' Lecture II., Prof. S. Thompson (Cantor Lecture).
— Geographical, 8½.—'Explorations in Guatemala, and Examination of the old Indian Cities, Tikal and Usumacinta,' Mr. A. P. Maudslay.
TUES. Horticultural, 11.—Scientific and Fruit and Floral Committees.
— Colonial Institute, 8
— Photographic, 8.
— Anthropological Institute, 8.—'Flint Implements and Flakes from Cape Blanc Nez (near Calais),' Mr. A. L. Lewis; 'The Australian Class Systems,' Mr. A. W. Howitt.
— Civil Engineers, 8.—Discussion on the 'Sinking of Two Shafts at Marsden for the Whitburn Coal Company.'
WED. Microscopical, 8.
— Society of Arts, 8.—'Electrical Exhibitions,' Mr. W. H. Preece.
— Literature, 8.—'Muhammedanism,' Sir P. de Colquhoun.
THURS. Royal, 4½.
— London Institution, 7.—'The Recent Transit of Venus,' Prof. R. S. Ball.
— Royal Academy, 8.—'Chemistry,' Mr. A. H. Church.
— Telegraph Engineers, 8.—Annual General Meeting; 'Application and Extension of Telephonic Communication in Japan,' Mr. T. J. Larkin.
— Mathematical, 8.—'Vibrations of a Spherical Shell,' Prof. H. Lamb; Paper by Prof. H. Smith; 'Certain Relations between Volumes of Loci of Connected Points,' Mr. E. B. Elliott; 'Geometrical Proof of Griffiths's Extension of Graves's Theorem,' Mr. J. J. Walker.
— Antiquaries, 8.—'Churches in the East of Italy,' Mr. E. Freshfield; 'Tempera Painting of the Blessed Virgin and Child in the Church of Great Canfield, Essex,' Mr. J. G. Waller.
FRI. Philological, 8.—'Initial Mutations in the Celtic, Basque, Sardinian, and Italian Dialects,' Part II., Prince L. L. Bonaparte.

Science Gossip.

MR. WILLIAM MOLYNEUX, F.G.S., died at Durban, Natal, on the 24th of October. About thirty years since Mr. Molyneux was in the Estate Office at Trentham Hall, when he made a collection of the fossils of the North Staffordshire coal-field, which subsequently found a place in the Museum of Practical Geology in Jermyn Street. He was appointed Librarian to the Mechanics' Institution at Stafford. Having been active in the development of the Cannock Chase coal-field, and being for some years the manager of one of its collieries, he took an active part in founding the Burton Natural History and Archæological Society. He wrote a history of Burton-on-Trent and also of Cheadle. He assisted in the compilation of 'The Gardens of England,' and contributed papers to the British Association. In 1880 Mr. Molyneux made a report to the Cape Government on the coal-fields of Cape Colony, and he was engaged in reporting on the mineral resources of Natal.

MR. WILLIAM BARNET LE VAN read before the members of the Franklin Institute on October 18th a paper 'On Economical Steam Power.' This is printed in the *Journal* of the Franklin Institute for November, and should be studied.

WE have been favoured by the Minister of Public Works at Madrid with a copy of the Royal Decree and Regulations for a Spanish National Exhibition of Mineralogy and Metallurgy, to be opened on the 1st of April, 1883, and closed on the 30th of June.

THE *Memoirs* of the Geological Survey of India, Vol. XIX., Part I., has been received. It is devoted to a notice of 'The Cachar Earthquake of 10th January, 1869,' by the late Thomas Oldham, LL.D., edited by his son, R. D. Oldham. Dr. Oldham, when he took the materials home with him, on retiring from the direction of the Geological Survey of India, intended to have published this report in England. Failing health and other causes prevented his carrying his wishes into execution, and the duty of completing the work devolved upon his son, who has since joined the Indian Geological Survey. The work, which has been most satisfactorily completed, is illustrated by ten engravings, four photographs, and a map of the seismic area.

FINE ARTS

ROYAL SOCIETY of PAINTERS in WATER COLOURS.—The TWENTY-FIRST WINTER EXHIBITION is NOW OPEN, 5, Pall Mall East, from Ten till Five.—Admission, 1s.; Catalogue, 6d.
ALFRED D. FRIPP, Secretary.

SOCIETY of BRITISH ARTISTS.—WINTER EXHIBITION NOW OPEN, from Ten to Five Daily, at the Suffolk Street Galleries, Pall Mall East.—Admission, 1s. THOMAS ROBERTS, Secretary.

The EIGHTEENTH ANNUAL EXHIBITION of WATER-COLOUR DRAWINGS by ARTISTS of the BRITISH and FOREIGN SCHOOLS is NOW OPEN at Thomas McLean's Gallery, 7, Haymarket.—Admission, including Catalogue, 1s.

WATER-COLOUR EXHIBITION, 53, Pall Mall, containing 350 Works by well-known Artists in Water Colours, three great Works by John Martin, R.I., and Fifty others in Oil. NOW OPEN.—Admission, 1s. ROBERT HOPKINS, Manager.

DORÉ'S GREAT WORKS, 'CHRIST LEAVING the PRÆTORIUM,' 'CHRIST ENTERING JERUSALEM,' and 'MOSES before PHARAOH,' each 33 by 22 feet, with 'Ecce Homo,' 'The Ascension,' 'Dream of Pilate's Wife,' 'Soldiers of the Cross,' 'A Day Dream,' &c., at the DORÉ GALLERY, 35, New Bond Street. Daily, Ten to Six.—1s.

ART FOR THE DRAWING-ROOM.

The Renaissance of Art in Italy: an Illustrated Sketch, by Leader Scott (Sampson Low & Co.), does not pretend to be more than a well-arranged compilation of materials borrowed freely from all sorts of sources. So far as it goes, and that is not far, the book fulfils its aim. A numerous list of "authorities"—nine out of ten of which are but compilations of no authority—does not affect the critical reader of this book. A large number of cuts, some of which are interesting on account of their subjects, have been borrowed freely from all sorts of books, and add largely to the value of the publication.

Ancient Greek Female Costumes. By J. Moyr Smith. (Sampson Low & Co.)—The duration and extent of Mr. Smith's studies in the subject of which he has had the courage to write may be judged from his own statement: "Though I have been interested in Greek costume for many years, it is only recently that I discovered that such a book as Hope's 'Costumes of the Ancients' existed. It was a revelation of the diversity, beauty, fitness, and grace of the early Greek dress"! From this treasure-trove of Hope's, and from the 'Denkmäler' of Müller, the greater number of the cuts before us were borrowed. Their insufficiency, not to say their badness, is patent. The letterpress is light, trivial, and likely to amuse those who know little about the subject.

Art Needlework (Ward, Lock & Co.) contains, besides a number of "designs,"—*i. e.*, patterns suitable for execution by experts and amateurs, some of which are questionable in taste, while others are commendable—numerous woodcuts and diagrams of patterns, implements, and subjects for embroidery and stitches of all sorts, together with ample and thoroughly practical instructions. While commending the letterpress, we may be allowed to advise the author, whose modesty conceals his or her name, not to trust too implicitly the historians who taught that "Queen Matilda left a history of the Norman conquest in the Bayeux tapestry." The writer should also adopt a higher conception of what art is. Otherwise the book seems to be worthy of its pretensions to be "a complete manual of embroidery in silks and crewels." The binding, in sham maple wood and real printed paper, is in deplorable taste.

ART FOR THE NURSERY.

The Good Old Story of Cinderella retold in Rhyme (Warne & Co.) owes its text and seventy of its illustrations to Lieut.-Col. Seccombe; twelve additional plates have been printed in colours by Emrik and Binger. Col. Seccombe's jingling verse has considerable spirit and movement; but his designs, most of which are in outline, surpass the verses, while the grace and sweetness of the heroine's air and features are very pretty, if rather sentimental. There is a good deal of vivacity and some sense of humour in the character part of these sketches.—*The Baby's Museum of Rhymes, Jingles, and Ditties, newly arranged by Uncle Charlie*, which Messrs. Griffith & Farran have published, contains some clever woodcuts. Among the best are a group of dogs by Mr. H. Weir on p. 61, and more drawings of animals in other parts of the book, *e.g.*, pp. 139 and 142.—Messrs. Dean & Son have sent us *The Prince and the Penny, Rhymes and Jingles*, and *Grandma's Nursery Rhymes*, each of which comprises "pictures" by Mr. C. Harrison. These designs, when they are not somewhat vulgar, are silly; they are neatly printed in bright and decidedly hard colours, but they are very badly drawn. *A Summer in the Country*, with twenty-five illustrations (same publishers), is a weak little book with feeble cuts.

THE GROSVENOR GALLERY EXHIBITION.

OF Mr. Alma Tadema's works in oil 130 are in the West Gallery at the Grosvenor; there are 54 more examples of his skill, including drawings in water colour, in the Fourth Room. The Fifth Room is hung with engravings after him by several of the most eminent modern hands. In the other rooms are 54 landscapes, essentially exercises in sky painting, by the late Mr. Cecil Lawson. On certain tables are terra-cotta statuettes by Signor Amendola, which are as charming in their elegance and spontaneity as any relics of the Italian Cinque-cento.

We shall begin these notes by considering the oil pictures of Mr. Tadema, among which are several not previously exhibited in this country. The collection is not, of course, complete; several very charming works of recent date could not be obtained from America; and neither of the versions of 'Fredegonda and Prætextatus,' 'V. Fortunatus and Radigonda,' and half a dozen fine, if smaller things besides, could be borrowed from Dutch or English private collections. At the moment of our writing, and for a few days to come, the much-talked-of 'Cleopatra,' which has undergone complete transformation since we described its design a month or so ago, is represented by a large empty frame on the south wall. As a whole the collection represents the genius and skill of the painter to perfection.

In studying the contributions of the illustrious pupil of Baron Leys, we must bear in mind that he was born in 1836 (January 8th). It was not until 1852 that Alma Tadema was free to choose the career of a painter; but that he long before this date worked industriously with the brush is proved by the *Portrait of the Artist in* 1852 (No. 1), which includes the nearly life-size half-length figure of a boy seated at an easel. The thin lips are set close together, and the eager eyes already search nature. Apart from the intense energy of the motive of this portrait, its execution is marvellous for a lad of sixteen, who at that time had not had the aid of masters or academies. Hard, sharply defined, and crude and dark in its brown shadows and pallid flesh as this remarkable exercise is, there is much in its execution which foreshadows the solidity, splendid modelling, and true drawing of the Roman damsel in the picture called *Tepidarium* (118), a brilliant example painted last year, and representing the present stage of Mr. Tadema's art, or at least the technical part of it. In the surprising *Clotilda at the Tomb of her Grandchildren* (7), a work of 1858, the somewhat opaque painting of the flesh and drapery, the pipe-like character of the folds of the garments, the comparatively colourless morbidezza of the features, the half tints of which are ashy, and the general smoothness of the surface, at once show the workings of a mind tentatively feeling its way and affected by the academic teaching of Baron Wappers and Heer Dyckmans, who were the guiding lights of the Antwerp School of Art in those days. In the simplicity and pathos of the action of the lamenting mother and in the sorrowful energy

XUM

of her face it is easy to discern the nascent genius of the designer.

In the *Education of the Grandchildren of Clotilda* (8), which was produced in 1861 (of this subject there is another and independent rendering), we notice a prodigious advance. The artist's conceptions have become more energetic. There is more movement in the action of the principal figure, the draperies are more varied, and the features are more lifelike and dramatic. While these points indicate the advent of a new master, a certain silveriness, smoothness, and lininess recall the picture of Clotilda at the tomb (No. 7), and are attributable to the influence of Dyckmans. There is some diffidence, if not timidity, in the conception of the minor figures of lookers-on; but the moody stillness of the seated queen, who trains the child to vengeance, is intensely effective, and the design of the figure of the royal boy is quite original. The archæological leanings of the artist and his delight in researches into costume and architecture and the physical looks of men and women of past ages are here obvious for the first time. *A Bargain* (3), which is dated 1860, may have been finished after the last-named picture was designed; at least its style, methods, and coloration are more developed. Here we have rich and vivid colour in an old arch and wall of dark, ruddy stone, with clear tones and luminous tints so intense and deep that we must needs refer them to the influence of Van Eyck upon studies from nature of a much less academical order than the earlier works display. In 1862 or 1863 Mr. Tadema was advanced enough to go to Rome, where, in the latter year, he painted the capital *Study of St. Clement's* (9). In 1862 the wonderfully dramatic and richly painted *Gonthram Bose* (21) was executed. It was sold for 100*l*. Here the finish of the landscape, its richness, fidelity to nature, and its light and local colouring are simply superb. The artist had also made a great step in the art of composition, and he was now able really to enrich his designs with subordinate incidents, and to impart expression by concentrating the movements and attention of the figures on the central fact, the murder of the captain. Great, however, as was the advance indicated by 'Gonthram Bose,' some of its charms attest the fact that Tadema had yet something to learn in the line Leys followed.

The *Egyptian at his Doorway* (16) was painted in 1865, and is in every way a noteworthy instance, because it embodies the spirit of *genre* painting on antique lines. It is the direct precursor of scores of works on these walls. It is, in fact, the first Tadema proper now before us. A still greater development of the same vein is shown by *Agrippina with the Ashes of Germanicus* (17), painted in 1866. The solid, elaborate, and searching execution of the deep-red toga of the Roman dame, who reclines on a couch in the richly decorated *columbarium* of her family, and holds in her lap the golden *cippus* of the hero, the rich gloom of the background, and the general fulness of tone and tint in this picture will remind every one of Van Eyck, but of Van Eyck refined by classic studies and Italian motives. The *Visit to the Studio* (10) was painted in 1867, and shows that the painter's studies had led him to deal with light, shadow, and local colour so as to form a complete scheme of chiaroscuro of the kind much affected by Gonzales Coques in some of the finest of his interiors. A lady and gentleman are looking at pictures. She is clad in dark cinnamon-coloured garments, which accord in tone with the background and furniture; he wears a coat of warm white and lustrous texture, which supplies a focus to the composition.

'The Egyptian,' 'Agrippina,' and the 'Visit to the Studio' form a group of pictures which may be said to mark the second stage of the painter's art. They show the influence of Leys, yet the choice of types is more refined, the painting more solid, the drawing immeasurably better, the design more subtle, and the composition more compact. Still they refer as strictly to him as his manner referred to Van Eyck's. *Egyptians Three Thousand Years Ago* (38) belongs to the same class. Painted in 1863, it was one of three works by Mr. Tadema that were exhibited at the French Gallery in 1865, the first of our artist's appearances in this country. It made a great sensation in Paris in 1864, and, we believe, won a first-class medal in the *Salon* of that year. The tragedy of 'Gonthram Bose' (21) concluded the first stage of Mr. Tadema's art; the 'Visit' and 'Agrippina' defined the second.

The third stage, and the best, grew directly out of the second. It began with *Phidias and the Elgin Marbles* (24), which is dated 1868, and, to the best of our recollection, has not before now been exhibited in this country. It represents the saffron-clad Aspasia, Pericles, in black, and Alcibiades, in white, inspecting the then newly-finished frieze of the Parthenon. This comprises a line of horsemen carved on the *cella* of the temple, and coloured in full tints. The peculiarity of the illumination is that the light is reflected from far below the feet of the figures into the dim space within the peristyle, and broken by the shadows of the tympan and the enormous columns. The keenest archæological research furnished details of the decoration of the scene, studies in nature enabled the artist to achieve a perfect representation of the novel effect, and technical accomplishments lent their aid to give solidity to the dramatic conception, which is extraordinarily happy. The statue-like figures are wisely associated with a sculptural subject. The colouring of the frieze, however, is much too heavy.

The famous *Pyrrhic Dance* (30) took the world by storm in the Academy of 1869. In energetic design it remains unsurpassed among the painter's conceptions. Not even *A Juggler* (27) (R.A., 1870) nor *A Roman Emperor* (32) excels it in energy of movement and expression. Softness of tonès and complete fusion of tints, qualities hitherto lacking in Mr. Tadema's art, appear at this stage of his development, and the picture is a masterpiece in these respects. 'A Juggler' illustrates the artist's researches into the costume, architecture, customs, and even the humours of antique life. The swart Egyptian mountebank stands erect in the atrium of a Roman house, and the ridges of the muscles of his loins attest the suppressed energy of the action with which he keeps five eggs rising and falling from his hands. The pleased admiration of his Roman hosts is worthy of notice. One of them is stolid and fat, the second full of interest and wonder, the third is moved by a most inquisitive spirit. One of the charms of this brilliant picture is the fidelity with which the light, having flooded the atrium, is reflected on the painted walls and ceiling of the ambulatory, and glows on the arms, pictures, and other ornaments which enrich the background of the figures and the colonnade. No. 32, 'A Roman Emperor,' is the larger version of its subject, and represents the legionaries saluting Claudius after they have slain Caligula. M. Rajon engraved this picture. A smaller and, in some respects, even finer version occurs in *Ave Cæsar! Io Saturnalia* (61), which the Catalogue dates 1880; see also *Claudius* (92), dated 1867. The first manifests more strongly than its forerunners had done a vein of sardonic humour in the artist's mind, which is unusually conspicuous in the design of *In the Time of Constantine* (79), dated 1878, in which two nobles, having nothing better to do than enjoy their sumptuous gardens, devote their energies to teaching a dog to "beg."

The grace of rhythmical movement is happily expressed in many of the examples before us. *The Vintage* (66), dated 1870, is a perfect illustration of this. The very attitudes of the women who follow the priest bearing the amphora suggest the shrillness and cadency of that flute-music which is at once joyful and austere. The local tints of the white and coloured marbles, bronzes, pavements, pictures, utensils, garments, and wreaths — exquisite representation of which is Mr. Tadema's peculiar gift—are here to be seen at their best. Not even the superbly painted silver bowl in the foreground of *A Sculpture Gallery* (59), which has fascinated amateurs since 1874, surpasses the marbles in 'The Vintage.' The fascination of such wonderful verisimilitude could not be exercised with greater fortune than in the lustrous purity of the gigantic sunlit white *term* in No. 120, which is called *Hide and Seek*, and dated 1876. A much higher, that is more subtle, kind of verisimilitude is exhibited in the picture which, dated 1877, succeeded 'Hide and Seek' on Mr. Tadema's easel, and is here named *The Sculptor* (54), because it depicts an artist and his *aides* at work on a vast white marble head of Phœbus, which fills nearly the whole of the small square canvas before us, and is as grand as an antique colossus should be. The men are diminished to scale with the size of the statue on which they are labouring, and their dark and opaque garments stand solidly against the blanched and partly transparent stone, which, as snow is, is blue with reflections from the azure sky, and touched with lustre where the sunlight catches its outlines and traces them in gold and rosy tints. The soft surface of the stone is still powdered with dust of the carver's chisels, and modelled with such exquisite insight into nature that we readily distinguish those contours which have had the last touches from those which have yet to be treated. The reader learned in archæology will appreciate the tools and the basket which contains them. Such skill, care, and lore were never more fortunately lavished on a *genre* picture; but in scientific delineation and verisimilitude it is matched by *Water Pets* (40), dated 1874, in which scientific perspective and an inexhaustible skill have rendered with perfect fidelity the geometry of the tessellated pavement. The narrow upright picture called *A Staircase* (44) comprises brilliant marbles and sheeny costumes of figures ascending and descending in pure sunlight. It was given by the artist in aid of the fund for the relief of French peasantry ruined by the war of 1870.

The white marble walls, statues, basin, and basreliefs of *A Sculpture Gallery* (59), painted in 1874, enclose life-size figures—some of the first life-size figures that Mr. Tadema produced; and they prove the artist was equal to the difficulties of the unwonted scale in full-length representations of the life. *The Chamberlain of Sesostris* (95), painted in 1869, is but a half-length figure, but its depths of tints and tones are so striking that it is difficult to believe that it was "rejected" by a committee of R.A.s when sent for exhibition in 1870; and when this fact was made known, no better place than a corner on high in the Lecture Room was found for it. We described this work in "The Private Collections of England," No. IV., and still consider it a masterpiece. Its archæology is exhaustive and peculiar, but not nearly so complex and difficult as that of *A Picture Gallery* (76), which contains the portraits of Mr. Gambart, in a black toga, discoursing about a picture which occupies an easel; of Madame Lowenstam, in a rose toga; and of Mr. Deschamps, seated in the front of the group of figures.

We have now traced the progress of Mr. Tadema's powers to their present stage, and quoted examples of his great success in respect to various technical qualities of painting and archæology. To these we have added instances of passion, dramatic conception, humour, animation, and pathos in design. Of exhaustive and original insight, that very rare quality in art of any kind, there is much in such pictures as the resplendent and spirited *Fête Intime* (35), the sardonic *Ave Cæsar!* (61), the richly coloured *Audience at Agrippa's* (63), as well as in its pendant, *After the Audience* (70), and *In the Time of Constantine* (79). None of these surpasses in this respect *A Well-protected Slumber* (87), where a slave girl, reclining on the pave-

XUM

ment before her young mistress's *cubiculam*, half rises, with finger on her lips, to warn one who passes before her post that the lady sleeps late behind that heavy yellow *portière* which bends the rod on which it hangs. Having filled the space at our command, we may conclude this part of our review by calling attention to the varied treatment of the nude figures in the merely realistic *Sculptor's Model* (83), a standing life-size subject, and the smaller, but choicer and immeasurably more elegant form of the girl in the above-mentioned *Tepidarium* (118). We reserve our notice of Mr. Cecil Lawson's pictures in the East Gallery.

THE SOCIETY OF PAINTERS IN WATER COLOURS. WINTER EXHIBITION.

The venerable Society of Painters in Water Colours has not only received permission to style itself Royal, but it has ceased to designate its winter gatherings as collections of "Sketches and Studies." Yet it is hard to accept the present exhibition as intended to bear comparison with that of last summer. As some of the members never send anything but sketches, and are altogether innocent of studies, their shortcomings are not noteworthy, but the *pièces de résistance* are comparatively trifling. Prof. A. Menzel's contributions are an elaborated part of a picture and a small interior, which, compared with what he has done on other occasions, is but a sketch. Mr. Wallis has sent a sketch taken in the Alhambra. Mr. A. W. Hunt's landscapes are but studies, exquisite as they are. The same may be said of the most covetable productions of Messrs. Boyce, A. Goodwin, Henry Moore, F. Powell, Willis, and others, who send studies, not pictures. On the other hand, the Princess Louise, an Honorary Member, who is denoted by "L" in the Catalogue, not only justifies her election, but proves a very efficient addition to the ranks of the society. Her works are above the average, as her capital *Canoeing on the Cascapediæ River* (No. 252), a standing figure with punting pole in hand, is enough to show. The absence of works by Messrs. Alma Tadema, the brothers Fripp, Holman Hunt, Lockhart, Marks, Marsh, North, and Shields may account for part of the shortcomings of this exhibition, and prove that even the alteration of its title and the new diplomas do not suffice to elevate the technical character of the display. The first winter's gathering of the new *régime*, being what it is, may well be criticized in the order of the Catalogue, as there are few pictures deserving to be selected. We therefore in that order name the examples which attract the eye.

Mr. D. Cox's *On the Beach, Hastings* (2), has fine silvery greys, and wave movements which remind us of his father's best works.—*Sunset in the Valley of the Simplon* (7), by Mr. A. Goodwin, is notable for the poetical dignity of the noble peaks, which tower above the clouds and are gilded by the sun's last rays. One of the few genuine pieces of draughtsmanship here is this painter's *Beachy Head, Summer, Noon* (25), which illustrates the forms and colours of the grand bastions of the chalk in vaporous sunlight, and the white sheen upon the sea. The golden light is charming; the terrace-like landscape and the bulk of the headland itself are beautifully drawn. *Through the Valley of the Sea* (195) renders the pillar of cloud and fire which the Israelites saw by an impressive, not to say terrifying, effect of sunset on stupendous black and white masses of cloud impending over the desert. The historical element of the subject is an after-thought. *The Monastery of St. Francis at Assisi* (240); *Study of a Sky* (246); *The Duomo at Assisi* (292), the beautiful façade in sunlit mist; and *Maidstone* (368), all by Mr. Goodwin, are worth looking at.—*A Grey Morning at Venice* (12), by Mr. O. W. Brierly, is full of tender semidiaphanous vapour which half obscures the towers and palaces of the city. The silvery tones on the water are excellent.—Mr. C. Davidson's *At Shiplake* (18) is a monumental composition. The effect is broad and simple. *C rnfie d, Bossiney* (222), is first rate.

Herr A. Menzel's *Pulpit in the Town Church Innsbruck* (28) is a vigorously painted, sombre interior of purple walls, in veiled light which reveals only the sparkling points of the gilded ornaments. The gloom of the effect enhances the richness of the colours and the scintillations on the numerous figures. A preacher occupies a lofty pulpit and is holding forth with an energy that is well rendered. Small as this work is, it is comprehensive, homogeneous, and spontaneous: a complete picture, full of thought, energy, and matter. No. 363 represents *Suspicion* by the half-length figure of a warrior in armour, on his guard and grasping the handle of his sword. It has the quaint austerity and spirit of a Cranach, the solidity and exquisite delineation of a Dürer. The animation of the expression is astonishing.—Mr. J. Parker's *The Cliff, Concale* (99), in summer afternoon sunlight, is elaborately and beautifully drawn, charming in its solidity, and remarkable for that velvety texture which attests complete finish. His *Concale* (360) is equally admirable.—Mr. A. W. Hunt's *Warkworth Castle from the Sands* (101) is distinguished by the grandeur of lowering grey clouds, the charm of the blue firmament, and the subtle painting of the orange sands, portions of which reflect the sky. *Kinloch Ewe, Ross-shire* (108), has the tenderness characteristic of the artist. *Eastfield Mill* (150) is another reading of the same effect. The foliage is delicately painted. This artist has some more delightful studies here.—In Mr. H. Moore's *Fishing Boats Returning* (113) the sky is capital and the atmosphere is perfectly truthful. It is the best of his contributions, all of which deserve praise.—Mr. G. H. Andrews's *Sketches in Venice and Belinzona* (152) are very bright.—Mrs. Allingham's *Phœbe* (153), a buxom girl's head in a pink hood, with black drapery on her shoulders, is strong and rich. This lady sends many good sketches.—Mr. B. Foster's *Fish and Fruit* (174) comprises solid studies from nature, of which the group of lampreys is the best.

Of some learned studies by Mr. Boyce it may be said that they epitomize nature and beauty in the simplest and most loyal manner, and delight us by the fineness of their colour, their solidity and breadth. The little *Shillingford* (175), for instance, is solid, sober, and serene. The time is evening, the weather calm; the effect illustrates sharp reflections on the shimmering surface of the Thames. *The Church and Tithe Barn at Dunster* (323) resembles an enamel seen in pearly light. *Edward the Confessor's Chapel* (339), as it appeared before Westminster Abbey was gaumed with "Scott's Brown Varnish," is not only an exquisite piece of draughtsmanship, but a precious artistic record, preserving the tints of Time's bestowing, now banished for ever. Other examples from the same artist will delight the student of nature in her sweetest and most modest guise.—*Village on a Marsh* (224), by Mr. A. Hopkins, though a little painty and opaque, shows fine sense of the charm of light on the grey herbage of the meadow and its pearl-like pools.—One of the best figure studies here is Mr. W. Duncan's *English Roses* (236), an "Old English" damsel in rose-coloured muslin, with a large bouquet of roses in her hand. It is painted with freshness and richness.—Mr. E. A. Goodall's *La Torre de la Agua, Alhambra* (307), charms us by its fresco-like qualities.—Quite like a pure and silvery toned fresco is Mr. F. Powell's *Armathwaite Bridge* (378), one of the most acceptable and artistic drawings in the gallery. It depicts a beautiful and serene effect on a bridge of ruddy brick and yellow stone, which spans a placid river, and defines a vista between trees. It has the demure spirit of an old English drawing in the most elegant taste.

In addition to the above we recommend to the visitors' notice the under-mentioned works, which we have not space enough to praise at length:—Mr. H. Moore's *Off St. Pierre, Guernsey* (31), a piece of the finest draughtsmanship; Mr. J. Parker's *Ipswich* (46), a bright and silvery picture of the quay; Mr. Collingwood's *From the Rigi* (73), rosy and white summits over an ocean of blue vapours; and Mr. A. Hopkins's *Dolce far Niente* (89), a delicate study of the white light of a misty summer afternoon on a sandy shore.—Although the character of Sir J. Gilbert's illustration of Roderick Random' (178) is caricatured, it is full of spirit and has much humour.—Mr. B. Bradley's *August* (255) is a capital drawing of dogs.—*The Solidor, St. Malo* (258), by Mr. C. Smith, renders well the grandeur of that stupendous group of grey towers.—*Kitty* (353) is one of the best, simplest, and truest of Miss Phillott's studies.—A number of drawings by the late Mr. E. Duncan will be found on a screen here; of these *Stranded Vessels* (415) and *Sound of Mull* (419) have the highest merits, and show how well the painter worked in his prime.

THE GRAPHIC EXHIBITION.

A number of pictures of animals, the results of commissions given by the proprietors of the *Graphic*, may be seen in New Bond Street. Many of them are below mediocrity, but a few are worthy of notice. *Caught at Last* (No. 6), by M. Gelibert, is spirited, and the mode of painting is clever. It represents a fox on the top of a rock besieged by dogs.—*An Artillery Team in Action* (9) is a capital study of horses and gunners, their arms and gear. The work of Mrs. Butler, it is not free from the heavy touch and loads of pigment in which she indulges. She has, nevertheless, drawn and painted the figures with exceptional care and precision.—Signor L. Chialiva's *Exchange of Compliments* (11) is a good French exercise in broad tones and rich local colour, after the manner of M. Français. The subject is much affected in France, because the groups of white geese on a meadow in soft sunlight and their attendant girl in a dark-toned dress afford contrasts of tones and tints. The design is spirited and has some humour.—M. de Neuville does not exhibit many "pot-boilers"; but his *Wounded Friend* (13) is one of the best of its class. The scene is a battle-field. A lancer has dismounted to bathe the injured foot of his horse at a stream. In its way this is first-rate work, neat, clear, without hardness, bright, precise and firm in touch, and designed with consideration of the circumstances proper to the incident.—A contrast to the last in all respects but the spirit of its design is furnished by the *Winter Song* (23) of Mr. MacWhirter, rabbits and a robin in a snowy field. The painting is very flimsy, but the handling and colour are less coarse than usual with Mr. MacWhirter.—*The Veterinary's Shop* (47), by Mr. R. W. Macbeth, shows an interior where a lady binds the wounded paw of a dog. The subordinate elements do not improve the design. Of study of the subject there is but little trace here; the draughtsmanship is so careless, the modelling so thin, and the colour so tinty, that the figures are at best silhouettes.—Contrasting with this in its accomplishments and artistic modesty is the scholarly *Excelsior* (69) of Mr. B. Bradley.—On the whole, the most spirited and complete of the sketched designs in this place, works which almost attain the dignity of studies, is Mr. B. Riviere's *Young Mother Hubbard* (52), a girl and her pet dog. There are few examples here fit to be called pictures, but this one has exceptional merit and homogeneity.—The *Talented Troupe* (64) of Mr. C. Green we saw lately at the gallery of the Institute of Painters in Water Colours.—There are also works by Messrs. R. Ansdell, O. Weber, R. Caldecott, and W. Small.

THE BRASENOSE CHALICES.

Brasenose College, Oxford.

Mr. Cripps has been good enough to come and see our chalices. The date-letter which I

thought was *e* (1502) he takes for an *a*, which would give an earlier year (1498) according to English hall-marking. But Mr. Cripps pronounces the chalices of German or Swiss make for this reason. The second mark on each chalice, which ought to be a leopard's head in a circular shield, is very worn and indistinct, but from the traces that remain Mr. Cripps thinks that whatever the mark was, it cannot have been the right English mark. At the same time he quite admits the correctness of the approximate date 1500, and knows no other instance of a German or Swiss chalice in an English church or chapel. Whether English or not, therefore, the chalices are of pre-Reformation work, and are almost identical in plan and detail with the well-known Nettlecombe type. It would be rash to dispute the question of origin with an authority *facile princeps*; but I hope, if possible, to collect some external evidence bearing on the point at issue. I may here remark that our present foundation dates from 1509, so that these chalices may well have been given by our founder, then Bishop of Lincoln. Our chapel plate escaped fortunately when all the hall plate was sacrificed to Charles I., and besides the chalices there survives a very fine pair of tall, upright, plain flagons, dated 1608; and these have the special interest of being, as Mr. Cripps tells me, five years earlier than any other known specimen of the kind.

A. J. Butler.

Babylonian Antiquities.

The inscription on a cylinder of Nabonidus, the last native king of Babylon, which Mr. Pinches brought before the Society of Biblical Archæology at their November meeting, contained several passages of interest. Firstly, there was a notice of the destruction of Astyages by Cyrus, supposed to have been inflicted on the Medes by the god Merodach as a punishment for their desecration of the Temple of the Moon God at Harran, the ruins of which retained the name of Selem-Sin ("image of the Moon God") to comparatively modern times; and in connexion with this subject a discussion arose at the meeting as to the name by which the Median subjects of Astyages were designated on the cylinder, Mr. Pinches adopting the reading of *Sabmanda*, according to the ordinary phonetic value of the characters employed, while M. Oppert suggested that the name should be read *Urvanda*, the original form of the modern Elwend. From another passage in which the name occurs (Cyrus Cylinder, line 13, Journ. R.A.S., new series, vol. xii. p. 88) it now appears that the first element of the compound is *Umman*, "troops or forces," and that the ethnic title is simply *Manda*, which is probably a dialectic variation of *Mada*, the two forms being used one for the other, as the names Matiene and Mantiene were indifferently applied by the Greeks to the interior of the province. We may suppose the name of *Umman-Manda*, or "Median troops," to have been given to the Medes by the Babylonians from the fighting qualities of the tribes; at any rate, it is clear from the association in the Cyrus inscription of the *Umman-Manda* with the *Mat Guti* (or the Kurds) and the *Zalmat-gagadu*, or "black-heads" of Babylonia, that the name did not apply to the mere Median army, but to the entire nation.

I may add that it is quite possible *Umman-Manda*, or, as pronounced, *Ummana-Vend*, may have been the proper name of the leading Median tribe which inhabited the Kurdish Mountains in the time of Astyages, *vend* (or *mend*, the *m* and *v* are undistinguishable in Median) being the common tribal affix universally used among the Kúrds and Lûrs at the present day. In this case *Ummana-Vend* would be a hybrid compound, an Aryan affix of race being added to the Assyrian word *Umman*, "an army," but such compounds are not unusual; and the meaning of "the army tribe" would be quite appropriate, recalling the name of *Sheher-i-zor*, or "the city of violence," which was applied to the capital of the province. The names of half the tribes of Luristan at the present day are formed of the suffix in *vend*, which I conjecture to be the cuneiform *manda*; compare *Tag-vend*, *Hama-vend*, *Káká-vend*, &c.

Another still more important notice in this Nabonidus inscription is that which assigns an approximate date of B.C. 3800 to the great Sargina. Nabonidus was an antiquary, and thus never lost an opportunity, when he was repairing the temples of the gods, of searching for the *timin* or foundation stone of the edifice, so as to verify the name and date of the original builder. In his work at the Temple of the Sun at Sippara, which was notoriously one of the oldest temples of the country, he excavated to a depth of about 32 ft. below the surface, and there found the memorial tablet of Naram-Sin, son of Sargina, which, he says, had not been seen by mortal eye for 3,200 years. Now modern criticism will naturally hesitate to accept these numbers as a real chronological date. Judging from the mutability in modern times of all institutions, political, social, religious, and linguistic, see ncredible at first sight that the same people, with the same cult, the same language, and the same writing, should have nestled round the same mound in the Babylonian plain for upwards of 3,000 years; yet I am bound to say that, after carefully examining all the evidence bearing on the subject, I now see no reason to doubt the good faith and accuracy within certain limits of Nabonidus's estimate. The means certainly existed in ancient Babylon of computing time to a very remote antiquity. Although no continuous chronological series has been yet found among the cuneiform tablets, like that contained in the Turin papyrus, fragments recording the duration of isolated dynasties have repeatedly turned up; and it is well known that in the royal inscriptions allusions are often made to chronological intervals, varying from 60 to 1,600 years, as if they were matters of common notoriety. Berosus, moreover, who had access to all the documents, after classifying the minor dynasties up to about 2400 B.C., enumerated eighty-six kings of one line, extending from the Median conquest to the era of the Flood—a measurement which at the moderate average of twenty years to a reign (2400+1720=4120) would give a date far in excess of the figures of Nabonidus. I will only say further on this subject that the Babylonians certainly used the Flood as an accepted historical epoch, and that the name of Sargina is given in one list in close connexion with that epoch. This king was afterwards deified and became connected with myths probably relating to the Flood; but that he was a real historic personage is proved by a summary of the events of his reign given on an astrological tablet, by Nabonidus's discovery at the Temple of the Sun at Sippara, and by the inscription on an alabaster vase belonging to his son, which was obtained by the French explorers at Babylon in 1852, but was afterwards lost in the Tigris. At present certainly the era of Sargina and its connexion with the Flood is the most interesting point in ancient Babylonian history.

H. C. Rawlinson.

Fine-Art Gossip.

Sir F. Leighton has made much progress with a fine statuette, to be enlarged in bronze, of a standing male figure. It represents a sluggard rousing himself. The P.R.A. has nearly finished the small life-size figure in oils of a little girl seated, wearing a white embroidered dress which is enriched with broad gold bands; she has very pale gold-coloured hair, blue eyes, delicate rosy carnations, and the sweetest and softest of expressions. In her bosom is a dark violet-coloured flower; she holds a bunch of peacock's feathers. A standing figure of a luxurious beauty, clad in white and gorgeous colours, which gain deeper tones and golden tints by light reflected upon them from below, fills a smaller canvas than the above, and owes much of its charm to the gorgeous azure tiles of the wall behind the figure, the exquisite whiteness of a slender shaft of marble, and the ruddiness of a niche of the same material in which the pillar is ensconced. Another picture contains the life-size figure of a young girl, seated on a couch covered with a tiger's skin, and clad in a purple robe with pale golden embroideries upon it. At her side is a playful kitten, over which the damsel is leaning sideways. The background is an alcove of gold and black; the lustre of the former gathers in an aureole about the head of the figure. A vestal-like head of a beautiful lady, seen in profile to our left and wrapped in a white hood-like mantle, leaving the sculpturesque features distinct, is at present on Sir F. Leighton's easel.

Mr. H. Clarence Whaite was elected a Member of the Society of Painters in Water Colours on Thursday evening of last week.

At the Burlington Club may be seen, by those who are fortunate enough to get a ticket, a number of impressions in various states from plates engraved throughout by Turner for his 'Liber Studiorum,' comprising instances of great rarity, and representing 'The Frontispiece,' 'Junction of the Severn and the Wye,' 'Inverary Pier,' 'Crypt of Kirkstall Abbey,' 'Calm,' 'Mer de Glace,' 'Entrance of Calais Harbour,' 'Raglan Castle,' 'Source of the Arveron,' 'Æsacus and Hesperie,' and 'Interior of a Church.' These examples belong to Messrs. W. G. Rawlinson, H. Vaughan, J. E. Taylor, J. L. Roget, and the Rev. Stopford Brooke.

Mr. E. Fox White has opened a collection of pictures at the King Street Galleries, St. James's. Among these works are 'A Girl's Head,' by Mr. Millais; 'The Hollow Tree,' 'The Last Load,' 'The Heath, Red Hill,' and four other productions by John Linnell; and examples by Messrs. Oakes ('River Scene, Sunset'), Boughton, Frith, Plassan, H. W. B. Davis, De Nittis, Israëls, A. Bonheur, Pettie, E. Frère, F. Holl, and H. Moore.

The forthcoming part of the *Journal* of the British Archæological Association will contain, among others, the following papers: 'The West Front of Lichfield Cathedral,' by Mr. J. T. Irvine; 'Notes on the Records of Marazion, Penzance, and St. Ives,' by the Rev. W. S. Lach-Szyrma, M.A.; 'Golf,' by Mr. C. H. Compton; 'Original Documents,' by Mr. W. de Gray Birch, F.S.A.; 'Two Somersetshire Camps, Cadbury and Dolbury,' by Mr. C. W. Dymond, F.S.A.; and 'Review of the Session and Congress,' by Mr. T. Morgan, F.S.A.

At Messrs. Dowdeswell's, New Bond Street, may, on and after Monday next, be seen a number of sketches by Mr. Sutton Palmer, representing 'Beauties of Surrey Scenery,' comprising views near Guildford, Dorking, Farnham, Richmond, Haslemere, Leith Hill, and Hind Head.

The third annual exhibition of tapestry paintings by lady amateurs and artists will open next week at Messrs. Howell & James's galleries. The exhibition includes a work by Mr. H. Stacy Marks, and others designed by Messrs. Hubert Herkomer, J. D. Linton, and J. D. Watson.

A Bartolozzi exhibition opens in Savile Row next week. The catalogue has been compiled by Mr. A. W. Tuer.

The Governing Committee of the American School of Classical Studies at Athens held its semi-annual meeting on November 17th in New York. It has invited Prof. Packard to accept the directorship of the school for the second year, to succeed Prof. Goodwin. Letters were read, says the *Nation*, from Prof. Goodwin announcing his arrival in Athens towards the end of September. He has hired for the school a convenient house on the boulevard which skirts the palace gardens, and it affords ample accommodation for the students and for the

library, on which Mr. Goodwin has already expended more than one thousand dollars. The school opens with six students. A sub-committee was appointed to report at the next meeting, which will take place in Boston in May, upon the publication of the *Bulletin* of the school. This the committee hopes to begin next year.

The French painter M. Sellier died lately at Nancy. He was a pupil of L. Cogniet, and obtained the Grand Prix de Rome in 1857. Among his chief works are 'L'Esclave Gaulois,' 'Léandre,' 'Madeleine,' and 'Une Joueuse.'

The Guatemalan Government has issued a decree which will be thankfully received by archæologists. It has ordered that stone shall no longer be quarried from the remains of antiquity and monuments of the Mayas, for which the country is distinguished.

MUSIC

THE WEEK.

Crystal Palace.—'The Redemption.'
St. James's Hall.—Popular Concerts.

No diminution of the remarkable interest taken in M. Gounod's sacred trilogy 'The Redemption' is as yet apparent, the Crystal Palace concert-room being unusually crowded last Saturday, when the work was given for the first time at Sydenham. To musicians it must be a matter of interest to note the variations of effect produced by the music when given under changed conditions and different conductors. At the Crystal Palace the chorus could not compare, either in numbers or power, with that at the Albert Hall; while the orchestra, though numerically somewhat smaller, was far superior in quality. The instrumental movements and the beautifully scored accompaniments were heard to the utmost advantage on Saturday, and the *tempi* adopted by Mr. Manns were judicious, being, as nearly as can be remembered, the same as those of M. Gounod himself. The only difficulty in the choruses is the maintenance of just intonation in certain of the numbers, more particularly "The Reproaches." Here the choir acquitted itself tolerably well; but the quality of tone was poor and the style feeble and spiritless. This was especially noticeable in the mocking choruses of priests and people, which were given with such dramatic force at Birmingham and at the Albert Hall. Of the soloists, Mrs. Hutchinson, Miss Marian Fenna, Madame Fassett, and Mr. Pyatt were satisfactory, and Mr. Lloyd and Mr. Santley repeated their now familiar successes. The last-named vocalist again doubled the parts of Christ and the bass narrator, and it is necessary to repeat the protest already made against this method of procedure, lest it should become a precedent. Mr. Santley contrives very cleverly to modify his style and the *timbre* of his voice when shifting from one *rôle* to the other, but other singers might not possess the same power, and his exceptional skill does not remove the artistic objections to the course pursued.

The reappearance of Herr Joachim, much earlier in the season than usual, constituted the principal feature of interest in last Monday's Popular Concert, but the programme was also attractive to the general public. There are few chamber works more effective than Beethoven's Quartet in C, Op. 59, No. 3, and Mendelssohn's Ottet in E flat; and to these was added Bach's Violin Concerto in A minor, which so pleased the audience that they encored the last movement. Herr Joachim has returned apparently in full possession of his unique powers, and no more need be said. The pianist, Miss Dora Schirmacher, made a highly favourable impression. She has much improved since her first appearance, some four or five years ago, her rendering of Mendelssohn's Scherzo à Capriccio in F sharp minor being powerful and spirited. As an encore she gave Handel's *gigue* from the Suite in A with equal vigour. Miss Carlotta Elliot may be warmly commended for her refined and sympathetic rendering of a difficult *aria* from Handel's 'Rodelinda,' and Lieder by Kjerulf and Taubert.

CHRISTMAS BOOKS.

From Messrs. Routledge & Sons we have received a quaintly but not elegantly bound volume, styled *Pan Pipes: a Book of Old Songs, Newly Arranged, and with Accompaniments by Theo. Marzials, set to Pictures by Walter Crane.* With considerable success the old practice has, so far as this case is concerned, been reversed, and the letterpress has been adapted to the illustrations. The modifications effected by Mr. Marzials in the songs are not material; at any rate, being placed on his guard about them, the reader, however fastidious he may be, may take the changes for what they are worth. 'To all you Ladies,' 'The Passionate Shepherd,' 'The Leather Bottel,' and 'My Lady Green Sleeves' are "the pansy and marjoram" of song culled from old-fashioned gardens. Mr. Crane's designs are, like former works of his, skilfully adapted to the strains which filled his ear while he drew them, and are therefore not without a dash of rustic roughness, a little of the wilful clumsiness of the seventeenth and eighteenth centuries, and some angularity in draughtsmanship. We owe to him many figures more finely drawn than these, and have been charmed by delineations in which the classicism is purer. On the other hand, he has rarely given us better colouring than these delicate half-tints convey. Nor has he often imparted greater vivacity and grace to his figures, of which the girl in 'It was a Maid of my Countree' is one of the most charming. Every one will admire the true Renaissance character of the mermaid's wooing the "jolly sailor boys"

With a comb and glass in her hand.

The figure in 'O, Willow, Willow,' does not please us at all—it is weakly designed and not well drawn; but that of the stately dame listening to Cupid in 'Love will find out the Way' redeems the defects of its neighbour. As a series these designs take a place next, but much below, 'The First of May,' which we reviewed in *Athen.* No. 2799, p. 819. On the whole, we are compelled to lament the development of certain conceits of invention and affected motives in design which add no charms to the style of Mr. Crane. Many of the subordinate and conventionalized borders of sculpturesque foliage are lovely in feeling and perfect in taste.

This combination of music with pictures is comparatively of recent origin; we have seen few more successful examples of it than in a new Christmas book just published by Messrs. Ward, Lock & Co., under the title of *Cradle Songs of Many Nations.* The musical part of the work is edited and in part composed by Reinhold L. Herman, while the illustrations are by Walter Satterlee. We have here a collection of cradle songs, including not only specimens of those of the chief European nations, but also examples of Arabic, Chinese, Malabar, Japanese, Hottentot, Zulu, and other equally curious songs, many of which appear in musical notation for the first time. The melodies are often of much interest. The illustrations are very tasteful and beautiful, and the book, which is admirably got up, will make a most acceptable present.

Song-Land: a Series of Ditties for Small Folks. Selected, arranged, and composed by W. M. Hutchinson. (Routledge & Sons.)—The compiler of this volume is known as the composer of one or two songs which have gained popularity. It contains in all thirty ditties, suitable for the vocalists of the nursery, and chiefly of a humorous description. The words and the music are partly original and partly selected. The illustrations, by A. W. Cooper, Miriam Kerns, and J. Sadler, are unequal in merit; some are coarse and badly drawn, while others are capital. In size the book is a thin royal octavo; it is beautifully printed on thick paper, and has an attractive exterior.

MUSIC AT CAMBRIDGE.

On the evening of the 2nd inst. the University Musical Society gave its 176th concert. The programme was so rich in antiquarian interest that but for two items it might have been termed "an evening with the old masters." Taking the works in the order of performance, the first was Handel's Concerto Grosso in G minor, No. 6 of the set in seven parts (four violins, viola, cello, and harpsichord) published in 1739. It may be mentioned that the most pleasing movement in this work, a *musette* in E flat, so attracted Mozart that he introduced it into his edition of 'Acis and Galatea' by way of prelude to the second part. A portion of Palestrina's 'Missa Papæ Marcelli' followed, including the "Kyrie," "Gloria," and "Credo." The circumstances which led to the composition of this work and its influence upon Church music are too well known to need recapitulation here, and the mass itself has been rendered familiar to musicians by the Bach Choir performances. It was sung with much refinement by Mr. Villiers Stanford's choir, and the loss of pitch at the conclusion was very trifling. The next work in the programme was Bach's cantata 'Halt im Gedächtniss,' if not one of the most elaborate, certainly one of the most beautiful of the Church cantatas, and very suitable for employment as an anthem for Eastertide. The solo parts in this were efficiently interpreted by Mrs. Dunn and Mr. W. A. J. Ford. A Symphony in D, by Emmanuel Bach, may without hesitation be regarded as an absolute novelty. Though not the most gifted of the many sons of J. S. Bach, Emmanuel was the most voluminous composer among them, and exercised the greatest influence upon the art. His works for clavier are his most valuable legacy, being moulded in the form which, under the influence of a greater genius, Joseph Haydn, became the recognized model for the expression of thought in instrumental music. In the symphonies, of course, we lack the variety and resource of modern orchestration, but in the example played last Saturday there are a boldness in the themes and a modern feeling in some of the phraseology which are scarcely to be found even in Haydn or Mozart. The former composer studied Bach's works with avidity, and acknowledged his indebtedness to him in the frankest manner. The historical portion of the programme came to an end with this symphony, and after mentioning a tasteful rendering of Beethoven's *scena*, "Ah! perfido," by Miss Amy Aylward, we have only further to note Mr. Stanford's hymn for baritone solo and chorus, "Awake, my heart." This composition, a setting of some verses by Klopstock, is not ambitious in structure, but it is refined and musicianly, and very agreeably written for the voice. The new and powerful organ now in the Guildhall is, of course, of immense advantage in the interpretation of sacred works; but it needs to be used with discretion, lest the orchestra and chorus be overwhelmed, as was the case once or twice on this occasion.

We give in another part of the paper a

notice of the performance at Cambridge of the 'Ajax' of Sophocles. A few words may be appropriately added here as to the music composed for the occasion by Prof. Macfarren, consisting of an orchestral prelude, four unison choruses with instrumental accompaniment, and an interlude introducing the second scene. The work is full of charming melody, and the unison choruses are so tastefully accompanied by the orchestra as never to become monotonous. A serious difficulty which presented itself to the composer has been overcome with consummate skill: we refer to the setting of the original text in place of an English translation. The Greek verses are so different in metre and accent from those of our own language that no small amount of ingenuity is required to adapt them to musical forms which shall be acceptable to our ears without at the same time being so modern in spirit as to be at variance with the general feeling of the drama. Little attempt has been made to introduce ancient modes, beyond the occasional use of the scale without the leading note, as in the chorus in E minor—

ὦ κλεινὰ Σαλαμίς.

We think Prof. Macfarren has unquestionably shown sound judgment in speaking to his audience in a musical idiom familiar to their ears rather than in endeavouring to reproduce faithfully the art of a past age. What is required in such a case is that the music should produce upon the hearers of to-day an approximation to the mental effect of that which two thousand years ago accompanied the first performance of the drama. The conditions of art have so changed that were it possible to secure and perform the original choruses of the work it is morally certain that the impression produced by them would be at the least unsatisfying. We consider that in the choruses of 'Ajax' we find the spirit and feeling required, though the means by which the effect is obtained differ very widely from those employed by the Greeks. Such choruses as the first—

Τελαμώνιε παῖ, τῆς ἀμφιρύτου,

and the hymn to Pan which precedes the entry of the messenger, leave nothing to desire, either from the point of view of absolute music or as the appropriate illustration of the dramatic situation. The gem of the whole work is perhaps the final chorus, preceded by a short funeral march, while the body of Ajax is carried off. Following the example of Handel, Prof. Macfarren has written his "Dead March" in a major key, and the experiment has been completely successful, great effect being obtained by means of the utmost simplicity. There is only one number in the whole of the work which (at least on a first hearing), appears unsatisfactory. The orchestral interlude which occurs at the change of scene has rather too lively a character for its surroundings. Considered simply as music, it is excellent, but in its position here it appears to us out of place. On the whole, the music of 'Ajax' is likely to increase the fame of its composer, though probably the fact of its being written to a Greek text will prevent its being so often heard as it deserves.

Musical Gossip.

Gade's cantata 'Psyche,' which achieved such a success at the recent Birmingham Festival, will be performed for the first time in London at the first of Mr. Willing's concerts at St. James's Hall on Tuesday evening next. Handel's 'Acis and Galatea' will complete the programme.

The programme of Mr. Charles Halle's seventh concert at the Free Trade Hall, Manchester, on Thursday, consisted of Beethoven's Mass in D, Mendelssohn's "Hear my prayer," and Gluck's Overture to 'Iphigénie en Aulide.'

Mr. P. E. van Noorden gave the first of four subscription concerts at Ladbroke Hall, Notting Hill, last Thursday evening.

Mr. Stephen S. Stratton's third chamber concert was given in the Masonic Hall, Birmingham, on Monday evening, when the programme included Mr. E. Prout's String Quartet in B flat, Op. 15; Beethoven's Sonata in G, Op. 30, No. 3, for piano and violin; Schumann's Piano Quartet in E flat; and Beethoven's String Quintet in C.

Wagner's 'Tristan und Isolde' was performed for the first time in Hamburg on the 23rd ult. The principal parts were sustained, as in London last June, by Frau Sucher and Herr Winkelmann.

The Musikverein of Münster gave a festival on the 18th and 19th ult., when Handel's 'Messiah' and Schumann's 'Paradise and the Peri' were the works performed.

Messrs. Breitkopf & Härtel, of Leipzig, announce the publication of a complete edition of the works of Grétry. A committee of Belgian musicians, headed by M. F. A. Gevaert, will superintend the publication, which will include thirty-three operas, the sacred and instrumental compositions of the Belgian master, and, as a supplement, his literary works.

DRAMA

THE 'AJAX' AT CAMBRIDGE.

To the representation of the 'Agamemnon' at Oxford, and of the 'Alcestis' at Bradfield College, we have now to add a representation of the 'Ajax' at Cambridge. English audiences have thus had an opportunity of comparing three masterpieces of Attic tragedy as acting plays, so far as it has been found possible to adapt them to modern conditions. And the experiment has been attended with remarkable success. It is not only, as I said on a previous occasion in these columns, that scholars have by means of these performances learnt to appreciate points of structure and of expression that were inevitably lost sight of in reading, but that the greatness of these old masters has been brought forcibly home to many persons who know no Greek, and have never felt much curiosity about Greek literature. That a marked impression of this kind has been made is certain—an impression that cannot fail to stimulate the study of Greek at a time and in circles where stimulation is sorely needed. This, to my mind, is not the least valuable result of the undertaking. For the performance at Cambridge I have nothing but praise. This is not to say that certain points might not have been improved. But so far as it went the effect was excellent, and such as to reflect the highest credit on all concerned.

To Mr. J. K. Stephen, who filled the part of Ajax, nature has given the broad shoulders which are essential to the character, though not, as Agamemnon reminds us, to be depended upon for success in life. His aspect when he first issued from his tent, whip in hand, with his shaggy hair and his eyes in frenzy rolling, was terrible indeed. But no less apt was his demeanour in his later more chastened mood. The quiet dignity and simplicity of his bearing enhanced the pathos of his situation. His voice is unusually powerful, and at times was perhaps too loud; but in pathetic passages, such as the address to his child, it had real tenderness in it. Nothing could have been better than the delivery of the famous ὦ παῖ γένοιο πατρὸς εὐτυχέστερος, κ.τ.λ. The irony of the speech in which he pretends submission to the authority alike of gods and men was peculiarly well given. In short, Mr. Stephen presented a just conception of the character of Ajax clothed in appropriate action and expression.

Mr. Macklin's Tecmessa was on all hands admitted to be a striking piece of characterization. To modern ideas a man's attempt to represent a woman has always an element of incongruity which prevents the complete illusion necessary to perfect satisfaction. But, on the whole, Mr. Macklin may be said to have triumphed over these difficulties. His action was, for the most part, graceful and appropriate; his declamation was admirable. The narrative of Ajax's deed of infatuation was given with vivid dramatic force, and both here and in other passages the intonation seemed to throw new light on words and phrases that were apparently familiar enough. Had less been attempted in the direction of facial expression a better rendering of the character could hardly have been conceived. It did not equal Mr. Lawrence's Cassandra, but allowance must be made for that gentleman's personal advantages and for the superior interest of the part he had to play. By the way, though picturesque, it was hardly accurate for Tecmessa to remain by the body of Ajax during the last scene if, as is probable, the parts of Odysseus and Tecmessa were played by the same actor. Her removal would have spared the audience a rather painfully monotonous exhibition of woe.

Mr. Cust's Teucer was excellent. He looked and played the part well-nigh to perfection. There was a frankness and a straightforwardness in his bearing, and an outspokenness in his utterance, which well befitted one of the most attractive characters in the whole of Greek drama.

Of the minor characters there is not much to be said. Mr. Gardner's Athene was adequate; the dress and pose were all that could be desired. Indeed, this ideal figure formed a striking part of the opening scene. More, I think, might have been made of Odysseus. If Menelaus and Agamemnon lacked interest, it must be remembered that the parts are singularly thankless.

There remain the Chorus and the accessories of dress and scenery. And here it is that comparison with the Oxford performance most naturally presents itself. The greater care and study devoted to these points at Cambridge, under the able and zealous direction of Dr. Waldstein and others, were amply justified by the result. In the Chorus the more precise relation of its movements to the divisions of the lyric odes was a decided improvement, while the speaking of the dialogue by the Choregus alone was at once more correct and gave unity to the part played by the Chorus. The music was found by some people too modern in character, but, allowing for the inevitable, it seemed to me both good of its kind and really harmonious with the action. The scenery was excellent; the dresses, too, were effective enough, and as Dr. Waldstein assures us they were copied from vases and reliefs, further criticism is disarmed. But the armour, and especially the shield of Ajax—ἑπτάβοιον ἄρρηκτον—might, I think, have looked rather less flimsy.

On the whole, however, the performance was a distinct advance on its predecessors, and its success—which I am happy to hear is not only æsthetic, but financial—should be an incentive to further effort. There is no reason why such representations should not become a normal part of university recreation. To all concerned, trainers, actors, and audience, there is real education to be gained from them as well as pleasure. As the 'Alcestis' was given in a somewhat remote spot, it would be fitting that one of the universities should next patronize Euripides, if not Aristophanes. In the mean time it would be well if arrangements could be made for the 'Ajax' to be given in London for the benefit of the numerous persons who failed to obtain admission to the performances at Cambridge.

Γ.

Dramatic Gossip.

Mr. Alfred Forman, the translator of 'The Nibelung's Ring,' has completed a version in blank verse of Victor Hugo's play 'Le Roi s'Amuse.'

One new theatre, the Novelty, opens its doors to-night; a second, the Pandora, cannot be got

ready in time, and the company which was to have there given the 'Yellow Dwarf' of Messrs. Reece and Thompson will on the 30th of December play the piece in question at Her Majesty's. A third new theatre, which is to be built for Mr. Wyndham, is to be constructed on the American pattern. The Alcazar meanwhile, as the Holborn Amphitheatre is to be called, seems likely under the management of Mr. Baum to become a species of rival to the late Alhambra.

THE loss of the Alhambra, which has undergone the customary fate of theatres, will be felt almost as much in Paris as in London. It is a curious fact that in the programme of the intelligent French visitor to London two items are always included—an exploration, under the charge of the police, of East end dens and a visit to the Alhambra.

THOUGH presented by an amateur company, 'Love brooks no Jesting,' a version by Mr. J. Whitcher, jun., of 'On ne Badine pas avec l'Amour,' proves the power of Musset's dramatic masterpiece over a public little used to work of the sort. It was received with favour by an audience over which it exercised a strong influence. The task of adaptation is competently discharged, though, as was to be expected, most of Musset's strange and fantastic humour disappears.

AN experiment made by Miss Archer at the Gaiety Theatre on Wednesday afternoon, in the production of a drama in four acts entitled 'My Life,' was unsuccessful. Much mirth was caused in the audience by passages intended to be serious, and those concerned in the representation had an uncomfortable time. Miss Archer, who took a leading part in her own piece, has probably learnt the lesson that to write a play and to perform in it are tasks demanding the possession of gifts higher than the mere desire to excel.

A NEW farce, entitled 'I'll see you Right,' is interesting as revealing in Mr. Crauford one more actor who is also a playwright. Its plot has little novelty, and the success obtained with the piece on its production at a Gaiety morning performance is chiefly ascribable to such briskness as there was in the action. Miss Gilchrist, Miss Ingram, Mr. Dallas, Mr. Ward, and the author supported the principal parts.

THE production at the Globe Theatre of Mr. Wills's version of 'Jane Eyre' has been fixed for Boxing Night. There is, however, a probability that for that day the previous Saturday will ultimately be substituted.

CLARENDON PRESS LIST.

THE SACRED BOOKS of the EAST.

Translated by various Oriental Scholars, and Edited by F. MAX MÜLLER.

VOLUME XIV.

The SACRED LAWS of the ARYAS, as taught in the Schools of Apastamba, Gautama, Vâsishṭha, and Baudhâyana. Translated by GEORG BÜHLER. Part II. 'Vâsishṭha and Baudhâyana.' Demy 8vo. cloth, price 10s. 6d.

VOLUME XVIII.

PAHLAVI TEXTS. Translated by E. W. WEST. Part II 'The Dâdistân-I Dînîk and the Epistles of Mânûshîhar. Demy 8vo. cloth, price 12s. 6d.

London: Henry Frowde, Clarendon Press Warehouse, 7, Paternoster-row.

MESSRS. SAMPSON LOW, MARSTON & Co. have Published the following important Works for the coming season of Christmas and the New Year:—

In 1 vol. crown 4to. cloth extra, about 550 pp., gilt edges, 31s. 6d.; or in parchment binding, top gilt, uncut edges, very handsome, 35s.

An ÉDITION DE LUXE of Mr. R. D. BLACKMORE'S Celebrated Novel, 'LORNA DOONE: a Romance of Exmoor.' It contains numerous Full-Page and other Illustrations, by Mr. F. Armstrong, Mr. W. Small, and Mr. Boot.

"Enriched with elaborate and delicately cut landscapes and figure designs....It is hard to say of the landscapes which is the most carefully and finely wrought;.....the figure-pieces supplied by Mr. W. Small are....well-designed and learnedly drawn."—*Athenæum.*

"Many of the sketches are very happy in their choice of scenery..... but a considerable portion represent incidents in the story, to which department Mr. W. Small's talents have been very successfully devoted." *Daily News.*

"Charmingly illustrated, and issued as an *édition de luxe*; makes a capital gift-book."—*World.*

"As graceful a gift-book as any the season has produced."—*Graphic.*

"For this latest and artistic production there is sure to be much and eager requirement."—*Lowest of Standard.*

"The work is one that may be fitly chosen for a Christmas present." *Scotsman.*

Large Imperial 4to. in tasteful extra binding, gilt edges, price 3l. 3s.

FLORENCE: its History. The Medici—The Humanists—Letters—Arts. By CHARLES YRIARTE. Translated by C. B. PITMAN. Illustrated with nearly 500 Engravings.

"M. Yriarte's 'Florence' may claim to rank with even his splendid work on Venice. No pains have been spared to make the English edition a worthy rival of the French original; and the result is a very beautiful book as well as a valuable one."—*St. James's Gazette.*

"This great work is well known to many of our readers in the original French of the author, and the reviews which have been devoted to it in the *Times* and other publications have done full justice to its literary merits, the historical value of its narratives, and the profusion of illustrations some artistically excellent and all instructive and valuable, with which the text is accompanied."—*Times.*

"One of the most superb artistic works of modern times." *Morning Post.*

"A more suitable memento of the famous city it would be hard to compile."—*Daily Telegraph.*

"Altogether it is a volume which Dante and Michael Angelo, much as they in other times loved Florence, would have delighted in. It would be difficult to overrate the resources of the book for amusement and instruction."—*Scotsman.*

"If you wish for really artistic illustrations you should get this book." *Truth.*

The HISTORY of FASHION in FRANCE; or, the Dress of Women from the Gallo-Roman Period to the Present Time. From the French of M. AUGUSTIN CHALLAMEL by Mrs. CASHEL HOEY and Mr. JOHN LILLIE. With 21 Coloured Plates after Water-Colour Drawings by F. Lix, and Tail-pieces by Scott. Imperial 8vo. very choicely bound in new satin-wood pattern, gilt edges, 28s.

"This history of female attire is decidedly interesting." *Saturday Review.*

"A bright and entertaining narrative....The drawings, indeed, are works of art."—*Daily Chronicle.*

"Reproduced in the most sumptuous style....The volume has not merely a passing interest, but will be valuable as a book of reference." *World.*

SIR ROGER de COVERLEY. Reimprinted from the *Spectator*. With 125 Woodcuts engraved by J. D. Cooper from Designs by C. O. Murray. Also with a Steel Etching as Frontispiece by the same Artist. Small fcap. 4to. cloth extra, 6s.

ART and ARCHÆOLOGY: an Illustrated Dictionary of the Terms used in Art and Archæology. By J. W. MOLLETT, B.A. With about 750 Wood Engravings. Small 4to. strongly bound in cloth, 15s. Now ready.

TAHITI. By Lady Brassey, Author of 'Voyage of the Sunbeam,' &c. Fcap. 4to. very tastefully bound, cloth extra, with 31 Autotype Illustrations, 21s. (not 15s., as previously advertised). From Photographs taken by Colonel Stuart-Wortley.

"Of all that is most beauteous imaged there
In happier beauty; more pellucid streams,
In ample ether, a diviner air,
And fields invested with purpureal gleams."

NEW NOVELS.

THE COMET AND THE TRANSIT OF VENUS.

THOMAS HARDY.—TWO on a TOWER. 3 vols. crown 8vo. 31s. 6d.

Being the story of the unforeseen relations into which a lady and a youth many years her junior were drawn by studying the stars together; of her desperate situation through generosity to him; and of the reckless coup d'audace by which she effected her deliverance.

"We have known military novels, sporting and dramatic novels, law and police novels, but an astronomical novel never....But, besides this, the story departs widely from received models....The author, in fact, has imagined and described a woman with whom few of his male readers will not fall in love."—*Athenæum.*

GEORGE MACDONALD.—WEIGHED and WANTING. 3 vols. crown 8vo. 31s. 6d.

LITERATURE

The Works of Alexander Pope. With Introductions and Notes by the Rev. W. Elwin and W. J. Courthope, M.A. Vol. IV.—*Poetry*, Vol. IV. With Illustrations. (Murray.)

THE volume before us is the second which has appeared under the editorship of Mr. Courthope. More than three hundred pages are devoted to 'The Dunciad,' and the remaining two hundred contain "Miscellaneous Pieces in Verse." Of the latter, as the less important, we shall speak first. Pope, it is well known, wrote a number of epitaphs and epigrams, a few odes, and a variety of occasional verses. It is impossible to say much for the epitaphs. Even that on Gay, dictated by real affection, ends with a feeble and conventional couplet. The picture of good men "striking their pensive bosoms" at the sight of Gay's monument is worthy of the smallest of Grub Street poets. As a lyrist we can judge of Pope from his 'Ode on St. Cecilia's Day' and from 'The Dying Christian to his Soul,' and in both cases effort is more striking than performance. Indeed, as a writer of odes Pope has no place in literature. Of the occasional verses, some of which are gross while others vainly strive to be humorous, nothing is nowadays called for beyond the expression of a wish that they had met with the oblivion they deserve. Several of these, it may be remarked, were not originally published with the author's sanction, nor with that of his first editor, Warburton. "When authors," says an anonymous editor, quoted by Mr. Courthope,

"have long engaged the public attention, when their works are read with avidity and universally receive a classical stamp, those who can add anything to their illustration and recover by time what has eluded former diligence bring an acceptable present to the public."

The chips and scrapings of an author's brain, dropped at odd moments and never meant to be seen again, are not an acceptable present to those who care for the honour of literature. An author is himself the best judge of what he wishes to preserve, and of what, as the fruit of youth or folly, he wishes to destroy. But neither in Pope's time nor in our own is a poet allowed to retain the mastership of his own works. The literary resurrectionist who was abroad in those days is still plying his useless vocation; and so, to every one's misfortune, but chiefly to the misfortune of the writer, the entire works of a great author must inevitably include much that is trivial and weak. This is the lot of Pope, just as it is the forlorn fate of some more recent and greater poets. Mr. Courthope acts more wisely than consistently in this matter. In the introduction to the "Miscellaneous Poems" he writes:—

"When once the poems suppressed by Pope's literary legatee were admitted by his editors into the body of his works, it became practically impossible to exclude compositions which were known to be his."

But in the introduction to the third volume of "Poetry" he observes:—

"The 'Sober Advice from Horace' is omitted in this edition, for though the authorship was avowed by Pope in private, and though it was printed in Dodsley's octavo edition of 1738, and in succeeding editions up to 1743, it does not appear in Warburton's edition, and it may therefore be inferred that Pope wished it to be suppressed."

Let us hope he did; but the judiciousness of Warburton in omitting this grossly indecent piece has not always been followed by the editors of the poet.

'The Dunciad,' called by one of the most eloquent of living writers a monumental work, demands and deserves all the help it can derive from the commentator; and Mr. Courthope has taken abundant pains not only to make the poem clear to the modern reader, but to vindicate its purpose. But what pains are necessary! To understand 'The Dunciad,' its allusions, its mystifications, its sketches of character and manners, something more is needed than that general knowledge of the period supplied by the historian. We must be acquainted, as far as that is possible, with the artifices of the poet and with the scribblers and quarrels of the time. The satire was not written for the world, not even for England, but for the town; and only within the comparatively small circle occupied by the wits of the day could it be properly appreciated. Personal satire is Pope's forte. He does not attack vices, but men; and 'The Dunciad' gave him an opportunity, not only of thrice slaying the slain—a set of Grub Street hacks who cannot be said ever to have possessed a literary existence—but also of attacking persons who, like Law and Whitefield, Bentley and Defoe, had a high claim to reputation. Pope's design of attacking insignificant scribblers and booksellers landed him in this dilemma. The foes were unworthy of his steel, and, notwithstanding his personal animosity, he knew them to be unworthy, and therefore, to add a zest to his satire, he included men who, whatever their defects may have been, could not, except by the wildest misappropriation of the term "dunce," take their place with persons like Henley and Gildon. Theobald, the first hero of the poem, would never have held that position had it not been for the feminine spite of the author; and it was another and still less fortunate feeling of enmity that led him to dethrone Theobald and place Colley Cibber on the vacant seat. To make Cibber a fool and a dullard was impossible. He had failings innumerable, but the want of sprightliness and vivacity was not one of them. Pope damaged his satire irretrievably by thus venting his wrath on Cibber, and he did the Laureate no harm. Not even his venom could inflict a more than momentary sting on a man so imperturbably good-humoured and self-satisfied. Mr. Courthope holds that by the word "dulness" Pope meant to include every sort of rebellion against right reason and good taste, and adds that Cibber is chosen as the type of pertness and impudence. As a writer, he says, Cibber

"had openly proclaimed his slender acquaintance with literature; as a theatrical manager he had sanctioned exhibitions which lowered the character of the stage; and as a laureate he was allowed to be the worst that ever wrote a birthday ode."

But Cibber cannot be accused of impudence in confessing his own ignorance; as a theatrical manager he showed considerable capacity, and was, we think, neither better nor worse than his age, which, in spite of Addison's 'Cato' and Steele's 'Tender Husband,' would not have rejected 'Three Hours after Marriage' for its indecency had not its stupidity been equally apparent. Gay had the help of Pope and of Arbuthnot in this production, which is worse than the worst of Cibber's plays. The Laureate's best comedies, on the other hand, though far from moral, were effective on the stage, and even Johnson, who regarded Cibber with contempt, allowed that they possessed considerable merit. One of them, indeed, 'Love's Last Shift,' was a popular play for forty years, and the dramatist who played his own characters was in such high repute that long after he had professedly left the stage he was in the habit of playing occasionally for 50*l.* a night. Moreover, no one can read the 'Apology' without seeing not only that Cibber understood the art he practised, but that he had no pleasure in what he calls "monstrous presentations," and was vexed when rope-dancing and buffoonery attracted as many spectators as the acting of a distinguished comedian. Mr. Courthope observes, by the way, that the drama "had been thoroughly purified since the accession of Queen Anne, but in becoming moral it had also become dull." Dull it may have been, though we think the statement doubtful, but "thoroughly purified" it certainly was not, as many plays acted in those years will prove. There was not, indeed, the extraordinary licence, neither was there the wit, of the Restoration dramatists, for Congreve's last comedy appeared in 1700; but Cibber, who acted for the first time in 1696 and for the last time in 1745, was, in the plays he acted and in those which he wrote, a type of the morality of the stage under Anne and under the two Georges, "when Dunce the second reigned like Dunce the first." Ode-making he did not understand, but Pope was the last man who had a right to gibbet him on that account, and, in fact, a personal quarrel was the sole cause of the ridicule which he heaped upon the Laureate. He had his revenge, though he destroyed the unity of his poem. Mr. Courthope is alive to this defect, and points out, as previous editors have done, that the whole of the first book should have been recast to suit the character of the new hero:—

"One of the best passages in the original satire was the description of Theobald's antiquarian library, but this was entirely inapplicable to Cibber, who would certainly have committed the twelve volumes of archæology to the flames without a single pang."

To our thinking the defects of the poem, we will not say outweigh its merits, but prevent it from taking the position assigned to it by Mr. Ruskin as "the most absolutely chiselled and monumental work 'exacted' in our country." A poem in which it is difficult to find six consecutive lines that can be understood without the notes of the poet or his commentators must have sterling qualities to make it still attractive. Great qualities 'The Dunciad' has undoubtedly, but until a reader has gained the requisite amount of knowledge the labour of perusal is probably greater than the pleasure. Mr. Courthope has formed a higher estimate of the poem than we can do, and it is right that his criticism should be quoted. After saying that the personality of the work gives it its greatest interest, he adds:—

"That a satire on such a trivial subject should have produced so vast an excitement in the literary world, that it should have been translated into foreign languages, that frequent editions of it should have been demanded during Pope's lifetime, and that a century and a half after his death it should be read with scarcely diminished interest—all this speaks of itself to the astonishing character of the performance. And when a study of the work reveals the causes of its permanent popularity, astonishment will be exchanged for admiration of the poet's resources. The felicity of invention which assigns to each of the multitude of Dunces his place and order in the Temple of Infamy, the propriety of the parodies, the strength, vividness, and at times the grandeur of the imagery, the terseness of the language and the harmony of the verse, must cause all genuine lovers of poetry to subordinate their sense of the faults of the poem to their appreciation of its overpowering excellence."

We are quite ready to admit that 'The Dunciad' contains passages written in Pope's finest vein and many lines that are immortal; but the first three books are devoted to petty persons and insignificant squabbles, and in the fourth alone does he write with a larger and more worthy purpose. It is, however, too late in the day to criticize 'The Dunciad.' If it lacks the charm of the inimitable Epistle to Arbuthnot and of the Imitations of Horace; if it makes great demands upon a reader's patience and also on his knowledge; if, in short, to quote from the editor's preface, he must give to understanding Pope's work "something of the pains which he spent on producing it," the student may notwithstanding be repaid for his toil, and will find that much of his labour has been lessened by Mr. Courthope's copious and admirable notes. Every effort has been made to give completeness to this edition, and the editor is by no means satisfied to follow in the broad ruts made by his predecessors. In addition to an elaborate and masterly introduction, his notes on 'The Dunciad' fill about sixty closely printed pages. The volume contains a reprint of the first edition of 1728, and also the valuable notes on the editions of 'The Dunciad,' which Mr. Thoms has allowed to be reprinted from *Notes and Queries*.

Souvenirs d'un Diplomate: Lettres Intimes sur l'Amérique. Par De Bacourt. (Paris, Calmann Lévy.)

If Mrs. Trollope and other English travellers, who half a century ago incurred the wrath of the citizens of the United States, could have known what M. de Bacourt wrote about the republic between 1840 and 1842, they would have been able to retort upon their American critics that a Frenchman possessing none of their insular prejudices agreed with many of their opinions. M. de Bacourt, a friend and admirer of Talleyrand, was the French Minister at Washington during the period in question. On his way to the United States he passed through London when Guizot was ambassador here, and when Palmerston was Foreign Secretary. His sketch of political parties and statesmen in England at that period is not flattering. He says that Earl Grey was bitter in his comments on public affairs, and could not reconcile himself to growing old; and that, though London was livelier and more luxurious than five years before, there were many disquieting tokens, adding:—

"The Queen is the target for reproaches, the Government lacks moral force, the Ministry is in a minority in Parliament once a month at the least, radicalism advances slowly but surely, and aristocracy daily loses something to the advantage of the middle class, which is ambitious and restless. Indeed, England has now serious difficulties to settle with Portugal, Spain, Naples, Egypt, Greece, China, and the United States. Her foreign policy is directed by a man who is bustling and clever, but who constantly raises up fresh troubles before he has laid those which he aroused by his heedless levity; his colleagues feel and know this, yet in order to provide a remedy it is necessary that one of them should undertake the direction of foreign affairs, and they are all either too lazy to do so or else are incapable of the task."

M. de Bacourt admits, however, that his interview with Palmerston was satisfactory. On June 4th, 1840, he embarked on board the Great Western steamer at Bristol, a year before the Britannia, the first Cunarder, sailed from Liverpool. In these days of monster ocean steamships it is curious to learn the impression made upon M. de Bacourt by the Great Western. He styles it a splendid ship, 226 ft. long; nowadays the same epithet is applied to vessels of which the length is 600 ft. The passage was made in fourteen days, and there are steamers now plying between Bristol and New York which do not make the passage in a shorter time. Though very rapid passages are sometimes made by certain steamers, the average one all the year round is not much shorter now than it was in 1840. M. de Bacourt's first impression of New York was not favourable; he thought

"the houses ugly, being built of brick and having areas in the English style. There are stone pavements everywhere; the middle of the streets is paved with rough stones, which is very bad for carriages; trees are planted in several streets; the general effect is that of a large English country town with a slightly Dutch aspect, wherein there is the activity created by a mercantile population numbering 300,000.....Broadway is the principal street; it contains all the shops, the finest houses, and the leading establishments. Here, however, everything gives the impression of a city devoted to business. There is not a monument, nor a well-built house which is not spoilt by something petty and in bad taste. .....The men belong to the ungraceful, but strong and robust English stock. I have seen many red-haired damsels without detecting as yet one of the much praised American beauties."

M. de Bacourt was struck with the American climate, in particular with the suddenness of the transitions from cold to excessive heat. He was not favourably impressed with American Puritanism, though he thought New York better than Boston, because, whilst in New York people did not pay visits on Sunday, in Boston chains were drawn across the streets to hinder people from taking walks. In one respect the New Yorkers were none the better, he thought, for their Puritanism, as most of them had been bankrupts or were on the verge of bankruptcy, and yet they lived as if they were highly prosperous. Dining at the best restaurant in New York, he found the fare detestable and the charge exorbitant. Things have changed since this was M. de Bacourt's lot, for in no city are the restaurants now better, though in few are the charges higher than in New York. After ten days' stay he formed the idea that America was a second-rate England and the Americans third-rate Englishmen. Six months later he wrote that the Americans, and particularly the women, ought to visit Europe and strive to enter good society in London or Paris. "If that were done they would copy us, because, whilst proud to a degree, they have the imitative instincts of monkeys and they are acted upon and governed by crowds." M. de Bacourt collected anecdotes in confirmation of his views. The following strange story he imagined to be characteristic of America:—

"A girl who had misconducted herself got married without abandoning her manner of life. Her father in speaking about her styled her a bad girl. She brought an action for libel against him, and obtained a verdict in her favour and damages to the amount of one thousand dollars. It is alleged that she requested her father to continue libelling her."

While he considered architecture in the United States to be deplorably bad, M. de Bacourt was yet pleased with the White House. His reception by the President, Mr. Van Buren, gave him especial pleasure. He thus describes what took place:—

"After speechmaking was over, Mr. Van Buren shook hands with me, led me to a sofa, and told me that he was delighted to see me, as he had not forgotten our meeting in London. He then asked me about you, questioning me also about Talleyrand's last moments in the most cordial strain. The audience was a long one, and Mr. Van Buren expressed himself most happily concerning the king, France, &c. M. Pageot, who was present at my reception, told me that he had not seen so cordial a one during the ten years he has been here.....I forgot to tell you that Mr. Van Buren is here called the American Talleyrand. This must be supposed to flatter him, because in speaking of our beloved Talleyrand he called him, at least ten times, a wonderful man. Mr. Van Buren is admitted to be very clever, but this relates to himself personally more than to his management of the country's affairs."

M. de Bacourt's first dinner at the White House was less agreeable than his reception by the President:—

"The dinner began at seven o'clock and the guests left the table at ten. What a bore! As the dinner was on my account I had the place of honour, notwithstanding the presence of the

entire diplomatic body, this being a piece of politeness shown to new arrivals. When dinner was announced the President took my arm and led me into the dining-room—a fine room, well decorated—and made me sit on his right hand. The table, at which forty guests were seated, would have held 120. The waiting was good for America and the dinner was excellent. The French cook told my valet the following curious fact: for several months, since the Presidential election has been the question of the day, many persons who arrived daily to breakfast or dinner without notice threatened to vote against him if they were not entertained. The cook stated that he had all possible trouble in satisfying them, and that they often returned what he sent up, doing so on the pretext that it was uneatable, and ordering something else; the result being that my valet remarked in all seriousness, 'I should think it is no easy matter to be President.'"

As a companion to the picture of the dinner at the White House when Mr. Van Buren was President we may give that of a dinner when Mr. Tyler succeeded to the Presidency:—

"I went yesterday at 5 o'clock to dine with the President. Forty men were present, but no women; the latter did not appear till after dinner. I was seated between Mr. Spencer and Mr. Webster. The latter threw off the pseudo-dignity in which he constantly clothes his sad mediocrity; the madeira, of which he drank too much, not only rendered him agreeable, in the American fashion that is to say, but caused him to become maudlin; he clasped my arm with both hands, and said: 'My dear Bacourt, I am exceedingly pleased to see you to-night; I feel this much more than I have previously done, though I cannot tell why. Perhaps I have not hitherto been friendly enough towards you, but, if you will allow me, we shall now become a pair of friends; you shall see that I am a good fellow. Come and see me daily without ceremony; that will please me greatly, my dear Bacourt, because I really find you charming.' This flattering avowal was made in halting phrase, and, I must tell you, with hiccups which rendered the neighbourhood of the Secretary of State anything but pleasant. All this occurred at the table of the head of the State at a dinner given to the representatives of all the European powers!"

On a previous occasion M. de Bacourt had met Webster at dinner. This was at the Austrian Minister's. He then thought Webster

"pompous in the extreme and ill at ease. I continue to be of the opinion that all the leading men in this country would be second or third rate men in England. They give themselves stuck-up airs characteristic of rich London brewers, having all their vanity, vulgarity, and absurdity. Mr. Clay is a man of another type; he is a gentleman farmer."

Travelling in the United States was not to M. de Bacourt's taste. He found the railways badly constructed, and deplored the want of protection from thieves. He did not see any other cities of note than New York, Philadelphia, Washington, and Boston, nor go further west than Buffalo; but in 1840 Buffalo was considered further removed from civilization than is the case now. He visited Niagara and was profoundly impressed by the spectacle. He thought Boston "a fine English town," its chief drawback in his eyes being that "the inhabitants hate and, what is worse, despise the French." When asked, however, in which city he would reside with the least dislike, he replied that he much preferred Philadelphia:—

"Boston is too glacial; New York too bustling and infested with adventurers from all parts of the globe seeking fortune or an asylum there; Baltimore is as gloomy as the grave; whereas Philadelphia has an air of grandeur, of cleanliness, a stamp of gentility, making it a city apart; all sorts of material supplies are to be found there, and even a kind of society which seems enjoyable. As for Washington, it is neither a city, nor a village, nor the country; it is a building-yard placed in a desolate spot, wherein living is unbearable."

More interesting to readers now than what M. de Bacourt thought of cities which have been transformed since he wrote is his judgment of the people as they appeared in his eyes:—

"The more I see and mix with the Americans, the more difficult do I find it to pass judgment upon them, owing to the great variety of types. The Northerner is very different from the native of the middle states. The Northerner, who is styled a Yankee, is of the English type, with which are combined the sharpness and skill of the Jew—this mixture of pride, of coldness, and of Britannic stiffness with Hebrew astuteness making the Yankee a unique personage. The Yankees are English at heart, despite the scorn which the English show for them. They go to England to acquire their tastes, their manners, their customs, their fashions, and even their aversion to France and the French. Much more civilized than their Southern countrymen, they approve of an aristocracy and all the gradations of rank which the English approve of, and in what is called New England not many changes would be required to establish there a form of government similar to that of Old England. In the Southern States, on the contrary, French tastes prevail; but I regret to say that these are very bad, because it is our revolutionary tastes which they have adopted, and it is these which they relish in us. They are vain and they are jealous of the superior Northern civilization, which they wish to destroy by means of ultra-democratic opinions. Such are the two distinct yet mingled races occupying the region stretching along the coast from North to South of the United States. But a third race which is forming in the West beyond the Alleghanys, on the borders of the Ohio, the Mississippi, and the Missouri, has also its special character, and it cannot easily be described at present. It is composed of emigrants from the Northern and Southern States, of Irish and Germans. In my opinion it is destined to play the principal part in the United States, and to dominate the other two in the course of a few years."

M. de Bacourt writes often with shrewdness, but he is generally far too prejudiced to command confidence. It is clear that he hated America; indeed, he candidly, if harshly, says, "I detest everything about the Americans—their opinions, their manners, their customs, and their character." When the Marquis de Talleyrand-Périgord, in 1876, published some uncomplimentary remarks on America, his book was treated by the Americans as exceptional. It is their fixed opinion that English travellers are the only persons who do them injustice. M. de Bacourt's book is a striking illustration to the contrary, for no English traveller ever wrote more foolishly or more unfairly. Yet there is much in his book that is worth reading besides that which is not worth printing. There are several incidental points of interest. M. de Bacourt was in the United States when Dickens first landed there, and he confirms the accounts given of the extreme lengths to which the people went in doing honour to him. He saw an album in which Prince Louis Napoleon wrote his name in 1837, adding two lines to which he affixed the name of Racine instead of Voltaire—a slip which M. de Bacourt mercilessly ridicules. He learned that Chateaubriand did not visit all the places which he describes. There can be little doubt of this, because Chateaubriand mentions that crocodiles were seen by him in places where crocodiles never existed. Few books can surpass M. de Bacourt's in blunders concerning proper names. There is scarcely a name which is correctly spelt, nor are many of the English words used intelligible at first sight. A list of the blunders would fill a page. We shall give but three examples: Executive Mansion is given as "Execution Mansion," Bunker Hill as "Bunkers Hise," while Harvard figures as "Howard College."

The Cities of Egypt. By Reginald Stuart Poole. (Smith, Elder & Co.)
Scenes from Life in Cairo: a Glimpse behind the Curtain. By Mary L. Whately. (Seeley, Jackson & Halliday.)
Egypt: Native Rulers and Foreign Interference. By Baron de Malortie. (Ridgway.)

Whatever may be the ultimate outcome of the battle of Tel el Kebir, there is no doubt that it will call forth a voluminous literature. The special correspondents are waiting till Christmas is over before bringing out their compilations; but already volumes relating to Egypt are accumulating on our table. The first on our list is of a more scholarly cast than it is likely many of its successors will be; but its title leads to expectations which are scarcely fulfilled. An account of the cities of Egypt such as Mr. Poole is competent to write would be a permanent addition to the library of the Egyptologist. The present little volume is a reprint of articles contributed apparently to a magazine, and its scope is still further limited by the fact that Mr. Poole confines himself to cities mentioned in the Bible. A late Lord Mayor discovered that Armenia is "a Bible country," and many excellent people take no interest in any Eastern countries or places that are not mentioned in the Scriptures. But it is curious to see a scholar of Mr. Poole's eminence tied down by a magazine editor within such limits, and it will create some surprise on the Continent. Needless to say, the work, so far as it goes, is excellently done. Mr. Poole writes with more ease and precision than he used to do; and excepting an occasional metaphor of doubtful propriety the style of his volume is clear and sound. A better handy book for the ordinary reader who wants to form a correct idea of ancient Egypt by reading a couple of hundred pages it would not be possible to find.

Miss Whately knows the women of Egypt so well, and has done so much for them, that, in spite of her strong prejudices, she is entitled to attention when she writes upon anything connected with hareem life. In the present instance she has written a pleasant and readable little tale, upon which are hung a great many sound and valuable observations on Mohammedan society. There is nothing, indeed, particularly novel or exciting about the plot beyond its improbability. This improbability lies in the conversion of Zohrab and his wife: no Mussulman ever becomes a Christian, though the

XUM

contrary process is not uncommon. But this is a flaw which was not likely to strike Miss Whately, who is necessarily theological in her aim, and has no notion of writing a book without a moral. It is not, however, for the story that 'Scenes from Life in Cairo' will be read, nor, probably, was the story Miss Whately's prime consideration. Every one will enjoy the pretty pictures of Egyptian life which abound in her little book. The town house of Zohrab Bey and the customs and regulations of the hareem in which his beautiful wife Ain el Hayat is learning to read, and becomes converted to Christianity by a perusal of the book of Genesis, are pleasantly described; and the country house, with its characteristic surroundings, gives another opportunity for description, and even for a panegyric of the creak of the *sákiyeh*, or water-wheel, which, instead of being the plague most travellers never tire of abusing, "means coolness and fresh water, fertility to the land, refreshing the parched garden, slaking of thirst to man and beast; and in its own way it is music to the Egyptian ear on the hot summer day." Miss Whately's picture of hareem life, even in the exceptionally favourable circumstances of Zohrab Bey's household, is very depressing. Mentally the ladies of Egypt are (only too truly) described as ignorant beyond European conception, and their whole existence is monotonous and enervating to a disastrous extent.

"The life of hareem ladies can hardly be favourable to good health, even under the happiest circumstances. They rarely take exercise, properly so called; in these days, indeed, many are permitted to drive out, but only in shut-up carriages; but even that poor kind of exercise is not partaken of by a large number, who are accustomed to the old-fashioned style of living. Some pass years without crossing their own threshold. A lady (a native Christian, but one whose family kept up the old habits of seclusion which the Moslems seem to have introduced when they came into possession centuries ago) actually lived within a mile and a half of the great river Nile, and had attained middle age without having ever seen it, nor, as she expressed no particular wish to do so, is it likely that she ever beheld those waters on which her country depends for its fertility, but probably died without quitting her voluntary prison—for in her case it was not compulsory. Most of the wealthier establishments have some sort of garden, certainly, and not a few have very good gardens, even in the heart of the town; but the languid habits of their life are such that the ladies rarely walk; they prefer to sit in the verandah and 'smell the air,' as they say, and the gardener brings roses, jasmine, and other flowers tied in somewhat stiff bouquets, and hands to the slaves to present to them. The delight of strolling about to gather flowers for oneself, or picking oranges from the bough, though hanging in rich profusion within reach, hardly seems to occur to them; and some have been much diverted and amazed at hearing that English ladies not only gather flowers for themselves, but even like to cultivate them and to pull up weeds, rake beds, and cut off dead blossoms with their own hands. Labour of any sort is looked upon by these caged birds of women as a thing for those compelled to it by poverty or dire necessity of some kind, never as a voluntary thing, still less as one which sweetens the life of man, when not in excess, more than all the luxuries of idleness and wealth. Slavery has, no doubt, much to do with this contempt for work, but the languor of an inactive and *purposeless* existence perhaps does more. They wander listlessly from room to room, or sit for hours smoking, till the head must become more or less stupefied by the fumes of the tobacco—though it is certainly a lighter kind than that in use in Europe—and never seem to think of roaming about in the garden, even in the most delightful weather.....'What do you do all day long?' an English lady once asked a friend in a hareem—a person of more than average intelligence, be it said—who often complained of headache, and was stouter than was natural at her age, for she was then at most only two or three and thirty. 'Why,' she answered, 'I go and sit on that divan yonder, and then come here and sit upon this one awhile,'—shrugging her shoulders as she spoke."

In such a dreary existence one can understand the exciting diversion produced by the book of Genesis. It would be better to lead the hard, toiling life of Mr. O'Donovan's lady friends at Merv than to drone through one's years "behind the curtain." There is nothing new, of course, in all that Miss Whately describes—it is well-worn ground that she treads afresh; but just as Prof. Ebers's novels of ancient Egypt bring the society of the Pharaohs home to us as no "Records of the Past" or hieroglyphic monograph can do, so Miss Whately's tale of modern Egyptian life will enable many to realize what native society is in Cairo who have neither the time nor the inclination to study more systematic and detailed accounts. Her remarks on the terrible effects of the lack of women's education (which she has herself done something to remedy)—in consequence of which the mind "gets mouldy and deteriorates as the being advances in years, which is perhaps the reason that in Egypt a child is often charming, a young girl sprightly and amusing, a middle-aged woman generally dull and tiresome, and an old woman odious,"—should be borne in mind just now, when we have the power to do something for education in Egypt. There is nothing more vital in the reform of the East than the education of the mother—the rest follows.

Miss Whately's style is easy and conversational rather than strictly grammatical. Her knowledge of Cairo saves her from serious errors; but we cannot understand how she came to describe the Lesser Festival as immediately preceding Ramadan, when every one knows that it follows the fast, and in that lies half its joviality. The expression that a person "is Islam" is meaningless; and the "Fathah," or first chapter of the Koran, should not be confused with the "Kelimeh," or profession of faith, as it is on p. 272. Any Christian could conscientiously repeat the "Fathah," which is merely a brief prayer: "Praise be to God, the Lord of the worlds, the compassionate, the merciful, King of the day of judgment! Thee we worship, and to Thee do we cry for help. Guide us in the right way, the way of those Thou art gracious to, not of those upon whom is Thy wrath, nor of the erring." Zohrab Bey might honestly repeat this after his conversion; but the "Kelimeh" ("There is no god but God, and Mohammed is His prophet") is a different affair. We must add that though Miss Whately naturally, but erroneously, extols the Copts at the expense of the Muslims, her portraits of the Mohammedan characters in her story are remarkably fair and written in a kindly and tolerant spirit.

Baron de Malortie has a method of composition entirely his own. We are accustomed to the species of literature—if such it is—which is contemptuously associated with the use of scissors and paste, but we are not accustomed to open avowal of the process employed. The Baron's volume is mainly composed of other people's remarks; but to each statement a foot-note is duly attached showing where the phrase, or substance of the phrase, comes from. By this method two advantages are secured—honesty by the writer and cyclopædic utility by the reader. It is extremely useful to be able to turn to any phase of the "Egyptian Question" described in this book, and find references to perhaps fifty other works on the subject. Baron de Malortie has a genius for foot-notes, and, indeed, it is difficult to imagine how he manages to arrange and attach them. It is true they do not always appear very relevant, as when "the pearl of the Ottoman dominions" evokes a note on Napoleon's invasion of Egypt; nor always quite precise, as when any statement about the Mohammedan religion calls forth the reference "*vide* Koran." Nevertheless, those who want to know what books have been written about Egypt from the middle of last century to the middle of last October may find ample references, full titles, and numerous extracts in Baron de Malortie's compendium.

Beyond this bibliographical value, however, we cannot discover much virtue in the work. The style is that of a smart journalist, who cares for effect rather than precision, and who is, perhaps, rather better acquainted with French than English, to judge from such phrases as "to contest him all original initiative," "substituted himself to the Moultezims," and the Government "demurs at the introduction of European judges." The facts, as we have said, are mainly borrowed from other books, with more than sufficient acknowledgment. It can hardly be necessary, for instance, to give nine foot-notes to nine lines of text, or attach a number and a reference to every epithet applied to the ex-Khedive. The fact that there are nearly nine hundred foot-notes in three hundred pages gives no idea of the amplitude of these references, which sometimes reach the total of fifty in a single page. This prodigality of acknowledgment detracts somewhat from the style and also the appearance of originality. Nevertheless, there are some excellent extracts from the author's own diary which contain interesting and novel information, especially speeches of the late and former viceroys, some of which are decidedly amusing. It is curious to learn that Abbâs Pasha's theory of government was to refuse raki but allow hashîsh to the fellahîn, because the former excited them, but hashîsh stupefied them and rendered them amenable to management. The proportion of original matter is, however, exceedingly small, and the book will be chiefly used as an index to other books.

Yet it must not be supposed that because the volume is made up of quotations the author has not views of his own. Baron de Malortie holds decided opinions on all the chief points of modern Egyptian history. The only difference between him and other writers is that he modestly prefers to express his views in other people's language. His text gives us one aspect of Egyptian politics,

XUM

but his foot-notes supply the means of checking it by a hundred other views. The book has been too hastily put together, and abounds in misprints, like Spitter Bey, S. W. Gregory, S. C. McCoan, &c., and worse. The compiler evidently knows nothing of Mohammedan law or character, or he would not speak of a divorced wife as entirely destitute, when her late husband is bound to support her for a time, or call students at the Azhar (not Ahzar) "young sheikhs," when sheikh means an old man; and his knowledge of history may be gauged by the extraordinary theory that the Sultans of Turkey "gradually wrested" the Khalifate from the Grand Sherifs of Mekka. The brilliant qualities he attributes to that "shining meteor" Ibrahîm, the father of the ex-Khedive, are certainly open to debate. Those who knew Ibrahîm regarded him more as the cruel and relentless devastator of Syria than as the "rescuer from a reign of terror and barbarism" in that province. There are plenty of mistakes like these, which considerably diminish the usefulness of the book; and, in spite of some really interesting and sound writing, we can recommend nothing in it so strongly as its references.

The New Medusa, and other Poems. By Eugene Lee-Hamilton. (Stock.)

Poetry is an art, yet it has a message, and if any writer's verse embodies a message true, direct, and pathetic, we cannot stay to inquire too curiously about the degree of artistic perfection with which it is delivered. The most truly passionate nature, and, perhaps, the greatest soul, that in our time has expressed itself in English verse, is Mrs. Browning's. At least, it is certain that with the single exception of Hood in the 'Song of the Shirt,' no other writer of the century has really touched our hearts with a hand so powerful. And she does this notwithstanding violations of poetic form and defective rhymes such as would appal some of our contemporary versifiers "who lisp in numbers" because the numbers (and nothing else) come. This is not to say that poetry as an art is not of great importance, but that the message of poetry is of greater importance still. In artistic requirements Mr. Lee-Hamilton's volume is often defective enough. Yet, with all its shortcomings—its irritating introduction of a prose word into a powerful passage when it would have been so easy to find a poetic one—we should have to go to great names among contemporary poets before we found a volume of verse with a message so clear and so touching. Of the writer's sorrows we know nothing save what the volume discloses. But then the volume discloses that here is a writer who does really learn in suffering what he teaches in song. Poetic woes (the woes of unsatisfied vanity and ambition) do not get much sympathy from any one who has suffered himself or who has seen real suffering. But it would be a hard nature that could read the following sonnet without being touched:—

TO THE MUSE.

Oh, were it not for thee, the dull, dead weight
Of Time's great coils, too sluggishly unrolled,
Which creep across me ever, fold on fold,
As I lie prostrate, were for strength too great,
For health and motion are not all that Fate
Has bid the passing seasons to withhold;
Alas! a nobler birthright yet was sold
For one small mess of pottage that I ate.
And, like the wretch who, shivering in the street
And gnawed by hunger, sees his haggard self
In some shop window piled with drink and meat,
I fix my hungry eyes where, cruelly near,
Are lying, closed and useless on the shelf,
The books I dare not read and dare not hear.

Here is a poet who (as we gather from the introduction) "lisps his numbers" as he lies on his back suffering the agonies of an incurable spinal disease, which not only paralyzes his limbs and prevents him from writing, but racks his brain with pain whenever books, or even his own verses, are read to him.

There was a captive once at Fenestrèl,
To whom there came an unexpected love
In the dim light which reached his narrow cell
From high above
* * * *
Between the flagstones of his prison floor
He saw one day a pale green shoot peep out
And with a rapture never felt before
He watched it sprout.
* * * *
Oh such another Picciola hast thou,
My prison-nurtured Poetry, long been;
Sprung up between the stones, I know not how,
From seed unseen!

This book is all a plant of prison growth,
Watered with prison water, not sweet rains;
The writer's limbs and mind are laden both
By heavy chains.

Not by steel shackles, riveted by men,
But by the clankless shackles of disease;
Which Death's own hand alone can sever, when
He so shall please.

What work I do, I do with numbed, chained hand,
With scanty light, and seeing ill the whole,
And each small part, once traced, must changeless stand
Beyond control.
* * * *
The whole is prison work: the human shapes
Are such fantastic figures, one and all,
As with a rusty nail the captive scrapes
Upon his wall.
* * * *
Scratched on that prison stone-work you will find
Some things more bold than men are wont to read.
The sentenced captive does not hide his mind;
He has no need.

Oh, would my prison were of solid stone
That knows no change, for habit might do much,
And men have grown to love their dungeons lone;
But 'tis not such.

It is that iron room whose four walls crept
On silent screws, and came each night more near
By steady inches while the victim slept,
And had no fear.

At dawn he wakes; there somehow seems a change;
The cell seems smaller; less apart the beams.
He sets it down to fancy; yet 'tis strange
How close it seems!

The next day comes; his narrow strip of sky
Seems narrower still: all day his strained eyes sweep
Floor, walls, and roof. He 's sure the roof 's less high:
He dares not sleep.

The third day breaks. He sees—he wildly calls
On God and man, who care not to attend;
He maims his hands against the conscious walls
That seek his end.

All day he fights, unarmed and all alone,
Against the closing walls, the shrinking floor,
Till Nature, ceasing to demand her own,
Rebels no more.

Then waits in silence, noting the degrees—
Perhaps with hair grown white from that dread doubt—
Till those inexorable walls shall squeeze
His strong soul out.

These lines are an excellent illustration of what we have often said in these columns as to the relation of the suggestive power of incident to the poetic and to the unpoetic mind. To the poet Nature and human life are infinite in symbol. Of such well-worn stories as 'Picciola' and the Iron Shroud an entirely new and fresh use can be made if the poet's mind is original, or if the conditions under which he writes are new. There is in the lines quoted a directness of speech due partly to the situation of the writer and partly to the rare gift which, above all others, makes a man a poet—a gift of truthful and sincere utterance. We have quoted from the more personal parts of the book because we have been greatly touched by them. But it is on the dramatic power displayed in such poems as 'The Raft' that the writer's position will have to rest. These show a fine imagination, but one which has been rendered gloomy and unhealthy by misfortune. What Mr. Lee-Hamilton has to avoid in the future is the too frequent use of words which, though pictorial, or else dramatic, have a prose suggestion, and are consequently unfit for poetic art. Since Landor's famous image of the murmuring sea-shell many have dallied with it; but it was reserved for Mr. Lee-Hamilton to give it an application so new that the reader forgets the illustration is old:—

SEA-SHELL MURMURS.

The hollow sea-shell which for years hath stood
On dusty shelves, when held against the ear
Proclaims its stormy parent; and we hear
The faint far murmur of the breaking flood.
We hear the sea. The sea? It is the blood
In our own veins, impetuous and near,
And pulses keeping pace with hope and fear
And with our feelings' every shifting mood.
Lo! in my heart I hear, as in a shell,
The murmur of a world beyond the grave,
Distinct, distinct, though faint and far it be.
Thou fool; this echo is a cheat as well,—
The hum of earthly instincts; and we crave
A world unreal as the shell-heard sea.

No competent judge who reads the book will deny that, great as is the sympathy which Mr. Lee-Hamilton commands as a sufferer, as a poet he commands a sympathy which is almost as great.

NOVELS OF THE WEEK.

Mr. Isaacs. By F. Marion Crawford. (Macmillan & Co.)

My Connaught Cousins. By Harriett Jay. 3 vols. (White & Co.)

Fair and Free. By the Author of 'A Modern Greek Heroine.' 3 vols. (Smith, Elder & Co.)

A Golden Shaft. By Charles Gibbon. 3 vols. (Chatto & Windus.)

The Bankers of St. Hubert, and other Tales. By Sylvanus Ward. 2 vols. (Remington & Co.)

'Mr. Isaacs' is a work of unusual ability. The author has obviously started with considerable experience of life and a great stock of miscellaneous knowledge. The varied information and the taste for philosophy, which in a way adorn its style, stand in the way of the complete success of the study, and it must be owned that the book begins heavily. There is a self-conscious display of learning and cleverness, and it is not until the author shakes this off that his ability is fully shown. 'Mr. Isaacs' is a tale of modern India, and the hero, instead of being (as might be guessed) a Jew with a friend in the City, is a

Persian millionaire, whose real name had been shortened for convenience of intercourse with English people in India, and because the abbreviation had "an attractive Semitic twang" that suited the owner's occupation of a dealer in precious stones. It is not with this part of his life that the story deals. It is a story of the sudden and strange passion of a sensitive, highly educated Mohammedan for an English girl, lovely, but by no means clever, who learns to return his love. The hero is all that a hero of romance could be—perfect in beauty of face and figure, generous, accomplished, brave, rich, and a little mysterious. But he is the one character in the book who makes the reader feel not in sympathy with the author. He is not quite real. The conversion of an Oriental to English views about women is a bold stroke, and the author has made it with both delicacy and power; but the impression left is that the hero was really only an Englishman with a dash of the Oriental in his way of thinking. His appearance and manners, of course, go for nothing in a story; one can only judge by what he says and does; and the truth is that the reader is entitled to make the mistake which the imaginary narrator made on first meeting the hero, and to put him down as a slightly cynical Italian with a cosmopolitan air. But whatever faults may be found with the conception of such a character, the author has, at all events, succeeded in telling the story of the hero's love and adventures in a way which holds the reader under a spell. In the account of the hero's liberation of Shere Ali in the winter of 1879, the effect of a very vigorous bit of description of rapid action is heightened by the introduction of an historical personage. 'Mr. Isaacs' fully deserves the notice that it is sure to attract.

'My Connaught Cousins' is less finished than the admirable stories by which Miss Jay first became known as a delineator of Irish life and character, but it is not less marked by knowledge of her subject. Perhaps it is as a relief from the sombre tragedy of the 'Priest's Blessing' that the author has chosen a lighter setting for the present book, the adventures of a young Englishman among his Irish relations naturally being on the whole of a cheerful cast. But besides anecdotes of the sport of the West, and charming and pathetic tales such as that of "How Andy Beg became a Fairy," which is as prettily told as anything in the book, there is an element of sad reality, inseparable, as it seems, from any book on Ireland at the present time. The value of these interesting volumes is rightly estimated in the introduction by Mr. Robert Buchanan.

It can hardly be said that the author of 'Fair and Free' has made a very great advance on 'A Modern Greek Heroine.' The reservation does not of necessity amount to dispraise, for there was in the earlier story a good deal of skilful work, if it was not possible to speak very highly of that work as a whole. Its conception was unequal, and the execution was frequently below the level of the conception. The same disappointments await the reader of 'Fair and Free,' which has many excellent features, whilst it is far from being a thoroughly satisfactory work of art. The first few chapters are by no means agreeable. A high-spirited girl, with even better qualities than those which the author attributes to her in his (?) title, is dragged by her abominable aunt through a most cruel ordeal; and the description of the Folkestone ball, at which the cruelty culminates, though it may be only too true to life, is as unpleasant as anything of the kind could be. The heroine comes fairly well out of this valley of humiliation, and her future career goes far to efface from our minds the unfortunate impression which has been left upon them; but other impressions scarcely less unfortunate, though mainly in respect of other characters in the story, succeed it. This said, it is indispensable to add that a marked ability is displayed in the development of the character of Marcella Cassilys, a charming hedonist by her own confession, and a very cunning defender of the faith that is in her. She is not the only character in the book on which its author has bestowed great and successful labour. Indeed, had the writer omitted a few scenes which are painful without possessing dramatic value, and aimed at a little more grace and precision in style, which must be quite within the competence of the writer, 'Fair and Free' would have taken exceptionally high rank amongst the novels of the day.

It is pleasant to meet with a work by Mr. Gibbon that will remind his readers of the promise of his earliest efforts. The story of Thorburn and his family is full of power and pathos, as is the figure of the strong-natured Musgrave, who goes about—for the sake of his daughter, and of John Armour, the son of his old love—sustaining the bitter consciousness of a crime which, strange to say, the dying injunctions of the man he has injured have bound him to conceal. Mr. Blackmore, in 'Cradock Nowell,' has given us a Bull Garnet whose sad presence comes across the memory as we read of the Fiscal. But the Scotch version of the character is sufficiently original to vindicate its separate existence, though, it may be added, it is a far less complete portrait than Mr. Blackmore's, as Mr. Gibbon's work in general is more suggestive of endeavour than accomplishment. The weakness of the present plot is the exaggerated self-abasement of Thorburn. The motive of his betrayal of Graham to justice was, in fact, base enough; but a good citizen had surely little choice of action in the case of a rebel and a murderer. To have done one's duty from wrong motives is a sad subject for reflection, but the circumstances would have gone far to console any but a very morbid mind. Granting, however, the postulates of the case, there is no doubt Thorburn, or Armour senior, is an interesting figure. To the tenderness of his blind mother, strong old Grannie Armour, both to him and to her grandson, it is due that Thorburn can conceal himself for love's sake, lest he should bring discredit on the son for whom, under an assumed name, he works in the mills at Thorniehowe. When the discovery comes, John Armour takes it as a good man should, and Ellie Musgrave shows him, under much difficulty, how true a good woman can be. A good contrast to these strong characters are the Fiscal's "lady," a vulgar woman, who has but little share in her daughter's nature, and Fenwick, a prosperous gentleman who writes himself M.P., and is a thorn in Ellie's side till in chagrin he marries a young woman who takes him for what he is worth.

Mr. Sylvanus Ward had a moral purpose in writing his story of 'The Bankers of St. Hubert,' which he duly explains in a short preface. His plot is taken from "real life," and illustrates "the low standard of morality which regulated the commercial business at St. Hubert in the earlier years of the present century"; and the author hopes to be instrumental in bringing about a revision of the more obnoxious peculiarities of the law in the Channel Islands, and in "thus removing one of the chief impediments to the moral and material advancement" of those islands. From which it is manifest that Mr. Ward, although he has gone back more than half a century for his facts, is not unwilling that his strictures should be taken to have a present application. The thin disguise of the title becomes more than transparent in the first chapter, and little or no care is taken to mask the writer's intention throughout. The story is interesting in itself, though it is not much else than a narrative of callous and sordid dishonesty. The affection of two young and innocent persons, somewhat baldly described, serves to relieve the darkness of this picture. They suffer through the roguery of the fraudulent bankers, as well as from the inequitable island law; but the rectitude of the hero secures for them a happy consummation of their hopes, and thus the author is enabled to point his moral in a twofold sense. Mr. Ward's style is not very easy or graceful, and his perpetual italics have the effect of weakening rather than of strengthening it, but 'The Bankers of St. Hubert' and the three tales which follow it are sufficiently entertaining to justify their appearance in print.

CHRISTMAS BOOKS.

Stories of Olden Times drawn from History. By Ella Baker. (Sonnenschein & Co.)

Tales from the Edda. Told by Helen Zimmern. (Same publishers.)

Heidi's Early Experiences: a Story for Children and for those who Love Children. By Johanna Spyri. (Same publishers.)

Doll Stories. By Lucie Cobbe. (Same publishers.)

Two Life-Stories. By Alice Weber. (Walter Smith.)

Garnered Sheaves: a Tale for Boys. By Mrs. Emma Raymond Pitman. (Blackie & Son.)

The Foster-Sisters: a Story of the Great Revival. By Lucy Ellen Guernsey. (Shaw & Co.)

Rachel's Share of the Road. (Boston, U.S., Osgood & Co.)

Rob and Ralph; or, a Trust Fulfilled. By Nellie Hellis. (Shaw & Co.)

The Ball of Fortune. By Charles Pearce. (Blackie & Son.)

Fairy Fancy: What she Saw and What she Heard. By Mrs. C. A. Read. (Same publishers.)

The Adventures of Mrs. Wishing-to-be, and other Stories. By Alice Corkran. (Same publishers.)

Tommy Greedygrab; and Wriggletum. By Joseph McKim, M.A. (Manchester, J. Heywood.)

Donald and Dorothy. By Mary Mapes Dodge. (Warne & Co.)

The New House that Jack Built. By Mrs Willoughby Luxton. (Routledge & Sons.)

Langley Little Ones: Six Stories. By Charlotte M. Yonge. (Walter Smith.)

The Girls of Flaxby. By C. R. Coleridge. (Same publisher.)

Only a Little Child. By Mrs. Sale Barker. (Routledge & Sons.)
Good Stories. Series LVI. (Wells Gardner, Darton & Co.)
Hubert D'Arcy, the Young Crusader. By N. Payne Galway. (Shaw & Co.)
New Light through Old Windows. By Gregson Gow. (Blackie & Son.)
Nat the Naturalist; or, a Boy's Adventures in Eastern Seas. By G. Manville Fenn. (Same publishers)

The 'Stories of Olden Times' are remarkable for a certain aimlessness and general want of point. They profess to be adapted for young children; but surely to be definite and clear is one of the first duties of the writer for the young. One can imagine a stern little critic, after wading through one of these stories, despairingly exclaiming, "But what is it all *about?*" There is a constant tendency, too, to put the cart before the horse, and so to implant in the minds of the unhappy children who imbibe their first notions of history from this book hopelessly wrong views as to the order of time. Perhaps the author, endeavouring, as she tells us in the preface, to avoid all "terrifying or revolting incidents," settles down on an unobjectionable historical personage, and rambles on, telling one after another the various unobjectionable anecdotes connected with that personage, in whatsoever order they occur to her mind. The story of Prince Edward's wife illustrates this unhappy mode of dealing with history.

A great contrast is presented by another of Messrs. Sonnenschein's publications, Miss Helen Zimmern's 'Tales from the Edda,' with illustrations by Kate Greenaway and others. The old Northern tales are told with a straightforward simplicity, and their charm is eternal. Odin, the All-Father, is there, and Thor the mighty; "Baldur the sinless, and the giver of all good; Loki the crafty, and many more.....A right merry time they had of it in Asgard, many were their deeds and adventures."

Messrs. Sonnenschein publish also a charming "story for children and for those who love children" in 'Heidi's Early Experiences.' There is an idyllic charm about the life of little Heidi and her grandfather in the lonely mountain hut, and there is pathos in the unbending of the stern old man towards the sweet little girl.

'Doll Stories' is a collection of quaint little fanciful tales for tiny children.

'Two Life-Stories' are two novelettes, somewhat affected in tone, but not without merit. The first story is of two sisters, Phyllis and Marjorie, who have a purpose in life. "We have *sworn*," says Phyllis, "to carry out our natural talents, you and I, have we not?—you, your painting, and I, my love of teaching." They struggle, like good girls, to carry out their purpose; but Marjorie forsakes her calling to marry her cousin, while to poor Phyllis there comes one of those consummate prigs so well known in the pages of lady novelists, who wins her love and then, with sublime unconsciousness, says to her, "Keep.....sacredly your devotion to that work which you have chosen as yours so heroically. I say 'heroically,' because most women, nearly all women, make married life the aim and end of all things; you, most wisely, have chosen the life for which you are so eminently fitted, which, if you were to allow personal interests to creep in, would deteriorate, and those 'others' of whom you are always thinking and for whom you work would suffer." Phyllis follows out these exhortations and lives a useful life, stronger "in her own might" than the heroine of the second story, Stella, who, being forsaken by a false and reverend lover, dies of grief and consumption. There is a general atmosphere in these two life-stories of faded Turkey carpets, sage-green mantel-piece borders, with daffodils, old china plates, crewel work, and subdued shades of colour.

'Garnered Sheaves' is rather an appalling book. Ormond Lee, a well-to-do young man, "irreproachable in conduct and principles," devotes his energies to Sunday-school teaching, although he says he grants "the work is not respectable." His line of life alienates him in great measure from his family. "There is a certain lowness about common Sunday-school teaching," says his sister Alice, "which does not become you, Ormond Lee—you, with your position and expectations." The worldly Alice and the unworldly Ormond, both unnatural and stilted beings, go their different ways; but, after all, they are not of so much account in the eyes of the author as Ormond's Sunday scholars. There are eight of them, and their adventures are many and startling.

'The Foster-Sisters' is a pretty story of the last century. Amabel and Lucy, English girls of good family, are brought up in a convent in the south of France, then go to Amabel's home in Northumberland, stopping on the way in Newcastle and falling in with John Wesley. The style is bright and sparkling, and there is much true local colour about the tale, as those who know the "canny town" will recognize.

'Rachel's Share of the Road,' one of Messrs. Osgood's "Round-Robin" series, is an American tale of an earnest-minded girl, Rachel, daughter of Judge Tyndal, "president of the road," the road being a certain railway in the States. The high officials of the line flourish while the workmen have difficulty in getting their wages, and the pity of this is Rachel's trial. "It was growing to be her share of the road.....to meet and know of the troubled anxious ones whom she could not help, and to feel a sense of guilt in the sharp contrasts of her own sheltered, abundant life." There is some powerful writing in the description of the poor workmen driven to their only resources, the strike and the fire.

'Rob and Ralph' is a pretty story, in which two little orphans, oppressed and ill treated by unworthy guardians, run away and find better luck. The theme is not very new, but it is well treated.

'The Ball of Fortune' is a golden cannon ball; many and strange are its adventures, but in the end it is safely fired into a bank.

'Fairy Fancy' and 'Mrs. Wishing-to-be' are two children's books neither better nor worse than hundreds of others.

'Tommy Greedygrab' and 'Wriggletum' announce themselves as fairy tales for children; they are nonsense with a moral.

'Donald and Dorothy' is an American tale with a somewhat wild plot. The two D's are a devoted brother and sister, who were saved from shipwreck in their infancy. In after years arises a doubt as to whether Dorothy is Dorothy after all. Eben Slade, the villain of the book, declares that she is not; but Donald wanders about the world in amateur detective fashion, and finally wins back his sister.

The new house that Jack built is in the colonies. There are some spirited descriptions of colonial life, and Margery's school experiences are rather funny.

The author of 'The Heir of Redclyffe' gives us in 'Langley Little Ones' six stories for teachers and taught.

'The Girls of Flaxby' shows strong traces of Miss Yonge's influence. 'St. Agnes's Guild' is a well-told episode drawn, it is stated, from actual life.

'Only a Little Child' is a pretty little story of children in a London nursery.

The volume of 'Good Stories' before us is a miscellaneous collection of fact and fiction. We begin with Lucy Hutchinson and Madame de Lavalette; we end with Oliver and Rob Branscombe, the good and the bad young men of the Sunday-school world.

Mr. Galway's story is well and pleasantly told. It possesses much interest and has a good moral. Its plot is so improbable, if not impossible, that we should regard it as a total fiction were it not for the preface, in which the author assures us that it is not only based on facts, but that those facts were well attested by competent contemporaries in the reign of King John.

Mr. Gow endeavours to present "some of the shreds of wit and wisdom which have come down to us from ancient times in the guise of fables .....showing that the observations on life and character of the keen-eyed Grecian sages are as applicable now as then." His book contains some fairly told tales, of which the morals are the same as the best known of Æsop's fables, but they are spread over thrice as many pages as there are lines in the original. However, they are agreeable reading for the young.

Nat, the youthful naturalist, attracted by the tales of his uncle, a devoted ornithologist, follows him in his quest after gorgeous birds of paradise and scarcely less lovely humming birds through New Guinea and the Eastern Archipelago. Here he meets with thrilling adventures, in which natives, snakes, and other denizens of the forest play their part. The late Lord Palmerston used to say that one use of war was to teach geography: such books as this teach it in a more harmless and cheaper way.

OUR LIBRARY TABLE.

An anthology comprised in one volume of three hundred pages or so could hardly supply an adequate idea of the great poetical activity of our day, and the handsomely printed volume, *Living English Poets*, sent to us by Messrs. Kegan Paul & Co., would scarcely provoke criticism were it not for the pretentious preface. When, however, the reader is told that "the editors, then, having desired to include, to the best of their judgment, representative pieces from all the verse-writers who may really be called in any high and lasting sense poets, have been gratified to find that the names have for the most part arranged themselves by a quantitative test in an order which approximately is that in which the public voice has classed the names selected," he feels curious to see how "the editors," who apparently model their style upon that of the Mathematical Society's papers, have done their work. He will first find that, while some exceedingly minor bards are "called in a high and lasting sense poets," the excluded herd of verse-writers comprises Mr. Allingham, Miss Blind, Miss Ingelow, Mr. F. Locker, Mr. George Meredith, Mr. John Payne, Mr. W. B. Scott, and Mr. W. Sharp. Nor if he comes to look at the pieces selected will he be less surprised. Turning to Mr. Tennyson, he will find that the editors have usually picked out the Laureate's second-rate work. They have, indeed, given 'Rizpah' and 'The Northern Farmer' and 'Tithonus,' but the other selections are singularly unhappy. For instance, instead of the perfect lyric "Home they brought her warrior dead," the rhetorical "Of old sat Freedom on the heights" is chosen. Nor is the selection from the younger poets more happy. Mr. Lang is curiously misrepresented, and Mr. Gosse fares as badly. Mr. Gosse has written some elegant sonnets, but the editors have, with strange perversity, chosen his feeblest. The lack of judgment shown in the editing of this volume is rivalled by the tastelessness of the frontispiece.

Mr. W. Scott Douglas may be congratulated on his careful redaction of Lockhart's *Life of Burns*, the best of Lockhart's biographies. Messrs. G. Bell & Sons are the publishers.—From Messrs. Bickers come revised editions of Lockhart's *Life of Napoleon Buonaparte* and Maxwell's *Life of Wellington*. We doubt the wisdom of reprinting either. Maxwell's especially is full of a vainglorious chauvinism, excusable at the time, but which had better be forgotten now.

From Messrs. Routledge comes *A Thousand and One Gems of Song*, a capital selection for popular use, edited by Dr. Charles Mackay.—Messrs. Ward & Lock send a cheap edition in

one volume of *Hallam's Literature of Europe*.—From Messrs. A. Heywood & Son, of Manchester, comes *Through the Night*, the first instalment of an edition of Mrs. Linnæus Banks's popular tales.

We have sundry cookery books on our table. *Good Plain Cookery*, by Mary Hooper, which Messrs. Ward, Lock & Co. send us, is an unambitious and useful book, and gives clear and sensible directions.—*The Girl's Own Cookery Book*, by Phillis Browne (*Girl's Own Paper* office), is a still more elementary work, and will be useful to young and inexperienced cooks.—*Choice Dishes at Small Cost*, by A. G. Payne (Cassell & Co.), is conveniently arranged, and the receipts are concise. It contains a great deal of information in a small space.

A number of annuals are on our table. The most valuable of these is the *Almanach de Gotha* (Nutt), which is always full of information collected with truly German industry. Tunis, we observe, is now included under France. There are very few mistakes in the volume. We cannot, however, say much for the taste of the frontispiece.—*The British Almanac and Companion* (Stationers' Company) contains many useful articles. The writer on the architecture of the year makes, however, a great mistake in depreciating the new Law Courts. He also underrates Decimus Burton.—*Eason's Almanac for Ireland* (W. H. Smith & Son) has deservedly reached its tenth year. It is cheap and useful.—Mr. Fry's *Royal Guide to the London Charities* (Bogue) has attained its twentieth year. In an interesting preface he points out the bad condition of the finances of our large unendowed hospitals.—Turning to pocket books, we may congratulate Mr. Pratt, of Sudbury, on the continued prosperity of *Fulcher's Ladies' Memorandum Book*.—*Gilbert's Clergyman's Almanac* and *Whitaker's Clergyman's Diary* still hold their ground successfully. They are issued by the Stationers' Company.—We should hardly think many boys have the patience to carry a pocket book long, but Mr. Frith has catered for them in *Every Boy's Pocket Book* (Routledge & Sons).

Christmas cards lie on our table in great numbers. On the whole, there is a decided improvement in them. Messrs. De La Rue send us a gorgeous show worthy of their high reputation. They also forward some delicious bookmarkers.—The cards of Messrs. Schipper & Co. are remarkable for elaboration and general good taste. They further send us some *menu* cards and calendars.—Mr. A. Gray sends us one or two cards in admirable taste. His comic cards are hardly to our liking.—Messrs. Phillipps & Sons send us a number of cards, the majority of which are really admirable.—Messrs. Falkner & Sons send us 'Patience' and "old style" cards, some of which are passable.

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Evolution (The) of Christianity, 8vo. 12/ cl.
Gospel of the Secular Life, Sermons preached at Oxford, Prefatory Essay by the Hon. W. H. Fremantle, 5/ cl.

M. LOUIS BLANC.

It is not probable that, as things and men settle down into their places, the literary importance of Louis Blanc will hold its rank beside that historical importance which he will always possess as an example of a certain school of political thought and a partaker in certain famous historical events. He was, indeed, master of an excellent working style of pure and scholarly French, which is almost indifferently exhibited in all his work. But his style was somewhat lacking in distinction, and was too apt to be diffuse—faults which it shares with the styles of all but a few of his contemporaries in England as well as in France, and which may be said to be generally characteristic of an age of journalism, if not almost necessary and inseparable accidents of the journalistic faculty. To this defect—if defect it must be called—of mere style, there had to be added, in the case of a writer who was always (at least in intention) arguing, a certain want of argumentative faculty. Other Frenchmen of Louis Blanc's day—Michelet is a notorious example—were quite as deeply committed to a *parti pris* as he. But the man of the first order of literary genius always contrives that the individual subject shall, in appearance at least, give a new illustration of his creed, and as it were force that creed on himself and his readers. Louis Blanc reversed the process, and, unconsciously no doubt, made the reader feel that his creed was ready and had only to be applied to the subject somehow or other. This peculiarity, like his more purely literary qualities, was constant. His work, however, may be divided into three parts, differentiated to a certain extent by their subjects. The first will contain the two great histories, the 'Dix Ans' and the 'Révolution.' Both were eloquent and vigorous, and the impression made by the first and the early volumes of the last at such a time as 1848 is quite intelligible even now. In both, however, the obvious *parti pris* (which is, be it remembered, as much a literary fault as a political or philosophical) injures the general effect considerably, while the style, excellent as it is of its kind, is scarcely sufficient to carry off the defect. The second class is made up of such directly political or politico-philosophical books as the 'Appel aux Honnêtes Gens,' the 'Organisation du Travail,' the 'Droit au Travail,' and all the miscellaneous work included under the general title 'Questions d'Aujourd'hui et de Demain,' and republished under that title very shortly before M. Blanc's death. Here the author's goodness of heart, his ingenuity in logic so long as he was allowed (to parody a well-known saying) to start from no premises except those which he chose, and come to no conclusions except those which he liked, were evident. But his want of practical grasp and theoretical width of view are equally apparent. Of the third division the most remarkable constituents are his well-known and extremely interesting letters from and on England, reprinted not long ago as 'Dix Ans de l'Histoire d'Angleterre.' A foreigner in London between 1860 and 1870 had an abundance of interesting subjects, and M. Louis Blanc's performance of the part of London correspondent is a really remarkable contribution—indeed, one of the most remarkable extant—to what may be called of deliberate purpose the "literature" of journalism. He is still thoroughly preoccupied, but it is a preoccupation which is positively useful to the journalist, because it gives him a steady and decided point of view. Much of the description is extremely lively; the interspersed argument vigorous and spirited, if not always convincing; the accuracy and impartiality (in so strong a partisan) are most exemplary; and the composition and sketching power shown in dealing with complicated circumstances very striking. It may seem a paradox, but we are disposed to think that these papers, fugitive as they were originally, will prove Louis Blanc's best title to permanent literary fame.

THE PUBLIC RECORDS.

The Forty-third Annual Report of the Deputy Keeper of the Public Records, which was presented to Parliament shortly before the close of the session, contains an unusual amount of matter interesting alike to the antiquary and to the historical student. Previous reports have described the gifts made by Lord Shaftesbury at various times from his fine collection of family manuscripts, and we now learn that the Record Office has received another donation from his lordship, which will make the series of documents relating to the first and third Earls of Shaftesbury almost perfect. From the summary given in the Report of the Calendars of State Papers and Chronicles and Memorials, published under the direction of the Master of the Rolls, it is gratifying to learn that the liberal sums allowed by the Treasury under this head have been partly recouped to the Exchequer by a sale of upwards of 50,000 copies of the various volumes in the two series. Mr. Hardy also gives some statistics showing the services rendered to the legal and literary inquirers who frequent the search rooms of the Record Office. We note, among other instances, that during the last year upwards of 300,000 documents were produced for public inspection.

In the Appendix to the Report is continued Mr. F. S. Haydon's Calendar of Patent Rolls, 2 Edward I., with some valuable introductory matter by its learned compiler. Among other contributions by the staff of the Record Office to the Appendix of the Report may be named the beginning of a much-wanted Calendar of the Privy Seals, &c., for the reign of Charles I., by Mr. G. J. Morris, extending from 1625 to 1632; and Mr. Douglas Trimmer's Inventory of Court Rolls belonging to the Duchy of Lancaster, which will be of great value to the local historian and the antiquary. The importance of these court rolls has long been recognized, owing to the light they shed on the relations between the lord and his tenants, the descents of families through many generations, and local manners and customs. As the Duchy held lands in almost every county in England and Wales, and as the matters dealt with in these local courts are of a very varied character, such as feudal customs, regulations for diet, forest and fishing laws, tolls, nuisances, and the morals and diversions of the community, this inventory may be described as of unusually wide interest.

Among the miscellaneous records of the Exchequer Mr. Gairdner was fortunate enough to discover a bundle of papers relating to the conspiracy of the Earl of Cambridge, Scrope of Masham, and others against Henry V. In spite of the decayed state of these documents, a great part of them has been deciphered and is printed in this Report, with an introduction showing their historical importance. Mr. Gairdner is able to prove conclusively that the papers are in the handwriting of the three chief conspirators, and are addressed to the king; they are, moreover, highly curious as specimens of early English.

The Rev. W. D. Macray's Report on Libraries in Sweden visited by him in the summer of 1881, under the direction of the Master of the Rolls, which is printed in Appendix II. of the Deputy Keeper's Report, is a very entertaining account of the various MS. materials in that country for the elucidation of English history. At the castle of Skokloster, owned by Count Brahe, is a splendid library of some 23,000 volumes, collected by the families of Wrangel, Brahe, Bielke, and Scheffer, besides many hundred volumes of manuscript, chiefly the correspondence of Marshal Herman Wrangel (who died in 1643) and his son Marshal Carl Gustaf Wrangel (who died in 1676). The earlier letters relate to the Thirty Years' War, and among them are many written by English and Scotch officers engaged in it. On the panelled sides of the corridors in Skokloster are painted full-length portraits of most of the commanders in this war, including Patrick Ruthven, afterwards Earl of Forth, David Drummond, and Jacob King, afterwards Lord Eythin. Mr. Macray estimates the number of separate papers in the MS. volumes at seventy or eighty thousand, but the time at his disposal did not admit of his doing more than draw up a list of the chief letters apparently relating to England and an index of the news-letters and despatches from London preserved at Skokloster. One volume is chiefly filled with the accounts of travelling and household expenses of Count Carl Philip Wrangel when on a visit to London in 1668. The count lodged in the house of one John Littell, in Covent Garden. He died there during the fourth month of his visit, and was buried in Westminster Abbey. The Royal Library at Stockholm contains many volumes of despatches and diaries of Swedish ambassadors in England, on which Mr. Macray is able to report more fully. In the University Library of Upsala were found even more interesting collections, such as the papers relating to a proposed marriage between Eric XII. and Queen Elizabeth; the correspondence of Count Sparre, Ambassador to England, who died in 1726; and the transcripts and other documents brought together by Bishop Nordin and by Palmskiold. Here also are preserved the private papers and correspondence of Gustavus III., given by that monarch in 1788, with a proviso that they should not be opened for fifty years after his death, which occurred by assassination in 1792; for England the special feature of interest in them lies in their containing the correspondence with the king of Prince Charles Edward, then known as the Count of Albany, and of his countess. The abstracts given by Mr. Macray of some of the letters painfully illustrate the unhappy and degraded position into which the Young Pretender fell in his latter days. Among other correspondents of King Gustavus we notice George III., Sidney Smith, while serving as a volunteer in the Swedish fleet, and the Countess Boufflers when in England. In this library are also many MSS. of travels in England by various persons between the years 1629 and 1772, and a manuscript entitled 'Observations Détachées sur l'Angleterre dans les Années 1788–90,' containing many curious fragmentary notes on Methodists, Quakers, the Church (of which the service is said to be long, fatiguing, and only calculated to send people to sleep; every clergyman is monotonous, &c.), and on places in and near London.

The State Archives at Stockholm have been examined for the Record Office by Mr. W. H. Bliss, whose report follows that of Mr. Macray. Here of special value are the letters of Sir James Spens and of Ludovicus Camerarius during the first half of the seventeenth century, and a series of original letters of English sovereigns; but from the voluminous correspondence of the Swedish ambassadors and agents in England, continued with scarcely a break for two hundred and fifty years, much information has yet to be gleaned. Mr. Bliss has so far been able to do little more than draw up a list of the chief papers relating to English history in the seventeenth century; he prints, however, some interesting extracts from a diary kept by Christer Carlsson Bonde between September, 1654, and September, 1658, when he was on a mission to this country.

ENGLISH AUTHORS AND AMERICAN PUBLISHERS.

December 11th, 1882.

I really do not see why your columns should be encumbered with Mr. Marston's complaints about my telegrams to the New York *Tribune*. If he has been aggrieved, the journal in which wrong has been done him is the one he should apply to for redress. But since he recurs to the matter, I must ask your leave for another word. In his first letter Mr. Marston appealed to me to correct my statement that his firm, Messrs. Sampson Low, Marston & Co., had received and retained, without Mr. Clark Russell's knowledge, the money paid them by Messrs. Harper for advance sheets of Mr. Russell's novels. I answered that my telegram was an exact summary of Mr. Sampson Low's letter to you, and that if any reflection had been made on the firm it was Mr. Low's reflection, and not mine; and I quoted Mr. Low's language. Mr. Marston does not and cannot deny this, yet he omits, no doubt inadvertently, to withdraw and regret his charge of inaccuracy. In his last letter he changes his ground, pleading that it is hardly likely that Mr. Sampson Low would have wished his words to convey the "improper" impression which my words conveyed. Very likely not. But the point is not what Mr. Low wished to convey, but what his statement did in fact signify. I adhere to my words. On the testimony of Mr. Sampson Low, Messrs. Harper had paid for advance sheets, Messrs. Sampson Low, Marston & Co. had received the money, and Mr. Clark Russell knew nothing about it. Nor does it yet appear that Mr. Low was in error on any point which affects the morality of the transaction.

Mr. Marston's sensitiveness is natural enough, and is creditable to him. But it has not yet brought him to the point of making a clean breast of the whole business. With the details of the arrangements between his firm and Mr. Clark Russell the public may not be much concerned. But we are all very much concerned, Americans as well as Englishmen, with the question which, if I may use a phrase not long ago famous, grows out of this controversy, or is suggested by it. I will try to put the question and the facts as briefly as I can, and as inoffensively, for, whatever Mr. Marston may think or hint, I write in no unfriendly spirit to him or his firm.

It appears from the copious correspondence you have printed that Messrs. Sampson Low, Marston & Co. are the English publishers of Mr. Clark Russell's novels. Mr. Russell signed a general contract with them in terms which they construed as entitling them to sell advance sheets to Messrs. Harper, and receive money for them, and put the money in their own pockets. Of the fact that he had conveyed away to Messrs. Sampson Low & Co. this right, Mr. Russell, on his own showing, was ignorant. He was equally ignorant of the fact that they had sold advance sheets of his novels, ignorant that the Harpers had bought, ignorant that his own publishers had received and retained the money. Hearing that large editions of his books had been sold in the United States, he naturally complains to you that he never received a farthing from the American publishers. He obviously supposed that if anybody in England was to get anything from these American sales he ought to get it, and not Messrs. Sampson Low, Marston & Co. If I am wrong in any of these particulars, Mr. Marston or Mr. Clark Russell will doubtless set me right, and Mr. Marston will perhaps, in any case, think it desirable to complete the narrative, of which part only has thus far been confided to you. But I give what I believe to be an accurate summary of the matter as unfolded in your columns.

Now the question I wish to ask is this: Do or do not English publishers, or any of them, make a practice of selling to American publishers an English author's rights, or, to use Mr. Marston's phrase, his "contingent interests," without the knowledge of the English author, and do they retain the proceeds of these sales? Whether the thing sold is called advance sheets or by any other name does not greatly matter. The American publishers have incurred much obloquy on account of their piracies from English authors. I neither defend them nor, in your columns, attack them. But I think Americans may reasonably inquire whether any part of this obloquy can be fairly transferred from American publishers to the broad shoulders of their English brethren. Some slight shifting

of the burden might take place should it turn out that the Americans have paid in cases where they were not known to have paid, and where the author has received no benefit from their payment. I do not for one moment suppose that English publishers are not strictly within their legal rights, or that they do not consider themselves perfectly justified in their dealings with English authors. So do the American publishers. The point is what the public and the author will think of it when the whole truth is known.

To prevent misconception as to my object in putting this question, I may be allowed to add that I am, and always have been, an advocate of an international copyright treaty. If I had the power I would make one to-morrow, which should enable the English author to deal with the American publisher on the same terms as the American author, and give him all the rights of the American author in America. G. W. S.

Brighton, Dec. 12, 1882.

Perhaps I may be allowed to add a word or two to this discussion, though it is rather late in the day. It seems clearly established that Messrs. Harper & Brothers did pay for reprinting Mr. W. C. Russell's stories—although one may well imagine there is not much profit to be made by or for anybody out of that sevenpence-halfpenny series, which has to compete with the Lakeside, Fireside, and other Libraries that pay nothing at all to the English author; and if Mr. Russell failed to get the sums paid by Messrs. Harper, he has merely himself to blame for not having made proper arrangements with his English publishers. But my object in adding to this correspondence, the beginning of which I happened not to have seen, is to give personal testimony; for I think, when a direct attack is made on an American firm, English authors who have been fairly, and even liberally, treated by that firm for years and years back, ought in common justice to come forward and say so. My testimony, then, is this: that the Harpers have been my American publishers for over a dozen years; and that (although no one can desire the establishment of international copyright more than I do) I greatly doubt whether, had international copyright existed, I should have been much better off; while, besides the fairness of their pecuniary arrangements, they have always shown themselves most courteous and friendly, which also counts for something in this magic-lantern sort of a world. Let me give one instance. Last year Messrs. Perry, Mason & Co., of Boston, asked me to write a short story for their *Youths' Companion*, and, as I happened to have a subject handy, I did so. For the American use of this story of ten columns they sent me a cheque for a considerable sum, so that I had no right to expect anything further from that side of the water. However, the Messrs. Harper wrote to Perry, Mason & Co., and obtained permission to reprint this story as a little volume, price one dollar; and at the same time wrote to me, informing me of the circumstance, and saying they would pay me a royalty of ten per cent. on all copies sold. These facts are to be noted: first, I had already been amply paid for the thing, such as it was; second, if there was any kind of property in it (in America), that belonged to Perry, Mason & Co.; and, third, that the permission to reprint, along with the use of two or three small wood-blocks, was granted by that firm after I had ceased to have anything to do with the story. Now the additional fact that the Harpers should, unsought, write and undertake to pay this royalty speaks for itself. I wonder how many English firms there are who, in similar circumstances, would have done the like. I hope there are a great many, but I am not sure. William Black.

BARATARIA.

Savile Club, 107, Piccadilly.

Some little while ago I said in public that the time in which Cervantes lived, with the manners of the time, lent its form and pressure to the genius of Cervantes, and that his 'Don Quixote' shows the very age and body of the time in which it was written. To the evidence I gave in proof of this I now beg to add other evidence lately and unexpectedly acquired. In a visit recently made to Caracas I was fortunate in making the acquaintance of Señor Don Amenodoro Urdaneta, who has recently published 'Cervantes y la Critica,' a learned work and full of interest, to which on another occasion I will call attention. But Urdaneta, besides being an author and a critic, is a gentleman with a keen eye for MSS., an explorer and discoverer in the dark and dusty realms of dead men's papers. One of his discoveries is a copy of the verses which Don Quixote addressed to Dulcinea "y que daban noticias de la hermosura de la reyna del Toboso," and these "versos castellanos" I am to have the honour of bringing to light in our tongue. Another discovery is that of the original letter of Cervantes to "Don Diego de Astudillo, en que se le da cuenta de la fiesta de San Juan de Alfarache, el dia de Sant Laureano." So far as my recollection serves me it differs in nothing from the "carta inedita" of the "Códice Colombino" discovered by Don Aureliano Fernandez-Guerra y Orbe some ten years ago.

It settles beyond dispute the site of Barataria. For my part I never had a doubt from the time that I read 'Las Noticias Secretas' of Ulloa that Seville was the real Barataria of Cervantes, that monstrous mart from which were despatched the sweepings of Spain, to be sold at enormous prices in the *repartimientos* and *encomiendas* of remote Peru; Seville also received the silver and the gold dug out of what became the graves of millions of murdered men; but I am none the less delighted to find, under the hand of Cervantes himself, that what I believed is absolutely true. Space will only admit of a single extract from this valuable relic. I translate as follows:—

"Scarcely had the sun begun to open his shutters and the maiden who had watched all night to close hers, and scarcely had Apollo's lackey brought horses for the coach of his lord, giving an example to all Castilian sons of the soil to do the same, when Alonso de Camino, the butler of the feast, mounted on a roomy rouncy, led the way, accompanied by a patient ass carrying a chest, two baskets, and a butt containing our belly-timber. We journeyed at a lingering pace until we came to the river [Guadalquivir], on the banks of which I found several of our friends. After the rest of us had come together, and we had deposited our common sense in safe keeping with the ceremonies customary on this side of Seville [tasting sherry surreptitiously spigoted in the custom-house], we gave ourselves to the stream, and in good time drew near to the *Gold Tower*. I say Tower, because as for the gold, I need not tell thee how far we always are from that."

Here follows a lengthy description of the feast and the jousts, and then comes the challenge of the tourney:—

"The Knight of El Buen Gusto, natural son of his own inclination and the adopted of his own thoughts, looking to discover good geniuses, has walked the academies of the world, doing many wrongs.....has come in the ship of his desire and made port in this fertile province; and to satisfy his lady, having seen her most pleasant insulas, he makes selection of this, the most fruitful insula of Asnalfarache, wherein he will maintain on the first Tuesday, which is the 3rd of July, from cockcrow to cockshut, that of all the women that are, taking them all in all, she whom he serves is most approved in firmness and most advantaged in beauty, defending the belief he holds with the pike he bears." After much more delicious nonsense, "There drew nigh to the courtyard the sound of a great multitude of Indians with their instruments, and not long after came Don Golondronio Gatatumbo Atabaliva, standing in a palanquin, decked with sweet cyperus and myrtle. The palanquin was borne on the shoulders of four Indians dressed from the waist in *guaypiles de algodon* [cotton tunics], and they carried in their hands bows and arrows, and they wore head-dresses of feathers.....As Atabaliva entered the lists he struck a large pike into the ground, and it was black, having gold bars; his dress was lion-coloured leather, all silver striped, and from his shoulders hung a cloak of white cendal," with much more, all breathing the gay spirit, the unrivalled banter, and the pleasant jest of Cervantes, which shall be published at length in due time.

As certainly as the Gold Tower marks the spot on the Seville river where the bulging galleons came to unlade their treasure brought from the New World, and Golondronio Gatatumbo Atabaliva the greedy, mock-submissive usurper Atahualpa, who was treacherously strangled by Pizarro at the baths of Cassamarca, and then robbed of his roomful of gold, so surely does the Insula de Asnalfarache represent that Barataria over which Sancho Panza ruled according to rules laid down by one who was well acquainted with the ways of the wicked governors of the New Castiles, the New Granadas, and New Toledos of a world that was fast going to the devil when 'Don Quixote' first appeared. But this will be better seen when the whole document is published. A. J. Duffield.

MR. GLADSTONE'S JUBILEE.

December 13, 1882.

By one of those little coincidences which from time to time refresh with the happy sense of self-complacency the lives of sequestered students, this morning, immediately after reading in the *Times* that the Athenians had voted a statue to Mr. Gladstone on the occasion of his completing the fiftieth year of his parliamentary life, I came across the following lines, referring to Cicero, in the 'Punica' of Silius Italicus:—

Ille super Gangem, super exauditus et Indos
Implebit terras voce, et furialia bella
Fulmine compescet linguæ, nec deinde relinquet
Par decus eloquio cuiquam sperare nepotum.

I venture to suggest them to the men of Athens for the inscription; or, if they must have it in Greek, I beg very respectfully to offer it, through your columns, to Mr. Gladstone himself, as a sort of public Christmas card. They are singularly felicitous in their applicability to him, and not less so in that they can be used with equal sincerity by friends and foes. G. B.

Literary Gossip.

In our number for December 30th we shall give a series of articles on the Continental Literature of the Year. Among them will be Belgium, by MM. É. de Laveleye and P. Fredericq; France, by M. F. de Pressensé; Germany, by Hofrath Zimmermann; Greece, by M. Lambros; Holland, by E. van Campen; Hungary, by Prof. Vámbéry; Italy, by Count de Gubernatis; Poland, by Dr. Belcikowski, of Cracow; Spain, by Señor Riaño; Russia, by Prof. Storojenko, of Moscow; and Sweden, by M. Ahnfelt.

In another column we have noticed the new volume of Mr. Courthope's edition of Pope, but it may be as well to mention that an interesting copy of Pope's works, lot 10,155, in four volumes, was disposed of at the recent sale at Puttick's for a trifling sum. The set could scarcely be said to form part

of the Sunderland collection, to which it was supposed to belong, as some of the volumes were published after the title of Sunderland had been merged in that of Marlborough. Vols. i. and ii., 4to., 1717 and 1735, contain the poems. Vol. iii., folio cut down to 4to., and vol. iv., 4to., 1737 and 1741, consist of letters and prose works. On the title-page of each volume is the signature "E. Marlborough, 1750." She was wife of Charles, fifth Earl of Sunderland, who in 1733 became third Duke of Marlborough. There is another autograph on the titles which has been erased, but which by holding up the leaf to the light can be easily deciphered as "Di Spencer." She was daughter of Charles, third Duke of Marlborough, and after her divorce from Lord Bolingbroke in 1768 was married to Johnson's friend Topham Beauclerk. At the end of each volume is a printed label "Blenheim."

The chief interest of these volumes, however, is not in their original contents, but in three pamphlets, which seem to have been surreptitiously inserted, and which escaped the notice of the compilers of the auction catalogue. They occur in vol. ii. after Donne's satires, and consist of (1) 'Sober Advice from Horace,' in which are the well-known lines alluding to the scandalous story of the Duchess of Cleveland and the great Duke of Marlborough; (2) 'Character of the late Duchess of Buckinghamshire,' 1746; (3) 'Verses upon the late D——ss of M—— by Mr. P——,' 1746. This (No. 3) is the first appearance of the famous satire on Atossa. It must be satisfactory to the shade of the great duchess to think that these libellous pamphlets are removed from the library of Blenheim.

'The Bridge to America' is the title of a new work by Mr. Phil Robinson, author of 'Under the Punkah.'

The first fasciculus of an important work illustrating the history of the Greek liturgies will be published by the Cambridge University Press in January. The Liturgy of St. Mark occupies the earlier sheets of the work. Hitherto an edition published at Paris in the year 1583 has furnished the only authority for this liturgy, but the Cambridge editor (Dr. Swainson, Lady Margaret's Professor and Master of Christ's College) has discovered the original of this edition and also a roll containing another recension of the whole liturgy, in addition to a large fragment (at Messina) noticed before in our pages. These are printed in parallel columns. They are followed by fresh collations (from the Barberini Codex) of the liturgies of St. Basil and St. Chrysostom — the latter compared with a copy, hitherto unnoticed, in another collection of the eighth or ninth century—and by a copy of the 'Presanctified,' not hitherto published. After this follows an attempt to exhibit the growth of these three liturgies from the ninth century to the present time. The liturgies of the thirteenth century are found in manuscripts in the possession of the Baroness Burdett Coutts; those of the fifteenth or early sixteenth in the Roman edition of 1526 (which most certainly affected the Prayer Book of 1549). Those of the nineteenth are well known. This ground is almost untrodden, and it is said that many curious problems will meet here with their solution.

Dr. Yavorsky's new work, 'The Journey of the Russian Mission through Afghanistan,' has been translated, with the author's sanction, into English by Mr. Walter Marvin, and will be published in a week or two. The book has excited interest in Russia on account of its attacks on General Stolietoff.

Messrs. Bell & Sons will publish as a volume the sketches of fisher life on the north-east coast which have been appearing of late in the columns of the *St. James's Gazette*. The author of the sketches, Mr. James Runciman, proposes to reproduce his work in two different forms, one of which is designed for the use of junior classes in elementary schools.

The death is announced of the Rev. T. W. Peile, D.D., formerly head master of Repton School, in his seventy-eighth year. He was well known for his editions of the 'Agamemnon' and 'Choephori' of Æschylus, and he was also the author of a work entitled 'Annotations on the Apostolical Epistles.'

Mr. W. H. K. Wright, Librarian of the Free Public Library, Plymouth, is collecting materials towards a bibliography of Sir Francis Drake. He will be thankful to receive any information which may assist him regarding titles of old and rare works or editions, modern works, articles, or poems, or the present possessors of books or documents the mention of which in such a bibliography would be desirable.

Dr. Brinton, the author of 'Myths of the New World,' is preparing to issue a series of publications, a "Library of Aboriginal American Literature." He now has in the press a volume of Maya chronicles which he is editing; and Mr. Horatio Hale, well known as the philologist of the United States exploring expedition under Charles Wilkes, has undertaken to edit the Iroquois 'Book of Rites,' an interesting text discovered by him, and supposed to be at least a hundred years old.

Miss Godkin, writing in the American *Critic* of Dec. 2nd of "American Literature in Italy," declares that the death of no foreign writer except Mrs. Browning has been so mourned by the Italians as that of Longfellow. "There is no educated Italian who has not read 'Evangeline' with emotion; and I have been told by a distinguished writer that 'Excelsior' has been rendered into Italian in almost a hundred different forms." Of other Americans Bret Harte is the most popular, he and Walt Whitman being regarded as the most representative of American writers. The genius of Emerson is highly appreciated, but Hawthorne, though read and admired in the original by English-speaking Italians, has never been translated; nor has Mr. Howells's "perfect picture of Venetian life, 'A Foregone Conclusion,'" yet been rendered into Italian.

It has been resolved by the Newsvendors' Benevolent Association to take advantage of the next annual meeting to commemorate the warm interest felt in newsvendors by the late Mr. John Francis, the publisher of this journal. The memorial will very likely take the form of additional annuities for distressed newsvendors.

The death is announced, in his seventy-fourth year, of Mr. Charles Jackson, of Doncaster, a well-known local antiquary. Mr. Jackson edited for the Surtees Society the 'Diary of Abraham de la Pryme,' and also a volume of 'Yorkshire Diaries and Autobiographies in the Seventeenth and Eighteenth Centuries,' and was engaged at the time of his death in editing for the Society a memoir of the Priestley family. He also was a considerable contributor to the *Yorkshire Archæological Journal*. His chief work was his history of 'Doncaster Charities, Past and Present,' a book only published last year, though written long before. It was favourably reviewed in this journal. Indeed, Mr. Jackson was accurate and painstaking in all he did. He had a large share in establishing the Free Library at Doncaster, and took a keen interest in it. He enjoyed universal respect in Doncaster, and his funeral was attended by a large concourse of people. The death is also announced of Mr. Taswell-Langmead, the author of a work on English constitutional history.

Mr. W. Niven writes:—

"In the notice of the death of the late Mr. C. H. Bayley, of West Bromwich, which occurred on the 15th ult., I observe that Worcester is given as the county upon the history of which he had long been engaged. Though this would probably be recognized by those who knew him as merely a misprint, I venture to ask you to make the correction in your next issue. While interested in Worcestershire, it was towards the history of his own county of Stafford that Mr. Bayley was so devoted a collector, and all those interested in the history and topography, of the southern part especially, of this county suffer a great loss by his removal."

The municipal libraries installed in the Paris Mairies are said to be a decided success. Taking the reference and lending departments together, the issue of books has increased during the year 1881–2 by 120,000 volumes. A gratifying symptom is the demand for music; unluckily in this respect the libraries are poorly provided; indeed, eight of them possess no music at all. It is proposed to open two new libraries—one for the Quartier du Gros Caillou, the other for the Quartier des Ternes.

A lecture was lately given in Persian at the Calcutta Madrissa on the subject of Mohammedan education, by Moulvie Jamaluddin-ul-Hussain, one of the leading ulemas of Cairo. The Moulvie, who was educated at Paris, was at one time a member of the Privy Council of the late Sultan Abdul Aziz and one of the advanced Liberal party to which Midhat Pasha belonged. He is now an exile.

According to the official Reports on Publications issued and registered in the Several Provinces of India during 1880, the total number of such publications was 5,310, Bengal taking the lead with 1,882, and the Punjab coming next with 1,037. Much of the Bengal literature was devoted to the criticism of contemporary life and morals in Young Bengal. In Bombay the most remarkable work was the 'Vicissitudes of Aryan Civilization in India,' by a Hindu. In the Madras literature the most notable productions were two metrical translations in Telugu of the 'Merchant of Venice,' and adaptations of the 'Comedy of Errors' and 'Winter's Tale.' The chief book published in the North-West Provinces was Sayud

XUM

Mohammed Zayor's 'History of Oudh,' specially valuable for its minute account of the siege of Lucknow.

We regret to be obliged, by the pressure on our columns at this season, to defer our report of the first days of the sale of the second portion of the magnificent Beckford Library.

SCIENCE

Heroes of Science.—Botanists, Zoologists, and Geologists. By Prof. P. M. Duncan, F.R.S. (Society for Promoting Christian Knowledge.)—Lives of naturalists are not generally rich in incident. Brilliant discoveries are made at only rare intervals, and most men of science must be content to pass their days in comparative seclusion, following pursuits which have little interest save to those who are imbued with a love of research for its own sake. Nevertheless the lives of our great naturalists offer in many cases most instructive lessons to the young; and in the little work before us Prof. Duncan is able to tell many a story of the noble way in which difficulties of the sternest kind have been surmounted by the heroes of natural history. These sketches not only offer interesting bits of biography likely to stimulate young people to the study of nature, but they serve as a medium for imparting to the reader a general notion of the principles of natural science.

Heroes of Science.—Astronomers. By E. J. C. Morton. (Same publishers.)—Mr. Morton gives in a readable form a continuous history of the principal lines of astronomical research. The names to which he allots especial prominence are, it need scarcely be remarked, Copernicus, Tycho, Kepler, Galileo, Newton, Lagrange, Laplace, and Herschel. The final chapter, "On Modern Astronomy," whilst necessarily more discursive, owing to the wealth of matter compressed into a small space, will, we think, be read with not less interest than the others. No book is free from errors, and we hope that the author will be enabled to correct those in this by an early call for another edition. We will mention two, both in p. 225. Speaking of transits of Venus over the sun, "her distance," we read, "would not be a quarter of his." Now Venus, even at the extreme case of her being at aphelion when the earth is at perihelion, never approaches the earth nearer than 0·27 of the earth's distance from the sun. In the same page, the comet of 1680, instead of that of 1682, is called Halley's comet. The author has been careful to call Copernicus by his vernacular name, Copernik, but follows the English habit of calling Galileo Galilei by his Christian instead of his family name. A general index, we may remark in conclusion, would be a valuable adjunct to a book in so many ways useful to the astronomical student.

The Sun: its Planets and their Satellites. A Course of Lectures upon the Solar System read in Gresham College, London, in the Years 1881 and 1882. By Edmund Ledger, M.A. (Stanford.)—This is a work of no ordinary merit. Although the substance of the matter is, of course, the same as that which interested the lecturer's audiences at Gresham College on different occasions during the last two years, Mr. Ledger has exerted great care, whilst bringing the lectures in this permanent form before the public, to render the information on all points conformable to the state of astronomical research and discovery at the time of publication. The result is the book before us, respecting which we may fairly say, after a complete perusal, that it is uniformly good and accurate. The author avoids adopting "the Solar System" as his title, because there is no reference to the subjects of cometic and meteoric astronomy. Let us hope to have at no distant date from his pen a supplementary treatise on those erratic and not in all cases permanent bodies of the solar system. Besides our own planet and its satellite, the Gresham lecturer gives in this volume interesting chapters on the other planets and their satellites. Of the latter all the planets revolving beyond our own earth possess one at least, and with a single exception more than one; the exception, indeed, is probably rather apparent than real, as it relates to the most distant planet Neptune, which probably has more than the one brought by its large size within the reach of our telescopes, although at so great a distance. The beauty and excellence of the numerous illustrations, as well as the clearness of the diagrams, call for a word of praise. A convenient and careful index is provided at the end.

The Kitchen and Market Garden. By Contributors to the 'Garden.' (Crosby Lockwood & Co.)—This is one of "Weale's Series," and an excellent little book it is. It gives much valuable information with regard to the kitchen garden itself, and then describes the culture of each vegetable and herb. There are also a calendar of monthly operations and some good garden receipts. Besides the vegetables ordinarily grown in English gardens we find here the cardoon, the egg-plant, maize, the morel, the lentil, and two varieties of oxalis.

The Flowers of Shakspeare. Depicted by Viola. (Sampson Low & Co.)—This is rather a pretty book, but beyond this faint praise we have nothing good to say. The idea is not original, for nearly forty years ago Miss Giraud published 'Flowers of Shakespeare: being a Series of Thirty Fanciful Groups of Flowers mentioned by Shakespeare in his Plays'; and we rather think the same thing has been since done. However, there was no harm in another book of Shakspearean flowers, if it were well executed. Unfortunately, though the grouping is generally good, Viola's drawing is very uncertain, and the colouring extremely coarse. The "four red roses on a stalk" are four most miserable little buds, and one of them seems half eaten away by canker. The "freckled cowslip" is without its freckle, while "long purples" are painted red instead of purple, and it is difficult to recognize which orchis (if it be an orchis at all) is intended. Shakspeare's "crowfoot" was more probably a "ragged Robin" than a buttercup; and "lush woodbine" is honeysuckle, and not the wild convolvulus, which is bindweed.

Town Gardening: a Handbook for Amateurs. By R. C. Ravenscroft. (Routledge & Sons.)—There are many useful hints in this 'Town Gardening,' but the list of plants recommended is very ambitious. The fact is that the expression "town gardening" is vague. Many plants will flourish in a country town in which there is little smoke, while any attempt to grow them in the heart of London or in one of the manufacturing towns of the North would lead to certain failure.

Water and its Teachings in Chemistry, Physics, and Physiography. By C. Lloyd Morgan. (Stanford.)—Water has frequently been selected by scientific writers as the text on which they have based a complete series of lessons on physical phenomena. Dr. Tyndall, for example, has worked out the subject in his 'Forms of Water,' while Prof. Huxley has selected a river as the basis of an admirable course of physiographical teaching. This method of using water as a type has been followed by Mr. Lloyd Morgan, of the Diocesan College at Rondebosch, Cape Town. The compact little volume just published contains a great amount of condensed information suggested by the study of water in its solid, liquid, and gaseous states. The work is in the form of notes rather than of reading lessons—a form which seems well suited for use in schools, since the notes may be amplified and illustrated according to the ingenuity of the teacher.

PROF. CHALLIS.

James Challis was born at Braintree in Essex on the 12th of December, 1803. His education was begun at Braintree School, continued at Mill Hill, and completed at Trinity College, Cambridge, where he graduated as Senior Wrangler and first Smith's Prizeman in 1825. He was elected Fellow of his college the following year, but shortly afterwards vacated his fellowship by marriage. Ordained in 1830, he accepted the college living of Papworth Everard, Cambs., where he resided as rector five years (it is an interesting circumstance that his son, Rev. J. L. Challis, now vicar of Stone, near Aylesbury, held the same living long afterwards, being appointed to it in 1859). About the end of 1835, Mr. (now Sir G. B.) Airy, on being nominated Astronomer Royal, resigned the Plumian Professorship of Astronomy and Experimental Philosophy at Cambridge (with which was connected the superintendence of the observatory), and the vacant post was offered to, and accepted by, Mr. Challis. As professor, his lectures fully maintained the reputation of that important chair; as director of the observatory, the volumes of observations made and published under his superintendence contributed much to the progress of astronomy during twenty-five successive years. Into their details we have not space to enter here, but cannot omit to mention the important part taken by Prof. Challis in the discovery of the planet Neptune in 1846, when he undertook a systematic search for it, according to the calculations of its approximate place by Mr. (now Prof.) Adams; and though he was not the first to announce the discovery, yet in the course of his search he succeeded in recording two observations (afterwards recognized as such) of the planet, thus securing its identification before it was seen by Dr. Galle at Berlin. In 1861 Prof. Challis resigned the directorship of the observatory, residing, however, at Cambridge till his decease, having been re-elected a Fellow of his college in 1870, and continuing personally to discharge the duties of the Plumian Professorship until about two years ago, when increasing age and infirmities compelled him to appoint a deputy (Rev. A. Freeman). In 1861 he published 'Creation in Plan and in Progress,' an essay written in reply to that of Mr. Goodwin on the Mosaic cosmogony in 'Essays and Reviews.' In 1869 Prof. Challis published his 'Principles of Mathematics and Physics,' in 1873 an 'Essay on the Mathematical Principles of Physics,' in 1875 'Remarks on the Cambridge Mathematical Studies and their Relation to Modern Physical Science,' and in 1879 'Lectures on Practical Astronomy and Astronomical Instruments.' His name is connected with the earliest proceedings of the British Association, the second volume of reports containing his report read at the Cambridge meeting in 1833, 'On the Present State of the Analytical Theory of Hydrostatics and Hydrodynamics.'

Prof. Challis took a great interest in theological investigations, on which he published several works, particularly a translation, with critical notes, of St. Paul's Epistle to the Romans. The honorary degree of LL.D. was conferred upon him by the University of Edinburgh in 1871; and he was a Fellow of the Royal Society and of the Royal Astronomical Society. In the University of Cambridge, where he so long occupied a prominent position, he was highly esteemed for his kindly disposition as well as for his scientific attainments, and inspired respect and attachment in all those with whom he was brought in intimate contact. At the time of his death, which (as mentioned last week) occurred after a long illness on the 6th inst., he had been a widower for several years.

GEOGRAPHICAL NOTES.

There is nothing strikingly novel in the *Proceedings* of the Royal Geographical Society

for this month. Mr. Colquhoun's interesting paper on his journey up the Canton river, through Yunnan and Bhamo, to British Burma was freely noticed in the press at the time that it was read, and its main points are known. It is, however, an advantage for those who wish to study Mr. Colquhoun's proposals for a new trade route from the frontier of Yunnan to Moulmein to be able to peruse his paper *in extenso*, and the excellent little accompanying map of the Indo-Chinese region, with its shades of colour to denote the political divisions, helps materially towards a comprehension of the question. This, however, will be better discussed a few weeks hence when we are in possession of Mr. Colquhoun's promised book entitled 'Across Chrysê.' Two papers in the same number of the *Proceedings*, by the Venerable Archdeacon Farler and the Rev. T. Wakefield, supply us with geographical information about routes to and through the Masai country in Eastern Equatorial Africa; and two hitherto unpublished letters by Dr. Krapf (dated 1849) give a description of the snow-clad peak Kenia, east of Lake Victoria Nyanza, which lies as near the equator as any snowy mountain on the globe. The last item calling for mention in the present number is an obituary memoir of the Russian admiral Count F. B. Lütke, the author of several important surveys and geographical researches on the Northern Pacific and Kamchatkan coast.

Mr. Joseph Thomson left England on Wednesday last for Zanzibar, and will organize his expedition from some point on the east coast, either Mombása or Kingáni, to the east shore of the Victoria Nyanza, to return by Mount Kenia. He proceeds alone at the sole expense of the Royal Geographical Society. Although young in years, he evidenced in his former expedition to Lakes Nyassa and Tanganyika that he had the gift of doing the work entrusted to him. He was kind to the natives, left no traces behind him of bloodshed or plunder, and he brought back his party to Zanzibar without the loss of a single man. His present expedition is one of the most hazardous and dangerous character. He has to pass through the country of the inhospitable Masai, and the best wishes of all friends of Africa will follow him, for it is of paramount importance to find a short and direct route from the coast to the equatorial lake.

A few months ago Mr. Grattan Guinness, of Harley House, Bow, published a translation into English of the grammar of the Kongo or Fyote language by Brusciotto, which appeared in Latin at Rome in the seventeenth century. He has now, by the aid of a missionary of the Livingstone Kongo Mission, Mr. Craven, and two native lads who were brought over to be trained in this country, published a grammar of the same language as spoken now, with dialectal variations, from Stanley Pool to the sea. Whatever may be the merits or demerits of this work of 266 pages, it is a most important contribution to our knowledge of the languages of West Africa, and we cannot doubt that grammars and not gunboats, dictionaries and elementary educational works and not tricolour flags, are the materials with which the basin of the Kongo will be thrown open to commerce. This very week the Baptist Mission Society sends out in scores of small parcels a steam launch with the significant name of Peace. Contrary to the usual practice, as far as Stanley Pool the steamer will not carry the men, but the men will carry the steamer. "Still in thy right hand carry gentle Peace."

The Danish steamer Dymphna is reported safe, and will winter at the mouth of the Petchora. All on board are reported well, provisions are ample, and the vessel has sustained no injury whilst drifting with the ice near Waygat Island.

ASTRONOMICAL NOTES.

Although the sky was quite cloudy over a large part of England on the 6th inst., it is gratifying to learn that the weather was very favourable in many parts of the world where important stations had been selected for making observations of the transit of Venus which might be useful for the determination of the solar parallax. We are particularly glad to hear of the success of Col. Tupman at Wellington, New Zealand; and at Melbourne, the Cape of Good Hope, and several of the American and West Indian stations good observations were obtained. The weather at Paris was as unfavourable as at London, and, indeed, over a large part of France and of Western Europe generally. Full accounts will from time to time arrive from the various expeditionary parties sent out by different nations, British, American, French, German, and Danish; none was sent from Russia, as the astronomers of that country decided that it was not desirable to take any part in the observations. To use Mr. Stone's expression, "The British expeditions have, on the whole, been most successful, and a valuable result is assured." The Madagascar expedition is the one from which the accounts will be the last to be received. With regard to the European capitals, it may be remarked that Paris, Berlin, and Madrid were as unsuccessful as London; but at Lisbon the weather was favourable.

Mr. S. C. Chandler, jun., of Harvard College Observatory, has redetermined the orbit of the great comet, and found that it is best represented by an ellipse with a period of about 4,070 years. The perihelion passage occurred on September 17th, at $5^h\ 30^m$ Greenwich time, at the distance from the sun's centre of 0·0076 in terms of the earth's mean distance, or about 700,000 miles; and the computed eccentricity is 0·9999700.

ANTHROPOLOGICAL NOTES.

Mr. H. W. Jackson, F.G.S., read on the 1st inst. to the West Kent Medico-Chirurgical Society an interesting and original paper 'On some Diseases and Injuries of Prehistoric Man.' We are not aware that the subject has elsewhere been treated, except in a *thèse inaugurale* by M. le Baron, of which an abstract was laid before the Society of Anthropology of Paris last year. Mr. Jackson cited a case of exostosis in a femur found at Lozère; evidence of toothache and of abscesses in the jaw found there and in the Belgian bone caves; of rheumatic ulceration of the joint in a jawbone and an astragalus from Furfooz, Belgium, and in other instances; a case of very extensive inflammation from the Caverne de l'Homme Mort, Lozère; a case of hydrocephaly from the Trou Rosette, Belgium, and one from the Canary Isles, observed by M. Verneau; hemiplegia in the skeleton found at Cissbury, Sussex; hip-joint disease in four cases recorded by M. le Baron; synostosis of the sutures in the Neanderthal skull; and numerous cases of surgical and posthumous trepanation. He also expressed the opinion that syphilis is a prehistoric disease, citing examples of it from Bray-sur-Seine, in France, from Patagonia, and from Peru, and hazarded the suggestion that circumcision, which prevails in every division of the globe, and is almost universally performed with a stone implement, is a practice which has descended from prehistoric times. Flattening of the skull is known to have been practised, and fractures of bones and wounds of the skull are, of course, very frequent. Upon the whole, it may be concluded that the diseases of neolithic prehistoric man did not differ much from those of the present day.

Anthropology has been honoured by the presentation by the Royal Society of a royal medal to Prof. Flower, in recognition of his distinguished services to the science.

SOCIETIES.

Royal.—*Dec.* 7.—The President in the chair.—The following papers were read: 'On the Alterations of the Excitability of the Sensory Nerves of Man by the Passage of a Galvanic Current,' by Dr. A. Waller and Mr. A. De Watteville,—'Preliminary Notice of an Investigation into the Coagulation of the Perivisceral Fluid of the Sea-urchin,' by Prof. Schäfer,—and 'Preliminary Note on the Structure, Development, and Affinities of *Phoronis*,' by Mr. W. H. Caldwell.

Geographical.—*Dec.* 11.—General Sir J. H. Lefroy, K.C.M.G., V.P., in the chair.—The following gentlemen were elected Fellows: Major-General R. D. Ardagh, Dr. J. J. Lamprey, Messrs. I. Brunel, R. Eve, and J. H. Mitcheson. The paper read was 'Explorations in Guatemala, and Examination of the old Indian Cities, Tikal and Usumacinta,' by Mr. A. P. Maudslay.

Astronomical—*Dec.* 8.—Mr. E. J. Stone, President, in the chair.—Messrs. Chambers, Lecky, and Penrose were appointed Auditors for the ensuing year.—Mr. J. W. Appleton and the Hon. C. Duncombe were elected Fellows.—A paper by Mr. D. Gill, 'On the Great Comet (*b*), 1882,' was read, and three photographs were exhibited which were taken with a camera portrait lens attached to the declination axis of an equatorial. The first photograph was taken on the 19th of October with an exposure of thirty minutes; the second on the 20th of October with an exposure of an hour; and the third on the 21st of October with an exposure of forty minutes. In the third photograph, which was the most perfect, the stars in the neighbourhood of the comet were shown slightly elongated in the direction of the comet's motion. The sharp termination of the tail at a distance of some twenty degrees from the head, and a luminous tuft projecting from the centre of the tail, which has been noticed by several observers, were well shown.—A communication from the Rev. T. W. Webb was read, enclosing observations of the comet made in New Zealand by Mr. Stevenson. He describes an anomalous tail of faint light which extended from the head of the comet in the direction of the sun. The axis of the anomalous tail was not quite parallel with the axis of the brighter tail extending in the opposite direction.—An extract from a letter by Dr. Schmidt was read, accompanying a drawing of the great comet, with a small companion comet, which he observed on October 9th, 10th, and 11th. In Dr. Schmidt's drawing the anomalous tail extending towards the sun was well shown.—Mr Common stated that he had also observed the anomalous tail. In October the head of the comet appeared like the nebula of Andromeda, with a luminous patch in the middle; afterwards a luminous patch was visible further down towards the tail, and later still there were several nuclei, the brightness of which varied from time to time.—Capt. Noble described the nucleus of the comet as seen on November 9th as being elongated, as if seen through a cylindrical lens, and the axis of the nucleus did not correspond with the axis of the tail.—The President read some telegrams announcing successful observations of the transit of Venus in South Africa and New Zealand. From the information already to hand he hoped that there would be sufficient observations to give a satisfactory determination of the sun's distance.—Mr. Howlett exhibited drawings of the recent sun spots.—The following papers were also read: 'On the Star Gauges of Sir William Herschel,' by Prof. E. J. Holden,—'On Observations of the Transit of Venus, 1882,' by Mr. C. L. Prince,—and 'On Newton's Solution of Kepler's Problem,' by Prof. J. C. Adams. And also papers on the Great Comet (*b*) of 1882, by Mr. R. L. J. Ellery, of Melbourne; Mr. H. C. Russell, of Sydney; Mr. J. Tebbutt, of Windsor, New South Wales; Mr. A. V. Nursinga Row, of Vizagapatam; and Dr. de Koukoly, of O Gyalla, Hungary.

Geological.—*Dec.* 6.—Mr. J. W. Hulke, President, in the chair.—Messrs. C. Bird, E. Cartwright, H. Eunson, W. Johnstone, H. Liversidge, jun., H. G. Lyons, J. Mawson, H. W. Monckton, H. A. Miers, J. Postlethwaite, and T. Viccars were elected Fellows.—The following communications were read: 'Note on a Wealden Fern, *Oleandridium* (*Tæniopteris*) *beyrichii*, Schenk, new to Britain,' by Mr. J. E. H. Peyton,—and 'On the Mechanics of Glaciers, more especially with relation to their Supposed Power of Excavation,' by the Rev. A. Irving.

Society of Antiquaries.—*Dec.* 7.—Mr. A. W. Franks, V.P., in the chair.—Mr. A. F. Tweedie exhibited a stone axe-head of syenite from China, on which the Chairman made some remarks.—Mr. A. J. Evans communicated the second part of his memoir 'On Recent Antiquarian Researches in Illyricum,' comprising notes on the Roman road-lines, Siscia, Salonæ, Epitaurum, and Scodra. Mr. Evans at the same time exhibited various objects of antiquity he had discovered in these researches. The great length and multifarious details of this paper make it impossible for us to attempt any abstract.

British Archæological Association.—*Dec.* 6.—Mr. T. Morgan in the chair.—Mr. L. Hand reported the discovery at Seagry, Wilts, of some ancient

British interments on a spot which had long been pointed out by tradition only as an old cemetery. The spot is also referred to in a charter of Saxon times as the place of heathen burial, a remarkable illustration of the continuance of local knowledge. —Dr. Stevens announced the discovery of traces of Roman burials at Winchester, at a spot near the north gate, which would appear to indicate the position of the ancient cemetery of the Roman city.—Mr. L. Brock exhibited a Roman vase from Colchester identical in form with one found at Winchester, referred to by Dr. Stevens.—Mr. C. H. Compton exhibited some stained glass from Amiens Cathedral, thrown out of the building during a recent work of "restoration"; also some Roman concreted pavement from the temple which stood on the site of the present Cathedral of Boulogne. This is identical with what was found last year on the site of Leadenhall Market.—Mr. H. F. J. Swayne sent photographs of the fifteenth century frescoes over the chancel arch of St. Thomas's Church, Salisbury.—Mrs. G. Rendle exhibited some curious engravings by Heemskirk illustrative of ancient costume; and Mr. E. Way described a costrel of early date recently found in London.—Mr. W. de Gray Birch called attention to the Tabula Honesta Missiones recently found in Belgium, which gave the name of a governor of Roman Britain, Titus Evidius Nepos, not previously known.—Major di Cesnola read a paper 'On Phœnician Art in Cyprus,' which was illustrated by a very fine exhibition of gold and silver ornaments found in the excavations in the island made by the lecturer. The connexion of the Phœnicians with the country was referred to at length, and the relics of their occupation passed in review after the history of this remarkable trading race had been dwelt upon. Many of the gold objects consisted of frontlets of thin metal with embossed patterns, very similar to those found by Dr. Schliemann at Hissarlik. The personal ornaments were of remarkable beauty and elegance of workmanship.—After the Chairman had passed in review the results of the recent Congress at Plymouth, the proceedings were brought to a close by a paper by Mr. C. W. Dymond on two of the remarkable earthworks in Somerset, Dolbury and Cadbury, the reputed Camelot of King Arthur's time.

ARCHÆOLOGICAL INSTITUTE.—*Dec.* 7.—The Rev. J. F. Russell, V.P., in the chair.—Mr. W. M. F. Petrie read a paper on Egyptian bricks, and exhibited a diagram of a series of forty examples from the eighth dynasty down to Arab times. Their continuous decrease in size in successive periods, and their uniformity in different parts of Egypt at each epoch, show their value in historical questions.—The Rev. W. S. Calverley sent a paper on Gosforth Cross, and exhibited full-size drawings of this very remarkable monument. From his long study of Scandinavian mythology Mr. Calverley has been enabled to interpret the subjects on the four sides of the cross, of which the main episodes have never been brought forward before. His reading is that the Christian parallel of the "world-stories" is as follows:—on the west side the devil is overcome and bound; on the south side the world is overcome; on the east side the flesh is overcome; and on the north side Christ rides triumphant. The cross is a monolith 14 ft. 6 in. high. —Mr. E. Peacock sent a paper on the unrestored church of Cadney, Lincolnshire.—Precentor Venables communicated an exhaustive paper on the Vicars' Court at Lincoln, founded by Bishop Oliver Sutton, 1280–1300, illustrated by plans and photographs. The writer showed that, notwithstanding modern alterations, the court forms a very curious and instructive architectural study, the house on the south side being one of the most perfect examples of an Edwardian house to be found in England.—Mr. F. C. J. Spurrell exhibited a collection of various palæolithic implements and *haches* of different types from Northfleet and Crayford, both imperfect and finished, together with the flint tools, or knappers, by which they were shaped. Of the hammers, some were pointed at one end, and some flat-headed, being "used" at the edges of the face. He showed the mode of using the peculiar hammers found with flakes at Crayford, and demonstrated by many specimens that the fine chipping frequently found at the butt end of the flakes was not the result of use, but a necessity of the manufacture. A number of flakes, mostly flat and thin, and hollow on one side, varying in weight from 1 oz. to 8 lb., were described as having been used somewhat after the manner of a bricklayer's trowel. They had the appearance of so-called hollow scrapers, but presented marks of percussion, and were not polished with use as in scrapers proper. The action of the hammers and knappers was analyzed and imitated synthetically with success, and they appeared, taken altogether, to be capable of doing all the work required to make the perfect tools with which they were found. All the specimens had been found by Mr. Spurrell in river reaches, where they had been made and used, in association with remains of the elephant, rhinoceros, &c., the carving of whose carcases was the probable cause of the spots being selected for flint manufacture. For comparison, neolithic knappers were shown, and gun-flints with knapping hammers of the seventeenth or eighteenth century found on the mediæval camping ground of Dartford Heath.—Capt. E. Hoare exhibited statuettes of Anubis, and Isis nursing Horus.—The Rev. J. Ash laid before the meeting a brass sacring bell, said to be sixteenth century work.—Mr. W. T. Watkin sent a photograph of a Roman altar found in July at Longwood, near Huddersfield, and inscribed as follows:—

DEO S(ANCTO) BRIGANT(VM) ET
N(VMINI) AVG(VSTI) T(ITVS) AVR(ELIVS)
QVINTVS DECRETO D(ECVRIONVM)
P(OSVIT) ET S(VSCEPTVM) S(OLVIT).

This reveals, for the first time, the existence of a male deity supposed to preside over the tribe.

LINNEAN.—*Dec.* 7.—Sir J. Lubbock, Bart., President, in the chair.—The Rev. R. Baron, Messrs. F. O. Bower, T. H. Corry, O. L. Fraser, D. Houston, A. W. Howitt, H. M'Callum, E. A. Petherick, S. Rous, and H. C. Stone, were elected Fellows.—The Rev. R. P. Murray showed specimens of *Althæa hirsuta*, *Vicia orobus*, and *Phlomis fruticosa*, obtained by him last summer in Somerset.—Mr. W. T. Thiselton Dyer exhibited and explained maps illustrative of the rapid spread of the phylloxera in Spain and Portugal, observing that within the last year quite a large area of the wine-growing districts had been affected. He also exhibited photographs of the trees and made remarks on chinchona cultivation in Ceylon.—Mr. W. B. Espeut drew attention to some kola nuts, and mentioned their remarkable sobering effects after intoxication by spirituous liquors.—Mr. G. Brook read 'Notes on some little known *Collembola* and the British Species of the Genus *Tomocerus*.' Tullberg refers to their occurrence in Sweden, but the four species in question have not hitherto been accorded a British habitat.—A paper, by Mr. J. G. Otto Tepper, was read, 'On the Discovery of above Ninety Species of Tasmanian Plants near Adelaide, South Australia.' —A contribution, by Dr. W. Nylander and the Rev. J. M. Crombie, was read, 'On a Collection of Exotic Lichens made in Eastern Asia by the late Dr. A. C. Maingay.' Those enumerated were from British Burma, China, and Japan; some are interesting as illustrative of lichen distribution, and others as new species and varieties.—'Remarks on the Genera of the Subfamily *Chalcidinæ*, with Synonymic Notes and Descriptions of New Species of *Leucospidinæ* and *Chalcidinæ*,' was a paper by Mr. F. Kirby.—The Rev. R. P. Murray afterwards made some remarks on cleistogamic flowers of *Hoya carnosa* producing fertile seeds.

CHEMICAL.—*Dec.* 7.—Dr. Gilbert, President, in the chair.—The following papers were read: 'On the Condensation Products of Oenanthol,' by Mr. W. H. Perkin, jun. The author has endeavoured to obtain evidence as to the constitution of these bodies. By the action of dilute alcoholic potash on oenanthol an acid, $C_{14}H_{26}O_2$, was formed, boiling at 270°–290°, and two aldehydes, $C_{14}H_{26}O$, boiling 277°–279°, and $C_{28}H_{50}O$, boiling 330°–340°. Zinc chloride forms with oenanthol principally $C_{14}H_{26}O$; nascent hydrogen converts this last substance first into an alcohol, $C_{14}H_{28}O$, and finally into the alcohol $C_{14}H_{30}O$. Alcoholic potash converts $C_{14}H_{28}O$ into heptylic acid and an acid $C_{14}H_{26}O_2$. The author concludes that the substance $C_{14}H_{26}O$ is hexylpentylacrylic aldehyde.—'On the Condensation Products of Isobutyl Aldehyde,' by Mr. W. H. Perkin, jun. The author prepared an aldehyde, $C_{12}H_{22}O_2$, and from this by nascent hydrogen an alcohol. By the action of stronger potash upon isobutyl aldehyde higher condensation products were obtained.—'On a Condensation Product of Phenanthraquinone with Ethylic Acetoacetate,' by Messrs. F. R. Japp and F. W. Streatfeild. This substance has the formula $C_{20}H_{16}O_4$, and crystallizes from benzene in white silky needles, fusing at 185°; it is ethylicphenanthroxylenacetoacetate; by treatment with hydriodic acid it forms ethylicphenanthroxylenisocrotonate, fusing at 124°. A new acid and a new compound, which the authors believe to be the desoxybenzoin of phenanthrene, have also been obtained.—'On the Constitution of Lophin,' by Dr. Armstrong.—'On the Constitution of Basic Ferric Sulphate,' by Mr. S. N. Pickering. By the determination of its molecular weight this salt has the formula $Fe_2(SO_4)_3, 5\,Fe_2O_3$.—'On the Chemistry of Hay and "Ensilage,"' by Mr. F. W. Toms.—'On certain Brominated Carbon Compounds obtained in the Manufacture of Bromine,' by Mr. S. Dyson. In a by-product the author has detected carbon tetrabromide, bromoform, and chlorobromoform.—'Note on the Preparation of Diphenylenketone Ether,' by Mr. W. H. Perkin.

NEW SHAKSPERE.—*Dec.* 8.—Dr. P. Bayne in the chair.—Mr. F. J. Furnivall read a paper upon the textual difficulties in the early comedies, which, however, he said, were but few, and of no great importance. 'Love's Labour's Lost' had the doubtful reading "school of night." In 'Much Ado,' II. ii., there was a palpable mistake, probably Shakspere's own, "Hear Margaret term me, *Claudio*." In 'Troilus and Cressida' the chief question was to decide how much was spurious. Towards the end we find much that is not Shakspeare's. Mr. Furnivall found the line of cleavage in Act V. sc. iii., the spurious part probably beginning at the words "How now, young man?"—'Some Notes on certain Puzzle-words in "Hamlet,"' by Prof. W. T. Thom, were read. IV. v. 101, "Every word," that is, *title*, as in Nares ('Glossary'), "Lord Burleigh . . . . signs his name W. Cecill, but adds, 'I forget my new *word*, William Burleighe.'" I. v. 133-7, "Yes, by St. Patrick." St. Patrick was the serpent-destroying saint, and the Ghost had just said, "'Tis given out that, sleeping in my orchard, a serpent stung me."

PHYSICAL.—*Dec.* 9.—Prof. Clifton, President, in the chair.—Mr. H. E. Harrison and Mr. S. T. H. Saunders were elected Members.—Prof. Forbes spoke on his previous experiments on the velocity of light of different colours.—Profs. Ayrton and Perry read papers 'On the Resistance of the Voltaic Arc' and 'On the Intensities of Electromagnets produced by Modes of Winding,' and exhibited three Faure accumulators in series feeding twenty Swan lamps, each giving over one candle light.

ARISTOTELIAN.—*Dec.* 11.—Mr. S. H. Hodgson' President, in the chair.—A business discussion took place, after which the discussion of the President's address was adjourned till January 15th, 1883.

SHORTHAND.—*Dec.* 6.—Mr. C. Walford, President, in the chair.—Three new Members were elected, Messrs. F. W. Walford, H. W. Rance, and W. Ford.—The Secretary (Mr. H. H. Pestell) read a paper, by Mr. X. Field, 'On Suggestive Shorthand'; and Dr. Westby-Gibson read a paper, by Mr. J. Bailey, 'On Richardson's Shorthand,' with notes by himself (Dr. Gibson).—Both papers led to a discussion, in which Messrs. T. A. Reed, E. Pocknell, J. Westby-Gibson, A. L. Lewis, E. Guest, C. W. H. Wyman, and the President took part.

MEETINGS FOR THE ENSUING WEEK.

MON. London Institution, 5.—'Shakspeare and Lytton,' Mr. W. Crewick.
— Institute of Actuaries, 7.—'The Subject of Extra Risks considered in relation to a Hypothetical Table of Mortality based on the Hm Table,' Mr. G. H. Ryan.
— Aristotelian, 7½.—'Kant's "Critic of Pure Reason,"' Mr. J. Fenton.
— Royal Academy, 8.—'Chemistry,' Mr. A. H. Church.
— Society of Arts, 8.—'Dynamo-Electric Machinery,' Lecture III., Prof. S. Thompson (Cantor Lecture).
— Asiatic, 8.—'Buddhism in Ceylon,' Mr. A. Lillie.
— British Architects, 8.
— Surveyors' Institution, 8.

TUES. Statistical, 7½.
— Zoological, 8.—'Whales of the Genus *Hyperoodon*,' Prof. Flower; 'Characters and Habits of the Bottle-nosed Whales,' Mr. D. Gray; 'Classification of the *Comatulæ*,' Mr. P. H. Carpenter.
— Civil Engineers, 8.—Annual General Meeting.
— Photographic, 8.

WED. Meteorological, 7.—'Popular Weather Prognostics,' Hon. R. Abercromby and Mr. W. Marriott; 'Report on the Phenological Observations for 1882,' Rev. T. A. Preston.
— Society of Arts, 8.—'The Utilization of Waste: a Quarter of a Century's Progress,' Mr. P. L. Simmonds.
— Geological, 8.—Generic Characters in the Order *Sauropterygia*,' Prof. Owen; 'Origin of Valley-Lakes, with Especial Reference to the Lakes of the Northern Alps,' Rev. A. Irving.

THURS. Royal, 4½.
— London Institution, 7.—'Some Dominant Forms of Animal Life,' Prof. L. Miall.
— Royal Academy, 8.—'Chemistry,' Mr. A. H. Church.
— Linnean, 8.—'Floral Development and Mode of Fertilization of *Asclepias cornuta*,' Mr. T. H. Corry; 'Observations on the Marine Fauna of the East Coast of Scotland,' Dr. F. Day; 'Flora of Madagascar,' II., Mr. J. G. Baker; '*Ligula manzoni*, a new Human Cestode,' Prof. Cobbold.
— Historical, 8.—'Hungary under King Matthias Hunyadi, surnamed Corvinus,' Dr. Zerffi.
— Chemical, 8.—'Condensation Products of Oenanthol,' Part II., Dr. W. H. Perkin, jun; 'Behaviour of the Nitrogen of Coal during Destructive Distillation, with Observations on the Estimation of Nitrogen in Coal,' Mr. W. Foster; 'Absorption of Weak Reagents by Cotton, Silk, and Wool,' Messrs. E. J. Mills and J. Takamine; 'Nitrobenzyl-Cyanide and some Derivatives with Diazo Bodies,' Dr. W. H. Perkin.

Science Gossip.

A CIRCULAR from Canada has just been distributed to the members of the British Association, which announces that the city of Montreal has taken measures to provide for the meeting appointed to be held in Montreal in 1884. The committee not only hold out a prospect that the meeting will be largely attended, but they give a guarantee that the amount contributed, and consequently the revenue available for the scientific grants of the Association, "shall not fall below that ordinarily received by the Association." The movement is not local, but meets with the support and approval of the Dominion, and the Government, it is announced, will make a liberal grant of money to defray the expense of invited members in crossing the ocean. While in Canada there is every prospect of success, there are still objections on the part of some in-

fluential members here, and the subject is under the consideration of the Council of the Association. On Monday a meeting of some members of the general committee was held at the rooms of the Geological Society; but there appeared to be no general disposition to oppose or supersede the meeting in Canada. A resolution was, however, carried by four votes, those who had expressed their opinions not voting, that a memorial should be addressed to the Council requesting that the whole matter should be reconsidered by them, and making suggestions that a meeting shall as usual be held in England, and that a deputation shall be sent to Canada. It is becoming probable that the Council will find the means of conciliating all interests by holding a meeting in England, transacting the formal business, and adjourning to Montreal. The Canadian authorities are already canvassing to obtain the presence of leading members, so as to have a strong party to meet their American and Canadian supporters.

At South Kensington large and lofty galleries constructed of wooden boards are being erected, which extend entirely across the south side of the Horticultural Society's garden, and have wooden roofs. They are destined to contain the International Fisheries Exhibition of next season, and are rapidly increasing in size. They are so near the National Portrait Gallery that, should the deal boards catch fire, the gallery, with all its priceless portraits, can hardly escape destruction. A cigar light thrown down by a stupid visitor, a foul chimney, an over-heated cooking stove, may be the cause of a catastrophe. We used to "admire," as Mr. Pepys was wont to say, that other peculiar arrangement which took twenty years to remedy, although it involved the retention of half a dozen large barges, laden with straw nearly to their crosstrees, in a dock within thirty feet of the western end of the Houses of Parliament. This was the outcome of ancient usage. At South Kensington, however, although it is almost incredible, one Government department is creating a tremendous risk for the treasures which are in charge of another Government department. Mr. Scharf had better look to his charge, or it may vanish into thin air.

Schools of science in the mining districts are in favour just now. Recently the foundation stone of a building for the meeting of science classes was laid at Redruth in Cornwall; and on the 14th Mr. W. Husband, engineer, was to place a corner stone on ground given—with a handsome subscription—at Camborne by Mr. Basset, of Tehidy.

Mr. Bernard Samuelson, M.P., recently offered 2,000*l.* towards the establishment of a school of science at Middlesbrough, and a subscription of 150*l.* per annum over a series of years towards maintaining it. A meeting was held at Middlesbrough on Monday, the 4th, and arrangements made to carry out the school. A sub-committee was appointed to visit existing technical schools and ascertain all details of the work carried on in them.

M. P. Launette made a communication on the 13th of November to the Académie des Sciences 'Sur les Causes de la Migration des Sardines.' He appears to have established the principle "Toute migration ne peut s'effectuer normalement que sous l'influence des deux conditions de nourriture et de température réunies." In his paper, published in the *Comptes Rendus*, M. Launette infers that the "sardine coureuse" is the "pilchard des Anglais." We do not think their identity is established.

Prof. Asa Gray has in the *American Journal of Science* for November some 'Remarks concerning the Flora of North America.' After stating the difficulties which tend to retard the progress of the North American flora, he concludes: "The co-operation of all our botanical associates is solicited.....as a matter of common interest and advantage."

FINE ARTS

ROYAL SOCIETY of PAINTERS in WATER COLOURS.—The TWENTY-FIRST WINTER EXHIBITION is NOW OPEN, 5, Pall Mall East, from Ten till Five.—Admission, 1*s.*; Catalogue, 6*d.*
ALFRED D. FRIPP, Secretary.

SOCIETY of BRITISH ARTISTS.—WINTER EXHIBITION NOW OPEN, from Ten to Five Daily, at the Suffolk Street Galleries, Pall Mall East.—Admission, 1*s.* THOMAS ROBERTS, Secretary.

GROSVENOR GALLERY.—WINTER EXHIBITION.—The WINTER EXHIBITION of the GROSVENOR GALLERY is NOW OPEN, with a Collection of the Works of L. Alma Tadema, R.A., and the Landscapes of the late Cecil Lawson.—Admission, 1*s*; Season Tickets, 5*s.*

Will Close this Day.
The EIGHTEENTH ANNUAL EXHIBITION of WATER-COLOUR DRAWINGS by ARTISTS of the BRITISH and FOREIGN SCHOOLS is NOW OPEN at Thomas McLean's Gallery, 7, Haymarket.—Admission, including Catalogue, 1*s.*

SURREY SCENERY.—This Beautiful Series of Sketches and Drawings made by Mr. Sutton Palmer is NOW ON VIEW at Messrs. Dowdeswell's, 133, New Bond Street, two doors from the Grosvenor Gallery.—Admission Free.

WATER-COLOUR EXHIBITION, 53, Pall Mall, containing 350 Works by well-known Artists in Water Colours, three great Works by John Martin, K.L., and Fifty others in Oil. NOW OPEN.—Admission, 1*s.* ROBERT HOPKINS, Manager.

DORÉ'S GREAT WORKS, 'CHRIST LEAVING the PRÆTORIUM,' 'CHRIST ENTERING JERUSALEM,' and 'MOSES before PHARAOH,' each 33 by 22 feet, with 'Ecce Homo,' 'The Ascension' 'Dream of Pilate's Wife,' 'Soldiers of the Cross,' 'A Day Dream,' &c., at the DORÉ GALLERY, 35, New Bond Street. Daily, Ten to Six.—1*s.*

ART FOR THE NURSERY.

Pretty Pictures for Little Paint-Brushes, with Descriptive Stories, outline pictures by T. Pym (Shaw & Co.), comprises sketches of children and their attendants nicely designed and fairly well drawn. There is a little humour and more character in several of the ludicrous subjects. A great many of them are pretty. The stories read well and have some liveliness. —*Dick's Holidays, and What He did with Them*, edited by J. Weston (Fisher Unwin), is "a picture-book of country life for young folks," and contains a considerable number of capital cuts of men, women, children, animals, trees, and flowers, designed to illustrate the doings of children in the woods, fields, garden, &c. It is slightly "goody." We strongly suspect the cuts were made for different purposes, and have been now, with admirable ingenuity, reutilized for these simple narratives.—*Father Christmas and his Christmas Cards* (Warne & Co.) contains tolerable but commonplace cuts, and six stories by G. C. Davison.—From the same publishers we have *The Field, the Fox Hunt, and the Farm*, an "alphabet" in colours with foolish designs by F. Grey.

Those Boys and *Those Girls*, by Mrs. Sale Barker; *Some of my Feathered and Four-footed Friends*, by the same; *Merry Conceits and Whimsical Rhymes*, written and drawn by C. H. Ross; *Snowdrop; Beppo; Sunny Days; Happy Days; Little Lays for Little Folks*, selected by J. G. Watts; and *Jumbo's Picture-Book of Natural History*, with full-page illustrations by F. Specht, have been published by Messrs. Routledge & Sons, and are all children's books of extremely simple quality, of which the last has by far the highest value, because it contains a large number of excellently designed and cleverly drawn representations of animal life, while the descriptive text is printed in the clearest of large and fine type. A portrait of Jumbo laden with children is the poorest thing in the volume.

THE JONES BEQUEST TO THE SOUTH KENSINGTON MUSEUM.

The late Mr. John Jones, a wealthy tailor and army clothier, who died in January last, bequeathed to the nation an enormously costly and numerous gathering of oil and water-colour pictures, miniatures, enamels, ceramics, articles of *vertu* in gold and silver, furniture, &c. In addition, he, by a codicil to his will, bequeathed all his printed books and several precious pieces of silver work. The collection has been roundly valued at a quarter of a million sterling. Its historical importance is greater than its intrinsic value, because it often helps to fill gaps in the national collection which, except by some such a bequest, there was small chance of filling. The testator stipulated that his treasures should be kept together at South Kensington, and never lent for exhibition. They are now deposited in two large galleries, which were constructed for the display of works sent for the national competitions of the schools of the Art Department.

By authority of the Committee of Council on Education an 'Art-Handbook' has been printed, which is, to say the least of it, sufficiently laudatory of the *bric-à-brac*, but it is unfortunately somewhat unreasonably brief with regard to the numerous pictures and sculptures, which are most interesting to our readers. The total number of articles, supposing them to have been "lotted" for sale, is stated to amount to rather fewer than 650. The handbook is enriched with many neat woodcuts of the more remarkable *objets d'art* and decorative furniture, some of which is gorgeous, while some are charming on account of their delicacy, refinement, and elaboration. The French furniture comprises an escritoire of great value and technical merit which belonged to Marie Antoinette, marqueterie cabinets which are marvels of exquisite inlaying, and otherwise superbly delicate ornamentation. The carriage clock of Marie Antoinette has the charm of its associations. Some of the specimens of Sèvres porcelain are exceptionally sumptuous, even among their sumptuous class. The genuineness of other specimens has been questioned. Of a chaster kind are several beautiful specimens of Dresden ware, including some quasi-classical vases of uncommonly pure forms. Of the former class nearly ninety pieces are works in *bleu de Vincennes*, *gros b'eu*, canary, jewelled and marbled ware of extraordinary attractiveness to amateurs, besides examples in *œil de perdrix*, turquoise, and green. Some good and characteristic instances of Chelsea ware are included in this wonderful gathering. There are Oriental *céladon* vases of lovely colour and exceptionally ugly form, mounted in boldly designed, finely chiselled frames of French ormolu, according to the bad taste of the days of Louis XV.

Among the rarer specimens in this collection of the rococo art of the last-named period are a writing-table signed by Petit (1052), a round table with the stamps of Pafrat and Carlin, and works of other artificers, such as David, Riesner, Oeben, P. Pionez, and C. Richter. We find some very elaborate objects decorated in the rich taste of Gouthière, and probably by him —see the candlesticks (971), the commode by Riesner (1113), and the cabinet by the same (1082). For the writing-tables, Nos. 1057 and 1058, the late owner was more than once offered 5,000*l.* The pieces of priceless furniture include specimens of natural and artificially coloured woods inlaid with the choicest plaques of porcelain painted by the artists of the Sèvres factory, enriched with chased work of ormolu, and including tables, cabinets, escritoires, bureaux, clocks, and cupboards. A pair of five-light candelabra by Clodion represent, with exceptional delicacy and spirit of execution, a satyr and a nymph. We turn, not without satisfaction, from this display of voluptuous and costly taste to the examples of art of a more intellectual kind. Of these there is, at present, no available catalogue, or even list. The visitor will, nevertheless, find all the pictures, drawings, and sculptures described by appropriate labels. From the considerable number we select the following in their order on the walls, where, as they cannot well be grouped systematically, they have been hung without reference to their comparative merits.

There are two good drawings of seaports by Vernet; two landscapes in Jacob Cats's enamel-like manner, with extremely delicate touch, succeed. On the opposite side of the room are grouped a number of small cabinet pictures of the English school, comprising several small original versions of well-known paintings. First are three pretty drawings by Mr. B. Foster; then come two works by Mr. Goodall. A

sketch by Sir E. Landseer represents Gore House by moonlight, and was made while the artist was gossiping at a window of Lady Blessington's residence. Turner's "yellow period" is represented by a capital drawing of London Bridge, signed, with "R.A." in addition. The foreground is filled with boats whose sails are displayed in the sunlight. A finer drawing represents the view from Plymouth Hoe, and contains a great number of figures dancing. It was engraved. A 'Classic Composition,' by the same master, exhibits a much later and more artificial stage of his art, with exquisitely nacreous colouring and subtle representation of the light. A drawing of 'Innspruck,' ascribed to Turner, is not genuine. 'The Rugged Path,' by Poole, is a good, rough little picture in oil. 'A Rustic Landscape,' by Nasmyth, is almost equal to the best of Hobbemas. 'Indigence,' a girl's head, in water colours, is a good specimen of the skill and homely pathos of W. Hunt. By Mr. Frith are some small versions of his popular pictures, including one of his more happy illustrations of 'Le Bourgeois Gentilhomme,' the brilliant picture in the national collection, and a capital scene from 'The Sentimental Journey.'

The largest picture of this class in oil is Mulready's 'Convalescent from Waterloo,' which was engraved by Mr. Doo for the Art Union of London. There are several minor works by Creswick, besides two pictures by Mr. Webster, and two capital cabinet Linnells. 'The Drove going Home' (488), by Linnell, is dated 1851, and shows evening twilight on a rough landscape, with a pool, the whole of an intensely glowing light and colour. 'The Harvest Moon' is likewise dated 1851, and shows the full moon in a warm blue-grey sky over a wide champaign. 'Johnny going to the Fair' is a good G. Morland. The oil pictures by Landseer consist of 'The Stonebreaker's Daughter' and a portrait of Lady Blessington's dog. By W. Collins is 'Fisherwomen, Coast of Boulogne'; Etty painted with unusual purity and brilliancy the study of a young girl called 'Innocence.' By Sir J. Reynolds is the tolerable 'Portrait of a Gentleman,' near which hangs a capital portrait, in the manner of Van Loo, of Peg Woffington.

The foreign pictures are very unequal, and include a considerable proportion about the genuineness of which it is not worth while to have decided opinions. We notice with pleasure a good Moucheron and Van de Velde; a 'Lady and a Cavalier' in an interior, much rubbed and bearing the name of Mieris. The capital Lancret called 'The Swing,' and representing a damsel seated while a youth is about to swing her, has been engraved. It is a happy and elegant composition. 'The Alarm,' two lovers seated near a fountain and warned of coming danger by an eager attendant, is one of the painter's most clever and animated designs. It is a comparatively late work. A portrait of Madame de Pompadour (487) is by Boucher. A brilliant portrait (529) of Marie Antoinette, aged seventeen, by Drouais, may be studied along with a charming life-size bust in marble of the unhappy queen, made not many years after her marriage. It is replete with life, a piquant hauteur, and a mixture of audacity and *espiéglerie*. Its companion bust represents the Princesse de Lamballe's dainty head. We may here state that the collection includes a body of decorative sculptures by Falconet and others, which need not detain us now. There are two tankards of ivory, carved in high relief with bacchanalian and other subjects. A superb example is the large tankard attributed to Fiammingo, No. 45. In the same material we noticed a beautiful statuette of a boy (Christ?), with his left foot on a skull, his right foot on a serpent; it is Italian of the eighteenth century.

There are a number of miniatures, along with which may be mentioned a tazza and two salt-cellars of Limoges enamel of the sixteenth century of capital quality, besides a cup signed "I. Court" (Vigier), and being eight inches high, seven inches wide, decorated in *grisaille* with the Israelites gathering manna, and with arabesque enrichments chased in gold, besides painted masks, festoons, demi-figures, heads, and fruit. On the cover are depicted the destruction of Pharaoh's host, and Miriam singing the song of triumph. Among the portrait miniatures are works of Petitot and his followers, and specimens reasonably ascribable to I. Oliver, Cooper, P. Oliver, Hilliard, and scholars of Janet. We noticed a fairly good repetition of the beautiful profile half-length portrait of Edward VI. holding the combined roses, of which a very lovely example is No. 442 in the National Portrait Gallery, and was painted under the influence of Holbein. Near this are several other miniatures of interest, including some of dubious origin and designation. There is a capital reduced copy, by a very firm and skilful Flemish hand, of a portrait said to represent Cæsar Borgia, and painted by, or in the style of, Titian. A fine miniature of R. Sackville, Earl of Dorset, bears the name of I. Oliver, and is well known to collectors. A portrait, possibly by N. Hilliard, represents Queen Elizabeth in a white dress richly jewelled, and wearing a wired ruff and an auburn wig. Other miniatures represent, or are said to represent, Marshal Catinat, Maria Louisa of Spain, Marie Antoinette, the whole family of Louis XVI., Madame Scarron (de Maintenon), the Marquis of Granby, Louis XIV. in his state robes, Madame La Vallière, the Duc de Vendôme, Mademoiselle de Blois, Olympia Mancini, Cardinal Richelieu, Cardinal Mazarin, Madame de Sévigné, Molière, La Grande Mademoiselle, the Duc d'Orléans, the Duc de Sully, Louis XV., Hortense Mancini, Anne of Austria, Marshal Turenne, Sir P. Sidney, Henry Prince of Wales, Devereux Earl of Essex, Charles II., the Duke of Ormond, Prince Rupert, La Belle Hamilton, Ninon de l'Enclos, Henrietta Maria, Charles I., Condé, Peter the Great, James Duke of York, and Mary Queen of Scots. It is possible that the titles and artists' names of some of the above works are open to revision.

THE GROSVENOR GALLERY EXHIBITION.

(Second and concluding Notice.)

Having criticized the works of Mr. Alma Tadema, we proceed to comment on the pictures which the admirers of the late Mr. Cecil Lawson exhibit. In thus bringing into juxtaposition with the achievements of one of the most accomplished and self-exacting executants of our time pictures which, whatever be their charms, are unusually defective in technical respects, the friends of the deceased painter have been more courageous than wise. The comparison thus forced upon the critic is disastrous to the younger man; while even casual visitors, although they are charmed by the sentiment which animates Mr. Lawson's pictures, cannot help recognizing shortcomings in draughtsmanship, purity of colour, clearness and brilliancy of lighting, and genuine observation of nature. The charm of sentiment must not blind us to the fact that foliage ought to be represented by something more exhaustive than the roughly handled, impurely tinted, and insufficiently drawn silhouettes of *The Minister's Garden* (No. 152), *The Hop-Gardens of England* (167), and half a score more landscapes. On the other hand, few painters have so happily delineated the true forms, to say nothing of the pathos, of the gaunt wreck of a tree which distinguishes the large and highly poetic sketch called *Strayed* (158), a moonlight pastoral of rare merit.

Foliage is beautiful in nature, and the play of light among its shadows has delighted men of all tastes; but the lover of nature is forced to examine the masses of unclean tints and ill-drawn boughs which are to be found in not one or two of Mr. Lawson's pictures, but in nearly every example that pretends to be more than a study. The critic cannot avoid regretting that such evidences of lack of education or of loyalty to that glorious nature he illustrated with sympathy should characterize Mr. Lawson. So much for technicalities; now for authorities. Either all other landscape painters, from Titian to Turner, were wrong, and Mr. Lawson was right, or the reverse is correct. No play of imaginative faculties, no poetry, grand or trivial, no pathos, can place on a high technical level a painter who, while depicting the homely motives of English landscapes such as these, and eschewing the conventions of the great masters in monumental landscape, indulged in the impure tints and clumsy draughtsmanship of the third-rate Neapolitans, injured as these are by time and failure of the pigments. *Moonlight* (133) looks like an uncleaned copy of a Salvator Rosa, and *The Morning after the Storm* (159), *The Voice of the Cuckoo* (176), and several of their neighbours remind experts of the present condition of faded Dutch landscapes of the seventeenth century. The coloration, *i. e.*, general colouring, local tints, chiaroscuro, and even the handling of *The Wet Moon* (135) and *The Thames, Misty Morning* (161), remind us of Vander Neers which, having been sorely rubbed and badly "restored," take rank again among works of the "dark masters" by new coats of dust and smoke on their surfaces.

Of the large category of artists who have imparted pathetic expressiveness to landscape which is not monumental, Mr. Lawson was the most recent; but he had little of that refined technique which Linnell attained by studies of the antique and the "life" so diligent that he became a master of style who would not for a moment have tolerated the crudities which abound in this gallery. The latest and the most powerful exponent of the mood of design and mode of painting Mr. Lawson seems to have set his heart upon was Jules Dupré, a superb student, who loved nature with unflinching fidelity, and beside whose art the inchoate productions of our painter would make but a poor show indeed.

It is difficult to account for the errors of an artist who, so far from being insensible to the charms of natural and rich colour, bright illumination, and choice draughtsmanship, made such good use of them in *Still Life* (192), *Study of Still Life* (194), *The Thunder Cloud* (216), and a dozen of the less pretentious works before us. It is no apology for the graceless and ill-combined life-size figures of two children in *The Voice of the Cuckoo* (176), the most prominent landscape here, to allege that Mr. Lawson did not voluntarily place such figures on a canvas he had already painted. It is not the fact of their introduction, but the manner in which they are introduced, which betrays the weakness of the painter. It is incumbent on a fine designer to show his art in overcoming the difficulty this apology suggests. The able master scorns such a justification for his work. To admit it is to admit that he could not draw "the figure" nor design a group with elegance. The fact seems to be that the painter, easily satisfied with himself and spoilt by unwise praise, did not care to correct his errors. His admirers so often reckoned Mr. Lawson's defects among his merits that they harmed him greatly. Criticism of this sort tends to the ruin of scholarship in art. Thus far for the technical part of Mr. Lawson's achievements.

As to his fine appreciation of that sentiment which, whether in chiaroscuro, light and shade, or effect, readily distinguishes the "seeing eye," a much more favourable verdict can be passed on the painter. The wan air, the ghastly shimmering of the moon, which hardly lights the landscape, the mysterious darkness of the foreground and its sheep, the gauntness of the wind-beaten, spindling trunk of the half-starved tree in *Strayed* (158), are intensely pathetic, thoroughly original elements, such as Vander Neer had, in his Dutch way, inklings of. Rembrandtish to the core is the fine inspiration of a dozen similar works before us. But Vander Neer would have remedied their bad drawing, and Rembrandt

would have refined the dirty tones and tints. Very effective and telling are the grey, rainy, and smoky vapours of *The Wet Moon* (135) and the gloom of *Yorkshire Pastures* (137). *The Storm Cloud* (139) is stupendously expressive. The warm and sombre silveriness of *The Pool* (145) needs only refining to be perfect. The sheen of the mist in *Twilight Grey* (162) works upon the visitor like a charm. Apart from its paintiness, *A Pastoral*, *Trafalgar Square*, *Chelsea* (154), sheep in frost-like vapours, is beautiful. Also worthy of notice are *Barden Towers* (169) and *A Pause in the Storm* (170), and they need only refinements of handling and colour to equal anything in this room. In the Third Room a score or so of powerful "blots" and rich studies, landscape sketches and views, seem to foreshadow a gradual refining of Mr. Lawson's art, which Fate unfortunately prevented.

NOTES FROM ROME.

I have to announce this time a discovery of the first importance, connected as it is with the earliest traditions of Roman history: the discovery of the walls of Antemnæ. This small township, the "turrigeræ Antemnæ" of Virgil, whose daughters fell the prey of the Roman youths at the feast of Neptunus Equestris, together with the virgins of Cænina and Crustuminum, was stormed by Romulus a few years after the foundation of Rome. Its site has never been a matter of dispute. Gell, Nibby, and Canina agree in placing Antemnæ on the top of that lofty hill which rises abruptly from the valleys of the Anio and the Tiber, at their junction, between the second and the third milestones of the Via Salaria, in the grounds formerly belonging to King Victor Emmanuel and now to Count Telfener (Villa Ada). Nibby and Gell have traced the site of several gates and roads leading from Antemnæ towards Fidenæ and towards the Roman settlement on the Palatine; and they justly observe how interesting a fact it is that a city destroyed at a period so remote from historical times should preserve indications of its former existence without even one stone remaining *in situ*. These "stones" have been found.

The site of Antemnæ, commanding far around the approach to Rome from the upper valley of the Tiber, has been selected by the military authorities as the seat of fortress No. xv., midway between fortress No. i. (Monte Mario) and fortress No. xiv. (Prata Lata). In opening the road which connects the Via Salaria with the hill, remains of a wall have been found, eight feet thick, and built with irregular blocks of local stone called cappellaccio. The wall rests on an artificial cutting, some sixty-five feet above the plain and as many below the top of the hill. It does not run in a straight line, but follows the "horizontal curve" of the slope. The portion already discovered is thirty feet long and nine feet high. Some of the stones were removed, however, at the moment of the discovery, before my arrival on the spot. The remaining portion will be carefully preserved as one of the most precious relics of our traditional history. I have never felt much sympathy with the hypercritical disposition of that German school which considers Roman history previous to the first Punic war not worthy of confidence and faith. The wonderful discoveries made since 1870 in the lower strata of our territory, within and outside the town, bear magnificent testimony to the solidity and correctness of primitive tradition. Take, for instance, the temple of Jupiter Opt. Max. on the Capitol, when Pliny, and Dionysius, and Livy describe every particular of its foundations and substructions, which they could not see. They evidently speak on the authority of written or oral tradition. This tradition was accurate beyond belief, as we saw ourselves when those foundations and those substructions were, for the first time since the kingly period, brought to light in 1865 and 1874.

The excavations within the walls of Antemnæ have just begun. We can already state that the site of the old venerable "Oppidum" had been occupied in imperial times by a private villa, the walls and the porticoes of which are built of reticulated work. This upper stratum is strewn with fragments of dolia and amphoræ of Roman manufacture. Below the level of the villa some walls have already appeared, built exactly like the town walls, with blocks of local stone badly squared, and joined together without cement. The ground contains what it was expected to contain, fragments of Etruscan black iridated ware, and of local pottery made by hand and baked in the sun. Rodolfo Lanciani.

Fine-Art Gossip.

It is proposed to reopen on Monday next, the 18th inst., the National Portrait Gallery, at least those portions of that building which have been temporarily closed for alterations. The upper rooms were opened on Monday last. The earlier pictures have been entirely rearranged, and are now seen to advantage, thanks to the new skylights.

The latest addition to the gallery is a portrait of Anne Boleyn, painted in oil, before she was queen, and interesting both on that account and because she wears a necklace of large pearls with a pendent gilt capital letter B. An ornament of this kind is occasionally represented in works of the century to which it belongs, the most noteworthy of which is the Duke of Devonshire's small picture of a young lady, often ascribed to Da Vinci, but probably by Beltraffio. (See "The Private Collections of England," No. XIV., Chatsworth.) The duke's picture has the combined initials G. and B. Anne Boleyn wears a French hood edged with large pearls, covering a sort of cap of gold thread, and having a pendant black veil. She has chestnut-coloured eyes and hair, and somewhat pinched, thin, and "prim" lips. The other portraits in the gallery have been arranged in strict chronological order. To the great advantage of the visitor, groups are thus formed. For instance, one wall is occupied with likenesses of Queen Elizabeth, Mary, Queen of Scots, and the whole-length, life-size picture of James I as a boy. The variety of these likenesses is most curious. Next is a Jacobean group, with the king in his later years for the centre. Strange to say, there is no portrait of Charles I. in the national collection! Another group includes Shakspeare (the Chandos picture), and his contemporaries, Ben Jonson, Drummond of Hawthornden, Beaumont (but no Fletcher!). Among the most interesting features of the collection are the electrotype copies from monumental effigies of kings, queens, and worthies of England, including Robert, Duke of Normandy, Henry III., Eleanor of Castille, Philippa of Hainault, Edward II., Edward III., Edward the Black Prince, Richard II., and Anne of Bohemia, Henry IV., and Lord Bacon (from St. Michael's Church, St. Alban's). We trust soon to see valuable additions to this class of portraits, including the beautiful mourners on the sides of the tomb of Edward III.

Concurrently with the forthcoming selected exhibition of the late Dante G. Rossetti's work at the Royal Academy, the Burlington Fine-Art Club, wishing to show their sympathy with the object of that exhibition, propose to bring together in their gallery a supplementary collection, embracing, together with several important pictures, many of the extremely interesting minor works of all kinds produced by the artist. Their hope and intention is to aid in supplying as complete and comprehensive a representation of the poet-painter's work as may be found practicable under existing circumstances. Any communications from possessors of interesting examples of the painter's work (other than those who have already promised to contribute) will be thankfully received by the committee at 17, Savile Row.

The committee of the Worcester Exhibition are about to publish reports on the various sections by Mr. Comyns Carr, Mr. W. de Gray Birch, and Mr. George Wallis. They intend to republish (as an addendum to the reports) the article by Mr. George Scharf which appeared in this journal.

A correspondent of one of the Western journals declares that it is the intention of the Midland Railway Company to carry a bridge over the Wye close to Tintern Abbey, so that the beautiful and perfect combination of the tranquil river and the ruined Cistercian church will be destroyed. The Midland scheme, it is said, contemplates this outrage as part of an attempt to oust the Great Western Railway Company from the traffic of South Wales. We call attention to the report, and trust there is no truth in it. Such an attempt is sure to be resisted to the utmost.

A strong appeal has been issued by the Society for the Protection of Ancient Buildings on behalf of Maghull Church, Lancashire. It appears that in July last a faculty was granted to pull down the whole of this building, except the chancel and the Unsworth Chapel, which is a proprietary structure. This faculty was obtained on the representation of the incumbent and churchwardens, supported by resolutions passed at a meeting of, it is said, considerably fewer than a score of the parishioners. Notice was given by the overseer that the ratepayers were about three hundred in number, nearly all, certainly three-fourths, and probably more, of whom are opposed to the destruction of the edifice, which is rich in historical and family reminiscences. Some parts of this church are, we understand, as old as the fourteenth and fifteenth centuries severally, while the private chapel attached is believed to date from the eleventh century, if not an earlier period of time. Mr. Thomas C. Mather, who had considerable interest in the church, procured, in the course of a few hours, more than one hundred signatures of ratepayers opposing the destruction, and could have obtained many more such protests had time allowed for the preparation of an address to that effect to the bishop. Thus the matter appears to remain; in the end, however, unless some one in a position to save a venerable building which the great majority desire to preserve will exert himself in its behalf, Maghull old church is doomed, and will disappear, as hundreds have disappeared, through the apathy, ignorance, and estrangement of those who ought to be the first to defend, the last to destroy them. How the parochial clergy of this country can be so blind to the consequences of forfeiting that profound interest which accrues to the Establishment from the venerable character of its churches, is a mystery to every man of insight.

The annual exhibition of paintings, sculpture, &c., at the Albert Hall will be opened in May next. "Additional facilities," it is said, "will be afforded for the reception of crowded-out pictures from the Royal Academy."

The obituary of the 8th inst. records the death on that day, at San Remo, in the Riviera, Italy, of Mrs. Elizabeth Murray (born Heaphy), wife of Mr. Henry John Murray, H.B.M. Consul at Tangiers and elsewhere. Mrs. Murray was one of the daughters—the youngest, we believe—of Thomas Heaphy, a prominent member of the Society of Painters in Water Colours, and one of the founders, and the first President, of the Society of British Artists. Thomas F. Heaphy, an artist of repute, a member of the latter society, the deceased lady's elder brother, wrote 'Mr. H.'s Own Narrative,' a renowned ghost story; a volume on the traditional likeness of Christ, which we reviewed last year; and numerous essays and criticisms on art. Thomas F. Heaphy died August 7th, 1873. His sister's first appearance in the Royal Academy was in 1838, when she exhibited a por-

trait of a lady and other works. From that time she frequently contributed similar examples and sketches of subjects of Oriental character; the latter were painted after her sojourn in the East began. In 1863 she became a Lady Member of the Institute of Painters in Water Colours.

Mr. P. Fancourt Hodgson is preparing a classified catalogue of monumental and sepulchral brasses made before 1700 extant in English churches and cathedrals.

MUSIC

THE WEEK.

St. James's Hall.—Mr. Willing's Choir.

A new musical association of lofty aim should always be received with welcome, and Mr. Willing, who has organized a choir for the performance of high-class works on an extensive scale, therefore deserves the thanks of musicians for his enterprise. Formerly organist of the Sacred Harmonic Society, and frequently Sir Michael Costa's deputy at rehearsals, Mr. Willing has had opportunities for acquiring experience of the work he has now undertaken. Between aim and accomplishment, however, there is sometimes a wide difference; and such, unfortunately, was the case at the concert on Tuesday last. The programme was admirable, and would have secured a large audience but for the reserve with which the London public invariably receives any new enterprise. Handel's delightful serenata, 'Acis and Galatea,' had not been heard for some years, and Gade's 'Psyche' was an interesting novelty, though it was not actually the first performance in London, the Highbury Philharmonic Society having given it on the 27th ult. There were certain features in the rendering of Handel's work which marred the enjoyment of intelligent listeners. Sir Michael Costa has written additional accompaniments for 'Acis and Galatea,' and against his right to do so nothing can be said if that of Mozart be acknowledged. But while the latter has merely strengthened the meagre score where necessary, the Italian musician has added brass and percussion even in such choruses as "Happy we" and "Galatea, dry thy tears." The effect of such noisy instrumentation in strictly pastoral music is utterly incongruous. The soloists, unfortunately, were also unsatisfactory. Madame Marie Roze did not seem at home in the soprano music; Mr. Bridson has not sufficient voice power for the part of Polyphemus; and Mr. Frank Boyle, who appeared in place of Mr. Edward Lloyd, was physically incapable of rendering even a modicum of justice to the airs of Acis. "Love sounds the alarm" had to be omitted, and in the concerted music Mr. Albert James, who was tolerably efficient as Damon, had to render assistance. The performance of 'Psyche' was at any rate free from any actual catastrophe. Madame Marie Roze, who created the title *rôle* at Birmingham, sang most artistically and with the utmost effect. The arduous part of Eros was very ably interpreted by Mr. F. King; and Miss Coward, Miss J. Rosse, and Mr. James lent efficient aid. The choruses had been well rehearsed; and here it may be said that Mr. Willing has a highly capable body of voices at his command, the tenors being especially powerful. Concerning the work itself little need be added to the remarks made upon it at the Birmingham Festival. The flow of graceful melody and the piquant orchestration gain rather than lose in charm with familiarity; and though Herr Gade never touches greatness, he approaches very near it in the scene descriptive of Hades. 'Psyche' should be heard frequently, for it possesses most of the elements of popularity, and also appeals strongly to the cultured taste.

It is with much regret that we feel compelled to speak in unfavourable terms of Mr. Willing as a conductor. The constant stamping of the foot formed a most unpleasant distraction on Tuesday, and with an excellent choir and an orchestra of first-rate quality such a method of marking the time must surely have been unnecessary. Further, the band frequently overpowered the voices, and such matters as light and shade received little or no attention. To complete our indictment, it must be mentioned that the *tempi* in 'Psyche' were in several instances far too slow—at little more than half the rate of speed indicated by the composer. These are disagreeable facts, but no object would be served in blinking them; and it may be that the criticism here freely expressed will result in a marked improvement on the next occasion. The second concert, on January 30th, will consist of 'Elijah.'

Musical Gossip.

Arrangements for the next triennial festival at Leeds, which will be held in the autumn of 1883, are already in a forward state, and from the report of a meeting of guarantors, held on the 5th inst., it is evident that the committee are fully impressed with the duty of maintaining the high repute of these gatherings. Local interest in the festival is evinced by the fact that the guarantee fund amounts to 17,000*l.*, or nearly double the sum offered at the corresponding date on the last occasion. This is a matter on which Leeds may congratulate itself, but of greater interest to musicians will be the announcement that three new works by English composers have been already secured—an oratorio by Prof. Macfarren on the subject of King David, a cantata by Mr. Frederic Clay, entitled 'Sardanapalus,' and a setting of the 97th Psalm, by Mr. Joseph Barnby. The committee have been less fortunate, so far, in their efforts to obtain new works from abroad. Overtures were made to Signor Verdi, who excused himself on the grounds that he had almost given up writing, and that he could not undertake to compose anything within a given time. Herr Gade declined, as he had work in hand which would occupy him until the commencement of 1883; and negotiations with Raff for the production of his oratorio, 'The End of the World, the Judgment, and the New World,' were broken off by the composer's death. Subsequent correspondence with the publishers, Messrs. Breitkopf & Härtel, has not yet resulted in any definite arrangement. Whatever may be the issue, it is evident that the committee are still animated by the spirit which led to success in the past and will assuredly lead in the future.

The programme of last Monday's Popular Concert included Mozart's Quartet in G, No. 1 of the set dedicated to Haydn; Schubert's Trio in B flat; Tartini's 'Trillo del Diavolo'; and Chopin's Impromptu in F sharp. Madame Haas, an excellent pianist, made her first appearance at these concerts, and Mr. Santley was the vocalist. To-day Herr Pachmann will appear for the first time.

Miss Arma Harkness, the young American violinist, made her second appearance at the Crystal Palace on Saturday last, when she played a Rondo Capriccioso in A, by M. Saint-Saëns, and a Polonaise by Wieniawski. The 'Eroica' Symphony was included in the programme. To-day Mr. Cowen's 'Scandinavian' Symphony will be performed, and the composer will conduct the entire concert.

'The Redemption' was given for the second time at the Albert Hall last Saturday afternoon. In accordance with a general expression of opinion, the strings of the orchestra were increased, the effect being proportionately enhanced. The choir of boys and the harps were also more numerous. The soloists were Madame Albani, Madame Patey, Miss Santley, and Messrs. Lloyd, Santley, and Pyatt.

The third subscription concert given by the pupils of Madame Sainton-Dolby's Vocal Academy took place at the Steinway Hall on Thursday evening. Misses Fyffe Duff, Scott, Walton, and Willis made their first appearance, and Misses Carter, Lord, Killik, and Wallis took part in the concert, together with Misses Coward and Fusselle, former students. The part music included Mendelssohn's motet, 'Laudate Pueri,' Wagner's Spinning Chorus, and Lassen's "O holy night."

The first performance of M. Gounod's 'Redemption' in America took place on the 6th inst., at New York. The work was very favourably received.

Delibes's opera 'Jean de Nivelle' was produced recently at the Théâtre de la Monnaie, Brussels, with great success.

A new sacred opera, 'Sulamith,' composed by Anton Rubinstein, is to be produced at Hamburg.

Herr Bernhard Scholz, of Breslau, has definitely accepted the post of director of the Hoch'sche Conservatorium at Frankfort-on-Main, rendered vacant by the death of Joachim Raff, and will enter upon his duties early in the coming year.

DRAMA

THE WEEK.

St. James's.—'Impulse,' a New Play. By B. C. Stephenson. Founded on 'La Maison du Mari.'
Vaudeville.—Revival of Sheridan's Comedy 'The Rivals.'

In advancing, as the original of his drama of 'Impulse,' a French play of unknown authorship, concerning which no record is found in ordinary sources of reference, Mr. B. C. Stephenson may possibly be laughing at the public and his critics. No piece entitled 'La Maison du Mari' appears in the *répertoire* of the old drama, and no mention of any such work is found in the various compilations which form an all but unbroken record of dramatic history in France. It would be hazardous to say that no such play is in being, but it may be asserted that strong arguments against its existence might be advanced. It is, to commence with, either earlier or later than 'Le Sphinx.' If earlier, it fastens upon M. Feuillet a charge of indebtedness to a predecessor which French criticism, always on the watch for instances of plagiarism, failed to detect; if later, English critics, who have reason to be well informed as to the Parisian stage, would be likely to know of its existence. The play, moreover, is modern in its views. It could not easily, supposing the version to be faithful, have been written before the commencement of those speculations concerning adultery which have come into vogue of late years, and it shows an acquaintance with the general literature on the subject which could scarcely be possessed by any except a writer of modern days. It seems, indeed, less a rendering

of an individual French play than a sort of combination or boiling down of several. The first act, as has been indicated, opens out like 'Le Sphinx,' a later act approaches closely 'Nos Intimes,' while (which is strikingly suggestive of a domestic origin) a portion of the story is anticipated by Shakspeare. The scene in which Mrs. Beresford offers her hand to her lover, Capt. Crichton, as the payment for killing his friend and redeeming her sister's honour, corresponds almost exactly with portions of 'Much Ado about Nothing.'

These things are not advanced with the view of supporting a charge of plagiarism, or even of seriously detracting from Mr. Stephenson's work. From whatever source it is derived, 'Impulse' is a creditable production, and a higher claim upon admiration would be put forward should it prove to be a concoction instead of being a translation, or, as it is now fashionable to say, an adaptation.

An ingenious arrangement of details imparts an air of probability to a plot which, thus baldly stated, seems extravagant. No more violation of probability than is necessary to secure dramatic action is, indeed, to be charged against Mr. Stephenson. The exercise of a little common sense would unravel nine-tenths of the complications in which dramatists delight. If it is once granted that a woman who has incurred her husband's anger and has learnt to love him may seek to conceal what, if known, will expose him to the risks of a duel with a skilful swordsman, all is plain sailing. The device of setting matters right by bringing the husband where he may, while expecting to learn of his wife's falsehood, overhear her vindication, is convenient rather than brilliant. This is, indeed, the weakest portion of the play. Complaint is made of the brutality of the lover who compels a reluctant woman to introduce him to her husband. Such conduct is, no doubt, reprehensible; the only question is, is it natural? Granting the position, it appears to us nothing can be more natural. A man knowing himself beloved by a woman who, though destitute of the resolution necessary to carry out her plans, has, for the purpose of joining him and sharing his life, quitted her husband's home, is likely enough, under the influence of absorbing passion, to resort to schemes even more desperate. The knowledge possessed by the audience that the case is altered is not his. He is justified in misinterpreting her emotion and in supposing that she will yield again as she has already yielded. Evidence that we are passing away from the period of big passions, and that society plays are uprooting the drama, is afforded in the fact that the reappearance of the lover provoked opposition from the audience. One of the latest of the great race of dramatic poets, William Habington, says:—

> He is but
> A coward lover whom or death or hell
> Can fright from 's mistress.

Ben Jonson in 'The Case is Altered' and Heywood in 'A Woman killed with Kindness' show men accepting the charge of treachery or crime rather than give up their love. Similar instances might, indeed, be multiplied almost *ad infinitum*.

'Impulse' is a powerful play. Alike in the two opening scenes, in which the action is brisker and more crowded with incident than in any other modern piece of the class, and in the three later acts, in which the lesson that penitence may not always expiate error is brought home to a woman whose meditated crime has not been carried out, it is strong and stimulating.

To its effect upon the audience an interpretation of remarkable merit largely contributed. Without passing the limits ordinarily imposed by modern habits Mr. Wenman charged with singular pathos the part of the husband. The style, at once natural and plaintive, of Miss Linda Dietz was of high service in the character of the wife. Mrs. Kendal played with artistic care and completeness in a secondary part, which her admirable method raised into importance; and Mr. Kendal showed as a foolish gentleman gifts which have during recent years ripened into excellence. Mr. Dacre as the lover, whom Mr. Stephenson has elected to present as a Frenchman, exhibited genuine passion. The entire performance was admirably competent.

In the revival at the Vaudeville of 'The Rivals' a cheery and jubilant style of acting replaces the distinction of which the secret in comedies of this kind is apparently lost. Several excellent impersonations are, however, presented. Mr. Farren's Sir Anthony Absolute has ripened into something like perfection, and is wholly irresistible. The same may be said of the Mrs. Malaprop of Mrs. Stirling, the roughness of which has been worn away, and which may now claim to rank as one of the finest pieces of acting our stage can present. Mr. Neville is an excellent Captain Absolute, and invests the character with more joviality than has previously been assigned it. Mr. Thorne's Bob Acres is wanting in light and shade, and Mr. A. Wood's David is wrongly dressed. Acres seeks to pass for a fine gentleman, and would not allow his servant to appear in a fashionable city like Bath in a faded coat, worsted stockings, and soiled breeches. The error in the presentation of a character like this arises from the desire of the low comedian to invoke all possible aid of extravagant dress. David's loutishness would appear only more conspicuous in a smart suit. Miss Winifred Emery was a piquant Lydia Languish. Miss Alma Murray as Julia, and Mr. Archer as Faulkland, assigned to two difficult and superfluous characters as much vivacity and reality as they are capable of receiving. Miss Kate Phillips, Mr. Crauford, and other members of the company were seen to advantage, and the entire performance was the best that has been given in recent years.

Notes upon some of Shakespeare's Plays. By Frances Anne Kemble. (Bentley & Son.)—The few notes upon Shakspeare which Mrs. Kemble has collected into a volume have characteristic clearness of insight and justness of view. In her opening sentence Mrs. Kemble hits upon what appears a cardinal defect in the average English mind, that species of intellectual obtuseness or slovenliness which confuses two words so distinct in meaning as "theatrical" and "dramatic." In truth, the things indicated by these terms are, as Mrs. Kemble says, "so dissimilar that they are nearly opposite." The conditions which at present environ the stage Mrs. Kemble regards with little favour. That "specific comprehension of effect and the means of producing it," which is the "alloy necessary to make theatrical that which is only dramatic," is now rarely found in combination with the "dramatic temperament," by which, we take it, is meant the imaginative faculty. English actors of the day are, Mrs. Kemble holds, "nothing if not critical," and "are not of their craft, having literally ceased to know 'what belongs to a frippery.'" What is said of the first of the four plays of Shakspeare—'Macbeth,' 'Henry VIII.,' 'The Tempest,' and 'Romeo and Juliet'—with which Mrs. Kemble deals, though valuable, is less startling. In her thoughts upon 'Macbeth,' which she regards as pre-eminently the "drama of conscience," Mrs. Kemble establishes an ingenious parallel of antagonism between Macbeth and Banquo. Recent views concerning Lady Macbeth, whom she holds to have died of wickedness rather than of remorse, she confutes, and, in opposition to Mrs. Siddons, she declares that the supernatural visitings by which Macbeth is tortured could never have been seen by his wife. 'Henry VIII.' Mrs. Kemble holds a heavy play which, in spite of "fine passages and scenes of great power, fails to awaken or keep alive any intense interest." Notes on 'The Tempest' deal principally with new readings and the emendations furnished in the "Collier folio." Those on 'Romeo and Juliet' consist of suggestions to a student of the character of Romeo.

In *English Dramatists of To-day* (Sampson Low & Co.) Mr. William Archer writes in the tone of pessimism now current when the English drama is discussed. Speaking of the theatre, he says: "The higher criticism despises and ignores it.....The lower criticism again, in its more serious moods, inclines to despondency and lamentation." Such drama as we possess "exists and flourishes as a non-literary product." Even when it is printed it "is not read, and is not written to be read." An attempt to disprove these assertions would be superfluous and futile. To establish, however, his own propositions Mr. Archer is driven into classifying as playwrights of yesterday not only men who are recently dead and whose influence still survives, but writers like Mr. Charles Reade, who is treated with scant courtesy, Mr. Dion Boucicault, and Dr. Westland Marston. Now a play of Mr. Reade's is at present in course of performance at a London theatre, and works by Mr. Boucicault and Dr. Marston are likely enough soon to be given. The process involves, accordingly, something like begging the question. To the subject he treats Mr. Archer brings a respectable amount of erudition. A knowledge of the French stage is *pour cause* necessary to one seeking to deal with the English drama. To this almost indispensable qualification Mr. Archer adds some familiarity with the modern drama of Italy, Germany, and Scandinavia. His book accordingly, besides being agreeable reading, has a pleasant literary flavour. Mr. Archer writes earnestly and is sometimes convincing. He is, however, better in the condemnatory mood than in the laudatory. Beside the arraignment he brings against the best known producers of such drama as we possess the eulogy bestowed upon obscure and insignificant writers seems not a little startling. Mr. Archer is commendably accurate. One error, however, requires to be corrected. No final *e* is requisite in the name of Genest, the diligent chronicler of things theatrical.

The Actor's Art, by Gustave Garcia (Pettit & Co.), supplies such particulars concerning declamation, gesture, deportment, and the like as are indispensable to the histrionic student. What is said about the employment of the voice is perhaps the most valuable portion of the book. The illustrations by A. Forestier are interesting, but many of them are not new.

Dramatic Gossip.

A FIVE-ACT melodrama, by Mr. Louis Stevenson and Mr. W. E. Henley, will be produced at Pullen's Theatre, Bradford, on the 21st inst. It is called 'Deacon Brodie; or, the Double Life.'

MDLLE. MULLER, who took a first prize in comedy at the last *concours* of the Conservatoire, will make her *début* at the Théâtre Français during the present month as Rosette in Musset's 'On ne Badine pas avec l'Amour.'

A VERSION in two acts of Sheridan's 'Critic' has been revived at the Gaiety, with Miss Farren as Tilburina and Mr. E. Terry as Don Ferolo Whiskerandos. These performances are familiar to the London public. Mr. Byron's burlesque of 'Young Fra Diavolo' has also been revived.

THE death of Miss Frances Kelly in her ninety-third year deserves to be mentioned. Her long absence from the stage accounts for the eclipse of a reputation that once stood high. Genest speaks of her as being in her time in melodrama "superior to all actresses." The theatre now known as the Royalty long bore her name. Only a month ago we announced a grant to her from the Crown. Some correspondents have since contested our assertion that she was the original of Barbara S——. If they will turn to Mr. Charles Kent's admirable Centenary edition, they will find opposite p. 496 a facsimile of Lamb's own words. They should also look at pp. 15 to 17 of the prefatory memoir.

'AMHRA!' a new drama in five acts by M. Grangeneuve (M. Morand de Puche), produced at the Odéon, at which house it has obtained a conspicuous success, deals with the all but mythical period of the conquest of Gaul by the Romans. Its title is said to be the war cry used by the early Gauls. The verse is rugged, but the action of the play is sympathetic and dramatic. Madame Tessandier, M. Mounet, M. Chelles, and M. Cosset play the principal parts.

THE new Armenian company of Mdlle. Siranush at Smyrna proposes to unite the East and West in strange fashion. It is to play French and Turkish operetta and burlesque. It appears likely to run the French company hard, because while the Levantines can be drawn by French, the Turks and Armenians, who pay as well or better, are provided for by Turkish drama, or rather French dramas in Turkish.

LITERATURE

In a Day: a Drama. By Augusta Webster. (Kegan Paul, Trench & Co.)

When it is remembered how high the racial type of the slave in Greece often was, there is not, perhaps, in European history any fact more suggestive of human cruelty and folly than this, that a slave's testimony was admissible only under torture. People who thoughtlessly compare ancient with modern Europe, to the disadvantage of the latter, are apt to forget such appalling facts as this. The truth is that, after everything has been said about Christian cruelty in the Middle Ages, the power of Christianity in softening the inherent savagery of man is so great as to be past all calculating. Not even in the darkest ages of modern Europe could an intelligent writer have used, without recognizing the cruel irony of their import, these words of the orator Isæus:—

"When slaves and freemen are at hand, you do not make use of the testimony of freemen; but putting slaves to the torture, you thus endeavour to find out the truth of what has been done."

Indeed, a slave's testimony seems to have been considered the purest of any, because it could only be given under torture; and if the calculations of Böckh are correct, showing the vast preponderance of slaves over freemen, the country of Æschylus and Praxiteles must have been a land of bloodshed, cruelty, and pain. Such an aspect of the tragi-comedy of human life, even in its most polished condition, was likely to strike a poet of deep human sympathies like Mrs. Webster. From her first volume to the one before us she has rarely used her gifts save from a distinctly humanizing and benevolent impulse. Impulse, however, must not be confounded with self-conscious intent. She has not strangled poetic art with a didactic purpose, and yet without a benevolent impulse she seems scarcely able to produce her best poetry. This criticism would be extraordinary praise if we were speaking of a man; it does not seem so, however, when the writer under discussion belongs to the same sex as Mrs. Browning and George Eliot. For one of the striking features of the nineteenth century is that, in the matter of humanitarianism, the women are in a very unaccountable degree in advance of the men. Compared with the earnest benevolence of writers such as those we have named, the poetry of even the most earnest men seems artistic and literary self-indulgence.

The condition of the slaves in Attica—often the equals in every respect, racial and intellectual, of the dominant race—is strangely pathetic, apart from the fact that the jurisprudence of the country could only be carried on through the mutilation and torture of their bodies. Not even Asia has anything to show more grievous than this. The idea of a beautiful female slave having to give testimony under torture in order to save the life of one who is at once her lover and her master is hardly to be surpassed for pity and for terror, and the story which Mrs. Webster has invented for the purpose of representing this idea is as ingenious as it is beautiful. During the period of the Roman dominance, a wealthy Greek, Myron, having fallen passionately in love with his young slave Klydone, has determined to marry her. With this view he has begun the necessary proceedings for the manumission of Klydone and her father Olymnios. But on the day fixed for the nuptials Myron is seized by the proconsul Lavinius on a charge of complicity in a plot against Rome. The charge is entirely groundless, but Myron's wealth has attracted the cupidity of the proconsul.

The evidence against Myron is so flimsy that it has virtually broken down when the idea occurs to one of his enemies (who is aware of his passion for Klydone) to demand for the clearance of the accused the testimony of the household slaves. Myron, knowing that Klydone and her father can only give testimony under torture, refuses to hand them over for this purpose. The proconsul, whose end is simply to get at Myron's wealth, suffers him to return to his house till the adjourned trial. The father and daughter on learning this determine secretly to save Myron by yielding themselves up for examination, and while he is quietly taking his siesta they leave the house and surrender themselves to the tribunal. Olymnios bears the torture in silence and without incriminating Myron, but Klydone, in spite of her high resolutions, is driven by the pain to utter all kinds of frantic and imaginary charges against Myron, and, as a result, he is convicted and condemned to die. He elects to die by hemlock. Klydone and her father determine to take hemlock too, and perish at the same moment.

In spite of the painfulness of the story, there is an air of tender resignation over the entire tale which makes it very beautiful. The scene where Myron wakes from his siesta to learn that he has been unintentionally betrayed to death by her who would have given her life for him, but had not the physical power to undergo pain, is very touching and noble:—

Myron. It was her step. Klydone!
Why pause there,
Lifting the curtain with thy doubting hand?
Enter Klydone.
Why dost thou stand and gaze? Come to me, love.
Klyd. I dare not. Oh, farewell.
Myr. Stay, love; come back.
Klyd. Myron. Oh make me speak.
Myr. And, prithee, do.
What words are these spring to thy quivering lips
That cannot pass them? Speak, Klydone, speak.
Child, what's thy horror? I will name it for thee.
The querulous people shall not have again,
By my disputed trial, food for scandals,
Nor just Lavinius's just magistrates
Condemn in the obloquy of an open court:
They have bribed, or scared, their useless prisoner,
The loud fool Lysias who now pules for mercy,
To swear their lie at last and end my case.
Have I guessed? And is the sentence come?
Klyd. Not yet.
Myron, 'twas I that—[*pauses*].
Myr. Not these passionate tears.
My poor Klydone! Dost thou love me so!
Klyd. 'Twas I betrayed thee: I!
Myr. What fancy's this?
Enter Olymnios.
Olymn. So, thou hast found him.
Klyd. 'Twas to save thee, save thee.
And then I said their will.
Olymn. She has said their will.
Forgive her, Myron: thou hadst spoiled the girl,
Thou and thy mother, in whose soft controls
She hath not known so much ungentle need
As to walk northwards with the wind in face.
Blame me who, fool, because she is my child,
Thought she should be some such brave paragon
As courage makes some women, and love some.
* * * *
Myr. What hath she done? 'Tis well, whate'er it was.
Klyd. I thought to save thee.
Olymn. She has given witness.
Myr. Klydone!
Olymn. And, being quickly mad with pangs,
Has answered all their promptings as they would,
Joined on imaginings of her startled brain,
Signed thy direct accusal; signed it twice.
For first, her scattered senses coming back,
Sudden she turned upon Lavinius;
Snatching the murderous paper while he read,
She dashed upon it "False: they made me mad";
At that they tried again, she failed again;
And then again, quit of the pain, was bold:
That time, be sure, they held the record tight:
They showed the thing she had signed, they threatened her,
She answered staunchly, let them place her, then
She—
Klyd. [*breaks in*]. Myron! Myron!
Myr. Dear, thou hast done thy best.
How couldst thou bear past nature?
Klyd. I have killed thee!
Oh 'twas not I! not I! Voice passed my lips,
I meant it not, I knew not; 'twas the pain.
Hate me not.
Myr. Love was but half love till now.
I love thee.
Klyd. Nay but hate me. Punish me.
Oh, give me some strange suffering for a doom:
Something that comes like answer for my crime,
That it may seem atonement. Make me perish.
Myr. Too much thou hast suffered for my sake, poor child.
* * * *
Klyd. So brief a pain! So little harmless pain!
And to betray thee for it! For so little!
'Tis past; I am not hurt; they spared me even:
I heard Lavinius buzz in my very ear,
"'Ware with her, butcher, see thou mar her not."
Olymn. He could wring her and not mar; he has good skill.
And yet 'tis true they went not past their need:
Not to the utmost pangs.
Myr. Some comfort there.
And thou?
Olymn. Not even on me their worst was wreaked:
Or scarcely long.
* * * *
Myr. Sweet my true brave Klydone, there 's a tale,
Thou know'st it, that the eagle, whose high gaze
Fronts to the living flame of sun, grows blind:
And, tell me, is his blindness the vile bat's
That keeps his eyes for blinking through the mirk?
Or should the brisk orbs of the incessant fly,
Being undazzled, prove more nobleness?
The eagle saw the sun, therefore is blind.
Thy heart had eagle's eyes. I hold thee blameless.
Klyd. Then let me die with thee.

The volume can hardly fail to increase Mrs. Webster's reputation as a dramatist. The dialogue is throughout both intellectual and subtle. Indeed, it is just here where lie such faults as can be charged against the play. Dialogue may be much too intellectual and subtle for pure representative

art. Concise and trenchant suggestiveness and intellectual pregnancy of line are required in drama, no doubt, but these must not be sought for at the expense of verbal music, and especially they must not be sought for at the expense of dramatic truth. Ever since Shakspeare's time the quest of striking lines of the aphoristic kind has spoilt drama. And no one will deny that even Shakspeare himself in this matter sometimes sins. In no time and in no country would a girl trimming a vase of flowers talk in this fashion to her lover, and yet as literature the dialogue is exceedingly good:

KLYD. But I have my task.
MYR. What task?
KLYD. To cut away parched leaves, spent blooms.
Thy vases must be cured of yesterday.
MYR. A fretful task, to gather perished sweets,
Task little fit for thee. Nay, put it by;
Let others take the blighted and the sere,
Cull thou new perfect flowers.
KLYD. That 's a man's share.
We women, even they that are not slaves,
Have never leave of life to take but best:
The best sweet flowers, and costing never a care,
Are for the butterflies and choiceful bees
And men like thee.

It is the universal opinion among the booksellers that there is with readers a positive antipathy to the dramatic form of poetry, whether the poetry be good or bad. And the reason seems to be the public dislike of difficulty in its reading. Now the dramatic form is essentially difficult as compared with narrative, and this difficulty is much increased by the straining after lines which shall be striking apart from their dramatic value. After all, it is the imaginative work done that decides the value of any drama. Howsoever striking may be any line, if it in the smallest degree diverts the reader's imagination by the difficulty of its metrical movement or by the intellectual suggestion it involves, it is, in the true critical sense, a blemish in a play, though the intellectual texture of the work may gain by it.

James Burn, the "Beggar Boy": an Autobiography. (Hodder & Stoughton.)

GENERALLY the life of a working man who is sufficiently to the fore to have an excuse for writing his own story is the history of a rise, more or less rapid, out of the workshop and its surroundings into middle or upper class life, so that half way through the book the rough actualities of working class existence are left behind, and we find ourselves following the conventional fortunes of a prosperous man of business or member of one of the genteel professions. Mr. James Burn, however, remains a working man to the end of his book. More than once in the course of his narrative he speaks of the times when he was doing regular work as a journeyman hatter as not only the happiest periods of a life of many miseries, but as times quite happy enough to need no enhancement from comparison. The disappointing thing is that these periods are of very short duration. Once out of the seven years' apprenticeship which it cost him an heroic struggle to accomplish, eight or nine—at the very utmost eighteen—months mark the limits of Mr. Burn's capacity for keeping to one occupation or remaining with one employer. And the cause of this was not, as in many cases, intemperance, or laziness, or insubordination, but simply a want of fixity of purpose resulting from a mental activity and quickness of social sympathy dangerously in excess of the solid forces of his character. The influences of a vagrant childhood acting upon a remarkably amiable and affectionate disposition are answerable for this fault. From infancy he has been acquainted with a variety of squalid and disreputable phases of life, and, being preserved by naturally good instincts from sharing the moral degradation of his associates, has gone through life without so much as understanding why other men of more corruptible morality think it desirable to escape as quickly as possible from the temptations of hand-to-mouth subsistence by keeping resolutely to their work, even at the cost of sacrificing some of the more precious and lovable attributes of human nature.

A preface says that this book has been written for the purpose of encouraging others in the struggle of life by showing how energy of character may overcome difficulties. But unless these common expressions are to be taken in an uncommon sense, the aim will hardly be realized. The true lesson of the book is the much rarer one that virtue is its own reward; and this not in the cynical sense of having to go unrewarded, but with the straightforward meaning that a good conscience, a kind heart, and a sweet temper preserved through eighty years of bad luck, will enable a man to look back upon his life with thankfulness to Providence and sincere good will towards his fellow men in all ranks. Even in speaking of himself Mr. Burn keeps clear of bitterness. No man ever admitted more candidly (or, it must be said, with better reason) that his misfortunes were of his own making; but he does so without any morbid excess of self-condemnation, and he has the courage to claim his merits as well as his defects. It this combination of candour and moderation that makes his book valuable as a study of character.

The literary merit of the work is very unequal. The style is that of a self-educated man, whose acquaintance with books has come a little too late to counteract the effects of an early training as far removed as possible from cultivated influences, and who at no time of his life has been in habitual contact with a scholarly world. It is easy and pleasant when the matter is well within the author's personal experience, but becomes prosy and tiresome when subjects of a wider range are attempted. The first half of the book is incomparably the better, partly on account of the more picturesque character of its incidents, and partly also because the author's defect of critical power and sense of proportion is less felt when he is dealing with the period of life when to want these things is not an individual peculiarity. Through life he has had plenty of imagination of the simpler kind that sees all things beautifully, affectionately, and with idealizing exaggeration; and this faculty serves him in good stead so long as he is engaged in painting the world of his childhood, of which his own consciousness is the centre and his emotions determine the perspective. The chapters in which he describes his wanderings with a vagabond stepfather have all the charm of a romance. This man, MacNamee by name, was a discharged Irish soldier whom the boy's mother had married after being deserted in wretched circumstances by the father of her child. Mr. Burn draws his portrait with characteristic leniency, but it is evident that the man was idle, drunken, and dishonest, and that in following the profession of a vagrant beggar he was doing about the only thing he was fit for. The man and the boy together tramped through the whole south country of Scotland and much of the English north country, and once made a journey to London and back. The result is that Mr. Burn has a great many anecdotes to tell in illustration of the manners of beggars in the old time, and of their shifts and impostures as well as of their real hardships and sufferings. Interspersed among a number of grim anecdotes and unsavoury details come not a few pleasant recollections of the kindly hospitality of the farmers on whose charity beggardom mainly throve:—

"Almost every house on the border at that time was a welcome home for the wayfarer; the beggar was treated kindly and bountifully supplied with food; he had his bed for the night comfortably made up in the barn or the byre; and in many farmhouses bedclothing was specially kept for this class of wanderers."

In the case of one class of beggars, technically described as "handbarrow mendicants," the host had not only to provide food and a night's shelter, but to take the trouble of conveying the guest to the next post on his road:—

"These miserable creatures were a source of infinite trouble to the people in the wild, sequestered parts of the country. They were either seated upon their barrows or they reclined on bundles of rags, and when one of them was set down at a farmer's door it required two able-bodied people to remove the living lumber to the next house."

MacNamee and his stepson often enjoyed another sort of hospitality than that of the kindly border farmers:—

"Within the short space of two years I had been an inmate of every jail in the south of Scotland. My poor stepfather's love of drink and his religious dogmatism continually embroiled him in scrapes, and, being his squire, of course I came in for a share of his treatment."

From a story that follows about a theft of a halter, it is pretty clear that MacNamee had dispositions tending more directly towards gaol-lodgings than religious dogmatism or even drunkenness. The man appears, however, to have had some kindly impulses, and the child was sincerely attached to him in spite of much torture of body and mind to which he subjected his stepson. Accounts of brutal beatings alternate with descriptions of terrible nights in which the boy suffers by sympathy all the horrors of *delirium tremens*, believing religiously in the presence of the thousand devils conjured up by the drunkard's imagination. At the age of fifteen the boy was transferred to the keeping of his own father, whom he cordially hated, and with whom he was ten times more miserable than with MacNamee. He soon ran away, and after six years of independent vagabondage apprenticed himself to a hatter at Hexham. This was the turning-point of his career, and ought to have been the beginning of settled fortunes. But, as has been said already, Mr. Burn never settled down to business. All his trade

did for him was to enable him to recover himself honestly after his worst falls.

It is impossible to follow here all the turns of Mr. Burn's life. Two or three times he opened a shop on his own account; but insufficient capital (and that borrowed) brought him quickly to ruin, and his want of business capacity always accelerated the catastrophe. As often he experimented in tavern-keeping, and it need hardly be said with results even more signally disastrous. He plunged into political agitation in connexion with the Chartist movement, and before long was branded as a renegade for denouncing the measures of the People's Parliament. He became a lecturer on Odd-Fellowship, and was swindled out of thirty pounds advanced to meet the expenses of a society's dinner. At every turn he is disappointed in fortune and in himself, but he rises from every blow full of new faith in the excellence of life and the goodness of human nature. After the most crushing catastrophe of all, which comes when he is near his fiftieth year, and at a time when a trade revolution has destroyed the value of his old-fashioned skill, he writes that he has learnt to regard this seeming misfortune as in reality the best piece of good fortune that ever came to him. Certainly after this crisis he is occasionally connected with affairs more congenial to his tastes than tavern-keeping could be, but in point of material prosperity it is difficult to discover much improvement. To the end of the book he is the sport of circumstances and of his own imprudence. We hear of him at different times as having to do with various publishing enterprises, never of a first-class kind and always coming to an unprofitable conclusion; he was obliged to go back several times to hat-making in spite of his disadvantages, and once he crossed the Atlantic and tried his fortune in America. How he fared there is best told by the following paragraph and the fact that he came home after three years with an empty pocket:—

"Seven dollars was the reward of my second week's labour [as a hatter once more], or rather the produce of my work; for if I had received seventy dollars my sufferings would not have been paid for. The process of adaptation is both more slow and painful in a man who is up in years [he was past sixty at this time] than it is to one who has youth on his side. For a period of more than three months I suffered continually from a severe pain in my back, which was not alleviated by a cessation from labour. In consequence of my bodily suffering and a continual feeling of anxiety pressing upon my mind, my rest at night was disturbed by a species of nightmare, and when I was in this condition, which lasted at least six weeks, I was subject to nervous starts and twitchings," &c.

The sale of a book written during his sojourn in the United States brought him a sum of twenty pounds, and not long afterwards a friend got him a temporary place as messenger-clerk to the Salmon Fisheries Office. It would have been pleasant to leave him in this comfortable berth, but after eighteen months the place ceased to exist, and the last glimpses Mr. Burn gives us of his life show him "trimming porcelain lamps" and earning five shillings a week by writing letters to a provincial newspaper. To the end, however, he keeps his tone of content; and this being so, the pain which it is impossible not to experience in reviewing this long series of unpropitious events is felt less on his account than for the many who, similarly situated and not similarly endowed, must inevitably sink in the struggle. The book is full of instruction for those who wish to know the truth about the difficulties that beset an average human being who starts in life with no favour from fortune; and it will probably be useful to many novelists wanting material for plots and characters. But for reading purposes it is a good deal spoilt by lengthy disquisitions on social and political matters, which, though exceedingly sensible, are not quite original enough to justify the interruption of the more interesting personal narrative.

A Tour in Greece. By R. R. Farrer and Lord Windsor. (Blackwood & Sons.)

This book will strike every one at first sight as beautifully printed and elegantly bound. There is also a large and excellent map of Greece at the end of the volume. A further merit is that the authors have honestly travelled through most of Greece, and have set down their itinerary in such a way as may guide others who attempt the same journey. Their appendix on the various routes to Greece is also practical. Let us add that in the writing of the book there is a certain gaiety of heart and enjoyment of youth, which cannot but attract those who are more weary of life, and who are obliged to enjoy by proxy the real delights of careless physical energy.

But here praise must end. The authors are so ignorant of the enormous literature on modern Greece that they regret in their preface the paucity of visitors and of descriptions since 1820. If they had studied some of the many recent books of travel in Greece—English, French, or German—they might have found much to say in addition to what they culled from their guide-book or "looked up" in Pausanias or Pindar. This sort of knowledge, too, though they have taken considerable pains, is not without curious mistakes. The monument of Lysicrates was not built in 355 B.C. (p. 45); nor should a modern Greek pronouncing his own language, or Homer's either, be set down as making "a mass of false quantities." The most beautiful of old Byzantine churches at Athens does not deserve to be called "a funny little church." The Greek poets do speak of Arcadia as the home of Pan and of satyrs and nymphs, though they do not admire it for sylvan beauty. It is, moreover, quite new and rather astonishing to hear that Philip of Macedon and Alexander the Great were buried at Olympia.

These are antiquarian mistakes. It is a far more serious, and indeed a mischievous, blunder to give as an instance of the insecurity of the Greek frontier the capture of Col. Synge. He was captured far from the frontier, and on Turkish ground. But this is only one of many direct or indirect charges against the Greek nation for lying, knavery, and general worthlessness, which make the book almost offensive to read. The authors are indeed kindlier than their theory implies, and mention cases of friendliness to them—often undeserved—on the part of the natives. But when they give it as their parting advice never to believe one word that a Greek says, they not only make out a good deal of their own book untrustworthy, but give advice which would make it both useless and impossible to travel anywhere. Of course, when the simple but acute mountaineers saw these young "lords" pulling out pistols to shoot any one who would not obey their often absurd directions, they "took the measure of them." They were only worth plundering, and not worth instructing. Any traveller who proclaims his incredulity offensively is sure to be repaid in suitable coin.

The right way to travel in Greece (or anywhere else) is not to swagger, not to carry pistols, not to threaten to shoot people—idle threats of that kind at once breed contempt—not to disbelieve everybody, and not to assume one's own superiority. It is the violation of these simple rules which has made English travellers detested in many parts of Europe. The facts stated by these young men about the safety of the Morea as compared with the frontier and the thrift of the people show that the Greeks have in them good qualities, and can improve the country which they are allowed to occupy without disturbance.

The illustrations with which the book abounds are mediocre. Most of them might suit any country view in a mountainous district. Thus a drawing of the great fort at Eleutheræ, if compared with old Dodwell's view (in his 'Pelasgic Remains'), shows how inferior is the modern hand. Still worse are the temples. The artist has not even observed how the Greeks laid their architrave on the pillars, and so produces terrible travesties of these incomparable buildings. If he had learnt to photograph or had taken a photographer with him he might have done really useful work in reproducing scenes which are as yet but little known.

But we return, in conclusion, to the main point. No travellers so unsympathetic could ever truly observe or truly report anything of real moment. Let them learn to respect the Greeks—we had almost said to respect themselves—before they offer their opinions on the subject.

Folk-Etymology: a Dictionary of Words perverted in Form or Meaning by False Derivation or Mistaken Analogy. By the Rev. A. Smythe Palmer. (Bell & Sons.)

Mr. Palmer has in this volume opened up a subject which cannot fail to be of the greatest interest to many besides philologists and folk-lorists. The instances which he has here brought together from a variety of sources of the modifications of words or their meanings, arising from an association with a false etymology, are exceedingly valuable and interesting, not only for the quaintness of the changes, but also as bringing clearly before us an example of the influences which have tended to bring about the actual condition of language. Folk-etymology he defines as the influence exercised upon words, both as to their form and meaning, by the popular use and misuse of them; and in a special sense he intends it to denote the corruption which words undergo, owing either to false ideas about their derivation or to a mistaken analogy with other words to which they are supposed to be related. The predisposing causes of this corruption Mr. Palmer believes to be, firstly, the reluct-

ance generally felt to acknowledge one's ignorance, and, secondly, that instinctive dislike which most men feel for everything untried and unfamiliar. To these we may add a hankering after etymologies with which many, if not most, are afflicted. Man is, as Mr. Palmer says, an etymologizing animal, and abhors an unmeaning word. If he does not know or cannot find out the source of a word, he is seldom at a loss to invent it. Hence we have such ludicrous suggestions as *devil* from *do-evil*, *mastiff* from *mase-thief*, *needle* from *ne-idle*, and *rogue* from *erro*, "by putting a *g* to it." For summary simplicity nothing can exceed the manner in which an old writer demonstrates to his own complete satisfaction the process by which *modirwort* (motherwort) became *mugwort*: "They corrupt the *o* into *u*, and *d* into *g*, smite away *i* and *r*, and say mugwort"! Yet these, ludicrous as they are, are, philologically speaking, no worse than many "etymologies" suggested in the present day, as indeed Mr. Palmer shows by a quotation from a book lately published, in which *mulier* is stated to be from *mollior*, as if the *softer* sex. There is an evil spirit of etymologizing abroad which will not be laid by the labours of Prof. Skeat, admirably supplemented as they are by the present work. The volume is divided into five parts, the first treating of corrupted English words, the second of corrupted foreign words, the third of corrupted proper names, the fourth of corruptions due to the coalescence of the article and the fifth of corruptions arising from mistakes about the numbers of words. And here we may at once express our regret that Mr. Palmer has not thought it necessary to complete his work by the addition of an index, the preparation of which would have involved but little labour, while its absence will be greatly felt, not only because there are six distinct sets of words (including the chapter of additions and corrections), but also from the fact that in some cases, as, for instance, under "Tureen," more than one word is treated under a single heading.

The first chapter or part will be found the most interesting to the majority of readers. In it the author demolishes most of those fanciful etymologies which are even yet commonly received, while the numerous instances he has collected of the perverse twistings and transformations which words have undergone, in order that they may resemble others with which some family relation or connexion is imagined, will, we are confident, be new to all but a very few. Thus most people will be surprised to hear that *court-card* has nothing whatever to do with *court*, the true form being *coat-card*, a name given from the long dresses in which the figures are depicted, and corrupted into *court*-card from the association with the titles of king and queen applied to them. Similarly *hanger*, a short curved sword, has no connexion with the verb *to hang*, nor *humble-pie* with *humble*, nor *greyhound* with *grey*. *Cutlet* is not, as might readily be imagined, a diminutive of *cut*; nor has *train-oil* anything to do with trains, so far as etymology is concerned. With the corrupted spelling *æglogue* for *eclogue*, as though the word were in some way connected with *goats*, it is interesting to compare the entry in the 'Catholicon Anglicum,' where we find "gayte [goat] speche" glossed by "egloga."

In his fourth part Mr. Palmer deals with corruptions due to the tendency of the article to become agglutinated to the substantive, especially when the latter begins with a vowel. Thus, such forms as *a noxe*, *a nasse*, *a nere*, *a nende*, &c., for an ox, an ass, an ear, an end, are common in old MSS., and we still write *a newt*, *a nickname*, instead of the true forms *an ewt*, *an ekename*. The opposite mistake has been made in *an apron*, *an adder*, *an orange*, &c., for *a napron*, *a nadder*, *a norange*, the *n* of the substantive being mistaken for a part of the article. Mr. Palmer has collected a large number of examples of these corruptions which have, so to say, become stereotyped in the language, and his introductory remarks on the subject are exceedingly interesting.

In a few instances we are unable to agree with Mr. Palmer's suggested etymologies and remarks. Thus the suggestion that the puzzling word *roster* is derived from *register*, though at first sight plausible and natural enough, certainly involves too violent a change of vowel. *Arrant*, again, we do not believe to have any connexion with the Mid. English *argh*, Anglo-Saxon *earg*, cowardly, but to be simply a modification of *errant*, the place of which it usurped about the end of the sixteenth century. The phrase "to rule the roast" Mr. Palmer considers, and probably correctly, to mean "to rule the *roost*," to tyrannize as a cock does over the poultry-yard. In support of this theory he unfortunately quotes from the edition of the 'Polycronicon' of 1527 the following passage in order to prove that *rost* was the old form of *roost*: "Trees that growe long tyme be *rosted* in a lytell whyle." But, as was pointed out in *Notes and Queries*, 6th S. iii. 477, *rosted* here is a misprint for *rooted*, the original Latin being *exstirpari*, and Trevisa's version *i-rooted up*. The corrupted form *Jordan* almonds for *garden* almonds, mentioned by Mr. Wheatley in his preface to the 'Catholicon Anglicum,' is omitted. "Stay-at-home-at-us," quoted in the introduction (p. xxi), should be "stay-at-home-with-us"; it occurs in 'Harry Lorrequer,' ch. xvi. Mr. Palmer has evidently bestowed the greatest care on the revision of his book, and we heartily thank him for this most interesting, instructive, and valuable contribution to the study of language.

With the Connaught Rangers, in Quarters, Camp, and on Leave. By General E. H. Maxwell, C.B. (Hurst & Blackett.)

General Maxwell has in the course of his military career seen much of the world, taken part in a considerable amount of fighting, and experienced many adventures. He writes in a genial fashion, with no more egotism than is inseparable from autobiography, and possesses evidently a great fund of animal spirits. Much of his book might with advantage have been omitted, especially the eight chapters—there are only sixteen in all—devoted to Cashmere and the Himalayas. The attraction of the book is that the author is never didactic and seldom strives to impart information. On the other hand, some of his stories are by no means new. The brief account of General Maxwell's experiences of garrison life in Ireland forty years ago has a pleasant flavour of Charles Lever, notably the story of his (General Maxwell's) horse, which after mess was brought into the mess-room and made to take a standing leap over the dinner-table. Here and there, too, are to be found several amusing Irish military stories. For example, when the 88th was in Bulgaria in 1854, an order was issued that every horse in the division was to have some identifying mark, so that in case of straying its owner might be ascertained:—

"The adjutant of the Connaught Rangers, Arthur Maule, gave orders to his batman to have his initials burnt on his horse's hind-quarters. I suppose Paddy did not know what initials meant, for Maule, on proceeding with his batman to inspect his nag, found B. R. beautifully clipped and burnt on the charger's hind-quarters. 'What does B. R. mean?' said the astonished officer. 'My initials are A. M.' 'Arrah, sure, sir,' said the rather offended groom, 'B. R. stands for British Army.'"

Another of the same sort is equally good. General Maxwell once had an Irish soldier servant, whom he "found telling a most palpable falsehood. On being afterwards accused by me of saying what was not true, he drew himself up to military attention, and said, 'Plase, sir, I lost my prisince of mind.'"

Among the somewhat stale but yet good stories may be mentioned the one about the British officer who, at an Anglo-Indian dinner party, was asked by a lady who had never been to England whether he had ever dined with the Queen. On being answered in the affirmative, she said, "I suppose that at her Majesty's table there was nothing but tinned provisions." General Maxwell speaks of the officer as a general, whereas it was really the late Lord Dunkellin, then a member of Lord Canning's staff.

Some other stories are less comical. It is notorious among Anglo-Indians that during the Indian Mutiny many natives were, though guiltless of any offence, punished through accident or from ignorance of the language on the part of officers lately arrived in the country. General Maxwell was the unwilling cause of undeserved punishment being inflicted on an innocent man. He had while in command of the 88th a favourite goat called Nan. One day when encamped near Delhi this goat strayed and was lost for a few hours. Early on the morning of the departure from the same place of Ross's Camel Corps on an expedition, some of the 88th came to the author's tent, leading Nan and bringing with them as a prisoner a native.

"They stated that the man had been trying to get Nan to go with him, and that she had resented this very much, which attracted their notice, and then they recognized the colonel's goat, so they seized the robber and brought him prisoner. Not one of us understood a word the man said, so I desired the soldiers to take the native and hand him over to the magistrate sahib. When they arrived at the civilian's tent, the magistrate was just mounting his horse to proceed on some duty, so the order was given to have the thief placed in some safe place till the official's return. I thought no more of the affair, as it was out of my hands, and old Nan was reposing close to my tent. Next morning I received an indignant letter from Ross, informing me that when the Camel Corps was marching off in the morning he had seen my

goat straying away, and that he had desired one of his coolies to take it to the 88th camp and give it to the colonel sahib. The native, as I described, had been taken prisoner; but the very sad part of the story has to come. The magistrate had not believed the coolie's story, and had ordered him to be flogged and turned out of camp. Naturally Col. Ross was much displeased, and I was equally distressed; but I explained matters, and sent the poor man a good present of rupees, and I received a letter saying that the coolie was quite pleased and would willingly be flogged every day for the same amount."

In another instance a mistake very nearly had a tragical ending. An officer of the 88th had a servant named Paul, who was addicted to liquor:—

"When we marched to Cawnpore after the capture of Calpee, a great many men of the regiment got fever, and among other officers Paul's master was very ill. The wretched servant got drunk in the bazaar, and was made a prisoner—at least, so it was supposed, for he did not return to his master, and no one knew what had become of him. Time went on, and my brother officer got better, and, *pour passer le temps*, either drove or rode into the town of Cawnpore to look at the place, still stained with the blood of its victims. Either by chance or from a desire to see the sepoy prisoners, my friend arrived at the kotwallie, or guard-house, where these mutineers were incarcerated, and, to his great dismay, he saw among these ironed rebels a wretched little man, who shouted, 'Me Paul! Me poor Paul!' Much surprised, he went to the kotwal and asked why the man was among the rebels, but could get no satisfactory reply. On explaining matters, that most probably Paul had been locked up for drunkenness, and not rebellion, he got him released, as one of the policemen grimly observed, 'Just in time, for he would have been hanged in to-morrow's batch.' Paul left Cawnpore without much delay."

A little care in telling his stories without tautology would render General Maxwell's books more pleasant to read.

NOVELS OF THE WEEK.

A Story of Carnival. By Mary A. M. Hoppus. 3 vols. (Hurst & Blackett.)
A Passion Flower. 2 vols. (Macmillan & Co.)
Mary St. John. By Rosa Nouchette Carey. 3 vols. (Bentley & Son.)
Entranced with a Dream. By Richard Rowlatt. 3 vols. (White & Co.)
Exchange no Robbery. By M. Betham-Edwards. 2 vols. (Hurst & Blackett.)
Earnest Madement: a Wiltshire Story. By Major R. D. Gibney. (Allen & Co.)

Innumerable Englishmen and Englishwomen have written about the Carnival at Rome, but Miss Hoppus proves that the thing had not been quite overdone. The purely descriptive parts of her story, whether she writes of the city in its ordinary aspects or of the Carnival in particular, are very fresh and spirited, so that the reader feels no inclination to skip over the pages in which her plot is so pleasantly interrupted. But, after all, the working out of the plot is the most tempting portion of these three volumes. The characters secure our interest at once; they are lifelike, full of vigour, and clothed in a dignity of their own, which makes us realize more forcibly than ever the bald and commonplace nature of too many contemporary novels. The little group of persons—English, Italian, German—who move before us on the author's stage are not simple puppets, awkward in shape and action, but men and women with sinew and backbone. They speak a fair measure of sense, enough badinage to save them from priggishness, with little nonsense or mere prolixity; and the drama which they enact is really worth looking at. It follows from this that the author, whose style is in itself unexceptionable, has written a good story, which will raise her reputation as a novelist, and give almost unalloyed satisfaction to her readers.

'A Passion Flower' is, in fact, two stories, the second being a continuation, after a considerable interval, of the history begun in the first. This is a great drawback to the interest of the book. Neither of the tales is satisfactory. The first is naturally incomplete, and the second is brought to a rather melancholy end by the retirement to a convent of the girl who forms the link between the two parts. The novel shows infirmity of purpose. It is not tragical enough for its conclusion, not historical enough for its occasional connexion with history, not well enough constructed to be a novel of plot, and not studied enough to be a novel of character.

'Mary St. John' is a simple little story told with unprovoking simplicity. Miss Carey shows a pleasing power of delineating the lighter traits of character, and, perhaps wisely, refrains from trying to depict any very strong passion. Her most able study is that of a beautiful woman, with a natural taste for refinement and luxury, married to a poor hard-working curate in the East-end of London, always revolting against her life and yet sustained in it by her deep love for her husband. The heroine, if not a commonplace character, is, at all events, one that is well known to every novel-reader; and the young men are as much drawn after a recognized model as a Davus or a Scapin.

Mr. Rowlatt's well-intentioned story is on the old lines—a scapegrace marriage, a doubtful inheritance of estates and title, and a clearing-up of mysteries by which everybody is satisfied. Of course there is also a marriage, or, at any rate, an engagement to marry, between the rightful heir and a daughter of the rival branch; but a certain amount of originality is introduced into the treatment of the hackneyed plot in some of its later phases. Collateral interest, again, is not wanting, and Mr. Rowlatt is sufficiently lively in his manner of narration, since he alternates conversation with incident in such a way as to cloak dulness even when he is not able to engross his readers. The delineations of character are not very skilful, and they are inadequately sustained, the good people never becoming more than "goody," and the bad ones being either killed off before their parts are played or left to figure at the end of the book almost in an odour of sanctity. A fairly attentive perusal of this story has not revealed any special significance in the title, though, to be sure, there is one dream by which the writer himself seems to be entranced, and from which he would do well to arouse himself. This is the vain idea that whenever he comes to a syntactical deadlock he can reinstate himself and renew the vigour of his sentence by the simple expedient of using the words "and which." On the whole, however, the composition is careful, and the story is decidedly entertaining.

Miss Edwards's collection of tales is marked by a good deal of versatility and pathos. 'Exchange no Robbery' is the somewhat fanciful story of the arrangement between two German maidens, whereby the "gnädige Fräulein" marries the village doctor, and the farmer's educated daughter becomes a grand-duchess in apparency. It is well told, if a little farcical. The "Japanese bride," whose jealous fury expends itself on her sculptor-husband's masterpiece, excites our pity much more than the superior person who married her only for her beauty and never forgives her for shocking his self-esteem. 'Fernande' is another tale of the petulance of artists. 'Priest and Maiden' and 'Désillusionné' have each a more didactic purpose, and both afford much food for reflection. 'The Three B.A.s,' 'Two Winter Days by the Sea,' and 'A Christmas Cabful' are of a slighter calibre, but up to the mark of such magazine trifles.

'Earnest Madement' is a fairly creditable venture in literature for one whose accustomed weapon has clearly not been the pen. It is written with a single-hearted desire of supporting the total abstinence movement; and, besides describing the death of Madement's mother through grief and poverty, and of his selfish and snobbish father through drink, deals in a plain, soldierly fashion with many topics connected with the army, and incidentally gives an eye-witness's account of some of our campaigns. Most people will read these matters with more pleasure than the doctrinaire portion of the book, but a certain amount of local knowledge imparts a colour to the peaceful side of life, and the characters of the Warminster people are not badly drawn.

CHRISTMAS BOOKS.

Anyhow Stories, Moral and Otherwise. By Mrs. W. K. Clifford. Illustrated by D. Tennant. (Macmillan & Co.)
The Prince of the Hundred Soups. Edited by Vernon Lee. (Fisher Unwin.)
The Boys and I. By Mrs. Molesworth. (Routledge & Sons.)
The Heroes of African Discovery and Adventure. By C. E. Bourne. 2 vols. (Sonnenschein & Co.)
Dinglefield. By Mrs. O'Reilly. (Routledge & Sons.)
Mrs. Gander's Story. By H. A. H. Illustrated by N. H. (Macmillan & Co.)
Evenings at Home; or, the Juvenile Budget Opened. By Dr. Aikin and Mrs. Barbauld. Corrected and revised by Cecil Hartley, M.A. (Routledge & Sons.)
Jeannette: a Story of the Huguenots. By Frances M. Peard. (Same publishers.)
St. Aubyn's Laddie and the Little Would-be Soldier. By E. C. Phillips. (Griffith & Farran.)
Other People: a Story of Modern Chivalry. By Stella Austin. (Masters & Co.)
Stories from English History. By Louise Creighton. (Rivingtons.)

Mrs. Clifford's stories stand quite apart from the ordinary run of Christmas books. The writer possesses an originality that will be sought for in vain in the many volumes, some of them clever and some of them silly, which we have reviewed during the last few weeks. The reader will be charmed, and sometimes startled, by the unexpected turns of thought with which he will frequently meet in these stories, and by the delicacy and subtlety of the writer's fancy. In fact, a number of remarks at once beautiful and true might easily be culled from her pages, any one of which is quite beyond the reach of a

merely clever story-teller. At the same time it may be doubted whether these stories will please children. Their appeal is essentially to those who have lived and reflected, and a profound melancholy pervades them with which a healthy child will not sympathize. That the pleasures of life are less than its pains, that our best endeavours often end in failure—such is the moral of this book. We shall not quote from the stories, but from a lullaby, the last of three little poems that are included in the volume. Despite an occasionally prosaic line and awkward phrase or two that augur want of practice, Mrs. Clifford's verses have a lightness of touch that is worthy of Praed; and besides, her verse is more joyous than her prose:—

The flowers for sleep are sighing,
The bird is in its nest,
The daylight is all hidden
With sunshine in the west.
* * *
And, hark! the cricket singing
His love song to the skies,
Where all the stars are waiting
To see you close your eyes.

They wish you all sweet slumber,
They wish you all good night;
They 'll tell the sun to rouse you
When once again 'tis light.

And while you sleep, the roses
May think your cheeks so fair
That, in the early morning,
You 'll find them resting there.

'The Prince of the Hundred Soups' is the popular title of the Doge of Bobbio, given to him in view of his obligation to eat a hundred plates of soup during his hundred days of office. And the story that "Vernon Lee" has taken from an old German MS. tells how, when Pantalone Busdrago became doge, his disappointed rival caused the soups to be made so nasty that it was impossible for the poor man to do his duty; whence came frightful troubles. The book is exquisitely got up, and its pretty cover alone will ensure its being coveted as a Christmas present. It is not, however, a book to be given indiscriminately to children. It will fascinate here and there the clever boy or girl of a clever household, but to the general of nursery palates it will be *caviare*. It is a book one must be educated up to, if not by a study of the Italian mask comedy such as "Vernon Lee" herself has made, at least by an appreciative reading of the preface, in which she describes her childish observation of the eccentric old man whose manuscripts came later into her possession.

'The Boys and I' is delightful. It is intended for children, and professes to be written by a child, a girl of fourteen, who records all that happened five years ago, when her father and mother went to China, and she and her brothers were left in charge of "Uncle Geoff," a bachelor physician living in London. Mrs. Molesworth has succeeded admirably in making the children as thoroughly wretched as children are pretty sure to be in the beginning of such an arrangement, without harrowing the feelings of her readers by subjecting them to any real cruelty or unkindness. Their policy is to band themselves together against their uncle and Mrs. Partridge, his rather grim housekeeper; but in carrying it out they quarrel among themselves, and are comically unhappy to find how cross they are growing.

Young people are likely to be attracted by the bright illustrations which accompany Mr. Bourne's narrative. The bulk of the volumes is taken up by abstracts from the works of travel published by Livingstone, Stanley, Speke, Baker, Cameron, and Rohlfs, with a few notes on Schweinfurth, Du Chaillu, Serpa Pinto, Thomson, and Holub, and an introduction described as a "brief sketch of the progress of African discovery from the earliest times." The abstracts given are very readable and are sure to please. The selection of representative travellers, however, is open to criticism, and the historical introduction poor. It is somewhat presumptuous in an author who "supposes" Covilham to have reached Sofala, and credits Bruce with being the discoverer of the source of the Blue Nile, to refer contemptuously to a famous collector of travels, to whom all writers on the subject owe a debt of gratitude, as "worthy, if not always veracious, old Hakluyt." Surely historical books intended for the young ought to be accurate as to facts, differing from works of a larger calibre only in the selection of subject-matter and treatment.

'Dinglefield' is a pleasant and thoroughly wholesome book for girls. Mrs. Field, an old lady "with a fancy for other folks' children," gathers under her roof no less than four girls, of whom only one is any kin to her. And these four girls, of different ages and characters, are brought up together like sisters. We particularly like the chapter in which the girls pay a round of visits with Mrs. Field, and we quite sympathize with the author's wish that it was the fashion nowadays for everybody on going into society to "put on, metaphorically, my grandmother's 'pardessus de soie noire moirée à la duchesse,'" a garment almost important enough to be classed among the personages of the book.

'Mrs. Gander's Story' is simple and unambitious, and is well suited to very young children. It is impossible to praise the illustrations.

In these days of introspection and morbid self-consciousness it is a pleasure and a refreshment to come upon the good old books of a century ago. It was about the year 1792 that Dr. Aikin published the first volume of his 'Evenings at Home.' Since the days of Dr. Aikin many generations of children have delighted in the 'Budget of Beechgrove Hall,' and now Messrs. Routledge put before us, to quote the preface, "a new, revised, and improved edition." To revise and improve a book written for young people nearly a century ago is no easy thing, nor can we think that the attempt has been very successful. It is best to leave the book to stand on its own merits, which are great, merely excising what has become obsolete or unintelligible; any attempt to do more than this merely ends in incongruity. It would be as easy to modernize 'Evelina' or to rewrite 'Clarissa Harlowe' in the style of Miss Braddon. We welcome a reprint of 'Evenings at Home,' but we are not much impressed by its revisions and improvements, and we could gladly have done without the very modern illustrations, especially the coloured ones.

Messrs. Routledge also send us 'Jeannette,' an interesting and well-told tale of the Revocation of the Edict of Nantes and the Huguenot persecution. There is a great flitting from France of all who can effect an escape: one little Huguenot maiden is carried away from danger in a barrel of apples; the ship Trois Sœurs takes her, with many adventures, across the Channel, and we have a picture of life in a Devonshire village two hundred years ago.

'St. Aubyn's Laddie' is a pathetic story of two little cousins—Cyril, or Laddie, the cripple, and Alan, the bold little would-be soldier. The relations between the two boys are tender and touching, but the story is almost too sad.

'Other People: a Story of Modern Chivalry,' is a strange, dreamy, sad book. The author meets us at the outset with an apology, or "Reflection." She says: "At the risk of being told that 'qui s'excuse s'accuse,' I preface this story with a few words. I anticipate the objection that Ray's ideas, thoughts, and feelings are too unlike those of boys of his age in general to have any claim on the reader's credulity. As a rule, perhaps, they would be; but I have imagined an intensely sympathetic, sensitive, highly-strung nature, reared in a hothouse, which forced each of these characteristics into undue prominence, while it stunted the growth of the more matter-of-fact, if less noble qualities." Whether the study of so abnormal a character be desirable is a question.

It is not possible to show much originality in such a book as Mrs. Creighton's. The most that can be done is to tell the tales in good, clear English, which shall be at once easily understood, and to avoid fanciful details. This Mrs. Creighton has done. The stories will be found entertaining by the boys and girls for whom they are intended, and there is no partisanship in them such as might cause parents to hesitate in putting them in their children's way. The illustrations are not fancy sketches, but almost all of them have some relation to the matter in hand. This is a great advance beyond what was common even a very few years ago. The woodcut which illustrates the account of Venerable Bede gives us a representation of Jarrow Church and his chair. Surely there should have been a note here to say that there is really no trustworthy evidence by which to connect that curious relic with the Saxon annalist. The book is very free from errors; we have detected but one statement which is certainly wrong. It is that Oliver Cromwell "lost two sons in battle." The eldest, Robert, died at school before the breaking out of the war. We think also that in writing for young persons it would have been safer not to have affirmed that cottages in the time of Wat Tyler were not furnished with chimneys. It may, perhaps, still be a matter of controversy when chimneys were introduced into ordinary houses, but the opinion of those competent to judge is, we believe, generally opposed to Mrs. Creighton's conclusion.

OUR LIBRARY TABLE.

Under the title of *Flotsam and Jetsam* (Allen & Co.) Mr. T. G. Bowles has published a collection of thoughts and reflections written down in the course of yachting expeditions from time to time since 1874. They are of the most varied kind and without connexion, amusing and serious, about women and society, the sea and simple nature, and almost everything under the sun. Naturally they are better suited for odd moments than for reading straight through. They show often a good deal of originality, and, whether the reader agrees with Mr. Bowles or not, he must always feel that, at all events, the author has set down his own thoughts and opinions, and not those of other people. He is at his best in speaking about the sea, and readers may regret that he did not give them more about his yachting experiences.

Mr. Loring Brace, who has been honourably distinguished by philanthropic labours in New York, has written, under the title of *Gesta Christi*, a sketch of the progress effected under the influence of Christianity. He has collected a large number of facts, and his book will be found interesting as a popular exposition of the subject. Messrs. Hodder & Stoughton are the publishers.

To review at length *A Soldier's Life and Work in South Africa*, a memoir of the late Col. A. W. Durnford, by Col. E. Durnford, would involve us in the old controversy regarding the disaster of Isandhlwana. There is more novelty in the earlier part of the book, which describes the services of Col. Durnford from his arrival in South Africa in 1872 to the breaking out of the Zulu war. Throughout his career he distinguished himself by his gallantry and his considerate treatment of the natives. Messrs. Sampson Low & Co. are the publishers.

There is obviously a revival of interest in the novelists who were famous at the close of the last century and the beginning of the present. The subsidence of the romantic movement has, no doubt, much to do with the change, and people are beginning to see that novels depicting a state of society with which the novelist was personally conversant must have more real value than the cleverest of "historical romances." New editions of 'Cecilia' and 'Evelina' have recently appeared, and Mr. Bentley lately pub-

lished a convenient and tasteful reprint of Miss Ferrier's stories. We have now to thank him for the "Steventon" edition of Miss Austen's novels. It is evidence of the returning popularity of these delightful books that so handsome an edition should be issued; and Miss Austen would have been surprised and gratified could she have foreseen that such a tribute would be paid to her memory. It is pleasant to see again the frontispieces that were familiar to us in the days of the "Standard Library." Mr. Bentley may be congratulated on the taste he has displayed in this reprint, which may fairly claim to rank as an *édition de luxe*.

In his preface to *Common Shorthand, for Ordinary Purposes, and for Moderate Speed* (Hart & Co.), Mr. E. Pocknell quotes a remark made in the *Athenæum* of August 26th, that "the philosophic investigator of shorthand ought to give his chief attention to examining what each system can do when limited to the use of simple means, such as an ordinary memory could retain after a few lessons, and to styles of spelling not too brief to be easily read." The present is an attempt to adapt the earlier work of the same author, 'Legible Shorthand,' to the requirements of such a test; but we cannot pronounce the attempt particularly successful. The characters for different letters are too much alike; for instance, the same form, differing only in size and thickness, stands for the six letters *y*, *w*, *p*, *f*, *b*, *v*, and when occurring alone stands for the six words *you*, *without*, *particular*, *for*, *being*, *very*. We believe some highly trained writers can trust themselves to preserve these minute distinctions, but to an ordinary penman they are simply snares. Some of the most elegant devices in the larger work are here rejected for the sake of simplicity, and in their stead an additional feature is introduced in the shape of a small loop to denote any single vowel, and a large loop to denote any double vowel.

A very charming little volume is the *Book-lover's Enchiridion*, arranged by Philobiblos in a way that shows he is a true lover of literature. His extracts supply some delightful reading.

Messrs. Smith & Elder send us a sixpenny edition, very clearly printed, of *Leaves from the Journal of our Life in the Highlands*; and also *The Fatal Boots* and *Cox's Diary*, bound together in a sixpenny volume.

Messrs. Ward & Lock send us the first part of their *édition de luxe* of the *Waverley Novels*. It contains the clever illustrations of the recent French edition. — Messrs. Kegan Paul & Co. have issued the fifth volume of their "Parchment Library" edition of *Skakspere*, certainly the pleasantest edition for fireside reading that we know of.—Mr. Murray did wisely in entrusting to Mr. Tozer the task of editing *Wordsworth's Greece*. Mr. Scharf has revised his excellent chapter on Greek art. This standard work will make an excellent Christmas present.

The London Post Office Directory (Kelly & Co.), at once the largest and the most satisfactory of annuals, is again on our table. Eighty-two new names of streets have been introduced, while the renaming of eleven and the renumbering of eighteen streets have added to the labours of the editor. The work is, as usual, brought carefully up to date. We have tested it in several instances not important enough to attract the notice of a careless editor, and we have invariably found the proper alterations made. If all the journeyman work of literature, as Mr. Arnold calls it, were as well done, what a change there would be in the feelings which works of reference usually provoke!—*Whitaker's Almanack* (Whitaker) continues to grow in size and popularity, as it deserves to do, being the best almanac that the general public can buy.—Three agricultural annuals are also on our table. *The Live Stock Journal Almanac* is one of the best of Messrs. Cassell's publications of this class. Morton's *Almanac for Farmers and Landowners* is published by the same firm, and it, too, is excellent.—The *Agricultural Gazette Almanac* (*Agricultural Gazette* Office) is also well adapted to its aim.

Some useful and substantial *Diaries*, well arranged and well bound, have been sent to us by Messrs. T. J. Smith, Son & Co. Both their "Post" and "Scribbling" Diaries deserve praise. They are excellently suited for business purposes, and so are the capital diaries sent to us by Messrs. Partridge & Cooper. Both firms send us *Calendars* very prettily devised. Of the latter Messrs. C. Goodall & Son have published a great variety, many of them being remarkable for taste and good colouring.

We have on our table *The History of the Year* (Cassell),—*Chatterbox*, 1882, edited by J. E. Clarke (Gardner),—*Our Darlings*, 1883, edited by Dr. Barnardo (Shaw & Co.),—*Sacred Allegories*, by the Rev. W. Adams (Rivingtons),—*First Readings: Christian Doctrine* (Bemrose),—*The Daily Offices and Litany*, by the Rev. E. Daniel (Gardner),—*Addresses to Candidates for Confirmation*, by the Rev. E. L. Cutts (S.P.C.K.),—*Lectures on the Historical and Dogmatical Position of the Church of England*, by the Rev. W. Baker, D.D. (S.P.C.K.),—*Prophecy: its Nature and Evidence*, by the Rev. R. A. Redford (R.T.S.),—*The Treasury of David*, Vol. VI., *Psalms CXIX. to CXXIV.*, by C. H. Spurgeon (Passmore & Alabaster),—*Das Land der Inca*, by R. Falb (Leipzig, Weber),—*Manuel de la Langue Danoise*, by S. Broberg (Copenhagen, Host & Son),—and *Oriente ed Occidente, Viaggi e Impressioni*, by the Vedova di E. Fusco (Naples, Lanciano). Among New Editions we have *Sir Roger de Coverley*, from the 'Spectator,' with illustrations by C. O. Murray (Low),—*The Poetical Works of T. Buchanan Read* (Lippincott),—*Life of a Scotch Naturalist*, by J. Smiles (Murray),—*The Revolt of Man*, by W. Besant (Blackwood),—*New Ireland*, by A. M. Sullivan (Glasgow, Cameron & Ferguson),—*Life among my Ain Folk*, by W. Alexander (Edinburgh, Douglas),—*A Week in the Yorkshire Dales*, by the Rev. J. Pickford (Manchester, Gray),—*The Text-Book of Botany*, by J. Sachs, edited by S. H. Vines (Frowde),—*Love Poems and Sonnets*, by O. Innsly (Boston, U.S., Williams & Co.),—*The Patna Crisis*, by W. Tayler (Allen & Co.),—*The Conveyancing Act*, 1882, by J. St. J. Clerke and T. Brett (Butterworths),—and *Considérations sur les Principaux Événements de la Révolution Française: Le Directoire*, by Madame de Staël, edited by V. Oger (Hachette). Also the following Pamphlets: *Memorials of the Pilgrim Fathers*, by W. Winters (The Author),—*A History of the Manchester Railways* (Office of the 'Manchester City News'),—*The Rising Generation* (Satchell),—*The New City of London Chamber of Commerce*, by F. Lyne (Wilson),—*Newfoundland*, by the Hon. T. Talbot (Low),—*Gibraltar and Ceuta*, by General Sir William J. Codrington, C.B. (Stanford),—and *The Standard of Value*, by W. L. Jordan (Bogue).

LIST OF NEW BOOKS.

ENGLISH.

Theology.

Buxton's (Rev. H. J. Wilmot) The Children's Bread, Short Sermons to Children, cr. 8vo. 3/6 cl.
Daily Text-Book (A), gathered from the Writings of Rev. E. B. Pusey, by E. H. and F. H., 16mo. 3/6 cl.
Friend's Hand (A), Short Text and Simple Prayers, with Special Prayers, by Very Rev. E. Bickersteth, 16mo. 2/ cl.
Hefele's (Rt. Rev. C. J.) History of the Councils of the Church, Vol. 3, 8vo. 12/ cl.
Lowe's (C. M. S.) God's Answers, a Record of Miss Annie Macpherson's Work, cr. 8vo. 3/6 cl.
Lutton (A.), Memorials of a Consecrated Life, compiled from the Autobiography of, cr. 8vo. 6/ cl.
Macmillan's (Rev. H.) The Marriage in Cana, cr. 8vo. 6/ cl.
Momerie's (Rev. A. W.) Defects of Modern Christianity, and other Sermons, cr. 8vo. 5/ cl.
Pelliccia's (A. A.) The Polity of the Christian Church, translated by Rev. J. C. Bellett, 8vo. 15/ cl.
Stalker's (Rev. J.) The New Song, and other Sermons for the Children's Hour, cr. 8vo. 2/6 cl.
Tipple's (S. A.) Sunday Mornings at Norwood, Prayers and Sermons, cr. 8vo. 6/ cl.

Law.

Poley (A. P.) and Dethridge's (F.) Handbook on the Electric Lighting Act, 1882, cr. 8vo. 2/ cl.

Fine Art and Archæology.

Handbook of the Jones Collection in the South Kensington Museum, cr. 8vo. 2/6 cl.
Schild's (Mme. M.) Old English Costumes, 4to. 2/6 swd.

Poetry and the Drama.

Dillon's (A.) River Songs, and other Poems, illustrated by Margery May, imp. 16mo. 10/6 cl.
Shakespeare's Historical Plays, Roman and English, with revised texts, &c., by C. Wordsworth, Vol. 1, cr. 8vo. 7/6

History and Biography.

Durnford (Col. A. W.), Memoir of, a Soldier's Life and Work in South Africa, 1872-1879, 8vo. 14/ cl.
Rimmer's (A. A.) Early Homes of Prince Albert, sq. 8vo. 21/ cl.
Rossetti (Dante Gabriel), a Record and a Study, by W. Sharp, cr. 8vo. 10/6 cl.

Geography and Travel.

Adams's (W. H. D.) Celebrated Women Travellers of the Nineteenth Century, cr. 8vo. 3/6 cl.
Griffis's (W. E.) Corea, the Hermit Nation, 8vo. 18/ cl.

'DR. GRIMSHAWE'S SECRET.'

A question having been raised as to the authorship of this work, a note thereon may be of interest, and will at least possess the value due to evidence in existence *ante litem motam*, as the lawyers have it.

Something over four years ago Mr. Julian

Hawthorne lent to my wife and myself a manuscript exceedingly unlike the form of his own unpublished stories. This was a gilt-edged red morocco volume, containing, in his minutest and most careful handwriting, a considerable portion of a story by his father, which I recognize as being the same story as is now before me in print. He had copied it from the original MS. with much difficulty and labour, he told me, owing to the faintness of the ink in places and the character of the handwriting. I have the impression that it was owing to this tedious difficulty of decipherment that the whole of the original had not been transcribed. And at that time the autograph, though not believed to be really lost, was mournfully confessed to have been mislaid. I kept the transcript for some time, hoping the original might be found, and so enable me to proceed with the story. I find a note from my friend, dated July, 1879:—"Do you remember when you were last in Twickenham (and seeing us there) that I lent you a small red MS. volume containing my father's 'Dr. Grimshawe'?"

At that time I know Mr. Julian Hawthorne had no thought of publishing the story. It seems to me probable that it was not until he had found the mislaid manuscript and completed the transcription of it, that he realized the work to be sufficiently complete for publication as something more than a fragment.

If the children of letters were as wise in their generation as the children of science, certain expressions of doubt as to the true authorship of 'Dr. Grimshawe' would surely have been delayed until the appearance of the work. Prof. Owen, with two small bones before him, could specify the animals to which they belonged, and with two whole books side by side, the one by the elder, the other by the younger Hawthorne, any literary analyst could surely tell to which they appertained without looking at the title-page.

Mr. Julian Hawthorne has an exceedingly robust style of his own, and the difference of his manner and method from that of his father has become more and more marked since the opening chapters were written of 'Bressant,' his first published work of fiction. In a single sentence the very rhythm will usually enable us to decide whether it is the father's work or the son's. The delicious dawdlings of Nathaniel Hawthorne; the agreeable digressions into byways of fancy into which he beguiles himself, and at the same time charms his reader into wandering—these and other quaint and rare characteristics form the bouquet of the wine of the older vintage; and no strength of the newer wine, however deftly blended, could be mistaken for the other, except by the dullest and furriest of literary palates. KENINGALE COOK.

A SUGGESTION.

Exeter.

THE recent appearance of an *édition de luxe* of Mr. Blackmore's Exmoor romance 'Lorna Doone' has reminded me of a desideratum, long ago pointed out by a *Quarterly* reviewer in an interesting topographical article, which up to this day has not been supplied. The paragraph is as follows:—"The Devonshire 'Orientales Illustres' are for the most part something more than 'grands hommes de province'; and we can scarcely imagine a more delightful volume than might be made of Prince's 'Worthies' [of Devon], with the additions to be derived by modern research, and with illustrations from good portraits, personal relics, ancient manor-houses, and sepulchral monuments."

Both the original folio edition (1701) and the quarto reprint (1810) are rare, especially the former, which is much more costly and difficult to procure now than when the above was written in 1859. Such an edition would, indeed, be a treasure not only to Devonians, but to book lovers generally. William Pearse, vicar of Dean Prior (a successor of Robert Herrick), thus addresses the author in some complimentary verses:—

> You 've done the Work, Sir, but you can't be Pay'd,
> Until among those Worthies you are laid:
> Then future Ages will unjustly do,
> To Write of Worthies, and to leave out you.

May the honour be paid him of having such an edition dedicated to his memory! Such a project would also fitly crown the efforts lately made in commemoration of one of Devon's foremost worthies—Drake. CH. ELKIN MATHEWS.

'THE JOLLY BEGGARS.'

Wilmslow, Dec. 4, 1882.

MR. ARCHIBALD NIMMO, of Carnwarth, in hi recently published collection of 'Ballads and Songs of Clydesdale,' in a note alludes to Burns's visit to the farmhouse of Mr. Prentice, Covington Mains, near Carnwarth. This visit was on the poet's first journey to Edinburgh. My father-in-law, Dr. Somerville, of Wilmslow, a nephew of Mr. Prentice, seeing this, has given the following description of the visit, which he had often heard from Mr. Prentice's lips:—"Archibald Prentice had made known to his brother farmers that Burns was expected at the Mains, and that they were all to assemble when they saw a white sheet hoisted on a cornstack. True to the invitation, they mustered in force when the signal was displayed. In the company were also the Rev. Bryce Little, minister of the parish, and Lang, the schoolmaster, and his brother, the minister of Leadhills. The evening that was spent can easily be conceived. Burns's wonderful conversational powers, drawn out by intelligent and congenial friends, carried all by storm. The songs and recitations, now grave, now gay, cheered and melted them by turns. In the height of their excitement Burns said, 'But the best of all is to come yet; only I must wait until Mrs. Prentice leaves the room.' 'Mr. Burns, you may just as well go on, for I will not leave the room this night.' 'Well, then,' said Burns, 'here's for "The Jolly Beggars."' Next morning he breakfasted at Mr. John Stodart's, Bank, and was accompanied by Mr. Prentice and the two brothers Lang. On arriving at the foot of the Bank brae Lang of Leadhills said, 'Oh, Mr. Burns, before we climb the brae just give us "The Jolly Beggars" owre again.' 'Na, na, Mr. Lang, the inspiration is gone.' Archibald Prentice could not bear to hear any one speak evil of his friend. Once at a meeting of ministers and elders some of them began to denounce Burns's works as immoral. 'I tell you what,' said the old man, 'if you had *a' his ill* and the *half o' his gude* among ye, ye 'd be a' better men than ye are.'"

The points settled by this communication are that Burns had written 'The Jolly Beggars' before his first visit to Edinburgh, and that he thought it too indelicate for "ears polite." The poem was not published till after his death. JOSEPH MCKIM.

THE CANADIAN ARCHIVES.

IN 1881 the Canadian Government instructed Mr. Douglas Brymner, Archivist of the Dominion, to pay a visit to this country with a view to ascertain the number, nature, and historical character of the manuscripts and records in the various repositories of Great Britain, and the means taken to arrange and preserve them. Mr. Brymner spent some months in England and Scotland on this mission, and on his return home was able to present to the Minister of Agriculture (in whom, curiously enough, seems to be vested the custody of Canadian muniments) a very exhaustive report on the historical treasures accumulated in the Public Record Office, the Manuscript Department of the British Museum, and the General Register House, Edinburgh, with a concise account of the manner in which these vast collections were formed. The assistance also given to historical studies by the Historical Manuscripts Commission was not overlooked by Mr. Brymner; and as an instance of his unwearied diligence we may mention that he has compiled from the indexes to the many volumes (nearly 48,000) of manuscripts in the British Museum a list of all the series of documents touching upon the history of British North America. The archives of Canada preserved at Ottawa are described by Mr. Brymner as valuable but fragmentary; they include the original military correspondence of the officers in command in Canada for a hundred years, the civil rule also being, to a great extent, in the same hands. Mr. Brymner's report is printed by permission as an appendix to the Report of the Deputy-Keeper of the Public Records in England, some of the contents of which we noticed last week.

ENGLISH AUTHORS AND AMERICAN PUBLISHERS.

50, Albemarle Street, Dec. 18, 1882.

As some question has been raised in your columns respecting the liberality of Messrs. Harper, of New York, to British authors, I conceive I am not justified in keeping back a public statement of the fact that when Dr. Livingstone's posthumous journals were in the press, and it was desired to raise as large a sum as possible for the benefit of his family, Messrs. Harper responded in the most liberal manner to my call, and came forward with the handsome sum of 1,000*l.* for advanced sheets, which amount I had the pleasure of handing over to Dr. Livingstone's representatives. JOHN MURRAY.

Crown Buildings, 188, Fleet Street, Dec. 19, 1882.

G. W. S. says: "My telegram was an exact summary of Mr. Sampson Low's letter.....I quoted Mr. Low's language. Mr. Marston does not and cannot deny this, yet he omits, no doubt inadvertently, to withdraw and regret his charge of inaccuracy."

I am sorry to say that I neither regret, nor can I withdraw, my charge of inaccuracy. Mr. Low's words are "*a fact of which Mr. Russell had probably not informed himself when he wrote to the Athenæum.*"

G. W. S. in his telegram converts these words into "*which they pocketed unknown to Mr. Russell,*" and says they exactly summarize Mr. Low's words.

Mr. Low's words imply an oversight on the part of Mr. Russell, who seemed to have forgotten that Messrs. Harper had written to him direct on each occasion of their having published his books.

G. W. S.'s words imply dishonest conduct on the part of my firm. He says that he "writes in no unfriendly spirit to me or my firm," therefore he may not have wished to convey the above implication; but, as he puts it, "the point is not what he wished to convey," but what, in fact, his words do convey to any unbiassed reader. Whatever may be the "concern" of Americans or Englishmen as to the "question which arises out of this controversy," my concern is that the action of my firm shall not be wilfully or unintentionally misrepresented in your columns. That being put right, I by no means feel it to be incumbent on me to comply with G. W. S.'s request that I should "put him right" on other matters on which he has deliberately chosen to go wrong. E. MARSTON.

Savile Club, Dec. 19, 1882.

IT must be in the experience of so many English authors that the Messrs. Harper treat openly and fairly with them for their works, that iteration of the fact in print is hardly necessary. Moreover, that enterprising firm, having latterly taken up the only proper position for the Colossus among publishers that it is said to be, by planting one foot on this side of the Atlantic, has thereby made itself more directly amenable to the customs of the English press than ever, and can have no possible wish to treat our writers cavalierly. For my own part, I may state—not to mention the *bona fides* of the Messrs. Harper in

ordinary transactions—that some time ago I agreed to supply them with the advance sheets of a novel for so much money, the said novel to be no shorter than a specified length, while if longer there was to be no additional payment. When finished, the story, planned without reference to the agreement, turned out to be one-third longer than the guaranteed length; and I was greatly surprised, and not less charmed, to receive from them the proportionate third above the price agreed on. It is said that other publishers delight in paying an author more than he expects to get, but I believe the excellent practice is not yet universal. THOMAS HARDY.

*** We cannot insert more letters on this subject.

MR. HENRY JAMES.

MR. HENRY JAMES, who died at his residence in Cambridge, Massachusetts, on the 18th inst., was born at Albany, New York, January 3rd, 1811. He graduated at Union College in that state, and afterwards studied in the Princeton Theological School. He did not, however, enter the clerical profession, because he believed that none of the existing churches was in accordance with apostolic standards. For a time he was interested in Sandemanian views, and edited Sandeman's 'Letters on Theron and Aspasia' (1839). In the following year he published 'Remarks on the Apostolic Gospel,' in which he maintained the deity of Christ, but denied the doctrine of a Trinity. In 1843, after a second tour in Europe, his mind took the pronounced Swedenborgian turn which influenced his subsequent writings, although he had no connexion with the Swedenborgian organization. His earliest original volume was entitled 'Moralism and Christianity,' comprising a course of lectures given in New York, 1849-50. Other works by Mr. James are 'Lectures and Miscellanies' (1852); 'The Church of Christ not an Ecclesiasticism' (1854); 'The Nature of Evil' (1855); 'Christianity the Logic of Creation' (1857). In all these works Mr. James proved himself to be an able theologian and a finished writer—master, indeed, of a style of rare simplicity and beauty. The religious view with which he is especially associated is one which carries the old theological distinction between "faith" and "works" to its transcendental expression. Morality is distinguished to a paradoxical degree as something formal and external from the religious life. Of all the thinkers who have appeared in America, Mr. James may perhaps be described as the most mystical. Of what is now called spiritualism he was a severe critic, maintaining that it conceived an immortality for egotism. "Whatsoever is of the person in us is illusory, and perishes; only what belongs to impersonal goodness and truth is real and immortal." These are the closing words of his remarkable article on 'Spiritualism New and Old,' in the *Atlantic Monthly*, March, 1872. Mr. James has written only when the views of which he was the sole representative in his country summoned him from the comparative seclusion into which he had retired. In his youth he had the misfortune to lose one of his legs by an accident. He was possessed of considerable powers of conversation, but his friendships were limited to those interested in profound subjects. The "impersonality" which he worshipped gradually gained expression in his face and manner, not, indeed, without adding a certain charm. His distinguished sons, Prof. James, of Harvard University, and Mr. Henry James, the novelist, were both absent at the time of their father's death—the former being in Europe, the latter having heard on landing in New York of his bereavement. If, as we hope, a biography of the late author shall be prepared, it is probable that a larger world will become acquainted with this unique thinker through a loss which will be much felt by the scholars who surrounded him at Cambridge.

THE BECKFORD SALE.

THE sale of the second portion of the magnificent library of Mr. Beckford commenced on Monday, the 11th inst., at the rooms of Messrs. Sotheby, Wilkinson & Hodge, and will be continued till this afternoon. The rarity of the books and the beauty of the various bindings have brought competitors from all parts, and in consequence prices have ruled extravagantly high. The following may suffice as specimens of the furore of bibliomaniacs of the present day:—

Galerie des Peintures, a duodecimo in red morocco by Boyet, with Count Hoym's arms, which sold in his sale for 14 francs, 111*l.* Galerie du Palais Royal, unlettered proofs, 75*l.* Galerie de l'Hermitage, 11*l.* 15*s.* Gautier de Sibert, Histoire des Ordres Royaulx de Notre-Dame du Mont-Carmel, 146*l.* Gerini, Pitture del Salone Imperiale del Palazzo di Firenze, 31*l.* Germain, Éléments d'Orfévrerie, 1748, 31*l.* Gesneri Historia Plantarum, having Thuanus's arms stamped on the binding, 20*l.* Gessner, Œuvres, 4 vols. in 1, large paper, 20*l.* A series of 672 caricatures by Gillray, with two original sketches, bound in four folio volumes, 305*l.*; another series of caricatures by the same artist, but containing only 513, 260*l.* Giraud, L'Invocation et l'Imitation des Saints, 4 vols., bound by Deseuil, 50*l.*; another copy, 28*l.* Gohory, Livre de la Conqueste de la Toison d'Or par le Prince Jason, bound in brown morocco covered with gold tooling by N. Eve, and having the arms of the Duc de Guise painted on the sides, 405*l.* L. de Gongora y Lope de Vega Carpio, Quatro Comedias Famosas, recopiladas por A. Sanchez, in olive morocco with arms and interlaced λλ of Louis Phelypeaux, Marquis de Vrillière, on the sides, 50*l.* Gould, Monographs of the Ramphastidæ, Odontophorinæ, Trochilidæ, Trogonidæ, Mammals of Australia, and Birds of Great Britain, Asia, New Guinea, and Australia, 542*l.* 4*s.*, all being bought by the same purchaser. Gresset, Œuvres, 3 vols., large paper, with a double set of plates, 1803, 68*l.* Grimm, German Popular Stories, 2 vols., first edition, with a double set of Cruikshank's illustrations, 64*l.* Gringore, Les Fantasies de Mere Sote, black-letter, Paris, 1516, 180*l.*; this copy sold for 9*l.* 9*s.* in Hibbert's sale. Guarini, Opere Poetiche, in brown morocco by Clovis Eve, probably for Marguerite de Valois, 175*l.* Guer, Histoire Critique de l'Ame des Bêtes, 2 vols., with arms of Madame de Pompadour in gold on the binding, Amsterdam, 1749, 56*l.* Guichenon, Histoire Généalogique de la Royale Maison de Savoye, 2 vols., large paper, Lyon, 1660, 60*l.* Duc de Guise, ses Mémoires, 2 vols. in 1, Cologne, 1669, 31*l.* 10*s.* Comte Hamilton, Œuvres, 4 vols., illustrated, Paris, 1812, 36*l.* 10*s.* Harrisii Matrona Ephesia, bound by Monnier, in variegated leathers, 136*l.* Hayward's Sanctuarie of a Troubled Soule, in old English morocco, 31*l.* 10*s.* Heinsii Orationes, presentation copy to Thuanus, 66*l.* Heliodore, traduit par P. Vallet, 14*l.* 10*s.* Henault, Abrégé Chronologique, large paper, in blue morocco by Derome, with his ticket, 56*l.* Herberstain, Res Moscoviticæ, Grolier's copy, 161*l.* Entrée de Henry II. en Paris, 470*l.*, the Yemeniz copy having sold for only 710 fr. Herrera, Historia General, Count Hoym's copy, 42*l.* Heures à lusaige de Paris, printed by S. Vostre in 1508, on vellum, magnificently bound by Clovis Eve for P. de St. Germain, 135*l.* Hieronymi Epistolæ Selectæ, a small duodecimo, magnificent specimen of the taste of Margaret of Valois in binding, 109*l.* A curious collection of French Histoires Prodigieuses, 25*l.* Hogarth's Works, including the rare Sunday March to Finchley, 40*l.* 10*s.* Holbein, Icones Veteris Testamenti, two editions—1539, 20*l.*, and 1547, 27*l.*; Court of Henry VIII., 40*l.*; Dance of Death, engraved by Hollar, 35*l.* Holland's Heroologia, 17*l.* Various engravings by Hollar, 323*l.* Homeri Ilias, Versibus Neo-Græcis, 45*l.* Hooge's Landing of William III., 27*l.* Horæ, with beautiful woodcuts by Tory de Bourge, in Grolier binding by Clovis Eve, 349*l.* Horace, printed in 1527 by Aldus, 45*l.*; printed by Elzevir in 1629, red morocco by Deseuil, 45*l.* 10*s.*; 1676 edition, bound for Count de Begon by Boyet, 46*l.*; Horatius a J. Pine, the Post-Est edition, 16*l.* Horstii Paradisus Animæ Christianæ, bound by Deseuil, 24*l.* Forty-seven select portraits by Houbraken, 114*l.* Hoyer's Gedichte, printed by L. Elzevier, 25*l.* Hugenii Momenta Desultoria, large paper, 20*l.* Hulsen's Pageants, 33*l.* Humbert, Combat à la Barrière, with plates by Callot, 19*l.* Itinerarium Portugallensium in Indiam et in Occidentem, 78*l.* Jacobi Hodoeporicon Ruthenicum et Hudsoni Detectio Freti ad Occasum, 70*l.* Jacobi II. Exequialia, 23*l.* Jappon, &c., 70*l.* Jean Damascene, Histoire de Barlaam et Josaphat, Henry III.'s copy, 195*l.* Jehan Zebedee, Apocalypse, 255*l.* Inigo Jones's Designs, with autograph of "A. Pope, given me by the Earl of Burlington," 21*l.* 10*s.* Joinville, Histoire de S. Louis, with arms of Marie de Médicis, 23*l.* 10*s.* Life of Mrs. Jordan, illustrated with portraits, playbills, &c., 140*l.* Josephus, traduit par M. Arnauld d'Andilly, large paper, bound by Derome, 24*l.* Jovii Vitæ Vicecomitum, with portraits by G. Tory, 189*l.* Junii et Sambuci Emblemata, De Thou's copy, 79*l.* Justinian, Histoire de Scios, 26*l.* Justinus, printed in 1640 by Elzevir, bound by Le Gascon, 42*l.*; another copy, bound by Roger Payne, 2*l.* 10*s.* Korb, Diarium, 20*l.* 10*s.* La Bruyère, Caractères, 1731 edition, bound by Boyet, 46*l.* 10*s.* La Chambre, Discours, bound by Le Gascon, 52*l.* 10*s.*; another copy, bound by Ducastin, 1*l.* 11*s.* La Chau et Le Blond, cabinet of the Duc d'Orléans, proofs of the *culs de lampe*, vignettes, and *médailles Spintriennes*, only 71*l.* Lactantius, printed at Subiaco in 1465, and the first book issued with a date in Italy, 285*l.* La Fontaine, Fables, the only complete edition published by the author, 15*l.*; Fables, four other different editions, 43*l.*, 21*l.*, 82*l.*, and 21*l.*; Contes, cuts by Romeyn de Hooge, 13*l.* 5*s.*; the edition of the Fermiers Généraux, 83*l.* 10*s.* La Marche, El Cavallero Determinado, a beautiful specimen of Roffet le Faucheux's binding for the Duc de Croy, 92*l.* 10*s.* Lanario, Guerre di Fiandra, dedication copy to Albert Archduke of Austria, in embroidered velvet, 20*l.* 5*s.* La Serre, Pageants, 66*l.* and 26*l.* Lastanosa, Museo, 36*l.*, bound by Derome; another copy in Spanish binding, 2*l.* 12*s.* 6*d.*; Lastanosa, De la Moneda Iaquesa, 36*l.* Laudonniere, Histoire de la Floride, 53*l.* Le Blon, Konst Boecxken für Goutsmeden, 48*l.* Le Brun, Galerie de Versailles, 71*l.*; Galerie des Peintres Flamands, 69*l.* Le Carpentier, Hôtel de Ville de Rouen, 66*l.* Leon, Fauconnerie, 36*l.* Le Quien, Histoire des Dauphins, 25*l.* 10*s.* Le Sage, Diable Boiteux, 36*l.* 10*s.*, purchased in Dent's sale for 5*l.* 5*s.* Leslæus de Origine Scotorum, two copies, 27*l.* and 10*l.* 10*s.*; Lesley on the Rights of Mary Queen of Scots to the Crown of England, rigidly suppressed by Queen Elizabeth, 20*l.* Leylande, Laboryouse Journey, 21*l.* L'Heritier, Stirpes Novæ, 20*l.* 5*s.* Livius Variorum, bound by Deseuil, 21*l.* Livre de bien Vivre, printed by Verard on vellum, 330*l.* Livre de Cuysine, 33*l.* Lobineau, Histoire de Bretagne, Louis XIV.'s copy, 40*l.* Lobkowitz, Philippus Prudens, a fine specimen of the library of Charles I. of England, 42*l.* Longus, printed on vellum by Didot, with the original beautiful drawings by Prud'hon and Gérard, from the library of Marshal Junot, 900*l.*; the translation by Maarcassus, 19*l.*; and three copies of Amyot's translation with the designs by the Regent Duke of Orleans, 34*l.* 10*s.*, 21*l.* 15*s.*, and 17*l.* 10*s.* Loniceri, Venatus et Aucupium, 14*l.* 5*s.* Louis XIII., Soleil au Signe de Lyon, dedication copy to Louis XIII., bound by Clovis Eve, 235*l.*; Voye de Laict, bound by Le Gascon, 53*l.* 10*s.*; his Reception in Paris, 52*l.* 10*s.* Lucanus Aldi, Grolier's copy, 290*l.*, and another copy 120*l.*; Lucanus Stephani, also

probably bound for Grolier, 135*l.*; Lucanus Variorum, bound by Boyet, 84*l.* Lucretius a Creech, Count Hoym's copy, 61*l.* Macrobii Opera, bound by Deseuil, 39*l.* Mahumedis II. Epistolæ, and other tracts in the volume, 28*l.* Maidment and Pitcairn's Nugæ, 24*l.* The total amount obtained for 2,082 lots, forming the first nine days' sale, is 16,817*l.* 3*s.* We shall continue our report next week.

A NEW 'BIOGRAPHIA BRITANNICA.'

I HAVE undertaken the responsible task of editing a new 'Biographia Britannica.' I cannot hope for success without the co-operation of the most competent living authorities. I have received very encouraging promises of support from nearly every one to whom I have applied, and have found a general belief that such a book is much needed. I am anxious to obtain help from all who are able and willing to give it. I shall therefore be obliged if you will permit me to state some particulars of the plan, so far as it is at present put into shape, in order to invite both criticism and co-operation.

The dictionary is intended to include English, Scotch, and Irish names from the earliest period. This includes Americans who were also British subjects. It will not include any names of living persons.

The first difficulty is to fix the scale, the number of names to be admitted, and the space to be allotted to each. I may point to the precedents of the 'Biographie Universelle'; of the incomplete dictionary published (1842-4) by the Society for the Diffusion of Useful Knowledge; and of the great dictionary of German biography, which has now reached the letter K. The English lives in the second of these dictionaries seem to me to afford the best model of the desirable mode of treatment. Apart from precedent, one or two principles are clear. We should aim at giving the greatest possible amount of information in a thoroughly business-like form. Dates and facts should be given abundantly and precisely; it is of primary importance to give in all cases, and upon a uniform plan, a clear reference to the primary authorities; and in the case of literary biographies it is important to give a full bibliographical notice. It would, however, be easy to ensure failure by attempting too much. We must exclude much if the dictionary is not to break down under its own weight. We must, in the first place, exclude (with certain exceptions) names which are only names. A biographical dictionary must be a collection of biographies, and cannot be a full catalogue of names. This, I may add, implies a limit to the bibliographical part of the work. Of the 46,000 and odd authors in Allibone's dictionary, a large proportion are known only by the title-page of some obscure book. To give all such names with their writings would be to incorporate the whole of such books of reference as Allibone, Watt, and Lowndes; and to add a vast mass of similar information. For this reason, though the bibliographical part of the book will be of great importance, we must omit many names and be content in other cases with a reference to more special works of authority.

We still have to deal with a great mass of information. Biographies of this kind may err by being too diffuse or too meagre. We must, of course, aim at condensation. Philosophical and critical disquisition, picturesque description, and so forth, are obviously out of place, and must be rigorously excised. There is a kind of diffuseness, too, which comes from simple verbosity, due chiefly to the fact that copying is easier than condensing. The whole pith of many articles in Chalmers and the old 'Biographia' might be given in half the space occupied in those works, and often in much less. On the other hand, it is a mistake to economize space by omitting any useful information. And when we ask what information comes under that head, it is not easy to draw the line. Elaborate analysis of character or exposition of critical theories is irrelevant; but a reader may fairly ask to have characteristic anecdotes in their most authentic form, and a clear statement of the view taken by a statesman of political controversies or of the position in the history of literature of a remarkable poem. A writer in a dictionary must be historical, not controversial or discursive; he must credit his readers with some knowledge of surrounding facts; he must put what he has to say in a pithy and condensed form; he must, as a rule, say nothing which would be equally appropriate under several other names; and, in short, he must be strictly biographical. But, granting this, I think that it would be hard to exclude anything which fairly deserves the name of biographical. I have been asked whether anything in the way of "literary style" is to be admitted. If style means superfluous ornament, I say emphatically, No. But style, and even high literary ability, is required for lucid and condensed narrative, and of such style I shall be anxious to get as much as I can. A biography written with a single eye to giving all the information presumably desirable by an intelligent reader may be not only useful, but intensely interesting, and even a model of literary art.

Such statements are necessarily vague. My general impression is that it will be possible, and that we should endeavour, to give a number of names large enough to satisfy any reasonable demands by condensing the more insignificant biographies, though with full reference to authorities, and thus making space for a fuller treatment of the most important. Thus, to give an instance from the old 'Biographia,' the space given to such a divine as Amory, who occupies five large folio pages, may be reduced to one-fifth at most; whilst the researches of Carruthers, Croker, Dilke, Elwin, and Courthope make it necessary to give a much fuller treatment of Pope than he has hitherto received.

I hope, however, to be able to give more precise indications to contributors. It is proposed, in the first place, to issue lists of names intended for insertion. I shall be much obliged to any one who will read such lists, mark errors and omissions, state what articles he would be prepared to undertake, and offer any suggestions that may occur to him. I shall be glad to receive the names of any who may be willing to contribute; and contributors will be peculiarly welcome who have made a special study of any particular period or class of biographies. I hope, further, to be able before long to prepare a few specimen lives, which can be seen by contributors, and which will, I hope, serve better than a general description to indicate the intended standard of treatment.

Further particulars as to date and mode of publication will be announced in due time.

Finally, I have one remark to add. The editor of such a work must, by the necessity of the case, be autocratic. He will do his best to be a considerate autocrat. LESLIE STEPHEN.

Literary Gossip.

THE life of Newton's favourite niece, Mrs. Conduit, which the late Prof. De Morgan wrote many years ago, and spent a long time on enlarging, is at last to appear. It may be as well to say that De Morgan was one of those who believed "sweet Mrs. Conduit" was privately married to Lord Halifax.

THE first instalment of the English Dictionary, edited by Dr. Murray, will be published early in February. It has been found necessary, owing to the accumulation of material, to enlarge the size of the dictionary beyond the limits that we mentioned some time ago.

A GOOD deal of nonsense having been written about the Hamilton Manuscripts, it may be well to say that the family papers were never offered for sale. Consequently the large collection of State documents of the seventeenth century was not included, being regarded as an heirloom. Bishop Burnet used many of these papers for his lives of the two Dukes of Hamilton, and Mr. Rawson Gardiner has recently edited some selections from them for the Camden Society, but there are many valuable letters of the reigns of James II. and William III. which have yet to be printed.

THE Prussian Government has given Dr. Lippmann a high order for his adroitness in purchasing the collection. Much blame has most absurdly been heaped on Messrs. Sotheby, Wilkinson & Hodge for selling the collection to a foreign government. But their business simply was to sell to the highest bidder. The sixteenth century papers that have gone to Berlin are not supposed to be of much value.

MR. FREDERIC W. H. MYERS will contribute to the January number of the *Century Magazine* an article containing his personal recollections of the late Dean Stanley.

THE Roxburghe Club has just issued to its members 'The King's Prophecie; or, Weeping Joy: Expressed in a Poem to the Honour of England's too great Solemnities,' by Jos. Hall. This very rare poetical pamphlet, believed to have been written by Bishop Hall, is edited by Mr. Buckley, who contributes a very interesting preface. For a long time only one *imperfect* copy was known, which was in the collections of Mr. Benjamin Heywood Bright and of Mr. Corser, and is now in the British Museum. "In the winter of 1881 a second copy, quite complete, was discovered by Mr. J. E. T. Loveday in the library of Williamscote House, near Banbury, Oxfordshire," and from this copy the Roxburghe volume has been edited.

LOVERS of Shakspeare will be glad to learn that 'Henry IV.,' Part II., has at length been added to the series of Mr. Griggs's facsimile quartos. There is only one edition in quarto, dated 1600, but there are two diverse issues, in consequence of an omission discovered by the original publisher in sheet E, which necessitated an amplified reprint of that sheet (in six leaves instead of four), and, as might be expected, the correction was too late for most copies of the edition. The facsimile is done from the Duke of Devonshire's complete copy (with E in six leaves), but by means of marginal notes on E 1 and E 2 the variants of the first issue are recorded, while the two leaves E 3 and E 4 of that issue are added in complete facsimile at the end. Thus the student possesses in this new part a complete representation of the two forms of the quarto of 1600. Subscribers may expect to receive their copies very soon.

WE may note some alterations in the London weekly and monthly press. The *Mark Lane Express*, after being the property of a joint-stock company for some time, has just changed hands. It will be conducted on the old basis, but with some improvements which may increase its attractions. The *British Trade Journal*, which completed its twenty-first year last month, has been placed under new literary management. The price will be reduced to sixpence, and at the same

time the paper will appear in an enlarged form. Among the new features will be a series of sketches entitled 'Annals of Commercial Fraud,' in which the leading cases of the kind occurring during the past fifty years will be dealt with. The *Zoophilist*, hitherto published at sixpence, will commence a fresh series with the new year, at threepence, under different editorship. The features of the first number are (1) diagrams and particulars of a new process of slaughtering animals by electricity, the invention of Mr. St. G. Lane-Fox, who has presented the magazine with his patent rights; and (2) a social tale, by Mrs. Cashel Hoey.

During Mr. Goldwin Smith's recent visit to this country the publication of his monthly magazine, the *Bystander*, was suspended. Since returning to Toronto he has arranged for its reappearance as a quarterly. The first number of the new series will be published early next year, and the quarterly, like the monthly, will be entirely written by Mr. Goldwin Smith, the proprietor and editor.

Mr. Traill, formerly of the *St. James's Gazette*, is now a member of the editorial staff of the *Daily Telegraph*.

Mr. Rawdon Brown, of Venice, has recently transmitted to the Public Record Office four volumes of translations of the news-letters and despatches sent by the Venetian resident in London to his Government during the eventful years between 1645 and 1656.

Mr. A. Mackenzie, the indefatigable editor of the *Celtic Magazine*, has in the press a 'History of the Highland Clearances,' from the battle of Culloden to the present time. The work contains a reprint of Donald Macleod's 'Gloomy Memories of the Highlands' (now not procurable for any money). A full account is given of the evictions at Glengarry, Knoydart, Strathglass, Kintail, Glenelg, Skye, North and South Uist, Barra, Rum, Coigeach, Strathconan, and several other places.

'It was a Lover and his Lass' is the title of a new novel by Mrs. Oliphant, shortly to be published by Messrs. Hurst & Blackett. The same firm will also issue during January 'Sanguelac,' a novel by Mr. Percy Greg, author of 'Ivy: Cousin and Bride,' &c.

A poll of the burgesses of Hull took place on Saturday last on the question of adopting the Public Libraries Act, 1855. We regret to say that while 4,212 voted in favour of the establishment of a library, 5,889 opposed it — a hostile majority of 1,677. This is the third unsuccessful attempt to apply the Libraries Act to Hull.

The editorship of the 'Dictionary of Foreign Words and Phrases adopted into English,' for the preparation of which the late Mr. Stanford left a bequest of 5,000*l.* to the University of Oxford, or failing it to that of Cambridge, has been undertaken for the latter by the Rev. A. S. Palmer, the author of 'Leaves from a Word-Hunter's Note-Book,' 'Folk-Etymology,' &c.

Subhi Pasha, the Turkish Minister of Commerce, is well known in the West as an accomplished statistician and a numismatist. His own fine library was destroyed by fire, and his well-known collection of coins was sold. He, however, set to work with energy and accumulated another cabinet of coins. This, which is also valuable, he has given to the Imperial Museum at Constantinople, which is to be further enriched by a collection of ancient arms and armour, formerly contained in the Imperial Treasury and but rarely seen. The museum is steadily growing, and now attracts many travellers.

Prof. Schrader, of Berlin, has now completed his new edition of 'Die Keilinschriften und das Alte Testament.' It contains full and copious glossaries, with exhaustive commentary and notes.

Rückert's poem 'The Wisdom of the Brahman' has been translated into English by Mr. Charles T. Brooks and published at Boston, U.S. Prof. Max Müller, in his lecture 'What can India Teach Us?' published in the October number of the *Contemporary Review*, says of it: "One of the most beautiful poems in the German language is 'Die Weisheit des Brahmanen' ('The Wisdom of the Brahman'), by Rückert, to my mind more rich in thought and more perfect in form than even Goethe's 'West-östlicher Divan.'"

Messrs. Abel Heywood & Son, of Manchester, have commenced the publication of a collected edition of the works of Mr. Benjamin Brierley, one of the most prolific of the Lancashire *littérateurs*, and the editor of the Lancashire serial *Brierley's Journal*.

A work regarding the Order of St. John of Jerusalem and its archives at Malta will soon be published in the "Bibliothèque des Écoles d'Athènes et de Rome," by M. J. Delaville le Roulx. It will consist of about a hundred documents of the eleventh and twelfth centuries relating to the history of the Hospitallers in Palestine. The editor has been occupied in special researches on the history of the order for several years, and reported on the importance of these inedited documents to the Académie des Inscriptions in 1879.

The vacancy caused by the death of Bluntschli among the ten foreign members of the Reale Accademia dei Lincei at Rome has been filled by the election of Prof. Max Müller.

In our number for December 30th we shall give a series of articles on the Continental Literature of the Year. Among them will be Belgium, by MM. É. de Laveleye and P. Fredericq; Denmark, by M. Petersen; France, by M. F. de Pressensé; Germany, by Hofrath Zimmermann; Greece, by M. Lambros; Holland, by E. van Campen; Hungary, by Prof. Vámbéry; Italy, by Count de Gubernatis; Norway, by M. Jæger; Poland, by Dr. Belcikowski, of Cracow; Spain, by Señor Riaño; Russia, by Prof. Storojenko, of Moscow; and Sweden, by M. Ahnfelt.

SCIENCE

GEOGRAPHICAL NOTES.

The Russian Geographical Society has resolved to enter into relations with other scientific institutions, with a view to the joint publication of a detailed description of Siberia and a history of that region since its occupation by the Russians. In connexion with this undertaking the issue of a bibliography of all existing works and articles upon Siberia written in the Russian language is in contemplation.

Dr. G. Schweinfurth was employed last summer in a survey of the environs of the porphyry val ey at the foot of Gebel Dakhan to a distance of thirty miles. His map will accompany a monograph on the porphyry of the ancients which Dr. Oscar Schneider is having printed at Dresden.

As a curiosity we may mention that Lepsius's 'Fremdenbuch,' in charge of the German consular agent at Luxor, contains a carefully finished copy of Sir Gardner Wilkinson's original map of Thebes and its environs. This, we believe, is the only map of our great Egyptologist which has been published, all his other maps having been lost apparently past recovery.

F. Bayberger's 'Der Inngletscher von Kufstein bis Haag,' published as a supplement to Petermann's *Mittheilungen*, is an important contribution to the ever-increasing literature on the glacial epoch in Europe. The author has succeeded in collecting a vast amount of information, and this he sets forth clearly in the letterpress no less than on the map which accompanies it.

The *Deutsche Geographische Blaetter* of Bremen contains the concluding chapters of the report of the brothers Krause on their explorations in the Chukchi peninsula and Alaska. Their herbarium contains 193 species of phanerogamous plants, and the catalogue of their ethnological collection enumerates 295 articles.

The *Revue de Géographie* publishes a paper on the Pulh or Fulah, by M. J. de Crozals, in which the physical type of that race and its mingling with the negroes are dealt with in a masterly manner. M. P. H. Antichan's article on Bulam, one of the Bisagos Islands, is likewise worth attention; but the same cannot be said of M. Bunge's lucubration on the Western Sahara. It must be matter for surprise that a periodical of the standing of the *Revue de Géographie* should revive the question of flooding the Sahara. M. Bunge rejects the altitudes of Dr. Lenz as inconclusive, but had he read the paper on M. Gatell's explorations in the *Bulletin* of the Paris Geographical Society for October, 1869, he would have found that all the wadis and rivers to beyond Cape Juby slope towards the Atlantic, and that there is no pretence for saying that there exists an "opening" along the coast through which the ocean could be admitted into the Sahara. A scheme like that of Mr. Mackenzie may fascinate for a time a few aldermen in the city of London, but it ought not to be countenanced by geographers. At all events, France is not likely to be called upon "d'empêcher l'Angleterre de disloquer son empire colonial Africain."

A member of Stanley's expedition has published a pamphlet at Brussels, in which the objects of the Comité d'Études du Haut Congo are fully set forth. The association bearing that name was founded at Brussels in 1878, with a capital of 40,000*l.*, and entrusted Mr. Stanley with the task of opening a road from the lower to the middle Congo. Its objects are exclusively philanthropic and scientific, and its stations are open to the missionaries and merchants of all nations. M. Gilles has established factories at Embomma and Noki, and a "Société Générale d'Exportation," established at Brussels in May last, proposes to avail itself of the facilities afforded for carrying on trade; but the Comité and the members of the staff working under it have not hitherto engaged in commercial transactions, nor do they propose to do so in the future. There is an undercurrent of dissatisfaction with M. de Brazza's transactions with King Makoko, and the fact that the French explorer received 20,000 francs from the International Association in 1879, in order to enable him to found stations on the Upper Ogowe

similar in aim to the stations founded by the Association elsewhere in Africa, is prominently stated.

At the last meeting of the Berlin Geographical Society, Dr. Finsch rendered an account of his three and a half years' residence in the islands of the Pacific. He visited in succession the Sandwich Islands, the Marshall and Gilbert Islands, the Carolinas, New Britain and New Ireland, the islands in Torres Straits, and New Guinea. The collection made during this expedition includes 4,000 ethnological articles, 200 skulls, 300 plaster casts taken from living individuals, and 6,000 vertebrate and 3,000 invertebrate animals. The curiosities brought home by him include the last canoe made from the bark of the bread-fruit tree and a chart composed of small sticks and shells, both from Jaluit.

There appears reason to believe that the traveller who wrote from Hami to the *China Mail* in the year 1879 under the pseudonym of "Pioneer," and who was referred to in the "Geographical Notes" of the *Athenæum* of October 14th, may be identified with Herr Mikhaelis, a German engineer employed by the Viceroy Tso.

The proposed statutes of the Russian Orthodox Palestine Society have been published with the approbation of the Imperial Government.

ASTRONOMICAL NOTES.

MR. STONE, Radcliffe Observer, under whose superintendence the organization of the British expeditions for observing the transit of Venus this year was ably carried out, has written to make the satisfactory announcement of the complete success of the party at Madagascar, where the principal observers were Revs. S. J. Perry and W. Sidgreaves, of Stonyhurst College, who also observed the transit of 1874 at Kerguelen Island, the southernmost station to which an expedition was sent. What makes this of especial importance is the fact of the success also of the party sent to Bermuda, for the "retarded ingress" observed at the latter place, compared with the "accelerated ingress" observed at Madagascar, forms an exceedingly favourable combination for the determination of the solar parallax. The stations for observation of the "retarded ingress" are also available for that of "accelerated egress," and include some of the West Indian islands; those selected for "retarded ingress" are in New Zealand, in which (as already remarked in the *Athenæum*) Col. Tupman was favoured with fine weather, and at Brisbane, Queensland, where a cloudy sky unfortunately prevented any observation being made. The Cape of Good Hope observations, which were very successful, are available for "accelerated ingress." No observing expedition was sent out by either the Austrian or the Italian Government on this occasion. Two parties proceeded from Belgium to different parts of America, and accounts have been received of the partial success of that one which went to Texas. No special expedition was sent from Holland; but it was arranged that Lieut. Heyming, of the Dutch navy, should select some station for observing the transit in the West Indies. Spain sent two parties of naval officers to Havana and to Porto Rico. The American expeditions were sent to the Cape of Good Hope and to South America, Prof. Newcomb being the principal observer at the Cape. Notes in the *Comptes Rendus* for the 11th inst. inform us that the ingress was well observed by Prof. Tacchini at Rome, the clouds clearing off from the sun just in time; that M. Janssen had a clear sky for observing the transit at Oran; and that at Marseilles, although the state of the sky left much to be desired, yet the astronomers there were able to observe the phenomena of the transit under conditions which M. Stephan (Director of the Observatory) considered good.

No. 2475 of the *Astronomische Nachrichten* contains a paper by Mr. J. Tebbutt, giving a fine series of observations of Wells's comet (I., 1882), made by him at Windsor, New South Wales, extending from June 19th to July 25th; also spectroscopic observations of the great comet (II., 1882), by Dr. von Konkoly, at O Gyalla, Hungary.

The death is announced of Prof. Gustaf Svanberg at Upsala on the 21st of November. Born in 1802, he became connected with the Upsala Observatory in 1829, and was Professor of Astronomy and Director of the Observatory from 1842 till 1875, when he retired. Under his superintendence the new observatory was completed in 1844, although it was not furnished with its full instrumental equipment till 1853. Svanberg's successor there was Prof. Hermann Schultz, the present able Director, well known for his observations and researches on nebulæ.

SOCIETIES.

ROYAL.—*Dec.* 14.—The President in the chair.—The Right Hon. J. Chamberlain was elected a Fellow.—The following papers were read: 'On the Development of Renilla,' by Dr. E. B. Wilson,—'On the Morphology and the Development of the Perithecium of Meliola, a Genus of Tropical Epiphyllous Fungi,' by Mr. H. M. Ward,—'Note on a Discovery, as yet Unpublished, by the late Prof. F. M. Balfour, F.R.S., concerning the Existence of a Blastospore and the Origin of the Mesoblast in the Embryo of *Peripatus Capensis*,' by Prof. Moseley and Mr. Adam Sedgwick, M.A.,—and 'On the Refraction of Plane-polarized Light at the Surface of a Uniaxal Crystal,' Part II., by Mr. R. T. Glazebrook.

ASIATIC.—*Dec.* 18.—Sir Bartle Frere, Bart., President, in the chair.—H.R.H. the Duke of Connaught, Sir Thomas Brassey, and Mr. A. Cassels were elected Resident Members, and H.H. the Maharani of Oodeypur, Lieut.-Col. C. M. Smith, and Mr. W. M. Ramsay, Non-resident Members.—Mr. A. Lillie read a paper 'On the Buddhism of Ceylon,' in which he combated the idea advanced by a section of writers, headed by Mr. Rhys Davids, that the ancient books of Ceylon teach nothing but annihilation, non-existence of the soul, and atheism. He cited the 'Tevigga Sutta,' in which Buddha is questioned on the subject of that union with Brahma which it was the great object of the Brahmin ascetic in Buddha's day to gain. Buddha, instead of answering that the supreme Brahma is non-existent, and that those who sought union with him were unwise, proclaimed distinctly the contrary proposition. Mr. Lillie then urged that the charges of annihilation, &c., brought against Buddha by Mr. Rhys Davids were founded on an erroneous reading of the Buddhist ideas about *Karma* and the *Skandas*. These, he stated, cease not on the death of the individual, but on his attaining spiritual awakenment. A passage in the 'Brahma Jâla Sutta' much relied on by Mr. Davids was then compared with its context, and it was shown that the doctrine of the annihilation of human beings was pronounced as heretical as that of future conscious existence. Mr. Lillie, in conclusion, expressed the opinion that the Northern and Southern systems should be compared, as by these means alone the archaic and true Buddhism could be detached from its later accretions.

SOCIETY OF ANTIQUARIES.—*Dec.* 14.—Mr. A. W. Franks, V.P., in the chair.—Notice was given of a ballot for the election of Fellows on Thursday, Jan. 11th, 1883.—Mr. E. Peacock exhibited a photograph of a wooden horn-book bearing the alphabet in two characters and the Paternoster, the latter with a variant reading, "*daily* trespasses," probably a mere blunder of the scribe.—The Earl of Mulgrave, through Mr. H. H. Howorth, exhibited a watch given by James II. to his natural daughter Catharine, created Countess of Doncaster, from whom it descended to the present owner. The outer case was of red cornelian, in compartments, with a bust of an emperor in the centre. The inner case had the royal arms of England; on the works the arms are repeated with the word "London."—Mr. E. Freshfield laid before the Society notes of visits he had paid to churches in various towns on the eastern coast of Italy, between Barletta and Taranto. The interest of these towns is that the country was wrested by the Normans, about the time of the Norman conquest of England, from the Greeks, every vestige of whose occupation appeared to Mr. Freshfield to have been destroyed. The actual towns visited and commented on by Mr. Freshfield in these notes were as follows: Bari, Bitonto, Trani, Molfetta, Canosa, Barletta, Taranto, Castel del Monte, Ruvo, and Brindisi. Mr. Freshfield observed that the churches passed under review fell into three groups. First, the group represented by St. Nicholas at Bari, where the building is a T-shaped basilica, with the transepts higher than the nave. Secondly, the buildings represented by the churches at Canosa, Molfetta, and the small church at Trani, where the buildings are entirely domed; and, thirdly, the cathedral at Bari, where the building is a T-shaped basilica, with a dome at the crossing. There are also the following peculiarities: 1. All the churches have three apses. 2. Several of the churches have square east ends applied to the apses. The domical and apsidal features were probably copied, in idea, from the Greeks. These valuable notes were the more interesting because they opened up a tract of country which is rarely visited by the English traveller, the accommodation (especially for ladies) being of a very inferior description.—Mr. J. G. Waller laid before the Society a paper on a beautiful wall painting in tempera of the Blessed Virgin and Child which had been discovered above the altar in the church of Great Canfield, Essex. Mr. Waller also exhibited a photograph of the painting, to which he assigned the date of the middle of the fourteenth century. Mr. Franks was disposed, however, to place it at the end of the thirteenth century. The figure of the Blessed Virgin was in royal attire, with tunic and mantle, also crowned, the hair long and flowing. Upon her lap is seated the Holy Child, also in tunic and mantle, whom she holds with her left hand while with the right she presents her bare breast. Notwithstanding this act of infant nurture, there is nothing in the Holy Child but the size to indicate the Babe. The proportions and dress are those of a youth, and He holds up His hand in the act of benediction. Mr. Waller took occasion to point out the various types which from the earliest times were met with in the representation of this subject, and which comprised more or less extensive fluctuations, from what he called the severe hieratic type, symbolical of the tenets of the Christian faith, to the more tenderly human aspect of motherhood.

ROYAL SOCIETY OF LITERATURE.—*Dec.* 13.—General Sir C. Dickson in the chair.—Sir P. de Colquhoun read a paper 'On Mohammedanism,' in which he sketched, briefly but effectively, the prophet's life. At first Mohammed, he said, aimed merely at the bettering of the moral condition of the Arab tribes. The development of his doctrine of the unity of God "without equal or companion" came afterwards. Sir P. Colquhoun pointed out many existing vulgar errors respecting the Mohammedan faith, which, in his view, differed in no respect, save in name and outward form, from that of Buddha and Christ. In advocating this view he maintained that Mohammed enfranchised the female sex, introduced the doctrine of a future state, abolished the immolation of human beings and of the lower animals as sacrificial atonements, promulgated the maxim "Let there be no violence in religions," and ignored any priestly caste.

PHILOLOGICAL.—*Dec.* 1.—Dr. J. A. H. Murray, President, in the chair; *Dec.* 15, Mr A. J. Ellis, V.P., in the chair.—H.I.H. Prince L. L. Bonaparte read a paper 'On Initial Mutations in the Living Celtic, Basque, Sardinian, and Italian Dialects,' which was illustrated by fifteen tables, containing complete lists of the kinds of initial mutation, suppression, and addition to any word under the influence of a preceding word to be found in these languages.—After the close of the second part of this paper the Prince read a very short paper on '*Roncesvalles* and *Juniper* in Basque, Latin, and Neo-Latin, and the Successors of Latin J.' He showed that the original Basque name for the place was Orreaga, "a place full of brambles," and that, as evidenced by the name for *juniper* in fifteen groups of languages, *j* assumed seventeen different forms.

MATHEMATICAL.—*Dec.* 14.—Prof. Henrici, President, in the chair.—Messrs. T. Woodcock and H. Fraser, Major Allan Cunningham, R.E., and Capt. P. Macmahon, R.A., were elected Members.—The Chairman announced that in consequence of ill health Mr. C. W. Merrifield had been obliged to resign the office of Treasurer, and that the Council had elected Mr. A. B. Kempe to the office.—Dr. Hirst having moved that a vote of thanks for Mr. Merrifield's past services and of condolence with him under the circumstances which led to his resignation be passed, the vote was carried unanimously.—The following communications were made: 'On the Vibrations of a Spherical Shell,' by Prof. Lamb,—'On the Absolutely Least Periods of the Elliptic Functions,' by Prof. H. Smith,—'On certain Relations between Volumes of Loci of Connected Points,' by Mr. Elliott,—'Geometrical Proof of Griffiths's Extension of Graves's Theorem,' by Mr. Walker,—'On Polygons circumscribed to a Tricuspidal Quartic,' by Mr. R. A. Roberts,—'Note on an Exceptional Case in which the Fundamental Postulate of Prof. Sylvester's Theory of Tamisage Fails,' by Mr. Hammond,—and 'On certain Quartic Curves which have a Cusp at Infinity, whereat the Line at Infinity is a Tangent,' by Mr. Jeffery.

ANTHROPOLOGICAL INSTITUTE.—*Dec.* 12.—Mr. M. J. Walhouse in the chair.—Mr. A. L. Lewis exhibited some neolithic flint implements and flakes found by him at Cape Blanc Nez, near Calais.—A paper by Mr. A. W. Howitt, 'On the Australian Class Systems,' was read, in which the author discussed and explained the various rules with respect to marriage adopted by several of the native tribes.

ARISTOTELIAN.—*Dec.* 18.—Mr. S. H. Hodgson, President, in the chair.—Mr. A. J. G. Lowe was elected a Member.—A discussion took place on the Prefaces and Introductions to Kant's 'Critic of Pure Reason.'

MEETINGS FOR THE ENSUING WEEK.

THURS. Royal Institution, 3.—'Light and the Eye,' Prof. Tyndall (Juvenile Lecture).
— London Institution, 7.—'Ether and its Functions,' Prof. O. J. Lodge.
SAT. Royal Institution, 3.—'Light and the Eye,' Prof. Tyndall (Juvenile Lecture).

Science Gossip.

MESSRS. ALLEN & Co. have in the press a work on 'Grouse Disease: its Causes and Remedies,' by Dr. D. G. F. Macdonald, which they will publish next month.

THE death is announced of Mr. John Sadler, Curator of the Royal Botanic Gardens, Edinburgh, at the early age of forty-five. Mr. Sadler was a botanist of authority, and was recently elected President of the Fungus Club, which was formed to popularize fungi as an article of diet. For his botanical and other services deceased was awarded the Neill Prize of 50*l.* by the Royal Caledonian Horticultural Society.

PROF. HENLE, the anatomist, has been appointed Permanent Secretary of the Royal Academy of Sciences at Göttingen in the place of the late Prof. Wöhler.

THE Accademia delle Scienze dell' Istituto di Bologna offers a gold medal of the value of 40*l.* to the author of a memoir which, upon sound principles of science, will indicate new and efficacious practical systems or new apparatus for the prevention or extinction of fires. Memoirs must be sent in before May 30th, 1884.

MR. JOHN LE CONTE in the *American Journal of Science* for December has an interesting paper 'On Apparent Attractions and Repulsions of small Floating Bodies,' in which a very clear explanation of these familiar phenomena, which, notwithstanding the mathematical theories of Laplace and Poisson, have remained a perplexing puzzle to many intelligent students, is given. It is not easy in our limited space to describe Mr. Le Conte's experiments, or to give his explanation, which involves the surface tension of the liquid and the tendency of capillary action to restore an equilibrium.

MR. C. E. DE RANCE, of the Geological Survey, read on the 5th inst. a paper before the Manchester Geological Society, 'On his Discovery of Manganese and Hematite in Denbighshire in the Old Red Sandstone.' The ore deposits discovered vary in thickness from six to twenty feet. Analysis has shown that the manganese ore contains 45 per cent. of metallic manganese.

THE *Chemiker Zeitung* gives the following modes of preparing incombustible writing and printing paper, which appear worth attention. The best asbestos is treated with a preparation of permanganate of potash and then with sulphuric acid. Ninety-five per cent. of this asbestos is mixed with five per cent. of wood-pulp in water containing borax and glue. A fire-proof writing ink is made by mixing Indian ink and gum with chloride of platinum and oil of lavender; for printing ink lampblack and varnish are to be substituted.

PROF. TYNDALL will deliver next Thursday, at the Royal Institution, the first of a set of lectures (adapted to a youthful audience) on light and the eye.

DR. CARL HIMLY and Herr L. von Frützschler-Falkenstein have invented a new explosive compound suitable for mining purposes and for firearms. It is a mixture of saltpetre, chlorate of potash, and a solid hydrocarbon. If ignited in the open air it burns slowly, but under pressure it manifests remarkable rending powers. This new explosive has been patented in this country by Dr. C. W. Siemens.

FINE ARTS

ROYAL SOCIETY of PAINTERS in WATER COLOURS.—The TWENTY-FIRST WINTER EXHIBITION is NOW OPEN, 5, Pall Mall East, from Ten till Five.—Admission, 1*s.*; Catalogue, 6*d.*
ALFRED D. FRIPP, Secretary.

SOCIETY of BRITISH ARTISTS.—WINTER EXHIBITION NOW OPEN, from Ten to Five Daily, at the Suffolk Street Galleries, Pall Mall East.—Admission, 1*s.* THOMAS ROBERTS, Secretary.

GROSVENOR GALLERY.—WINTER EXHIBITION.—The WINTER EXHIBITION of the GROSVENOR GALLERY is NOW OPEN, with a Collection of the Works of L. Alma Tadema, R.A., and the Landscapes of the late Cecil Lawson.—Admission, 1*s.*; Season Tickets, 5*s.*

SURREY SCENERY.—This Beautiful Series of Sketches and Drawings made by Mr. Sutton Palmer is NOW ON VIEW at Messrs. Dowdeswell's, 133, New Bond Street, two doors from the Grosvenor Gallery.—Admission Free.

DORÉ'S GREAT WORKS, 'CHRIST LEAVING the PRÆTORIUM,' 'CHRIST ENTERING JERUSALEM,' and 'MOSES before PHARAOH,' each 33 by 22 feet, with 'Ecce Homo,' 'The Ascension,' 'Dream of Pilate's Wife,' 'Soldiers of the Cross,' 'A Day Dream,' &c., at the DORÉ GALLERY, 35, New Bond Street. Daily, Ten to Six.—1*s.*

ART FOR THE DRAWING-ROOM.

Modern Etchings of Celebrated Paintings, with an Essay by J. W. Mollett (Sampson Low & Co.), contains twenty etchings from pictures in Paris, Madrid, London, Vienna, Frankfort, and Dresden. These capital transcripts were mostly, if not all, borrowed from the *Gazette des Beaux-Arts*, yet they are so good that they cannot be less esteemed on this account. The pictures include the 'Orleans Madonna,' etched by M. Gaillard in a fine, brilliant manner, appropriate to the early Raphael it represents. The portrait attributed to Holbein of 'Simon George of Cornwall,' etched by Herr Eissenhardt, is hard and cold, but drawn with precision, and, though defective in colour, like a Holbein. The portraits of Martin Day and his wife, by M. L. Flameng, after Rembrandt, are capital. Like a Hals is the 'Woman with a Glove,' by M. Boilvin. Herr Unger's reproduction of 'A Dutch Family,' by Jan Ver Meer, at Vienna, is, like all the transcripts from that artist's pictures, welcome. It gives finely the idiosyncrasies of Ver Meer, but is too small to do justice to the original. These are the best of the etchings. Mr. Mollett seems to have laboured under considerable disadvantages in the preparation of his letterpress; but he does not lack sympathy with the motives of the painters to whose art his attention has been drawn by "circumstances" rather than by special studies. Taste and ingenuity have enabled him to treat his subject deftly and sometimes to bring into unexpected apposition the subjects of the pictures, transcripts of which seem to have been furnished to him with instructions to make a book somehow or other. Accordingly, we cannot but admire the tact, even if we smile, that, in order to bring together the before-named Raphael and Del Sarto's portrait of Lucrezia della Fede at Madrid, has brought into comparison the "inspiration of Raphael and the skill of Del Sarto." The apposition is taking and looks correct; but the facts are patent to critics who look below the surface and refuse to see any greater or higher "inspiration" than that of sweetness and simple grace in the charming work of the young Urbinate; and as to the "skill" of Andrea, there is not a little questionable draughtsmanship in the features and form of his wife, to which Mr. Gilbert has done more than justice. Mr. Mollett might well give attention to the grounds for the assertions of some of his authorities. For example, p. 9 tells us that Holbein "transmitted to us the living reality" and "portraits from the life of such men as Luther and Erasmus." Admitting that Holbein delineated the features of Erasmus, we demur to the assertion that we owe to him any portrait of Luther, because we agree with R. N. Wornum in wondering why likenesses of "hook-nosed men are chosen to bear the name of Luther," while Cranach's portrait of the Reformer exhibits a slightly aquiline nose, and the nose of the well-known medal is straight. As might be expected from the very varied character of the etchings, Mr. Mollett's letterpress is, to say the least of it, discursive.

The Ruined Abbeys of Yorkshire, by W. C. Lefroy (Seeley, Jackson & Halliday), is, although the fact is not stated, a reprint of papers published in the *Portfolio*. Mr. Lefroy's readable but somewhat discursive and slight letterpress is accompanied by the etchings and woodcuts of MM. Brunet-Debaines and H. Toussaint. This well-printed volume is suited for drawing-room tables, owing to its picturesque illustrations and the readable nature of the letterpress. The mild archæology of the volume is acceptable to the educated palate; and Mr. Lefroy shows sympathy with the great monastic houses. He carefully explains the differences which dictated the architectural character, planning, and choice of site of each; and he does not omit to point out how each place owed all its history to the religious rule under which its inmates lived and died without a thought that all things about them would suffer transformation so complete that, as our author says, a countryman of Furness actually inquired if the Benedictines of that glorious abbey of rose-coloured stone, which for centuries was the centre of the life of the promontory of Lancashire, were "really black men," as he had been led to believe they were. The plans given, with the etchings and vignettes, suffice to give fair ideas of the abbey. The charming etchings of M. Brunet-Debaines are not quite so good and careful as other works of his with which we are acquainted, but they abound in picturesque elements; and his solid draughtsmanship has been employed with success in producing the lovely, but somewhat heavily drawn, 'Chapel of the Nine Altars at Fountains.' This abbey has, as it has a right to do, especially attracted the author and artist. Fountains is, indeed, "the crown and glory of all that monasticism has left us in England." Not even the majesty of Furness nor the incomparable loveliness of Rievaulx can surpass Fountains; not to have studied it is to be imperfectly acquainted with English Gothic architecture.

Modern Landscape. By J. Comyns Carr. (Remington & Co.)—Mr. Carr has republished in this volume *de luxe* a series of essays from *Art and Letters*. He has added numerous etchings, most of which have appeared elsewhere, by MM. Chauvel, J. Park, Greux, and C. E. Wilson, after Constable, Crome, Corot, Diaz, Daubigny, and Th. Rousseau. There are also some excellent woodcuts of thoroughly modern feeling and character. Mr. Carr's letterpress shows fine discrimination and close analysis combined with freshness and clearness of diction. He is right in saying that Titian was the founder of modern landscape art, and we may add that the background of Lord Darnley's 'Europa' is instinct with the spirit of fine modern landscape painting. In speaking of Constable and his very visible influence on modern French art, Mr. Carr might well have noticed the fine works of S. W. Reynolds, the renowned engraver, and Girtin, both of whom worked largely in France. But we do not agree with him in thinking that Stark had 'an equal claim to consideration" with Vincent. It is not altogether correct to say that the last exhibition of Vincent's 'Greenwich Hospital' (R.A. 1877) "sustained the reputation which it had won for its author." It was the International Exhibition of 1862 that rehabilitated Vincent's reputation. The Academy of 1877 added nothing to it. Mr. Carr, writing as he does from a standpoint in criticism which is almost, if not wholly, unaffected by technical considerations, is needlessly indifferent to the shortcomings of such artists as the late Mr. Cecil Lawson, to whose praise a concluding section of this volume is devoted. The

interest which belongs to most of the engravings in this work is so great that it may seem ungrateful to say that not a quarter of them have any relation to the text. Some of the plates are a good deal worn. Apart from all this, 'Modern Landscape' is one of the best essays of its kind, of this or recent seasons.

Nature at Home. From the French of Théophile Gautier. Illustrated by K. Bodmer. (Bradbury, Agnew & Co.)—The French of Théophile Gautier has been translated into English in a meritorious but somewhat stiff manner. The type of the volume is clear, and the "getting-up" substantial. The drawings of Karl Bodmer, well known in the original illustrated edition of the work, have suffered nothing in being reproduced and reprinted. A large number of them possess high technical value. They are fresh, crisp, and yet soft. The draughtsmanship is careful, and the engraving by M. P. Comte admirable. These cuts are richer in tones and tints than English practice usually affects; they have a peculiarly "mossy" texture, and are full of colour and capitally drawn. Worthy of especial praise are the gloomy shadows and glowing illumination of 'A Sequestered Pool,' p. 19, with its finely delineated pine trunks *en silhouette* against the vivid sky; the reflections of light and dark in the water are treated with exemplary skill. 'A Quiet Resting-Place,' p. 49, is delightful. The exquisite drawing and elegance that come of finished studies, combined with taste and an irreproachable touch, are apparent in many lovely vignettes of herbage, flowers, animals, and their nests. See 'Autumnal Lacework,' a cobweb and foliage of delicate draughtsmanship, showing the complex structure of the web and the foreshortening of some of its planes. A charming larger cut is called 'An Innocent Creature,' because it delineates a fawn at the side of a pool among woods. The effect of snow on dark foliage and herbage is cleverly represented by 'Winter Quarters' and 'Storm-Driven.'

The New Forest: its History and its Scenery. By John R. Wise. Artist's Edition. (Sotheran & Co.)—Twenty years ago (*Athen.* No. 1835, Dec. 27th, 1862) we reviewed the first edition of Mr. Wise's capital book on the last of the ancient forests of England which, in a measure, retains its original charms, Dean being the only other that can boast of large extent of woodland scenery. We may repeat the praise thus long since given to the book, which is a model to its class. We may once again praise the charming cuts, engraved by Mr. W. J. Linton, of woodland views by Mr. Walter Crane, who has since they appeared distinguished himself in other walks of art, and earned the hearty thanks of children, artists, and poets. Messrs. Sotheran & Co. have republished the volume with added luxury of printing and paper and binding of the very "newest block" or pattern. The fidelity with which, in tinted and pressed paper, this binding imitates freshly-cut boards is the sole drawback to our pleasure in examining this old friend in a new dress. This "Artist's Edition" is enriched with twelve etchings by Mr. Heywood Sumner, most of which are notable for their richness of tone, their soft, clear light and shadow, and the rural felicity which pervades the sentiment they express. We may single out for special praise 'Mark Ash,' a beechen glade in grey daylight; the reach of water shining in the twilight meadows of 'Beaulieu'; and the sombre twilight of 'Christ Church,' with the river in flood. The only unsatisfactory etching of the dozen is that which includes the weakly drawn oaks and rivulet of 'Queen's Bower.' We have repeatedly admired Mr. Sumner's delightful etchings of the scenery of the Avon and Itchen valleys.

Scottish Loch Scenery (Walker & Co.) contains a considerable proportion of unusually excellent and solidly drawn and well printed coloured views of lakes, waterfalls, streams, and estuaries, by Mr. A. F. Lydon. 'Lochmaben' is very pretty; 'Loch Doon' is noteworthy for good drawing and solidity. As a chromo-lithograph 'The Grey Mare's Tail' could hardly be improved; 'Loch Coriusk' is impressive enough to be worthy of its subject, the grandest and wildest of all the Scottish lochs. The descriptive letterpress which accompanies these pictures is soberly and carefully written.

A Royal Warren; or, Picturesque Rambles in the Isle of Purbeck. By C. E. Robinson. (The Typographic Etching Company.)—The typography, binding, and illustrations of this handsome volume are creditable to those concerned in its production. The paper on which it is printed is first-rate in colour, texture, and substance. Handsome without excess of ornament, its exterior ensures the volume a welcome to either the library or the drawing-room table. The letterpress really justifies the title, and gives an account of "picturesque rambles" in the so-called "isle," which never was an isle, of Purbeck. Mr. Robinson is a son of the Surveyor of the Queen's Pictures, one of the magnates of Swanage, the chief town of Purbeck proper, who as a landowner is no doubt interested in promoting the "opening up" of a district which as yet is truly "beyond railways." It is, therefore, no wonder that the writer laughs at the protests of those who object to a railway which, as it seems to be his pleasing mission to announce to the hungry shopkeepers of Swanage, will bring their goods at five shillings per ton less than they paid before, and ensure the coming of excursionists. As a "guide" this volume is too large, as a drawing-room table book it is deficient in refinement, as a book for the study it lacks learning. On the other hand, to easily pleased walkers by cliff paths and dusty roads, to the explorer of old churches and quarries, and to the idler in general, who likes to be amused by the gossip of a lively companion, who while he talks has a keen eye for the picturesqueness of the landscape, we heartily commend this book, notwithstanding its flippancies and crudities. In short, it is an uncritical guide-book *in excelsis*. The illustrations of Mr. A. Dawson are not the less welcome because they seem to owe a great part of their charms to photography.

The Vanity Fair Album. By Jehu Junior. (*Vanity Fair* Office.)—In this, the fourteenth volume of the series, the letterpress is more bitter than ever, and thus gives extra piquancy to the likenesses and memoirs. The taste of the "cartoons" has improved, and the portraits are as good likenesses as ever; they are less grotesque, for those vertebral curvatures which characterized the earlier examples are exceptional now. It looks as if the joke of delineating monstrous heads on little bodies has at last grown threadbare. Not only is it so, but the faces are better drawn and less coarsely caricatured, though there is not a cartoon fit to be compared with that lately published in *Moonshine* delineating the escape of Arabi Pasha, a vulpine ape, over a bridge of suspended apes, each grasping its front neighbour's tail. 'Lord Robartes,' though not free from caricature, is capital. There is a dogmatic energy in the expression of Spy's 'Mr. John Holms' that deserves praise. 'Lord Haldon,' by Spy, is all the better for its solidity and quiet air. It is in this respect like 'Mr. Errington,' 'Lord Henniker,' 'Mr. Cyril Flower,' 'Lord Walsingham,' and Sir John B. Lawes,' which are all by "T." They are sober but subtle satires, and good in their way. Spy is a caricaturist in 'Col. Lindsay,' '"General" Booth,' and others; he is dull and weak in 'Dhuleep Singh' and 'Sir J. W. Ellis'; exceedingly happy and strong in 'Mr. Smiles,' the admirable 'Sir Harry Verney,' 'Col. J. J. Macdonnell,' and 'Mr. Dion Boucicault.' The last is among the best of the portraits, and only a little better than 'George Fordham.' Of the literary portraits one of the most shrewd is that devoted to 'Mr. Lecky.'

ART FOR THE NURSERY.

Stories of Old Renown: Tales of Knights and Heroes. By A. R. Hope. Illustrated by Gordon Browne. (Blackie & Son.)—This nicely prepared volume is enriched by a collection of old romances of chivalry and love, which are compactly and clearly related, in a simple but not colourless manner. The legends comprise 'Roswall and Lillian,' 'Ogier the Dane,' 'Guy of Warwick,' 'Patient Griselda,' and others. The sketches, they are nothing better, which accompany the text have considerable spirit, and rather assist than detain the reader, who is sure to be in haste to devour the book.—*Sixes and Sevens*, by F. E. Weatherly, has been illustrated by J. M. Dealy and published by Messrs. Hildesheimer & Falkner. The letterpress consists of lively verses for the amusement of children. The designs are printed in tolerable colour, and suggest a fairly happy combination of the manners of "E. V. B." and Mr. Caldecott, but they do not possess the merit of either of these artists.—*The Light of the Nursery*, *Sunny Hours*, and *The Tiny Lawn Tennis Club* are children's books issued by Messrs. Dean & Son. We cannot praise the draughtsmanship of any of the illustrators. Mr. E. Dewane, who produced the pictures of the first-named of these works, has not attained power sufficient to place his figures safely and truly on their feet, to draw their draperies, or give expression to their faces. His ideas of colour are of the weakest order. Mr. G. Lambert is, compared to Mr. Dewane, a finished draughtsman and a Rubens in colouring; but although a few of his children are pretty and child like, his powers of design are superior to his powers of expression. This is not saying much for them, yet it is certain that they excel the owner's skill. The "Designer of the Children's Kettledrum," who thus designates him- or herself as the artist to whom the world owes the unequal pictures of 'The Tiny Lawn Tennis Club,' is, for the present, wisely content to hide his, or her, light under a bushel. These works do not promise a brilliant artistic future. The fact is, these illustrations are due to draughtsmen who ought still to be in the drawing school.

THE EXPLORATION OF ASIA MINOR.

On Thursday, the 14th inst., Mr. W. M. Ramsay gave a public lecture at 22, Albemarle Street, to members of the Hellenic Society and others, on Phrygia in its relation to Greek art, history, and literature. The history of the country was to be gathered from its natural features, references in Greek literature, ancient monuments, and inscriptions; but intimate topographical knowledge was the first and most essential source of information. After describing the country, and pointing out that Phrygia forms the western half of the great central plateau of Asia Minor, Mr. Ramsay proceeded to show how the grand and monotonous character of the scenery had influenced the legends of Phrygia, which, in contrast to those of Greece, are all of a mournful kind. Hence the Greeks and Phrygians, though sister races, became from their surroundings totally different in character. The names of towns, among other things, prove social life in Phrygia to have been completely dominated by religion. The native organization of Asia Minor centres in the *hieron*—the sanctuary; that of Greece rather in the *polis*—the city or state. In the several religious centres the priesthood had all the power, and the gift of prophecy, or the power of revealing the will of the god, was a leading feature of the system. The mystery which lay at the root of the enthusiastic worship of Phrygia and other parts of Asia Minor was the perpetual self-identity which underlies both life and death. All through Greek history we find this religion pressing on the true Hellenic religion, so that, although for a time the Hellenic spirit of order and moderation toned down the excessive ecstasies of the invader, when the

Hellenic religion decayed the rites of Asia Minor and Egypt were ready to take its place, until these again gave way before Christianity. It is easy to understand why this religion was opposed and proscribed alike by Greeks and Romans as subversive of all morality; but to judge it fairly its pantheistic views of nature, its sympathetic perception of the divine in the world around, must be remembered to its credit. Another feature in the social system of Asia Minor is the high place assigned to woman in its religion. Thus in historical Lydia it is the hand of the woman that confers the kingdom; and in legendary times divine descent in Asia Minor takes the form of the mother being a goddess and the father a mortal, whereas in Greece the case is usually reversed.

Phrygia is for the most part cut off from the sea by rugged mountain chains, but there is a single cleft running all the way from the Phrygian city of Celænæ to the sea at Miletus. This must have been used as a trade route from the earliest times, and upon it depends the whole history of Asia Minor in the Greek and Roman period. The Greek inland colonies were planned in reference to it, and it was still further developed by the Romans. The road system of each province converged to one of the great towns on the road, so that not trade only but all government depended upon the great highway. Thus the Roman governors of Cilicia under the Republic used to land at Ephesus and travel by this road to Tarsus. It being easy to hold *conventus* at Laodiceia, Apameia, and Synnada as they passed, these three districts were attached to the distant province of Cilicia instead of Asia, to which they naturally belong. When the harbour of Miletus was silted up, Ephesus took its place as the terminus of the road until, this town also losing its harbour, Smyrna became, as it still remains, the chief seat of trade on the Ægean coast.

When Constantinople became the centre of the Roman world, the road system of Asia Minor was revolutionized in order to connect the new provinces with the capital. This dependence of the road system on the situation of the centre of civilization for the time being raises another problem as to the eastward terminus of the Royal Road, described by Herodotus as running along the north side of the great central plateau of Asia Minor. Mr. Ramsay brought various arguments to show that there must have been a great city in early times in Northern Cappadocia, the existence of which would at once explain the course taken by this Royal Road, and also why Sinope was the outlet, as it is known to have been, for the trade of the interior. Now (1) such a city has actually been discovered in the right spot by M. Perrot, the massive fortifications of which, and its magnificent remains of primitive art, prove it to have been a city of the Oriental type – older than, and unaffected by, Greek civilization. This city is identified by Perrot with the city of Pterion mentioned by Herodotus. (2) The course of the road from this city across Phrygia to Sardis is marked by a series of great religious and trading centres, several of which disappeared from history at an early time, and presumably, therefore, when the Royal Road decayed. Such were Tavium, Ancyra, Gordium, Pessinus, and also Orcistus, beneath the walls of which is the tomb inscribed with the name of "Midas the King." Mr. Ramsay even believed that at one spot he found traces of the road itself where it crossed the Phrygian mountains by a path cut in the rock. (3) Sculptures of the same style of art and religious character as abound at the capital of Cappadocia are also found at intervals along this road. (4) Greek legend always localizes the old Phrygian kings, not in Southern Phrygia, which is traversed by the trade-route from Celænæ to Miletus, but in Northern Phrygia, in the broad valley of the Sangarius. It was here that Priam fought for the Phrygians against the Amazons, and it is here that we find the cities of the Royal Road. (5) Lastly, as the names of the cities on the later trade-route refer to the Græco-Roman period, so those of the cities of the Royal Road refer to the old Phrygian mythology and religion — all are connected with Gordius and Midas, the legendary kings. All this goes to show that long before the Persian conquest a well-developed civilization existed along the north side of the plateau of Asia Minor; that regular communication between Sardis and the cities beyond the Halys was encouraged by the existence of a well-constructed road, with a bridge such as presupposes great engineering skill thrown across the broad and rapid Halys. That Midas, with whom the story of the old Phrygian kingdom was mythologically connected, was an historical personage, has been proved beyond a doubt by the discovery, in 1800, of a splendid tomb inscribed with his name. The downfall of his kingdom about 670 B.C. through a Cimmerian invasion made a lasting impression on the Greek mind. The Phrygians never regained their political power, but fell first under the domination of the Lydian kings, and then gradually, both in art and other matters, became subject to Greek influence; so that the later conquest of the country by Alexander only consummated a change which had been growing for centuries. Phrygian art lost henceforth its native strength and power of development.

Mr. Ramsay then proceeded to suggest that the Oriental influence commonly traced in early Greek art might have found its way to Greece through Phrygia as well as by sea from Phœnicia. This was rendered the more probable by Prof. Curtius's now established theory of the artistic influence exercised on the Greeks by Oriental carpets, for there was evidence of such carpets being at least carried through Phrygia to Sinope, if they were not made in Phrygia itself. Moreover, the well-known device in archaic Greek art of two animals placed symmetrically face to face, of which the Lion-gate at Mycenæ was the typical example, was of frequent occurrence on Phrygian monuments; and in this connexion it was interesting to remember the supposed Phrygian origin of the house of Pelops. Turning to Greek literature, Mr. Ramsay argued that the fact of the scene of the Iliad being laid in Asia Minor, of the Odyssey dealing mainly with the islands, of the early legends, especially that of the Argonauts, being connected with the discovery of the Black Sea and the lands beyond it, seemed to point in the same direction towards an Asiatic origin of Greek civilization, and to suggest that the impetus to civilization was largely given by the early voyages of Greek sailors to the East. In conclusion, Mr Ramsay touched briefly on certain Christian inscriptions recently found in Phrygia, which seemed to throw light on some important personages in the early Church.

Prof. C. T. Newton, who was in the chair, thanked the lecturer for his able and suggestive memoir, and expressed the hope that he might not be the last explorer sent out, whether under the auspices of the Hellenic Society or of any other body, to prosecute researches in Asia Minor. The clues indicated by Mr. Ramsay well deserved to be followed out, and it was to be hoped that before long a trigonometrical survey might be made of the whole of Asia Minor. It may be added that the subscription of 500*l.* to enable Mr. Ramsay to carry on his work is not yet complete, and contributions may still be paid to Mr. George Macmillan, 29, Bedford Street, Covent Garden, or to Messrs. Robarts, Lubbock & Co., Lombard Street, E.C., to the credit of the Asia Minor Exploration Fund.

Fine-Art Gossip.

The private view of the Winter Exhibition of the Royal Academy is appointed for Saturday next, the 30th inst. The gallery, which comprises pictures and drawings by John Linnell and D. G. Rossetti, will be opened to the public on the following Monday.

The private view of the collection of pictures belonging to the Marquis of Bute, and generously lent to Bethnal Green Museum, occurred on Wednesday last. We have recently mentioned some of the more important of these works, and may yet have more to say about them.

The Council of the Surrey Archæological Society, having been informed of the threatened demolition of the Archiepiscopal Palace at Croydon, unanimously passed the following resolution at a meeting held on Wednesday at their rooms, 8, Danes Inn, Strand: "That the Council of the Surrey Archæological Society, having heard with great regret that there is a probability of the destruction of the ancient Archiepiscopal Palace at Croydon, earnestly deprecate any injury being done to such a venerable monument of antiquity, and are desirous of being placed in communication with any person, or bodies of persons, who are taking active steps with the object of preserving this interesting building."

Recent reports to the Committee of the Society for Preserving the Memorials of the Dead describe the results of inquiries into the treatment vouchsafed of late to several private and public records of great interest and, in many cases, of considerable beauty. All these reports show the need for enlarged means and wider range of action on the part of the society. One correspondent, who had noticed in Pickering Church, Yorkshire, at the west end of the nave, a fine cross-legged effigy in marble, believed to be of one of the Bruce family, found it, on a second visit, after the church had been "restored," behind the organ, in a higgledy-piggledy of chairs and forms, out of sight. It seems hardly credible that the "restoring" architect did not recognize the fact that this relic was of more value and interest than any of his new works. At Aldborough, in Suffolk, part of the legend of a brass was lying in the vestry of the church, and in two pieces. Mr. H. W. King relates of Messing Church, Essex, that a curious wooden effigy of a "Crusader," in chain armour, recently occupied a niche in the north wall; on visiting the church in order to draw this monument he found that the late vicar had given it, a short time before, to the parish clerk, to be burnt as a piece of useless lumber. The latter official actually burnt this rare relic! The same correspondent asserts that at the "restoration" of the church at South Weald, Essex, the monumental brasses were removed from their slabs and given away. "Through the medium of *Notes and Queries* they have been recovered and restored, but it is impossible to replace them *in situ*." The altar-tomb of Sir Anthony Browne, Chief Justice of the Common Pleas, was destroyed, although he was the munificent founder of the Grammar School of South Weald. The paths of the churchyard are paved with sepulchral slabs removed from the church, and their inscriptions are now, consequently, nearly or quite illegible. We ourselves lately saw the memorial stones of Swanage Churchyard removed from their places and stacked against the wall. At Low Leyton, Essex, the sepulchral slab of John Strype, the historian, has been buried beneath a new pavement. The last monumental brass in Prittlewell Church, Essex, "was abstracted a few years since, and is believed to be now in private possession." A Norfolk farmer writes:—"Have seen a great many of the churches of the county, and strange alterations made; the old knights and esquires' tombs, &c., moved and destroyed by the new men just under a pretence, and to make room to get those Minton's tiles down." Another correspondent wrote:—"I desire to call your attention to the fact that a tomb (altar tomb) standing within the altar rails of the ancient church of Furthoe, Northamptonshire, has lately been removed and destroyed by the incumbent, the

Rev. J. Chalmers." It is thought to be the tomb of the founder of the church, Sir Gilbert (or William) de Furthoe. It appears that the loose portions of the famous Felbrigg Cross, Norfolk, to the absence of which from their places we called attention more than two years ago, have not yet been reset.

The good example set by the Cumberland and Westmoreland Antiquarian Society in collecting and publishing a complete inventory of all the church plate in the diocese of Carlisle seems likely to be soon followed. The societies of Kent and Derbyshire are already at work in their respective counties, and the matter is being considered also in Yorkshire and in Sussex.

Messrs. Sampson Low & Co. publish *The Year's Art*, 1883, being the fourth issue. A new feature in this volume is a complete list of the R.A.s and A.R.A.s since the foundation of the Academy, with the dates of their births, elections, and, where not living, deaths. The names are placed in alphabetical order. This is the first complete list of the kind published, and will be extremely useful. Further lists of the officers of the Academy would be acceptable, or the information such lists would furnish might be embodied in that before us. The summary of the contents of the museums throughout the country has been extended, but, we think, need not be repeated annually. The extremely useful directory of artists' addresses has been extended to contain 3,500 names. The copious analysis of sales must have demanded great labour in compilation. There are also lists of engravings and books, and of art-dealers. This excellent volume justifies its title.

A new museum is to be erected at Brunswick in the ducal park.

Géricault's sketch for the 'Shipwreck of the Medusa' ('Naufrage de la Méduse'), which is in the Louvre, has been bought for 2,000 fr. by the Musée de Rouen.

An important collection of Japanese paintings, rolls, and coloured drawings, brought together by Dr. Gierke, of Breslau, has been bought by the Berlin National Gallery for 45,000 fr. This gathering is reported to be the most valuable and complete of its kind, and to illustrate Japanese art from the thirteenth century.

The French journals record the death of M. Pollet, engraver and water-colour draughtsman. He was born in Paris in 1811, and became a pupil of Ingres and Delaroche. In 1838 he obtained the Prix de Rome for engraving after having worked in the *atelier* of Richomme.

The Munich Artists' Association intend to hold in the summer of 1883 a great international exhibition in the Royal Crystal Palace at Munich, similar to those held in 1869 and 1879. Of the Central Committee Carl von Piloty is the Honorary President. Works for exhibition should be sent in between the 1st and the 31st of May. The Committee holds itself in no way responsible for any damage or loss of works delivered before the appointed time.

MUSIC

THE WEEK.

St. James's Hall.—Popular Concerts. Royal Academy Concert.

The last Saturday Popular Concert at St. James's Hall derived special interest from the first appearance at these concerts of Herr Pachmann, the Russian pianist, who paid a short visit to London last summer, when he was heard at Mr. Ganz's concerts, and likewise gave a pianoforte recital. Herr Pachmann chose for his solo on Saturday Chopin's rather laboured Sonata for piano, in B minor, Op. 58, and also joined Herr Joachim and Signor Piatti in Beethoven's great Trio in B flat, Op. 97. There can be no doubt whatever that the Russian pianist is an artist of the highest rank. His technique is beautifully finished, while the charm of his touch reminds us of Rubinstein's. His reading both of Chopin's and Beethoven's music left nothing to desire; while full of warmth and feeling, it was equally free from exaggeration and affectation. A finer performance of Beethoven's trio we do not remember. Another very interesting feature of Saturday's concert was Spohr's Duo in D minor, Op. 39, No. 1, for two violins, exquisitely played by Herren Joachim and Straus. The themes, though not especially characteristic of their composer, are graceful and pleasing; but that which distinguishes this and other duets by Spohr for the same instruments is the skill with which all feeling of thinness in the music is avoided. In many passages the composer, by means of "double-stopping," obtains the effect of a full string quartet; and even where each instrument has only a single note, the harmony is distributed with such skill that the absence of other parts is hardly noticed. It is possible that Spohr took as his models the two very interesting duets by Mozart for violin and viola, in which the treatment is somewhat similar. It would be worth Mr. Chappell's while to introduce these works also at the Popular Concerts, to give his audiences the opportunity of comparison. The concert commenced with an excellent performance by Messrs. Joachim, Ries, Straus, and Piatti of Beethoven's Quartet in D, Op. 18, No. 3. Miss Santley, the vocalist of the afternoon, sang with great taste songs by Molloy, Bennett, and Handel.

At Monday's concert Herr Pachmann again appeared, and played six of Chopin's Études, Nos. 4, 11, and 12, from Op. 10, and Nos. 6, 8, and 9 from Op. 25. Any suspicion of dryness which such a selection might reasonably have evoked was not justified by the result. The musical beauty of these immensely difficult studies was illustrated in the fullest manner by the Russian pianist, whose exquisite touch and perfect command over the gradations of tone invested them with a singular charm. The influence upon the audience was such as an artist of rare gifts can alone exercise, and it was only after a double encore that Herr Pachmann was permitted to retire from the platform. Beethoven's Quartet in F minor, Op. 95, and Mozart's Pianoforte Quartet in G minor, were the concerted works in the programme. Herr Joachim gave Spohr's *barcarolle* and *scherzo* from the Salon Stücke, Op. 135, and Miss Santley, who is rightly a favourite at these concerts, sang Gounod's 'Au Rossignol,' and two songs by Miss Maude Valerie White. After to-day, the concerts will be suspended until Monday, January 8th.

The improvement recently noticed in the arrangements of the Royal Academy Students' Concerts was only made after attention had long been called to faults which were irritating alike to the pupils and to all who were favourably disposed towards the institution. A change for the better has now taken place, and the programme of the Christmas concert, given on Friday week, was a model of its kind, and, considered merely as a musical entertainment, interesting and instructive. Only two examples of composition by students were included, but both of these were of some importance in design and structure. A Concertstück in A minor, for pianoforte, by Mr. Charles S. Macpherson, so much resembled Schumann's Concerto in its opening bars that a charge of plagiarism seemed imminent. But the likeness was but evanescent, the general character of the music being of the Mendelssohnian school. The extremely pleasing second subject of the principal movement shows that the young composer has some capacity for writing melody. A setting of the 137th Psalm, "By the waters of Babylon," by Mr. F. K. Hattersley (Balfe scholar), deserves higher commendation. Written for soprano solo and chorus, the work exhibits more than ordinary feeling for expression, marred only by technical shortcomings which will disappear with further study. It would be out of place to criticize in fuller detail compositions which, of course, should be considered chiefly in the light of exercises. Many pianoforte works exist more calculated to display executive talent in a favourable light than Brahms's new concerto; but it was highly commendable to afford the students an opportunity for making acquaintance with this modern representative work. The four movements were divided between Miss Margaret Gyde and Miss Annie Mukle, the former taking the first and third, and the latter the second and fourth sections. It was not to be expected that difficulties which almost overtax the energies of the strongest players would be entirely overcome; but the young executants grappled well with Brahms's ungrateful passages, the lack of physical power being compensated for by general neatness of execution. The concert concluded with a performance of Handel's 'Ode on St. Cecilia's Day,' a work rarely heard in its entirety. Mr. W. Sewell (Novello scholar), who had written an organ part, was permitted to state in the programme that "the task in making this addition was to fill up the customary incompleteness of Handel's score, with reverence for the author's design and in emulation of the manner of his time." It must be allowed that he has not overstepped the bounds of modesty, for comparatively little of the organ could be heard, and many passages imperatively requiring harmony were apparently left with the bare treble and bass. The effect of the music would have been enhanced by the use of Mozart's thoroughly artistic accompaniments, but as a means of showing what Handel's scores are like without any additional orchestration it was worth while performing the work in this way. The general rendering was excellent under Mr. Shakespeare's direction, the magnificent chorus "As from the power of sacred lays" being especially well given. Among the vocalists who appeared Miss Kate Hardy, Miss Thudichum, and Mr. Courtice Pounds displayed considerable promise, but the most distinct success was won by Miss Alexandra Ehrenberg, who sang Weber's "O Araby" with much beauty of voice and excellence of style.

Musical Gossip.

The first number of a new weekly journal, to be entitled the *Musical Review*, will appear on January 6th. In the preliminary announcement it is stated that the paper "will not be made the organ of a party, much less of commercial in-

terest of any kind"; and further, that in general independence and enlightenment the example of Schumann's *Neue Zeitschrift für Musik* will be followed. A feature of the *Musical Review* will be the issue of verses by the best writers for musical setting. The first number will contain a poem, hitherto unpublished, by the late D. G. Rossetti.

Mr. Henry Holmes announces another series of five Musical Evenings, to take place on Wednesday evenings, January 24th, February 14th and 21st, and March 7th and 14th, at the Royal Academy Concert Room. The list of compositions to be performed contains no novelties, but an excellent selection of classical and modern works.

Mr. Frederic Cowen conducted the Crystal Palace Concert last Saturday, in the absence of Mr. Manns, who has commenced his season in Glasgow. The young English composer's 'Scandinavian' Symphony was the principal item in the programme, and it was received with far more warmth than at its first performance at Sydenham. The beauties of the work certainly become more apparent at each successive hearing, and, despite some inequalities, it will compare favourably in charm and freshness of idea with any other symphony by a living composer. Miss Emma Barnett played Mendelssohn's Pianoforte Concerto in D minor and also three Impromptus by Mr. J. F. Barnett, the latter nicely written, agreeable drawing-room pieces. Signor Foli sang airs from Beethoven's 'Ruins of Athens' and Verdi's 'Nabuco.' The concerts will be resumed on Saturday, February 10th.

A performance of the 'Messiah' was given, under the direction of Mr. W. G. Cusins, on Saturday last at St. James's Hall. The cast of soloists was unusually strong, including Madame Albani, Madame Patey, Mr. Maas, and Mr. Santley; and the band and chorus numbered 300 executants.

Mr. Isidore de Lara gave a "vocal recital" at the Steinway Hall on Tuesday evening. The programme consisted of eleven songs and two recitations, the latter given by Mrs. Bernard Beere. Signor Li Calsi was the accompanist.

Messrs. Rudall, Carte & Co. announce a publication which is likely to prove of considerable artistic interest. They are about to issue by subscription a series of ten new pianoforte sonatas, which will be expressly composed for them by musicians of established reputation. The series is to comprise works by Dr. Ferdinand Hiller, Niels Gade, Edvard Grieg, Carl Reinecke, Anton Dvorák, Sir Julius Benedict, Prof. G. A. Macfarren, and Messrs. C. E. Stephens, John Francis Barnett, and Villiers Stanford. The subscription price is very low, being fixed at one guinea for the entire series, and we trust that the enterprise may receive the large support which it deserves.

Mr. Charles Halle's annual performances of the 'Messiah' were given at the Free Trade Hall, Manchester, on Thursday and Friday evenings. The vocalists announced for both occasions were Madame Albani, Madame Patey, Mr. Edward Lloyd, and Mr. Santley.

A students' concert has been given at the Kensington School of Music, Cromwell Road, under the direction of the principal, Mr. William Buels.

At the Châtelet Concert of last Sunday week, under the direction of M. Colonne, Schumann's music to 'Manfred' was given. The work was most warmly received, three numbers being encored.

It is announced from Darmstadt that Friedrich von Flotow, the popular composer of 'Martha,' who resides in that city, has become blind.

Raff's tenth symphony, 'Zur Herbstzeit,' was recently performed at a concert of the Museumsgesellschaft in Frankfort-on-Main, and created a very favourable impression.

DRAMA

THE WEEK.

Court.—'Comrades,' an Original Comedy in Three Acts. By Brandon Thomas and B. C. Stephenson.
Strand.—'Eloped; or, Babes and Beetles,' a Comedy in Three Acts. By Tom Taylor.

The advance in the character of stage entertainments which recent days have witnessed is accompanied by no commensurate progress in the drama, although some improvement in the nature of the pieces supplied is visible. While in the case of theatrical art we can point to actual and remarkable accomplishment, the most that can be said of the modern English drama is that its state is encouraging. No amount of clever adaptation justifies the claim to the possession of a drama. Of pieces of purely domestic growth, meanwhile, there are singularly few which show high dramatic quality. In behalf of the new play by Messrs. Brandon Thomas and B. C. Stephenson it may be urged that it supplies some striking situations, the full force of which is brought out by a signally competent interpretation. Its plot is, however, thin, the motive to heroic action being inadequate. So pitiful is the conduct of one of the principal characters, the sacrifice made in his behalf is scarcely sympathetic. A man who, to save the honour of his father, to secure the happiness of the woman he loves, or for any other adequate reason, allows the taint of bastardy to rest on his name, and foregoes everything that makes life tolerable, wins our heartiest admiration. Something more, however, than the cowardice of a father who, having contracted a second marriage, dares not tell his wife of the first, is requisite to justify such chivalry as is displayed by the hero of 'Comrades.' While, moreover, the son loses by the disproportion between the forfeit and the claim upon him, the father who accepts the sacrifice becomes dishonoured. Looking upon his conduct in the most favourable light, he is guilty of a fraud upon a gallant youth who has been kept out of his rights and in ignorance that he possesses any. It is but just, however, to say that when this state of things is accepted much ingenuity is shown in the disposition of the play. A keen interest is stirred and the dangerous element of surprise is employed with admirable effect. In the present state of our drama 'Comrades' must accordingly be accepted as a good play. Its prospects of enduring success are bright as they can be. A storm of approval attended the close, and no sign of weariness, discontent, or inattention was perceptible during its progress. This result is principally attributable to the acting. The entire performance had the *ensemble* the reconquest of which is the most satisfactory among the signs of a theatrical renaissance, and individual impersonations were excellent. In the portrayal of suppressed emotion Mr. Coghlan has always been seen at his best. With increasing observation and experience he has obtained a method such as few Englishmen can boast. His capacity to present passion at once ardent and active cannot yet be judged. The slumbering heat of the furnace is indicated, its explosive power can scarcely be guessed. Mr. Coghlan's performance of Capt. Darleigh came near perfection. In the manner in which he manifested and then curbed his love, and in the solemnity, almost majestic, of his surrender to the wishes of his father, whom he spared all avowal of baseness, an effect as strong as ordinarily attends the display of fierce passion was obtained. All that can be urged against this fine presentation is that the costume worn in the first act was ineffective, and that Mr. Coghlan's accents in his quieter moods seemed at times wanting in cultivation. Mr. John Clayton imparted distinct individuality to the difficult character of General Dexter, the father of the heroine, and showed finely the weakness of a man of action. In the scene between father and son which forms the chief strength of the drama Mr. Clayton could not have been better. Though a little too loud in utterance, Mr. Mackintosh played admirably as a retired sergeant, rendering the character equally natural and sympathetic. Miss Marion Terry played with considerable tenderness and pathos as the heroine, and shared with Mr. Coghlan the honours won in some trying situations. Miss Carlotta Addison created a strong effect as a weak and rather vapourish lady. Comic business of dubious merit was made the most of by Mr. Arthur Cecil and Miss Erskine; and Mr. Kemble and Mr. D. G. Boucicault left nothing to be desired in two subsidiary *rôles*.

'Eloped' proves to be a compressed version of a play by Tom Taylor produced more than a score years ago at the Haymarket under the title of 'Babes in the Wood.' One of the few pieces of its author that wholly failed on their first performance, it is now reduced to a third of its former dimensions and proves fairly amusing. Its story, which has been to a certain extent anticipated in a play of the Shakspearean epoch, shows a father watching over a daughter he dares not approach and to whom he will not reveal himself—one who, in the great style of that epoch, says, "She shall drink of my wealth as beggars drink of running water, and never know the source from whence it flows." Such merit as it can claim is in the character of a henpecked lodging-house keeper, first played by Buckstone, now taken by Mr. J. S. Clarke. No character in which Mr. Clarke is seen shows to greater advantage his singularly mirthful style and the way in which, with little aid except from facial play, he produces the most bewilderingly comic results. Mr. and Miss Turner and Mr. Carton take part in the representation.

Dramatic Gossip.

In spite of the brilliant success obtained at the Vaudeville by Mdlle. Sarah Bernhardt in 'Fédora,' it is doubtful whether the new play of M. Sardou will hold very long possession of the stage. Its savage and lugubrious plot, which, commencing with an assassination, or what is judged to be such, finishes in a suicide, moves admiration rather than sympathy, and repels as frequently as it attracts. In that species of ingenuity which M. Sardou took from Scribe it is admirable, and it has a conciseness and a strength of dialogue and situation to which Scribe never attained. None the less it depresses a public which before all things seeks to be amused. Mdlle. Bernhardt carried off the honours of the representation. M. Pierre Berton created, however, a strong impression by a fine performance of Loris Ipanoff, the lover and victim of the heroine.

TAKEN in connexion with the popularity enjoyed by Mrs. Langtry in America, the reception accorded Mdlle. Bernhardt abundantly proves, what needed no proof, that publicity is for an actress the greatest of attractions, and that the temptations held out to a woman to be a charlatan are such as human nature can scarcely be expected to resist.

'LA MAISON DU MARI,' on which Mr. Stephenson states he has founded his drama of 'Impulse,' was produced at the Théâtre Cluny in the autumn of 1873, when that theatre had fallen into a state of complete decadence. It is by MM. Xavier de Montépin and Kervani. That it should escape the most diligent search is not strange. Besides being absent from the printed lists of plays published by the chief houses, it did not appear during the time of its performance in one, at least, of the newspaper sheets which in France do duty for playbills. The cast at other theatres for November and December, when 'La Maison du Mari' was played, is given in *L'Orchestre*, but all reference to the Théâtre Cluny, except in one short paragraph in a single number, is omitted. The changes made by Mr. Stephenson are considerable. In the French piece the fugitive woman lives for a while with the partner of her flight, and is permitted to return home for the purpose of nursing a sick child. In the end the seducer is slain in a duel with the husband.

A NEW comedy by Mr. Hamilton Aïdé, given under the title of 'Cousins' at the Shelley Theatre, is well written and fairly ingenious. Unfortunately the performance, in which amateur actors took part, was dull and weak. From this censure, however, Mrs. Cecil Clay (Miss Rosina Vokes) and Mr. Ponsonby may be excepted.

TO CORRESPONDENTS.—D. C. M.—J. D. C.—L. P.—J. B.—received.

Erratum.—P. 816, col. 3, line 5 from bottom, for "6th inst." read *3rd inst.*

CONTINENTAL LITERATURE IN 1882.

BELGIUM.

In this short notice we intend to mention only the principal works that have been published in Belgium during the year 1882. The utility of these annual sketches in the *Athenæum* seems to us to lie in the fact that they indicate to the English public the works that have appeared abroad, and each one can then, in his special branch, consult those of interest to himself. A simple list, therefore, with a word or so of comment, suffices. We shall continue, then, to give this as we have hitherto done.

As in former years, works referring to the history of the country take the first place, both in number and importance. The late M. Edmond Poullet, in his 'Histoire Politique Nationale,' has traced the origin and the history of the institutions of the Netherlands before the French Revolution. The first volume appeared this year, and goes as far as the fourteenth century. It is a work of great value. M. Namèche's 'Cours d'Histoire Nationale' is less original, the author having, as a rule, simply abridged and condensed the work of his predecessors. The ninth volume, published this year, relates the commencement of the reign of the Emperor Charles V. in our provinces. The late M. Moke's 'Histoire de Belgique' has been remodelled by M. Eugène Hubert.

Among works referring to a limited period, two treat of the conquest of Belgium by the Romans—'La Conquête de la Belgique par Jules César,' by M. Victor Gantier, and 'Jules César et les Éburons,' by M. Henrard. In 'St. Hubert d'après son plus ancien Biographe' M. J. Demarteau describes the life of an evangelist of the valley of the Meuse. M. Henri Pirenne gives us a curious sketch of the intellectual condition of the town of Liège in the Middle Ages in his 'Sedulius de Liège.' In 'Flamands et Danois' M. E. vanden Bussche tells of the relations existing at that period between the Flemings and the Danes. In his curious 'Fondations Pieuses et Charitables des Marchands Flamands en Espagne' M. Hye-Hoys gives a history of our trading colonies established in the Peninsula. Under the title of 'Matines Brugeoises' M. Duclos has written a critical history of the massacre of the French at Bruges in 1302. M. Alphonse Vandenpeereboom has published a new work on the death, wills, and epitaphs of the famous Bishop of Ypres, Cornelius Jansenius. M. Eugène Hubert's 'Étude sur la Condition des Protestants en Belgique depuis Charles-Quint jusqu'à Joseph II.' is also both new and interesting. The author has studied in detail from unpublished documents the history of the famous emperor's edict of toleration (1781). It is one of the best books of the year. M. Rahlenbeck supplies a curious notice on 'La Belgique et les Garnisons de la Barrière' in the eighteenth century. M. Edmond Vanderstraeten's 'Histoire du Théâtre Villageois en Flandre' is full of revelations of all sorts about the moral and intellectual condition of rural Flanders since the fifteenth century. M. Stecher throws some light on the honest part played in Belgium before the year 1830 by the Dutch statesman Falck. As usual, M. Théodore Juste has written a great deal about the founders of Belgian independence. We may mention his 'L'Élection de Léopold I.' (from manuscript authorities), 'Le Baron Nothomb,' and 'Souvenirs du Baron Nothomb.' General Brialmont's book on 'La Situation Militaire de la Belgique' has been much discussed. The general considers the possibilities of a foreign invasion by the valley of the Meuse, and the means for protecting ourselves against it by the construction of defensive works.

The Royal Academy continues the publication of its biographical dictionary of the celebrated men of Belgium. The portion that has appeared this year extends from Fyon to Gérard. 'La Belgique Illustrée,' commenced by the late Eugène van Bemmel, is still continued, in spite of the death of the first editor. This historical and picturesque description of the country will be shortly completed. Its excellent type and numerous engravings render it attractive as illustrative of the Belgium of to-day and its former history.

M. Ferd. Vanderhaeghen proceeds with his admirable 'Bibliotheca Belgica,' an enormous work, which will contain almost inexhaustible information on the most diverse subjects connected with our national history. In the portion published this year there is an article which treats of Commines, and has been specially noticed. We are indebted to M. Max Rooses for an excellent 'Catalogue du Musée Plantin à Anvers,' and for the first part of a work entitled 'Christophe Plantin, Imprimeur.' The value of the book is increased by some fine engravings. M. Desmazières describes the lives and la' ours of the printers and booksellers of Tournai in his 'Bibliographie Tournaisienne'; and finally, a group of men of letters have undertaken to compile a large dictionary of Belgian writers and their publications, from 1830 to 1880, under the title of 'Bibliographie Nationale.' The first instalment, which ap peared this year, is from "A" to "Capitaine."

In the domain of local history we have an excellent 'Histoire des Communes du Canton de Glabbeek' (Arrondissement de Louvain), by M. Alphonse Wauters; a new volume of the interesting 'Ypriana,' by M. Alph. Vandenpeereboom; some curious studies on the engravings of the province of Liège since the days of the Van Eyck brothers, by a scholarly anonymous author; and a 'Histoire de Menin' (West Flanders), by M. Rembry-Barth, which comprises no less than four large volumes. Numerous documents referring to national history have been published, the majority of them at the State's expense. M. Gachard gives us the fifth volume of his 'Ordonnances des Pays-Bas Autrichiens,' which is preceded by a masterly preface. M. Alphonse Wauters has completed the sixth volume of his important 'Table Chronologique des Chartes et Diplômes Imprimés,' which goes back as far as the year 1300. M. Kervyn de Lettenhove has commenced a work of the greatest interest by collecting all documents concerning the 'Relations Politiques des Pays-Bas et de l'Angleterre sous le Règne de Philippe II.' M. Piot furnishes the fourth volume of his curious collection, 'Voyages des Souverains des Pays-Bas.' M. Léopold Devillers continues his 'Cartulaire des Comtes de Hainaut.' The new volume terminates at the death of the celebrated Countess Jacqueline, who was for a short space the wife of the Duke of Gloucester. The bibliophiles of Mons have published two manuscript accounts by eye-witnesses of the events which took place in Hainault from the death of Joseph II. (1790) till the peace of Luneville (1801). Finally, the Chamber of Representatives has ordered the report of the Parliamentary Committee appointed to examine thoroughly into primary education and schools, both official and free, to be printed word for word. This report occupies three enormous volumes, and is full of astounding revelations with regard to the opposition of the Catholic clergy to the new school law. It has made quite a sensation both in Belgium and abroad.

We must also mention several books on ancient and modern history. M. P. Willems has published the second volume of his already classic work, 'Le Senat de la République Romaine.' M. Adolf de Ceuleneer devotes a scholarly notice to 'Deux Têtes de Satyres Ailés découvertes à Angleur-lez-Liège.' The same author brought back from his travels in Portugal important notes on the ancient schools of painting of the country; on their chief, the mysterious Gran Vasco; on the *azulejos;* and on the archæological researches that have recently been carried on in that country. M. J. Thonissen, already well known for his dissertations on the judicial institutions of the Franks, gives us this year a fresh memoir on 'L'Organisation Judiciaire, le Droit Pénal, et la Procédure Pénale de la Loi Salique.' It is accompanied by an account of every class of population mentioned in the drawing up of this famous law. M. J. Demarteau has printed several letters of the famous Theroigne de Mericourt. Her real name, it appears, was Anne Josèphe Terwangne, and she came from the small village of Marcour, in Belgian Luxembourg. One of the most important works of the year is entitled 'West-Europa im Zeitalter von Philip II., Elizabeth, und Heinrich IV.' It is written in German by M. Philippson, a professor at the Brussels University. It will be useful in modifying and rectifying the French historian Forneron's recent work, which is often overcharged. M. Ernest Nys contributes a remarkable volume on 'Le Droit de Guerre et les Précurseurs de Grotius'; also another study on the same subject, entitled 'Honoré Bonet et Christine de Pisan.'

M. Émile de Laveleye has written several essays and pamphlets on the 'Question Monétaire,' and has published 'Les Éléments d'Économie Politique.' M. A. Lemaire treats the great topic of the day in Belgium in his book 'De l'Exacte Représentation Électorale.' An anonymous author writes on the same subject in 'Le Droit de Suffrage en Belgique et à l'Étranger.' 'Conférences faites à la Société Franklin,' by M. J. Delbœuf, is full of original ideas. The same author has also studied the questions of "determinism" and liberty from a special standpoint; the latter he demonstrates by mechanics. M. Alphonse Le Roy has issued an essay on the public conscience. 'Conférences et Entretiens sur l'Art de la Parole,' by M. E. Monrose, is also worthy of mention; and MM. F. and E. Putzey's 'Hygiène dans la Construction des Habitations Privées' is a most conscientious work, giving the results of fresh experiments tried by the authors themselves.

The history of the fine arts has not been neglected. Among the monographs that have appeared may be cited 'Recherches sur l'Histoire de l'École Flamande de Peinture de la Seconde Moitié du XVe Siècle,' by M. Alphonse Wauters, and 'La Peinture Flamande et son Enseignement dans les Anciennes Confréries de St. Luc,' by M. Edgar Baes. 'Biographies d'Artistes Anversois,' by the late M. Th. van Lerius, is also recommendable. MM. Keuller, Wauters, J. Demarteau, and others have published learned dissertations on the exhibitions of ancient national art in Brussels in 1880, and Liège in 1881. MM. Keuller and Wauters's work is entirely devoted to 'Tapisseries Historiées,' and contains very fine folio plates. In the domain of music we have the sixth volume of M. Edmond Vanderstraeten's great work, 'La Musique aux Pays-Bas avant le XIXe Siècle,' and 'L'Histoire de la Musique et des Musiciens Belges depuis 1830,' by M. Adolphe Samuel. M. Camille Lemonnier depicts the condition and progress of painting, sculpture, engraving, and architecture since that date. Finally, in his book 'L'Art est Rationnel,' M. Émile Leclercq defends an interesting æsthetic theory. Educational questions have been studied by M. Ernest Descailles in his voluminous 'Histoire des Concours Généraux' of the national schools, the grammar schools, and the universities of Belgium; by M. Colard in his study on classical philology in the German universities; and by M. Paul Fredericq in a little work on the theoretical and practical teaching of history in those universities.

The Belgians, who from the thirteenth to the seventeenth century were famous for their books of travel, seem to be readopting the traditions of their ancestors, too long forgotten. This year many pleasing works of this kind have been published. The late M. Emmanuel Desoer wrote on the Salz Kammergut; Ch. van Beneden gives us a work on Morocco, Madeira, and the Canary Isles; Louis Hymans on Mont Cenis and the St. Gothard; De Robiano one on Chili, Araucania, and the Straits of Magellan; E. de Keersmaecker on Holland; J. Chalon and L. Navez on Switzerland; F. Gueymard on Baden and the Black Forest; Lucien Solvay and A. Dubois on Italy, &c. The best written and most interesting is M. Émile Cauderlier's 'Du St. Gothard à Syracuse.'

These narratives of travel really belong to literature, properly speaking, which has this year produced several pleasing little tales and novels, but no really remarkable work. The authors of these are the late Caroline Gravière and Madame Deros, MM. Camille Lemonnier, Émile Leclercq, Émile Greyson, Louis Hymans, O. Pirmez, Gens, Comte Maurice du Chastel, Eugène Bondroit, &c. Among the dramatic works which have appeared may be mentioned 'André Vésale,' by M. Claes. In the domain of poetry MM. Potvin and Frenay have published an 'Essai de Poésie Populaire,' which is quite what it is intended to be. Other poetical collections are from the pens of MM. Stanislaus, Vermer, Bourgeois, Fiérard, and Dumoralze. M. Delbœuf has edited with pious care the French and Walloon poems of the late M. A. Picard. Some of them are really charming.

The Royal Academy publishes annually some few works of ancient writers of the country. This year M. Stecher has edited two volumes of 'Illustrations de Gaule,' by Jean Le Maire des Belges (sixteenth century), and M. Kervyn de Lettenhove 'Poésies,' by Gilles le Muisis (fourteenth century); the latter collection is derived from a manuscript belonging to Lord Ashburnham. We must mention also two excellent dictionaries of old Belgian idioms: the 'Glossaire Wallon' ('Walloon Glossary') of the works of the Liège chronicler Jean d'Outre Meuse, by M. Aug. Scheler, our best Romance philologist; and the 'Glossaire Flamand' to the remarkable 'Inventaire des Archives de Bruges' of M. Gilliodts van Severen, by M. Ed. Gailliard, which is deserving of praise even when compared with the dictionaries of MM. De Vries, Oudemans, Verwÿs, and Verdam, of Holland. Finally, M. Dory has published an interesting dissertation on *Wallonismes*.

In literary history may be mentioned M. Stecher's notice of a productive writer, the late M. Ch. Steur, and more especially M. Ch. Potvin's 'Histoire des Lettres en Belgique depuis 1830,' which draws a complete picture, full of life.

Flemish literature has given proof of remarkable vitality, and we are happy to be able to state that its productions are not confined to novels and poems. M. Frans vanden Branden continues the publication of his learned 'Geschiedenis des Antwerpsche Schilderschool' ('History of the Antwerp School of Painting'), which is full of revelations drawn from the archives of our great commercial metropolis. M. Frans de Potter gives us a voluminous monograph, entitled 'Geschiedenis van het Schependom in de Belgische Gewesten van de Vroegste Tÿden tot het Einde der XVIIIe Eeuw' ('History of the Belgian Town Magistrates from their Origin to the Eighteenth Century'). M. Napoleon de Pauw publishes a new number of the important collection 'Rekeningen der Stad Gent, tÿdvak van Jacob van Artevelde' ('Communal Records of the City of Ghent in the Time of Jacob van Artevelde'). 'Het Openbaar Ouderwÿs in Vlanderen tÿdens de XV. en XVI. Eeuwen' ('Public Schools of Flanders in the Fifteenth and Sixteenth Centuries'), by M. L. de Rÿcker, is a singular monograph. The work crowned by the Academy, M. Alfons de Deckers's 'Geschiedenis der Malcontenten' ('History of the Malcontents in the Netherlands, Sixteenth Century'), is weak and prejudiced, in spite of a vain show of learning.

MM. Heremans and Ferd. Vanderhaeghen have reprinted in facsimile the only existing copy of an ancient Flemish grammar, 'Nederlandsche Spellynghe van Joos Lambrecht,' and have prefixed an interesting introduction on the great value of this rare work, which was printed at Ghent in 1550. M. P. Genard has devoted a curious essay to the life and works of a Flemish linguist of the sixteenth century, Cornelis van Kiel or Kilianus. M. Max Rooses's 'Nieuw Schetsenboek' ('New Sketch-Book') contains a series of charming literary studies. The last of them is devoted to Conscience, the great contemporary Flemish novelist. MM. Moroy and Vandenweghe discuss in a similar manner the life and works of the late Canon David, historian and linguist, and one of the Catholic founders of the Flemish movement. As is known, the principal object of this movement is to obtain the official teaching of the native tongue in the Flemish provinces of Belgium. Two language laws to this effect were voted in the Belgian Chambers in 1873 and 1878. The powerful association of "Het Willems-Fonds" has this year published a text of these laws with commentaries and a French translation. This document will be read with curiosity by all who are interested in following the various symptoms of the movements of nationalities. MM. César Fredericq and Teirlinck have written original works in Flemish on botany. Scientific books seldom appear in this language.

Poetry has also been fruitful this year. We may mention the collections of MM. Pol de Mont, Ad. Beernaert, De Geyter, V. vande Walle, L. Buyst, and Emiel Callant. Two volumes of unpublished poetry by the late Prudens van Duyse have appeared under the title of 'Nagelatene Gedichten' ('Posthumous Poems'). Van Duyse was one of the first and most productive of Flemish poets after the Revolution of 1830. The poetical event of the year has been the publication of a drama in blank verse, 'Gudrun,' by a young writer of great promise, Albrecht Rodenbach; he died two years ago.

M. Sleeckx, one of our neatest prose writers, has collected his numerous dramatic works and has reprinted several novels. Madame Courtmans and MM. Teirlinck-Stÿns, Geiregat, Snieders, Peeters, Sauwen, Van Cuyck, Gustaaf Segers, and F. Moke have published novels and tales. Finally, two important volumes are deserving of special attention. 'Voor 't Volk Geofferd' ('Martyred for the People'), by M. E. Anseele, is a socialist romance, describing the aspirations and revolts of the workmen of Ghent during the last thirty years. It is an outspoken work; the style is at times ill-tempered, but it contains many pathetic pages, and the author gives proof of great literary capacity. The other book is a series of tales by two sisters, Rosalie and Virginie Loveling. These two prose writers possess great powers of observation and charming taste. Mdlle. Rosalie died in 1875, and it was supposed that all her writings had already appeared. The volume just published contains nine pieces

by her not printed hitherto, which will be highly appreciated by the connoisseurs of Flemish Belgium and Holland.

Émile de Laveleye—Paul Fredericq.

DENMARK.

From various reasons I was last year prevented from writing about the literature of Denmark. Consequently two years have elapsed since my last report, and although space does not permit me to deal equally with the whole of this time, I hope the reader may find it but reasonable that I should name some of the most conspicuous works of last year too.

I commence with some interesting publications concerning our deceased authors. The centenary of the birth of St. St. Blicher (who died in 1848) occurred this year, and gave occasion to a new edition of his tales more nearly complete than preceding ones, and also to sundry monographs treating of this excellent painter of the scenery and country life of Jutland, who while he lived was not sufficiently esteemed. About Hans Christian Andersen his oldest and most confidential friend, E. Collin, has written a voluminous book, which supplies information valuable for the correct understanding of Andersen as a poet and a man. The best verses of the lyrical poet Schack-Staffeldt (who died in the year 1826) have been issued in a new and careful edition, with an excellent introduction by Georg Brandes. The large edition of the poetical writings of N. F. S. Grundtvig has reached its fourth volume; and finally, Mrs. J. L. Heiberg, the great actress, who left the stage some years ago, has published an interesting book about her father-in-law, P. A. Heiberg (who in the year 1800, on account of his Liberal writings, was exiled for life), and his wife, Mrs. Gyllembourg, the novelist.

While these and other publications represent the older literature, about which opinion is, in the main, already fixed, and with which critics busy themselves historically and in a dispassionate temper, we find, on the other hand, in the lately issued 'Collected Poems' by S. Schandorph, written in the course of the last twenty years, a picture of that struggle between the new and the old which marks our most recent development. Schandorph early felt himself in opposition to the opinions and theories which in the sixties ruled our life in religious and literary as well as in political matters. He belonged to a circle, then only small, which felt that we needed freer air and more of the influence of the culture of other nations if our literature was to be more than a weak reproduction of the thoughts and forms of the preceding period. When, about ten years ago, G. Brandes by his lectures and writings really gave the impulse, Schandorph soon embraced the new doctrines, and has, especially in the polemics of the last few years, been an untiring champion of "the literary Left" (see my last review in *Athen.* No. 2774). His controversial verses dedicated to literary friends and antagonists are, in an artistic point of view, the best in the collection named above.

Yet Schandorph himself is not the greatest name in the new literature. As a poet he is surpassed by H. Drachmann, and as prose writers G. Brandes and the novelist J. P. Jacobsen are, without doubt, more important. Still his novels and tales possess an honoured place among the productions of the last ten years, especially on account of their naturalness and the broad humour with which he portrays our peasants and the people of the small towns. Since my last report was written he has published a romance and a collection of 'Novelettes.' In the first-mentioned work, 'The History of Thomas Friis,' he has delineated the social condition and intellectual life of Denmark in the years before 1870. In the romance which this autumn has been most spoken of in Denmark, viz., 'Germanernes Lærling' ('The Pupil of the Germans'), by K. Gjellerup, we find a similar picture of the developments of the last two or three years, especially of the advance of free thought and the democratic spirit among the young. Notwithstanding some onesidedness and exaggerations it is a clever and humorous book. In my last article I singled out this young author, and spoke of his extensive knowledge and his considerable talents; with great perseverance, but often with too much youthful rashness, he struggles to propagate his ideas through works of the most various kinds. I have this time, besides the said romance, to name two volumes of poems—one of which, 'Aander og Tider' ('Spirits and Times'), is an enthusiastic tribute to Charles Darwin and his doctrines—and further, a learned essay about 'Inheritance and Morality.'

Last year the most prominent work of fiction was, without doubt, J. P. Jacobsen's romance 'Niels Lyhne.' Unfortunately space only permits me to say briefly that this picture of our present life is not inferior to the masterly romance from the life of the seventeenth century, 'Marie Grubbe,' published by the same author (see *Athen.*, 1877, No. 2618), of which book the third edition has just come out. This year we have in 'Mogens and other Tales' new proofs of Jacobsen's earnest and almost melancholy view of life, of his peculiar language, and his eminent skill in narrating. Of Drachmann I have this time to mention a new collection of short tales; a more elaborate fiction, 'Vandenes Datter' ('The Daughter of the Waves'), a curious combination of romanticism and realism; and a collection of poems published under a pseudonym, 'Gamle Guder og Nye' ('Old Gods and New'), all issued in 1881. This year he has published a series of sketches from his travels and also his first dramatic work, 'Puppe og Sommerfugl' ('Chrysalis and Butterfly'). In Drachmann's numerous writings the fresh *naïveté* and the inexhaustible fund of lyric song are always first and foremost, and give to works otherwise very different a real value, and it is, therefore, but natural that the lyric element should greatly, perhaps too greatly, predominate in the drama mentioned. In drama our new poetical school has not yet reaped any triumphs; but Drachmann's work, and still more the two interesting plays by Edw. Brandes—'Lægemidler' ('Medicaments') and 'Gyngende Grund' ('Unsafe Ground')—all received with acclamation on our national stage, form a promising beginning. At the same time I may also mention a couple of plays, the authors of which, although they belong to the elder generation of poets, yet occupy a sympathetic position towards the new tendencies, and in one way mediate between the old and the new. They are 'Fulvia,' by H. V. Kaalund, and 'Eva,' by C. Hostrup.

Indeed, these "new tendencies" are more or less decidedly embraced by all new writers of any importance; for instance, by H. Pontoppidan ('Clipped Wings') and Miss Sylvia Bennett ('Pictures of Women'). But even older authors, such as Rud. Schmidt and Holm-Hansen, show, to their own benefit, in their latest works, 'Drawings' and 'Barbara,' the unmistakable influence of "realism." Not being able to dwell upon either exaggerations of the realism met with in the writings of different young authors or the extravagant idealism of several of the veteran "romanticists," I shall but mention among new books published by the latter the following: 'Charles Lyng,' by H. F. Ewald; 'Through Cliffs and Breakers,' by Carl Andersen; 'A Love Tale,' by Thomas Lange; and two tales in verse, 'Against the Tide' and 'Frater Bengt,' by M. Rosing.

If my list of works of fiction has only given indications and mentioned examples of the different styles, with regard to philosophy, philology, and history I must be still more brief. Happily our literature has, of late years, been growing in these departments also, and among the many new books which come forth there are not a few that really present something original, and of several it may be justly said that they "meet a long-felt want." I must simply confine myself here to enumerating some of the most important published since my last review. J. N. Madvig has written a large and very learned work, 'The Constitution and Administration of the Roman State.' Of works treating of the history of our country I may mention 'The Political History 1635–45,' by Fredericia, and Erslev's 'Queen Margaret and the Calmar Union'; besides, these and younger historians have continued the publication of 'Unpublished Documents of Danish History'; and new volumes of O. Nielsen's 'History of Copenhagen,' and Troels Lund's 'History of Denmark and Norway at the Close of the Sixteenth Century,' have been issued. Of biographical works, besides those already mentioned in the beginning of this article, I may name 'Ferdinand Lassalle,' by G. Brandes; an autobiography by Fred. Hammerich (a posthumous work); and the last volumes of Vaupell's 'Griffenfeldt' and Birket Smith's 'Eleonora Ulfeldt,'—of books connected with literary history, C. W. Smith's 'History of Russian Literature,' Rud. Schmidt's 'Busts and Masks' (essays treating of different foreign authors), and Recke's 'Principles of Danish Metrical Art.' In philosophy I must confine myself to mentioning Höffding's 'Outlines of Psychology,' Fejlberg's 'On the Greatest Gain of the Faculties of the Soul,' and Martensen's 'Jakob Böhme.' I may end my article this time by pointing to the laudable exertions that a couple of societies have made for the last two years to bring forward materials and scientific helps to the knowledge of our native tongue. Of their publications I may name a dictionary of the older Danish language by Kalkar.

Viggo Petersen.

FRANCE.

The lapse of another year reminds us that Time never lags. Six years more and France will be celebrating the centenary of glorious 1789, the year fraught with boundless hopes, destined to be realized in only a very small part, and fraught with the seeds of many changes, not yet entirely accomplished. The completion of the century should furnish France with an opportunity for following the example set by America on the completion of her first century of independence, and for taking stock, so to speak, of her family papers. France will ask herself whether she has succeeded in establishing a social and political condition as deeply rooted and stable as the one which fell, borne down by abuses and defects, after a not inglorious existence of nearly ten centuries. She will ask—and that is the question which most concerns my subject—whether she has called into being an art as fitted to express the ideas of the present day as the art of our fathers was capable of clothing their ideas. Some fifty years since we should have answered both questions in the affirmative without hesitation and not without a feeling of pride. In those days doctrinaire and Liberal politicians flattered themselves that they had for ever succeeded in reconciling liberty and order, and preached that the charter was the inevitable goal and that the parliamentary system was the last natural stage in our political history. And that, too, was the time when the romantic school was rejoicing in all the luxuriance of its first bloom, when its exponents were revelling with sublime self-confidence in the absolute infallibility of the new dogmas, and casting an eye of scorn on the worn-out garments of expiring classicism. It is to the wreck of the two great movements to which the Revolution had given birth; to the complete failure, in appearance at least, of the two great experiments made by the most brilliant sons of nineteenth century France in politics and art to realize the theories of the new era; to the cruel falsification of the noblest aspirations of the preceding generation, that we must attribute the profound discouragement, the scepticism and pessimistic realism, to which our country seems a prey. "Une immense espérance a traversé les cieux"; but it has vanished below the horizon like a meteor, and left nothing behind but regret at its brief light and a feeling of disgust at the present darkness.

I should be the very last to undervalue the brave struggle made by Liberal France since the fall of the Empire to found a well-established democratic Government by the help of self-constituted and manly self-government. Despite the troubles of to-day, and although the real significance of the political situation is obscured by petty scandals, which are exaggerated by a hundred voices from a hostile press, it is beyond question that after 1870 the trembling hand of wounded and mutilated France gathered up again with a sure instinct the thread of constitutional traditions, and bound the last quarter of this century to the hopes and wishes of the first half. But—for there is a but—the faith and enthusiasm of the greater statesmen of 1830 have in the case of the politicians of to-day too often changed into a desire to find an expedient for the day's need. There is not, perhaps, any great harm in the fact that the idealist temperament of the French people, of which Mrs. Browning has given so striking a presentment in 'Aurora Leigh,' has been toned down, and that the nation has learnt to distrust cut-and-dried solutions of great questions and the worship of paper constitutions — that it has learnt by experience the value of that benevolent scepticism which knows the vanity of the best directed efforts, and yet does not shrink from making them. What is peculiarly characteristic of our age is the great gulf which seems to have opened between the nation's public life and the creations of its literature.

Where freedom flourishes—and this, in spite of Montesquieu's celebrated formula, applies not only to republics — the basis of self-government is the self-government of each individual unit, and the authority of the State rests on the self-control of each citizen. The more circumscribed the sway of an exterior power, the greater the sovereignty of each individual conscience; where the authority of law or the word of a master grows feeble, there arises the government of the individual conscience. Now, it so happens—and the contradiction is striking—that in France the slow and painful reconstruction of political liberty has coincided with the gradual abasement of literature. Never has the ideal undergone a greater eclipse, never has French literature been more engrossed with material enjoyments and the delights of epicurean sensuality. There seems to be a complete separation between our public life—in which, in spite of many haltings, the ideal still burns with a pure and brilliant flame in many great hearts and souls—and literature, which seems to become more and more the servant of satiated voluptuaries. Fiction is afflicted with a cynical realism, which revels in the elaboration of details from the life of the low and unclean, and has not even respect enough for its art to tone down its sombre effects by allowing a little sunlight to gleam on its black canvases. On the stage the wondrous strides of mechanical industry, instead of helping the dramatic poet, have reduced him to be a mere fellow workman of the stage carpenter. The dramatist writes only for actors and actresses, to afford M. X or Mdlle. Z an opportunity for displaying the resources of a mechanical art or the charms of personal beauty. If an author is bold enough to quit for a moment the beaten track, he gives his audience a minutely exact reproduction of some event of the day, the coarse details of some sensational trial, or an accurate photograph from some corner of the great panorama of Paris.

It is incontestable that realism weighs down our literature; but there are two elements to be considered which should, I think, considerably relieve the gloom of the situation I have described. To begin with, the school of M. Zola is not the spontaneous product of the last ten years. The master, as M. Zola's followers love to style him, had thought out his principles and practice years before the fall of the Empire. He had even begun to publish, not, it is true, with any great success, the series of physiologico-philosophical novels called the "Rougon-Macquart." From the first pages of the series the whole theory of M. Zola's pathological art is developed with striking clearness and pitiless logic. It is to the Empire, to its manners and literature, that belong the earliest conception and elaboration of M. Zola's plan. Still, it cannot be denied that the unparalleled success of the painter of the 'Assommoir' has been attained under the Republic, after the sad lesson of the *année terrible* and amidst civil strife. At first sight we might accept this fact as a signal proof of the complete failure of the moral regeneration which was preached by orators and made the theme of innumerable essays in the days following 1870. In my opinion such a conclusion would be singularly superficial. We have only to consider the causes which establish a necessary co-relation between the existence and development of free political institutions and the growth of mental discipline, of moral self-government and the practice of private virtue, to at once comprehend that the success of M. Zola and of his worst imitators is quite compatible with a real national regeneration. We have only to remember that it is among the embittered adversaries of free institutions that the realistic school has found its chief supporters. M. Zola and his followers, in choosing their heroes from the middle and lower classes, know very well what they are about. It is notorious that the petty tradesman and mechanic have a keen relish for romantic stories of high life. It is to this appetite that popular fiction and "penny dreadfuls" minister in choosing aristocratic personages as the materials wherefrom to weave their grotesque creations. By analogy M. Zola's readers relish unflattering portraits of a class of society for not having placed them in which they inwardly bless Heaven. The real secret of such a novelist's art lies in not alienating the sympathies of his readers by bringing home to their conscience a brutal *de te fabula narratur*. To pander to the lower instincts of humanity and yet to lull the conscience to sleep shows, it must be confessed, a deep knowledge of human nature. By practising this cunning manœuvre naturalism has opened to itself a path to regions that might have been considered inaccessible.

There is more to be said. If naturalism were a phenomenon altogether peculiar to France, we might then see in it only an unhealthy reaction against the excesses of romanticism. But, on the contrary, naturalism is a universal force. Its action can be traced far beyond the narrow limits of our country. Even history has been affected by this tendency. Day by day it discards its oratorical trappings, and conforms more and more to the severest requirements of scholarship, substituting for brilliant and sometimes singularly suggestive theories, yet generally arbitrary and founded on hasty generalization, a system of patient and almost microscopic research and of judicious scepticism. The art of fiction, which is, perhaps, more susceptible to its physical and moral surroundings than any other branch of creative art, could not fail to be profoundly modified by this universal force, and Fiction has renounced, with the exaggerated fervour

characteristic of converts, the traditions of her recent past. She will have none of the mediæval conventionalism, of the high-flown sentiments, of the heroic adventures, of the archaic *bric-à-brac*, in which romanticism took delight, but boldly strives to paint the men and women of to-day. She is firmly convinced that the daily life of our great commercial and industrial centres is matter at least as susceptible of artistic treatment as the romantic incidents of a dim past, and in this conception lies the strength of modern realism. No claim to originality can be allowed on the part of the preachers of this plain doctrine, and it must be admitted at once that the reaction from the romantic school has from the first overstepped all the bounds of reason. The fact has been forgotten that Nature herself offers an unceasing contrast between beauty and ugliness, between sunshine and rain, between gay summer and gloomy winter. A sort of monopoly of interest has been ascribed to everything loathsome, diseased, and base. The hackneyed commonplaces of realism have only made room for the cynical paradoxes of lawless naturalism. It is the naturalistic section of the new school which makes its voice heard, and, with some temerity, claims Balzac as its father. But Balzac had no need to painfully elaborate, by the help of a commonplace book, lay figures invested with no more life than the wax dolls of Madame Tussaud; his genius was essentially creative, and his heroes are as full of the breath of life as the men who walk on the earth. It as little becomes the Zola school, who seem to think that the place of genius can be supplied by a slavish copying of style, to invoke the name of Balzac as it would a photographer paid to reproduce the crudities of the dissecting room to claim kin with Rembrandt, or to liken his work to the 'Lesson in Anatomy.' Naturalism cannot boast of high ancestry. It cannot trace its pedigree further back than to 'Madame Bovary' and to the art of Gustave Flaubert. Even Stendhal had too keen a sense of the beautiful in nature and art and of the refinement of life to become a thoroughgoing realist. It is M. Zola and his followers who have pushed this tendency to its extreme limits, but already a very perceptible reaction has begun to manifest itself against the extravagances of ultra-realism, and I shall have occasion in this article to point out signs of a return to a truer and healthier art. These general considerations must serve as an introduction to the hurried summary I am about to present of the works which have appeared in France during 1882. Without them the meagre catalogue I have drawn up would be nearly destitute of meaning or interest.

Ab Jove principium. M. Zola is entitled, both by priority of date and the importance of his work, to first engage our attention. 'Pot-Bouille,' as its title imports, is a study of middle-class life. As regards plot it is one of M. Zola's least happy productions. The thread of the story barely connects the many pictures which dance before our eyes like the changes of a kaleidoscope. As regards unchaste descriptions M. Zola has in this work surpassed himself; certain scenes cause a feeling of nausea, and in the crowd of personages there is not a single pure character to offer a contrast to the unbridled passions depicted. In justice to the author I am bound to admit that the book contains some minor incidents well conceived and invested with an air of reality worthy of all praise. With the exception, perhaps, of Henri Monnier, no author has ever attained so intimate a knowledge of the character of the Paris *concierge*. Certain incidents connected with the publication of 'Pot-Bouille' have caused M. Zola to explain the moral purpose of his book. It is no man's province to judge the conscience, and I should be the last to assert that the author is not sincere when he asks us to believe that his last story is written in the best interests of morality. M. Zola is of opinion that the entire *bourgeoisie* is a prey to the most horrible corruption. He wishes to pose as a benefactor who tears away the bandages, that the hideous sores may be laid bare to the healing agency of knife and cautery. There is no need to argue with M. Zola. I would merely suggest that there may here and there be some few exceptions to the judgment he passes on the middle classes of our country; that the French *bourgeoisie*, which has produced such men as Pascal and Bossuet, and so many great magistrates of the old Parlements, may not altogether have lost its noble traditions nor abandoned the domestic hearth to compete in the boudoirs of loose women with the sons of that cosmopolitan and sham aristocracy which is too often mistaken as a type of young Paris. Duclos the Academician once began to tell before the Maréchale Duchesse de Luxembourg and another great lady a more than doubtful story, after having eased his conscience by a formal declaration that a virtuous woman need not fear any story, however equivocal. At last he reached a peculiarly trying passage, and the duchess, hiding her face with her fan, said, "Ah, M. Duclos, really you are giving us credit for more virtue than we possess." In the same fashion M. Zola pushes his zeal in the cause of morality so far that he deals in demoralizing pruriency. It is stated, by the way, that the comparative failure of 'Pot-Bouille' has had a sobering effect on its author, and in the preface of his new story, which the *Gil Blas*, a boulevard journal, began to publish on the 15th of this month, the public are assured that they will find a sauce less highly seasoned.

But the lesson does not seem to have been taken to heart by his numerous disciples. At any rate, the shop windows of fashionable booksellers and the stalls of the Palais Royal and of the Odéon show no signs of a diminished supply of what may be termed Zola goods. I shall first of all notice the few writers to whom M. Zola has been a literary sponsor, just as he lately acted as godfather to the child of an American admirer. M. Huysmans, in his 'A Vau l'Eau,' expounds the dismal philosophy of practical materialism in a lugubrious and monotonous story of a petty clerk who drags out a negative kind of existence with clockwork regularity. It is a life in which ambition, affection, enjoyment, and dignity have no place, and the author, as if to deepen the melancholy impression produced by his minute description, has written in the plain and laborious style of an official report. I am sorry to add that the book is disgraced by a scene without parallel even in *naturaliste* literature. MM. Vast-Ricouard, as a change from their more ponderous works, have told in two volumes, 'La Jeune Garde' and 'La Vieille Garde,' some doubtful anecdotes which do not even possess the merit of being neatly put. If a certain section of the public demand this kind of literature—and I am afraid that the fact is incontestable—which our fathers were decent enough to carry "*sous le manteau*," it seems to me that the booksellers who busy themselves in supplying this public could do better than order from living authors coarse imitations of the novels of Crébillon *fils*. The *petits conteurs* of the eighteenth century are always with us; they, at least, partly atoned for the immorality of their works by an inimitable grace of diction, by a delicate touch, and by the adoption of a certain courtly air which makes their stories appear less gross than when told by clowns. 'Les Contes de Fromaget,' of which M. Octave Uzanne has just brought out a new edition for the "Librairie des Bibliophiles," is assuredly no masterpiece in its very second-rate class, but the book gains by contrast with its imitators of to-day. I am not inclined to alter this verdict from a perusal of M. R. Maizeroy's 'Mal d'Aimer,' the style of which is pretentious and the tone marked by mawkish effeminacy; or of M. François Coppée's 'Contes en Prose,' a collection of tales written in haste, and on which it is grievous to see the author of the 'Reliquaire' and of the 'Passant' wasting his talents; or of M. Guy de Maupassant's 'Mademoiselle Fifi,' in which, it must be admitted, Gustave Flaubert's executor has displayed consummate art.

In collecting these titles, to which I might have added M. A. Dunoy's 'Par les Femmes,' M. de Peyrebrune's 'Gatienne,' and M. Albert Cim's 'Deux Malheureuses,' I have had in view a particular form of Zolaism, much in vogue at this moment. I am speaking of the *naturalisme précieux*, which discourses of a refined but yet sensual love that it is too much the fashion to dignify with the name of passion. The followers of this school are pupils of both M. Gustave Droz and of M. Zola, and in their mannered compositions are found mixed in equal parts the *concetti* of a refined epicureanism and a cynical materialism. A perfect type of this bastard school is furnished by a novel which has just appeared in one volume, after having scandalized the subscribers to the *Revue des Deux Mondes* by making a serial appearance in the pages of that grave journal. In 'Dans le Monde' M. Henry Rabusson has tried the effect of the coarser colours of realism with his own lighter tones. The title should have run 'Dans le Grand Monde,' the humblest characters being dukes or marquises. The author assures us that his pages breathe the pure atmosphere of the best society of the Faubourg St. Germain; he is careful to mention the very perfumes which fill the rooms. Still in the midst of this dainty company M. Rabusson is bold enough to carry out the anatomical method of his school. It is impossible to describe the effect produced by the contrast between the conventionally finicking background and the studied coarseness of the characters. M.

Rabusson's flesh is delicate, and the bluest blood runs in its veins; but it is identical with the flesh which is covered by M. Zola's rags. I need not stay to discuss such a novel as 'La Fange,' which justifies its title; or M. A. Delpit's 'La Marquise,' in which a risky situation is treated with a power that half redeems its faults, and in which psychology is not altogether superseded by physiology; or M. Antony Blondel's 'La Vie Privée de Camus d'Arras,' which, in spite of a certain awkwardness, displays real talent, more akin to Balzac than to Zola, and this is no slight praise; or M. Albert Le Roy's 'Mariage de Laure' and 'Part à Trois,' in which the author attacks the marriage system of France; or, finally, two works by second-rate novelists, due to the inspiration of M. Alexandre Dumas *fils*: 'Les Femmes qui Déshonorent,' by MM. Sirven and Leverdier, and 'Les Femmes qui Tombent,' by M. de Peyrebrune, who was happier in 'Marco.'

I hardly know how to class M. de Goncourt. In collaboration with his brother, now no more, he has produced, besides historical works which show an unrivalled acquaintance with the anecdotal, literary, and artistic history of the eighteenth century, some well-written novels in which the setting sun of romanticism cast its expiring rays on nascent naturalism. M. de Goncourt has published sundry works of fiction since his brother's death. In 'Les Frères Zemganno' inconsolable grief at the loss of the companion of the author's work and play pierces through the flimsy disguise of a somewhat fanciful tale. 'La Faustin,' which appeared this year, is a psychological study of the strange mental condition induced by a life spent on the boards, the actor playing with his life as with a toy, and forgetting in feverish excitement the reality of anything but the applause of the audience. The world has seen in M. de Goncourt's actress the portrait of a lady whose wayward freaks are more talked of than even her genius. It seems to me that the author of 'La Faustin' was not able to choose between drawing a finished portrait of the original who was in his thoughts, and filling up the more generic and philosophical study which he had sketched out. It is impossible to speak too severely of M. de Goncourt's style; he tortures the French language, and the sense itself is too often obscured in his involved sentences.

M. Alphonse Daudet is a writer of a very different stamp. In spite of his assertions that he is more indebted to his commonplace book than to his imagination, M. Daudet is a poet, and will remain so to the end of his days. Through all his works there runs a vein of exquisite feeling which it is a delight to recall. The touching yet simple pathos of "la petite Chèbe" in 'Fromont Jeune et Risler Aîné,' of "bonne maman" and the domestic circle in the 'Nabab,' can never be forgotten. It is incontestable that M. Daudet has assimilated a certain aspect of the art of the author of 'David Copperfield.' It is sufficient to recall in the 'Nabab' that opening description—half humorous and half pathetic—of a Parisian fog. In fact, although he may pride himself on being a realist, even a naturalist, M. Daudet has been saved by the bent of his genius from the school which claims him, and his works constitute an excellent antidote to their doctrine. A novel by M. Daudet has a singularly refreshing effect after the perusal of a story by M. Zola or by one of his disciples. But M. Daudet is too much of an artist to be able to produce a book every six or eight months with the regularity of his great rival, and this is why, instead of reviewing a story by him, I can only call the reader's attention to his 'Évangéliste,' which has begun to appear in the *Figaro*. It has been looked for with the more impatience because it was known that the author had chosen a subject possessing the charm of complete novelty. It will be a study of the Scandinavian colony in Paris and of Parisian Protestantism. The author of 'Petit Chose' has also profited by the comparative leisure of this year to take the readers of the *Nouvelle Revue* into his confidence as to his methods of literary work. His brother, M. Ernest Daudet, who is an indefatigable worker in many different branches of literature, had already published 'Mon Frère et Moi,' memoirs of the private life of the brothers. Good taste would condemn such pandering to vulgar curiosity; for my part I regret the dignified reserve of our fathers, who would not have thrown the secrets of their hearts to the first passer by. Nevertheless, the autobiography of the MM. Daudet is an interesting contribution to the literary and social history of our days.

I remarked at the beginning of this article that a reaction against exaggerated realism had already begun to manifest itself. Till now I have only noticed the greater names of the new school of reaction. I must call attention to a work of modest pretensions, which, published at an opportune moment, has had much to do with the turn of the tide. In 'L'Abbé Constantin' M. Ludovic Halévy has not produced a masterpiece. The faults of this little book are on the surface, and it would be puerile to pretend to find in it powerful conception, breadth of treatment, or original views; these are qualities which have no place in it, and which the author has not attempted to reach. Its merits are a tone of good breeding, a light and graceful touch, gentle emotion, and an agreeable yet unpretentious style. Nothing could be more simple than Halévy's plot. The reader is charmed by the courtship of a young and penniless artillery officer and a rich American heiress, whose original and yet noble character, free from every suspicion of vulgarity, at once arrests the attention. Sympathy is also excited by an old priest who is the guardian of the hero. With the help of these elements M. Halévy has made an exquisite little study. Who would have predicted that the coadjutor of M. Meilhac, the author of many broad pieces, a *boulevardier* before everything, would, at the risk of being thought a second Berquin, give the signal of a healthy reaction, and follow 'M. et Madame Cardinal' with the sweet eclogue of the 'Abbé Constantin'? To be just I must admit that although the public, possibly from surprise at his sudden conversion, has recognized in M. Halévy the leader of a reaction long expected, there have yet never been wanting writers whose works upheld the best traditions of French fiction. The distinguished lady who shelters herself under the pseudonym of "Henry Gréville" brought back from Russia a dozen picturesque studies of Russian life. No one has forgotten the success of those charming creations 'Dosia,' 'Sonia,' and many others. Madame Gréville is anxious to prove that she can dispense with the advantage of drawing her scenes from a little-known society, and that she is capable of digging valuable ore from the well-worked mine of French life. The *Revue Politique et Littéraire* is about to publish a novel of some length by this author bearing a somewhat mysterious title. M. André Theuriet, although he has exhibited leanings towards the realistic school, is too true an artist not to have recognized the function of the ideal in fiction. In his books we always breathe the wholesome and bracing air of the hills of Lorraine which he loves so well. Neither 'Madame Heurteloup' nor 'Les Mauvais Ménages,' nor even 'Sauvageonne,' which, despite the incontestable charm of the principal figure, is not free from a certain conscious cynicism, will add much to M. Theuriet's reputation. He is seen at his best in poetry, and we shall presently come to him. Madame Th. Bentzon has the merit—too rare in this country—of looking out of her windows, and has made an intelligent study of English literature, as is proved by her 'Littérature et Mœurs Étrangères.' Her own novels are happily tinged by this influence.

I have no space to notice all the works which fall into the category above mentioned as constituting a sort of third party, having affinity both with naturalism and defunct romanticism. M. Georges Ohnet, whose 'Serge Panine' has won under its dramatic shape a greater success than attended the original work, and whose 'Maître de Forges,' in spite of a certain lack of invention, shows real power; M. Hector Malot, who in his 'Millions Honteux' has tried to paint a kind of life to which, perhaps, only Balzac could have done justice; M. Claretie, who in 'Le Million' has tried to shake off the yoke of Zola and to return to an art simpler and broader; M. André Mouézy, whose 'Les Révoltes de Simone' and 'L'Oncle de Danielle' have met with a cordial reception; and M. Dubut de Laforest, seem to me to belong to this transitional group.

This hurried epitome of the literature of fiction would not be complete without some notice of the scientific novels, historical tales, and romances of adventure which have appeared during the year. M. Jules Verne still holds almost undisputed sway in the domain of fiction with a spice of science, but his 'Rayon Vert' has neither the originality nor the well-sustained interest of his previous works. Tales of adventure, especially with the judicial element, continue to flourish in the *feuilletons* of popular papers. MM. Xavier de Montépin, Pierre Zaccone, Alexis Bouvier, Adolphe Belot, and others compound with a skilled hand in their tales murders and robberies, the virtues of the Valjeans of low life and the miraculous sagacity of detectives; and these dramas of the Court of Assize ever find a crowd of readers. M. Gilbert Augustin Thierry, who bears a name doubly honoured in French literature, lately attracted attention by a strange, weird book

full of the terrors of the unseen, which seemed charged with the spirit of Nathaniel Hawthorne, and bore the title 'Une Ame en Peine.' His 'Capitaine Sans-Façons' is concerned with a period less remote and less tempting to the play of his sombre fancy. M. Jules de Glouvet has been careful in his 'Histoires du Temps Passé' to dwarf the size of his frames. His subtle talent would not have been equal to the execution of a large canvas, but, taking his book for what it is, it is one of the best this able craftsman has produced. The Marquis de Belleval in his 'Galerie des Ancêtres' has remembered a little too much of his own pedigree; but, after all, a man may be a gentleman of good descent, and even be proud of it, without his literary ability suffering thereby. "Madame Mary Sumner" in the 'Amoureuses du Colonel' has produced a brilliant study of manners from the period of the First Empire which proves the author to be, in spite of the strange pseudonym that figures on the title-page, the possessor of a thoroughly French style imbued with the best traditions of our literature.

The 'Torquemada' of Victor Hugo towers above all the rest of the year's poetry. It is useless to seek in it for the conditions essential to a strictly dramatic action. The plays of Victor Hugo are in reality only a continuation of his lyrical poetry. His characters have not the intense vitality of the heroes of Shakspeare; the action does not advance steadily to a logical issue which appears to the spectator the decree of fate. We must look on the romantic drama, as Victor Hugo understands and practises it, as a sort of opera in which the beauty and harmony of the verse are intended to supply the place of the music, where anything serves as a pretext for cavatinas and for romances. The very violence of the action, often pushed to extremes, is the best possible proof, if we understand it rightly, of the fundamental lack of real life. The great dramatic artists have no need of the exceptional in order to impart to their works the living spark of creation. 'Torquemada' can only confirm this impression, which the partial failure of the revival of 'Le Roi s'Amuse' has in its turn served to strengthen. It seems to me more seemly and more useful, however, not to insist on these well-known defects, which constitute in some measure an integral part of the genius of M. Hugo, but rather to call attention to the grandeur of the conception which animates this play, the captivating freshness with which the octogenarian poet has contrived to depict the loves of two children, and the splendour of the versification. Only a great poet could create the sombre physiognomy of the director of the Inquisition, sound the depths of his violent and restless spirit, and read in it the thought of that supernatural love which only lights the faggots on this earth in order to extinguish the fires of hell, and tortures and kills the body in order to save the soul. Only a great poet could place in the midst of this gloomy and terrible drama the fresh and sparkling idyl of those two innocent loves, of the two virgin hearts for which the gratitude of Torquemada reserves so tragic a reward. Finally, only a great poet could find his inspiration in the sad circumstances of our epoch, brand as he has done by the mouth of his Spanish rabbi the disgraceful revival of the spirit of persecution in the closing years of our century, and give eloquent expression to the complaints and groans of oppressed races and sects, the sufferings of which are the shame of our age of boasted civilization. Literary France cannot—without an emotion which all will understand who know, according to the saying of one of the ancients, that the laurels are greener on the hairs of a grandfather—reap the rich harvest, the golden fruit, of this vigorous St. Martin's summer of M. Victor Hugo. A tender note of filial piety pervades the admiration of the public for the survivor of the struggle of romanticism, and certainly the country which honours the old age of its Tennyson and its Browning will not complain of the feeling that causes criticism to abdicate its functions in the presence of Victor Hugo.

What is important to make clear is how it is that the universal worship paid at the shrine of the greatest of the romanticists has little influence on the literary *credo* and the poetic methods of the new generation. Among the writers whose works I am going to mention rapidly there are scarcely more than one or two who, while paying homage to the great father of them all, trouble themselves to follow the lessons of the master. Of course, the great revolution in things poetical to which Victor Hugo has for ever linked his name remains almost entire. It is in some sort in a new atmosphere that the new poetical school labours, and it is to Victor Hugo in a great measure that it owes this. Still it is none the less certain that if one were to name the artists whose influence is most profoundly felt at the present moment in the new Pleiad, one would have to mention, first and foremost, André Chénier, Théophile Gautier, and Baudelaire. M. Sully Prudhomme, whose election to the Academy has been hailed with delight by the youth of France, is a true disciple of André Chénier, as is shown by the tender grace, the harmonious softness of his verse, the deep melancholy of his inspiration, and the generous ardour of a poetical temperament which does not recoil before the highest problems of contemporary thought, and in 'La Justice' has given us the 'Hermès' of the nineteenth century. It is in the faultless Théophile Gautier, in Baudelaire, and also in your Shelley, that one ought to seek for the varied sources of the inspiration of M. Paul Bourget. In his 'Aveux,' as in his 'Vie Inquiète' and his 'Edel,' the influence of the singer of 'Epipsychidion' is visible, without there being thereby any diminution of the writer's originality. M. Bourget has given expression to the refined melancholy, the dreamy tenderness, the high aspirations, and, I must add, the unhealthy languor of the new generation, his contemporaries. The charm of these sincere confessions lies in the rare union of a form that is singularly near to perfection, and modelled on the purest types of French art, with a foreign inspiration which one may say has been borrowed from the North. M. Bourget possesses at one and the same time the dexterity of a French Parnassian, skilful to chisel his rhymes and model his rhythms, and the *naïveté* of a Northern poet, habituated to expressing his whole soul in his songs. His firm and full lines seem to be always enveloped in an indefinite atmosphere of mystery. It was, of course, impossible that the high culture of M. Bourget and the talents he has shown in his literary criticisms, of which I shall speak presently, should not make the author of 'Les Aveux' something better than a simple artist in rhyme. People of his stamp are unfortunately so rare that he is worth dwelling upon as I have done. In the 'Livre de la Payse' of M. André Theuriet we recognize the forest scenery and the country odours by which the novels of the author are characterized. In verse as in prose the imagination of M. Theuriet is haunted by the deep woodland, the wide glades, and the ceaseless play of light and shade on the thick foliage. The monotony attendant on such a limited range of subject is avoided by the artistic ingenuity of the writer. The merit which he possesses beyond his fellow poets of the day is that of being not a mere writer who elaborates his themes in his library, and of not yielding to imaginary caprices and indulging in infinite variations of the same theme. M. Theuriet has lived his poems before writing them. He only crystallizes in the form of verse emotions which he has felt and impressions he has received. This is the secret of the great yet sober charms which poetry possesses that is the journal of a life.

I can only mention rapidly a few minor volumes of verse published during 1882. Full of *savoir-faire*, but incapable of throwing on the faultless mirror of their verse a thought or a sentiment, MM. Bruyère ('Chansons de Guerre'), Depiot ('Poésies'), L. de Tournefort ('Travesties'), Antoine Cros ('Les Belles Heures'), R. de Latille Hervé ('Chansons des Roses'), P. Nebout ('Poëme de la Jeunesse'), and others, who write 'Veillées Poétiques' and such like verses, that it would take too long to mention, would be, no doubt, much astonished if any one took seriously their poetical essays. Just as formerly every young man of promise, whether he was to become a great scientific celebrity like Claude Bernard or a statesman like Charles de Rémusat, was bound to have a tragedy among his papers, nowadays every good young man sacrifices once for all to the muses. It is a family matter with which the public has nothing to do. One volume, however, must be excepted, for it would be unjust not to praise the patriotic poetry of M. Louis Ratisbonne, the translator of Dante, who in his 'Quatre Alsaciennes' has attained success by the simplest of all means; the popularity of his little book in the conquered provinces is a sufficient proof of his merit. In his 'Poésie d'un Vaincu' M. Édouard Siebecker has not shown equal ability; still the young exiles of the French Poland love to repeat his verse; M. Stéphen Liégeard in his 'Grands Cœurs' shows that the great hearts are not always great souls. M. Clovis Hugues does not exactly woo the patriotic muse in his 'Soirs de Batailles'; his fighting and singing are done on behalf of socialism. If the chords of his lyre are of brass, he is able to extract harmony from them, and in judging the poet one must lay aside the prejudices that the deputy inspires.

I do not know how much truth there is in

Sainte-Beuve's famous saying, endorsed by Alfred de Musset in his lines:—

Il existe, en un mot, chez les trois quarts des hommes
Un poëte mort jeune, à qui l'homme survit.

In any case the couplet admirably describes the great critic who ruled the first half of this century, and who never, amidst the brilliant success of the 'Lundis' and 'Nouveaux Lundis,' forgot the honourable ambition which had fired the author of 'Joseph Delorme' and of the 'Pensées d'Août.' It is incontestable that the mantle of Sainte-Beuve has fallen upon M. Scherer, whose 'Études sur la Littérature Contemporaine' reveal wide and deep culture, a sound judgment, pure taste, and a fearless, outspoken tone, contrasting pleasantly with the commonplaces of the mutual admiration societies of the day. But I have no call to make M. Scherer's name known in England, thanks in great measure to the good offices of Mr. Matthew Arnold. A distinguishing trait of M. Scherer—and some, no doubt, will see in it a critical disability—is an entire absence of that indifferent eclecticism so often produced by very wide culture. His catholic sympathies have in no way sapped his orthodoxy. He has room in his literary pantheon for every legitimate form of art, but no critic has protested with more force against the pretensions of the *naturaliste* school, none has denounced M. Zola and his disciples in more withering terms. It has been alleged, and with justice, that M. Scherer's critical method is occasionally at fault from a too rigid adherence to the laws of logic; but it must be conceded that this very limitation has rendered the author of 'Études sur la Littérature' good service in his crusade against a debasing materialism. In his preface to the works of Bersot, 'Un Moraliste au XIXe Siècle, M. Scherer has told, in simple, but touching words, the story of a noble life, of a man who was good as well as gifted, of a philosopher who endured excruciating agony with the fortitude of a Stoic.

M. Paul de St. Victor, whom death has recently snatched from the ranks of Paris journalism, was a critic of a school widely apart from that of M. Scherer. In the 'Deux Masques, Comédie et Tragédie Antiques,' we do not find a deep knowledge of classical pagan art, or any suggestive criticism of the masterpieces of antiquity. The author was entirely an exponent of the school of picturesque criticism, of which Théophile Gautier was the ablest representative. It was the delight of M. de St. Victor to make an inspiriting subject the theme of a gorgeous word-panorama prolonged to infinity. To think out the laws of literary production; to endeavour to enter into the very soul of one of the great poets of the past, not for the sake of finding a theme for a brilliant dissertation, but to discover the act of creation; and to bring to light the earliest seeds of genius, was assuredly far from the thoughts of this *virtuoso*. Hence his brilliant pages, which met with ready success, have no element of enduring fame. Already the bloom has begun to fade and the perfume to pass away, and soon these brilliant meteors will be but a dim tradition. This is not the criticism for our scientific age.

M. Paul Bourget, whose poetry I have had occasion to praise, is a fresh arrival. His first appearance in literature dates some five or six years back; the past year has seen him take up the pen of the critic. Under the title 'Études de Psychologie Littéraire' the *Nouvelle Revue* published a series of articles by him on M. Renan, Stendhal, Gustave Flaubert, and M. Taine, as well as some essays on Wordsworth, Southey, and De Quincey—'Notes de Voyage sur les Lacs Anglais.' All who have a right to speak with authority have hailed the appearance of M. Bourget. He possesses, in addition to a keenly poetic temperament and the analytical faculty of a modern philosopher, a breadth of conception, a dialectical subtlety, and a wide range of scholarship which will soon place him in the first rank.

M. F. Brunetière, who is critic to the *Revue des Deux Mondes*, is beyond dispute endowed with ability, taste, and learning. His 'Études Critiques sur l'Histoire de la Littérature Française' are marred by a pedantic tone and by an affectation of superiority. M. Brunetière might have done worse than take example in some respects from Gustave Planche, his predecessor, although I am far from advising any writer to adopt the brutal frankness of the latter. M. Brunetière has a much better model in another fellow worker on the *Revue;* I am speaking of M. Émile Montégut, who has broken a too long silence and has given us a criticism on Charles Nodier, a life of Maréchal Davout, and collected volumes of some of his best essays, 'Types Littéraires et Fantaisies Esthétiques.' M. Montégut is one of the most delightful freelances in the band of critics. The imagination of a poet lights up all his work, and his fancy is but the handmaid of a sound judgment and cultivated mind.

I cannot say as much for another critic in the *Revue*. M. Maxime du Camp's 'Souvenirs Littéraires' have been the cause of as much offence as amusement. M. du Camp has never acted with great forbearance to his enemies—witness his attacks on the Communists; but it must be admitted that his friends have suffered even more by his indiscretion. Gustave Flaubert, Louis Bouilhet, and Théophile Gautier would feel scant gratitude for the cynical frankness of the revelations which he has thought fit to connect with their memories. M. du Camp's gratitude for the amazing good fortune which has carried him, alone of the little group I have just mentioned, within the Academy, is indeed a cause for just comment. Posterity will redress the balance between the author of the 'Souvenirs' and the great writers on whom he has presumed to pass judgment.

There is an ever-increasing abundance of literary biographies and of memoirs elucidating the personal history of the romantic movement. Not to mention the letters of George Sand, of which three volumes have appeared, under circumstances which rob them of a certain measure of historical value, though in no way interfering with their general interest, nor the letters of Lamartine, the concluding volume of which has recently been seen through the press by his niece, I must notice the amusing 'Souvenirs Littéraires' recently issued by M. Théodore de Banville, the well-known poet, which is also a most valuable contribution to the history of the second romantic period. In 'Cinquante Ans de Vie Littéraire' M. Mary Lafon has given us the recollections of a literary personage of the third order whose very insignificance often brought him into close relation with many men of mark and enabled him to witness events of great moment. M. de Pontmartin, who had already furnished us with what Sainte-Beuve called "the very bitterest of his gall," has again given expression and at greater length in his 'Souvenirs d'un Vieux Critique' to the literary disappointments of a gentleman of letters.

I must mention the 'Lettres de Benjamin Constant à Madame Récamier' and the Comte d'Haussonville's 'Salon de Madame Necker' as casting valuable light on the cultured society of the beginning of this century. Going a little further back, to the eighteenth century, I must notice the beginning of a work by MM. Lucien Perey and Gaston Maugras of great interest, 'La Jeunesse de Madame d'Épinay,' and the conclusion of that huge work, the entire correspondence of Grimm, Diderot, &c. The great seventeenth century, the really classical period of our literature, has inspired but few original works. Among them I select an interesting book by M. l'Abbé Fabre, professor in the Faculty of Theology at Aix, on 'La Jeunesse de Fléchier'; 'St. Vincent de Paul et les Gondi,' by M. de Chantelauze; the pamphlets by M. Léonce Person, 'L'Histoire du Véritable Saint-Genest' and the 'Wenceslas de Rotrou'; M. Hémon's essay, also on Rotrou; and, coming a little nearer to modern times, M. Barthélemy's 'Comédie de Dancourt' and M. Frédéric Masson's 'Le Marquis de Grignan, Petit-Fils de Madame de Sévigné.' The sixteenth century has furnished M. Dejob with an interesting study of the great Latinist Marc Antoine Muret; M. Pellissier with a monograph on the Protestant poet Du Bartas; and M. A. Baschet with a curious account of the Italian comedians at the French Court.

It is not my province to deal with books of mere erudition. But among those which have appeared in 1882 there are some historical works which, from their plan and execution, have so close an affinity to literature proper that I cannot pass them over in silence. I can merely mention their titles; for within my limits it would be utterly impossible to give them the attention they deserve. I must, therefore, crave my readers' indulgence for closing this hurried review with the following catalogue: the Duc de Broglie's brilliant 'Frédéric II. et Marie Thérèse'; and the works of MM. Albert Vandal ('Élisabeth de Russie et Louis XV.'), Campardon ('Les Prodigalités d'un Fermier Général'), Ch. Vatel ('Madame du Barry'), Faugère and A. de Boislisle (editions of the 'Écrits Inédits' and of the 'Mémoires de St. Simon'), Chéruel ('Histoire de France sous la Minorité de Louis XIV.' and 'Histoire de France sous le Ministère du Cardinal Mazarin'), H. Forneron ('Histoire de Philippe II.'), de Ruble ('Antoine de Bourbon et Jeanne d'Albret'), Comte Jules Delaborde ('Histoire de Coligny'), Chantelauze ('Louis XIV. et Marie de Mancini'), Édouard Rott ('Henri IV., les Suisses et la Haute Italie'), Comte de Ferrières ('Les Projets de Mariage de la Reine Elisabeth'), Th. Jung ('Mémoires de Lucien Bonaparte'),

L. Larchey ('Mémoires du Sergent Fricasse et du Capitaine Coignet sur les Guerres de la République et de l'Empire'), G. Picot ('La Vie de M. Dufaure'), Comte H. d'Ideville ('Le Maréchal Bugeaud'), Rothan ('La Politique Française en 1866 et l'Affaire du Luxembourg'), Comte Bernard d'Harcourt ('Les Quatre Ministères de M. Drouyn de Lhuys'), A. Sorel ('Essais de Critique et d'Histoire'), and the Duc d'Almazon ('Histoire de la Guerre d'Italie').

Francis de Pressensé.

GERMANY.

Some one once compared Germany to the milky way, on which are strewn close to one another stars that have each their own light instead of clustering round a central sun. The home of the French author is Paris, of the English London, of the German Germany. The German author may be born anywhere "wo die deutsche Zunge klingt," in the sandy flats of the North or in the green valleys of the Southern hills. But while almost no French or English author of note, even if born in the country, has failed sooner or later to leave his native place for the capital, many great German writers have passed their lives in small places. The greatest of German philosophers never stirred further than four leagues from his native Königsberg; the greatest German poet was vainly entreated by Napoleon to exchange the narrow limits of the palace park at Weimar for the wide horizon of Paris.

Germany has never till recently had either literary or political capital. The political centre of the old empire was always there where the reigning emperor, its political head, fixed his abode. The literary centre has ever been where the chief representative of German literature lived. The unconquerable love of roaming, which at the time of the migrations of the barbarians drove the Teutonic races from the ice-fields of the North and the steppes of the East southwards and westwards, and leads German artisans from town to town, and German students and professors from university to university, has brought about this result among others, that the political centre of gravity—and the literary too—has in the course of history changed its position countless times. Cities of the second and third rank, like Goslar, Worms, and Ratisbon, have been for a time raised to the dignity of political capitals by the temporary settlement of the emperor and the empire within their walls. About the middle of the last century Leipzig was the "little Paris" where Master Gottsched resided; at the close of it the country town of Weimar, where Goethe lived, and the learned village of Jena, where Schiller had settled, were Germany's literary capitals. The old imperial city of Vienna was after the treaty of Westphalia only in name the seat of the empire; and it had never been even nominally its literary head. The new imperial city of Berlin, which since the war of 1870 has been the real centre of Germany's political life, is on the way to become also the permanent centre of its literary activity. As in the old German story not the lion, but the bear, is the king of the beasts, so Berlin, that displays the bear on its shield, from being the humble town built on piles at the side of the Spree, where, down to the end of the seventeenth century, the courtiers went to court on stilts to avoid the mire, has in a little over a hundred and fifty years grown to be the queen of cities.

On the 27th of this month it was six hundred years since the first German emperor of the house of Hapsburg, Rudolph, by bestowing on his sons Albert and Rudolph the fiefs of Austria and Styria, laid the foundations of the now flourishing Hapsburg monarchy. About that time Frederick of Zollern, the ancestor of the royal house of Prussia, became Burggraf of Nuremberg. The last emperor of the house of Hapsburg, Francis II., laid down the crown which had become a mockery, and as King of Hungary and Bohemia assumed the crown of Austria. The little Burggraf of Zollern had meanwhile slowly grown to be Margrave and Elector of Brandenburg, then Duke and King of Prussia, and the great-grand-nephew of the victor of Rossbach put an end, like Rudolph of Hapsburg before him, to the "emperorless" period, and in the whilom city of Charlemagne placed on his brow the crown of Germany.

To the new imperial family political Germany owes its renaissance; literary Germany has in former days experienced from the Hohenzollern much stepmotherly treatment. The "great Elector" introduced French weavers and spinners into the country, the great king invited French poets and *savants* to his court. In his 'Essay on German Literature,' composed exactly a hundred years ago, Frederick the Great, whose thoughts were German but his verses French, praised Gellert the fabulist as the one readable German writer, and the old-fashioned comedy, 'Der Postzug,' of Ayrenhoff, a forgotten dramatist, as the one comedy of the German nation; and this at a time when Klopstock, Lessing, and Goethe had established their reputations, and the model of German comedy, Lessing's 'Minna von Barnhelm,' had been long played on the stage of his Prussian majesty's own capital.

If Frederick were now to write an account of German literature, he would be able to count among the poets of the year a princess of his own house. "Carmen Sylva" would have won a creditable place in the German "Dichterwald," even if the bearer of this pseudonym had not been the wife of a Hohenzollern and the Queen of Roumania. Princess Elizabeth of Neuwied has not in her new home on the Danube forgotten the scenes of her youth. The most successful of her historical poems, which she has headed 'Stürme,' deals with the legend of Schloss Hammerstein on the Rhine, where the unfortunate Emperor Henry IV. found his last refuge from his rebellious son. The author, who unites manly spirit with womanly tenderness, has attempted not only narrative but also lyric and didactic poetry, and has given some specimens of the latter in her collection of sayings 'Jehova,' which are full of *verve* as well as of thought. As queen of a foreign country she has turned her attention to its literature also, and has not only collected and translated Roumanian popular poetry, but also herself written Roumanian verse.

Lyric queens are as rare as kings of lyric poetry. Poets of this description, excepting those who hold themselves to be such, exist no longer. In spite of all the efforts of the critics, who, like Mephistopheles, think

alles, was entsteht
Ist werth, dass es zu Grunde geht,

each new year, to their as to his disgust,

circulirt ein neues, frisches Poëtenblut.

Ladies have precedence. This year an author hitherto unknown, Martha Hellmuth, has collected her poems for the first time, while one who has long enjoyed a good reputation, Countess Wickenburg, has done the same thing for the third. The latter has been warmly praised by Johannes Scherr; the former has been declared (perhaps by one of her friends) the most remarkable female writer of lyrics since the crystal-clear verses of Betty Paoli and the natural and vigorous lines of Annette von Droste-Hülshoff appeared. The train of sweet melancholy—not pessimism—which runs through the verses of the first named, the nobility of feeling and the sense of the happiness of life that the poetry of the other expresses, form a pleasant contrast to the "Weltschmerz" which Schopenhauer introduced into our modern lyric poetry, and the noisy realism which Scheffel's disciples have cultivated. Of the pessimistic school Albert Moeser may be styled the chief, and his most recent volume, 'Schauen und Schaffen,' exhibits a union of philosophical penetration with classical form. The gloomy view of the world which the first poems of this distinguished writer exhibited has, in consequence of his study of modern science, given place to quieter and more cheerful views. Moeser's gifts are almost wholly lyrical, and he is the only writer of the day capable of writing an ode—a species of composition that is nearly extinct. At once poetical and exact, his descriptions read like the hymns of a new religion of nature. While Moeser is exceptionally metaphysical, Stefan Milow, a kindred spirit, is also ethical. The former opposes to

der See von Plagen,
Die unseres Fleisches Erbtheil,

the tranquillity of the sage; the latter the force of the human will. Both are didactic in their tendencies, while the third member of the group, Ferdinand von Saar, who has hitherto been known as a dramatist and story-teller, and has this year, for the first time, made his appearance as a lyric poet, is before everything a rhetorician. His 'Gedichte' lack the lyrical impulse which is obvious in his tales, almost all of which are autobiographical. On the other hand, the best of them are marked by a passionate pathos which recalls the dramatist, and a sensuous fervour which often verges on audacity. The opposite tendency and the jovial sense of enjoyment which Rückert and Daumer introduced by their translations of Hafiz, F. Bodenstedt made popular by 'Mirza Schaffy'—the echo is rather feebly repeated in his last work, 'Sprüche und Lieder aus dem Morgen- und Abendlande'—and Scheffel made the watchword of all "wandering minstrels," are, if we may judge by Rudolf Baumbach's latest verses, 'Von der Landstrasse,' in danger of degenerating into a mechanical celebration of "wine, leisure, and pleasure." The poet sends, as Uhland said, his poems like children into the wide world; but what father of a lyric offspring ever before thought of counting his progeny, and writing "first thousand"

on his title-page, as the "Spielmann von der Landstrasse" has done with his last volume?

The celebrated writer on æsthetics Friedrich Vischer has this year joined the "journeying multitude" of the poets. This able man has in the capacity of an unrelenting critic plucked the peacock's feathers from many a lyric crow. His own poetic clothing, even if no peacock's plumage, has grown on his own body. His stately volume of 'Poems' comprises a politico-philosophic journal full of thought. His humorous ballads, which he has at various times given to the world under the pseudonym of "Schartenmayer," and which have won a wide circulation, are unfortunately not included in the book.

The place of the once popular Roman plays has been taken by the German national, and more recently by the patriotic Prussian, drama. Gracchus and Catiline, Messalina and Nero, have made way for the Carlovingians and the Anglo-Saxon Harold, and quite lately for the Prussian patriots of 1809 and the student volunteers of the War of Independence. The author of the 'Carolinger,' Ernst von Wildenbruch, has in the course of this year enriched dramatic literature with three new works, the subjects of the first and third of which are taken from Prussian history and the second from English. Wildenbruch's pieces are remarkable for a quality rare in Germany—suitability to the stage. The author has in a degree superior to his rivals the ability of inventing dramatic conflicts, strong situations, effective scenes, and more especially striking catastrophes—qualities which have secured the success of almost all his productions. Wildenbruch first came into notice as a narrative poet, and while his predecessor Schernberg celebrated the Prussian victories in Frederick's time and those of the War of Liberation, he dealt with those of the last French war. As a dramatist he shares with his countryman Heinrich von Kleist his military and distinctly Prussian patriotism, his succinct brevity and vigour of expression, but, fortunately, not his fantastically mystical tendency to the romantic. In the warlike scenes of his two plays, 'Der Mennonit' and 'Fathers and Sons,' the Prussian officer and Brandenburg patriot speaks just as in Kleist's 'Prinzen von Homburg': the scene of the first is laid in the time of the ill-starred rising of Schill; that of the second partly in the day of Prussia's deepest humiliation after the battle of Jena, partly in her most glorious epoch, the battles for liberation. The former deals with the conflict between the religious creed that forbids the Mennonites to handle arms and the patriotic feelings roused by the foreign yoke. The latter depicts in glaring, almost too glaring, contrast the shortcomings of the fathers whose treachery and cowardice ruined the kingdom of Frederick the Great, and the virtue of the sons whose devotion and valour rescued their country. Both appeal mainly to a Prussian public. As a dramatic composition the latter is far inferior to the former, for the first two acts are separated from the last three by an interval of seven years, while in the other play the plot is compact, and is rapidly and continuously developed. If in both these pieces the author has relied too exclusively on patriotic feeling, his tragedy of 'Harald' is a work of considerable length and undeniably tragic character. The writer competes with Tennyson in his portrait of the Anglo-Saxon hero who succumbs to the Norman conqueror. The greatest difficulty that the dramatist has to encounter in dealing with the character of Harold is his open repudiation after his return from Normandy of the oath he has sworn on the relics of a saint. This perjury is a blot on an otherwise frank and chivalrous nature, and the poet must either extenuate it, in order to exalt the character of his hero, or boldly make the moral guilt the cause of the hero's downfall. Tennyson, who tries to make Harold an ideal hero, has chosen the former alternative; Wildenbruch, who sees in him, according to Aristotle's precept, a mixture of good and evil, has not hesitated to adopt the latter. In order to place Harold's breach of faith in a softer light Tennyson represents him as cheated by William. Harold in taking the oath has no idea that he does this upon relics concealed under a cloth. Thereby his breach of the oath seems more excusable: as if the oath were not in itself sacred, but was only made inviolable by the knowledge that it was sworn on relics. This idea, however consonant with the opinion of the age and the theories of the mediæval Church, is opposed to modern morality. We prefer that the hero should be guilty of a breach of his word rather than that he should be acquitted on grounds with which we have no sympathy. The German dramatist gives his hero the choice of either keeping his oath and rejecting the crown of his country, or of winning the kingly dignity and bringing on himself the curse of perjury. That, placed in this position, he chooses the crown, constitutes at once his guilt and the pathos of the drama. Harold deliberately prefers the acceptance of the crown, on which the rescue of his people depends, to the preservation unsullied of his personal honour. His glorious death is a more than sufficient atonement for the stain on his reputation. That the poet has not made his choice lightly is best shown in the scene between Harold and his mother, who has more especially encouraged him in his opposition to foreigners, but now that he intends to assume the crown refuses the allegiance which her son, who in her eyes has lost his honour, demands, first coaxingly and then imperiously. In this grandiose contest between mother and son, patriotism and honour, the German writer has displayed a dramatic strength and boldness of character drawing which, more than the Laureate's fidelity to the chronicles, reminds one of Shakspeare's histories.

If in Wildenbruch's tragedy the spirit of Shakspeare lives, in Richard Wagner's 'Parsifal,' produced in August last at Bayreuth, the drama of the Middle Ages is reproduced. While in the former the free will of the dramatic hero becomes the "smith of his destiny," in the latter the hero is an involuntary tool of a higher order of things. It is characteristic of this view of things that the dramatist of the future does not name his hero Percival, as the original saga does, but with Görres writes it Parsifal. The former signifies a man who breaks through all obstacles, and is therefore active; the latter (according to Wagner) a "pure fool," who submits to anything and is therefore passive. The "Kunstwerk der Zukunft," that ought to be called not an opera but a musical drama, abolishes, like the mystery plays of the Middle Ages, the free will of the hero in order to substitute for it the scenic description of an epic tale in which the destiny of the hero seems predestined without his intervention. There is in this conception a recurrence to the form of the Middle Ages, and there is a similar recurrence to their spirit. Parsifal the fool is a type of purity opposed to the temptress Kundry—that is, to Science the unclean. The conceptions of good and evil coincide in true mediæval fashion with those of believing ignorance and scientific unbelief. In the conversion of the last named, personified in the Magdalene Kundry, and in the exaltation of the second, personified in the new Saviour Parsifal, the tendency of this new mystery, which, as in most thoroughgoing allegories, is but slightly veiled, culminates. It is regarded by the adherents of Wagner not only as a poetical but as a world-redeeming fact, and as the announcement of a new epoch of salvation and religion destined to take the place of an effete Christianity.

Compared with dramatic phenomena like these, of which the former is important through the greatness of its treatment, the latter through the magnitude of its error, the other plays of the year are insignificant. Neither the popular tragedy 'Die Zauberin am Stein' of the Austrian playwright Franz Nissel, who some years ago won the Schiller Prize at Berlin, nor the middle-class play 'Die Idealisten' of the lovable fabulist Gustav zu Putlitz, can claim permanent value. The scene of the former is laid in the Austrian Alps, and its subject is the tragical fate of a supposed witch. Its chief fault is that the high-minded heroine and her *entourage*, while they speak like villagers, think like townspeople. In the latter the characters suffer from the exceeding softheartedness of the author, and the piece is one proof more that the capacity for writing fairy tales, which makes even the untrue appear probable, and that for the drama, which makes only the probable appear true, are mutually exclusive. The new comedies 'Jungbrunnen,' by Paul Lindau, and the 'Jour Fixe' of Hugo Bürger, have this in common, that their authors have copied themselves, but not fortunately. The new Kotzebue, G. von Moser, has in the latest of his numerous farces taken the successful figure of his popular 'Krieg im Frieden,' the coxcombical lieutenant in the Guards, and has made him the sentimental hero of a continuation of the play, giving it the title of 'Reif-Reiflingen.'

From drama to romance the path lies through *Novellen*. As the drama is often nothing else than a tale provided with dialogue, the tale is often nothing else than a play turned into a narrative. Paul Heyse, the Goethe of German story-tellers, has this year not only collected his hitherto scattered Provençal tales under the name of 'Troubadour Novellen,' but he has added a new gem to the treasury of German tales, which already owes to him many jewels. The scene of his tale 'Das Glück von Rothenburg' is laid in

the forgotten old imperial town on the Tauber, which, a Nuremberg in miniature, has preserved its mediæval aspect, its walls, towers, and small projecting gables, and preaches in a roguish and pointed way the doctrine ignored by this boisterous age, that the fortune sought in the immeasurable distance is most securely and easily to be found in the comfortable narrowness of a wise self-restraint. Besides it there emerge, like an island out of the deluge of tales, which rises and falls yearly like the Nile, but, unlike it, fails to fertilize, the collected stories of Ludwig Steub, the humorous painter of scenery and people in Tyrol; the 'Züricher Novellen,' now also collected, of Gottfried Keller, a keen observer and sharp critic of Swiss character; the no longer new 'Neuen Novellen aus Oesterreich' of Ferdinand von Saar; and the 'Brandenburger Novellen' of Theodor Fontane and Gustav zu Putlitz, which show, like Putlitz's 'Froelenhaus,' a work full of local colour, that the sandy and dreary Mark of Brandenburg has a poetry of its own.

It is often said of German *savants* and professors that they are more at home in antiquity and in distant climes than in the present age and their native country. The author of the 'Aegyptische Königstochter' and of 'Uarda' has called to life the mummified inhabitants of Pharaonic temples and royal mausoleums, but the stout burghers of his latest romance—the scene of which is laid not on the Nile, but on the Rhine—the Burgemeister van der Werff and the Frau Burgemeisterin, who defend Leyden against the Spaniard, are bloodless shadows. Ebers, like Antæus, gains fresh strength from contact with the soil, but it must not be his native soil. In this he is the opposite of Spielhagen. Ebers finds a living world among the sands of the Pyramids, Spielhagen among the wastes of Brandenburg. When the former lets go of his erudition and the other of personal observation their characters become unreal. Spielhagen's most recent novel 'Angela,' the scene of which is laid on the shores of the Lake of Geneva, is in subtlety of character drawing and breadth of treatment far inferior to its predecessors. The characters are some of them exaggerated, especially the heroine, who has rightly been styled a governess on horseback; some of them grotesque, like the gigantic lady who confesses herself to be an adulteress and the murderess of her husband. The situations are glaring and sometimes indecorous, the motives are often improbable, the final catastrophe is forced and precipitate. In spite of this the charge of immorality which has been levelled against the work is groundless. The writer does not apologize for crime, but punishes it with pitiless poetical justice. The *Dorfgeschichte*, a class of work which has lost a master hand through the recent death of Berthold Auerbach, has gained a new tone from union with the historical romance. Robert Schweichel's historical *Dorfgeschichte*, 'Die Falkener von St. Vigil,' tells the simple history of the loves of a pair of villagers among the Dolomites of the Pusterthal. The colossal mountains furnish a landscape background, while the rising of Tyrol against the French supplies the historical colouring. With excellent tact the author has avoided the danger of writing history instead of romance. Hofer and Speckbacher appear on the scene, but they do not divert the reader's attention from the real heroes of the story—the peasant family of the Falkener. The social novel of the present day has gold for its ideal, and the stock exchange for its scene; the craze for speculation forms its heroism, and financial bankruptcy constitutes its tragic catastrophe. Spielhagen's 'Sturmfluth' was the masterpiece of this kind of fiction. Karl Frenzel's book 'Die Geschwister' is this year its representative. The writer divides the paladins of the modern stock exchange, who are united by a common desire to get rich without labour, into three classes, each of which has a leading representative in his novel—the ruined aristocrat who hopes by stockjobbing to raise again the fallen greatness of his house, the financier by profession who risks his money in order to win ten times his stake, and the penniless seeker after wealth who fancies that by wild speculations he can make millions out of nothing. On account of the typical character of his heroes, Frenzel, who takes Gutzkow for his model, is considered by critics the representative of the idealistic novel; Freytag and Spielhagen of the realistic; Scheffel, Ebers, and Dahn of the erudite and archæological.

In modest and respectable German houses it is a good family custom that the wreath of birch is preserved behind the mirror. The 'Evil History,' which the stubborn "Alte vom Zürchberge" Johannes Scherr has further called 'Porkeles and Porkelessa,' is a volume in which to the too well bred present, as well as to the ill bred, the mirror is held up and the scourge is shown. Goethe would have called this wonderful production, neither novel nor tale,—in which the history is the minor affair, the evil the principal thing,—a "Tragelaphe." The author is well known as an historian of culture, and his tale 'Rosa von der Flühe' shows he has at command deep pathos, but in his new book he wields, like his model Fischart, a cudgel or hammer instead of a pen, and deals his blows on every side. A thorough idealist and, as a good German, "a friend of all the world," bitter experiences have made a pessimist of him, and, like his Suabian countryman the "frummer Landsknecht," an enemy of all the world, whose blows strike all alike—Semites and anti-Semites, cosmopolitans and chauvinists, Liberals and Conservatives, fanatics and freethinkers, absolutists and anarchists.

Were the life of the lovely Greek Athenais, the heathen daughter of a Neoplatonic philosopher who rose to be Empress of the East, not history, it must be deemed a romance. As the last Emperor of the West bore the name of Rome, the last representative of Hellenic culture bore the name of Athens. Ferdinand Gregorovius, who has done for mediæval what Mommsen has done for ancient Rome, has, after endeavouring to whitewash the abused lady of West Rome, Lucrezia Borgia, tried to do the same service for the most virtuous woman of East Rome, the learned and poetical wife of Theodosius. Athenais, or, as she was called after her conversion, Eudocia, has hitherto been suspected of an unlawful intrigue with Paulinus, the Chamberlain of the Imperial Palace, and of having taken a bloody revenge for the execution of him and other friends on Saturninus, the author of their deaths. Gregorovius repudiates both charges and shows in the clearest light the innocence of his heroine. This celebrated writer belongs to that rare class of historians which knows how to combine criticism and thoroughness with taste and style. Himself a poet, he feels sympathy for the poet's soul fretting under the restraints of the etiquette of the Byzantine court, and gives a careful translation of the poem which celebrates the love of the heathen sage Cyprianus for the devout Christian Justina and their martyr death, and formed the source of Calderon's 'Magico Prodigioso.'

While one historian has undertaken the vindication of a woman whom chance raised to the throne, another has performed a similar service for a man who for over two hundred years has been suspected of a wish to procure one for himself by treachery. Wallenstein's character, which, as the poet says,

> Durch der Parteien Hass und Gunst verwirrt,
> In der Geschichte schwankt,

has called forth a literature debating the question of his guilt or innocence. At first almost universally deemed a traitor, he has been regarded in a milder light by modern historians, especially since Hallwich's publication of his official correspondence. Even Ranke, the Nestor of German historical research, has admitted his guilt is not proved, and that his special endeavour was to make peace between the two religious parties, between the emperor and the princes. The more Wallenstein's innocence asserted itself, the more difficult to fathom seemed to be the secret source out of which sprang the fatal suspicion of his designs entertained by his contemporaries and posterity, which is said now to be proved a mistake. A solution of the mystery, and therefore of the Wallenstein question, is offered by Edmund Schebek. Basing his work on researches among archives, the author has made it more than probable that the irreconcilable enemy of the Bohemian Protestants and rebels, Count Wilhelm Slawata—who was thrown from the window of the Castle at Prague along with his colleague Martiniz, an incident which was the signal for the Thirty Years' War—was also the bitter and secret author of the fall of the Duke of Friedland and the blackening of his memory. Whether by this book the debate regarding Wallenstein is settled the sequel will show. Since the State and family archives of Austria have been thrown open to historians, the sources of the story of the great struggle, so far as it was waged on Bohemian soil, have grown numerous, as the huge work which has this year reached its fourth volume, the 'History of the Thirty Years' War,' by Gindely, and the monograph of the same author on the Bohemian revolt and the battle of the White Mountain, prove.

Our age of minute research is not favourable to the comprehensive histories of Schlosser and his school, the outcome of the philosophical century which preceded them. Only a patriarch like Ranke, who surveys the destinies of man with the impartial eye of a dweller in another world, is equal to the task. Instead of general histories we have monographs relating to special countries and definite periods. The principle of the division of labour has long worked well in the natural

sciences, and is also advancing historical knowledge. Of the monographs that have lately appeared the edition (finished with the second volume) of the 'Jahrbücher des Deutschen Reichs unter Heinrich III.,' and the 'Geschichte des Ersten Schlesischen Kriegs,' by Karl Grünhagen, are excellent. The former, issued under the auspices of the Historical Committee of the Bavarian Academy of Sciences, deals with the most brilliant period of the mediæval empire —of course in annalistic form, but with exhaustive thoroughness. The latter work is based upon extensive researches among the archives of London, Dresden, and Vienna; and in the last-named city the unexplored treasures of the records of the Ministry of War were liberally thrown open to the writer, who depicts in lively colours the change made in the condition of Europe by the appearance on the scene of the ambitious young King of Prussia. Among the cyclic histories, if one may so style them, the new 'Allgemeine Geschichte in Einzeldarstellungen,' under Oncken's editorship, and the renewed 'Europäische Staatengeschichte,' under Giesebrecht's auspices, proceed steadily onwards. To the former series, besides Dümichen's 'History of Ancient Egypt,' Justi's 'History of Ancient Persia,' Stade's 'History of Israel,' and Lefmann's still unfinished 'History of Ancient India,' has newly been added an excellent 'History of the Crusades,' by Bernhard Kugler, which is based upon Sybel's investigations. An extremely interesting 'Geschichte des Zeitalters der Entdeckungen,' illustrated with excellent maps, has been compiled by Sophus Ruge; while Alfred Stern's 'History of the English Revolution' is attractive through its clever descriptions of leading personages, although after the works of Macaulay, Guizot, and Dahlmann it is likely to be styled an "Ilias post Homerum." Martin Philippson, in his 'Age of Louis XIV.,' has paid particular attention to the intellectual and social side of the reign of the Grand Monarque. Alexander Brückner has shown much industry in his 'Life of Peter the Great,' a despot, in the sense of Frederick the Great, for the good of his people. Oncken, the editor of the series, has displayed much impartiality in his 'Age of Frederick the Great.' In the Giesebrecht collection the excellent 'History of Spain,' begun twenty years ago by H. Schaefer, has been worthily continued in the 'History of Castile in the Twelfth and Thirteenth Centuries' of Schirrmacher. The first part of Paul Hassel's remarkable history of Prussian policy from 1807 to 1815 forms the sixth volume of the "Publications from the Prussian State Records." It furnishes a number of documents throwing new light on the statesmanship which rescued Prussia from her deepest humiliation.

The *Historische Taschenbuch*, founded by the once celebrated historian Friedrich von Raumer in 1831, has this year under Maurenbrecher's editorship entered on the second half century of its existence. As usual it is full of matter, and its articles contain a great deal of acute criticism. Harry Bresslau's paper on the genuineness of the Casket Letters attributed to Mary Stuart will attract English readers. The writer considers the most important letters forgeries.

Wilhelm Scherer's 'History of German Literature' has this year reached its sixth part, which brings it down to Lessing's time. Karl Goedeke's 'Introduction to the History of German Poetry,' "aus den Quellen," has at length terminated with the seventh part of the third volume. The former has this advantage over other voluminous works of its class, that it is not merely, as they are, learned, but it is free from æsthetic, religious, and national prejudices, and its style is easy and tasteful; the latter contains a mass of biographical and bibliographical matter collected with truly German industry.

The centenary of the death of Lessing called forth a deluge of new publications and republications. Of the latter the most important were the new editions of the exhaustive biography of Lessing by Danzel and Guhrauer, and the Lessing Lectures of Kuno Fischer. "The worship of genius," which manifests itself in Germany by numerous celebrations, monuments, and commemorative tablets, is, comparatively speaking, a recent phenomenon. Lessing, Goethe, and Schiller did not in their early years lack opponents and even bitter enemies. The judgments of their contemporaries with regard to works that now rank as classical were at the time of their appearance anything but unanimous. Julius Braun's book, 'Goethe und Schiller im Urtheile ihrer Zeitgenossen,' is an attempt to collect the verdicts of their contemporaries on the first productions of the two poets. Schiller's youthful revolutionary dramas, 'The Robbers' and 'Intrigue and Love,' could boast of an enthusiastic reception at the hands of the younger part of the theatre-going public, but provoked the passionate hostility of the elder portion. Even a professional critic like Goethe's friend Karl Philipp Moritz considered "Herr Schiller" a man of talent, but not "anständig." The poet Maltitz was quite justified in writing in the album of the Schiller monument at Stuttgart that it was the lot of Schiller, as of all classical writers, to be stupidly praised and stupidly blamed.

Goethe said, "Shakspeare und kein Ende"; in his most recent rectorial address at Berlin Du Bois-Reymond has said, "Goethe und kein Ende." One and the same year has produced, exclusive of the essays in Vischer's collection of articles entitled 'Old and New,' three commentaries on Faust. One of these, that of Max Bergedorf, has sought to bring Faust nearer to the popular Christianity; the second, Schreyer's, defends the unity of the Faust poem against the historical criticism of Scherer and Loeper; while the third, Schroeer's, is almost entirely panegyrical, and contents itself with explaining the obscurities of the poet and his use of words. 'Goethe's Letters,' by Fr. Strehlke, undertakes to catalogue, according to recipients, place, date, and opening words, the whole of the poet's correspondence, which consists, according to the compiler's estimate, of about 7,500 printed pieces and about 2,000 probably which have not been printed. Düntzer and Schoell furnish their little offerings to the master's shrine, the one in the form of explanations of 'Wahrheit und Dichtung,' the other in the shape of personal reminiscences and literary excursuses from the golden age of Weimar.

In a more adequate manner does Heinrich Bulthaupt treat of the 'Dramaturgy of the Classics,' less from an æsthetical point of view than from that of practical stage management. In this book Heinrich von Kleist figures for the first time by the side of Lessing, Goethe, and Schiller. It is a pity that the writer has made no mention of Grillparzer, whose plays were composed under the direct influence of the first theatre in Germany, the Vienna Burgtheater, and rank next to the work of the three great masters. A second part, of which the manuscript is finished, is devoted entirely to Shakspeare. Shakspearean literature has been this year enriched not only by the *Jahrbuch* of the German Shakspeare Society, which is full of philological and dramatic details, but also by the elaborate work of Fritz Krauss, 'Shakspeare's Confessions.' The author, who unfortunately died last year, adopts the view originally put forward by Gerald Massey, that the dark woman of the sonnets is Lady Rich, Philip Sidney's Stella.

Although not a native of Germany, G. Brandes, the clever Danish critic, originally published in German—"for Europe," as he himself says—his literary sketches of the nineteenth century, which he has collected under the title of 'Moderne Geister.' Among these delineations the portraits of Paul Heyse and Gustave Flaubert are particularly distinguished by delicacy and precision, while those of his Scandinavian brethren, Andersen and Paludan-Müller, the Swedish Tegnér, and the Norwegian Björnson, have for the greater part of the European public the charm of novelty. Among recent collections of letters the correspondence of Dorothea von Schlegel with her sons, and that of Caroline Schlegel with her friends, are important, independently of the light they throw on the history of literature. The former, the daughter of the Jewish philosopher Mendelssohn, was divorced by the Berlin merchant Veit, and became the wife of the younger of the Schlegels; the latter, the daughter of the Göttingen professor Michaelis, was divorced by the elder of the Schlegels, and became the wife of Schelling. Both played a leading part among the German Romanticists. Dorothea, the original of the famous 'Lucinda' of Friedrich Schlegel, in later years passed with him over to Rome, and carried with her into the communion of the Catholic Church her sons by her first husband, Johann and Philipp Veit. Caroline, in her youth an ardent adherent of the French Revolution, and involved in the troubles of the Mayence Clubbists, became in after years the soul of the Romantic opposition to the Classicism of Weimar, and was styled by its adherents in confidential intercourse "Frau Satan." The letters now published show the passionately religious Dorothea in her relation to her sons, who shared her religious feelings, but were differently gifted. They had settled at Rome as painters in Overbeck's neo-German or Nazarene school. The letters of the friends of Caroline form a supplement to the spirited and bold letters of the most remarkable woman who has figured in German literature. They were edited some years ago by George Waitz under the title 'Caroline.'

From the numerous books of travel I may select for mention the instructive work of the agreeable poet and editor of the *Deutsche*

Rundschau, Julius Rodenberg, upon 'Belgium and the Belgians'; the handsome volume of F. Bodenstedt, 'From the Atlantic to the Pacific'; and 'Pictures of Transatlantic Society,' by Karl Knortz, interesting on account of the information they supply about the German element in America. Of works regarding the South, which, since we now travel not only over but under the Alps, come into being at express speed and are forgotten as quickly, I may mention the masterly description of Corfu by F. Gregorovius, and the 'Sketches and Pictures of Italy,' by Woldemar Kaden, which, like the young writer's 'Italienische Gypsfiguren,' published last year, is distinguished by truth and impartiality.

Few art collections in or out of Germany can boast of an owner like Graf von Schack at Munich, who combines the endowments of a poet with a liberal and intelligent patronage of the arts; few literatures an artist who, like the recently deceased Anselm Feuerbach, understands how to wield the pen and pencil with equal skill. The former, as the history he has himself written of his gallery shows, has in ordering his pictures had in his eye not only the best of art, but the advantage of the artists, and has thereby not merely assisted men who were undeservedly neglected by their contemporaries, but rescued for the benefit of posterity two of the most important—Bonaventura Genelli and Anselm Feuerbach. The latter was the youngest scion of a family renowned for three generations—which produced the jurist Paul Anselm von Feuerbach, the grandfather of the painter; the philosopher Ludwig Feuerbach, his uncle; and the archæologist Anselm Feuerbach, his father. Besides producing works which, like 'Hafiz at the Fountain' and 'Iphigenia at Tauris,' will preserve his name in the annals of art, the painter has, in his subtle description of his life which he styled "a legacy," left a literary memorial which shows him to be an author worthy of his ancestors.

Political testaments, like legacies, generally are destined for posterity. Few statesmen have been so fortunate as the Iron Chancellor of the German Empire, who has become the executor of his own political last will. Poschinger's piquant collection of documents, 'Bismarck at the Diet,' shows the representative of Prussia at Frankfort towards the end of the fifties, already in despatches, memorials, and letters busy giving, as

seiner Weisheit letzten Schluss,

the same counsels which as Minister of Foreign Affairs he afterwards carried into effect by driving Austria out of the Federation and winning for Prussia the hegemony of Europe. That profound and radical work on social politics, the 'Testament of a German,' published by the æsthetic philosopher Köstlin from the posthumous papers of the Suabian *savant* Karl Christian Planck, and the latter's 'Gospel of Humanity,' written to promote the termination of the influence of wealth, will long remain on his executor's hands unless the man who administers the German Empire and has taken the social problem in hand understands how to be, instead of the instrument of the world's history, the organ of the world's wisdom.

German philosophy, which since the collapse of Hegel's school has been in danger of spending itself in unconnected monographs and historical inquiries, has lately resumed its natural endeavour of systematically delineating the totality of knowledge. However, there is this weighty difference, that the immediate successors of Kant, Fichte, Schelling, Hegel, and Krause — some "krause" æsthetic has just been published from the posthumous papers of that thinker — began with such an endeavour; the younger men, Lotze, Hartmann, &c., end with it. Lotze's too early decease has deprived the German philosophy of our day of its most important and most original thinker, and he has left unfinished the concluding 'Zusammenfassung' of the system which he began in his 'Logic' and continued in his 'Metaphysics.' Originally a medical man, he in his 'Universal Pathology' and his 'Physiology of the Bodily Life' showed himself a decided adherent of the mechanical theory of nature, and an opponent as keen-sighted as he was successful of the hypothesis of a separate organic life-force. As a philosopher he had been mainly influenced by the realism of Herbart, the monads of Leibnitz, and above all by the ethico-theistic standpoint of Hegel's quondam disciple Weisse. In his 'Medical Psychology' he defended the existence and immortality of the soul against the assaults of the materialists; and in his chief work, 'Mikrokosmos,' which by its brilliancy and excellent style reminds the reader of Herder's celebrated 'Ideas for the Philosophy of the History of Mankind,' he arranged the mechanism of nature under teleology, metaphysic under ethics, and in his 'History of Æsthetics' the beautiful under the good. The sum and substance of his doctrines, so far as can be judged from the fragments of his exposition of his system, is an ethical theism which, through the final dissolution of all finite divisions in the infinite and undivided God, becomes pantheism. An explanation at once clear and affectionate of his relation to the philosophy of the present has been given by his former pupil Otto Caspari in the historical and critical monograph 'Hermann Lotze.' At the same time other pupils have tried to fill the gaps in the exposition of the system by the editing of the notes taken by students who attended his lectures on ethics and the history of philosophy. Eduard von Hartmann, on the other hand, has been more fortunate than Lotze, and has worked out his entire system in his own lifetime. His third chief work has appeared this year, 'The Religious Conscience of Mankind in the Sequence of its Evolution,' and forms a supplement to his 'Phaenomenologie des sittlichen Bewusstseins,' which contains the author's moral philosophy, and is the counterpart of 'Philosophie des Unbewussten,' which is devoted to metaphysics. It contains in essentials, like L. Feuerbach's 'Lectures on the Essence of Religions,' a history of religions from the primitive forms which the author styles henotheism, fetichism, and polytheism, down to future forms following upon the dissolution of the present Christianity. The history of the development of the religious conscience is according to Hartmann, who uses words reminding us of Hegel's pantheism, nothing else than the process of the gradual "Zusichselberkommens des Geistes in religiöser Hinsicht."

Side by side with the tendency to monism, which, derived in the case of Lotze from Leibnitz, and of Hartmann from Schopenhauer, leads back to pantheism, two movements make themselves felt, one of which may be called a renaissance of Kant's sceptical 'Critique,' the other a sensualistic or spiritualistic dogmatism. The former necessitates the exact editing of the texts of Kant's writings, as a complement to which a similar issue of the works of Herbart has been begun by Kehrbach. The most important production of this school has been an elaborate commentary on the 'Critique of Pure Reason' by Hans Vaihinger, of which a further instalment has appeared this year, containing a complete and thorough survey of all questions and writings belonging to the Kantian literature.

The other school of thought, which, like English empiricism, generally owes much to Darwin and Spencer, is represented this year by Fritz Schulze's methodical 'Philosophy of the Natural Sciences.' Schulze endeavours to show that even Kant agreed with Darwinism. The necessity of a philosophy is keenly felt among men of science, as the book just mentioned and other works, such as Stricker's exact anatomical 'Studien über die Association der Vorstellungen,' show. Only crass materialism imagines that all riddles are solved by the natural sciences. An investigator fully abreast of the latest results like Du Bois-Reymond, in his most recent lecture, 'Die Sieben Welträthsel,' sees, exactly as Kant saw, that man is surrounded on all sides by unsolved and, within the world of phenomena, insoluble problems. The Königsberg philosopher took refuge in the hypothesis of a "Ding an sich" as the last and only remnant of the metaphysic that his 'Critique' had robbed of its content.

A knowledge through the channels of experience of the world lying outside all experience, such as spiritualism professes to possess, and which since the decease of Zöllner, who lived too long for his reputation, is maintained seriously by only one man, Baron Hellenbach, the original author of the 'Diary of a Philosopher,' was long ago disposed of by the shrewd Kant as the "dream of seers."

Robert Zimmermann.

GREECE.

I have several works to mention this year that have interest not only for my countrymen, but also for those foreigners who care about Hellenic literature, although it must not be supposed that they have made a deep impression or created anything like an epoch. Few such books are written in Greece. Masterpieces are scarce, and very seldom does any book find its way to the hearts of the people and become really popular. I have not space to set forth the causes of this; I must content myself with mentioning the fact. Our literary productions mostly resemble hothouse plants: reared in the quiet of the study, they quickly wither in the open air of publicity. Most of those I have to mention, especially in *belles-lettres*, are more remarkable for the care of the gardener than the beauty of their flowers.

To begin with poetry, I must mention some volumes of lyrics by young writers: 'The Cranes of Ibycus, and other Poems,' by Stam. Balbis; the 'Verses' of Tsakassiáros, a promising beginner from Zante; 'The Old Sins' of Dem. Kambúroglus, and 'The Stalactites' of G. Drossinis, the last two of whom I mentioned in my article of 1881. Plays are scarce. Dem. Koromilàs has published a one-act comedy, 'Evil Hours.' Ant. Antoniádis, who with one and the same pen writes elementary books for schools and dramas for the library shelf, has again produced three tragedies (named 'Pantheia,' 'Kÿra Phrosyne,' and 'The Klepht's Daughter'), and a comedy, 'The Mother-in-Law.' A peculiar place is taken by the 'Euphrosyne' of Dem. Bernardákis, to whom our literature is already indebted for several beautiful tragedies. This popular poet, who is Professor of History at the University, has chosen for the subject of his most recent work the tragic death of the lovely Greek girl of Janina, who, on account of her relations with Muktar, the son of Ali Pasha, was drowned in the lake of Janina by order of the jealous tyrant. She has long been the theme of popular ballads, and her fate was bewailed in a long narrative poem by one of our eminent writers, Arist. Valaoritis, who died three years ago. Her death is also the subject of the tragedy by Antoniádis mentioned above, 'Kÿra Phrosyne.' Bernardákis in the development of his play has followed the account given by A. Beauchamp in his 'Vie d'Ali Pacha, Visir de Janina' (Paris, 1822).

Few tales or novels have appeared this year, the demand for fiction being chiefly supplied by translations of foreign novels, not always the best.

In history and cognate studies some works of great value have appeared. Const. Sathas has brought out the third volume of his 'Documents Inédits relatifs à l'Histoire de la Grèce au Moyen Age.' It contains 509 documents from the Venetian archives which belong to the period between 1312 and 1440. Two maps are supplied: one of Constantinople, after a drawing by the Italian traveller Cristoforo Buondelmonte; the other, depicting the Greek territory, is a map of the sixteenth century, by Giacomo Gastaldi. The Κερκυραικὰ Ἀνέκδοτα of the writer of this work contains unpublished documents touching the mediæval history of Corfu, collected from the libraries of Munich, Mount Athos, and Corfu. A letter of the Bishop of Corfu, Basilius Pediaditis, written at the close of the twelfth century, is taken from the only Greek manuscript, which is in the library of the Fitzwilliam Museum. I have also brought out a translation of the 'Athenais' of F. Gregorovius. Under the title of 'Studies and Speeches' the Finance Minister, Paul Calligas—one of our most distinguished authors, and formerly a law professor in the University—has published several essays on historical and legal subjects, some of which had already appeared in the newspapers, and the orations which he has of late delivered in the Chamber on important questions. This thick volume is one of the most interesting publications of the year. The historical essays deal with such subjects as the Council of Florence, the position of the peasantry under the Romans and Byzantines, the Nika insurrection, &c. Excellent is the first instalment of a history of the Greek nation by Prof. Const. Paparrigopulos, favourably known by his history of Greece in five volumes and other works. The second edition of his larger book promises, through the author's clever use of the latest results, to be more original than the first edition, in which he closely followed Grote.

An interesting book is the work of Nicolas Moschovákis on the public law of Greece under the Turkish rule. The author holds that the Greeks must place their public law on a national basis, and he endeavours to reconstruct the history of Greek institutions under Turkish rule by comparison with the Ottoman law. He is a decided advocate of self-government. Although he has not had the opportunity of enriching his volume by a study of the archives of Venice, which would have supplied him with new facts, his book is welcome, and we shall expect of him still more interesting work in the future. A little *brochure* by Andrulidákis deserves mention on account of its subject, the taxation of Crete during the first years of the Turkish domination. It is founded on documentary sources. The 'Kythniaca' of Ant. Vállindas deals with the topography and history of the island of Kythnos from a local standpoint. Anast. D. Kyriakos, Professor of Theology at the University, has published a work in two volumes on Church history down to the present day. The book is based on the latest researches, the most original part being that which deals with the fate of the Greek Church after the fall of Constantinople. Milt. Bratsános, the director of the Normal School at Athens, has published a short historical account of popular education in Greece since the war of independence. Neocl. Kasásis, a *Privatdocent* at the University, has devoted the first volume of a work which he is bringing out, on 'The Law of Nature,' to a history of the development of the idea of law and the state among the ancients and the moderns, from the Greeks to the newest developments of Socialism. In his historical inquiries he has followed no settled system. As he himself says, he has adopted Feuerbach's axiom "No authority is my authority." A publication of the Home Office, the statistics of the population of Greece in 1879, edited by the former head of the Statistical Department, Alex. Mansólas, should be mentioned here as affording much information about the state of the country.

In philology I may notice the monograph of Dragátsis on the theatre of the Piræus and the Kophos Limên, and the edition of the important Piræotic inscription regarding the arsenal of Philo by its discoverer, A. Meletopulos. Both scholars have done good service to the archæology of the Piræus. I have further to mention a little tractate by G. Pagidas on the topography of the sevengated Thebes; a monograph by Nic. Politis, a *Privatdocent*, on the sun in popular legends; and a book on the church music of the Byzantines by Joh. Tzétzis, a gymnasium teacher who has made of this music the study of his life, and has examined most of the European libraries in which Byzantine music is preserved. Two books deserve special mention: a posthumous work of Coray's, and one by a highly gifted professor, Const. Cóntos, a friend and pupil of Cobet of Leyden. The latter volume, 'Grammatical Remarks on Modern Greek,' contains, under the guise of corrections of the mistakes of the modern Greeks who most pride themselves on their purity of style, a number of valuable remarks on certain words as well as on grammar. All is worked out with the scientific accuracy and exactness which characterize a master of language. Coray's work contains valuable materials for a French-Greek dictionary and interesting MS. notes on the dictionary of the French Academy. They form the first volume of a new edition of the works of the celebrated scholar undertaken by a committee at Marseilles. A countryman, Andreas Mámukas, has prefixed a long and interesting biography of the philologist.

These are the chief productions of the year, δόσις ὀλίγη τε φίλη τε.

Spyr. P. Lambros.

HOLLAND.

It often happens that when the crops are still standing in the fields the farmers expect a bad harvest, and when the corn is brought into the barns there is much more than they had looked for. This frequently happens in literature too. In the first six months of the year I wondered what I should have to record in December, and now the corn is housed I must acknowledge that the harvest is respectable.

To begin with the novels. Mrs. Zwaardemaker has chosen for her 'Ada Bermudas' a background of Israelite life, which cannot fail to interest people in our days of Semitic and anti-Semitic movements. Her personages have to struggle against the egotism and prejudices of others, and to fight their inward battles between love and duty. It has been observed that Mrs. Zwaardemaker has more knowledge of law than most of our authors display. Miss van Rees pays her tribute of admiration to the greatest composer of the past by a very long and not quite satisfactory biography of Beethoven. She has written a readable novel too, 'Zoo Zÿn Er' ('Such People Exist'), in which a girl of masculine tastes, but who is truth and sincerity personified, is beautifully contrasted with her ladylike, hypocritical aunt. Van Nievelt has collected some of his agreeable sketches under the title of 'Chiaroscuro.' One of them, 'Love is the Land of Sunshine,' really brings some Italian sunshine into our rain and fog. In 'Cyriacus' Mrs. Quarles has given us a sequel to 'Clebitius' Nightingale.' She has found the material for her historical novel (1563–64) in the archives and the library at Frankfort. Mr. Huf van Buren, who made such a good impression some time ago with his 'Kroon van Gelderland,' has tried his hand at short historical novelettes, entitled 'Grootheid en Val' ('Greatness and Ruin'). This is a *genre* which requires as much knowledge as the historical novel and certainly much more talent, and very few authors succeed in it; so it is not wonderful that his sketches are inferior to his novel. Another author, using the pseudonym of "Willem van Amstel," has written, in a careless style, an historical novel, 'Marie Touchet,' in which the romantic element predominates over the historical.

Perelaer, in his 'Nederlandsch Indië,' tells us in an entertaining way a great many things about our possessions in India,

of which no Dutchman can know too much in these days of trouble. He gives here the real story, too, of the four heroes of his 'Borneo,' which I announced last year. It is a book written with knowledge and conviction. Mr. van Rees's 'Wynanda' is an improbable story, written with the obvious purpose of increasing our acquaintance with what is going on in Atjeh.

Among the dramatic works I must mention those of Rosier Faassen, published now for the first time. Many of the shorter pieces, less melodramatic than 'Anne Mie,' show that the author knows the human heart as well as the stage, of which he is an ornament.

Jan Holland, whose satirical works I have often mentioned, has published three new books. In the first two he points out, with much exaggeration, some of the blunders in modern education. In the third, 'The Book of Monkeys,' he attributes all our folly, weakness, and degradation to the "monkey" in us, which we must crush and conquer before we are worthy of the name of "men."

A new edition has been published of Hofdÿk's 'History of the Dutch,' a book to be consulted by every one who cares more for the facts related than for the style, more for the contents than for the form. All the friends of Gouverneur are glad that the old poet, who has so often amused them in an idle hour, has lived to witness the publication of his complete works. Oltmans's novels, too, are being reprinted—respectable old-fashioned novels, of the sort to be read late at night and to make young people shudder. Schimmel's 'Mary Hollis' and 'Sinjeur Semeyns' are republished; the latter can now be enjoyed across the Channel too in an English translation. I may close this list of reprints with 'Snikken en Grimlachjes' and 'Braga'—the former as clever a parody on spleen and "Weltschmerz" as ever was penned. 'Braga' was a periodical, entirely in rhyme, which appeared about forty years ago, but did not last long. It was the organ of some young men of talent, who obstinately set their faces against sentimentality. It is interesting to us to see the people whom we know as the sober, elderly poets of to-day pour out the exuberance of their youthful spirits in the jovial poems and witty satires of the 'Braga' of '46. In the notes Winkler Prins gives at once too much and too little. He mentions the dates of birth and death of the best-known authors, but keeps from us the details requisite to understand the allusions of a poem written in the forties.

In the learned book which bears the learned title of 'Philosophical Investigation: Critical Prolegomena of Æsthetics,' Prof. Pierson successfully attacks neo-Kantianism, represented in our country by Prof. Spruyt. Prof. Pierson has also just published a volume of poems. Some of these owe their existence to the impression made on the writer's mind by the reading of Vondel, the Koran, and Pindar. The poet whom I spoke of last year, and who persists in calling himself "Fiore della Neve," has written a new poem called 'Liana.' Mr. Coens, whose verses often appear in periodicals, has published a volume, 'Tithes of the Harvest.' Some of the verses are distinguished by feeling and originality, though, as in every harvest, there is chaff among his corn. Burgersdÿk is going on with his translations from Shakspeare. 'The Taming of the Shrew' and 'Macbeth' are now finished. "Soera Rana" (Mr. Esser) has introduced Otway to our public by a careful translation of 'Venice Preserved.' Vosmaer's hexameters and other foreign metres are very harmonious in his new idyl, 'Nanno'—a charming Grecian story of the love of a princess and a poet. Through the whole runs an under-current of deep thought. The Dorian girl is taught by her lover that physical courage and strength are not the most desirable of things; that mind is superior to force, and the poetical mind superior to all. Between Vosmaer's hexameters and Hofdÿk's in 'The Heart of Java' there is a great difference. Hofdÿk's lines are sometimes mere prose. His subject is the rise of Dutch rule in the East Indies at the time of the government of Joan Maetsuicker.

Half way between the works of fiction and those on the history of literature stand the sketches of W. Otto, who gives us in the shape of stories the results of his literary studies. The thirty-third number of the "Bibliotheek voor Midd. Ned. Letterkunde" has brought us the 'Fergunt,' by the late Eelco Verwÿs. The first part of a 'Midd. Ned. Woordenboek' has been carefully edited by Verdam, who has also brought before the public the old legend of Theophilus. Mr. Haverkorn van Rÿsewÿk has compiled from old archives the history of the Rotterdam theatre. Vosmaer has completed the first series of 'Our Modern Painters.' The last number is one of the finest, as the subject, Rochussen, was one of the most attractive. A contemporary of this amiable painter is the subject of the first instalment of a book which may be considered as a parallel to Vosmaer's 'Painters'; I mean Ten Brink's 'Our Modern Authors.' The gifted woman whose biography rightly opens the series is Mrs. Bosboom-Toussaint. In the autumn of this year she completed her seventieth year, and her many friends and admirers celebrated the day with enthusiasm. Her latest novel, 'Het Kasteel Westhoven,' shows clearly that she is herself still. One of her oldest friends, her brother in faith, Prof. van Oosterzee, died this year. The book which his son is publishing now, 'Uit mÿn Levensboek,' is a short autobiography, destined for the friends of the deceased author. It is touching in its simplicity, the more so as most of Van Oosterzee's writings are more or less disfigured by redundancy and false pathos. The first number of the book will fill the reader with sympathy for the man who expresses so simply his gratitude for his success in life; the second volume will inspire him with pity for one who was driven by circumstances to undertake more than he could easily perform.

In Boissevain's 'Van het Noorden naar het Zuiden' are related to us all the impressions he received during his tour in America. He agrees with Gautier that "in a six weeks' tour you cannot penetrate into the character of a nation"; but his book proves the truth of the other half of Gautier's saying, "that the newness of the scenes produces a certain freshness which would be effaced by a longer sojourn."

The first part of the third series, or the eleventh volume, of Fruin's 'Bydragen tot de Vaderlandsche Geschiedenis en Oudheden' ('Contributions to Dutch History and Antiquities') has appeared, and a new edition of his instructive 'Ten Years of the Eighty Years' War.' In the five numbers of the new volume of the sequel to Arend's history, which treats of our history between the treaties of Utrecht and Aix-la-Chapelle, Van Vloten brings us to the year 1731. Ten Brink is writing a popular history of the 'First Years of the Revolution' (1555–1568). The subject is always interesting, though not quite startling in its novelty. Mr. ten Brink has consulted the best authors, rejects many a partial judgment of Motley's, and keeps to our own authorities, Fruin, Van Vloten, and Bakhuizen van den Brink. He even quotes them too often. It is as if he put them in front to make us feel sure that he is a safe guide in the field of history, though we are more accustomed to meet him in the paths of fiction and *belles-lettres*. This is, however, a book I should like to gain popularity.

The first volume has appeared of Prof. Kern's 'History of Buddhism in India.' In a clear style this great scholar relates the legends about Buddha; he traces the history of the mythical and the historical Buddha, and treats of Buddha's place in the world. The next volume will contain information on his dogmas, the mysticism of the Buddhists, and their doctrines concerning the world, the nature of man, and his salvation.

Among the few authors who combine productivity and originality may be counted Busken Huët, of whose literary 'Fantasiën en Kritieken,' written between 1857 and 1876, the fourteenth volume has just been published. Huët is a shrewd observer, but fond of paradox. He is sometimes inconsistent and a pessimist, but he always captivates, and he is exactly the man to show old things in a new and striking light. This he intends to do in his 'Land van Rembrandt,' of which the first volume has appeared. In a few pages of introduction he heaps fact upon fact to prove that in culture and civilization we have always been in the rear of other nations. This startling and unpatriotic assertion does not seem to promise much, but in the period he intends to describe (1572–1718) he wishes to show how passionately our people has loved what is good and noble, and has sacrificed much to gain real culture. In this first volume he describes some remarkable events to characterize the centuries before 1572, beginning with the thirteenth, and some very remarkable persons who lived in those dark ages. The chapter on Thomas à Kempis is written in Huët's best style, and the well-chosen specimens from the 'Imitatio' assist the author greatly to paint a good portrait of the pious and amiable monk. In the chapter on Erasmus the author contradicts himself by showing how much the civilization of Europe is indebted to our great countryman. If the second volume, which will treat of the seventeenth century, appear next year, and answer the expectations excited by this one, I shall be happy to count it among the best fruits of our literary soil.

E. van Campen.

HUNGARY.

It is with the melancholy news of death that I have to begin my report of the literary movement of the past year. John Arany, the greatest Hungarian poet of recent times, died on the 28th of October after a long illness. Hungary has lost her most eminent poet, the unrivalled master of the Magyar tongue, the many-sided and highly learned writer, the typical representative of the true national spirit, and at the same time a patriot of the purest character and a most ardent lover of his country. The pain caused by this loss becomes intenser when we ask ourselves who will replace him in this age of mediocrities. John Arany (born March 2nd, 1817) came forward as a writer in 1847. His masterpieces are the 'Toldy' trilogy and an Hungarian translation of the comedies of Aristophanes and of several dramas of Shakspeare, and he particularly excelled in ballad poetry. To his posthumous works belongs a highly interesting correspondence with his contemporaries, which will be edited by his gifted son M. Ladislaus Arany.

If we have any consolation at all for the loss of Arany it is in the delight inspired by a worker in another field of *belles-lettres*, Maurus Jokai, whose activity is as great as ever, and whose brilliant fancy does not show the slightest sign of decay in spite of advancing years. Of his productions during the past year I may mention the novels 'A kik kétszer halnak meg' ('Those who Die Twice'), 'Egy játékos ki mindég nyer' ('A Player who always Wins'), and the just published 'Bálványos Vár' ('Idol Castle'). In the novel last named the early period of Hungarian history is depicted with a truthfulness which really makes us believe that the author has discovered some hitherto unknown manuscript describing the social, religious, and political condition of that remote period, when the ancient Magyars still clung to the old Shaman faith brought from Asia to the banks of the Danube and of the Theiss. Similar remarks may be made upon his 'Targalyak' ('Leafless Branches'), a collection of stories in which M. Jokai exhibits that wonderful fancy so justly admired in Germany, France, and Russia, where he has become a favourite of the reading public. There are only two points in which he is open to criticism: his predilection for exceptional figures and an occasional carelessness caused by haste in the delineation of character. Still he is, like the late M. Arany, without a rival among his fellow writers. There is a great gap between him and the *dii minores*, able young men, the promising *littérateurs* of the future. To these belongs M. J. Acsády, whose 'Fridényi Bankja' ('The Bank of Fridényi') shows the author to be a shrewd observer of daily life, well versed in the ways of the financial world, and a tolerably good narrator. M. Kornél A'brányi has by his novel 'Egy Modern Apostol' ('A Modern Apostle') convinced us again of his eminent talent in depicting motives, but he is sometimes careless. M. Emil Kazár shows unmistakable signs of progress in his recent novel 'Oesök és Unokák' ('Ancestors and Grandchildren'), for hitherto he has evinced more cleverness in short tales than in novels. M. Ludovic Tolnay, one of our best writers of fiction, has come forward with a well-conceived novel, 'A Nemes Vér' ('The Noble Blood'), and the only faults which critics can find is his praising living persons or those recently dead, and introducing foreign elements injurious to the production of a harmonious piece of art.

If there is any prose writer who comes near M. Jokai it is M. Koloman Mikszáth, whose second collection of tales, issued under the title 'A jó Palóczok,' has surpassed the one mentioned in my report of last year. Mikszáth undoubtedly shows brilliant talents in sketching the peculiarities of individuals and fractions of his nation. He is an excellent narrator, and able to raise even the most trifling incident, through his power of conception, his humour and style, to the dignity of a literary masterpiece. His favourite form is that of Bret Harte; but considering the originality of his ideas, his finish, and his command over the language, it is almost certain that he will apply these faculties to the production of larger works. He has made his reputation in Hungary, and is also acknowledged as an able writer in Germany. Speaking of the younger generation, I cannot omit M. Béla Tóth, the son of the late excellent poet M. Koloman Tóth, whose 'Tollhegygyel' ('With the Point of the Pen'), a collection of sketches, has attracted the attention of the reading public.

In the field of lyric poetry I have to mention new editions of Paul Gyulai, Joseph Kiss, and John Vajda. M. Julius Rudnyánszky has come forward with a collection of lyric verses full of deep feeling and marked by literary finish, but wanting in knowledge of life. Not over rich in original thought, our lyric poets have been busy in transplanting the works of the great European authors. We have already a complete translation of Shakspeare, and we shall shortly have also an Hungarian edition of Molière. The *répertoire* of our national stage has been enriched with two works of importance. One is 'A Stomfai Család' ('The Stomfa Family'), by Gregor Csiky, which has achieved popularity through the happy combination of broad humour with touching scenes; whilst the second, 'Marianne,' by Kornél A'brányi, depicting Hungarian aristocratic life, although full of spirit, has been only a partial success. The Hungarian original opera 'Atala,' the music of which has been composed by M. Francis Schauer, whilst the libretto is adapted by M. A. Várady from the well-known work of Chateaubriand, has met with general approval.

M. Paul Gyulai's 'Katona Jozsef és Bánk-Bánja' has earned the respect due to this author, who has again proved to be the best critical writer of his country. Katona was misunderstood by his contemporaries, but his merits have been acknowledged by posterity. Gyulai accounts for this by giving a full account of the shortcomings of 'Bank-Bán,' and showing why that tragedy had not the effect it should have exercised upon its contemporaries. In his analysis he refers to a similar work by Prof. Gustav Heinrich, entitled 'Bank-Bán a Német Irodalomban' ('Bank-Bán in German Literature'), based upon an entirely independent study and a thorough investigation of the literature of the subject. The same Prof. Heinrich has published this year 'Boccaccio Élete és Müvei' ('Life and Works of Boccaccio'). He has shown the influence of Boccaccio upon Hungarian writers of the sixteenth century. If I add to the above Z. Beöthy's 'Szinmü Irók és Szinészek' ('Dramatic Writers and Actors'), being a valuable contribution towards the history of Hungarian dramatic poetry, I have pretty well exhausted my notes on the *belles-lettres* of Hungary during the past year.

As I have frequently said in previous reviews, of all branches of literature the Hungarians cultivate history most eagerly. Not only the archives of their country, but those of foreign countries, are being continually searched by Hungarian *savants;* and although many of the documents collected or copied hitherto have been used only for the compilation of monographs, there is no doubt that they will yet serve as valuable material for a complete general history of Hungary. Amongst the publications of this year I may mention in the first place Prof. Marczali's 'Hungary during the Reign of Josef II.,' a book of deep erudition and vigorous description. Only the first volume has come out, and the second is anxiously waited for. A portion of the same period is treated of by M. Eugen Szentkláray in his 'Hundred Years of the History of South Hungary,' in which the period beginning in 1779 is described by the light of many documents hitherto unknown and unused. In M. Aladár Ballagi's 'The Croatian Carabineers of Wallenstein, 1623-26,' interesting light is thrown upon the events of the Thirty Years' War. The book is full of solid information gathered from many hitherto unknown documents. Further, there is Frederic Pesty's 'The Hungarian County Governors in the Thirteenth Century,' and last, but not least, Dr. Theodor Ortvay's 'Hydrography of Hungary in the Twelfth Century.' Turning to another period of Hungarian history, I have to note M. Ludovic Szádeczky's 'Michael, Voyvode of the Subalpine District of Transylvania, 1599-1601,' in which the pretensions of the Roumanians to make of this leader a national hero are refuted; and M. Alexander Szilagyi's 'Gabriel Bethlen and Swedish Diplomacy,' a carefully written book, in which the part this great Transylvanian prince played in the Thirty Years' War is for the first time brought into relief.

Sociology and national economy are most zealously cultivated, and I am happy to say the views of English philosophers are gaining more and more ground. M. Beksics, who has personal knowledge of the social and political condition of England, is one of the most promising workers in this line, as his book 'The Hungarian Doctrinaires' shows. The efforts of Eötvös, Csengery, Trefort, and other statesmen to introduce modern parliamentary life into Hungary are cleverly described. Speaking of these heroes of our present political life, I cannot omit to mention that the last named, who is now Minister of Public Instruction, has just published his minor writings on politico-social questions, which have been well received by the public. M. Leo Beöthy's 'Beginnings of Social Development' shows familiarity with the literature of the subject,

ingenuity of view, a spirited style, and a real love for the theme.

And now allow me to correct a mistake which I made last year when I spoke of the third volume of M. Francis Pulszky's memoirs as being the concluding portion of that highly interesting book. This is not the case, for M. Pulszky has most agreeably surprised us with a fourth volume. Here we find many valuable hints concerning the political negotiations between M. Kossuth and Count Cavour, as well as a sketch of the autobiographer's life in Florence, which may be still in the memory of many Englishmen who visited the pleasant town on the Arno at that time. In this fourth volume, as in the preceding ones, M. Pulszky maintains his reputation as a narrator full of wit and sagacity.

I am puzzled how to conclude, for the space allotted to me is not sufficient to satisfy the demands of my literary countrymen, who are not at all indifferent to a notice in your paper. Therefore I can only mention *en passant* M. Szinnyei's book on Finland, called 'The Country of a Thousand Lakes'; Prof. Fodor's hygienic studies, a book much valued also in Germany; M. Guido Schenzel's work on the meteorological conditions of Hungary; and Prof. Aurel Török's volume on anthropology. If I have totally omitted to mention philology, it is simply because—my own book on the origin of the Magyars having become the book of the year—I should have to speak of myself, which I can hardly do, keeping in view the Oriental proverb, "To speak of oneself is only the business of the Shaitan."

A. Vámbéry.

ITALY.

Those who are alarmed from time to time at detecting something like a generalization may calm their fears as far as Italy is concerned; we shall not for the present be the disturbers of the world. Notwithstanding the efforts of a few authors and publishers to popularize science and spread literary culture; notwithstanding the excellent scientific manuals of Hoepli, the Milan publisher, the "Biblioteca Classica" and the "Biblioteca Universale" of Sonzogno of the same city, and the scholastic publications of Paggi, Barbera, and Le Monnier of Florence, and Paravia of Turin; notwithstanding the number of periodicals continually cropping up in Italy for the education and amusement of the young—the fact remains that what is called in France *le grand public* is still very small in our country. The attempt to popularize all branches of human knowledge remains with us not only an inglorious but also an unremunerative task. Fortunately, as Italy is united, we no longer study our literary history by provinces and as it were geographically; yet if physical divisions no longer exist, literary coteries remain, whose members busy themselves with some speciality and rest satisfied with a single success. Serious though such work may be, I do not think it can ever be very productive, and it is apparent to me that young men who are forced into specialism immediately upon leaving school and entering the university are generally wanting in breadth of view, chiefly through possessing a far too limited though minute erudition. A student who enters an Italian university (often with an imperfect knowledge of Greek and Latin) is met by professors who ask him, "To what speciality do you intend to devote yourself?" To which the undergraduate, himself often quite undecided, makes a hurried and haphazard reply, or sometimes, in his anxiety to please, declares that he has fixed upon that very branch of which his interlocutor is professor. His questioner receives the announcement with a smile, and at the end of a fortnight asks his pupil what theme he has chosen for his thesis, in compliance with a law established by the minister Bonghi that all students in philology shall present a thesis after two years' study. The student begs the professor to point out a subject to him; the professor, who sometimes wants to make special researches on a subject he happens to be studying, seizes this opportunity of making his young pupils clear and prepare the ground for him, thus sparing himself arduous and often tedious work in libraries and amongst archives, where the student spends half the time of his university career in trying to understand documents which he often cannot even read. In such conditions what time has he left for study, for learning to write, for storing his mind with such general information as should form the basis of all special culture and make it productive? The student collects some materials and constructs his thesis, introducing into it some unpublished document (whether important or not), and work of this sort is called science and method. When the young man produces his essay he is proclaimed a model student, and a brilliant future is predicted for him. I own frankly that I profoundly mistrust the apparent erudition of a great number of our young university men, and I should not be sorry to see them return to some extent to the much decried methods of past days. Doubtless there was in the past too much rhetoric; the attention was unduly absorbed by form and construction; but to-day we have run into the other extreme. If some respect is still paid to elegance, no trouble is taken to acquire it, so great is the fear of being thought superficial. People write before they know how to write, they copy in libraries, and pass at once for scholars by publishing these copies with commentaries, the dryness of which is considered their chief merit. It sometimes happens that our improvised specialist is a youth of talent, who breathes a little warmth and life into his subject, and succeeds in making it interesting; but these precocious *savants* rarely go far, or they are succeeded by men who in no way justify the hopes excited by their predecessors. The young men of to-day are lacking in that general culture which alone can show the relationship which connects a special subject with universal science. Often they never get beyond the thesis of their graduateship. This, in fact, seems to me one of the serious dangers of the day, and I mention it in the hope that some one in Italy may read these lines and seriously consider whether it is right to encourage our youth in the path into which it has somewhat imprudently been led. In order to make a *savant* of the student all his time is taken from him, he is forced into researches about details of subjects too often of no significance, and he is led to believe that these are the embodiments of science. Specialization seems to me in no way suited to young minds. Before one concentrates one's faculty one should have acquired and reflected much, otherwise one may in the end grasp only at shadows. I shall make no special mention of any of the university dissertations of the past year; some of them are doubtless remarkable, a few even treat of curious and interesting topics; but what I combat here is the custom of occupying young students in erudite compilations when they should be studying and learning to write.

Nobody in our day would like to pass for an encyclopædist, but many imagine they can acquire fame for learning by signing newspaper articles on curious or so-called learned subjects. A new journal has just appeared in Padua which will, doubtless unintentionally, encourage this tendency to improvisation on learned matters. It is called *Giornale degli Eruditi e Curiosi*, and has great resemblance to your *Notes and Queries*, which it avowedly takes as its model. I fear that it will encourage dilettantism, but I have otherwise no fault to find with a publication of this kind, which may from time to time furnish history, philology, and literature with valuable notions by the answers it receives. I merely note as a sign of the times the fact that such a journal can make a start and even promise to live in a country like Italy. The subscribers themselves keeping up the interest of the journal, it is natural to suppose that Italy can furnish a sufficient number of curious and erudite readers for that purpose.

I have had occasion in preceding years to mention several publications of a special tendency which have appeared in the domain of history and philology. In the last number of the *Curiosità e Ricerche di Storia Subalpina*, published in Turin under the direction of Nicomede Bianchi, I remark a very interesting article by M. Vayra on the autographs of the house of Savoy. By the side of the *Rivista di Filologia Romanza*, directed by Prof. Monaci, and the *Rivista di Filologia Classica*, directed by Profs. Comparetti, Flechia, and Müller, will soon appear in Turin a *Rivista Storica della Letteratura Italiana* and a review of Italian archæology under the name of *Museo*, the direction of which will be entrusted to Prof. Comparetti. MM. Pitrè, Sabadini, and Severino Ferrari are carrying on their interesting publications of Italian folk-lore. I may take this opportunity of informing an English correspondent who asked me whether the song of 'Lisabetta of Messina' was published that it is contained in the volume of 'Cantilene e Ballate, Strambotti e Madrigali dei Secoli XIII. e XIV.,' published in Pisa in 1871 by Prof. Carducci. Prof. Francesco Berlan has just brought out a volume which possesses a certain interest even for foreign readers. It forms the first chapter of a history of printing; three hundred pages are filled with facts relating to the following subject, 'La Invenzione della Stampa a Tipo Mobile Fuso rivendicata all' Italia.'

Many valuable additions have been made this year to literary biographies; among the best are an essay on Alessandro Manzoni by Cesare Cantù, full of personal recollections of the author, and a magnificent monograph on Galileo and the University of Padua by Prof. Favaro. A curious work is that of

XUM

Prof. Morandi, entitled 'Voltaire contro Shakespeare, Barretti contro Voltaire.' It is well known that Barretti during his sojourn in England had become almost English, but it is nevertheless curious to see an Italian of the last century defending the great English poet against a Frenchman. At the beginning of this century Pietro Giordani was known in Italy as the "principe de' prosatori Italiani." The greater number of the readers of the *Athenæum* have, probably, never heard of this prince, but those who wish to make his acquaintance can read with pleasure and profit the work of M. Ildebrando della Giovanna, entitled 'Pietro Giordani e la sua Dittatura Letteraria.' The publisher of this book, Dumolard of Milan, has also issued an Italian translation of Vernon Lee's work on the literature, drama, and music of the last century in Italy, and a small volume of biographical notes on the Leopardi family with a preface by Prof. Aulard. A host of interesting notes on Italian literary history of the early part of this century are to be found in the first volume of the correspondence of Manzoni, collected by Signor Sforza; in the two volumes of the letters of Guerrazzi, published, at Leghorn, by Prof. Carducci; in the book entitled 'Eustachio Degola, il Clero Costituzionale, e la Conversione della Famiglia Manzoni'; and in the first volume of the letters of Gino Capponi, published by Alessandro Carraresi. Arturo Linaker has given us a sufficiently detailed and affectionate biography of the novelist Ruffini. While Signor Bonghi continues to issue his translation of Plato's dialogues, Prof. Carlo Cantoni pursues his studies on Kant; and Prof. Trezza, a powerful thinker, who above all others commands the art of bringing out with renewed power the ideas which he has assimilated, gives us a new edition of his fine work 'Epicuro e l'Epicureismo.' Prof. Mestica is about to give to Barbera, the Florentine publisher, a manual in two volumes of Italian literature in our century, from which he has excluded living authors.

Novelists are rapidly increasing; besides Farina, Barrili, and Verga, who occupy the first rank, two new writers have appeared on our horizon—G. Rovetta, author of a novel called 'Mater Dolorosa,' which has been spoken of in most flattering terms, and Signor Ciampoli, author of pleasantly told tales of the Abruzzi. Signor Capuana has momentarily left the school of Zola and taken up a totally opposite style in a rehandling of popular tales, somewhat after the manner of Perrault, under the title 'C'era una Volta.' Poets of the new school continue to attract a certain degree of notice. Gabriele d'Annunzio and Giovanni Pascoli are two small but graceful ornaments of this new Parnassus, who combine their effects with intelligence, but they have but one string to their lyre, and, young as they are, they are already giving signs of exhaustion. In a small burlesque poem called 'Job,' "Marco Balossardi" (the *nom de plume* of a well-known poet) makes a few pointed thrusts at the living poets of Italy. Olindo Guerrini allows his muse to slumber and furnishes literary criticism with prose articles. Carducci, our first living poet after Prati, instead of convincing and conquering by song, is taking endless trouble in collecting under the head of 'Confessioni e Battaglie' all his causes of complaint against his opponents.

Autobiography is a lure to many writers. In order to give satisfaction to the former contributors to the *Fanfulla della Domenica*, Ferdinando Martini, himself giving the example, invited his former collaborators (amongst whom were Carducci, Guerrini, Bersezio, D'Ancona, and Bartoli) to write their own early biography, or, more correctly, describe their entrance into public careers. This curious little book is called 'I Primi Passi.' M. Pizzi, our learned Orientalist, who is about to publish in Leipzig an excellent manual of the Persian language, has in the meanwhile given us a translation in blank verse of an episode from the 'Book of Kings' of Firdousi, entitled 'Avventure di un Principe di Persia.'

Italians are once more beginning to travel. We visit the Alps with Signor Giuseppe Corona in his 'Aria di Monti,' we revisit the two Niles with Count Pennazzi, we go through Spain with Signor Pojero Varvaro, and we travel through Japan and Siberia with Count Luchino del Verme in the handsome volume published by Hoepli.

But this is not all. We have this year the third volume of Prof. Villari's 'Machiavelli,' the third volume of the works of the late Bernardino Zendrini, and the letters of Cavour, published by Chiala. Novels, poems, lectures, positively rain down, and pamphlets appear by thousands. To console the authors of some of these who have sent me their works in the hope that I may mention them in this catalogue, I may tell them that I do not intend to speak of my own books. Neither can I speak of the magazines, which are too numerous. If I venture to remark that the *Nuova Antologia* remains our best periodical, people will perhaps overlook the real merits of that review, and remember only that I am one of its contributors, and have, therefore, some interest in advertising it. But for this year at least a review of Italian literature will be more easily dispensed with, a French writer, M. Amédée Roux, having just brought out, through Charpentier, a history of Italian literature of the last five years. It contains a number of notices, skilfully grouped as a whole, and it is written in an impartial and amiable spirit which will find much favour in Italy; but it is well to remember that works of this kind compiled in foreign countries are never wholly satisfactory: the relative value of authors is not thoroughly understood, so that a mediocre writer may have the good fortune of finding himself ranked amongst the first contemporary authors, while others highly appreciated in their own country may be overlooked, or at least undervalued.

The essential point for Italy is, after all, to maintain her ardour for work, and in this I observe no abatement. In the domains of history, philosophy, literature, and philology, excellent results are obtained through the classes of Profs. Flechia and Graf in Turin; Cantoni and Barzellotti in Pavia; Ascoli and Reina in Milan; De Leva in Padua; Carducci in Bologna; Villari and Bartoli in Florence; D'Ancona in Pisa; Monaci and Lignana in Rome; D'Ovidio, Zumbini, and Kerbaker in Naples, &c. Thus is kept up an intellectual movement of a truly scientific nature, though I maintain that people are generally too much absorbed by details, and do not sufficiently grasp the *ensemble* of a discipline. But I have already given my opinion of this excess of specialization. It has its good side, of course, in that it reacts against the old Italian vice of rhetoric, but rhetoric must not be confounded with the ideal. If we learn new sciences without that higher feeling which is ideality itself, we shall be, as it were, aimless wanderers through an intricate vegetation. If it be necessary for all men to work, it is still more so for them to know why they work, and we can only obtain this knowledge by placing all branches of learning in their proper relationship. Our literature can no longer cheat itself with words, it must be founded on science; an enlightened pedagogy teaches not only the method of directing a school, but the far more difficult method of directing thoughts, feelings, the way of living and acting, and the manner of expressing oneself. We possess very few real pedagogues, but we discern certain tendencies in the large-minded teaching of Profs. Angiulli, Barzellotti, and Siciliani (who all three have felt the influence of your great philosopher Herbert Spencer), which lead us to hope that before long we may have a science of education. If the exponents of this science are able to maintain themselves on the high level of their teaching, they will render greater services to our country than all our politicians put together. After that we shall have to wish that our scientific men may become also eloquent.

ANGELO DE GUBERNATIS.

NORWAY.

YEAR by year the literary productiveness of Norway increases, and the increase would be satisfactory if it were not characterized by a fall, rather than a rise, in the standard of literary excellence—a result which may be ascribed mainly to a deterioration in the tastes, requirements, and critical judgment of the public. We may perhaps find another explanation of the preponderance of inferior literary productions in the want of harmony existing between the best Norwegian writers and the community at large, the former having for the most part assumed a literary standpoint a generation in advance of the latter. And this is the more important, seeing that the period separating the present generation from the last has been marked in Norwegian literature by a powerful reaction from idealism to realism, from Conservatism to Radicalism, and from pietism to free thought. It is satisfactory, however, to have to record three exceptions to the general deal level, for which Norwegians are indebted to their old favourites Henrik Ibsen, Jonas Lie, and Alexander Kielland.

In a so-called family drama of five acts, entitled 'En Folkefiende' ('A National Enemy'), Ibsen has, to a certain extent, protested against the storm raised by his 'Gjengangere.' The hero, a Dr. Tomas Stockmann, medical superintendent of a bathing establishment in a little Norwegian town, is presented to us as occupying a position analogous to that occupied by the author a year ago. The general verdict on the piece is made sufficiently manifest by the eagerness with which the managers of our leading Scandinavian

theatres have sought permission to bring it out on their boards, and I believe that at the new year 'Folkefiende' will be simultaneously represented at Christiania, Stockholm, and Copenhagen.

Besides Ibsen the only contributors to this year's dramatic productions are Magdalene Thoresen, whose 'Opgående Sol' ('Uprising Sun') has not met with much success, and the writer of the present notice, whose comedy entitled 'Löse Fugle' will be brought out in Christiania early in 1883.

Among genuine works of fiction, which, in point of fact, constitute the mass of the year's literature, Jonas Lie's latest tale, entitled 'Gå På' ('Go On'), takes the lead. The tone of the book is alike sound and animated; and while the author, with his usual vigour, assails special points of social controversy, 'Gå På' is in many respects in advance of his previous works, and more in harmony with the sentiments of our best authors. Although, like its predecessors, 'Gå På' consists of a series of loosely connected incidents, it supplies us in the first hundred pages with so strikingly realistic a picture of actual life during the winter term of the herring-fishing season in Western Norway that we seem in this new work to find the best of all literary solutions to some of those social questions of national importance which earlier writers thought could be solved by approaching them by the less direct method of 'Gå Udenom' ('Go Roundabout').

Alexander Kielland's new novel, 'Skipper Worse,' like his former productions, 'Arbejdsfolk' and 'Else,' is remarkable for the grace and finish of its style and diction, while it is wholly free from the mannerism and superficiality which led his warmest admirers to fear that he was becoming a slave to mere tricks of manner. Happily, however, Kielland's 'Skipper Worse' is much in advance of his former productions, for it possesses greater consistency of plot, and shows more force in its delineation of character, and greater vigour in its style. The scene is laid at Stavanger, the author's native town, and the time chosen is that of the last generation, when a strong pietistic spirit was suddenly brought in contact with a newly awakened craving to participate in the industrial enterprise of the times. Being thus far removed from the burning questions of our own day, Kielland's work has met with a more favourable reception than its predecessors, and counts already a larger number of readers than any other novel by the same author. In addition to 'Skipper Worse,' A. Kielland has brought out a volume containing two tales, the scene of which is laid in Denmark, where the author has for the present taken up his abode. Here, too, we may mark the skill with which he wields satire, and the success with which in the limited space of a novelette he is able to present us with the complete picture of a life's drama.

Next in order I have to mention Johan Paulsen's collection of travelling adventures, brought out under the title 'På Vandring,' and a novel by him named 'The Family Pehrsen,' which in some respects indicates a marked advance on his previous efforts. The veteran author Marie Colban has also given us a new tale, whilst another lady named Aubert, who has hitherto written anonymously, has produced a fiction entitled 'Dagny,' to which I may add a new collection of L. Dilling's small tales, a humorous tale by Johan Vibe, and an anonymous political romance, 'Til Statsrådstabouretten' ('The Town Councillor's Seat'), which has not hitherto attained much popularity.

The most interesting of the various reprints of older authors which have appeared in the course of the year is a selection of the poetic and journalistic remains of the late A. O. Vinje, an ultra-Norsk democrat, and the contemporary of Björnson and Ibsen, whose sharp and witty pen betrayed the strong influence which H. Heine had exerted on the writer. Next in order I may mention a collection of the popular tales of the late H. Schulze, a man of a far different character from the impulsive Vinje, while it only remains to be stated that the present writer has lately completed a critically annotated edition of the best of the late Maurits Hansen's novels, which forty years ago enjoyed great popularity, and which even now can boast of no inconsiderable number of readers.

In lyrical poetry there is nothing to show in the past year but a small collection of the poems of the late Bernt Lund and an imitation of Welhaven's well-known polemic anthology 'Norges Dæmring' ('Norway's Dawn'), to which the compiler, a young clergyman, has given the title of 'Norges Dag' ('Norway's Day'), but which will not bear comparison with the favourite of the past generation.

Under the head of scientific literature, besides various works on natural history and a continuation of the reports of the Polar Expedition, I must direct attention to a description of the Viking ship which was found two years ago near the Sandefjord. The author, Herr N. Nicolaysen, one of the most eminent Norwegian archæologists, has enriched his work, which is specially well printed, with numerous admirable illustrations. And lastly, among works of a more popular character I would draw attention to a narrative of the times of the emperors Tiberius and Nero by Dr. Weisse, Professor of Latin in the University of Christiania.

Henrik Jæger.

POLAND.

Quite lately an interesting scientific dispute has cropped up among the young Cracow historians regarding the earliest history of Poland. It was begun by Dr. Piekosinski, who started the theory that Poland owes the beginning of its definite existence to a foreign conquest effected by a Slavonic race, which originally inhabited the extreme west of the Slavonic territory. This assumption was disputed by Dr. Bobrzynski and Dr. Stanislaus Smolka, and the consequence of this difference of opinion is a considerable number of historical pamphlets and even books which discuss the subject from various points of view. Many of the hypotheses put forward may eventually be proved to be false and untenable, but it is not to be denied that this discussion has thrown light on sundry obscure periods of our earliest history. In his historical narratives Prof. Szujski has taken the fourteenth and fifteenth centuries for his subject, and the same period has been worked by Prof. Smolka, whom I mentioned just above, in the first series of his historical sketches, and also by Anton Prochaska in his 'Last Years of Prince Witold.' The able historian Jarochowski and Dr. Rollè (who possesses a peculiar talent for dealing with the history of manners and making out of minute details an atractive historical picture) have devoted their pens to a subject with which they are familiar—the eighteenth century. An episode in the reign of Sigismund III. has been depicted by A. Sokolowski in his book 'Before the Civil War,' and Dr. Albert Kentrzynski has published the results of exhaustive researches regarding the condition of the Polish population in old Prussia under the rule of the Teutonic knights. Also worthy of mention is the laborious work of Korzon, 'Internal History of Poland in the Days of (the last king) Stanislaus Poniatowski,' in which is given a picture of the social and financial condition, hitherto little known, of the period. The two volumes containing the biography of the Polish *savant* and publicist Sigismund Anton Helcel, by H. Lisicki, supply many facts relating to the recent history of the country, and plead warmly the cause of the old conservative ideas.

The celebration next year of the two hundredth anniversary of the raising of the Turkish siege of Vienna, in which Poland and her heroic king played the chief part, has given rise to several historical works both in Polish and in German. At the head of them must in justice be placed the great publication of the Academy of Sciences of Cracow, which fills several volumes and contains a collection of documents and materials for the history of the times of Sobieski. In the books of our Western neighbours the spirit of fairness that this history displays is, unfortunately, not always found, although it might be reasonably expected in handling a theme so remote.

In fiction only well-known names occur. The indefatigable J. I. Kraszewski has again this year issued about twenty volumes of historical romances and pictures of contemporary manners. One of the latter, the novel 'Without Heart,' has been printed simultaneously in Polish and in German (in the *feuilleton* of the *Neue Freie Presse* of Vienna). Madame Orzeszko and Madame Morzkowska, the former in her peculiar way, have given new proofs of their abilities both in stories and also in longer narratives. Wilczynski, with his humorous *genre* pictures; Bykowski, who is successful in historical novels; the witty Lam, Rogosz, "Hodi" (a pseudonym), and Sienkiewicz (he has written a beautiful story of a Polish peasant who served as a Prussian soldier in the French campaign), together with some less remarkable writers, pretty well complete the list of our novelists. Magazines as well as daily papers consume a good deal of such work. Numbers of translations from all European languages are also through these channels brought before the public.

In lyric and narrative poetry there is little to speak of this year. Besides the 'Patriotic Rhymes' of the popular song writer T. Lenartowicz, I may mention a collection

of lyric poems by H. Merzbach and one by W. Gomulicki, whose verses show real poetical inspiration. All the rest is translation. Part of Byron's 'Don Juan' has been translated by Count Baworowski and E. Porembowicz; and versions of Béranger and the 'Æneid' have also appeared.

In drama popular pieces are the fashion in which the contrasts of town and country life or the collision of different ranks in society are depicted. The best of these are 'The Poor' of Swiderski and 'The Common Faults' of Galasiewicz. 'The Family,' a play in five acts by Kraszewski and Zalewski, has obtained a *succès d'estime*. Count Koziebrodzki published a collection of comedies in one act, which are specially liked by those who get up amateur theatricals. Short pieces by M. Gawalewicz have also been applauded. An historical play by A. Belcikowski has lately made its appearance—'Boleslaus the Bold'—which has for its subject a bloody conflict between one of the old Polish kings and a Bishop of Cracow afterwards canonized. English readers may be interested in learning that Shakspeare's works, at least the so-called histories, have been produced in an abridged narrative form with extracts by St. Kozmian.

In other branches of literature I may name the following: 'Spinoza's Ethic,' by Raciborski; 'The History of Universal Literature, with Illustrations,' of which the first volume, dealing with ancient literature, has come out; a 'Cyclopædia of Education,' edited by Prince Lubomirski; a narrative of travel by St. Belza, couched in the form of letters, and called 'In and Out of Denmark'; a tractate on the Jewish question, by the well-known lady novelist Madame Orzeszko; and an admirable biography of Chopin by Karasowski.

It is pleasant to observe that translations are serving to make Polish literature better known abroad. A great deal of Mickiewicz has been translated into French and German; his 'Konrad Wallenrod' into English by Miss Biggs; and his 'Books of the Polish Pilgrimage' into Hebrew by Dr. Mosco Ascarelli. But it is more particularly among the other branches of the Slavonic race, especially among the Bohemians, that a knowledge of our literature is spreading. Although at present Panslavism may be a dream, it is undeniable that the Slavonic nations are becoming more curious about the literary movement in the different branches of their race, and are growing, to their mutual advantage, better acquainted with its intellectual treasures. The knowledge of Polish poetry and thought is in this respect of much importance. A 'History of Polish Literature' has been published at Leipzig in German by H. Nitschmann, a writer already known by his excellent versions from the Polish poets. Poles should be grateful to him for his book. From it, as it contains a rich anthology of our poets and prose writers, foreigners can now obtain a good knowledge of our literature, and can convince themselves of its real value.

Adam Belcikowski.

RUSSIA.

In reviewing Russian literature for the past year we must take into account the abnormal condition under which the Russian press has laboured. Of course it was never (with the exception of the first years of the reign of Alexander II.) in a very brilliant state, but ever since the melancholy catastrophe of the 13th of March its position has grown considerably worse. The authorities have manifested remarkable zeal during the present year, and have been continually showering rules, prohibitions, and punishments from their cornucopia. The worst of all is that no fixed code exists, and that all these regulations are entirely arbitrary; for what is forbidden to-day may be permitted to-morrow, and again forbidden the day after. Worn out by this struggle with a suspicious and arbitrary censorship, many honest voices have voluntarily chosen silence, in the hope that better days are in store. This course has been adopted by several newspapers, the *Poryadok*, *Zemstvo*, and others. Those Liberal organs which have stuck to their colours and have determined to fight to the last have the sword of Damocles hanging over them, and are frequently reminded thereof. A very moderate journal, published in Moscow under the title of *Russkaya Myssl*, has been particularly unfortunate in this respect. Nearly every number of this periodical appears behind its time because some article or other has been ruthlessly cut out by the scissors of the relentless censor. Thus the May number of the *Russkaya Myssl* was disfigured by having an article of Count Leo Tolstoy's cut out and burned. In this article he had related the history of his religious views and experiences with a candour and a talent hardly surpassed even by Rousseau.

As might be expected, the influence of this reaction is strongly felt by the lighter and more artistic literature, which, probably owing to this arbitrariness, is distinguished for little that is remarkable. Tourguénief has presented us with a novelette entitled 'Despair,' written with the wonderful simplicity and artistic finish which readers always expect of works from his pen. Another famous novelist, Count Leo Tolstoy, has devoted himself lately to religious speculations, and has only produced a single short fantastic story, which has been translated into English, and has appeared in *Fraser's Magazine* under the title of 'What makes People to [*sic*] Live.' Another novel must not here be forgotten. It is remarkable for depth of thought and the knowledge of peasant life which it reveals. This is Gleb Ouspyensky's 'Power of the Soil.' The author shows admirably how strongly the peasant is tied to his corn-growing mother earth. As long as he remains in his village, surrounded by his country neighbours and relations, the peasant performs his daily duties and lives a virtuous and useful life; but as soon as he is taken away from his native soil and transplanted into a town he loses his self-control, his industry forsakes him, and he gradually degenerates into a dissipated and drunken loafer.

Of novels there has been no lack, as usual, but only a few are above mediocrity. The book that caused most sensation and called forth much lively criticism was a novel by R. Boborykin, entitled 'Kitai Gorod' (the name of part of the business centre of Moscow). Mr. Boborykin is one of our most productive and cultivated *literati*. He has remarkable powers of observation, possesses the knack of telling a story well, and his plots are generally original and good, abounding in amusing incidents; but his works are wanting in artistic finish and analysis of character. The latter defect may perhaps be explained if we remember that Mr. Boborykin has lately become a convert to the naturalist school of M. Zola, which has not a few disciples in Russia. In 'Kitai Gorod' Mr. Boborykin has endeavoured to describe the new Russian *bourgeoisie* in all its phases. This new class plays a most important part in Moscow, and is trying hard to supersede the old and impoverished nobility. Mr. Boborykin has acquitted himself fairly well, but superficially, of his task. He has carefully studied the external appearance and physiognomy of the rising class, but he has altogether failed in the details; for he has not given himself the trouble to dive into the heart of the Russian merchant of the new school, nor has he succeeded in showing how the external European veneer and polish cover moral depravity and Asiatic self-complacency. Entirely opposite in its tendency is a novel by Count Valluieff, entitled 'Lorin,' which was loudly heralded by the puff preliminary, and which had some success in the upper circles of St. Petersburg society, owing chiefly to the high position which the noble author had formerly filled—that of Minister of the Interior. If Mr. Boborykin appears as the representative of the naturalist school of Zola, and even as his legate *in partibus infidelium*, Count Valluieff, on the other hand, is an idealist, and has taken Tolstoy's 'Anna Karenina' for his model; but though the former has partly succeeded in coming near his master, the latter has only justified Lessing's celebrated dictum, when referring to imitators of Shakspeare, that the club of Hercules was too heavy for ordinary mortals to wield. Besides the above, the following novels are worthy of enumeration: 'Collected Tales,' by Vsevolod Garshin; 'Poverty,' by Mikhailoff; 'The Evil Spirit,' by Avséenko; 'The Village Tale,' by Zlatovratsky; and several sketches and shorter pieces by the gifted lady who still hides her identity under the pseudonym of "Krestoffsky." These are all the works of fiction of any pretension that have been published.

But if the present state of affairs is unfavourable to fiction, it offers rich material and a golden opportunity to the satirist; and Stchedrin may be credited with having fully availed himself of the peculiar circumstances of the time in his 'Letters to my Aunt,' which have lately appeared in a separate form. In my last article I entered minutely into the character and importance of Stchedrin's satirical works; it will, therefore, be sufficient praise to say that 'Letters to my Aunt' are in no way inferior to his other productions, and show no signs of falling off in vigour or in acerbity. They are full of protest against the servility, hypocrisy, and mystification which characterize contemporary Russian society.

The present year began with a good omen for Russian poetry by the discovery and publication of a juvenile poem of Lermontoff's, 'Sashka,' which was evidently influenced by Byron's 'Don Juan,' and is written in the same metre. It gives strong

signs of the presence of that poetic genius in the lad of nineteen which eventually built up Lermontoff's fame. Our veteran poet Maikoff has given the public a beautiful dramatic poem, 'The Two Worlds,' thus repaying us with interest for his long silence. In this new production, forming a continuation of his 'Three Deaths,' Maikoff, with the artistic perfection peculiar to him, has represented the collision of two worlds, or rather of two ethical systems or cosmical philosophies—the pagan Roman and the Christian which superseded it. The most remarkable lyrical production of the year is certainly a collection of 'Patriotic Songs' by Minsky. Such deep, sincere notes, wrung from the very heart, and coming so evidently from a breast pining under the melancholy impressions of the present, our Russian muse has not given out for many a long day. This youthful poet wants nothing but form and smoothness, in which particulars he does not compare to advantage with Maikoff, to take no mean place on the Russian Parnassus. The same sad and morbid note is touched by another young poet, Mr. Nadson, who with Minsky may be regarded as the minstrels of the rising generation, the interpreters of its ideals, sorrows, hopes, and disenchantments.

We have been particularly rich in translations this year. Besides a considerable number of minor verses by foreign poets scattered in journals and magazines, we have had two translations of 'Faust' by Fett and Trounin, and a graceful translation of Shelley's 'Queen Mab' by Minsky; also two translations of portions of 'King Lear,' very conscientiously executed by Mr. Yourieff, and 'King John,' admirably translated by Prof. Min, a Scotchman by extraction, and already known for his translation of Dante's 'Divina Commedia' and many English ballads and poems. The drama, however, has not been so fruitful. Of the numerous original plays and adaptations put on the stage this year Ostroffsky's 'Talents and Admirers' (his forty-fourth) alone is worthy of any notice. This, indeed, testifies to the unfading freshness of our great dramatist's genius. Forsaking for once the mercantile classes which he holds so dear, Ostroffsky has this time taken the provincial theatrical world for his subject. The heroine is a girl of noble aspirations and artistic feeling, but is not possessed of sufficient force of character. The result is that she succumbs to her surroundings, and yields in the struggle against the temptations, intrigues, and troubles of life.

On turning to archæology the most important work of the year will be found to consist of Prof. Inostrantzoff's book on 'Prehistoric Man of the Stone Age on the Shores of Lake Ladoga,' which is founded on researches conducted on the spot. With a view to making his work at least partially accessible to foreigners, the author has translated the headings of his chapters into French, and added a *précis* of the contents in that language.

A valuable contribution towards the history of Russian literature has been made by Mr. Alexander Vyesseloffsky, who has issued the fourth number of his 'Russian Popular Religious Songs.' Especially interesting is the chapter on the history of mediæval *jongleurs* and *Spielleute*, and the Byzantine maskers and mummers, and their *répertoires*. A work by a youthful scholar, Mr. Shdanoff, 'On the Literary History of Popular Poetry,' is remarkable for the novelty of its method. The author belongs to that school of critics which seeks to discover the prototypes of Russian popular heroes of the so-called Vladimir cycle in literary sources, but he carries his method too far. Thus, for instance, having proved the identity of the Biblical Samson with the Samson in our *builinas*, he endeavours to show that one of the ancient heroes, a certain Svyatogor, to whom the *builinas* ascribe deeds somewhat similar to those ascribed to Samson, must have the same origin, which is certainly a bold inference.

Prof. Arkhanhelsky, of the University of Kazan, has made the antiquarian world a present of an exceedingly pleasing character by investigating the life and writings of the celebrated ascetic monk of the sixteenth century, Nil Sorsky, who strongly protested against the right of possession exercised by monasteries over domains colonized by them, and was celebrated for the remarkable toleration of his religious views, in which respect he was far in advance of his times. Mr. Alexis Vyesseloffsky has devoted a brilliant essay to the investigation of the influence of Western European literature on that of Russia. The same subject has been treated, though from a more special point of view, by a young critic named Kolmatcheffsky in an excellent treatise on 'The Animal Epic in the West and among the Slavs.' He is the first to bring the wealth of Slavonic popular legends to bear on the study of this vexed question.

Works on modern Russian literature have been nearly all confined to biography. An 'Attempt at a Biography of Lermontoff,' by Prof. Viskovaloff, has appeared; Pushkin has found a new biographer in Nezelonoff; and a delightful life of Shevtchenko, the Burns of Little Russia—quite as gifted a poet, though infinitely more unfortunate—is also one of the achievements of the year. Besides these, the seventh volume of the collected works of Prince Vyazemsky (once a celebrated poet, and a contemporary of Karamzin and Pushkin), the sixth part of Prof. Soukhomlinoff's 'History of the Russian Academy,' and several other less important works, have appeared in the course of the year.

A few interesting additions have been made to history. The Historical Society has published vols. xxxii.–xxxiv. of its *Transactions*, containing, as usual, much curious and valuable historical material; among other things, the letters of Baron Grimm to Diderot and the Empress Catherine II., and documents relating to the sojourn of Peter the Great in France in 1717. The State papers in the Moscow archives of the Foreign Office have supplied a basis for the two following works, one by Troussévitch, entitled 'The History of the Diplomatic and Commercial Relations of Russia with China,' and the other by Mr. Oulyanitzky, on 'The Dardanelles, the Bosphorus, and the Black Sea in the Eighteenth Century.'

I must not forget to mention a new work by our eminent historian Kostomaroff on Mazeppa, which is also mainly based on documents in the Moscow archives of the Foreign Office. The thoroughly scholarly manner in which this mysterious subject has been investigated, and the masterly description of Mazeppa's character, amounting to a psychological study, will without doubt make this book take rank with the best works of Kostomaroff. The enigmatical character of the Emperor Paul—that mixture of generous impulses and attacks of tyrannic despotism bordering on madness, who reminds one strongly of Herodotus's Cambyses—has found an expositor in Mr. Kobeko, who, in his work entitled 'The Cæsarevitch Paul Petrovitch,' has represented the terrible emperor in an entirely new light. He endeavours to show to what circumstances the intelligent and sympathetic young prince owed his gradual deterioration into a moody and passionate despot. The reign of Alexander I. has been brought out into strong relief by the very naïve memoirs of Mr. Belyaeff ('Experiences and Impressions of a Decembrist'), who took part in the conspiracy against Nicholas I., and had to atone for his rashness by a thirty years' sojourn in Siberia. I may also mention a collection of essays written at various times by the late Prof. Solovyeff, Spasovitch's 'Life and Politics of the Marquis of Vieliepolsky,' a series of biographical sketches by Prof. Besteuzheff-Ryoumin, and the eleventh posthumous volume of 'The History of the Russian Church,' by the Metropolitan Makari.

This year philosophy has been enriched by but two works worthy of notice. The first of these is a bulky treatise by Prof. Troytsky 'On the Science of the Soul,' in two volumes. Judging from the fact that the author treats here merely of the general characteristics and laws of psychology, it may be safely supposed that this is but an introduction to a more bulky work, which will doubtless prove one of the most important additions to our philosophical literature. The other is the work of a talented young philosopher, Mr. Grot, and is entitled 'A Contribution to the Question of the Reform of Logic.' It contains a history of logic, and endeavours to identify all logical processes with reasoning by association of ideas.

Several remarkable books on politics and ethics have appeared this year, but the most noteworthy of these is by Prof. Yanzhull, entitled 'Historical Outlines of the Development of the Idea of Open Competition and Government Non-interference.' In this work the professor gives a graphic picture of the social tension in England during the forties, connecting this with the Free Trade agitation, and acquainting the Russian public with a number of prominent English economists hitherto unknown in this country. A clever work, though somewhat one-sided, is Mr. Daneffsky's 'Systems of Political Equilibrium and Legitimism, and the Origin of Nationality,' in which he tries to prove that the principle of nationality will at no distant future become the foundation of all international relations. I will pass over the curious investigations of Mr. Likhatcheff into the subject of 'Suicides in Western Europe and in Russia,' and Prof. Martens's work on 'International Law,' the only systematic handbook of international law yet published, and will go on to consider

two curious works which, notwithstanding their paradoxical nature, are read with avidity by our young men: I mean 'The Fate of Capital in Russia,' by Woronzoff, and 'Sociological Studies,' by Youzoff. In the former of these works the author endeavours to prove that capital does not increase in Russia, and that it is quite unnecessary for us to have recourse to the cumbrous machinery of capitalization as an incentive to production. The fundamental idea underlying the other is that social forms should be reconstructed in conformity with the views and necessities of the masses. The mayor of Moscow, Tchitcherin, until lately a professor at the university, has published a work entitled 'Property and the State'; but this is only political in name, and is really philosophical in treatment, or rather Hegelian, for the author is one of "the last of the Mohicans" of Hegelian philosophy in Russia.

In conclusion, I must not ignore the books of travel which 1882 has added to Russian literature. Prof. Kondakoff's 'Journey to Sinai' is interesting from an archæological point of view, and contains a curious account of the monastery of Sinai and its relics, consisting chiefly of mosaics, Greek MSS., &c. No less interesting, though in quite another respect, is the 'Diary' of Dr. Yavorsky, who accompanied the embassy of General Stoletoff to Afghanistan in 1879. A translation of this work will shortly appear in English by Mr. C. Marvin. Of great ethnographical value is Mr. Yadrintzeff's 'Siberia considered as a Colony.' The author is a native of Siberia, and knows his country well. He pays particular attention to the internal history of Siberia, its ethnographical characteristics, and especially its social circumstances. To any one desirous of making himself acquainted with this remarkable country Mr. Yadrintzeff's work is absolutely indispensable.

Nicholas Storojenko.

SPAIN.

In Spain this year the movement both in letters and science, though decidedly progressive, has not been so active as might have been anticipated, publications by the Academies and other scientific bodies having been comparatively few and unimportant. To begin with the Royal Academy of History, with the exception of one volume, the ninth, of its 'Memorias,' containing remarkable essays by some of its members—Count Clonard, Caveda, and Amador de los Rios, all deceased; of another, the fourth, 'Cortes de Castilla y de Leon'; and lastly, of a paper on the life and exploits of a celebrated Spanish *condottiere* of the fifteenth century (Don Rodrigo de Villandrando, Count of Rivadeo), read by Don Antonio Maria Fabié at the anniversary meeting of that body in May, nothing has been done to justify its admitted reputation for activity and zeal. As to the other Academies, the Española, Fine Arts of San Fernando, and Moral and Political Sciences, though each of them has published its annual *Bulletin*, they have not otherwise given signs of life. Indeed, the Real Academia Española de la Lengua, whose object and rules are exactly the same as those of the Académie Française, has long since announced as ready for the press the celebrated 'Cantigas,' or book of songs, by Alfonso X. What may be the cause of the delay it is not easy to say; certain it is that the public in general, and scholars in particular, are much disappointed at not seeing in print one of the most remarkable productions of the thirteenth century.

The Sociedad Geografica, on the other hand, has not been idle. Besides the usual monthly numbers of its *Boletin*, containing papers by Lasso de la Vega, Eduardo Saavedra, Arrangoiz, Beltran, Vilanova, and others, it must be owned that the impulse given to historical geography, and particularly to that of the Spanish colonies in South America, has during the present year furnished us with several works, old or modern, which otherwise might not have been published. Among the former it is but just to mention 'Historia del Descubrimiento de las Regiones Austriales [*sic*], hecho por el General Pedro Fernandez de Quirós,' the third volume of which, by Don Justo Zaragoza, made its appearance three months ago. This, which is to be the last of the work, and most probably also of the "Biblioteca Ultramarina," is a useful appendix to the former two, as it contains biographical notices of all and every one of the navigators mentioned therein. Of the 'Relaciones Geográficas de Indias,' a work splendidly printed at the expense of the Government, to be distributed among the members of the Congreso de Americanistas in 1881, no other volume, I regret to say, has yet been published; but in the "Coleccion de Documentos Inéditos para la Historia de España," which has already reached the seventy-eighth volume, a history of the Philippine Islands, by Father Rodrigo de Aganduru Moriz, has been issued. Another of Guatemala in the seventeenth century, by Capt. D. Francisco Antonio de Fuentes y Guzman, has been edited by the above-named Señor Zaragoza from the original manuscript. Of modern works relating to the Spanish colonies in America or in the Asiatic archipelago, I am able to mention 'Memoria sobre Filipinas y Joló,' by the late Escosura, edited by Cañamaque; 'El Archipielago de Joló,' by Garin; 'Escenas Filipinas,' by Vila, and 'El Progreso de Filipinas,' by Sancianco; 'Cuba Indígena,' by Fort; and 'El Rio de San Juan de Nicaragua,' by Peralta; besides two more works on Africa, namely, 'Marruecos,' by Muñiz Carro, a translation from the Italian d'Amicis, and 'Africa en 1881,' by Beltran. The editors of the collection entitled "Documentos Inéditos relativos al Descubrimiento, Conquista, y Organizacion de las Antiguas Posesiones Españolas de America y Oceanía," have likewise published vol. xxxvi., many tracts and papers on the subject—at present, as it would seem, a favourite with us.

Reprints or reproductions by the photo-lithographic process of works belonging to our ancient literature have not been wanting this year. Among the latter a very scarce one, first printed at Coria in Estremadura in 1489, in the castle of the Duke of Alba, the only copy known of the 'Blason y Ciencia Heráldica,' by Gracia Dei, the herald or king-at-arms of Ferdinand and Isabella, deserves particular mention. A similar reproduction of 'El Libro de las Tablas,' or game of chess, composed, as it is said, by King Alfonso the "Learned," has likewise been published, though not for sale. The treatise on hunting and hawking by Don Juan Manuel, the celebrated author of 'Conde Lucanor,' hitherto inedited, has come to light in one of the volumes of the "Biblioteca Venatoria"; and Señor Sbarbi has committed to the press a hitherto unpublished, nay unknown, collection of apothegms (1606?) by Luis Rufo, the son of Juan, to whom we owe the 'Austriada' and other works in verse. Of those works of St. Theresa which have likewise been reprinted or reproduced in autographic facsimile from the copies preserved in the Escurial more will be said hereafter.

With the exception, however, of the above-mentioned works, and some others of minor importance, few additions have been made this year to our store of national history, since 'Nueva Luz y Juizio Verdadero sobre Felipe II.,' by Father Montaña, can only be regarded as a vindication of that monarch's character and political views, rather than as a faithful and impartial account of his government and administration. We could hardly expect from a reverend canon of the metropolitan church of Toledo anything approaching the critical spirit of our modern times, and therefore the author's principal aim has been, as he informs us, "to refute the slanderous assertions of that king's political enemies." A history of the Knights Templar, derived, as stated on its title-page, from original sources by Matheo Bruguera, Apostolic Prothonotary and well-deserving clerk (*clerigo benemerito*) of the Holy See, is but a meagre compilation from what Count Campomanes and others wrote about the middle of last century on that now almost forgotten subject. As to the "original sources" from which the Apostolic Prothonotary's work is said to have been derived, I must own my inability to discover them, unless two or three deeds of the thirteenth century relating to the Order of the Temple, and preserved in the archives of Barcelona, which, by-the-by, have been printed in several ancient as well as modern historical collections, be meant. This remark, however, cannot be applied to the late publication by a learned professor of the University of the Arabic text of Ibn Bashcuwál, a Hispano-Mohammedan historian of the thirteenth century. The first of its class printed in Spain since the beginning of the present century, it also bids fair to be introductory to a series of Arabic works on the history of the Spanish Mohammedans. At present only the Arabic text has been printed; let us hope that, for the benefit of scholars not acquainted with that language, and yet wishing to sound the depths of Mohammedan culture as well as reconstruct national history, a faithful translation will be given one of these days.

'Casamientos Regios de la Casa de Borbon' ('Royal Marriages of the Bourbons from 1701 to 1789'), by Pineda, is, as its title implies, a compilation from the writings of Flores and others on the intermarriages of the Bourbons of Naples and Spain, from the Duke of Anjou (Philip V.) down to Charles IV. of Spain, that is to say, eighteen years later than the 'Reynas Cathólicas de España,' by that Augustinian friar. 'Medallas de las Proclamaciones,' &c., by Herrera; the second part of 'Episodios Nacionales,' by Perez Galdós; the fourth volume of 'La Guerra de la Independencia,' by General Gomez de Arteche, a highly

esteemed work; and lastly, a summary account, by the Marquis de Mendigorria, of the expedition sent to the relief of Rome in 1849, will in time prove valuable contributions to national history.

But if works relating to the general history of this country have not been so numerous as might have been anticipated, considering the progress visibly made in all branches of literature, it must be owned, on the other hand, that those on local history, far from diminishing in number, have lately considerably increased. It is an ascertained fact, and one that needs no comment on my part, that the various provinces constituting the old Spanish monarchy are still far from being melted into one compact nationality, the peculiar characteristics of each race having been preserved among us in Spain more effectually, perhaps, than in any other European country. Whoever happens to glance at Muñoz's very perfect 'Dictionary of Topographical Spanish History' (1858), in which several hundred titles of works are alphabetically recorded, will wonder at the great number of those published since that date. In this manner we have within the present year a history of Guadalajara by Catalina-Garcia, which has already gone through a second edition; another of Liebana, in the province of Santander, by Llorente Fernandez; of Saragossa, by Cosme Blanco (the first volume); of Zamora, by Capt. Cesareo Fernandez Duro (the first volume); of Valladolid, by Ortega, in two volumes; and of Madrid, by Fernandez y Gonzalez, also in two volumes. The well-known writer Victor Balaguer, to whom the reading public is already much indebted for an excellent history of his native province, Catalonia, in several volumes, as well as for another of the Provençal troubadours, has lately published a graphic description of the celebrated Monasterio de Piedra, near Calatayud, in Aragon. Not to say anything of 'Las Llaves del Estrecho' ('The Keys of the Strait'), by Navarrete, with a preface by General Lopez Dominguez, in which the long debated political question about Gibraltar has again been revived, I am able to record within the present year one more 'History of the Province and City of Badajoz,' on the borders of Portugal, though it has already been described by two native historians—one in the sixteenth century, Dosma Delgado; the other in the seventeenth, Suarez de Figueroa. 'Recuerdos de un Viaje á Santiago' ('Recollections of a Journey to Santiago de Compostella'), by two well-known Royal Academicians—Father Fita, a Jesuit, and Fernandez Guerra—is an agreeable and learned sketch of that part of Galicia where, according to a pious tradition, James the Apostle is said to have lived and died. Our knowledge of the Basque provinces—a sort of *terra incognita* for most of us Spaniards—is likely to be improved by the publication last summer of several works relating to them, such as 'Corografia de Guipuzcoa,' by Father Manuel de Larramendi, the well-known author of 'El Imposible Vencido' and other works on the Basque language. Written about the middle of last century, the work of the learned Jesuit remained unpublished until six months ago, when it came out in Barcelona in vol. xix. of a cyclopædia published in that city under the title of 'La Verdadera Ciencia Española.' In a like manner we have 'Norte y Sur, Recuerdos Alegres de Vizcaya,' by José Navarrete, and lastly 'Los Ultimos Iberos,' by D. Vicente de Arana, a work in which elegance of style and vivid pictures of mountain scenery are happily blended with high patriotic feeling, perhaps too exuberantly expressed. If to this be added the 'Euscaratik Erderara Biurtzeco Iztegia,' or Basco-Spanish dictionary, by the late D. Francisco de Aizquivel, of which two parts have already appeared at Tolosa, and the recent treatise on Basque proper names ('Los Apellidos Vascongados') by Irigoyen, there is a good chance for us Castilians to penetrate into the mysteries of a language which is said to be the same that Noah and his sons spoke within the Ark, and has hitherto been, and will most likely continue to be, a puzzle to European philologists.

If the above hasty review of works more or less connected with the history of the Peninsula is not full, the list of those appertaining to light literature, such as poetry and novels, will be found to be comparatively long. 'La Prodiga' and 'Narraciones Inverosimiles,' third series, by Alarcon, and 'Doña Luz' and 'Cuentos y Dialogos,' by Valera, are valuable additions to the already lengthy list of novels of two of our most popular writers. 'El Capitan Satanas' and 'Los Baños de Manzanares,' by Escamilla; 'Las Estraviadas,' by Rodriguez Solis; 'Historias Contemporáneas,' by Selgas; 'La Venganza de un Esclavo,' by Moreno Fuentes; and 'De Flor en Flor,' by Trueba, are a few only among the numberless works of fiction published in Madrid, Barcelona, Seville, and other cities. It may perhaps be necessary to add that, owing to the spread of your Folk-lore Society, considerable attention has lately been paid to that class of popular literature. Several works—such as 'Cantos Populares Españoles,' by Rodriguez Marin, to consist of five volumes; 'El Fauno y la Driada,' by Ortega; 'Cuentos Vivos,' by Alegre; and one or two more of the same kind—have already been published at Seville by members of the Folk-lore Andaluz. An edition—the sixteenth or seventeenth in order, as we are told—of Le Sage's 'Gil Blas de Santillane,' translated by Father Isla, the Jesuit, would hardly be worthy of notice were it not that on its title-page we read the oft-repeated statement that it was originally stolen from Spain, and that the 'Bachiller de Salamanca, Don Querubin de la Ronda,' a novel by Antonio de Solis, and other similar works unnamed, served the French author for the compilation of his most entertaining book. So deeply rooted is this belief among us that it will take time to eradicate it entirely. Meanwhile, without further entering on the subject, the editor adheres absolutely to the general opinion, and, without adducing further proofs, stoutly declares without hesitation that the story was purloined, &c., by Le Sage. Cervantes, however, has been allowed to rest comparatively in peace during the present year, since, with the exception of an edition with plates of his 'Exemplary Novels,' and another of his 'Don Quixote,' in two small volumes, also with plates, besides a learned essay on his works by Capt. Vidart, his slumber has not been disturbed. True it is that the "Cervantistas" have been considerably excited of late by the announcement in one of the daily papers of this capital of a copy of the very first edition of 'Don Quixote' having been found at Palencia in Old Castile, studded with marginal notes in the hand of its immortal author! an announcement which, by-the-by, has not, that I am aware of, been confirmed, and yet has had its echo on the other side of the Pyrenees, for I find it reproduced in the first number of *La Bibliophilie*, a periodical published in Paris, as follows: "On a découvert à Valencia [*sic*], en Andalousie, l'édition primitive de 'Don Quichotte,' annotée et corrigée par Cervantes lui-même"!

Poetry is equally flourishing, and in much demand, to judge from the number of verses with which our papers are daily filled, and the almost countless works published by our bards. Besides the third volume of the works of the Marquis de Molins, those of Ayala and Hartzenbusch, in course of publication, the 'Doloras' and other poems by Campoamor, some detached pieces by Zorrilla, and a poem on the conquest of Teneriffe, two columns of the *Athenæum* might be filled with the names only of those who nowadays are ready to rhyme on any occasion, however trifling. Much of this ephemeral poetry was issued three months ago on the occasion of a centenary celebrated with great pomp and solemnity at the city of Avila, twenty leagues from Madrid. The second centenary of the death of Calderon, the dramatist, having been solemnized here at Madrid in May, 1881, it was to be expected that the inhabitants of some other town in Castile would bestir themselves in favour of some recognized hero, male or female, military or ecclesiastic, no matter whom, provided it was a national one. The choice fell on St. Theresa, whom pious Philip III. elevated in 1618 to the rank of lady patroness of Spain, and Pope Urban VIII. canonized in 1622. Her death, or rather "glorious transit"—since, according to Ribadeneyra, no less than ten thousand martyrs assisted at her bedside, our Saviour himself coming down in person to convey his bride to heaven—happened on the 1st of October, 1582, and on that very day three centuries after the decayed and decaying city of Avila del Rey, with its castellated walls, its ruinous monastic buildings, and its fine cathedral, half church, half fortress, swarmed with pilgrims from all parts of the Peninsula desirous of witnessing the pageant in honour of the patroness of Spain. Of course the festivals—which, naturally enough, were ecclesiastical rather than civic — left nothing to desire; they were, moreover, the cause of several works relating to the saint or to her native place, Avila, being printed, not, indeed, in that city itself (for though the capital of a province it possesses no printing press), but at Madrid, and possibly at Valladolid. Besides the original work of the saint in two volumes quarto ('Vida Interior'), which, though several times printed, has since been reproduced by photo-lithography from the holograph manuscript in the Escurial Library, we have now 'Manual del Peregrino para visitar la Patria, &c., de Santa Teresa de Jesus,' and 'Libro de las Fundaciones,' both edited by Don Vicente de la Fuente, a Royal

Academician and professor at the Madrid University, well known in literary circles as the author of a new 'Ecclesiastical History of Spain.' Reprints have likewise been issued of the life of the saint written by Father Julian de Avila, her chaplain, and 'Rasgos Biograficos,' in octavo. Lastly, D. José Maria Sbarbi, in his 'Album Teresiano,' has collected all the poems, romances, and songs written in honour of the saint.

Dramatic art in its highest branches—that is tragedy and comedy—has produced nothing important within the present year. Here, as well as in France, and, indeed, almost everywhere, the taste of the public seems to have undergone great change, and our national stage is daily fed by *zarzuelas*, or musical operettas, by *juguetes cómicos*, as they are called, *saynetes*, and so forth, more calculated to amuse than to affect or interest the spectator; and although such models as the dramatic works of Martinez de la Rosa, Ventura de la Vega, Zorrilla, Rivas, and Hartzenbusch are daily set before our eyes, principally in the first and second volumes of the collection entitled 'Autores Dramáticos Contemporáneos,' all efforts made to reconstruct the national drama seem to be unavailing. Hence it is that—with the exception of 'Parientes Lejanos' ('Distant Relations'), by Vital Aza, and 'Carta Canta,' by the same; 'De Confianza' ('Familiarly'), by Estremera; 'Soledad,' by Hernandez; and 'Los Verderones,' by Sanchez de Castilla and Manuel Gomez de Cadiz, all belonging to the above class of *juguetes cómicos*—very little has been done towards reforming the taste of the public, unless 'La Justicia del Acaso,' by Ferrari, in three acts; 'El Alcaide de Toledo,' also in three, by Olavarria; 'Dicha y Fortuna' and 'En Busca de un Corazon,' both by Luis Oneca; and lastly, 'La Tempestad,' by Miguel Ramon Carrion—all of which were acted with applause in the theatres of this capital—be considered as having approached a higher school of art. A new edition (the third) of Balaguer's 'Tragedies,' and 'Teatro Selecto de D. Ramon de la Cruz,' with etchings by Cubas, besides a biographical notice of the author by Roque Barcia, are well worthy of notice; but I must not omit Macpherson's spirited translation of 'Richard III.,' which, joined to others by the same author, and to those already made by the late Mr. Clark, will in effect give us a Spanish Shakspeare. Indeed, the knowledge of English seems to be making rapid advance among us, for we have this year translations from Milton, Macaulay, Walter Scott, Fenimore Cooper, Thackeray, Hawthorne, Gladstone, and others.

The physical and mathematical sciences, as well as botany, natural history, and medicine, have had likewise a fair representation, whilst translations from the Greek and Latin classics have not been wanting.

Besides the above I am bound to mention a good number of works and pamphlets relating to the statistical and social sciences, such as political economy, industry, trade, &c., and likewise a higher class of school-books destined for colleges and universities, of which there was great want. Indeed, it can be safely asserted that through the efforts already made to secularize completely the education of the people and render it more independent and free, the lower classes in Spain are sure to enjoy in future the benefit of a more liberal and gratuitous system of teaching than hitherto. On Spanish statistics we have 'Cause and Origin of Emigration in the Canary and Balearic Islands,' by Diaz Perez; 'Cartas sobre Emigracion y Colonias,' by Conrado; and 'El Comercio Español y la Cuestion de Africa,' by Costa. 'La Esclavitud,' by Vera, and 'El Cepo y el Grillete' ('The Stocks and the Shackles'), by two Cuban members of the Abolitionist Society at Madrid, are, as their titles imply, intended to deprecate slavery; whilst Doña Concepcion Arenal, a stout champion of the rights of her sex, in her 'Instruccion del Pueblo'—a remarkable pamphlet, which obtained one of the prizes at a late contest (*certamen*) before the Academy of Moral and Political Sciences—has pointed out in a clear manner the advantages to be derived from a well-directed and liberal system of education.

To conclude this review of Spanish literature in 1882, a fact closely connected with the above paragraph must be recorded, though, to say the truth, I am almost inclined to omit it. Just at the time that efforts are made to improve the education of the lower classes, no less than three different works on bull-fighting have made their appearance and have had a rapid sale, namely, 'Ensalada Taurina,' by el Tio Pepe, 'Curiosidades Tauromaquicas,' by Velazquez, and 'Manual de Tauromaquia,' by Sanchez, the former two relating to the history of that "sport," and the third actually prescribing the rules to be observed in the arena! Thus, notwithstanding the efforts made by your Society for the Prevention of Cruelty to Animals, which has lately made proselytes in this capital, and is striving to put down that "barbarous exhibition," it is to be feared that some time will elapse before "Pan y Toros" ceases to be the accredited motto of the Spanish nation. J. F. Riaño.

LITERATURE

The English Scholar's Library.—George Joy's Apology to W. Tindale. Edited by Edward Arber. (Birmingham, privately printed.)

Everybody knows, or ought to know, the closing sentence in John Fox's account of William Tyndale:—

"He was a man without any spot or blemishe of rancor or malice, full of mercy and compassion, so that no man living was able to reproove him of any kinde of sinne or cryme, albeit his righteousnes and justification depended not there upon before God, but onely upon the bloud of Christ and his fayth upon the same."

When men devote themselves wholly to the pursuit of some high object they are apt to become forgetful of the minor moralities; too often they assume a dictatorial tone, and are sadly wanting in respect for the feelings of others. Tyndale would have been more than human if he had succeeded in completely freeing himself from this besetting fault of greatness. An exile from his native land, the victim of ceaseless persecution, having ever before his eyes the expectation of a violent death, he could not fail to experience moments of bitterness. But in his polemical writings, hard hitter as he was, he always preserved a dignified demeanour, and never exchanged the sword of the warrior for the bludgeon of the ruffian. Simple and straightforward, consistent and logical, he refused to be hoodwinked by rhetorical flourishes or paradoxical subtleties. Sir Thomas More, the most accomplished man of the age, finding himself no match in argument for the plain-spoken scholar, took refuge in abuse.

No one had ever a more thorough command of simple, fluent English than William Tyndale. His words are faultlessly chosen; there is nothing which one could wish to add or take away. His translation of the New Testament, published in 1525, is substantially the translation read to-day by Englishmen all over the world. In the language there is a perennial freshness which even our revisers were unwilling to mar to any serious extent. We may be sure that Tyndale's power of "fitting aptest words to things" was not less the result of ceaseless industry than of happy spontaneity. His writing appeals at once to the most learned and the most ignorant. The scholar can admire and envy its suppleness and strength; to the merest child it is intelligible. Words could not be more weighty and impressive than these from the address "yet once more to the Christen reader" in the 1534 edition of his New Testament:—

"Moreover I take God (which alone seeth ye heart) to recorde to my conscience/ beseching him yat my parte be not in ye bloude of Christ/ if I wrote of all yat I have wrytten thorow oute all my boke/ ought of an evell purpose/ of envie or malice to anye man/ or to stere vp any false doctrine or opinion in the churche of Christ/ or to be autor of anye secte/ or to drawe disciples after me/ or that I wolde be estemed or had in pryce above the least chylde yat is borne/ save onlye of pitie and compassion I had and yet have on the blindnes of my brethren and to bringe them unto the knowledge of Christ/ and to make every one of them/ if it were possible as perfect as an angell of heaven/ and to wede out all yat is not planted of our hevenly father/ and to bring doune all that lyfteth up it selfe agaynst the knowledge of the salvacion that is in ye bloude of Christ."

The single-hearted student had thrown all his heart into his work. Without hope of present reward or future fame he had constantly laboured in the cause of truth. With pathetic earnestness he protests that he is willing and anxious to receive suggestions and emendations from any and every quarter:—

"And where they fynde fautes/ let them shew it me/ if they be nye/ or wryte to me/ if they be farre of: or wryte openly agaynst it and improve it/ and I promyse them/ if I shall perceave that there reasons conclude I will confesse myne ignoraunce openly."

But he was naturally indignant that an incompetent hand should tamper with his work and publish, without his authority, a copy bearing his name and professing to be "dyligentlye oversene and correct." Of such an offence his fellow exile George Joy had been guilty. Joy and Tyndale differed on some doctrinal questions, and Joy had been at the pains to alter Tyndale's language throughout on these points, at the same time withholding his own name and allowing the public to believe that Tyndale was responsible for the alterations. With perfect dignity, more in sorrow than in anger, Tyndale reproved his associate for his

disingenuous dealing. Joy defended himself in a somewhat intemperate apology, which Mr. Arber has reprinted from the unique copy in the Cambridge University library. As a piece of invective this tract is not without value for its rough vigour; but it is still more interesting as showing the personal influence exercised by Tyndale over those with whom he was associated. Even in his most violent moments Joy cannot help betraying the admiration which he entertains for his leader. He feels the inequality of the contest in which he is engaged; he is stung by the grave, quiet tones of reproval, and retorts angrily with gibes and taunts. But his language throughout is that of a manwho. is conscious of the honesty of his motives. At least he had not been spurred to his unfortunate undertaking by hope of gain, for he tells us the precise sum—and a miserably small sum it is—which he received for his corrections and for seeing the sheets through the press. There is a touch of ge uine pathos in the closing words of the 'Apol gy':

"But had it bene my enimye that thus had vniustely revyled and vexed me/ I coulde have borne him/ And yf my hater had thus oppressed me/ I coude have avoyded hym. But yt was thou my nowne felowe/ my companion in lyke perel and persecucion/ my familiare/ so well knowne/ vnto whom I committed so lovingly my secretis/ with whom gladly I went into the house of god."

Joy made at least one palpable hit when he twitted Tyndale with his excessive addiction to marginal glosses:—

"But in good faithe as for me I had as lief put the trwthe in the text as in the margent and excepte the glose expowne the text (as many of theirs do not) or where the text is playn ynough: I had as lief leue sich fryuole gloses clene out. I wolde the scripture were so puerly and plyanly translated that it neded nether note/ glose nor scholia/ so that the reder might once swimme without a corke."

This short extract will suffice to show that the 'Apology' is not such a "contemptible work" as it has been hitherto supposed to be.

The Letters and Memorials of William Allen (1532–1594). Edited by Fathers of the Congregation of the London Oratory. With an Historical Introduction by Thomas Francis Knox, D.D. (Nutt.)

For the credit of those who during the last ten years have helped us materially to obtain a better knowledge of a period of English history heretofore unduly neglected and imperfectly studied, it is sincerely to be wished that this volume may be the last of the series which has been advertised. The market has been flooded with memoirs, more or less valuable and interesting, illustrative of the hard measure dealt out to conscientious Catholics during Queen Elizabeth's reign, and all reasonable men whose judgment was not blinded by sectarian hatred have arrived at the conviction that a strong case has been made out, and that "our Catholic forefathers"—to use a phrase of Mr. Morris's—were the victims of much ruffianly cruelty and injustice, and were barbarously persecuted for conscience' sake by the queen and her myrmidons. There the subject might have been left, and there, indeed, such astute advocates as Mr. Morris were content to leave it. The Jesuit knows how far to go and when to stop, and there is good reason to believe that we have seen the last of those volumes of 'Troubles,' which have effected all that they were intended to effect by their projectors. Less cautious and less skilful adventurers in a game that requires no little delicacy have determined to play for higher stakes, and the Oratorians, ostensibly in perfect harmony with the Jesuit fathers, have got the lead into their own hands at the cost of trumping their partner's best card. For finesse they have substituted recklessness, and the result will scarcely justify the change of tactics.

While we were invited to listen to harrowing tales of suffering and wrong which brought out in bold relief the stubborn heroism of men and women in our own towns and villages three hundred years ago, we were captivated spite of ourselves by the romantic narratives which yet were grimly true, and we could not help feeling pity and admiration for the unfortunates, whom we were yet persuaded were wrongheaded enthusiasts. But when he is carried across the Channel and asked to give his sympathy to very different actors—asked to excuse the plots and treasons of political agents and Englishmen born who had sunk to become pensionaries of the Pope or the King of Spain — asked to condone the mad extravagances of a pirate like Stukely or a soldier lost to honour like Stanley — nay, asked to justify the insane attempt upon Ireland by Sanders, the vile plots to assassinate the queen, and the monstrous infatuation which suggested the Armada—the reader can hardly repress a feeling of scorn for those who have so low an opinion of his understanding.

Regarded as a merely literary performance the publication of Cardinal Allen's letters may be pronounced to be a highly creditable piece of work. Dr. Knox was a man of some eminence, his degree at the University of Cambridge was a sufficient guarantee of his accomplishments when a young man, and his life of quiet study among the Oratorian brotherhood was calculated to confirm his scholarly habits of mind. He lived long enough to prepare his work for the press, and it is evident that he did not spare himself. If travelling from library to library in search of any small scrap of writing that could be discovered—if minute comparison of manuscripts of the same document, laborious examination of all available sources of information, and patient study of the history of the times—could ensure perfection for any book, Dr. Knox was not the man to be found wanting. As a scrupulous and conscientious editor of the text he set himself to offer to the world he has left nothing to be desired. Nearly two hundred letters and papers are here printed for the first time, a large number of which were not even known to exist till Dr. Knox unearthed them; and if it can hardly be said that the new evidence thus brought forward will tend to alter the popular opinion of Allen, and of those who worked with him, and of those for whom he worked, it may at any rate be affirmed with confidence that we have now before us as much information as we are ever likely to get, and a great deal more than Allen himself would have wished posterity to become conversant with.

When Dr. Knox brought out his earlier volume of 'Records of the English Catholics,' which contained little or nothing that did not concern the English Colleges of Douay and Rheims which Allen founded, we welcomed with cordiality the appearance of a work that had a distinct value as a contribution to our knowledge of history. Few except Catholics or specialists knew anything about Cardinal Allen or his colleges, and so much bitterness had been excited by the question of the guilt or the sincerity of the Catholic martyrs, as we were required to call them, that we were glad to receive from an undeniable Roman convert so temperate and calm a statement of facts and so appreciative a biography of Allen as the historical introduction contained. Have the editors of this second volume become intoxicated by the reception awarded to the first? Have they mistaken generous literary criticism for approval of their religious views? One thing is certain—that if the introduction to the first volume was pure history, the introduction to the second is almost pure polemic. Readers with any bias towards Protestantism, with any lingering fear and suspicion of Popish plots and Jesuit guile, if they read this wonderful brief for the defence, will inevitably rush to the conclusion that the crafty reticence of the earlier work was part of a deliberate plan for getting a hearing for the special pleading of the later volume. The transition from one to the other is assuredly startling. And yet how was it to be avoided? It is just possible that the Oratorians, when they undertook to make known to the world the whole truth with regard to the English Colleges and their founder, were as little aware as other people how complete the record was by which he would be tried. Research has succeeded in producing a weight of evidence which there is no gainsaying. The editors had to choose between printing their materials without note or comment, and taking up the defence of their hero regardless of consequences. They have chosen the latter alternative, and thrown in their lot for good or evil with Cardinal Allen. This man is proved beyond dispute to have been a traitor to his country, to have leagued himself with cutthroats and hired assassins, to have written in defence of the basest criminals, *therefore* the reader is invited to open the shameful questions that he fancied no honest man would ever be troubled with again, and to resort to the wretched casuistry which the conscience of our forefathers denounced as abominable. Once more the public is gravely invited to discuss, as though they were still open questions: "Can a sovereign be lawfully deposed by the Pope?" "Were there valid reasons for Queen Elizabeth's deposition?" "What is to be thought of the proposed assassination of the queen?" and so absolutely ignorant of the moral convictions of their contemporaries are these modern propagandists that they apparently believe the time has come for Papal dialecticians to move the clock back to where it pointed in the days of Hildebrand.

What is to be thought of the state of mind that a cultured gentleman and a Christian priest has brought himself to when he enters into an elaborate discussion of the justifiableness of secret murder at the bidding of the Bishop of Rome? When a man assures his readers that "there is nothing wrong in rejoicing at the death of a great persecutor

or heresiarch . . . . nor is it immoral to desire and *pray for* the death of such an one," they are fain to leave him where they find him, sure that for himself and them there is no common ground; but when he adds that St. Paul is an example of one who offered such a prayer, because he wrote to the Galatian Christians, "I would they were even cut off that trouble you," we know not which amazes us more, the weakness of the argument or the badness of the scholarship. Is it forbidden to a devout Catholic to read his Greek Testament? or, if he reads, may he translate the words ὄφελον καὶ ἀποκόψονται only as the Vulgate or the Douay version has interpreted them?

Hitherto the public has been more than lenient to the modern school of Catholic historians; they have had a fair hearing, and no one has grudged them the praise which their industry, earnestness, and candour have well earned for them; but it is to be hoped that the 'Records of the English Catholics' are not again to be issued under the guise of historical apparatus, though in fact utilized for purposes of proselytizing the unwary. If this be what we are to look for next, the series, it may safely be predicted, will not be continued long.

LOCAL HISTORY.

A Short Chronicle concerning the Parish of Croydon. By J. Corbet Anderson. (Reeves & Turner.)—Mr. Anderson's former work, 'Croydon Church, Past and Present,' published about twelve years ago, won him much deserved praise for the care and industry he bestowed on his subject, and the present volume, which we presume may be taken as a supplement to it, will not lessen his reputation for painstaking and accuracy. It is not the lengthened history which might have been written of a parish so large and so important that its population exceeds that of many county towns, but it is as long and as complete as an author can be expected to put forward at his own expense, not backed, as he ought to be, by the local society, and is written in a pleasant and easy style, with just enough gossip in it to make it readable. The author takes a sensible view of the derivation of the name of the place, which he reads "crooked valley," the old spelling having been Croydene, and not Croydon. Curiously enough, a detached part of the parish is still called Croydon "crook." As, however, there is still "Croham-hurst" close by, it may be that Croydon is only a shortening of a "Croham-don," now forgotten. Mr. Anderson is not so happy in supposing the hamlet of Waddon was called from Woden, to whom he presumes a temple to have been erected here, the obvious derivation of woody-hill escaping him. The hill was no doubt that now known as Duppa's Hill, immediately above the present farmhouse. When keeping to matters within his own knowledge Mr. Anderson is very interesting and correct, so it is the greater pity to see the Druids' wicker image full of victims reappearing in his pages, and to be told that Queen Victoria is "lineally" descended from King Alfred. Indeed, his weakest point would seem to be his genealogy, for at p. 141 we read that Bishop Wake was descended from the same noble family whence sprang the Saxon Hereward, and at p. 221 the Kentish Scot-Baliol fiction is as flourishing as ever.

We have received *A List of Collections on Briefs from the Registers of the Parish of High Melton, West Riding of Yorkshire*, which has been communicated to the *Yorkshire Archæological Journal* by Mr. F. Royston Fairbank. The Melton list of briefs does not begin so early as some others we have seen. It extends from 1671 to 1702. It is much to be wished that a complete catalogue of briefs should be formed. Mr. Fairbank's paper will be found serviceable by any one who undertakes such a work. Such a list as this is capable of almost any amount of annotation. There is hardly a line of text which might not bear a long commentary. Mr. Fairbank has not been sparing in his notes. In 1686 and again in 1688 there were collections for the French Protestant refugees, and in 1689 for the Irish Protestants. Most of the briefs were for the repair of churches and for fires. In 1699 there was a brief for Drury Lane. Whether this was for the theatre we are not informed. Probably it was, for we are told in a note that in 1673 there was a brief "for rebuilding the Theatre Royal in London." This Yorkshire list does not contain so many briefs for prisoners as we have seen elsewhere. In 1700 a collection was made for captives in Morocco.

Les Fiefs du Comté de Namur. Par Stanislas Bormans. (Namur, Wesmael-Charlier.)—The precious collection of documents published late in the last century by Galliot, who, with all his faults of editing, rendered great service to history, and the more recent publications of Grandgagnage and the Baron de Reiffenberg, do not exhaust the stores of information contained in the archives of Namur. M. Bormans has founded upon them a clear and concise account of the feudal court of the counts of Namur, its history, constitution, and powers; and the Archæological Society of that city may be congratulated on this interesting and useful publication. The feudal customs prevailing in various districts present no very remarkable points of difference; but an authentic statement of the incidents of tenure in a particular county is certain to be of value. The heredity and independence of the fiefs can be shown to have commenced in the early years of the tenth century, and by the first half of the fourteenth century the subordinate fiefs in the county of Namur were as many as three hundred. Long before this, however, a system of feudal law had been established; in 1154 the laws of Namur are referred to as being well known, and Lodenoet wrote in 1483 that they had been "used in all times." Under these, a high criminal jurisdiction, with appeal from inferior courts and sole authority in all feudal cases, was assigned to the court of the count, called "sovereign bailliage." This court was presided over originally by the counts in person; but when the absence of the counts in Constantinople rendered that impracticable, a deputy called "sovereign bailiff" was appointed, from whose office the court derived its name. The first bailiff known is Lambert (1229). By the end of the fourteenth century the bailiff had come to be sole president of the court, the counts having ceased to attend, and still later the bailiff himself appointed a deputy or "lieutenant bailiff." The twelve peers of the castle had a separate jurisdiction, with appeal in some cases from the sovereign bailliage, as appears from a "privilege" of Mary, Duchess of Burgundy, in 1477, which describes the successive appeals, "as has been done and used so long that there is not memory of man to the contrary." The other members of the court were the homagers, who are named as being consulted by the count as early as 1152; the allodial holders; and the "men of law and of lineage," who must be born of knight and lady, are sometimes called judges, gave their decisions "by right, by law, by judgment, and by full assize of men," and sat sometimes with the homagers and sometimes apart. A greffier of the court at the close of the fifteenth century, up to which time it continued to be the supreme tribunal of the county, thus describes the form of doing homage:—"The homager comes bareheaded, without defensive knife, and without cloak. He joins his two hands in sign of humility, and places them between the two hands of his lord, or of the sovereign bailiff or lieutenant, in sign that he promises and vows all faith to him, and the lord also receives him; and thus the homager promises to keep faith and loyalty to him, and says the following words: 'Sire, I come to your homage and in your faith, and become your man of mouth and of hands, and swear and promise to you faith and loyalty towards all and against all, and to keep your right to my power, and to assist you to do good justice to your issue or to the issue of your bailiff according to my sense and understanding, and promise to hide the secrets of your court and keep them secret.' This done, the lord receives him and answers in like manner: 'And also I receive you as my man of fief, saving my right and the right of others, to such usages and customs as the fief you now relieve should owe and be held to according to the usage and custom of my court and of the country'; and in confirmation of this, and in the name of faith and of true lord, the lord kisses the man on the mouth."

Mr. W. Brown, of Edinburgh, has sent us the *Historical Memoirs of Rob Roy and the Clan Macgregor, including Original Notices of Lady Grange, &c.*, by K. Macleay, M.D., which is stated in the preface to be the third edition of that work, but must surely be the fourth, as the third edition (of which, and not of the second, this is a reprint) appeared in 1819. In fact, it is too close a reprint, for on p. 28 we are referred to a "Note, p. 193," a reference that does not correspond with the pagination of the present issue, but with that of the edition of 1819. The reproduction, as regards paper and printing, is highly creditable to the publisher. The work consists of (1) a sketch of the condition of the Highlands prior to the year 1745; (2) historical memoirs of the clan Gregor, with a brief allusion to Gilderoy (Patrick Macgregor), and a sufficiently interesting description of the famous duel of Glenfruin between the clan Gregor and the Colquhouns; (3) as *pièce de resistance*, a memoir of Rob Roy Macgregor and some branches of his family, which we suppose to be simply an expansion of the two papers by "Dicaledon" published in *Blackwood's Magazine* in 1817; (4) "Notices regarding the Mysterious History of Lady Grange," a narrative of the most sensational type, but having nothing in the world to do with Rob Roy or any other member of the Macgregor clan. By this memoir one feature of Rob Roy's character, merely alluded to in Scott's introduction to the novel, is amply illustrated, namely, his generosity to the poor and weak. The author, indeed, looks on "blackmail" as an "indispensable usage," and regards the greater number of Rob's errors as venial (he asserts that there is no proof of his being a freebooter); and as for his wife Mary, the author protests against the calumny of Scott, informing us that she was "a woman of an agreeable temper and domestic habits, active and economical in the management of her family, and though steady and resolute, yet far from being the inhuman virago she is represented in the late novel of 'Rob Roy.'" The story of Rob's default as a cattle-dealer, as told by Dr. Macleay, throws no discredit on him, and is utterly discordant with the narrative given in the Montrose papers ('Historical Reports,' iii. 381), where the blackest roguery is attributed to him and he is even accused of having attempted to escape "beyond seas" with large sums of money he had obtained on credit in the Lowlands. As to the matter of Killearn's capture, we are told in the Montrose papers (published by Scott) that the "rogue" entered at the door with six men with cocked pistols, while a number of others presented their guns at the window; but here we are treated to the less alarming picture of Rob marching up in romantic and friendly style behind his piper to the door of Chapellaroch inn. Dr. Macleay further states that the factor was confined on an island in Loch Katrine "for a considerable time," the fact being that he was marched about from place to place from Monday till the following Sunday. While we are bound to commend this reprint—a reprint without

note or comment—as a storehouse of entertaining stories about the Robin Hood of Scotland, for our part we should have deemed it a fairer enterprise to have furnished also some account of the material that has since come to light, and perhaps even to have added 'The Highland Rogue,' which, although justly denounced by Scott as "a catchpenny publication," has a peculiar interest from having been issued during the life of the freebooter, even in spite of the fact that its author, confessedly after the manner of Josephus, fabricates a "dispute with a Scotch parson upon predestination." Doubtless there are letters of Rob himself still unpublished—one we know of, written from Portnellan in 1707 in a clear schoolboy hand, of an interesting nature; and only three years ago the descendant of a cottar near Duchray Castle was said to have still in preservation as heirlooms the stool that often served Rob Roy for a pillow, a formidable dirk he once left behind him in bed at Duchray Castle, and a gigantic purse nearly six inches long and six deep, not unworthily conjectured to be the veritable limbo into which he consigned the rents of the duke's factor. In the "Notices of Lady Grange" there is a curious paragraph on the alleged virtue of St. Fillan's Pool in cases of insanity, which finds an extraordinary parallel in Pennant's account of Loch Maree.

THE CONFERENCE OF HEAD MASTERS.

The annual Conference of Head Masters was held on December 21st and 22nd, in the Botanical Theatre of University College, kindly lent by the Council to the Head Master of University College School, who was the host on this occasion. Sixty head masters were present, and an unusually large number of assistant masters, not more than three or four of the schools on the list being entirely unrepresented. Mr. H. W. Eve, head master of University College School, presided. The subject of geographical teaching was introduced by Mr. Phillpotts, of Bedford, in a bright and suggestive speech, and an interesting paper on the same subject by Mr. Hale, of Eton, was circulated. The brief discussion brought out some of the many real difficulties attending a satisfactory solution of the problem. On the one hand, the elements of geographical knowledge are traditionally, and with good cause, a subject of instruction in the lowest classes; on the other, any approximation to *Erdkunde* implies some knowledge of several sciences, and has not unreasonably been looked upon as the final summing up of such scientific teaching as can be given at school. There is again the necessity of selecting from the enormous mass of geographical information a few facts likely to fix themselves on the memory, while the detailed study of one or more countries is equally important as a foundation for intelligent knowledge. On two points there seemed a general consensus—that the geographical work of the several classes of a school should be co-ordinated under the superintendence of a master who had made a special study of the subject; and that there was much room for improvement in the maps ordinarily used for teaching. Though, with the limited time at the disposal of the Conference, the treatment of so wide a subject is necessarily inadequate, we are disposed to think that the influence of the discussion in suggesting practical improvements to men who can *comprendre à demi-mot* is out of all proportion to the value of the debate if reported in full, and we should regret to see such general questions disappear from the programme.

Next came a proposal to urge examining bodies to substitute "unseens" for "set books" in all such public examinations as are not used as school examinations. The examinations affected would be the Matriculation of the University of London, the various professional examinations, such as that now conducted by the College of Preceptors on behalf of the College of Surgeons, and, to a certain extent, the Oxford and Cambridge Local Examinations. The certificate examinations, intended to work as school examinations, are *ipso facto* excluded. It was urged that the preparation of the various books set by different bodies seriously interfered with the normal course of school work; that boys of very different calibre must be put into the same class merely because they were desirous of passing the same examination, to the detriment both of the best scholars, who were kept down to the pace of the laggards, and of the laggards themselves, who must be crammed rather than taught. It was by no means uncommon to find boys who had passed examinations in set books incapable of construing a simple sentence at sight. "Unseens," it was added, could by a judicious examiner be set to any standard, and supplied a criterion of what a public examination was really intended to test, power rather than acquired knowledge. In reply to these arguments it was pointed out that the set subject was a guarantee of the methodical study of a single book, which under a *régime* of "unseens" only might be superseded by disjointed teaching and an effort to get up "tips"; that the power of getting up a subject was one in itself to be cultivated; and that the apparent difficulties of preparing for an "unseen" would be a serious discouragement to many boys whose early education had been neglected, as well as to their teachers. After an interesting discussion the committee was requested to collect written opinions on the subject.

Attention was then called to the Society of Schoolmasters, an institution half provident, half charitable, with some funded property, but at present poorly supported by subscriptions, which only exceed by 60*l.* or 70*l.* the annual working expenses. The society is of old standing, it has done useful work, and it has on its committee the names of many eminent schoolmasters. It was generally felt that timely support, and possibly some changes of organization, might open to the society a career of renewed usefulness commensurate with the recent development of the profession, and a small committee was appointed to confer with the authorities. A kindred subject, the provision of retiring pensions for masters, was referred to the committee of the Conference, who were empowered to obtain professional opinions. Few schools are rich enough to offer pensions from their own funds; but it is the interest of all governing bodies to facilitate the retirement of superannuated members of the staff, and it is probable that a small contribution on their part, or some assistance in the management of funds, would do much to induce men to provide for the future, and enable them to look forward without anxiety to the time when their efficiency as teachers begins to fail.

The second day's proceedings commenced with a vote of sympathy to the family of the late Archbishop of Canterbury, and one of congratulation to his successor, both distinguished schoolmasters. Few who were present will readily forget the impressive and touching words in which Dr. Scott, of Westminster, spoke of the public character and private life of Archbishop Tait. The conference then passed to the discussion of a measure which, if judiciously worked out, may have far-reaching and beneficial effects. Years ago, at the Clifton meeting of the conference, a scheme for awarding scholarships at the public schools to promising boys brought out by the Junior Oxford and Cambridge Local Examinations was introduced by Dr. Jex Blake, partly at the suggestion of Mr. Wilson, then a master at Rugby. Last year the plan was revived, and a number of schools offered scholarships, so that five or six may be expected to be available annually. Communications were opened with the Oxford Delegacy and the Cambridge Syndicate, who entered heartily into the undertaking. They expressed their willingness to make the scholarships known, to select candidates, to institute the necessary inquiries, and to conduct correspondence with parents and schoolmasters. The scholarships are to be limited to children of parents who could not afford to continue their education, and no one is eligible from any school that habitually sends boys to the universities, or affords a reasonable hope that he could be prepared there for a university career. It was on the last point that the chief discussion arose. It was felt that while it was of great, even of national, importance to facilitate the advance of promising boys, it would be unfair to tempt them from rising schools which might offer them at least a fair preparation for the university, and which would be, in return, benefited by their presence. No formal resolution was adopted, but it was left to the committee, who are in communication with the university authorities, to frame their regulations so as to meet the difficulty.

The remainder of the sitting was occupied with questions relating to the certificates of the joint board. The present regulations, it appears, operate prejudicially to the study of mediæval and modern history by requiring both the general outline and the period studied in detail to be taken from the history of the same country. The schoolmaster who wishes to work through a short period of modern history with his sixth—and such lessons are among the most stimulating both to masters and to boys—is deterred by the corresponding outline, on which examiners are apt to expect almost as elaborate knowledge as on the special subject. He cannot afford to drop his Grecian and Roman history for a year, and he is therefore driven to select his

special subject rather from Mommsen or Grote than from Guizot or Hallam. A much wider question connected with the certificates was opened by Mr. Vardy, of Birmingham. The certificates were originally instituted with a view of affixing a university *imprimatur* to the result of school examinations. At present they tend to become rather an unbending public examination, dictating to the schools, than an elastic machinery for appraising their work and keeping up their standard while studiously following their lead. The universities and the schools are in such free communication, and their objects are so completely identical, that the problem ought not to be insoluble.

PRINCE'S 'WORTHIES OF DEVON.'

I fully concur in the "suggestion" made by Mr. Mathews of Exeter in your last number, in reference to the desirability of a new edition, as an *édition de luxe*, of old John Prince's 'Damnonii Orientales Illustres'; but I fear that it will be difficult to find an editor competent to the work who has at his command sufficient leisure time for the task. There is, however, one other thing that possibly might be done, viz., to print the portion of the work which the author left in MS., and which contains the biographies of some 115 persons not mentioned in the published work. This MS. was formerly at Ford Abbey, whence it was sold, in 1846, to the late Sir Thomas Phillipps, whose representatives might possibly be induced to allow it to be printed for the delectation of Devonians.

If this permission could be obtained, I, and I am sure many others interested in the history of our county, would willingly lend the necessary aid to see the MS. through the press, with the addition of illustrative notes.

W. R. Drake.

MR. COURTHOPE'S NEW VOLUME OF POPE.

After the article on Mr. Courthope's new volume of Pope which appeared in the *Athenæum* of December 16th, it seems almost presumptuous to write further on the subject. The remarks, however, which I have to make will be as brief as possible; and though I venture to differ from the reviewer's opinions, I am well aware that his views are shared by a majority of the literary men of the present day.

It is scarcely more than a year since the appearance of Mr. Courthope's previous volume, and great credit must be given to a writer who, in the midst of heavy official duties, is able in such a comparatively brief period to edit a work which undoubtedly requires deep study and research. It would have been better, perhaps, if the editor had kept us waiting a little longer for this new volume. The notes, both critical and explanatory, of the first three books of 'The Dunciad' are in every respect excellent. But the fourth book, by far the finest part of the work, is less carefully edited, and several points of interest are not alluded to which would scarcely have escaped the notice of such an intelligent critic as Mr. Courthope if he had allowed himself more time for the completion of his task.

The bibliography of 'The Dunciad' is a separate study, and has often more than a mere antiquarian interest. Nearly all the variorum editions differ more or less one from the other both in the text and in the arrangements of the contents, and though these differences are slight, they are seldom without design. There are even copies of the same edition which do not agree. These variations are not the result of accident. Sometimes, indeed, they occur from mere whim or caprice, but oftener they were employed to mark some quarrel or reconciliation. Sometimes the reconciliation was followed by a fresh dispute, and a name omitted in one edition is restored in the next. Another reason for these alterations was a wish to bewilder the public, and for this purpose the different frontispieces of the ass or owl were also used. These frontispieces are reproduced in the new edition; but they are wretched performances, and give a very poor idea of the original woodcuts, which, I suspect, were engraved by George Bickham the elder.

Mr. Courthope seems to have followed implicitly the text of Warburton's edition of Pope published in 1751. There are references in the editor's notes on the first three books to the various readings of the first edition and of Pope's MS.; but of the alterations and additions to the fourth book, which contains thirty-six lines more in Warburton's edition than when the poem was originally published in 1742, no notice is taken. In the lines on Sir Thomas Hanmer, who is satirized under the name of Montalto, verse 114 in the first edition stands:—

> Withdrew his hand and clos'd the pompous page.

In Warburton's separate edition of 'The Dunciad,' 1744, this is changed to

> What! no respect, he cried, for Shakespeare's page?

This is a decided improvement, for the word "pompous" is misleading. It seems to refer to Shakspeare, though, of course, it is only applied to Hanmer's edition of the plays. In the edition of 1751 Warburton restored the original line, which is also adopted by Mr. Courthope. "Verse 249 and the next five lines," we read in the editor's note, 3h, "stood originally in the first book as part of Tibbald's invocation of the goddess." This is correct; but in the octavo, 1743, the lines are omitted, and their place is supplied, not by six, but by four lines of asterisks, which probably indicates that some other verses were originally intended for this passage. There is no note in the first edition to verse 506:—

> Smiling on all and smil'd on by a Queen:

but in the edition of 1751 a foolish note is inserted by Warburton, stating that the queen referred to is the Queen, or Goddess, of Dulness. The lines, of course, refer to Queen Caroline's partiality for Lord Hervey, but no comment is made by the editor on the passage or note. Verse 601 and four following lines are given as in Warburton's edition:—

> And nobly conscious, Princes are but things
> Born for First Ministers, as Slaves for Kings,
> Tyrant supreme! shall three Estates command,
> And make one mighty Dunciad of the Land!
> More she had spoke, but yawn'd—All nature nods.

In the first edition the passage runs:—

> But here vain Icarus! thy flight confine,
> Forbear! nor hope to make that monarch thine
> Blind with ambition! To think Princes things,
> Made just for thee, as all beside for Kings—
> More she had said but yawn'd—All nature nods.

But before the small octavo was issued Pope had become nervous, and the verses are supplied by asterisks. The original lines are much the more vigorous, and should at least have been given in the editor's notes. The passage, as Mr. Courthope explains in a note, is a pointed attack on Walpole.

In verse 608 Gilbert's name is given as G——. In the first edition we find G—lb—t. In the small octavo of 1743 and in Warburton's own edition of 1749 the name is given in full. But in 1751 Warburton's "faint omens of the lawn" had become more distinct, and he was unwilling to affront a prelate beside whom he might perhaps soon claim a seat. The name accordingly shrinks back to G——, which is repeated in the present edition.

Mr. Courthope is, I think, justified in adding to his volume "Miscellaneous Pieces in Verse." Many of them are valuable from the insight they give us into the manners and social life of that age. In the poem of 'The Looking Glass' (page 450), on Mrs. Pulteney, better known as Miss Gumley, occurs the line

> Far other carriage grac'd her virgin life.

The allusion is to the caricature of 'The Writing Desk,' in which Miss Gumley figures. A full explanation of the story which gave rise to the caricature was formerly given in *Notes and Queries*.

The judgment passed by the reviewer on Pope's odes and epitaphs is not too harsh. The epitaphs are certainly as feeble as that class of composition generally is. But the estimate of Pope's famous satire is hardly just. The chief objections raised by the reviewer to the first three books of 'The Dunciad' are that they relate to obscure persons and insignificant squabbles, and that the individuals attacked are so little known that much of the poem is unintelligible without a special knowledge of the Grub Street authors whom the poet satirizes. But the reviewer must surely acknowledge that some of the finest satires are personal. The subjects of many of the poems of Catullus are unknown individuals. It is no longer possible, for instance, to identify Commodus, who is laughed at for his free use of the aspirate. Yet Catullus is styled by Niebuhr the greatest of the Roman poets. Martial wrote about 1,500 epigrams, many of them satirizing obscure individuals who have been forgotten for nearly 2,000 years, but the works of Martial are still found in every classical library. The reviewer surely does not mean to assert that the value of a poem depends on our knowledge of the persons to whom it refers. Horace's delightful verses to Pyrrha, Leuconoë, and Lydia are surely of greater merit than the courtly odes to Mæcenas and Augustus. The poet, the novelist, and, above all, the satirist, may select their characters from living contemporaries, but however faithfully they may be portrayed, they must be considered merely as types. The needy scribblers pilloried by Pope had their prototypes in the Augustan age, who were called Bavius and Mævius; and though the condition of men of letters is now vastly improved, it might still be possible to find in their ranks representatives of the heroes of 'The Dunciad.' Among our clergy it might not be difficult to name a successor to Orator Henley, and book collectors would probably be able to name a modern Curll. It seems to the reviewer preposterous that the names of Defoe and Gildon should be included in the same category. Recent discoveries, however, have shown that Defoe's quill was as venal as that of "meagre Gildon," though there is certainly no comparison between the talents of the two men. Gildon, however, was an inimitable satirist. His pamphlet written to ridicule the 'Rape of the Lock,' although coarse, is intensely humorous; and his travesty of 'Robinson Crusoe' may still be read with amusement.

The reviewer allows that Pope wrote the fourth book with a larger and more worthy purpose. I have always thought 'The New Dunciad' the finest of Pope's performances. The striking lines at the opening of the book, and the description (verses 297-312) of the foreign scenes, where the Goddess of Dulness conducts the gilded youth, have never been surpassed. In the attack on the Italian opera (verses 45-58) the satire is keen and pointed, and the poetry singularly melodious. And I cannot refrain from mentioning the lines at the close of the poem—those noble lines which Johnson loved to declaim, and which Pope himself, we are told by Spence, could never repeat but with a faltering voice. Pope's admirers are less numerous than they were, but I believe that a small remnant will always be found who, like the Colonel in 'What will He do with It?' still "prefer Pope and common sense." F. G.

A FRISIAN BIBLE.

It is about forty years since that, wishing to consult my kind and learned friend John Mitchell Kemble, the great Saxonist, I ran down to Addlestone, where he was then living.

After luncheon we started for Weybridge Common, and enjoyed a delightful stroll on that charming spot. In the course of our conversation I referred to our Anglo-Saxon progenitors, when Kemble, who spoke with great authority on such matters, proved to me that our ancestors came from Friesland. From that time everything Frisian has had a great attraction for me, and I have picked up a few curious Frisian books. I lately wanted to get a Frisian Bible, but I regret to find that the Bible Society have

not printed one in that cognate tongue. Surely with the large funds which the Society possesses it might do so. I am told, by one who speaks with full knowledge on such a subject, that several portions of the Bible have been translated into Frisian, copies of which are in the British Museum. William J. Thoms.

THE BECKFORD SALE.

Last week we gave an account of the first nine days of the sale of the second portion of this splendid collection at the rooms of Messrs. Sotheby, Wilkinson & Hodge, and now we conclude our report by quoting the prices of the principal lots sold in the last three days:—

Malherbe, Monographie des Picides, only eighty copies printed, 18*l.* Mandeville, Voyage de Jerusalem, an unknown edition, but slightly imperfect, 31*l.* Marcial de Paris, Vigilles du Roy Charles VII., 20*l.* Marcillac's Voyage en Espagne, on account of Mr. Beckford's caustic "Ce sot livre ne contient pas une seule remarque qu'il vaut la peine d'extraire," sold for 1*l.* 1*s.*, instead of, as usual, for sixpence. Marcolino, Sorti, purchased in Hibbert's sale for 6*l.* 15*s.*, brought 140*l.* Marguerites de la Marguerite, 26*l.* Marguerite de Valois, son Tombeau, two copies, 19*l.* 5*s.* and 18*l.* 5*s.* Marguerite de Navarre, L'Heptameron, second edition, but the first containing the seventy-two novels, bound by Ruette for Louis XIV., 400*l.*; the reprint at Berne in 1780, bound by Roger Payne, 46*l.*; a set of Freudenberg's illustrations, unlettered proofs, without the text, 49*l.*; two editions of her Memoires, printed in 1713 and 1715, the former bound by Padeloup, 12*l.* 10*s.*, and the latter by Boyet for the Comtesse de Verrue, 24*l.* 10*s.* Mariette, Pierres Gravées, bound by Padeloup, 29*l.* 10*s.* C. Marot, Œuvres, printed in 1543 by Dolet, 13*l.*; the edition printed in 1545 at Lyons, 29*l.*; that at La Haye in 1700, because uncut, 30*l.* J. Marot, Voyages de Genes et Venise, printed by G. Tory, 45*l.* Two copies of the 1501 Aldine Martial, 18*l.* and 12*l.* 15*s.*; Martial printed by Gryphius, with the crest of Henry II. as Dauphin, 75*l.*; the Variorum Martial, bound by Deseuil, 42*l.* Martyn, Des Isles Nouvellement Trouvées, 126*l.* Marulli Hymni, Grolier's copy, 275*l.* Massuccio, Novelle, 1541, Maioli's copy, 365*l.* Matthiæ I., Electio et Coronatio, 28*l.* Maximilian von Wied-Neuwied, Reise nach Brasilien, 45*l.* 10*s.* Meliadus de Leonnoys, 69*l.* Mellan's Select Works, fine impressions, 21*l.* Menagii Poemata, printed in 1663 by Elzevir, two copies, both uncut, 34*l.* 5*s.* and 31*l.* 10*s.* Mendano, Sylva de Romances, 27*l.* 10*s.* Mezeray, Histoire de France, large paper, 33*l.*; Abregé, 1682, bound by Boyet, 15*l.* 5*s.*, having been bought in Col. Stanley's sale for 5*l.* 7*s.* 6*d.*; another edition of 1688, on account of its beautiful binding, 68*l.*, another copy, although bound by Padeloup, selling for 9*l.* 10*s.* Middleton, Histoire de Ciceron, Louis XVI.'s copy when Dauphin, 15*l.* Minucius Felix, bound by Deseuil, 19*l.* Mirabilia Romæ, 1500, the celebrated guide-book containing the story of Pope Joan, which was subsequently rigidly suppressed, 5*l.* 5*s.*; the same in German, also printed in 1500, 9*l.* 9*s.* Mocenico, Guerra di Cambrai, covered with gold tooling in the Grolier style, with the monogram of Marquis de Menars, 395*l.* Mocquet, Voyages, De Thou's copy, 16*l.* Molière, Œuvres, 1739, with Punt's plates, and bound by Padeloup, 100*l.*; the 1765 edition, 16*l.* Montaigne, Essais, the last edition published in the author's lifetime, 120*l.*; the Elzevir edition, bound by Deseuil, 200*l.*; another copy of the same edition, but with Brussels title-pages, bound by Roger Payne, only 12*l.* 5*s.*; Voyage en Italie, Turgot's copy, bound by Derome, 22*l.* 10*s.* Montalambert, Merveilleuse Hystoire de lesperit qui cest apparu au Monastere des Religieuses de S. Pierre de Lyon, 62*l.* Montfaucon, Monumens de la Monarchie Françoise, 39*l.* Montgon, Memoires, Madame Victoire's copy, 22*l.* Montresor, Memoires, bound by Le Gascon, 79*l.* Moore's Fables of the Female Sex, with the original drawings by Hayman, 63*l.*, purchased in Baker's sale for 10*l.* 5*s.* Sir Thomas More's Works, 42*l.* Moreau, Prieres, bound by Le Gascon, 63*l.* Mornay, De la Verité de la Religion Chrestienne, Philip de Mornay's own copy, magnificently bound by Clovis Eve, 245*l.* Mystere des Actes des Apostres, bound by Derome, 26*l.* 10*s.*

The twelve days of this second portion of the library containing 2,732 lots, realized 22,340*l.* 3*s.* The first part contained 3,197 lots, and sold for 31,516*l.* 5*s.* The catalogue of the next portion, commencing with the letter N, is preparing, and when completed will offer to amateurs books equal in rarity and magnificence of the bindings to any contained in the first two portions.

MONSIGNOR THOMAS SING.

By the death of Monsignor Sing the English Catholics have lost one of the most learned of their clergy. Sprung from a Catholic family, he was born in 1808, and sent at an early age to Sedgley Park School, where, it is said, he attracted the notice of the excellent Bishop Milner. He went through the ordinary course at St. Mary's College, Oscott, and was ordained priest about the year 1833. After remaining as mission priest for two years at Bilston, in Staffordshire, he was transferred to Derby, where he continued to reside for twenty-three years. Derby enjoyed a bad reputation for turbulence when Mr. Sing first settled there. The famous Derby insurrection of 1818 must have been still fresh in the memory of many of the inhabitants, and as late as 1831, when the House of Lords threw out the Reform Bill, there had been a serious riot in the town, the gaol was stormed by the mob, the prisoners set at liberty, and several lives were lost before the military were called out. Mr. Sing lost no time in trying to civilize the people, and he had soon the honour of building St. Mary's, Derby, which remains as a monument of his zeal and energy. Almost at the same time he started a serial, the *Catholic Instructor*, which soon became an important organ in the Midlands; in 1847 he brought over a colony of sisters of mercy from Ireland, and established them in Derby, to carry on the work of education which he had much at heart, and he built the schools of St. Mary, which in those days were exceptionally handsome and commodious. While engaged on these works he was vigorously pursuing his issue of the "Derby Reprints," a series of Catholic books of devotion, biography, and history, which had an immense sale. Of one of these, Bishop Milner's 'End of Controversy,' more than half a million copies were printed and sold. When the hierarchy was re-established by the Pope in England in 1850—that measure which caused so much excitement—Mr. Sing was appointed Canon of Nottingham; and when his health had begun to suffer from continuous labour and self-denial he was removed, in 1859, to a smaller and less anxious sphere, at Market Rasen, in Lincolnshire. Here he continued enjoying comparative repose till 1864, when he was invited by Cardinal Wiseman to assist in preparing for the press a complete edition of the Cardinal's works. The scheme was never carried into effect, the Cardinal's death occurring in 1865. Shortly after this Mr. Sing was appointed to the charge of St. Mary, Grantham, where he continued his ministrations till death came upon him, in the seventy-fifth year of his age, on Tuesday, the 12th inst. In 1877 the Pope appointed him a *Camerière d'onore extra urbem*, which conferred the title of Monsignor, and he was further made Vicar-General of the diocese of Nottingham, an office which his weak health enabled him to hold only for a short time. Canon Sing's chief contribution to literature was a work on the Gunpowder Plot.

Literary Gossip.

The bust of Fielding which, as we mentioned some time ago, is to be put up in his native county, will be unveiled by Mr. J. R. Lowell.

A portion of the library and art collections of the late Dr. John Brown, author of 'Rab and his Friends,' is to be sold in Edinburgh at the close of January and the beginning of February.

About a fortnight ago we mentioned that the *Whitehall Review* had passed into the hands of a new proprietor. It will in future be edited by Mr. H. E. Watts, and, in addition to the ordinary features of a political and literary journal, it will contain tales and sketches by eminent hands, besides articles on the healthier country sports. A new paper, called *The West End*, which seems intended to be a combination of a "society journal" with a local paper, will appear next week.

Mr. T. Fisher Unwin informs us that the volume of 'Heroic Adventures' recently issued by him having been found to contain an amount of copyright matter from Schweinfurth's 'Heart of Africa' and other works, the property of Messrs. Sampson Low, Marston & Co., by the courtesy of those publishers a special arrangement has been made, by which he is enabled to continue the publication of the volume. It is needless to say that the insertion of copyright matter in the volume was entirely without the knowledge of Mr. Unwin.

Under the auspices of a committee, a memorial bust, in white marble, has been executed of the late Mr. D. Florence Mac Carthy, the translator of Calderon, &c., and placed in the City Hall, Dublin, where Chantrey's statue of Grattan is also preserved.

The Rev. J. H. Stanning has issued an announcement of the publication of the 'Registers of the Parish of Leigh, Lancashire.' The first volume, comprising upwards of 600 pages, will contain the records from February, 1558, to March, 1625. It will be illustrated by plates of arms, &c.

Another of the old county weeklies has perceived the wisdom of joining the "cheap press." The *Derby Reporter* will shortly commemorate the sixtieth year of publication by reducing its price from twopence to one penny.

We regret to learn of the death of Mr. John Bulloch, of Aberdeen, a working brass-finisher, whose acute 'Studies on the Text of Shakespeare' were favourably noticed in our columns on their appearance in 1879. Mr. Bulloch was in his seventy-eighth year. Many years ago he contributed occasional papers on decimal coinage and other subjects to the *Athenæum*.

A few weeks ago we stated that Madame de Novikoff ("O. K.") was engaged in writing a memoir of the late General Skobeleff. We now learn that, although Madame de Novikoff has been suddenly summoned to Moscow by the illness of her son, she has nearly completed the work, and its publication, therefore, is not likely to be long delayed.

The second "Congrès National des Professeurs de Français en Angleterre" will

commence its sittings next Thursday at Merchant Taylors' School. M. Tissot will preside at the opening meeting.

Out of fourteen candidates, eight of whom were ministers, Mr. Donald MacKinnon has been chosen to fill the new Celtic chair in Edinburgh University. He was distinguished during his university career as a student of unusual industry, and in more recent years he has made a close study of his native tongue. Prof. Blackie now advocates the establishment of a travelling fellowship in connexion with the chair.

Mr. Douglas, of Edinburgh, proposes adding to his pocket series of American reprints, in which Mr. Howells's novels have appeared, some of the works of Mr. Frank R. Stockton and Mr. John Burrough. The 'Rudder Grange' stories of the former and 'Winter Sunshine' by the latter will be published in January.

'Old Testament Revision: a Handbook for English Readers,' is the title of a new work by the Rev. Prof. Alexander Roberts, author of a 'Companion to the Revised New Testament.' It will be published immediately by Messrs. Hodder & Stoughton.

'Goblin Tales of Lancashire,' collected by Mr. J. Bowker; 'Old Norse Sagas,' edited by Miss Cappel; and a selection from the 'Gesta Romanorum,' form three new volumes of the "Illustrated Library of the Fairy Tales of all Nations."

The purchasers of Dr. Bickell's 'Carmina Veteris Testamenti Metrice' who have not as yet received the two supplements to that work ("Emendanda" and "Supplementum") may, we are asked to say, obtain them gratis from the publisher (Wagner of Innsbruck) by applying for them either directly or through their bookseller.

Mr. A. Smythe Palmer writes to us:—

"I observe in the 'Literary Gossip' of last Saturday a paragraph stating that the editing of the proposed 'Stanford Dictionary of Foreign Words and Phrases adopted into English' had been entrusted to me by the University of Cambridge. Will you please correct this statement in your next issue? It is quite incorrect. No appointment to the editorship of this work has yet been made by the Syndics of the Pitt Press." The Secretary of the Pitt Press writes to us to the same effect.

A new palæographical work of importance is announced, 'Exempla Scripturæ Visigoticæ,' edited by P. Ewald and G. Loewe. It is the result of a journey in Spain, undertaken at the expense of the Prussian Government. There will be forty plates.

We are compelled to defer the publication of Dr. Ahnfelt's article on the Swedish literature of 1882.

SCIENCE

The Wild Tribes of India. By Horatio Bickerstaffe Rowney. (De La Rue & Co.)

It was a happy thought which led Mr. Rowney to include in a handy volume of two hundred pages an account of the collective wild tribes, as separate from the civilized populations, of India, and he has treated his subject in a most attractive manner. There are, however, three great omissions he could easily have supplied which detract from the value of his book: he says nothing of himself, who he is, and what have been his opportunities of personally studying the wild tribes of India; he seldom, if ever, names their race; and he never gives their numbers. When the Vedic Aryas entered India about B.C. 3001–2, the arbitrary date from which the current Kali Yuga or "Black Age" of the Hindus is counted, they at first occupied the Punjab; and after they had been settled there for 1,500 years they began, about the time of the Exodus of Israel from Egypt, to overflow into the Doab between the Jamna and the Ganges, where the race of Brahmanical Hindus, as distinguished from the original Vedic Aryas of the Punjab, originated. In another thousand years they reached the delta of the Ganges. Mixed Aryan colonists also extended themselves later south of the Vindhyan ranges into Maharashtra, "the Great Country," on the west, and into Orissa on the east; but, strictly speaking, the Aryan pale in India has never exceeded the limits given in the Code of Manu, B.C. 500–200, namely, the Himalayas on the north, the Vindhyan ranges on the south, and the ocean on the east and west. The mixed Scythian or Turkman and Aryan tribes, indiscriminately called Aryas by us, who are the earliest traditional colonists of India, were not, however, its first inhabitants. Long before they invaded the country it had been occupied by its evidently intrusive Mongolian and Dravidian tribes, and apparently aboriginal Kolarian tribes, allied to the Nigritian races of the Indian Ocean. As the Aryas advanced eastward from the Sindh-Sagar-Doab to the Sundarbands they drove the Mongolian race into the Himalayas and beyond the Ganges, where they are still represented by the Thibeto-Burman tribes of Ladak and Baltistan, Garhwal, Nipal, Bhutan, Sikkim, and Assam, and of the maritime countries of Arakan, Pegu, and Tenasserim, numbering in all about 4,000,000, and for the most part Buddhists. Along the southern course of the Indus was apparently the primordial seat of the great Dravidian races of India, and south of the Ganges, in its lower course, that of the Kolarian races; and as the Aryas advanced southward, towards Saurashtra on the west and Orissa on the east, they would appear to have driven the Dravidas and Kolars before them into the fastnesses of the Vindhyan ranges, and beyond them into the Dakhan. The Dravidian and Kolarian tribes are strangely intermingled in the Vindhyas; whereas the Dravidian race exclusively supplies the population of the Dakhan from the Godaveri to Cape Comorin. The explanation probably is that as the Dravidas and Kolars retreated southward they converged in central India, where the comparatively weaker body of the fugitive Kolars was scattered right and left among the widespreading ranges of the Vindhyas by collision with the overwhelming mass of the retiring Dravidas, who passed on, almost unbroken by the shock, to people Southern India and the island of Ceylon. The Dravidas, or Andhra-Dravidas, who thus occupied the plains of Southern India, rapidly attained to their present state of civilization; but those who remained locked up in the Vindhyas, or were forced up into the mountains in the extreme south of the Dakhan, have always been more or less savage. Such are the Gonds of the Central Provinces, the Konds of the highlands of Gangam and Orissa, the Oraon and Rajmahalis of the wilds of Chutia Nagpur, the Kodagu of Kurg, and the few thousand Tudas, Kotas, and Veddhas of the Nilghiris, the Cardamoun hills of Travancore, and of Eastern Ceylon, numbering in all under 3,000,000.

The Kolars are all wild, and are represented by the Santals about Bhagalpur; the Karias and Mehtos of Singbhum and Chutia Nagpur; the Mundas, Larkas, and other Kols of Singbhum; the Mal-Paharias or Tuangs of Orissa; the Kurkus about the sources of the Narbada, in the very heart of the Satpura range of the Vindhyas; the Bhils of Malwa and Khandesh; the Kulis of Gujarat; the Mhairs of Rajputana; and others elsewhere, numbering in all about 4,000,000, for the most part heathens.

Besides these there are the wild Aryan tribes of the North-West frontier, who hold the passes through which India has always been invaded. They all left stragglers in these passes, where they were soon reduced to the primitive savagery fostered by the conditions of so inaccessible and unproductive a situation. The substratum of these wild tribes must be formed from the original Aryan emigrants from Central Asia, who stopped short in the passes on their way into India; and the Code of Manu tells us how rapidly they became separated by their abiding savagery from the Brahmanical Hindus of the valley of the Ganges. It denounces them as having gradually sunk among men to the lowest of the four castes, and stigmatizes them all as "Dasyus or plunderers, whether they speak the language of Mlechas [unclean ones, foreigners] or that of Aryas." Similarly they are denounced in the 'Tandya Brahmana' as heretics and outcasts, "living without Brahmans, without kings, and in perpetual warfare." In the 'Mahabharata' it is also charged against them that "they drink the intoxicating spirit of sugar and of rice, and eat beef and other flesh and impure vegetables; and that among them a Brahman passes into the rank of a Kshatriya, or Vaisya, or Sudra; and the Brahman may become a barber, and the barber a Kshatriya." There are the Aryan tribes of Kafristan and the Sulaiman Mountains, intervening between British India and Afghanistan, who are gradually, rather by the slow and sure operation of economic causes than any direct political action on the part of the Government of India, being brought under our sovereignty. Some of them are still pagans, some are Mohammedans, and their numbers are altogether, if one may venture at all to calculate them, under 1,000,000.

We have, then, in India the low alluvial plain of Hindustan, inhabited by its highly civilized Aryas, bounded on the west by the Aryan wild tribes of the Sulaiman Mountains and Dardistan, and on the north by the wild Mongolian tribes of the Himalayas, and separated from the upland plain of the Dakhan by the Dravidian and Kolarian wild tribes of the Vindhyan ranges. The civilized Dravidians of the Dakhan—the Tamils, Telugus, Kanarese, and others—amount to about 50,000,000; the Aryas of Hindustan, Orissa, and Western India to

well nigh 200,000,000; and the wild tribes altogether to about 11,000,000.

Of the last named the wild tribes of the Vindhyan ranges are, from the economist's point of view, the most important. They occupy an immense area of the greatest natural beauty and fertility, which the extension of roads and railways under our administration has made accessible in every part, while they are as a rule more amenable to English influences than any other people in India. It is true that many of them have embraced Hinduism, but very lightly, and none of them is either a Buddhist or a Mohammedan. Their country is the true "damned nigger" pale of India as distinguished from the Aryan pale of Hindustan, and presents an almost boundless field for the development of the English industrial type of civilization, and the extension of Christianity, as was long ago pointed out by the late Rev. Dr. John Wilson, the Free Kirk missionary at Bombay. A most able paper has recently been published by the Rev. George Pope, the late principal of Bishop Cotton's college at Bangalore, on 'The Six Canons of Missionary Work in India,' in which the conditions on which alone we can hope to make converts among the highly civilized Brahmanical Hindus of the Dakhan and Hindustan are clearly pointed out. But everywhere throughout the heathen tribes of the Vindhyan ranges there is an open field for our missionaries, the harvest of which would cast into the shade the transient triumphs of Xavier in Southern India.

Similarly this central highland region presents the most hopeful field in India for British industrial enterprise. It is in one word the Soudan of India, and only has to be intelligently tapped in all directions from the civilized plains below and above it, and exploited by wealthy Englishmen, to become an inexhaustible source of profit to this country. Unfortunately the leading English merchants in India confine themselves to the presidency towns, and are, for the most part, as ignorant of India beyond the Maratha Ditch at Calcutta, the Madras roads, and Bombay harbour as the natives themselves are of everything beyond Kala-Pani, the "black waters" which bound the Malabar and Coromandel coasts. If, however, they would only seriously set to work to bring into fruitful operation the immeasurable latent industrial force represented by the wild populations of India and the rich and vast territories they occupy, particularly in Central India, the effect would be felt all over the world, like the opening up of the Soudan to Western commerce or the discovery of a new continent. The Vindhyan tribes are in every stage of wildness, from the most abject savagery to patriarchal barbarism, and all that Mr. Rowney says of their social and religious state is deeply, if painfully interesting and instructive. Some are so savage that the individuals of the tribe lead perfectly solitary lives amid their native forest wilds. It would seem hopeless to turn such men to use; and yet the enterprising Parsi traders have managed to do so. They place spirit in their way. They drink it and like it, and gradually are taught to collect the gums and resins, and dyes and tans, and other natural productions of the surrounding forests, in exchange for it. The general degradation of the actual condition of the wild tribes of India can hardly be more forcibly illustrated than by the fact that even the introduction of intoxication among some of them is not an unmitigated evil.

The Santal is absolutely the best specimen of them. He is short, well made, beardless, and active. In dealing with men of superior race he is shy and cowardly, but confronted with wild beasts shows the highest courage. He is a good hunter, a good herdsman, and a good agriculturist. His skill, patience, and diligence are exemplary. He always reclaims the jungle he enters to inhabit, and carefully collects all its products, which he barters. But he does all this only for himself and his family, and will never work for any one else. He wears only a cloth between his legs, but his wife wears a *sari*. The chief ornaments of both sexes are flowers and feathers and cow-tail hair necklaces. The women also wear heavy brass and bell-metal bangles and anklets and torques. Mr. Rowney continues:—

"The Sonthal is an admirer of nature, and never fells down any useful or ornamental tree, which gives his clearings a park-like and unmistakable appearance; and he is Arcadian in practice, and enjoys life better than other people of the same grade, from being immensely fond of music and dancing. His flute is a simple instrument made of bamboo, but gives out deep rich tones; and every village has a dancing ground where the youths and maidens meet in the evening to dance and sing. This is the national custom and no harm is thought of it; and the maidens, decked with flowers and feathers, pair off with the young men, all blithely going round in a circle, with their feet falling in cadence, and singing responsive to musicians placed in their centre.....There is a covered platform besides in each village, where the head men meet to talk over and regulate village affairs and to award punishments where they may have been deserved. All marriages in the Sonthal country are said to be love matches, though it is considered respectable for the parents to mature the necessary arrangements, as if without the knowledge of the lovers. The selection is said to be preceded by a beastly festival named 'Bandana,' which is held in the month of January and lasts six days, when all candidates for matrimony, male and female, are assembled together and permitted to have promiscuous intercourse with each other, each lover selecting his future wife after the termination of this general carnival."

Their gods are Bagh-Bhoot, the "Tiger-Spirit"; Bora Mangi, the spirit of a deceased and canonized chief; and Sing-Bonga, the supreme sun-god. The moon is his wife and the stars are his daughters. Besides these there are numerous sylvan deities. The worship of them all is, as among the wild tribes of India generally, accompanied with bloody sacrifices and drunken and obscene debaucheries. Such is the terrible description given of the best and happiest of the wild tribes of India.

Mr. Rowney's book is the first popular account of them that has ever been published in this country. It should deeply stir up the national sympathy with them and arouse systematic and concentrated efforts for their redemption, particularly in Central India and on the North-West frontier.

A Treatise on Marine Surveying. By the Rev. J. F. Robinson. (Macmillan & Co.)—It is very fitting that this, the first elementary text-book, as we believe, that has been published on marine surveying, should be due to a professor at the Royal Naval College, which has done so much to promote science among those whom the author, with a rather curious use of capitals, styles "our Younger Naval Officers." The aim of the treatise, as frankly stated in the preface, is to do for marine surveying what the text-books of Todhunter, Routh, Goodeve, and others have done for the various branches of mathematics, pure and applied. In marine surveying, indeed, still more than in land surveying, the subject is mixed up with a great deal that can in no sense be called science, being either the practical handling of particular instruments, or the explanation of arbitrary rules of practice. Thus chapter i. of the present book is devoted to the symbols used in charts and the signals of lighthouses, and chapter ii. to the construction and use of scales. We have then chapters on laying out of angles, fixing positions by angles, and on charts and chart drawing. These contain a number of interesting geometrical problems, which are simply and clearly worked out. In chapter vi. we return to the description of instruments, the sextant, theodolite, level, &c. We have then chapters on the measuring of a base, triangulation, and levelling. These, of course, would be equally in place in a treatise on land surveying; they give, however, some interesting particulars about recent Ordnance surveys, especially as to the connexion of Spain with Algiers by triangulation in 1879, over a distance of 170 miles. Purely marine matters are returned to in the ensuing chapters on tides and tidal observations and on soundings. These are generally clear and good; but we may mention in passing a rather serious slip on p. 209, where the mean surface velocity in a river section is taken to be the same as the mean velocity for calculating the discharge. We have then a good account of chronometers and of the mode of determining meridian distances by them; and finally ample directions as to the methods of plotting a survey. The book is enriched by a large number of examples (some of them fully worked out, and the rest with answers) of the exact type which the younger naval officer may expect to meet with in his lieutenant's examination. Whilst, however, the book is well fitted for its purpose as a vehicle of "cram," it would be a mistake to suppose that it is nothing more. On the contrary, there is much to be found in it of value to all who are interested in marine matters, and the treatment and arrangement appear to be excellent. A specially commendable feature is the copious supply of definitions for the technical terms employed, although the wording of the definitions themselves, never an easy matter, is not always faultless. We may take as an example the definition of a projection, p. 81, as "a representation of a figure on a surface formed by the intersection of that surface by lines drawn from the observer's eye to every visible point of the figure." At first sight this is far from being intelligible. We would suggest as an emendation, "If from a given point lines are drawn through every point in the outline of a geometrical figure, to intersect a surface, the outline formed by the intersections is called a projection of the figure on the surface."

ASTRONOMICAL NOTES.

The sun will be in perigee this year about 10 o'clock to-morrow (Sunday, December 31st) morning.

Venus will be at her greatest brilliancy (as a morning star) in the second week in January, and in perihelion on the 9th of that month.

Mr. Stone feels confident, considering the success obtained in observing the transit of Venus at so many of the most important British

stations, the care which was taken to secure observers of skill, provided with excellent instruments and trained to observe the same kind of contact at all stations, and the means adopted to obtain an accurate knowledge of the positions of the stations, that the contact observations, thus so fully made available on this occasion, will fix the sun's true distance "without any greater error than 300,000 miles."

Prof. Langley, Director of the Allegheny Observatory, Pennsylvania, whilst observing the transit of Venus there, noticed a peculiar phenomenon on the planet. In addition to the faintly luminous line of light seen round a great part of the circumference by previous observers in 1874, both he and his assistant (Mr. J. E. Keeler) distinctly noticed a spot of light extending through nearly 30° of the circumference and from the periphery inwards for about one-fourth of the radius. The brightness of this spot appeared greatest at the outside, and faded away towards the centre.

SOCIETIES.

Royal.—*Dec.* 21.—The President in the chair.—The following papers were read: 'On the Normal Paraffins,' Part IV., by Prof. C. Schorlemmer and Mr. T. E. Thorpe,—'On the Connexion between the State of the Sun's Surface and the Horizontal Intensity of the Earth's Magnetism,' by Prof. B. Stewart,—'On a Method of Photographing the Solar Corona without an Eclipse,' by Mr. W. Huggins,—'On the Dark Plane which is formed over a Heated Wire in Dusty Air,' by Lord Rayleigh,—'On the Origin of the Hydro-carbon Flame Spectrum,' by Profs. Liveing and Dewar,—'On the Inversion of the Layers of the Blastoderm in the Rat and Mouse,' by Prof. A. Fraser,—and 'On the Electric Discharge with the Chloride of Silver Battery,' by Messrs. De La Rue and Müller.—The Society adjourned over the Christmas recess to Thursday, January 11th.

Numismatic.—*Dec.* 21.—Dr. J. Evans, President, in the chair.—M. A. Chabouillet and M. C. Robert were elected Honorary Members, and the Rev. G. F. Crowther an Ordinary Member.—Mr. R. A. Hoblyn exhibited a collection, almost complete, of the coins and tokens of the Isle of Man, forming a nearly perfect illustration of Dr. Clay's 'Currency of the Isle of Man.' The collection comprised Hutton's token, 1657, the St. Patrick pieces, the cast coins of 1709, patterns of 1723, currency of 1733, 1758, 1786, 1798, 1813, 1839, together with nearly all the known tokens from 1811 to 1831. The patterns of 1724 and 1732 were wanting, and Mr. Hoblyn thought were probably only to be found in Dr. Clay's collection. The original motto on the coins of the Isle of Man prior to 1733 was QUOCUNQUE GESSERIS STABIT. It was then altered to QUOCUNQUE JECERIS STABIT.—Mr. B. V. Head read a paper, by Dr. A. Smith, 'On the Human Hand as a Symbol on Hiberno-Danish Coins found in Ireland.'—Mr. H. H. Howorth communicated a paper in which he proposed various re-attributions of Greek, Roman, and British coins. The fine gold medallion of Diocletian from the Blacas collection, now in the British Museum (Grueber, 'Rom. Med.,' pl. lv.), Mr. Howorth, notwithstanding the inscription which it bears, proposed, on iconographic grounds, to attribute to Maximian. Mr. Howorth also called in question Prof. Gardner's attribution of a tetradrachm (B. M. Cat., 'Seleucidæ,' pl. iii. 2) to Antiochus I. This coin, both on account of the portrait and of the reverse type (Herakles seated), the writer preferred to ascribe to Antiochus II. Mr. Howorth next proceeded to dispute Mr. Evans's attribution of a British coin to a chief named Vossenos (Evans, pl. iv. 13), giving it instead to Dubnovellaunos.—In the discussion which followed, the President and Mr. Grueber supported the accepted attributions of the coins referred to.

Zoological.—*Dec.* 19.—Prof. W. H. Flower, President, in the chair.—The Secretary read a report on the additions to the Society's menagerie during November, and called special attention to a collection of reptiles from the Western States of North America, and to a young lynx from Ballistan, which was apparently referable to *Felis isabellina*, Blyth.—Mr. Sclater exhibited and made remarks on some photographs of a new zebra from Shoa, lately named *Equus grevyi*, by M. A. Milne-Edwards.—The Rev. H. H. Slater exhibited and made remarks on the skin of a shrike (*Lanius*, sp. inc.) obtained near Spurn Point, Yorkshire.—The Secretary exhibited, on behalf of Lord Lilford, the skin of a young male *Emberiza rustica*, which had been taken at Elstree Reservoir on the 19th of November last. Only one other example of this bird had hitherto been recorded as having been met with in Great Britain.—Dr. Günther exhibited, on behalf of Sir C. Orde, Bart., a specimen of a charr (*Salmo alpinus*), obtained in a loch in North Uist.—Mr. P. H. Carpenter exhibited and made remarks on some microscopical preparations of *Antedon eschrichti*, in which a nervous plexus derived from the fibrillar envelope of the chambered organ was visible at the sides of the ambulacra of the disc.—Papers and letters were read: by Prof. Flower, on the whales of the genus *Hyperoodon*, in which he pointed out that one of the most important points in the history of these animals yet unsolved was whether the large-headed form, with great development of the maxillary crests, called by Dr. J. E. Gray *Lagenocetus latifrons*, was a distinct species, or whether, as suspected by Eschricht, it was the adult male of the common form known as *Hyperoodon rostratus*,—from Capt. D. Gray, 'On the Characters and Habits of the Bottlenose Whale (*Hyperoodon*),' in which it was stated that he had killed 203 of these animals last season, and had traced in the males every gradation of development between the two forms, and had therefore conclusively proved that *Hyperoodon* or *Lagenocetus latifrons* had no existence as a distinct species,—by Mr. P. H. Carpenter, on the classification of the *Comatulæ*, in which he criticized the method of formulation recently proposed by Prof. F. J. Bell, and pointed out its disadvantages for the purposes of classification, owing to its being inapplicable to those *Comatulæ* which have irregular arm-divisions; he explained his own system of formulation and classification, and stated that he believed it to be capable of dealing with all possible variations of *Comatula* structure,—by Mr. F. Day, on the identity of *Arnoglossus lophotes*, Gthr., with *Pleuronectes grohmanni*, Bonap., and on some hybrids between salmon and trout,—by Messrs. Godman and Salvin, on some butterflies from New Ireland, received from the Rev. G. Brown and Mr. E. L. Layard; among these were examples of two new species, named respectively *Prothoe layardi* and *Danais adustus*,—by Mr. O. Thomas, on two new species of fruit-bats of the genus *Pteropus* from the Caroline Islands, which the author proposed to call *Pteropus phæocephalus* and *Pt. breviceps*,—from Major G. F. L. Marshall, on Asiatic butterflies: a species of *Amecera* was mentioned as new to the Beluchistan fauna, and three species were described as new to science,—by Mr. G. A. Boulenger, on a new species of lizard from Dacotah, based upon some specimens lately presented to the Society's collection by Mr. S. Garman, of the Museum of Comparative Zoology, Cambridge, Mass., and proposing to name it *Sceloporus garmani*,—by Mr. A. G. Butler, on a collection of spiders made by the Rev. D. Cowan in Madagascar, which, in addition to many interesting and singular forms, contained specimens of the curious tailed species *Arachnoura scorpionoides* from Central Madagascar: six new species were described,—by Mr. W. N. Parker, on some points in the anatomy of the Indian tapir,—and by Mr. H. Druce, on new species of moths, chiefly from Western Africa and New Guinea. Fifteen new species were described, as was also a new genus of *Chalcosiidæ* from New Guinea.

Chemical.—*Dec.* 21.—Dr. Gilbert, President, in the chair.—The following papers were read: 'On the Condensation Products of Œnanthol,' Part II., by Mr. W. H. Perkin, jun. The author has studied the action of nascent hydrogen upon œnanthol. When this substance is dissolved in acetic acid and acted upon by sodium amalgam, heptylic alcohol is produced, an aldehyde $C_{14}H_{28}O$, and an alcohol $C_{14}H_{28}O$. If the œnanthol is dissolved in ether, heptylic alcohol, a solid aldehyde, melting at 29°5 ($C_{14}H_{28}O$), and a second substance, $C_{21}H_{40}O$, are formed. By oxidizing the aldehyde $C_{14}H_{28}O$ with silver oxide, a small quantity of an acid, $C_{14}H_{28}O_2$, boiling at 300°–310°, was obtained. The author has also studied the action of nascent hydrogen upon the aldehyde $C_{14}H_{28}O$, and discusses the constitution of these new bodies.—'On the Behaviour of the Nitrogen of Coal during Destructive Distillation, with some Observations on the Estimation of Nitrogen in Coal and Coke,' by Mr. W. Foster.—'On the Absorption of Weak Reagents by Cotton, Silk, and Wool,' by Mr. E. J. Mills and Mr. J. Takamine. The reagents are sulphuric and hydrochloric acids and caustic soda. This paper chiefly contains tables with results calculated to five places of decimals.—'On Brucine,' by Mr. W. A. Shenstone.—'Researches on the Induline Group,' by Mr. O. N. Witt and Mr. E. G. P. Thomas. "Induline" is a term applied to all coloured compounds formed by the action of amidoazo compounds on the hydrochlorides of aromatic amines with elimination of ammonia. The authors have studied in the present paper the formation of amidoazobenzene and its action on aromatic hydrochlorides, and especially on anilin hydrochloride.—'Preliminary Note on some Diazo Derivatives of Nitrobenzylcyanide,' by Mr. W. H. Perkin.

Meteorological.—*Dec.* 20.—Mr. J. K. Laughton, President, in the chair.—Four new Fellows were elected, and Capt. J. de B. Capello and Mr. W. Ferrel were elected Honorary Members.—The following papers were read: 'Popular Weather Prognostics,' by the Hon. R. Abercromby and Mr. W. Marriott. The authors explain over one hundred prognostics by showing that they make their appearance in definite positions relative to the areas of high and low atmospheric pressure shown in synoptic charts. The method adopted not only explains many which have not hitherto been accounted for, but enables the failure as well as the success of any prognostic to be traced by following the history of the weather of the day on a synoptic chart. The forms discussed are cyclones, anticyclones, and wedge-shaped and straight isobars. The weather in the last two is now described for the first time. They also point out (1) that prognostics will never be superseded for use at sea and other solitary situations; and (2) that prognostics can be usefully combined with charts in synoptic forecasting, especially in certain classes of showers and thunderstorms which do not affect the reading of the barometer.—'Report on the Phenological Observations for the Year 1882,' by the Rev. T. A. Preston.—Mr. J. S. Dyason exhibited a series of typical clouds in monochrome, and also a series of sketches of clouds in colour, made in June, July, and August, 1882.

Institution of Civil Engineers.—*Dec.* 19.—*Annual General Meeting.*—Sir W. G. Armstrong, President, in the chair.—The Report of the Council was read.—After the reading of the Report, the premiums that had been awarded for papers disposed of during the session of 1881–82 were presented by the President.—The following gentlemen were elected to serve on the Council for the ensuing year: Mr. J. Brunlees, *President;* Sir J. W. Bazalgette, Sir F. Bramwell, Mr. E. Woods, and Mr. G. B. Bruce, *Vice-Presidents;* Mr. B. Baker, Mr. J. W. Barry, Mr. G. Berkley, Sir J. Coode, Mr. E. A. Cowper, Sir J. N. Douglass, Mr. A. Giles, Mr. H. Hayter, Dr. W. Pole, Mr. R. Rawlinson, Mr. A. M. Rendel, Dr. C. W. Siemens, Mr. D. Stevenson, Sir W. Thomson, and Sir J. Whitworth, Bart., *other Members of Council.*

Historical.—*Dec.* 21.—Mr. J. Heywood in the chair.—The following gentlemen were elected Fellows: M. L. Arrigoni, Don Cesar Gonzalez, Rev. E. Jones, Messrs. W. Bowen, A. J. McEwan, J. Stansfeld, and G. A. Wood.—Dr. Zerffi read a paper 'On Hungary under King Matthias Hunyadi, surnamed Corvinus.'—A discussion followed, in which Messrs. Hyde Clarke, T. Pagliardini, and the Chairman took part.

MEETINGS FOR THE ENSUING WEEK.

Mon. London Institution, 5.—'Tourists and Travelling in the Early Days of the Roman Empire,' Prof. J. P. Mahaffy.
— Musical Association, 5.—'Musical Æsthetics,' Mr. E. J. Breakspeare.
— Victoria Institute, 8.—'The Argument from Design in Nature, with some Illustrations from Plants,' Mr. W. P. James.
Tues. Royal Institution, 3.—'Light and the Eye,' Prof. Tyndall.
Wed. Shorthand, 8.—'Shorthand for Schools,' Mr. J. B. Rundell.
— British Archæological Association, 8.—'The Myth of the Week,' Prof. Hodgetts; 'Redstone Hermitage, Worcestershire,' Rev. J. P. Hastings.
— Society of Arts, 8.—'Inhabitants of the Ocean,' Prof. H. N. Moseley (Juvenile Lecture).
Thurs. Royal Institution, 3.—'Light and the Eye,' Prof. Tyndall.
— London Institution, 7.—'Thought-reading, True and False,' Prof. W. F. Barrett.
Sat. Royal Institution, 3.—'Light and the Eye,' Prof. Tyndall.

Science Gossip.

The question of ensilage and silo, which has been the subject of many recent letters in the *Times*, will be fully discussed in a forthcoming book upon this new method of preserving fodder for cattle during the winter months by Prof. J. E. Thorold Rogers, M.P. It will be issued by Messrs. Sonnenschein & Co. early next year.

Dr. R. Angus Smith, F.R.S., read before the Manchester Literary and Philosophical Society 'A Note on the Development of Living Germs in Water.' The process employed cannot be too generally known. About 2½ per cent. of gelatin well heated in a little water is mixed with the water to be tested, and the mixture forms a transparent mass. If any organisms are developed they do not fall to the bottom, but become visible as spheres of activity, which remain long and can be closely observed. It is suggested that photographs of these globules may be taken and become a visible report made by nature when the water has active organisms in it.

Mr. Henry F. Blanford, F.R.S., Meteorological Reporter to the Government of India, sends us meteorological observations recorded at six stations in India in the year 1881.

Dr. C. W. Siemens publishes in the *Comptes Rendus* for November 27th a paper 'Sur la Conservation de l'Énergie Solaire,' which is a full reply to the objections to his hypothesis raised by M. G. A. Hirn.

The *Bulletin* of the Académie Impériale des Sciences de St. Pétersbourg, No. 2 of Vol. XXVIII., is to hand. It contains four astronomical papers, and two physical and two chemical memoirs.

We have received from the Geological Survey of India 'Palæontologia Indica,' Vol. II., Parts I., II., III.: "Siwalik Rhinocerotidæ," supplement to "Siwalik and Narbada Proboscidia and Siwalik and Narbada Equidæ," by Richard Lydekker. The first fasciculus treats of all the more important remains of Siwalik rhinoceroses acquired by the Indian Museum since the publication of the second fasciculus of the first volume, and the second comprises notices of the remains of other Siwalik and Narbada perissodactyles belonging to the family Equidæ. These volumes are beautifully illustrated with fifteen lithographic plates of fossil remains.

We learn from America that Major Powell and some other zealous scholars have prevailed upon Congress to make a grant for the establishment of an Ethnological Bureau at Washington in connexion with the Smithsonian Institution. There is an array of young philologists engaged in collecting materials for the Bureau, and three or four volumes are actually in the press.

Mr. John Trowbridge and Mr. Charles B. Penrose, of the Physical Laboratory, Harvard, have been making experiments on "the Thomson effect," which shows that an electric current passing through a piece of metal, the ends of which are kept at different temperatures, carries heat with it in a direction depending on the character of the metal and the direction of the current. The above observers have included nickel and carbon in their tests. For nickel they find that the Thomson effect is negative, and for ordinary graphite it is the same. In trying whether magnetism produced any effect the experimenters obtained only negative results.

We have the Monthly Record of the Results of Observations at the Melbourne Observatory for October, November, and December, 1881.

FINE ARTS

ROYAL SOCIETY of PAINTERS in WATER COLOURS.—The TWENTY-FIRST WINTER EXHIBITION is NOW OPEN, 5, Pall Mall East, from Ten till Five.—Admission, 1s.; Catalogue, 6d.
ALFRED D. FRIPP, Secretary.

SOCIETY of BRITISH ARTISTS.—WINTER EXHIBITION NOW OPEN, from Ten to Five Daily, at the Suffolk Street Galleries, Pall Mall East.—Admission, 1s. THOMAS ROBERTS, Secretary.

SURREY SCENERY.—This Beautiful Series of Sketches and Drawings made by Mr. Sutton Palmer is NOW ON VIEW at Messrs. Dowdeswell's, 133, New Bond Street, two doors from the Grosvenor Gallery.—Admission Free.

NOW ON VIEW, at H. T. JENNINGS'S GALLERIES, 62, Cheapside, a COLLECTION of HIGH-CLASS WATER-COLOUR DRAWINGS of Swiss, Pyrenean, and other Scenery, by GEORGE BARNARD, of the Alpine Club. Open daily from Ten till Four o'clock.—Admission by Invitation or Address Card.

DORÉ'S GREAT WORKS, 'CHRIST LEAVING the PRÆTORIUM,' 'CHRIST ENTERING JERUSALEM,' and 'MOSES before PHARAOH,' each 33 by 22 feet, with 'Ecce Homo,' 'The Ascension,' 'Dream of Pilate's Wife,' 'Soldiers of the Cross,' 'A Day Dream,' &c., at the DORÉ GALLERY, 35, New Bond Street. Daily, Ten to Six.—1s.

Jahrbuch der Königlich Preussischen Kunstsammlungen. Vol. III., Parts I., II., III., IV. (Berlin.)

In this year's issue of the 'Jahrbuch der Königlich Preussischen Kunstsammlungen' the section to which the general reader will turn with most expectation is that devoted to chronicling the results of the second series of the excavations carried on at Pergamon. It contains three articles—the first by Dr. Humann, who had the general direction of the expedition; the second by Dr. Bohn, who directed specially the architectural explorations; and the third by Prof. Conze, to whom fell the task of selection, from the various objects brought to light, of such as he deemed it most desirable to remove to Berlin. It was hoped at starting that more portions of the Gigantomachia would be found, that further remains of inscriptions might be discovered, and, above all, that the site of the temple of Athene-Polias might be exactly determined. Entire success seems to have crowned the efforts of the party in all these respects. Nearly two hundred fragments of inscriptions (none of great importance) were collected; several hundred additional bits of the Gigantomachia were found, and—grievous to relate—not a few of the latter were discovered half burnt in a disused limekiln. Finally, in February, after industrious clearing to the extreme south, Herr Bohn succeeded in tracing the foundation of the Athene temple, and, later still, the site of the temple of Julia was also determined on the north. Full particulars of every point connected with these discoveries, together with reproductions of many of the inscriptions, are given in the text, which is accompanied by an architectural restoration of the buildings in question, by an excellent plan, and by a coloured map of the upper part of the Acropolis which enables us to master the results of both the first and second expeditions in the minutest detail. Nothing, of course, which has now been obtained from Pergamon can come to us with the same startling and original interest which attached to the discovery of the great altar and its stupendous series of reliefs. These recent excavations must be regarded only as the completion of the work previously undertaken, and deriving their importance from the fact that without them the results of the first expedition would have remained imperfect.

When shall we come to the limit of inquiry in the field of archæological research? It seems impossible that it should be carried on for many generations at the progressive rate which it has acquired in the present, and that, too, in every direction. The additions which each year brings to our knowledge of classical work are outrivalled by the quantity of new matter constantly coming in and requiring to be wrought into the history of more modern art. One of the foremost labourers in this last field, where labourers are legion, is Dr. Wilhelm Bode, for he yields to none in point of patient industry and conscientious exactness in the following up of minute investigations. The present numbers of the 'Jahrbuch' contain the continuation of a series of articles by him on the sculptors of the Italian Renaissance in the Berlin Museum. The two papers which he contributes this year both deal with works from the hand of Andrea del Verrocchio. These have been specially chosen by Dr. Bode to follow his valuable account of the 'St. John' of Michael Angelo, not because they can possibly rival the artistic value of that noble statuette, but because they have not yet, for the most part, been identified with the name of the master to whom they are due, and may afford us the opportunity of getting somewhat nearer to a correct estimate of one whose work is a many-sided puzzle. Of the two articles the first is devoted to Verrocchio as a sculptor, the second—and this is the more important—to his productions as a painter.

Dr. Bode in the first place recapitulates all the great sculptures positively known to be by the hand, or carried out from the designs, of Verrocchio—the Medici monument in San Lorenzo at Florence; the bronze statue of David as the slayer of Goliath, now in the Bargello; the winged figure of a boy astride a dolphin, now in the court of the Palazzo Vecchio; the silver relief in the cathedral at Florence, which depicts the beheading of John the Baptist, and which is the only authentic example we possess of his skill as a goldsmith; the bronze statue of St. Thomas in Or San Michele; the bronze equestrian figure of Colleoni at Venice; and the monument of Cardinal Forteguerri, of which our best record is the little clay sketch possessed by the South Kensington Museum. The character of each of these works having been carefully defined, Dr. Bode next goes at length into the claims of minor examples, and probably no one will be inclined to contest his attribution to Verrocchio of four, at least, out of the five terra-cottas now in the Berlin Museum, excellent reproductions of which accompany the text. As to the fifth, which he considers to be an original sketch by the hand of Verrocchio for the 'David' in the Bargello, it is not so easy to agree. The same reasons which induced Paris critics at the Trocadero in 1878 to refuse to accept this statuette as worthy of the name of the master must still hold good, unless, indeed, some incontestable piece of technical or documentary evidence is brought forward to give it a character.

As regards the paintings executed by Verrocchio, Dr. Bode has but one authentic work with which to compare all those others which he proposes to class under the master's name. This is, as every one will recollect, 'The Baptism of Christ' in the Academy at Florence. The legend which bids us believe that one of the two attendant angels was painted in by Verrocchio's great pupil, Leonardo, and that the master, confessing himself surpassed by his scholar's excellence, never again touched the brush, has given to this picture an extraordinary and fanciful interest. Of late competent critics have declared themselves unable to see in the execution of this picture any intrinsic evidence of the truth of the legend preserved by Vasari. Dr. Bode is of a contrary opinion. He dismisses from consideration the fabled effect on Verrocchio of his pupil's surpassing achievement, but he observes that the picture in question—which is still unfinished—has been carried out in two different mediums and at two different times. The first painting has been in tempera; then one of the angels (that attributed to Leonardo) has been wholly, and the remainder of the picture partly, repainted, but not completed, in oil. The portion of the work executed in tempera Dr. Bode assigns to Verrocchio, and suggests that when he was much pressed for time, or after his death, the unfinished work was confided to Leonardo, who worked upon it in oil and brought it up to the point at which we now see it. But the conclusiveness of his argument—of which he makes this hypothesis a main point—is in great measure weakened by the fact that many of the works the claims of which to be considered as from the hand of Verrocchio he next proceeds to urge are executed in a similar manner.

A certain group of Madonna subjects previously attributed to Pesello or Pollajuolo were noted by Messrs. Crowe and Cavalcaselle as more properly allied to the school of Verrocchio. This attribution has been contested by Morelli—of whom, by the way, Dr. Bode speaks alternately by his own name and by his *nom de plume*, Lermollief, in a way which, without explanation, must puzzle those who are unaware of the fact that Morelli and Lermollief are one and the same person. To Morelli's arguments Dr. Bode replies, and goes even further in respect of the group in question than Messrs. Crowe and Cavalcaselle, for he holds that they are all undoubtedly of the school of Verrocchio, and in part actually by his hand. They not only all resemble each other, and present points of character common to the group of reliefs of the Madonna and Child to which Dr. Bode refers in his first paper, but allied designs are to be found on leaves from the sketch-book of Verrocchio, both in the possession of the Duc d'Aumale and in the Louvre. All these pictures, however, are, according to Dr. Bode himself, painted, or at least grounded, in tempera, the effect being heightened by glazes of colour applied in a medium of varnish, or oil and varnish; and the Virgin with the Child on her lap in the Berlin Gallery (No. 104 A), the picture for which, if for any, he specially claims the honour of having been entirely executed by Verrocchio, is produced by exactly the same means as those employed in the 'Baptism of Christ' in the Academy at Florence. As far, therefore, as the proof of the two methods goes towards showing the co-operation of Leonardo in the 'Baptism of Christ,' we are once more reduced to a battle of subjective impressions, and are forced to call to our aid that test of "geistige wirkung" to which Prof. Herman Grimm is so ready to appeal, but which is, to our thinking, about the least satisfactory form in which evidence can be offered or received.

Two more papers on questions connected with the life and works of Raphael are contributed this year by Prof. Grimm himself. In the first he prints *in extenso* one or two documents of which we have hitherto had but fragments; in the second he notes the use made by Raphael of the groups of athletes with horses standing on Monte Cavallo in his 'Judgment of Solomon,' in his 'St. George,' and in a drawing in the Berlin Print Room. On the supposition that the last belongs to the early Roman epoch of Raphael's activity, Prof. Grimm bases an argument concerning the collaboration of Raphael in the frescoes of Siena, which we refrain from reproducing here, as the writer himself acknowledges that it rests but on supposition.

In Dr. Lippmann's 'Italian Wood Engraving in the Fifteenth Century' we find ourselves on quite different ground. Dr. Lippmann writes with precision of the different characteristics of early Italo-German, Upper Italian, Venetian, Neapolitan, and Florentine printing and wood-cutting. The text is a substantive addition to the literature of his subject, and the illustrations which accompany it, especially those from Florentine books, are of the greatest variety and beauty. All the illustrations are remarkable for their fineness of impression; the reproductions of the medals annexed to Dr. Friedländer's articles are specially noticeable for a delicacy due, we believe, to the fact that the skill of the printers employed on the printing of the Government money notes is placed at the disposal of the editor of the 'Jahrbuch.' Francesco Francia, Francesco di San Gallo, Petrus de Mediolano, Francesco Laurana, and one or two medalists of Lyons, are the subjects of Dr. Friedländer's last contributions. But there remain so many other articles in this year's issue which demand attention that it is impossible to do more than refer thus briefly to his valuable papers, and then pass on to give a cursory notice of the rest.

It will easily be seen that selection is difficult when every writer brings new matter to our stores; but we must not close this summary without at least naming Dr. Dohme's article on the 'Central-bauten des XVII. und XVIII. Jahrhunderts,' and Dr. Thode's paper on the use made by Dürer of the antique, nor must we omit to mention an exhaustive treatise on the collection of prints belonging to the town of Breslau, in which Dr. Max Lehrs notes, amongst other woodcuts, a remarkable and hitherto undescribed example of Cornelis von Bos. Jacob Cornelisz, of Amsterdam, too, who has hitherto been known to us only as a draughtsman, is revealed by Dr. Schiebler as the painter of four pictures in the museum at Berlin; and D. von Seidlitz adds some twenty or thirty new examples to our list of woodcuts by Hans Sebald Beham. Truly it may be said that the 'Art Year-Book of Prussia' for 1882 shows a sum of activity on the part of her officials which no other country in Europe, except, perhaps, France, is in a position to match.

A Manual of Sculpture: Egyptian, Assyrian, Greek, Roman. 160 Illustrations and Map. By George Redford, F.R.C.S. (Sampson Low & Co.)—This addition to a series of illustrated handbooks of art history of all ages deserves cordial recommendation to the full extent of its pretensions. These extend to no more than "to open out the principal paths which lead to the great mountain region that has to be climbed before any wide and comprehensive view can be obtained of ancient sculptural art." The purpose is well furthered by an arrangement of the subject under the sections of "Technic," explanatory of materials and method of modelling, carving, casting, and so forth; of "Æsthetic," dealing with the relation of natural to typical and ideal beauty; of "Historic and Descriptive"; and lastly of "Examples." The author proposes this plan of exposition with diffidence, but it is not only well suited for the instruction of the tyros whom the book more particularly addresses, but might well be adopted for a work on a more exhaustive and serious scale. It has the advantage of duly subordinating mere archæology to history, and the inevitably defective history to the more satisfactory appreciation of expressive art. A great work of art is not merely for its own age but for all time, and its relation to all time continues in the main unaffected when, as so often is the case with the sculptural remains of antiquity, the precise age of a work is not recoverable. Among the numerous illustrations we find certain distressing failures, but the majority are more than usually satisfactory both in selection and execution. Mr. Redford is far from putting himself forward as an original authority; but while deferring to others he does not renounce the exercise of independent judgment. Occasionally he defers too submissively. For example, he accepts the colossal bronze female mask in the British Museum as a work of the finest period of Greek art. Again, he adopts a representation of the Apollo Belvedere as holding out in the restored left hand no appropriate bow, but, left-handedly enough, a problematical scaring ægis. This change has for some time been urged as imperative, from comparison of an antique statuette, the Stroganoff bronze (a repetition of the figure), which grasps what was certainly no bow, and may just possibly be a fragment of the goatskin of the ægis. But the sculptor of the bronze was consistent in his adaptation of a type; in depriving Apollo of his bow he took away the useless quiver also, and had more sense of balance in composition than, while burdening the extended arm, to retain the confusing folds of the chlamys thrown over the forearm. On the other hand, the woodcut of the 'Laocoon' gives the well-established authentic restoration of the lost right arm of the sire as bent towards the back of his head, not, as in the Vatican restoration, stretched out and extending the coils of the serpent as if they were destitute of all power of constriction like so much elastic tubing. It is with surprise no less than regret that we observe that the article "Laocoon" in the recently issued volume of the 'Encyclopædia Britannica' does not even notice that there are two opinions on the subject, but so far countenances a finished engraving of the falsified restoration.

THE MARQUIS OF BUTE'S PICTURES AT BETHNAL GREEN.

(First Notice.)

Lord Bute has, with much liberality, collected at Bethnal Green nearly all the pictures belonging to his family from several country seats and the house in Pimlico, where the greater number have been deposited for several years. The collection, having been formed more than a hundred years ago, before the light of modern criticism had come to help amateurs, is of an extremely mixed character. The school best represented is that of the Low Country; for this the collection has long been renowned. There are also a few noteworthy Italian paintings. As no catalogue is yet available, we shall take the best works in their order on the walls, grouping examples of schools and masters, without regard to the numbers which have been temporarily attached to the frames.

The Italian pictures are attributed to Guercino, a 'Madonna and Child,' or 'Assumption'; Domenichino, 'A Landscape'; Guido, 'Venus and Cupid'; C. Maratta, a 'Holy Family,' which comprises a very characteristic head of Christ with elaborately curled hair, and deserves attention because it is a perfect academical example; and Tintoretto, by whom are, 1, an 'Allegory of Virtue crowning Merit' (?), being life-size figures of striking decorative quality (the leg of Virtue is badly foreshortened); 2, a second Allegory, which contains very little indeed of this master's work, although it may have been produced by a pupil in his school. Paul Veronese (or his school) produced the capital decoration of 'The Marriage of St. Catherine.' The saint's head has a certain charm of character and painting. Bonifazio's picture of the same subject gives with great felicity the head of a young Venetian lady as St. Catherine. There are potentialities of voluptuousness in her girlish face, and the picture is representative of Venetian art of the kind.

'A Portrait of a Senator' bears the name of Titian. The dress of black, trimmed with brown fur, is finely and broadly painted. The soft fusion of modelling and lightless carnations and the smooth surface make the picture unlike a Titian and very like a Tintoret, but it may be a late work of the former. The name of Velazquez was not dishonoured, although it may have been taken in vain, when applied to the superb 'Portrait of Pope Innocent X.,' Pamphilli, which is a masterpiece of force and character, solid and firm painting. It

follows the well-known type of Raphael, and shows the pontiff in his scarlet cape and cap seated in a chair. The energy of the resolute, astute, and masterful face, the craft of the hard, overbearing eyes and thin, set lips, are admirably rendered. By Claude there is a good 'Landscape with Figures,' which is very soft and luminous. Too soft it may be, but the golden twilight and warm trees are charming. A 'Virgin and Child, with Angels,' bears the name of Raphael, and is by a Ferrarese master, who worked after the Urbinate in the manner of Garofalo. It has been much repainted. Another Claude of a 'Seaport' looks as if it had not escaped restoration. Its foreground is a sunset effect of an intense glow.

The remaining pictures are by Dutch and Flemish masters. Nothing could be better than the Adrian Van Ostades, of which the chief is the famous 'Lawyer in his Study,' a single figure sitting at a table before a window, with his cheek on one hand, a black hat on his head, and intently reading through his spectacles the letter held by his left hand. Attention is admirably delineated on his dry and withered features. Finish, soundness, richness of tone, and fine if somewhat sad colour distinguish this picture: it has a broad and simple chiaroscuro, and great clearness in the deepest shadows. This example was No. 28 in the Royal Academy Winter Exhibition of 1870, and is dated 1671, the year after Mr. Addington's renowned 'Tric-trac,' which was at the Academy in 1880, No. 47. 'Schoolmaster and Boys' is another A. Van Ostade of unusual clearness and solidity, extreme finish and softness. The charms of verisimilitude and happy expression are not wanting. In the truly Dutch type of face this master affected the features are ignoble, but the expression is gentle and intelligent. It is to be seen in the boy, who looks at us from behind the shoulder of his comrade, to whom the master attends. The third Van Ostade is even more luminous in tone and bright in colour. It represents, with brilliancy and fine, soft purity of colour, the sweetest and richest tones, two boors playing at backgammon, while a third looks on. They are grouped at a window in a cabaret. The many-tinted jacket of the seated player goes well with his rubicund visage and black hat, and the russet jacket and blue sleeves of his standing antagonist. The lucidity of the shadows is an example for modern masters. This little masterpiece was much admired by F. Walker. Van Ostade's scholar, C. Bega, is well represented by a good picture of an old man and his wife. The so-called Albert Dürer's 'Death of St. Anne' is a poor copy from, and probably on, a print. By R. Savery we have here a 'Woody Landscape,' which illustrates his peculiar method, a fine one in its way, of treating foliage in broad masses with strong accidental shadows and noteworthy breadth of light. 'A Lady feeding a Parrot,' by Eglon Van der Neer, is like, but inferior to, a Metsu. It is a delicate and solidly finished picture. The face has been retouched.

This collection is celebrated for its Jan Steens, which are among the finest there are in England. The most pleasing of them is nearly equal to a Metsu in softness, delicacy of touch, smoothness of surface, clearness of tones, and fineness of colour; while, as Dr. Waagen remarked, its design surpasses any of Metsu's in dramatic interest. Metsu never delineated figures so animated and graceful as those of 'Cavalier playing on a Lute to a Lady,' who listens enraptured by love and music. The rich, luminous costumes are charming, especially the apposition of the lady's dress of silvery white, blue, and russet. Another Jan Steen, called 'The Cock-Fight,' was No. 25 at the Academy in 1870, and can boast of much animation and almost as much commonness, not to say vulgarity, as homeliness. It is a masterpiece of the heavier mode of the artist, and is remarkable for spirit and the variety of its art facial expressions. The woman who flirts with the man behind her while standing on our left and looking at the cocks is first rate. In 'The Love Letter,' by the same, a leering old woman is approaching a matron in a deep pink satin petticoat, black cloak, and white sleeves bound with scarlet. The voluptuous suggestions of the matron's figure and the figure of the man who looks on from the background are as truly characteristic of one of the veins of Steen's humour as the dramatic arrangement. Two pictures attributed to F. Hals are of very unequal value. The one which represents a 'Boy playing on a Violin' is the better; but we are not satisfied of the genuineness of either of these rough and crudely designed examples. By one of the Le Nains is a capital sketch called 'The Artist in his Own Studio,' dressed in dead-leaf satin, seated stiffly at an easel and looking at us steadily, while a sitter waits for his attention. Three stiff figures of men look on from behind. The carnations of this picture are dirty, and its composition is awkward, but the touch is firm, the draughtsmanship good, the portraiture first rate.

A 'Landscape and Figures' by "Velvet" Brueghel is in his hard, cold manner. The sky is bright blue, with a cold light. A companion picture by the same hands is on the same screen. A third Brueghel represents 'The Adoration of the Magi.' Its qualities are similar. The execution is that of a miniature, the tents are brilliant and isolated, and the drawing elaborate. Another work of the same order, said to be by "Velvet" Brueghel, represents, with amazing finish and precision of touch, isolated and bright tints, a vast mass of *bric-à-brac* piled on a sort of *dressoir* in a sumptuously curtained chamber, where sits the "Duchesse de Montespan," stark naked as Venus, and attended by a French boy as Cupid, while a lame and grizzled Vulcan offers to her the emblazoned shield of France, and gorgeous armour lies piled on the floor at his feet. The figures may be by Franken; they are not elegant enough to be Rottenhammer's. These artists and Hendrik Van Balen inserted figures in the pictures of "Velvet" Brueghel. Among the most interesting works here are two somewhat crude examples attributed to "Old Francks," who is clearly not the pupil of F. Floris, because the works include copies of pictures by Rubens and Van Dyck. They are probably by one of the "Young Franckses," possibly Jerome. Each painting includes several copies of famous pictures hanging on the wall. One of the two thus represents the so-called "Raphael" 'Portrait of F. Carondelet and his Secretary,' the property of the Duke of Grafton, which was at the Academy this year, No. 160, and the subject of many guesses as to its authorship. In the background are men with donkeys' heads destroying paintings. The other, styled 'A Picture Collector's Gallery,' includes figures of a patron and his friends examining works of art in a sumptuous gallery. This picture, or another and better version, has been engraved. By Ruysdael there are several excellent examples, including a small 'Landscape,' with water rushing over stones in front and through a flat country, marked by masses of dark foliage, and a clear cold sky before rain, with finely studied clouds. Another Ruysdael, called 'View in Norway,' reminds us of Everdingon, the artist's prototype, and comprises a torrent in front, a castle on a cliff on our left, and a somewhat spotty effect of cloudy weather. By far the most interesting Ruysdael here includes figures by Wouwermans, and came from the Braamcamp collection. It represents with impressive sentiment and tremendous breadth of effect the 'Interior of the Nieu Kirke at Amsterdam by Moonlight.' The illumination is concentrated about the altar, and is cold and greyish green, with dark shadows on the lower portion of the view.

HAMPTON COURT.

WHILE the late injury to the fabric of Hampton Court Palace is being so much regretted, will you allow me to call attention to another kind of destruction which has lately taken place there, the result neither of accident nor carelessness? The south-west angle of the palace, adjoining the "Outer Green Court," and abutting nearest upon the river, had formerly a charming old-world character about it, and though homely rather than stately, and containing only subordinate rooms and offices, had for many greater attraction than the more architectural parts of the buildings. The old roofs and brick chimneys of Henry VIII.'s time, that grouped so well with their background of ancient elms, as seen from the gardens, formed a favourite subject for several of our best artists. All this has been effaced by the erection in front of additional buildings to increase the accommodation of one of the inmates; so that what is now seen prominently from the river and the bridge is little else but brand-new buildings. The Office of Works is frequently replacing with patches of smug new brickwork the grey and time-honoured walls; but these additions, however much their authors may consider them in the style of the old work, are surely an unnecessary effacement. N. W.

NOTES FROM FLORENCE.

THE façade of Sta. Maria del Fiore, begun some six years ago with the plans and under the superintendence of the architect De Fabris, is now approaching completion. The whole of the façade up to the *ballatoio* or terrace on a level with the roof of the cathedral will be completed at the beginning of next year; and it is calculated that two more years will complete the portion above the *ballatoio*, including the statues and mosaics of the gable or gables. The architects, De Fabris and Del Moro, and the committee for the construction of the façade have determined to uncover, some time about Easter, the completed portion of the work, together with a model which shall, by giving a section of each of the two arrangements, enable the public to judge whether the façade had better be crowned by a single gable, like that of the basilica of S. Miniato a Monte, or with three gables, like the cathedrals of Siena and of Orvieto. Commendatore De Fabris, whose plan for the façade carried off the prize at the competition, which was held so far back as grand-ducal days, has attempted to complete the very heterogeneous structure of Sta. Maria del Fiore by a façade which, belonging to what may be considered the medium epoch in the construction of the cathedral, from Arnolfo to Brunellesco, might serve to connect, and in a manner to epitomize, the various styles of the various other parts of the edifice; incorporating at the same time a skilful reminiscence of Giotto's belfry in the shape of a series of large statues in highly ornamented niches round the tabernacle of the Virgin, which surmounts the main portal. This design naturally brings us very close to the design of Lorenzo Maitani's cathedrals at Siena and Orvieto; and the logical and æsthetic conclusion would certainly appear to be that as the general structure of the Florentine cathedral is similar to that of the cathedrals of Siena and Orvieto, and the façade will greatly recall theirs, it requires to be crowned by the same three-gable arrangement. But, obvious as this appears, there exists a party in Florence which insists that the façade should terminate in one gable, like that of S. Miniato, a building of a much earlier period, and moreover an intense example of the early mediæval basilica, not a single one of whose peculiarities of internal construction is shared by Sta. Maria del Fiore. This would be not only a glaring anachronism, but the single gable, closing a building divided into three very unequal parts, would constitute a complete contradiction between the internal and external

plans of the building. It is to be hoped that when the public is able to judge of the effect of the two arrangements it will finally agree in the views of Commendatore De Fabris.

The portion of the façade which is now completed, and which can be seen as yet only by penetrating beneath the matting which entirely conceals all the scaffoldings, represents financially about half or two-thirds of the computed cost of the whole façade; and it is truly marvellous to think that such an enormous surface can have been covered with such admirable marble tarsia and carved work for so small a sum as half a million of francs—about 20,000*l*. Such a result is possible only thanks to the greatest ingenuity and economy of the superintendents, and to the exceptional resources, physical and mental, of Tuscany. The material is altogether Tuscan, the white marble having been brought from Serravezza, the red (like a fine *rosso antico*) from the neighbourhood of Siena, the green from Prato, and a rich red breccia from the Garfagnana. The work is also entirely Tuscan. The models of the statues have been supplied at cost price. The highest day's wages of any of the workmen is from three to six francs. Six francs a day are the wages of the head stonemason, who with his son has modelled and chiselled all the finest arabesques and foliations of the portals, some of which are extremely bold and at the same time delicate in effect. The workmen, whose number has just been reduced from seventy to sixty, are almost entirely from the districts of Fiesole and Settignano, which gave Florence some of her greatest Renaissance sculptors in Mino, Benedetto da Majano, and Benedetto da Rovezzano. To these men, who are none of them able to draw, who have learnt all that they know from study of the older portions of the cathedral and from patient practice, are given only the general measurements and the roughest outline in charcoal on the wall by the architects, and they furnish a much better idea of the men who worked at Pisa, at Siena, or at Chartres than could any highly taught and highly æstheticized modern architect. Still, while admiring the beautiful work of these masons (which contrasts painfully with the feeble inspirations of the modern sculptors who have tried to adapt to Gothic purposes the remnants of the insipid Bartolini style of fifty years ago), we must not forget how much in the really striking and beautiful effect of the façade is due to the architects, obliged to study, often to guess, under the matting of the scaffoldings, the exact proportions and relief of all the various portions of an enormous mass of marble incrustations which will be seen at such different heights and distances.

The modern completion of a mediæval cathedral (as is lamentably shown by the new portions of Cologne Cathedral) can never be more than a *pis-aller*, since to revive the style we should require to revive the whole life of the past; but there is every appearance that this façade of Sta. Maria del Fiore, when complete and when stained golden by the sunshine of centuries, will be no unworthy completion of the great work of Arnolfo and Giotto and Brunellesco. V. L.

Fine-Art Gossip.

On the 16th and again on the 30th of January the members of the Royal Academy will meet in order to elect Associates of their body. Probably as many as six artists will be then selected. Yesterday (Friday) evening was appointed for the election of an Honorary Foreign Academician.

The well-known collection of prints and etchings formed by Dr. Griffiths, the late Warden of Wadham College, Oxford, will be sold early next year. Various schools, and notably the Italian, are fully represented in this collection, but its great strength lies in a most magnificent series of Rembrandts. It is said that Dr. Griffiths's collection does not contain a single poor or worn-out impression, and is most remarkable as a whole for the excellent condition of the prints.

An architectural exhibition is being held in the galleries of the Scottish Academy, comprising twelve hundred exhibits, among which there is a series of illustrations of old Edinburgh, with models, drawings, &c., of many ancient Scottish castles and houses.

A new hall is to be very shortly opened in the Musée de Cluny, and will be found to contain a very important collection of foot coverings (*chaussures*) of all nations, and dating from remote antiquity. With these are many ancient vestments and tapestries from the Château de Boussac. The last-named objects were rescued by purchase from the risk of being sold to *marchands allemands*, which seemed to be their destiny. They have been repaired by workmen from the Gobelins factory.

The large collection of drawings bequeathed to the French nation by M. His de la Salle has been arranged in one of the halls of the Louvre, and will reward the visits of all art-lovers who happen to be in Paris. The Vicomte de Tauzia has compiled an excellent catalogue of these works. The Collection Timbal has likewise a home in the Louvre.

MUSIC

Life of Mozart. By Otto Jahn. Translated from the German by Pauline D. Townsend. With a Preface by George Grove, D.C.L. 3 vols. (Novello, Ewer & Co.)

In the excellent preface which Dr. Grove has written for the present translation he speaks of Jahn's elaborate monograph as being what the Germans call an "epoch-making work." If we look at the literary history of music during the twenty-six years which have elapsed since its first publication in Germany, the correctness of the epithet will not be doubted. Otto Jahn was the pioneer of the musical historiographers who have during the present generation conferred such benefits on students by their unwearied and frequently exhaustive researches into everything connected directly or indirectly with the lives and labours of the great composers. To say nothing of the fact that Köchel's invaluable thematic catalogue of Mozart's works owes its existence directly to Jahn, and that the example of Köchel induced F. W. Jähns to undertake a similar labour on behalf of Carl Maria von Weber, we have in Spitta's 'Life of J. S. Bach,' and in the still unfinished biographies of Handel by Dr. Chrysander, and of Haydn by Herr C. F. Pohl, works modelled upon the same lines as the volumes before us, and probably immediately due to the example which Jahn was the first to set. In works of this class German authors stand alone. The conditions of professional life in this country are such, and the constant strain and high pressure of musical life here are so great, that we doubt if any Englishman could be found who has at once the qualifications and the leisure to compile a biography on the scale of any of those to which we have referred. Even a cursory examination of the work now under notice will show the enormous amount of patient labour involved in its preparation.

It may, perhaps, appear hypercritical to find fault with the title of the translation, but we cannot help thinking that the original heading, "W. A. Mozart," would have been more appropriate. It is true that Jahn's book is a life of Mozart, and by far the most elaborate which has ever been written; but it is far more than this. Were the whole of the biographical portion, including the correspondence, eliminated from these volumes, what remains would be a most important contribution to musical literature. The author rightly felt that it was impossible to show Mozart's true position as an artist, and his influence, both upon the music of his own day and of that of the generation which succeeded him, without entering in some detail into the history of music in Germany during the latter half of the last century. Accordingly we find chapters on the "Opera Seria," the "Opera Buffa," "Church Music," and "Instrumental Music," in which not only are Mozart's compositions in these various classes described, and often analyzed in detail, but much information is afforded as to the general styles of dramatic, sacred, and instrumental music at the time in which Mozart wrote, and we are enabled to see in what respects his music differed from that of his contemporaries, and thus enlarged the resources of his art.

The extraordinary wealth of material to be found in these three volumes, which contain in all 1,350 pages of large octavo, renders it absolutely impossible within the limits of our columns to do more than glance at one or two of the most striking features of Jahn's book. The biographical portion, though containing many details not to be met with elsewhere, is hardly that part of the work which will possess the most interest for musicians, because the general outlines of the composer's history are tolerably well known. Our author presents Mozart's character in a most attractive light. We see not only the genuine artist, but the devoted son, the loving husband, and the generous friend, caring little for his own worldly advancement, and too inexperienced in matters of business to make use of such opportunities as offered themselves. An instance of this will be found at vol. ii. p. 277. The King of Prussia, in May, 1789, wished to make Mozart his Capellmeister; the composer declined the offer.

"Once returned to Vienna, Mozart thought no more of the matter, and only after much persuasion from his friends was induced to lay it before the Emperor, and tender his resignation. In unpleased surprise, Joseph asked, 'What, do you mean to forsake me, Mozart?' Whereupon Mozart answered, with emotion, 'May it please your majesty, I will stay.' Upon the question of a friend as to whether he had not taken the opportunity of demanding some compensation, he exclaimed, angrily: 'Who the devil would have thought of that at such a time?'"

No less characteristic of the composer was his treatment of his unworthy friend the clarinet player Stadler—as thorough-paced a scoundrel as ever breathed, if Jahn's account of him may be trusted. From pure good nature, amounting even to weakness, Mozart allowed himself to be swindled time after time by this man, trusting him notwithstanding to the very end of his life.

The three chapters in the second volume of the translation entitled "Married Life," "Mozart's Family and Friends," and "Social Intercourse," will be to many readers among the most interesting and entertaining parts of the work; to the student, however, the detailed account of nearly all Mozart's com-

positions—over six hundred in number—will prove especially valuable. In this respect the biographer's intimate acquaintance with his subject is truly astonishing. It is not so much in the masterly analyses of the greater operas that this is noticeable; Jahn appears to be familiar with every dance tune, every detached song, and every little instrumental piece, of whatever kind, that Mozart composed. It must be remembered that the book was written at a time when a very large number of Mozart's works were still unpublished and difficult of access; and a comparison of the music which is now being issued in the complete edition of Messrs. Breitkopf & Härtel with Herr Jahn's comments thereupon gives a high idea not only of his accurate knowledge but of his critical acumen. The chapters on the pianoforte music and on the instrumental works are of the greatest interest.

It is with great pleasure that we are able to speak in terms of the highest praise of the manner in which Miss Townsend has acquitted herself of the by no means easy task of translation. In so voluminous a work as the present it is almost inevitable that a few slips should be found; but those that we have noted are not only extremely rare, but mostly of slight importance. For instance, at p. 18 of vol. iii. the Quintet for strings in G minor is spoken of as being in G *major;* while at p. 166 of vol. ii. the great Serenade in B flat for wind instruments is said to have parts for two "viols" instead of two "corni di bassetto"—an unaccountable error. But in general the translation is thoroughly trustworthy, and the style so good that it reads like an original work. The value of this edition is much enhanced by the excellent index—an absolute necessity in a work of such extent, though its necessity is not so invariably recognized as it should be by authors. It was a happy thought on the part of the editor to give the classified catalogue of the new edition of Mozart's works already referred to with a reference to the pages in which each composition is spoken of. An examination of this list will show at once how small a proportion of the whole has escaped Jahn's notice.

We have done inadequate justice in this review to one of the most important works in the whole domain of musical literature; our excuse must be the absolute impossibility of dealing fully with it within reasonable bounds. We conclude by most cordially recommending it to all who are interested in music, and need only add that the printing and general appearance of the volumes are worthy alike of their contents and of the reputation of the firm which publishes them.

Musical Gossip.

The compositions of Theodor Kirchner are but little known in this country, and some interest attached to the performance of eight numbers of his 'Novelletten,' Op. 59, for piano, violin, and violoncello, at Mr. Dannreuther's concert on Thursday week. The comparatively few masterminds of music inevitably influence a number of more modestly gifted workers in the art, and Kirchner may in this way be deemed a disciple of Schumann. His works are mostly for the pianoforte and are nearly all of small calibre. In the 'Novelletten' the keyed instrument is far more effectively treated than are the strings; but on the whole these little pieces are extremely pleasing and some of them really charming. Mr. Dannreuther played Beethoven's Sonata in C minor, Op. 111, and the concert concluded with Brahms's Quintet in F minor, Op. 34. Some new songs, by Mr. Hubert Parry and Mr. Villiers Stanford, sung by Miss Anna Williams, exhibit a laudable endeavour to aim at a higher standard than is usually attained in ballad composition. But with this object in view the necessity of melodic charm should not be overlooked. Mr. Parry's setting of Scott's "Where shall the lover rest?" is a fine, vigorous song; but in some other instances the voice part is ineffective and ungrateful.

The last Saturday Popular Concert before Christmas contained Beethoven's Septet, Mendelssohn's posthumous Andante and Scherzo for string quartet, and some of Brahms's Hungarian Dances, played by Herr Joachim. Madame Haas was the pianist, her solo being Chopin's Barcarolle in F sharp major. The vocalist was Miss Carlotta Elliot.

The season of orchestral and choral concerts under the direction of Mr. Manns, in Glasgow, is proceeding with unqualified success. The number of concerts and the size of the orchestra have been increased since last year in consequence of the greater interest taken in the enterprise. Beside the subscription series, popular concerts at cheap prices are given on Saturday evenings, the audiences at which are, it is said, just as appreciative of high class works.

Last Thursday week Mr. F. H. Cowen conducted his 'Scandinavian' Symphony at Aix-la-Chapelle. Both the work and the composer were most warmly received, the latter being presented with a laurel wreath in the name of the town.

A younger sister of Madame Sophie Menter has lately appeared in Vienna as a pianist. She is said not only to be a clever executant, but to possess much musical feeling.

The committee of the International Exhibition to be held next year in Amsterdam have decided for financial reasons to do nothing in connexion with music beyond the performance of a cantata to be composed for the opening ceremony by Herr Verhulst.

Johann Baptist André, a pianist and composer of some repute, died at Offenbach-on-the-Main on the 9th inst., in the sixtieth year of his age.

In Genoa a monumental tablet has been placed on the house in which a century ago, on October 27th, 1782, Paganini was born.

Herr Angelo Neumann's Wagner company, after performing in many of the principal cities of Germany, will early in the coming year make a tour first in Holland, then in Belgium, Sweden and Norway, and France.

Schumann's 'Genoveva' was performed in the German Opera at Rotterdam on the 9th inst., and was very warmly received.

Saint-Saëns's opera 'Samson and Delila' is to be one of the novelties of the present season at Munich. The chief parts are to be taken by Herr and Frau Vogl.

It is stated, though not on the best authority, that Signor Boïto's long expected opera on the subject of Nero will be produced at the Brussels Théâtre de la Monnaie next month.

Herr Bilse gave his 3,000th concert in Berlin on the 12th inst. The concerts were established fifteen years ago, and have done much for the popularization of good music in the German capital.

In last week's *Le Ménestrel* M. Arthur Pougin completes his admirable series of articles on 'Cherubini: sa Vie, ses Œuvres, son Rôle Artistique,' which were commenced in September, 1881, and, with an occasional break, have been continued in the journal weekly. Whether from an historical or a critical point of view, M. Pougin's articles are so valuable that we trust they may soon be reprinted in a volume. They will certainly form by far the best existing biography of the old Florentine master.

DRAMA

THE WEEK.

Globe.—'Jane Eyre,' a New Drama in Four Acts. By W. G. Wills. Founded on the Novel by Charlotte Brontë.
Drury Lane.—'Sindbad the Sailor,' a Pantomime. By E. L. Blanchard.

Few stories lend themselves less readily than 'Jane Eyre' to the purposes of the dramatist. In Germany, where the developments of any form of sentimental *liaison* are accepted by the public, a play characteristically Teutonic in motive has been extracted from the love passages between Jane Eyre and her admirers. English and American versions of the novel, meanwhile, have hitherto dealt with those melodramatic incidents with which, ignorant of her own strength, Charlotte Brontë felt bound to fortify her story. Mr. Wills's attempt to supply a play of literary value founded upon that portion of Jane Eyre's life which began with her arrival at Thornefield Hall is practically the first effort seriously to test the dramatic worth of one of the most famous of English novels. Popular admiration for 'Jane Eyre,' the marvellous—it might almost be said prodigious—outcome of the imagination of a girl with more learning than then formed a portion of feminine training, left to brood among the solitudes of Yorkshire hills, has blinded the world to the few marks of crudity or inexperience the book betrays. It is still customary to regard Rochester as a genuine human being, and almost, indeed, as a typical man. He is, on the contrary, the sort of being a girl with a genius and an education like Charlotte Brontë, knowing men only through books and despising the "curled darlings" of ordinary fiction, is likely to conceive. Anything rather than beneficial has been the influence upon subsequent writers of this creation, for as such Rochester may be regarded. By a succeeding generation of imitators, masculine kisses as passionate and as unprivileged as those of Rochester were presented as the chief object of feminine pursuit, until the ultimate outcome was seen in the monstrous and abominable birth of modern female fiction. A great writer is not to be held accountable for the extravagance and vulgarities of his imitators. A serious difficulty is, however, offered to a dramatist in the fact that while the character of Jane Eyre is incapable of receiving on the stage traits so lifelike as are furnished by the elaborate psychology of the novel, that of Rochester, which is far more susceptible of stage treatment, has in subsequent fiction been vulgarized to an extent that deprives it of the appearance of originality.

Mr. Wills has so far triumphed over the difficulties with which he is beset as to have furnished a play with genuine and sustained interest. Not too bright appear its chances of continued popularity. One scene alone is of a kind to appeal to the general public. Such, meanwhile, are now the conditions of things theatrical, that a success that does not extend beyond the cultivated classes means

a failure. Delightful, then, as are the scenes of wooing between Jane and her saturnine and mysterious lover, they seem scarcely enough, even with the strong scene before mentioned, for a public that has always in recent times regarded psychology as secondary to incident. The point at which the public is stirred to its depths is when on the solitude of Jane, who has just listened to the avowals of Rochester, breaks the apparition of the maniac wife. The wild yell and fierce laughter that heralded her coming and the attitude of deadly menace exercised upon the audience an influence so strong that a portion of it was compelled to withdraw. In the original the solitary visit of Bertha to the heroine occurs when the latter is in bed. A fair specimen is thus afforded of the manner in which Mr. Wills has treated his subject. While departing from the story to the extent of introducing situations and even characters which do not appear in it, Mr. Wills has supplied little or nothing for which in the narrative a species of justification is not supplied.

Mrs. Bernard Beere does not look Jane Eyre. The fact may or may not be important: a fact, however, it is. Instead of the demure, resolute, little woman, who by sheer strength of virtues the least characteristically feminine subjugates a man weary of commonplace triumph, we see a tall, graceful, cultivated lady, fit to preside at the most exalted board. Whatever gain to the picture presented may spring from this change, some loss to *vraisemblance* is at least experienced. A delightful exposition of a very acceptable type of womanhood, not in the least like Jane Eyre, is presented. In the love-making scenes, and in that scene especially in which, after the exposure of the trick to which she has almost fallen a prey, Jane has strength to tear herself from the arms of her lover, Mrs. Beere's acting was admirable. Studiously undercoloured throughout, the performance of Mr. Kelly failed to suggest the passion of Rochester. Some disqualification, such as illness or loss of memory, prevented Mr. Kelly from rendering his conception clearly intelligible. Miss Kate Bishop played agreeably in the difficult character of Blanche Ingram. Some other characters were not too successfully presented. By putting back the action to a date somewhere in the second decade of the present century, the management, which has displayed commendable care in mounting the piece, has been able to introduce the quaint and fanciful costume with which modern art has rendered the public familiar.

Mr. Blanchard's bright pantomime of 'Sindbad' appears to be buried beneath scenery. What the effect may be when the elaborate spectacle runs smoothly can as yet scarcely be judged. So much unreadiness was displayed on the opening night that the representation provoked loud opposition, and scarcely escaped *fiasco*. It seems now too late to complain that all that is fanciful and poetical in pantomime is disappearing; that actors are supplanted by music hall entertainers; that fun is a thing of the past; and that the whole is a mere spectacle with accompaniments of music and dancing. One portion of the spectacle at Drury Lane is entitled to praise. This is a representation in the guise of a pageant of the kings of England from the period of the Norman Conquest down to modern days. So elaborate is this portion of the spectacle that the back wall of the stage has had to be taken down in order to make room for the number of actors employed. The dresses, designed by M. Pilotell, are singularly tasteful and accurate, and the entire pageant may be seen with pleasure and advantage. Other portions of the piece are well conceived. While the whole remains in a state of confusion such as was exhibited on Tuesday night, no definite verdict upon it can be given. Nothing in the pantomimes at other theatres calls for comment.

Dramatic Gossip.

In addition to Drury Lane, three West-end theatres supply pantomimes. 'Cinderella' is the subject of the pantomime at the Alcazar, as the Holborn Amphitheatre is now called. The Imperial has given 'Jack the Giant-Killer,' and the Avenue Theatre a children's pantomime on the subject of 'Whittington and his Cat.'

A burlesque drama, by Mr. Reece, on the subject of 'Valentine and Orson,' has been produced at the Gaiety Theatre. Its first reception was unfavourable, but it has since been adapted to the taste of frequenters of the theatre.

'The Lady of Lyons' has been revived at the Olympic, with Miss De Grey as Pauline Deschappelles, Mr. Macklin as Claude Melnotte, and Mr. G. F. Edgar as Beauséant. The performance concludes with the comic scenes from 'The Hunchback,' presented by Miss De Grey as Helen and Mr. Macklin as Modus.

Mr. Charles Reade's drama of 'Rachael the Reaper' has been produced as an opening piece at the Adelphi, at which house it precedes 'Love and Money.' Mr. W. Rignold and Miss Edith Lynd have been engaged for its performance.

Mr. Dion Boucicault, who has left for America, intends to produce in Boston his new play 'Boyne Water.'

Upon its revival at the Palais Royal, 'M. Garat,' the well-known *vaudeville* of M. Sardou, first produced by Déjazet at the theatre named after her, proves old-fashioned and simple almost to childishness. Madame Chaumont, who takes the character of Garat, "created" by Déjazet, seems scarcely at home in the *rôle*.

To fill up the vacancies caused by recent retirements, the Comédie Française has elected MM. Prudhon and Sylvain, Mdlles. Tholer, Granger, and Dudlay to the rank of *sociétaires*.

At one of its Monday performances at reduced prices, the Odéon has given 'Les Deux Frères' of Kotzebue. A strong resemblance between the story of the play and that of 'Les Rantzau' has been discovered by the Parisians.

MISCELLANEA

Adding Insult to Injury.—I confess to having thought that this phrase came from Sam Weller. Is it among "things generally known" that it is in Phædrus? When the bald man slaps his own head in trying to kill a fly:—

> Tunc illa iridens: Punctum volucris parvulæ
> Voluisti morte ulcisci; quid facies tibi,
> *Injuriæ qui addideris contumeliam?*

H. Yule.

To Correspondents.—N.—G. R. J.—E. C. B.—H. S. A.—L.—A. H.—F. W. S.—J. I.—W. D.—G. H. B.—received.
No notice can be taken of anonymous communications.

TIME, for JANUARY, now publishing.

Contents.

A Real Queen. By R. E. Francillon.
Stella. By Nelly Keith.
Fugitive American Humour.
Tennysonian Philosophy. By H. S. S.
Portia; or, By Passions Rocked: a Novel. By the Author of 'Phyllis,' 'Mrs. Geoffrey,' &c. Chap. 22.
Shadows from an Old Sun-Dial. By Frederick Gale.
A Story of Marsden Rock. By Hal Lowther.
Round Time's Clock. By Taf.
The New Costume Society and the Stage. By A. H. Wall.
Haunted Hearts. By J. Palgrave Simpson. Part II.
Proverbs. By F. A. Ward.
Sivard the Purblind.

London: Kelly & Co. 51, Great Queen-street, W.C.; and all Booksellers.

NEW NOVEL by R. E. FRANCILLON, Author of 'Olympia,' 'Strange Waters,' &c., entitled

A REAL QUEEN,

is commenced in the JANUARY Number of TIME, now publishing.

London: Kelly & Co 51, Great Queen-street, W.C.; and all Booksellers and Railway Stations.

ASPECTS of HUMAN NATURE. By JAMES KERR, M.A.

Second Edition, Enlarged. 1 vol. 5s.

"This volume contains a series of thoughtful essays, made popular and interesting by an agreeable style and many felicitous illustrations."—*Glasgow Herald.*

"The book is full of brief and lively illustrations, and the instances from the commonplace religious and social life of ourselves and everybody else are generally searching and often humorous."
Westminster Review.

"It is a wise book, well timed, excellently written, and few will rise from its pages without some additional knowledge of that curious human nature which is every day moving and acting around us and in us."—*Aberdeen Free Press.*

"It is gratifying to meet with such a book in a second edition; it deserves to be widely read, and may be pondered with advantage by members of every class, section, order, and sect embraced in our social organism."—*Scotsman.*

London: Longmans & Co.

In crown 8vo. price 5s.

THE FAITHS of the WORLD: a Concise History of the Great Religious Systems of the World. By Principal CAIRD; Professors FLINT, MILLIGAN, and TAYLOR; Drs. JAMES MACGREGOR, J. CAMERON LEES, and others.

"For popular use we know of no more instructive work than this.... We are enabled to follow with intense interest the gropings of the greater and better minds of heathen antiquity in the darkness which enveloped them with more or less of success towards the light."
Baptist Magazine.

"Distinguished by rare ability and a thorough and complete knowledge of the varied subjects with which it deals."—*Christian Globe.*

"We have rarely met with a better and more practical idea than that which is embodied in these lectures.... The study of comparative theology is as instructive and edifying as it is interesting.... The authors of this volume have shown it is possible to give an accurate general idea of the various systems discussed, to fix upon their distinctive and characteristic principles, and make them stand out clearly and boldly."
Freeman.

William Blackwood & Sons, Edinburgh and London.

MESSRS. WM. BLACKWOOD & SONS' NEW PUBLICATIONS.

THIS DAY IS PUBLISHED,

FIRE FOUNTAINS. The Kingdom of Hawaii: its Volcanoes and the History of its Missions. By C. F. GORDON CUMMING, Author of 'A Lady's Cruise in a French Man-of-War.' 'At Home in Fiji,' &c. With Map and numerous Illustrations. 2 vols. 8vo. 25s.

The EARLY HOMES of PRINCE ALBERT. By ALFRED RIMMER, Author of 'Our Old Country Towns,' &c. Beautifully Illustrated with Tinted Plates, and numerous Engravings on Wood. 8vo. 21s.

SIR ARCHIBALD ALISON, BART.

SOME ACCOUNT of MY LIFE and WRITINGS. An Autobiography. By the late Sir ARCHIBALD ALISON, Bart., D.C.L. Edited by his Daughter-in-Law. 2 vols. 8vo. with Portraits, 36s.

"Deserves to be read, not for amusement merely, but instruction.... Affords a striking example of what perseverance and directness of purpose can accomplish."—*Athenæum.*

"There is much of fair-mindedness and old-fashioned courtesy scattered over these two volumes, which it is rather pleasant to come across, after the surfeit of 'Reminiscences' of a very different sort which we have recently had."—*Spectator.*

A TOUR in GREECE, 1880. By RICHARD RIDLEY FARRER. With 27 Full-Page Illustrations by LORD WINDSOR. Royal 8vo. with a Map, 21s.

"The most chaste and elegant book of the present season.... Mr. Farrer's narrative is well written and scholarly. It leaves nothing to be desired as a description of the Greece of the past, as seen in the remains of it existing in the present day."—*Land and Water.*

"Mr. Farrer's narrative is decidedly above the average; in many respects we should be inclined to give it rank as the best account of a pleasure tour in Greece.... Lord Windsor has shown both taste and judgment in the selection of scenes for his illustrations."
St. James's Gazette.

The HISTORICAL PLAYS of SHAKSPEARE With Introductions and Notes, by CHARLES WORDSWORTH, D.C.L., Bishop of S. Andrews. In 3 vols. post 8vo.

Now ready, Vol. I. containing CORIOLANUS, JULIUS CÆSAR, ANTONY and CLEOPATRA, KING JOHN. Price 7s. 6d.

SHORT-SERVICE ENLISTMENT and the ORGANIZATION of our INFANTRY, as Illustrated by RECENT EVENTS. By Lieut.-General Sir P. L. MACDOUGALL. Price 1s.

TENTH THOUSAND.

The GLADSTONE A B C. With 15 Illustrations. Price 6d.

WILLIAM BLACKWOOD & SONS, Edinburgh and London.
